DEDICATION.

TO HIS GRACE

JOHN DUKE OF ARGYLL AND GREENWICH, *&c.*

My Lord,

As this is the only method by which men of genius and learning, though ſmall perhaps my claim to either, can ſhow their eſteem for perſons of extraordinary merit, in a ſuperior manner to the reſt of mankind, I could never embrace a more favourable opportunity to expreſs my veneration for your Grace, than before a tranſlation of ſo ancient and valuable an author as Heſiod. Your high deſcent, and the glory of your illuſtrious anceſtors, are the weakeſt foundations of your praiſe; your own exalted worth attracts the admiration, and I may ſay the love of all virtuous and diſtinguiſhing ſouls; and to that only I dedicate the following work. The many circumſtances which contributed to the raiſing you to the dignities which you now enjoy, and which render you deſerving the greateſt favours a prince can beſtow; and, what is above all, which fix you ever dear in the affection of your country, will be no ſmall part of the Engliſh hiſtory, and ſhall make the name of Argyll ſacred to every generation; nor is it the leaſt part of your character, that the nation entertains the higheſt opinion of your taſte and judgment in the polite arts.

You, my Lord, know how the works of genius lift up the head of a nation above her neighbours, and give it as much honour as ſucceſs in arms; among theſe we muſt reckon our tranſlations of the claſſics; by which, when we have naturalized all Greece and Rome, we ſhall be ſo much richer than they were by ſo many original productions as we ſhall have of our own. By tranſlations, when performed by able hands, our countrymen have an opportunity of diſcovering the beauties of the ancients, without the trouble and expence of learning their languages; which are of no other advantage to us than for the authors who have writ in them; among which the poets are in the firſt rank of honour, whoſe verſes are the delightful channels through which the beſt precepts of morality are conveyed to the mind; they have generally ſomething in them ſo much above the common ſenſe of mankind; and that delivered with ſuch dignity of expreſſion, and in ſuch harmony of numbers, all which put together, conſtitute the *os divinum*, that the reader is inſpired with ſentiments of honour and virtue, he thinks with abhorrence of all that is baſe and trifling; I may ſay, while he is reading, he is exalted above himſelf.

You, my Lord, I ſay, have a juſt ſenſe of the benefits ariſing from works of genius, and will therefore pardon the zeal with which I expreſs myſelf concerning them: and great is the bleſſing, that we want not perſons who have hearts equal to their power to cheriſh them: and here I muſt beg leave to pay a debt of gratitude to one, who, I dare ſay, is as highly thought of by all lovers of polite learning as by myſelf, I mean the Earl of Pembroke; whoſe notes I have uſed in the words in which he gave them to me, and diſtinguiſhed them by a particular mark from the reſt. Much would I ſay in commendation of that great man; but I am checked by the fear of offending that virtue which every one admires. The ſame reaſon makes me dwell leſs on the praiſe of your Grace than my heart inclines me to.

The many obligations which I have received from a lady, of whoſe virtues I can never ſay too much, make it a duty in me to mention her in the moſt grateful manner; and particularly before a tranſlation, to the perfecting which I may with propriety ſay ſhe greatly conduced, by her kind ſolicitations in my behalf, and her earneſt recommendation of me to ſeveral perſons of diſtinction. I believe your Grace will not charge me with vanity, if I confeſs myſelf ambitious of being in the leaſt degree of favour with ſo excellent a lady as the Marchioneſs of Annandale.

I ſhall conclude without troubling your Grace with any more circumſtances relating to myſelf, ſincerely wiſhing what I offer was more worthy your patronage; and at the ſame time I beg it may be received as proceeding from a juſt ſenſe of your eminence in all that is great and laudable. I am,

My Lord,
with the moſt profound reſpect,
your Grace's
moſt obedient,
and moſt humble ſervant,
THOMAS COOKE.

January 1728.

TWO DISCOURSES
ON THE LIFE AND WRITINGS OF HESIOD.

ON THE LIFE OF HESIOD.

Sect. 1. *The Introduction.*

THE lives of few perſons are confounded with ſo many uncertainties and fabulous relations as thoſe of Heſiod and Homer; for which reaſon, what may poſſibly be true, is ſometimes as much diſputed as the romantic part of their ſtories. The firſt has been more fortunate than the other, in furniſhing us, from his writings, with ſome circumſtances of himſelf and family; as the condition of his father, the place of his birth, and the extent of his travels; and he has put it out of diſpute, though he has not fixed the period, that he was one of the earlieſt writers of whom we have any account.

2. *Of his own and father's country, from his writings.*

He tells us in the ſecond book of his Works and Days, that his father was an inhabitant of Cuma, in one of the Æolian iſles; from whence he removed to Aſcra, a village in Bœotia, at the foot of mount Helicon; which was doubtleſs the place of our poet's birth, though Suidas, Lilius Gyraldus, Fabricius, and others, ſay he was of Cuma. Heſiod himſelf ſeems, and not undeſignedly, to have prevented any miſtake about his country; he tells us poſitively, in the ſame book, he never was but once at ſea, and that in a voyage from Aulis, a ſea port in Bœotia, to the iſland Eubœa. This, connected with the former paſſage of his father ſailing from Cuma to Bœotia, will leave us in no doubt concerning his country.

3. *Of his quality, from his writings.*

Of what quality his father was we are not very certain; that he was drove from Cuma to Aſcra, by misfortunes, we have the teſtimony of Heſiod. Some tell us he fled to avoid paying a fine; but what reaſon they have to imagine that I know not. It is remarkable that our poet, in the firſt book of his Works and Days, calls his brother διον γενος. We are told indeed that the name of his father was Dios, of which we are not aſſured from any of his writings now extant; but if it was, I rather believe, had he deſigned to call his brother of the race of Dios, he would have uſed Διογενης or Διι γενος; he muſt therefore by διον γένος intend to call him of race divine. Le Clerc obſerves, on this paſſage, that the old poets were always proud of the epithet divine; and brings an inſtance from Homer, who ſtyled the ſwineherd of Ulyſſes ſo. In the ſame remark he ſays, he thinks Heſiod debaſes the word in his application of it, having ſpoke of the neceſſitous circumſtances of his father in the following book. I have no doubt but Le Clerc is right in the meaning of the word διον; but at the ſame time I think his obſervation on it trifling: becauſe, if his father was reduced to poverty, we are not to infer from thence he was never rich, or, if he was always poor, that is no argument againſt his being of a good family; nor is the word divine in the leaſt debaſed by being an epithet to the ſwineherd, but a proof of the dignity of that office in thoſe times. We are ſupported in this reading by Tzetzes: and Valla and Friſius have took the word in the ſame ſenſe, in their Latin tranſlations of the Works and Days.

—Frater ades (ſays Valla) generoſo e ſanguine Perſe.

And Friſius calls him Perſe divine.

4. *A judgment of his age and quality from fiction.*

The genealogy likewiſe which the author of the contention betwixt Homer and Heſiod, gives us, very much countenances this interpretation. We are told in that work, that Linus was the ſon of Apollo, and of Thooſe the daughter of Neptune; King Pierus was the ſon of Linus, Oeagrus of Pierus and the nymph Methone, and Orpheus of Oeagrus and the Muſe Calliope; Orpheus was the father of Othrys, Othrys of Harmonides, and Harmonides of Philoterpus; from him ſprung Euphemus the father of Epiphrades, who begot Menalops the father of Dios; Heſiod and Perſes were the ſons of Dios by Pucamede the daughter of Apollo; Perſes was the father of Mæon, whoſe daughter Crytheis bore Homer to the river Meles. Homer is here made the great grandſon of Perſes the brother of Heſiod. I do not give this account with a view it ſhould be much depended on; for it is plain from the poetical etymologies of the names, it is a fictitious generation; yet two uſeful inferences may be made from it; firſt, it is natural to ſuppoſe the author of this genealogy would not have forged ſuch an honourable deſcent, unleſs it was generally believed he was of a great family; nor would he have placed him ſo long before Homer, had it not been the prevailing opinion he was firſt.

5. *Of his age, from Longomontanus, and the Arundelian marble.*

Mr. Kennet quotes the Daniſh aſtronomer Longomontanus, who undertook to ſettle the age of Heſiod from ſome lines in his Works and Days; and he made it agree with the Arundelian marble, which makes him about thirty years before Homer

6. *From Herodotus.*

Herodotus assures us that Hesiod, whom he places first in his account, and Homer, lived four hundred years and no more before himself; this must carry no small weight with it, when we consider it as delivered down to us by the oldest Greek historian we have.

7. *From his writings.*

The pious exclamation against the vices of his own times, in the beginning of the iron age, and the manner in which the description of that age is wrote, most of the verbs being in the future tense, give us room to imagine he lived when the world had but just departed from their primitive virtue; just as the race of heroes was at an end, and men were sunk into all that is base and wicked.

8. *The opinions of Justus Lipsius, and Ludolphus Neocorus confuted.*

Justus Lipsius, in his notes to the first book of Velleius Paterculus, says, "there is more simplicity, and a greater air of antiquity in the works "of Hesiod than of Homer," from which he would infer he is the older writer: and Fabricius gives us these words of Ludolphus Neocorus, who writ a critical history of Homer: "if a judgment of "the two poets is to be made from their works, "Homer has the advantage in the greater simplicity and air of antiquity in his style. Hesiod "is more finished and elegant." One of these is a flagrant instance of the random judgment which the critics and commentators often pass on authors, and how little dependence is to be laid on some of them. In short, they are both in an error; for, had they considered through how many hands the Iliad and Odysses have been since they came from the first author, they would not have pretended to determine the question, who was first by their style.

9. *Dr. Clarke's and Sir Isaac Newton's opinions considered.*

Dr. Samuel Clarke (who was indeed a person of much more extensive learning and nicer discernment than either Neocorus or Lipsius) has founded an argument for the antiquity of Homer on a quantity of the word κακος: in his note on the 43d verse of the 2d book of the Iliad, he observes, that Homer has used the word κακος in the Iliad and Odyssey above two hundred and seventy times, and has in every place made the first syllable long; whereas Hesiod frequently makes it long, and often short: and Theocritus uses it both long and short in the same verse; from which our learned critic infers that Hesiod could not be cotemporary with Homer (unless, says he, they spoke different languages in different parts of the country) but much later; because he takes it for granted, that the liberty of making the first syllable of κακος short was long after Homer; who uses the word above two hundred and seventy times, and never has the first syllable short. This is a curious piece of criticism, but productive of no certainty of the age of Homer or Hesiod. The Ionic poets, Dr. Clarke observes, had one fixed rule of making the first syllable in κακος long: the Attic poets Sophocles, Euripides, and Aristophanes, in innumerable places, he says, make it short; the Doric poets do the same: all therefore that can be inferred from this is, that Homer always used it in the Ionic manner, and Hesiod often in the Ionic, and often in the Doric. This argument of Dr. Clarke's, founded on a single quantity of a word, is entirely destructive of Sir Isaac Newton's system of chronology; who fixes the time of Troy being taken but thirty-four years before Hesiod flourished. Troy, he says*, was taken nine hundred and four years before Christ, and Hesiod, he says, flourished eight hundred and seventy. This shows Sir Isaac Newton's opinion of the age of Hesiod in regard to his vicinity to Homer: his bringing the chronology of both so low as he does, is to support his favourite scheme of reducing all to scripture chronology.

10. *A thousand years before Christ.*

After all, it is universally agreed he was before, or at least cotemporary with Homer; but I think we have more reason to believe him the older; and Mr. Pope, after all the authorities he could find in behalf of Homer, fixes his decision on the Arundelian marble. To enter into all the disputes which have been on this head, would be endless and unnecessary; but we may venture to place him a thousand years before Christ, without exceeding an hundred, perhaps, on either side.

11. *Some circumstances of his life from his writings.*

Having thus far agreed to his parents, his country, and the time in which he rose, our next business is to trace him in such of his actions as are discoverable; and here we have nothing certain but what occurs to us in his works. That he tended his own flocks on mount Helicon, and there first received his notions of poetry, is very probable from the beginning of his Theogony; but what he there says of the muses appearing to him, and giving him a sceptre of laurel, I pass over as a poetical flight. It likewise appears, from the first book of his Works and Days, that his father left some effects, when he died, on the division of which his brother Perses defrauded him, by bribing the judges. He was so far from being provoked to any act of resentment by this injustice, that he expressed a concern for those poor mistaken mortals, who placed their happiness in riches only, even at the expence of their virtue. He lets us know, in the same poem, that he was not only above want, but capable of assisting his brother in time of need; which he often did after the ill usage he had met with from him. The last passage, relating to himself, is his conquest in a poetical contention. Amphidamas, king of Eubœa, had instituted funeral games in honour of his own memory, which his sons afterwards saw performed; Hesiod here was competitor for the prize in poe-

* *In his chronology of ancient kingdoms amended.*

try, a tripod, which he won, and, as he tells us himself, consecrated to the muses.

12. *From Plutarch, &c.*

Plutarch, in his Banquet of the Seven Wise Men, makes Periander give an account of the poetical contention at Chalcis; in which Hesiod and Homer are made antagonists: the first was conqueror, who received a tripod for his victory, which he dedicated to the muses, with this inscription:

Ησιοδος Μουσαις Ελικωνισι τονδ' ανεθηκεν,
Τμνω νικησας εν χαλκιδι θειον Ομηρον.

This Hesiod vows to th' Heliconian nine,
In Chalcis won from Homer the divine.

This story, as related by Plutarch, was doubtless occasioned by what Hesiod says of himself, in the second book of his Works and Days; which passage might possibly give birth to that famous treatise, Αγων Ομηρε και Ησιοδε, mentioned in the fourth section of this discourse. Barnes, in his Prelocium to the same treatise, quotes three verses, two from Eustathius, and the third added by Lilius Gyraldus, in his life of our poet, which inform us, that Hesiod and Homer sung in Delos to the honour of Apollo.

Εν Δηλω ποτε πρωτον εγω και Ομηρος, αοιδοι,
Μελπομεν, εν νεαροις υμνοις ρωψαντες αοιδην,
Φοιβον Απολλωνα χρυσαορον ον τεκε Λητω.

Homer, and I, in Delos sung our lays,
There first we sung, and to Apollo's praise;
New was the verse in which we then begun
In honour to the god, Latona's son.

But these, together with the contention betwixt these two great poets, are regarded as no other than fables; and Barnes, who had certainly read as much on this head as any man, and who seems, by some expressions, willing to believe it if he could, is forced to decline the dispute, and leave it in the same uncertainty in which he found it. The story of the two poets meeting in Delos, is a manifest forgery: because, as I observed before, Hesiod positively says he never took any voyage but that to Chalcis; and these verses make his meeting in Delos, which is contrary to his own assertion, precede his contention at Chalcis. Thus have I collected, and compared together, all that is material of his life; in the latter part of which, we are told, he removed to Locris, a town near the same distance from mount Parnassus, as Ascra from Helicon. Lilius Gyraldus, and others, tell us he left a son, and a daughter; and that his son was Stesichorus the poet; but this wants better confirmation than we have of it. It is agreed by all that he lived to a very advanced age.

13. *His Death.*

The story of his death, as told by Solon, in Plutarch's Banquet of the Seven Wise Men, is very remarkable. The man, with whom Hesiod lived at Locris, ravished a maid in the same house. Hesiod, though entirely ignorant of the fact, was maliciously accused, as an accomplice, to her brothers, who barbarously murdered him with his companion, whose name was Troilus, and throwed their bodies into the sea. The body of Troilus was cast on a rock, which retains the name of Troilus from that accident. The body of Hesiod was received by a shoal of dolphins as soon as it was hurled into the water, and carried to the city Molicria, near the promontory Rhion: near which place the Locrians then held a solemn feast, the same which is at this time celebrated with so much pomp. When they saw a floating carcase, they ran with astonishment to the shore, and finding it to be the body of Hesiod, newly slain, they resolved, as they thought themselves obliged, to detect the murderers of a person they so much esteemed and honoured. When they had found out the wretches who committed the murder, they plunged them alive into the sea, and afterwards destroyed their houses. The remains of Hesiod were deposited in Nemea; and his tomb is unknown to most strangers; the reason of it being concealed, was because of the Orchomenians, who had a design, founded on the advice of an oracle, to steal his remains from thence, and to bury them in their own country. This account of the oracle, here mentioned by Plutarch, is related by Pausanias, in his Bœotics. He tells us the Orchomenians were advised by the oracle to bring the bones of Hesiod into their country, as the only means to drive away a pestilence which raged among them. They obeyed the oracle, found the bones, and brought them home. Pausanias, say they, erected a tomb over him, with an inscription to this purpose on it:

Hesiod, thy birth is barren Ascra's boast,
Thy dead remains now grace the Minyan coast;
Thy honours to meridian glory rise,
Grateful thy name to all the good and wise.

14. *Monuments, &c. of him.*

We have the knowledge of some few monuments which were raised in honour to this great and ancient poet: Pausanias, in his Bœotics informs us, that his countrymen the Bœotians erected to his memory an image with a harp in his hand: the same author tells us, in another place, there was likewise a statue of Hesiod in the temple of Jupiter Olympicus. Fulvius Ursinus, and Boissard, in his Antiquities, have exhibited a breast with a head, a trunk without a head, and a gem, of him: and Ursinus says, there is a statue of him, of brass, in the public college of Constantinople. The only original monument of him besides, now remaining, or at least known, is a marble buste in the Pembroke collection at Wilton. "What Fulvius Ursinus has published resembles that, but is only a basso relievo. From the manner of the head being cracked off from the lower part, which has some of the hair behind, it appears that both the parts are of the same work and date."

15. *His character.*

For his character we need go no farther than his Works and Days. With what a dutiful affection he speaks of his father, when he proposes him

as a pattern to his brother. His behaviour, after the unjuſt treatment from Perſes and the judges, proves him both a philoſopher and a good man. His moral precepts, in the firſt book, ſeem to be as much the dictates of his heart as the fruits of his genius; there we behold a man of the chaſteſt manners, and the beſt diſpoſition.

He was undoubtedly a great lover of retirement and contemplation, and ſeems to have had no ambition but that of acting well. I ſhall conclude my character of him with that part of it which Paterculus ſo juſtly thought his due: "perelegantis ingenii, et moliſſimâ dulcedini carminum memorabilis; otii quietiſque cupidiſſimus:" of a truly elegant genius, and memorable for his moſt eaſy ſweetneſs of verſe; moſt fond of leiſure and quietude.

ON THE WRITINGS OF HESIOD.

Sect. 1. *The Introduction.*

Of all the authors who have given any account of the writings of our poet, I find none ſo perfect as the learned Fabricius, in his Bibliotheca Græca. He there ſeems to have left unread no work that might in the leaſt contribute to the completing his deſign: him I ſhall follow in the ſucceeding diſcourſe, ſo far as relates to the titles of the poems, and the authorities for them.

2. *The Theogony.*

I ſhall begin with the Theogony, or Generation of the Gods, which Fabricius puts out of diſpute to be of Heſiod: nor is it doubted, ſays he, that Pythagoras took it for his, who feigned he ſaw the ſoul of our poet in hell chained to a brazen pillar; a puniſhment inflicted upon him for the ſtories which he invented of the gods. This doubtleſs is the poem that gave Herodotus occaſion to ſay that Heſiod, with Homer, was the firſt who introduced a theogony among the Grecians; the firſt who gave names to the gods, aſcribed to them honours and arts, giving particular deſcriptions of their perſons. The firſt hundred and fifteen lines of this poem have been diſputed; but I am inclined to believe them genuine; becauſe Pauſanias takes notice of the ſceptre of laurel, which the poet ſays, in thoſe verſes, was a preſent to him from the muſes; and Ovid, in the beginning of his Art of Love, alludes to that paſſage of the muſes appearing to him; and Heſiod himſelf, in the ſecond book of his Works and Days, has an alluſion to theſe verſes.

3. *The Works and Days.*

The Works and Days is the firſt poem of its kind, if we may rely on the teſtimony of Pliny; it being very uncertain, ſays Fabricius, whether the poems attributed to *Orpheus* were older than *Heſiod*; among which the critics and commentators mention one of the ſame title, with this of our poet. Pauſanias, in his Bœotics, tells us he ſaw a copy of this wrote in plates of lead, but without the firſt ten verſes with which it now begins. The only diſpute about this piece has been concerning the title, and the diviſion into books. Some make it two poems; the firſt they call Ἔργα, works, and the ſecond Ἡμέραι, days; others call the firſt Ἔργα καὶ Ἡμέραι, works and days, and the ſecond Ἡμέραι only, which part conſiſts of but ſixty-four lines: where I mention the number of verſes in this diſcourſe, I ſpeak of them as they ſtand in the original. We find, in ſome editions, the diviſion beginning at the end of the moral and religious precepts; but Grævius denies ſuch diſtinctions being in any of the old manuſcripts. Whether theſe diviſions were in the firſt copies ſignifies little; for as we find them in ſeveral late editions, they are very natural, and contribute ſomething to the eaſe of the reader, without the leaſt detriment to the original text. I am ready to imagine we have not this work delivered down to us ſo perfect as it came from the hands of the poet, which I ſhall endeavour to ſhow in the next ſection. This poem, as Plutarch in his Sympoſiacs aſſures us, was ſung to the harp.

4. *The Theogony, and Works and Days, the only undoubted poems of Heſiod now extant.*

The Theogony, and Works and Days, are the only undoubted pieces of our poet now extant; the ἀσπὶς Ἡρακλέους, the ſhield of Hercules, is always printed with theſe two, but has not one convincing argument in its favour by which we may poſitively declare it a genuine work of Heſiod. We have great reaſon to believe thoſe two poems only were remaining in the reign of Auguſtus. Manilius, who was an author of the Auguſtan age, in the ſecond book of his Aſtronomy, takes notice, in his commendation of our poet and his writings, of no other than the Theogony, and Works and Days. The verſes of Manilius are theſe:

Heſiodus memorat divos, div'umque parentes,
Et chaos enixum terras, orbemque ſub illo
Infantem, * primum, titubantia ſidera, corpus,
Titanaſque ſenes, Jovis et cunabula magni,
Et ſub fratre viri nomen, ſine fratre parentis,
Atque iterum patrio naſcentem corpore Bacchum,
Omniaque immenſo volitantia numina mundo:

* *Dr. Bentley, whoſe Manilius was publiſhed ten years after the firſt edition of this diſcourſe, gives* primos titubantia ſidera partus: *the old copies, he ſays, have* primos, *and* partus *is ſupplied by his own judgment: but* primos partus *for* titubantia ſidera *is not conſiſtent with the genealogy of theſe natural bodies in the Theogony of Heſiod: an exact genealogical table to which I have given at the end of my notes to that poem. I muſt, with great deference to the ſuperior knowledge of that learned critic, prefer the common reading* primum corpus: *Dr. Bentley's chief objection to this reading is founded on making* primum *to be underſtood* firſt *in point of time; therefore, ſays he* quomodo vero ſidera primum erant corpus, cum ante ille extiterint chaos, terræ, orbis? *Very true; but* primum *muſt be taken as I have uſed it in my explanation of it.*

Quinetiam rutis cultus, * legeſque rogavit,
Militiamque Soli, quos colles Bacchus amaret,
Quos fœcunda Ceres campos, quod † Bacchus utriumque,
Atque arbuſta vagis eſſent quod adultera pomis,
Sylvarumque deos, ſacrataque numina nymphas;
Pacis opus, magnos naturæ condit in uſus.

Thus tranſlated by Mr. Creech:

—— Heſiod ſings the gods immortal race;
He ſings how chaos bore the earthy maſs;
How light from darkneſs ſtruck did beams diſplay,
And infant-ſtars firſt ſtagger'd in their way;
How name of brother veil'd an huſband's love,
And Juno bore unaided by her Jove, [thigh,
How twice-born Bacchus burſt the thund'rer's
And all the gods that wander through the ſky:
Hence he to fields deſcends, manures the ſoil,
Inſtructs the plowman, and rewards his toil;
He ſings how corn in plains, how vine in hills,
Delight, how both with vaſt increaſe the olive fills,
How foreign grafts th' adult'rous ſtock receives,
Bears ſtranger fruit, and wonders at her leaves;
An uſeful work when peace and plenty reign,
And art joins nature to improve the plain.

The obſervation which Mr. Kennet makes on theſe lines is, "that thoſe fine things which the "Latin poet recounts about the birth of the gods, "and the making the world, are not ſo nearly al- "lied to any paſſage in the preſent Theogony as "to juſtify the alluſion." An author, who was giving an account of an ancient poet, ought to have been more careful than this biographer was in his judgment of theſe verſes because ſuch as read him, and are at the ſame time unlearned in the language of the poet, are to form their notions from his ſentiments. Mr. Kennet is ſo very wrong in his remark here, that in all the ſeven lines which contain the encomium on the Theogony, I cannot ſee one expreſſion that has not an alluſion, and a ſtrong one, to ſome particular paſſage in that poem. I am afraid this gentleman's modeſty made him diſtruſt himſelf, and too ſervilely follow this tranſlation, which he quotes in his life of Heſiod, where he ſeems to lay great ſtreſs on the judgment of the tranſlator. Mr. Creech has in theſe few lines ſo unhappily miſtook his author, that in ſome places he adds what the poet never thought of, leaves whole verſes untranſlated, and in other places gives a ſenſe quite different to what the poet deſigned. I ſhall now proceed to point out theſe paſſages to which Manilius particularly alludes. His firſt line relates to the poem in general, the Generation of the Gods; though we muſt take notice that he had that part of Heſiod's ſyſtem in view where he makes matter precede all things, and even the gods themſelves; for by *div'um parentes* the Latin poet means chaos, heaven, earth, &c. which the Greek poet makes the parents of the gods. Heſiod tells us, verſe 116, chaos brought forth the earth her firſt offſpring; to which the ſecond line here quoted has a plain reference; and *orbemque ſub illo infantem*, which Mr. Creech has omitted, may either mean the world in general, or, by *ſub illo* being annexed, hell, which, according to our poet, was made a ſubterranean world. *Primum titubantia ſidera, corpus*, which is here rendered, *and infant-ſtars firſt ſtagger'd in their way*, are the ſun and moon; our poet calls them Ηελιον τε μεγαν, λαμπρην τε σεληνην, the great ſun, and the bright moon; the Roman calls them the wandering planets, the chief bodies in the firmament, not the firſt works of heaven, as is interpreted in the Dauphine's edition of Manilius. The fourth verſe, which refers to the birth of Jove, and the wars of the giants and the gods, one of the greateſt ſubjects of the Theogony, the Engliſh tranſlator has left untouched. I am not ignorant of a various reading of this paſſage, viz.

"Titanaſque juviſſe ſenis cunabula magni,"

which has a ſtronger alluſion to the battle of the gods than the other reading, *ſenis cunabula magni*, meaning the ſecond childhood or old age of *Saturn*. The next verſe, which is beautifully expreſſed in theſe two lines,

How name of brother veil'd an huſband's love,
And Juno bore unaided by her Jove,

plainly directs to Jupiter taking his ſiſter Juno to wife, and Juno bearing Vulcan, ᾳ φιλοτητι, μιγεισα, by which Heſiod means without the mutual joys of love. The ſucceeding line has a reference to the birth of Bacchus, and the ſeventh to the whole poem; ſo that he may be ſaid to begin and end his panegyric on the Theogony, with a general alluſion to the whole. The Latin poet, in his ſix verſes on the Works and Days, begins as on the Theogony, with a general obſervation on the whole poem: "Heſiod," ſays he, "inquired into "the tillage and management of the country, and "into the laws or rules of agriculture." I do not queſtion but Manilius, in *legeſque rogavit*, had his eye on theſe words of our poet Ουτος τοι πεδιων πελεται νομος, this is the law of the fields. What the Roman there ſays of Bacchus loving hills, and of grafting, has no alluſion to any part of the preſent Works and Days; but we are not to infer from thence that this is not the poem alluded to, but that thoſe paſſages are loſt; of which I have not the leaſt doubt, when I conſider of ſome parts of the Works and Days which are not ſo well connected as I wiſh they were. I think it is indiſputable that Heſiod writ more of the vintage than we have now extant, and that he likewiſe laid down rules for the care of trees: this will appear more clearly, if we obſerve in what manner Virgil introduces this line,

"Aſcræumque cano, Romana per oppida, carmen."

This is in the ſecond book of the Georgics; the chief ſubjects of which book are the different me-

* *For* legeſque rogavit *Dr. Bentley gives* legeſque novandi, *on the authority of no copy, but from a diſlike to the expreſſion of* rogavit cultus *and* rogavit militiam; *but, as the old reading* rogavit *is agreeable to my conſtruction of it, I am for keeping it in.*

† *For* Bacchus utrumque *Dr. Bentley gives* Pallas utrumque; *and in that ſenſe Mr. Creech has tranſlated it; which would be the more eligible reading, if Heſiod had treated of Olives.* Bacchus utrumque *is a fooliſh repetition, as Dr. Bentley obſerves.*

thods of producing trees, of tranſplanting, grafting, of the various kinds of trees, the proper ſoil for each kind, and of the care of vines and olives; and he has in that book the very expreſſion Manilius applies to Heſiod. Bacchus *amat colles*, ſays Virgil; *rogavit quos colles Bacchus amaret*, ſays the other of our poet, he inquired after what hills Bacchus loved.

I ſhould not have uſed Mr. Creech and Mr. Kennet with ſo much freedom as I have, had not the tranſlation of the one, and the remark of the other, ſo nearly concerned our poet; but I hope the clearing a difficult and remarkable paſſage in a claſſic, will, in ſome meaſure, atone for the liberties I have took with thoſe gentlemen.

5. *The Shield of Hercules.*

We have now aſcribed to Heſiod a poem under the title of Ασπις Ηρακλεους, the Shield of Hercules; which Ariſtophanes the grammarian ſuppoſes to he ſpurious, and that it is an imitation of the Shield of Achilles in Homer. Lilius Gyraldus, and Fabricius, bring all the teſtimonies they can for it being writ by Heſiod; but none of them amount to a proof. Fabricius gives us the opinion of Tanaquil Faber, in theſe words: I am much ſurpriſed that this ſhould formerly have been, and is now, a matter of diſpute; thoſe who ſuppoſe the Shield not to be of Heſiod, have a very ſlender knowledge of the Greek poetry. This is only the judgment of one man againſt a number, and that founded on no authority. I know not what could induce Tanaquil Faber ſo confidently to aſſert this, which looks, if I may uſe the expreſſion, like a ſort of bullying a perſon into his opinion, by forcing him into the dreadful apprehenſion of being thought no judge of Greek poetry, if he will not come in: I ſay, I know not what could induce him to aſſert this; for there is no manner of ſimilitude to the other works of our poet: and here I muſt call in queſtion the judgment of Ariſtophanes, and of ſuch as have followed him, for ſuppoſing it to be an imitation of the Shield of Achilles. The whole poem conſiſts of four hundred and four ſcore verſes; of which the deſcription of the Shield is but one hundred and four ſcore: in this deſcription are ſome ſimilar paſſages to that of Achilles, but not ſufficient to juſtify that opinion: there are likewiſe a few lines the ſame in both; but after a ſtrict examination, they may poſſibly appear as much to the diſadvantage of Homer, as to the author of this poem. The other parts have no affinity to any book in the two poems of Homer. The poet begins with a beautiful deſcription of the perſon of Alcmena, her love to Amphitryon, and her amour with Jupiter; from thence he proceeds to the characters of Hercules and Iphiclus, and goes on regularly to the death of Cygnus, which concludes the poem; with many other particulars, which, as I ſaid before, have no relation to any part of Homer. Among the writings of our poet which were loſt, we have the titles of Γυναικων, or Ηρωιδων, Καταλογος, and of Γυναικων Καταλογος, or Ηοιαι Μεγαλαι: both theſe titles are likely to belong but to one poem, and to that which Suidas mentions, the Catalogue of Heroic Women, in five books: that he compoſed ſuch a work, is probable, from the two laſt verſes of the Theogony, and it being often mentioned by ancient writers: we have an account of another poem, under the title of Ηρωγονια, the Generation of Heroes. The favourers of the Shield of Hercules would have that poem received as a fragment of one of theſe; and all that Le Clerc ſays in defence of it, is, ſince Hercules was the moſt famous of heroes, it is not abſurd to imagine the Shield to be a part of the Ηρωγονια, though it is handed down to us as a diſtinct work; and yet it is but a fragment of it. Thus we ſee all their arguments, both for it being genuine, and a fragment of another poem, are but conjectures. I think they ought not to ſuſpect it a part of another work, unleſs they could tell when, where, or by whom, the title was changed. It is certainly a very ancient piece, and well worth the notice of men of genius.

6. *Poems which are loſt.*

Beſides the pieces juſt mentioned, we find the following catalogue in Fabricius attributed to Heſiod, but now loſt.

Παραινεσις, or Τροθηκαι χειρωνος. This was concerning the education of Achilles under Chiron; which Ariſtophanes, in one of his comedies, banters as the work of Heſiod.

Μελαμποδια, or εις τον Μαντιν Μελαμποδα: a poem on divination. The title is ſuppoſed to be took from Melampus, an ancient phyſician, ſaid to be ſkilled in divination by birds. Part of this work is commended by Athenæus, book 13.

Αστρονομια μεγαλη, or Αστρικη βιβλος: a treatiſe of aſtronomy. Pliny ſays, according to Heſiod, in whoſe name we have a book of aſtrology extant, the early ſetting of the Pleiades is about the end of the autumn equinox. Notwithſtanding this quotation, Fabricius tells us, that Athenæus and Pliny, in ſome other place, have given us reaſon to believe they thought the poem of aſtronomy ſuppoſititious.

Επικηδειος εις Βατραχυν. This is mentioned by Suidas, with the addition of τινα τερμενον αυτω, a funeral ſong on Batrachus, whom he loved.

Περι Ιδαιων Δακτυλων. This was of the Idæi Dactyli, who, ſays Pliny, in his ſeventh book, are recorded by Heſiod as diſcoverers of iron in Crete. This is likewiſe in the catalogue of Suidas.

Επιθαλαμιος Πελεως και Θετιδος: an epithalamium on the marriage of Peleus and Thetis; two verſes of which are in the Prolegomena of Iſaac Tzetzes to Lycophron.

Γης περιοδος. This book of geography is mentioned by Strabo.

Αιγιμιος: a poem on one Ægimus. This, Athenæus tells us, was writ by Heſiod, or Cecrops; a wretch, whoſe name is now remembered only for being to Heſiod what Zoilus was to Homer.

Θησεως εις τον αιδην καταβασις: the deſcent of Theſeus into hell. This is attributed to Heſiod, by Pauſanias, in his Bœotics.

Επη μαντικα και εξηγησεις επι περασιν: on prophecies, or divination, with an expoſition of pro-

digies, or portents. This is likewiſe mentioned by Pauſanias.

Θειοι λογοι: divine ſpeeches; which Maximus Tyrius takes notice of in his ſixteenth diſſertation.

Μεγαλα ἐργα: great or remarkable actions. We find the title of this work in the eighth book of Athenæus.

Κηυκος γαμος: the marriage of Ceyx. We have an account of this poem, both by Athenæus, and Plutarch, in his Sympoſiacs.

Of all theſe labours of this great poet, we ſee nothing but the titles remaining, excepting ſome fragments preſerved by Pauſanias, Plutarch, Polybius, &c. We are told that our poet compoſed ſome other works, of which we have not even the titles. We are aſſured, from diverſe paſſages in Pliny, that he wrote of the virtues of herbs; but here Fabricius judiciouſly obſerves, that he might, in other poems, occaſionally treat of various herbs; as in the beginning of his Works and Days, he ſpeaks of the wholeſomeneſs of mallows, and the daffodil, or aſphodelos. Quintilian, in his fifth book, denies the fables of Æſop to have been written originally by him, but ſays the firſt author of them was Heſiod; and Plutarch informs us that Æſop was his diſciple: but this opinion, though countenanced by ſome, is exploded by others.

When we reflect on the number of titles, the poems to which are irreparably loſt, we ſhould conſider them as ſo many monuments to raiſe our concern for the loſs of ſo much treaſure never to be retrieved. Let us turn our thoughts from that melancholy theme, and view the poet in his living writings; let us read him ourſelves, and incite our countrymen to a taſte of the politeneſs of Greece. Scaliger, in an epiſtle to Salmaſius, divides the ſtate of poetry in Greece into four periods of time: in the firſt aroſe Homer and Heſiod; on which he has the juſt obſervation that concludes my diſcourſe: this, ſays he, you may not improperly call the ſpring of poeſy; but it is rather the bloom than infancy.

GENERAL ARGUMENT TO THE WORKS AND DAYS.

FROM THE GREEK OF DANIEL HEINSIUS.

The poet begins with the difference of the two contentions; and rejecting that which is attended with diſgrace, he adviſes his brother Perſes to prefer the other. One is the lover of ſtrife, and the occaſion of troubles: the other prompts us on to procure the neceſſaries of life in a fair and honeſt way. After Prometheus had by ſubtlety ſtole the fire clandeſtinely from Jove (the fire is by the divine Plato, in his alluſion to this paſſage, called the neceſſaries, or abundance of life; and thoſe are called ſubtle, who were ſolicitous after the abundance of life), the god created a great evil, which was Pandora, that is Fortune, who was endowed with all the gifts of the gods, meaning all the benefits of nature: ſo Fortune may from thence be ſaid to have the diſpoſal of the comforts of life; and from that time care and prudence are required in the management of human affairs. Before Prometheus had purloined the fire, all the common neceſſaries of life were near at hand, and eaſily attained; for Saturn had firſt made a golden age of men, to which the earth yielded all her fruits ſpontaneouſly: the mortals of the golden age ſubmitted to a ſoft and pleaſant death, and were afterwards made demons; and honour attended their names. To this ſucceeded the ſecond, the ſilver age, worſe in all things than the firſt, and better than the following; which Jupiter, or Fate, took from the earth, and made happy in their death. Hence the poet paſſes to the third, the braſen age; the men of which, he ſays, were fierce and terrible, who ignobly fell by their own folly and civil diſcord; nor was their future fate like to the other, for they deſcended to hell. This generation is followed by a race of heroes, Eteocles and Polynices, and the reſt who were in the firſt and oldeſt Theban war, and Agamemnon and Menelaus; and ſuch as are recorded by the * poet to be in the Trojan war; of whom ſome periſhed entirely by death, and ſome now inhabit the iſles of the bleſſed. Next he deſcribes the iron age, and the injuſtice which prevailed in it. He greatly reproves the judges, and taxes them with corruption, in a ſhort and beautiful fable. In the other part of the book, he ſets before our eyes the conſequences of juſtice and injuſtice; and then, in the moſt ſagacious manner, lays down ſome of the wiſeſt precepts to Perſes. The part which contains the precepts, is chiefly writ in an irregular, free, and eaſy way; and his frequent repetitions, which cuſtom modern writers have quite avoided, bear no ſmall marks of his antiquity. He often digreſſes, that his brother might not be tired with his precepts, becauſe of a too much ſameneſs. Hence he paſſes to rules of economy, beginning with agriculture. He points out the proper ſeaſon for the plough, the harveſt, the vintage, and for felling wood; he ſhows the fruits of induſtry, and the ill conſequences of negligence. He deſcribes the different ſeaſons, and tells us what works are proper to each. Theſe are the ſubjects of the firſt part of his Economy. In proceſs of time, and the thirſt of gain increaſing in men, every method was tried to the procuring riches; men begun to extend their commerce over the ſeas; for which reaſon the poet laid down precepts for navigation. He next proceeds to a recommendation of divine worſhip, the adoration due to the immortal gods, and the various ways of paying our homage to them. He concludes with a ſhort obſervation on days, dividing them into the good, bad, and indifferent.

* *I ſuppoſe Heinſius means Homer.*

COOKE'S HESIOD.

WORKS AND DAYS*.

BOOK I.

THE ARGUMENT.

This book contains the invocation to the whole, the general propoſition, the ſtory of Prometheus, Epimetheus, and Pandora; a deſcription of the golden age, ſilver age, braſen age, the age of heroes, and the iron age; a recommendation of virtue, from the temporal bleſſings with which good men are attended, and the condition of the wicked, and ſeveral moral precepts proper to be obſerved through the courſe of our lives.

SING, muſes, ſing, from the Pierian grove;
Begin the ſong, and let the theme be Jove;
From him ye ſprung, and him ye firſt ſhould praiſe;
From your immortal ſire deduce your lays;

* *The ſcholiaſt Tzetzes tells us, this poem was firſt called the Works and Days of Heſiod, to diſtinguiſh it from another on the ſame ſubject, and of the ſame title, wrote by Orpheus. How much this may be depended on I cannot ſay; but Fabricius aſſures us from Pliny, book* 18. *chap.* 25. *that Heſiod was the firſt who laid down rules for agriculture. It is certain, that of all the pieces of this nature which were before Virgil, and extant in his days, this was moſt eſteemed by him, otherwiſe he would not have ſhowed that reſpect to our author which he does quite through his Georgic. In one place he propoſes him as a pattern in that great work, where, addreſſing to his country, he ſays,*

——tibi res antiquæ laudis et artis
Ingredior, ſanctos auſus recludere fontes;
Aſcræumque cano, Romano per oppida, carmen.
Lib. 2.

For thee my tuneful accents will I raiſe,
And treat of arts diſclos'd in ancient days,
Once more unlock for thee the ſacred ſpring,
And old Aſcræan verſe in Roman cities ſing.
DRYDEN.

He begins the Georgic with an explanation of the title of the Works and Days.

Quid faciat lætas ſegetes, quo ſidere terram
Vertere, &c.
What makes a plenteous harveſt, when to turn
The fruitly ſoil, and when to ſow the corn.
DRYDEN.

for by Works is meant the art of agriculture, and by Days the proper ſeaſons for works. See farther in my Diſcourſe on the Writings of Heſiod.

To him alone, to his great will we owe,
That we exiſt, and what we are below.
Whether we blaze among the ſons of fame,
Or live obſcurely, and without a name,
Or noble or ignoble, ſtill we prove
Our lot determin'd by the will of Jove.
With eaſe he lifts the peaſant to a crown,
With the ſame eaſe he caſts the monarch down;
With eaſe he clouds the brighteſt name in night,
And calls the meaneſt to the faireſt light;
At will he varies life through ev'ry ſtate,
Unnerves the ſtrong, and makes the crooked ſtrait.
Such Jove, who thunders terrible from high,
Who dwells in manſions far above the ſky.
Look down, thou pow'r ſupreme, vouchſafe thine aid,
And let my judgment be by juſtice ſway'd;
O hear my vows, and thine aſſiſtance bring,
While truths undoubted I to Perſes ſing.
As here on earth we tread the maze of life,
The minds divided in a double ſtrife;
One by the wiſe is thought deſerving fame,
And this attended by the greateſt ſhame,
The diſmal ſource whence ſpring pernicious jars,
The baneful fountain of deſtructive wars,
Which, by the laws of arbitrary fate,
Who follow, though by nature taught to hate;
From night's black realms this took its odious birth
And one Jove planted in the womb of earth,
The better ſtrife, by this the ſoul is fir'd
To arduous toils, nor with theſe toils is tir'd;
One ſees his neighbour with laborious hand,
Planting his orchard, or manuring land;
He ſees another with induſtrious care,
Materials for the building are prepare;

Idle himſelf he ſees them haſte to riſe,
Obſerves their growing wealth with envious eyes,
With emulation fir'd, beholds their ſtore.
And toils with joy who never toil'd before:
The artiſt envies what the artiſt gains,
The bard the rival bard's ſucceſsful ſtrains.
Perſes attend, my juſt decrees obſerve,
Nor from thy honeſt labour idly ſwerve;
The love of ſtrife, that joys in evils, ſhun,
Nor to the forum from thy duty run.
How vain the wranglings of the bar to mind,
While Ceres, yellow goddeſs, is unkind!
But when propitious ſhe has heap'd your ſtore,
For others you may plead, and not before;
But let with juſtice your contentions prove,
And be your counſels ſuch as come from Jove;
Not as of late when we divided lands,
You graſp'd at all with avaricious hands;
When the corrupted bench, for bribes well known,
Unjuſtly granted more than was your own.
Fools, blind to truth! nor knows their erring ſoul
How much the half is better than the whole,
How great the pleaſure wholeſome herbs afford,
How bleſs'd the frugal, and an honeſt board!
Would the immortal gods on men beſtow
A mind, how few the wants of life to know,
They all the year from labour free might live
On what the bounty of a day would give,
They ſoon the rudder o'er the ſmoke would lay,
And let the mule and ox at leiſure ſtray:
This ſenſe to man the king of gods denies,
In wrath to him who daring rob'd the ſkies;
Dread ills the god prepar'd, unknown before,
And the ſtol'n fire back to his heav'n he bore;
But from Prometheus 'twas conceal'd in vain,
Which for the uſe of man he ſtole again,
And, artful in his fraud, brought from above,
Clos'd in a hollow cane, deceiving Jove:
Again defrauded of celeſtial fire,
Thus ſpoke the cloud-compelling god in ire:
Son of Iäpetus, o'er ſubtle, go,
And glory in thy artful theft below;
Now of the fire you boaſt by ſtealth retriev'd,
And triumph in almighty Jove deceiv'd;
But thou too late ſhall find the triumph vain,
And read thy folly in ſucceeding pain;
Poſterity the ſad effect ſhall know,
When, in purſuit of joy, they graſp their woe.
He ſpoke, and told to Mulciber his will,
And, ſmiling, bade him his commands fulfil,
To uſe his greateſt art, his niceſt care,
To frame a creature exquiſitely fair,
To temper well the clay with water, then
To add the vigour and the voice of men,
To let her firſt in virgin luſtre ſhine,
In form a goddeſs, with a bloom divine:
And next the ſire demands Minerva's aid,
In all her various ſkill to train the maid,
Bids her the ſecrets of the loom impart,
To caſt a curious thread with happy art.
And golden Venus was to teach the fair,
The wiles of love, and to improve her air,
And then, in awful majeſty, to ſhed
A thouſand graceful charms aroud her head:

Next Hermes, artful god, muſt form her mind,
One day to torture, and the next be kind,
With manners all deceitful, and her tongue
Fraught with abuſe, and with detraction hung.
Jove gave the mandate; and the gods obey'd.
Firſt Vulcan form'd of earth the bluſhing maid;
Minerva next perform'd the taſk aſſign'd,
With ev'ry female art adorn'd her mind.
To dreſs her Suada, and the Graces join;
Around her perſon, lo! the di'monds ſhine.
To deck her brows the fair treſs'd ſeaſons bring!
A garland breathing all the ſweets of ſpring.
Each preſent Pallas gives it proper place,
And adds to ev'ry ornament a grace.
Next Hermes taught the fair the heart to move,
With all the falſe alluring arts of love,
Her manners all deceitful, and her tongue
With falſehoods fruitful, and detraction hung.
The finiſh'd maid the gods Pandora call,
Becauſe a tribute ſhe receiv'd from all:
And thus, 'twas Jove's command, the ſex began,
A lovely miſchief to the ſoul of man.
When the great ſire of gods beheld the fair,
The fatal guile, th' inevitable ſnare,
Hermes he bids to Epimethus bear.
Prometheus mindful of his theft above,
Had warn'd his brother to beware of Jove,
To take no preſent that the god ſhould ſend,
Leſt the fair bribe ſhould ill to man portend;
But he, forgetful, takes his evil fate,
Accepts the miſchief, and repents too late.
Mortals at firſt a bliſsful earth enjoy'd,
With ills untainted, nor with cares annoy'd;
To them the world was no laborious ſtage,
Nor fear'd they then the miſeries of age;
But ſoon the ſad reverſion they behold,
Alas! they grow in their afflictions old;
For in her hand the nymph a caſket bears,
Full of diſeaſes and corroding cares,
Which open'd, they to taint the world begin,
And hope alone remains entire within.
Such was the fatal preſent from above,
And ſuch the will of cloud-compelling Jove:
And now unnumber'd woes o'er mortals reign,
Alike infected is the land and main;
O'er human race diſtempers ſilent ſtray,
And multiply their ſtrength by night and day:
'Twas Jove's decree they ſhould in ſilence rove:
For who is able to contend with Jove!
And now the ſubject of my verſe I change;
To tales of profit and delight I range;
Whence you may pleaſure and advantage gain,
If in your mind you lay the uſeful ſtrain.
Soon as the deathleſs gods were born, and man,
A mortal race, with voice endow'd, began,
The heav'nly pow'rs from high their work behold,
And the firſt age they ſtyle an age of gold.
Men ſpent a life like gods in Saturn's reign,
Nor felt their mind a care, nor body pain;
From labour free, they ev'ry ſenſe enjoy;
Nor could the ills of time their peace deſtroy;
In banquets they delight, remov'd from care;
Nor troubleſome old age intruded there:
They die, or rather ſeem to die, they ſeem
From hence tranſported in a pleaſing dream;

The fields, as yet untill'd, their fruits afford,
And fill a ſumptuous, and unenvy'd board:
Thus, crown'd with happineſs their ev'ry day,
Serene and joyful, paſs'd their lives away.
When in the grave this race of men was laid,
Soon was a world of holy demons made,
Aërial ſpirits, by great Jove deſign'd,
To be on earth the guardians of mankind;
Inviſible to mortal eyes they go,
And mark our actions, good, or bad, below;
Th' immortal ſpies with watchful care preſide,
And thrice ten thouſand round their charges glide:
They can reward with glory, or with gold;
A pow'r they by divine permiſſion hold.
Worſe than the firſt, a ſecond age appears,
Which the celeſtials call the ſilver years.
The golden age's virtues are no more;
Nature grows weaker than ſhe was before;
In ſtrength of body mortals much decay;
And human wiſdom ſeems to fade away.
An hundred years the careful dames employ,
Before they form'd to man th' unpoliſh'd boy;
Who when he reach'd his bloom, his age's prime,
Found, meaſur'd by his joys, but ſhort his time.
Men, prone to ill, deny'd the gods their due,
And by their follies, made their days but few.
The altars of the bleſs'd neglected ſtand,
Without the off'rings which the laws demand;
But angry Jove in duſt this people laid,
Becauſe no honours to the gods they paid.
This ſecond race, when clos'd their life's ſhort ſpan,
Was happy deem'd beyond the ſtate of man;
Their names were grateful to their children made;
Each paid a rev'rence to his father's ſhade.
And now a third, a brazen people riſe,
Unlike the former, men of monſtrous ſize:
Strong arms extenſive from their ſhoulders grow,
Their limbs of equal magnitude below;
Potent in arms, and dreadful at the ſpear,
They live injurious, and devoid of fear:
On the crude fleſh of beaſts they feed alone,
Savage their nature, and their hearts of ſtone;
Their houſes braſs, of braſs the warlike blade,
Iron was yet unknown, in braſs they trade:
Furious, robuſt, impatient for the fight,
War is their only care, and ſole delight,
To the dark ſhades of death this race deſcend,
By civil diſcords, an ignoble end! [ed might,
Strong though they were, death quell'd their boaſt-
And forc'd their ſtubborn ſouls to leave the light.
To theſe a fourth, a better race ſucceeds,
Of godlike heroes, fam'd for martial deeds;
Them demigods, at firſt, their matchleſs worth
Proclaim aloud all through the boundleſs earth,
Theſe, horrid wars, their love of arms deſtroy,
Some at the gates of Thebes, and ſome at Troy.
Theſe, for the brothers fell, deteſted ſtrife!
For beauty thoſe, the lovely Grecian wife!
To theſe does Jove a ſecond life ordain,
Some happy ſoil far in the diſtant main,
Where live the hero-ſhades in rich repaſt,
Remote from mortals of a vulgar caſt:
There in the iſland of the bleſs'd they find,
Where Saturn reigns, an endleſs calm of mind;
And there the choiceſt fruits adorn the fields,
And thrice the fertile year a harveſt yields.
O! would I had my hours of life began
Before this fifth, this ſinful race of man;
Or had I not been call'd to breathe the day,
Till the rough iron age had paſs'd away:
For now, the times are ſuch, the gods ordain,
That every moment ſhall be wing'd with pain;
Condemn'd to ſorrows, and to toil we live;
Reſt to our labour death alone can give;
And yet, amid the cares our lives annoy,
The gods will grant ſome intervals of joy:
But how degen'rate is the human ſtate!
Virtue no more diſtinguiſhes the great;
No ſafe reception ſhall the ſtranger find;
Nor ſhall the ties of blood or friendſhip bind;
Nor ſhall the parent, when his ſons are nigh,
Look with the fondneſs of a parent's eye,
Nor to the ſire the ſon obedience pay,
Nor look with rev'rence on the locks of gray,
But O! regardleſs of the pow'rs divine,
With bitter taunts ſhall load his life's decline.
Revenge and rapine ſhall reſpect command,
The pious, juſt, and good, neglected ſtand.
The wicked ſhall the better man diſtreſs,
The righteous ſuffer, and without redreſs;
Strict honeſty, and naked truth, ſhall fail,
The perjur'd villain in his arts prevail.
Hoarſe envy ſhall, unſeen, exert her voice,
Attend the wretched, and in ill rejoice.
At laſt fair modeſty and juſtice fly,
Rob'd their pure limbs in white, and gain the ſky,
From the wide earth they reach the bleſt abodes,
And join the grand aſſembly of the gods,
While mortal men, abandon'd to their grief,
Sink in their ſorrows, hopeleſs of relief.
While now my fable from the birds I bring,
To the great rulers of the earth I ſing.
High in the clouds a mighty bird of prey
Bore a melodious nightingale away;
And to the captive, ſhiv'ring in deſpair,
Thus, cruel, ſpoke the tyrant of the air.
Why mourns the wretch in my ſuperior power?
Thy voice avails not in the raviſh'd hour;
Vain are thy cries; as my deſpotic will,
Or I can fet thee free, or I can kill.
Unwiſely who provokes his abler foe,
Conqueſt ſtill flies him, and he ſtrives for woe.
Thus ſpoke th' enſlaver with inſulting pride.
O! Perſes, juſtice ever be thy guide:
May malice never gain upon thy will,
Malice that makes the wretch more wretched ſtill.
The good man, injur'd, to revenge is ſlow,
To him the vengeance is the greater woe.
Ever will all injurious courſes fail,
And juſtice ever over wrongs prevail;
Right will take place at laſt, by fit degrees;
This truth the fool by ſad experience ſees.
When ſuits commence, diſhoneſt ſtrife the cauſe,
Faith violated, and the breach of laws,
Enſue; the cries of juſtice haunt the judge,
Of bribes the glutton, and of ſin the drudge.
Through cities then the holy demon runs,
Unſeen, and mourns the manners of their ſons,

Disperſing evils, to reward the crimes
Of thoſe who baniſh juſtice from the times.
Is there a man whom incorrupt we call,
Who ſits alike unprejudic'd to all,
By him the city flouriſhes in peace,
Her borders lengthen and her ſons increaſe;
From him far-ſeeing Jove will drive afar
All civil diſcord, and the rage of war.
No days of famine to the righteous fall,
But all is plenty, and delightful all;
Nature indulgent o'er their land is ſeen,
With oaks high tow'ring are their mountains green,
With heavy maſt their arms diffuſive bow,
While from their trunks rich ſtreams of honey flow;
Of flocks untainted are their paſtures full,
Which ſlowly ſtrut beneath their weight of wool;
And ſons are born the likeneſs of their ſire,
The fruits of virtue, and a chaſte deſire:
O'er the wide ſeas for wealth they need not roam,
Many and laſting are their joys at home.
Not thus the wicked, who in ill delight,
Whoſe daily acts pervert the rules of right,
To theſe the wiſe diſpoſer, Jove, ordains,
Repeated loſſes, and a world of pains:
Famines and plagues are, unexpected, nigh:
Their wives are barren, and their kindred die;
Numbers of theſe at once are ſweep'd away;
And ſhips of wealth become the ocean's prey.
One ſinner oft provokes th' avenger's hand;
And often one man's crimes deſtroy a land.
Exactly mark, ye rulers of mankind,
The ways of truth, nor be to juſtice blind;
Conſider all ye do, and all ye ſay,
The holy demons to their god convey,
Aërial ſpirits, by great Jove deſign'd,
To be on earth the guardians of mankind;
Inviſible to mortal eyes they go,
And mark our actions, good, or bad, below;
Th' immortal ſpies with watchful care preſide,
And thrice ten thouſand round their charges glide.
Juſtice, unſpotted maid, deriv'd from Jove,
Renown'd, and reverenc'd by the gods above,
When mortals violate her ſacred laws,
When judges hear the bribe, and not the cauſe,
Cloſe by her parent-god behold her ſtand,
And urge the puniſhment their ſins demand.
Look in your breaſts, and there ſurvey your crimes,
Think, O ye judges! and reform betimes,
Forget the paſt, nor more falſe judgments give,
Turn from your ways betimes, O turn and live!
Who, full of wiles, his neighbour's harm contrives,
Falſe to himſelf, againſt himſelf he ſtrives;
For he that harbours evil in his mind,
Will from his evil thoughts but evil find;
And lo! the eye of Jove, that all things knows,
Can, when he will, the heart of man diſcloſe;
Open the guilty boſom all within,
And trace the infant thoughts of future ſin.
O! when I hear the upright man complain,
And, by his injuries, the judge arraign,
If to be wicked is to find ſucceſs,
I cry, and to be juſt to meet diſtreſs.
May I nor mine the righteous path purſue,
Ut int'reſt only ever keep in view:
But by reflection better taught, I find
We ſee the preſent, to the future blind.
Truſt to the will of Jove, and wait the end,
And good ſhall always your good acts attend.
Theſe doctrines, Perſes, treaſure in thy heart,
And never from the paths of juſtice part:
Never by brutal violence be ſway'd;
But be the will of Jove in theſe obey'd.
In theſe the brute creation men exceed,
They, void of reaſon, by each other bleed,
While man by juſtice ſhould be keep'd in awe,
Juſtice of nature, well ordain'd, the law.
Who right eſpouſes through a righteous love,
Shall meet the bounty of the hands of Jove;
But he that will not be by laws confin'd,
Whom not the ſacrament of oaths can bind,
Who, with a willing ſoul, can juſtice leave,
A wound immortal ſhall that man receive;
His houſe's honour daily ſhall decline:
Fair flouriſh ſhall the juſt from line to line.
O! Perſes, fooliſh Perſes, bow thine ear
To the good counſels of a ſoul ſincere.
To wickedneſs the road is quickly found,
Short is the way, and on an eaſy ground.
The paths of virtue muſt be reach'd by toil,
Arduous and long, and on a rugged ſoil,
Thorny the gate, but when the top you gain,
Fair is the future, and the proſpect plain,
Far does the man all other men excel,
Who, from his wiſdom, thinks in all things well,
Wiſely conſid'ring, to himſelf a friend,
All for the preſent beſt, and for the end:
Nor is the man without his ſhare of praiſe,
Who well the dictates of the wiſe obeys;
But he that is not wiſe himſelf, nor can
Harken to wiſdom, is a uſeleſs man.
Ever obſerve, Perſes, of birth divine,
My precepts, and the profit ſhall be thine;
Then famine always ſhall avoid thy door,
And Ceres, fair-wreath'd goddeſs, bleſs thy ſtore.
The ſlothful wretch, who lives from labour free,
Like drones, the robbers of the painful bee,
Has always men, and gods, alike his foes;
Him famine follows with her train of woes.
With cheerful zeal your mod'rate toils purſue,
That your full barns you may in ſeaſon view.
The man induſtrious ſtranger is to need,
A thouſand flocks his fertile paſtures feed;
As with the drone with him it would not prove,
Him men and gods behold with eyes of love.
To care and labour think it no diſgrace,
Falſe pride! the portion of the ſluggard race:
The ſlothful man, who never work'd before,
Shall gaze with envy on thy growing ſtore,
Like thee to flouriſh, he will ſpare no pains;
For lo! the rich virtue and glory gains.
Strictly obſerve the wholeſome rules I give,
And, bleſs'd in all, thou like a god ſhalt live.
Ne'er to thy neighbour's goods extend thy cares,
Nor be neglectful of thine own affairs.
Let no degen'rate ſhame debaſe thy mind,
Shame that is never to the needy kind;
The man that has it will continue poor;
He muſt be bold that would enlarge his ſtore.

But raviſh not, depending on thy might,
Injurious to thyſelf, another's right.
Who, or by open force, or ſecret ſtealth,
Or perjur'd wiles, amaſſes heaps of wealth,
Such many are, whom thirſt of gain betrays,
The gods, all ſeeing, ſhall o'ercloud his days;
His wife, his children, and his friends, ſhall die,
And, like a dream, his ill-got riches fly:
Nor leſs, or to inſult the ſuppliant's cries,
The guilt, or break through hoſpitable ties.
Is there who, by inceſtuous paſſion led,
Pollutes with joys unclean his brother's bed;
Or who, regardleſs of his tender truſt,
To the poor helpleſs orphan proves unjuſt;
Or, when the father's fatal day appears,
His body bending through the weight of years,
A ſon who views him with unduteous eyes,
And words of comfort to his age denies,
Great Jove vindictive ſees the impious train,
And, equal to their crimes, inflicts a pain.
Theſe precepts be thy guide thro' life to ſteer:
Next learn the gods immortal to revere:
With unpolluted hands, and heart ſincere,
Let from your herd, or flock, an off'ring riſe;
Of the pure victim burn the white fat thighs;
And to your wealth confine the ſacrifice.
Let the rich fumes of od'rous incenſe fly,
A grateful ſavour, to the pow'rs on high;
The due libation nor neglect to pay,
When ev'ning cloſes, or when dawns the day:
Then ſhall thy work, the gods thy friends, ſucceed;
Then may you purchaſe farms, nor ſell through need.
Enjoy thy riches with a lib'ral ſoul,
Plenteous the feaſt, and ſmiling be the bowl;
No friend forget, nor entertain thy foe,
Nor let thy neighbour uninvited go.
Happy the man with peace his days are crown'd,
Whoſe houſe an honeſt neighbourhood ſurround;
Of foreign harms he never ſleeps afraid,
They, always ready, bring their willing aid;
Cheerful, ſhould he ſome buſy preſſure feel,
They lend an aid beyond a kindred's zeal;
They never will conſpire to blaſt his fame:
Secure he walks, unſully'd his good name:
Unhappy man, whom neighbours ill ſurround,
His oxen die oft' by a treach'rous wound,
Whate'er you borrow of your neighbour's ſtore,
Return the ſame in weight, if able, more;
So to yourſelf will you ſecure a friend;
He never after will refuſe to lend.
Whatever by diſhoneſt means you gain,
You purchaſe an equivalent of pain.
To all a love for love return: contend
In virtuous acts to emulate your friend.
Be to the good thy favours unconfin'd;
Neglect a ſordid, and ungrateful mind.
From all the gen'rous a reſpect command,
While none regard the baſe ungiving hand:
The man who gives from an unbounded breaſt,
Though large the bounty, in himſelf is bleſs'd:
Who raviſhes another's right ſhall find,
Though ſmall the prey, a deadly ſting behind.
Content, and honeſtly enjoy your lot,
And often add to that already got;
From little oft' repeated, much will riſe,
And of thy toil the fruits ſalute thine eyes.
How ſweet at home to have what life demands,
The juſt reward of our induſtrious hands,
To view our neighbour's bliſs without deſire,
To dread not famine, with her aſpect dire!
Be theſe thy thoughts, to theſe thy heart incline,
And lo! theſe bleſſings ſhall be ſurely thine.
When at your board your faithful friend you greet,
Without reſerve, and lib'ral be the treat:
To ſtint the wine a frugal huſband ſhows,
When from the middle of the caſk it flows.
Do not, by mirth betray'd, your brother truſt,
Without a witneſs, he may prove unjuſt:
Alike it is unſafe for men to be,
With ſome too diffident, with ſome too free.
Let not a woman ſteal your heart away,
By tender looks, and her apparel gay;
When your abode ſhe languiſhing inquires,
Command your heart, and quench the kindling fires;
If love ſhe vows, 'tis madneſs to believe,
Turn from the thief, ſhe charms but to deceive:
Who does too raſhly in a woman truſt,
Too late will find the wanton proves unjuſt.
Take a chaſte matron, partner of your breaſt,
Contented live, of her alone poſſeſs'd;
Then ſhall you number many days in peace,
And with your children ſee your wealth increaſe;
Then ſhall a duteous careful heir ſurvive,
To keep the honour of the houſe alive.
If large poſſeſſions are in life thy view,
Theſe precepts with aſſiduous care purſue.

NOTES ON THE FIRST BOOK OF THE WORKS AND DAYS.

Ver. 1. ARISTARCHUS, and ſome others, are for having this exordium left out, as not a part of the poem. Praxiphanes, a ſcholar of Theophraſtus, ſays, he had a copy which begun from this verſe.

As here on earth we tread the maze of life.

The reaſon which Proclus aſſigns for it not being writ by Heſiod, is, that he who begun his Theogony, with an invocation to the muſes from Helicon, and who was himſelf brought up at the foot of that mountain, would never call on the Pierian muſes. A weak objection, and unworthy a critic! the diſtinction is as follows. The muſes are ſaid

to be the daughters of Jove, that is, of that power by which we are enabled to perform. Pieria is ſaid to be the birth-place of the muſes, and the ſeat of Jove, that is, the mind, whence all our conceptions ariſe. Helicon is a place of reſidence to the muſes, where they celebrate the praiſes of their father, and ſearch into the knowledge of antiquity. In this work Heſiod inſtructs his brother in the art of tillage and morality, all which doctrines proceed from his own experience, his own natural ſentiments, and therefore he invokes the muſes from Pieria: his account of the Generation of the Gods, being received, partly from books, and partly from oral tradition, he invokes them from Helicon. Tzetz. Here the Scholiaſt talks as if he did not doubt theſe lines being genuine.

Ver. 13. This exordium was certainly admired by Horace, who, in one of his odes, has elegantly tranſlated this part of it.

Valet ima ſummis
Mutare, et inſignem attenuat, deus,
Obſcura promens.

I muſt acknowledge, after all, what Pauſanias ſays, in his Bœotics. that this beginning was not in the copy which he ſaw in lead, is a great argument againſt thoſe who think it of Heſiod: and Plutarch likewiſe, in his Sympoſiacs, begins this poem according to Pauſanias.

Ver. 23. The words of Heſiod are theſe; "there "is not one kind of contention only on earth, but "there are two, which divide the mind." In the Theogony he makes but one contention, and that ſprung from night, ſoon after the birth of the fates, and other evil deities, which are of the ſame parent. From contentioo ſprung all that is hurtful to gods and men, as plagues, wars, ſecret bloodſhed, ſlander, &c. The ſecond contention, emulation, which was planted in the womb of earth by Jove, muſt be after the invention of arts; for before was no room for emulation. The contention firſt mentioned, was before the wars of the giants. Of that ſee farther in the notes to the Theogony.

Ver. 29. The truth of this will plainly appear, when we conſider the neceſſity of many of our actions, which, though involuntary, are rendered neceſſary by the cauſe. By involuntary I do not mean without the conſent of the will, becauſe it is certain that muſt precede the action, but what we had rather we had no occaſion to do.

Ver. 43. Hear Plato on this paſſage; his words are theſe: "And ſo it is neceſſary," ſays Heſiod, or according to Heſiod, "it ſhould be among all "of the ſame profeſſion, that they may be filled with envy, and contention." Plato certainly miſtakes the poet in this, when he imagines that Heſiod thinks it abſolutely neceſſary for the better government of the world. All that he means is, he finds it ſo in nature; and, from our appetites natural to us, we cannot avoid it. The reſt of the note by Mr. Theobald. Ariſtotle in his ſecond book of Rhetoric, in the chapter on envy, quotes this paſſage of Heſiod, though he does not name the author, with this introduction, "becauſe men "contend, for honour's ſake, with their rivals; "and with all who have paſſions and deſires like "themſelves, there is a neceſſity that they muſt "envy ſuch;" hence it has been ſaid, *και κέραμευς κεραμεῖ κοτεει.*

Ver. 55. The ſin of Perſes was reckoned by the ancients one of the moſt heinous. Seneca begs he may know to divide with his brother, as if he eſteemed it one of the moſt neceſſary duties of man. This cuſtom of dividing the father's patrimony by lot among all the children, is likewiſe alluded to in the Odyſſes of Homer, Book 14.

Ver. 59. What a noble triumph is this over the avarice and injuſtice of his brother, and the partiality of the judges! How much like a philoſopher is this greatneſs of ſoul, in his contempt of ill got riches! What a conqueſt has he gained, though he loſt the cauſe, and ſuffered by the wickedneſs of his adverſary! He not only ſhows himſelf a happy man, but teaches him by whom he is moſt injured to be ſo too. I have taken the liberty to add this line, which is not in the original, as an explanation of this famous paſſage of our poet, which, and no other, I am certain muſt be his meaning:

How bleſs'd the frugal, and an honeſt board.

The *μαλαχη* and *ασφοδελος*, the firſt of which we generally render in Engliſh the mallows, and the latter the daffodil, the names of which I have not tranſlated, being of no conſequence to the beauty of this paſſage. Plutarch, in his Banqnet of the Seven Wiſe Men, commends as the wholeſomeſt of herbs; he mentions the *ανθερικος*, which Le Clerc tells us is a part of the *ασφοδελος*: the ſame critic alſo obſerves, from Scaliger, that it appears from this verſe that the ancients did eat the daffodil, or *ασφοδελος*.

Ver. 67. What the poet means by this, and the preceding lines, is, if we knew how few things are neceſſary for the ſupport of life, we ſhould not be ſo ſolicitous about it as we are; we ſhould not ſpend ſo much time in agriculture and navigation as we do. This expreſſion of laying the rudder over the ſmoke, alludes to the cuſtom of laying it to harden over the ſmoke at thoſe times in which they did not uſe it. Says Grævius on this verſe, it was cuſtomary to hang the rudders in the ſmoke, when the ſeaſon for ſailing was paſſed; by which they believed they were preſerved from rotting, and kept ſolid till the next ſeaſon. This we find likewiſe among the precepts in the ſecond book of this poem.

And o'er the ſmoke the well made rudder lay.
Ver. 327.

Which rule alſo Virgil has laid down in his Georgic, in his direction for tools of huſbandry:

Et ſuſpenſa focis explorat robora fumus. Lib. 1.

Ver. 69. Hear the Scholiaſt on this paſſage, on the invention of arts; men, ſays he, were at firſt ſimple and unexperienced; the art of agriculture, and all other, were entirely unknown; they knew not diſeaſes, nor the pangs of death; when they

died they expired on the ground, as if they knew not what they ſuffered. They enjoyed the fruit of the earth in common among them. Then were no rulers: for all were lords of themſelves: but when men grew προμηθεστεροι, which is the ſignification of Prometheus, more cunning, more apt to contrive, they departed from their primitive temperance, and conſequently their ſerenity. Then the uſe of fire was diſcovered, which was the ſource of all mechanical arts. *Tzetz.*

Ver. 71. It is beyond diſpute, that with the invention and improvement of arts, the luxury of men increaſed, and that diſeaſes were the effects of luxury.

And the ſtol'n fire back to the ſkies he bore.

This paſſage of the fable, moſt of the commentators have left untouched, as not knowing what to make of it. I think it muſt allude to the decay of arts and ſciences; which the ſucceeding verſe will farther explain.

Ver. 73. By Prometheus is ſurely meant, as before, προμηθεστεροι, wiſer men, who were as forward to recover or revive loſt arts, as to invent new.

Ver. 76. The original is εν κοιλω ναρθηκι; which expreſſion is uſed again in the Theogony, verſe 567 of the original, and 847 of my tranſlation: there is a curious comment on this paſſage in Tourneſort's account of the iſland of Skinoſa, in his voyage into the Levant; which I ſhall here give as near a tranſlation of as I can. "This "iſland abounds with the *ferula* of the ancients; "the old name of which is preſerved by the mo- "dern Greeks, who call it Nartheca, from Ναρθηξ: "it has a ſtalk five feet in height, and three inch- "es thick: every ten inches it has a knot that is "branchy, and covered with a hard bark: the "hollow of the ſtalk is full of white marrow, "which, when dry, takes fire like a match; which "fire continues a long while, and conſumes the "marrow by ſlow degrees, without doing any da- "mage to the bark; for which reaſon this plant "is uſed for carrying fire from one place to ano- "ther: our ſailors laid in a large ſtore of it: this "uſe of it is derived from early antiquity; and "may contribute to the explanation of a paſſage "in Heſiod, who, ſpeaking of the fire which Pro- "metheus ſtole from heaven, ſays, that he brought "it in ναρθηκι, *i. e.* in Latin *ferula*; this fable "doubtleſs ariſes from Prometheus diſcovering the "uſe of ſteel in ſtriking fire from the flint: and "Prometheus moſt probably made uſe of the mar- "row of the *ferula*, and inſtructed men how to "preſerve fire in the ſtalk of this plant.'

Ver. 112. "* The original is ορμους χρυσειους "εθεισάν χροΐ. They placed about her body orna- "ments of gold. A ſtrict regard ought always to "be paid to the original meaning of the ancient "author; if a liberty is took by the tranſlator, "for the better embelliſhing the poem, it is pro- "per to have a remark on that occaſion. The "danger ariſing from ſuch an omiſſion, is, that "the reader who depends on the tranſlation may "be miſled in facts; as from this paſſage he would "take it for granted, diamonds were in the days "of Heſiod, which does not appear from ορμους "χρυσειους. This obſervation will be good in "greater points." * How far I may be indulged in the liberty I have taken with this paſſage I know not; but I am ſure this part of her dreſs contributes more towards the beauty of the whole, than a golden necklace, which Valla has given her in his following tranſlation:

Aurea candenti poſuere monilia collo.

Ver. 121. To paſs over the poetical beauty of this allegory, let us come to the explication of it. To puniſh the crime of Prometheus, Jupiter ſends a woman on earth. How agreeable in the whole is the ſtory conducted! Vulcan firſt moulds her to form; that is after the uſe of fire was found out, of which Vulcan is called the god, by art men begun to embelliſh the works of nature: then all the inferior arts, which are meant by the other deities, conſpire to render the beauties of nature ſtill more charming. By theſe means the deſires of men grew ſtronger and impetuous, and plunged them on to ſuch exceſſive indulgence of their ſenſes, as brought on them the miſeries which the poet afterwards mentions.

Ver. 125. How admirable is the fable continued! Here is a virgin made of all the charms of art and nature, to captivate the eyes, and endowed with all the cunning of the ſex to gain on the heart, for that is the meaning of her being ſent by Hermes. Thus formed, παν δωρον, "having received a tribute from all the gods" to complete her, well may the poet call her δυλον αμηχανον, "a temptation that no art can withſtand." Here Prometheus, that is the wiſe man, who foreſees the event of things, warns his brother Epimetheus, that is, the man who is wiſe too late, to avoid the ſight of ſuch an aſſemblage of graces. Of Iäpetus, Prometheus, &c. and the deities here mentioned, ſee farther in the Theogony.

Ver. 140. Pandora's box may properly be took in the ſame myſtical ſenſe, with the apple in the book of Geneſis; and in that light the moral will appear without any difficulty.

Ver. 146. With what a ſorrowful ſolemnity theſe lines run, anſwerable to the ſenſe contained in them:

Αλλα δε μυρια λυγρα κατ' ανθρωπους αλαλησι,
Αλεη μεν γαρ γαια κακων, πλεη δε θαλασσα.

Some think the ſtory of Pandora, and the account we have from Moſes of the fall of man, were took from the ſame tradition. The curſe, indeed, pronounced againſt Adam, in the third chapter of Geneſis, is the ſame with this in the effect; but what weight this imagination may carry with it, I ſhall not undertake to determine. This ſtory is imitated, and in ſeveral lines tranſlated by Quillet, in his Callipædia, and by the late Dr. Parnell, in his poem, called, The Riſe of Women.

Ver. 160. It is certain, from this paſſage, that, according to the ſyſtem of our author in this poem, the golden age preceded the creation of woman, ſhe being ſent by Jupiter, who had then the

government of heaven. And agreeable to this, is the deſcription of the felicity of human ſtate, before Epimetheus had knowledge of Pandora. We muſt obſerve, that this does not coincide with his account in the Theogony, where, after Saturn's revenge on his father, the Furies, Contention, and all the conſequences of it, immediately appear.

Ver. 173. The notion of guardian angels has prevailed among many in almoſt all ages, and all countries. Paſſages of the like nature are frequent in both the Old and New Teſtament, and in Homer alſo; and, as Mr. Addiſon obſerves, Milton doubtleſs had an eye on this part of Heſiod, where he ſays,

Millions of ſpiritual creatures walk the earth
Unſeen, both when we wake and when we
ſleep. *Paradiſe Loſt.*

I cannot help taking particular notice of the beauty and uſe of our author's doctrine of guardian angels; he makes them παντη φοιτωντες επ' αιαν, "wandering all over the earth;" φυλασσουσι τε δικας, και σχετλια ἐργα, "they keep an account of actions, both juſt and unjuſt." Theſe ſentiments grafted in the minds of the people, and received as a point of faith by them, would make them always on their guard; and there being πλουτοδοται, "the diſpoſers of riches," would be ſufficient to induce them to good actions. The making them the inſtruments of Providence, to reward men according to their merits to each other in his life, is a doctrine ſo amiable, that if the truth of it cannot be proved, it ought never to be publicly argued againſt. Here the poet endeavours to deter his brother from any future injuſtice, by telling him all his actions are recorded; and that according to their merits, he ſhall be rewarded.

Ver. 185. Men of the former age were made of the earth, and the firſt elements, therefore more ſtrong of body than theſe of a mixed ſeed. The word φυη, here made uſe of for nature, is a metaphor taken from trees and plants. The verb is φυω, to plant, &c. *Tzetz.* Not much unlike this is the account we have from Moſes of the different generations of man in earlier times.

Ver. 206. All the commentators which I ever ſaw, ſeem to have entirely miſtook the ſenſe of this line; nor have Valla and Friſius entered into the meaning of the poet in their tranſlations: the firſt tranſlates εκ μελιαν

——— Dryadumque creata
Sanguine———

ſprung from the blood of the dryads, or wood-nymphs: and Friſius has it "quercubus ex duris," from hard oaks. I ſhall uſe the comment which Mr. Theobald has furniſhed me with on this occaſion, and in the ſame words in which he gave it to me.

Ζευς δε πατηρ τριτον αλλο γενος μεροπων ανθρωπων
Καλκειον ποιησ', ουκ αργυρῳ ουδεν ομοιον,
Εκ μελιαν δεινον τε και ομοριμον, οισιν Αρηος
Εργ' ἐμελε στονοεντα και υβριας.

I think I may venture to affirm, from the comments they have given it, that none of all the Greek commentators rightly underſtood this paſſage. I believe I may ſay the ſame of the Latin critics: Grævius, Le Clerc, and Hienſius, have paſſed the difficulty over in ſilence. Screvelius falls into the interpretation of the Greek ſcholiaſts; and Guietus, it is plain, ſaw nothing of what I apprehended to be the meaning of the poet; becauſe he makes an alteration of the text itſelf, changing εκ μελιαν into εκ τε μελης, *abſonum inordinatum*: this, too, he borrows from one of the conjectures of Tzetzes; who firſt, together with Moſcopylus and Proclus, tells us, that by εκμελιαν (for they all make but one word of it), the poet intends to inform us, that this race was made out of aſhen-trees; that is to ſay, of a firm and unperiſhable make: but was the ſame generation brazen and wooden too? It might much more reaſonably been called the wooden age, if Jupiter had formed the people out of trees. Heſiod, I am perſuaded, had no thought of obtruding ſuch a generation on us: beſides, as neither in the deſcription of the golden or ſilver age, the poet has given us any account of what materials the men were formed, why ſhould he do it here? In ſhort, let us rectify the pointing of the whole paſſage, and take the context along with us, and a very little ſagacity, I hope, will reſtore us the author's true meaning. I have a great ſuſpicion the verſes ought to be pointed thus:

Ζευς δε πατηρ τριτον αλλο γενος μεροπων ανθρωπων
Καλκειον ποιησ', ουκ αργυρῳ ουδεν ομοιον,
Εκ μηλιᾶν δεινον τε καὶ ὁμοριμον, οισιν Αρηος
Εργ' ἐμελε στονοεντα καὶ ὑβριας.

So εκ μελιαν δεινον τε και ομοριμον, will be "potent and dreadful at the ſpear." Εκ μελιαν, is the Doric genitive, inſtead of εκμελιων. Μελια is not only the aſh-tree, but is metaphorically uſed by Homer, and other poets, for the ſpear: ſo Iliad 2. in the deſcription of the Abantes.

Τωδ' αμ' ἑπαντες εποντο θοοι οπιθεν κομοωντες,
Αιχμηται, μεμαωντες ογκηστησι μελησι
Θωρηκας ρηξειν δηϊων αμφι στηθεσσι.

Down their broad ſhoulders falls a length of hair,
Their hands diſmiſs not the long lance in air,
But with protended ſpears, in fighting fields,
Pierce the tough corſlets, and the brazen ſhields.
POPE.

The Scholiaſt on the place, explains μελησι by the words δορασιν απο ωελιας ζυλα γινομενοις. "ſpears made out of the aſh tree" ſo in our poet, εκ μελιαν δεινον I take to be no more than δια των μελιων, or ταις μελιαις δεινον, "terrible with ſpears." Both the prepoſitions are indifferently uſed, in the ſame manner, by the beſt proſe writers, as well as the poets: ſo in Thucydides we have εκ των οπλων, for δια των οπλων *by* force of *arms*. It may not be unworthy a remark, and to ſtrengthen this conjecture, that Ovid, who had an eye on Heſiod, in the deſcription of the four ages, ſoon as he names

the brazen age, likewiſe diſtinguiſhes it by this propenſity to arms.

Tertia poſt illas ſucceſſit aënea proles,
Sævior ingeniis, et ad horrida promptior arma.

Ver. 208. Here the poet, ſpeaking of the giant race, ſays, ὐδὶ τι σιτον ησθιον, of which Schrevelius, Tzetzes, and other commentators, ſay they feed not on bread, or meat dreſſed, but tore and eat the limbs of beaſts.

Ver. 210. That there was a time when brazen arms were uſed, we may learn from Plutarch; who tells us, when Cimon, the ſon of Miltiades, carried the bones of Theſeus from the iſle of Scyros to Athens, he found interred with him a ſword, and the head of a ſpear, made of braſs.

Pauſanias, who mentions this fact, tells us, that iron was then begun to be uſed in war; but for brazen arms in heroical times, he gives the inſtances of Pyſander's ax, and the dart of Meriones, both from Homer. He likewiſe alleges the authority of the ſpear of Achilles, preſerved in the temple of Minerva at Phaſelis, and the ſword of Memnon, all of braſs, in the temple of Æſculapius in Nicomedia. Lucretius is a voucher, almoſt in the words of our author, for the antiquity and uſe of braſs before that of iron.

Poſteriùs ferri vis eſt æriſque reperta,
Sed priùs æris erat, quam ferri, cognitus uſus.

The remarks from Pauſanias and Lucretius, are by Mr. Theobald. See farther in the obſervation on line 253d of the Theogony.

Ver. 218. Exactly the ſame is the diſtinction Moſes makes in Geneſis: ſays he, "There were "giants in the earth in thoſe days;" and alſo after that, "when the ſons of God came unto the daugh- "ters of men, and they bare children to them, "the ſame became mighty men, which were of "old, men of renown. Chap. vi. ver. 4.

Here are plainly the age of giants, and the age of heroes.

Ver. 230. The fortunate iſlands, by the Greeks thought to be the ſeats of good men. Homer, Lycoperon, Plutarch, Philoſtratus, and Dion, as well as Heſiod, have mentioned, and unanimouſly agree, that they are fragrant fruitful fields, and meadows, as lovely to the eye as the mind of man can imagine. *Tzetz.* Agreeable to this, is that beautiful deſcription of Elyſium in the Æneis of Virgil.

Devenere locus lætos, et amæna vireta
Fortunatorum nemorum, ſedeſque beatas. Lib. vi.

——————They took their way,
Where long extended plains of pleaſure lay.
The blifsful ſeats of happy ſouls below. DRYDEN.

Pindar, in his ſecond Olympic, comes nearer to our poet, in his deſcription of thoſe ſeats of the happy:

——————ενθα μακαρων
Νασον ωκεανιδες
Αυραι περιπνεουσιν.

"Where the gales from the ocean, breathe "through the iſland of the bleſſed." I muſt here obſerve that Homer, in his account of Elyſium, judged very wrong, when he made Achilles ſay to Ulyſſes, "he would rather ſerve the pooreſt on "earth, than rule over the departed." Od. B. 11. Speaking thus dreadfully of a future ſtate, and of the happieſt condition of it, is no encouragement to the living.

Ver. 231. The original of this is omitted in many editions, but Grævius is for reſtoring it from a manuſcript which he had ſeen.

Ver. 234. Here he cannot mention the vices of his age without ſhowing the utmoſt deteſtation to them. We ſee the ſame purity of manners, the ſame air of piety, running through all his works. See the Life.

Ver. 246. This paſſage Ovid has beautifully tranſlated in his Metamorphoſes; and indeed ſeveral parts of Heſiod are well improved by that fine poet. In the diviſion of the ages he differs from our author, and of five makes but four. "It is "the opinion of ſome, that it would have been "better, if Ovid had paid as great regard to the "hiſtorical relations, as to the beauties of thoſe "whom he imitates."

Ver. 268. Here the poet likens himſelf to the nightingale, and the judges to the birds of prey. *Tzetz.* This tranſition, from the five ages to the fable of the hawk and the nightingale, is a little abrupt. The remaining part of this book contains a beautiful, though ſmall body of moral philoſophy.

Ver. 316. By this antitheſis how lively is the ſtate of the righteous repreſented. This it is gives ſuch a beauty to the firſt and thirty-ſeventh Pſalms, where the natural ſtate of the juſt and unjuſt is truly deſcribed, and in many circumſtances like this of our poet

Ver. 325. Examples of this may be found in hiſtory. When a vengeance of this kind happens, the execution of it depends on the degree of the perſon guilty, and the nature of the crime committed, and againſt whom, as that of Paris, who was the ſon of a powerful prince; and who, in breaking the laws of hoſpitality, offended a powerful people, by which he involved his country in ruin.

Ver. 326. He now turns the diſcourſe from his brother to the judges, by whom likewiſe he had been injured. He exhorts them to the purſuit of juſtice, on theſe two conſiderations: *firſt*, Becauſe the wicked man, who plots the deſtruction of another, at the ſame time works his own unhappineſs; and, *ſecondly*, Becauſe the gods are not only conſcious of all our actions, but our very thoughts.

Ver. 330. This repetition of the circumſpection of the guardian angels, and the puniſhment of the unrighteous, is to keep the crime of which they were guilty freſh in the memory of his brother and the judges. Repetitions of this nature are frequent in the Greek poets, and more particularly in Homer than any other.

Ver. 341. The original has it, that Juſtice reminds Jove of human wickedneſs, and ſolicits him that the people may be puniſhed for the offences of their rulers.

——————οφρ' αποτισῃ
Δημος ατασθαλιας βασιλῆων——————

The Greek commentators are all satisfied with this sense. Monsieur Le Clerc indeed reasonably objects, that if the goddess, who presides over justice, obtains, that the public should suffer for the crimes of their rulers, which they dislike and condemn, where is the justice of it? And he quotes the well-known axiom of Horace, "Delirant reges, plectuntur achivi," and refers us to a foregoing passage of our own author; in which he says, a whole city is often destroyed for the guilt of a single person: but it is not obvious to me that this is the poet's meaning. Let us examine the sentiment with the context, and that will best determine us in the meaning here. "Justice (says he) sitting by her father Jove, when any one wrongs her, complains of the iniquity of man, that the people may suffer for the offences of their governors; therefore, ye governors, take heed of pronouncing unjust judgments, for every man's evil machinations fall on his own head." If a man's own ill devices fall on himself, it is most absurd for Justice to solicit that the vulgar should be punished for the crimes of their rulers. In short, though all the copies agree to support this argument, the alteration of a single letter will give it a turn of plain reason, and make all the parts consonant to each other. I propose this change only as a private suspicion; because, as it stands at present, I am at a loss how to satisfy myself in the sense. I would suppose that the author might have wrote it,

Και ῥ' οποτ' αν τις μιν βλαπτῃ, σκολιων ονοταζων,
Αυτικα, παρ δι πατρι καθεζομενη κρονιωνι,
Γηρυετ' ανθρωπων αδικον νοον, εφρ' αποτισῃ
Τημος αταθαλιας βασιληων.

The only change that is made in the text is, of δημος into τημος; but the change from thence in the sense, is very strong and signal: "When Justice is injured, she, sitting by Jove, immediately exclaims against human iniquity, that he might then, or at that instant, punish the enormities of the judges: therefore, ye judges, take heed to be more righteous: for the iniquity of every one falls upon his own head." The words so altered, certainly bear such a sense; and the Greek, I think, without any strain of the language, admits it. Τημος, then, is an adverb of time, which answers to ημος, when; the want of which is supplied by οποτε, which is the same sense with ημος, and by οφρα and αυτικα, by which the connection is entirely grammatical: and then αποτιω does not only signify *luo, pœnas do*, but likewise *punio, ulciscor*, and governs an accusative case, as Stephens, and other lexicon writers, take notice, and prove by authorities: but, as I said before, I only submit it to judgment. I will conclude this remark with an observation that will not a little strengthen it; which is, that the sense I would give this passage is exactly conformable to what our poet says but few verses before, which are, in your translation, these:

When suits commence, dishoneſt strife the cause,
Faith violated, and the breath of laws,
Ensue; the cries of justice haunt the judge.
[This whole note by Mr. Theobald.]

Ver. 354. Plutarch would have these lines left out as blasphemy, and unworthy Hesiod. I must beg leave to dissent from him. The poet here says, with the greatest solemnity, "may I nor mine be just, if to be so is to be unfortunate, and if to be wicked is to be successful," as we see in life it often happens. I think he takes a bold scope, and well solves the objection of Plutarch in this line:

Αλλα τα γ' ωπω εολπα τελειν δια τερπικεραυνον.

But this is my comfort, "I hope it is not by the consent of Jove." *Tzetz.*

Ver. 372. Here the poet has a regard to real merit, wisely considering that a good act is sometimes done, and the author of it ignorant of the good he does: therefore consequently void of the merit of it; as on the contrary, a man may commit a crime without the consent of his will, and is therefore guiltless.

Ver. 382. The beauty of this passage is admirable; and it will appear the more so, when we consider the truth of the doctrine in this poetical dress. The road to what he here calls wickedness is soon found; that is, our appetites are no sooner capable of enjoying their proper objects, but such objects are every day presenting themselves to us; the way to what he calls virtue, and which is really so, is truly rugged, because we must resist the dictates of nature, if we consider ourselves as mere sensual beings, and reject those things which would give us immediate pleasure.

Ver. 396. After the poet has endeavoured to excite his brother to acts of justice, by moral precepts, he reminds him of his birth, intimating that by acts of virtue the honour of a family is supported. *Tzetz.* See farther in the Life.

Ver. 424. How proper is this, after he had recommended boldness to his brother, lest he should mistake that which he designed as an honest resolution boldly pursued, and convert the best advice to the prejudice of others!

Ver. 448. The thighs were offered to the gods, because of the honour due to them, those parts being of greatest service to animals in walking, and generating; and thereby, says Tzetzes, they commended themselves, and their undertakings, to divine protection.

We find the same offerings ordained by the Levitical laws, though perhaps not just on the same occasion. How near the ceremonies agreed is uncertain; for here our author is deficient. We find the same strict command in Leviticus, that the victim should be pure. "And if his offering, for "a sacrifice of peace offering, unto the Lord, be "of the flock, male or female, he shall offer it "without blemish, Chap. iii ver. 6." There likewise the fat, and those parts which contribute most to generation, are more particularly appropriated to that use. "And he shall offer an offering "made by fire unto the Lord; the fat thereof, "and the whole rump, it shall he take off hard "by the back bone; and the fat that covereth "the inwards, and all the fat that is on the in-"wards. And the two kidneys, and the fat that "is on them, which is by the flanks, and the caul

" above the liver, with the kidneys, it ſhall he take " away. And the prieſt ſhall burn them on the " altar, it is the food of the offering made by fire, " for a ſweet ſavour. All the fat is the Lord's, " ver. 9, 15, 16." And in the ſame book are the offerings of frankincenſe, and drink offerings, inſtituted. In the Iliad of Homer, book i. the thighs are offered to Apollo, as likewiſe in the Odyſſes, book xxi. and in ſeveral other parts of theſe two poems.

Ver. 470. Our author in his rules of morality does not recommend an obſervation of the laws only, but all that may conduce to the true enjoyment of life, to ourſelves, our friends, and our neighbours, as liberality, a particular regard to good men, in our payments to return more than we borrow; none of which we are obliged to by any laws; all this, therefore, muſt proceed from a generous ſoul, from a knowledge of the world, and a juſt and prudent way of thinking. He likewiſe ſhows, that to be honeſt, to be liberal, is not only to indulge a noble paſſion, but to be friends to ourſelves; and the rule he lays down in one line is enforced by the reaſon in the next. What an elegant praiſe is that Tully gives our poet, when, to recommend this paſſage, he uſes the ſame words, as near as he can, which he ſo much admires.

" Illud Heſiodeum laudatur a doctis quod eâdem " menſurâ reddere juhet, quâ acciperis, aut etiam " cumulatiore, ſi poſſis.

" That paſſage of Heſiod is commended by men " of learning, becauſe he commands you never to " return leſs than you borrow, but more, if you " are able."

Ver. 498. The reaſon Tzetzes, and ſome other commentators give for this advice, is, that wine, when the caſk is firſt pierced, is ſmall, being next the air, and when low, troubled with dregs; at both which times, they ſay, Heſiod adviſes not to be ſparing, the wine not being of much value; but when it is about half out, it draws more pure; then is the time to be frugal. A poor compliment this to his gueſts! If ſo, all his former rules of liberality are deſtroyed; but theſe gentlemen muſt certainly miſtake his meaning. All that he would recommend is, not to let our liberality run to profuſeneſs; and, when the wine is ſtrong, not to drink to exceſs, by which we become enemies to ourſelves and friends.

BOOK II.

THE ARGUMENT.

In this book, the poet inſtructs his countrymen in the arts of agriculture and navigation, and in the management of the vintage: he illuſtrates the work with rural deſcriptions, and concludes with ſeveral religious precepts, founded on the cuſtom and manners of his age.

When the Pleïades, of Atlas born,
Before the ſun's ariſe illume the morn,
Apply the ſickle to the ripen'd corn;
And when, attendant on the ſun's decline,
They in the ev'ning ether only ſhine,
Then is the ſeaſon to begin to plough,
To yoke the oxen, and prepare to ſow:
There is a time when forty days they lie,
And forty nights, conceal'd from human eye,
But in the courſe of the revolving year,
When the ſwain ſharps the ſcythe, again appear.
This is the rule to the laborious ſwain,
Who dwells or near or diſtant from the main,
Whether the ſhady vale receives his toil,
And he manures the fat, the inland ſoil.
Would you the fruits of all your labours ſee,
Or plow, or ſow, or reap, ſtill naked be;
Then ſhall thy barns, by Ceres bleſs'd, appear
Full of the various produce of the year;
Nor ſhall the ſeaſons then behold thee poor,
A mean dependant on another's ſtore.
Though, fooliſh Perſes, bending to thy pray'rs,
I lately heard thy plaints, and eas'd thy cares,
On me no longer for ſupplies depend,
For I no more ſhall give, no more ſhall lend.
Labour induſtrious, if you would ſucceed;
That men ſhould labour have the gods decreed,
That with our wives and children we may live,
Without th' aſſiſtance that our neighbours give,
That we may never know the pain of mind
To aſk for ſuccour, and no ſuccour find:
Twice, thrice, perhaps, they may your wants ſupply;
But conſtant beggars teach them to deny;
Then wretched may you beg, and beg again,
And uſe the moving force of words in vain.
Such ills to ſhun, my counſels lay to heart;
Nor dread the debtor's chain, nor hunger's ſmart.
A houſe, and yoke of oxen, firſt provide,
A maid to guard your herds, and then a bride;
The houſe be furniſh'd as thy need demands,
Nor want to borrow from a neighbour's hands.
While to ſupport your wants abroad you roam,
Time glides away, and work ſtands ſtill at home.
Your bus'neſs ne'er defer from day to day,
Sorrows and poverty attend delay;
But lo! the careful man ſhall always find
Increaſe of wealth according to his mind.
When the hot ſeaſon of the year is o'er
That draws the toilſome ſweat from ev'ry pore,

When o'er our heads th' abated planet rolls
A ſhorter courſe, and viſits diſtant poles,
When Jove deſcends in ſhow'rs upon the plains,
And the parch'd earth is cheer'd with plenteous rains,
When human bodies feel the grateful change,
And leſs a burden to themſelves they range,
When the tall foreſt ſheds her foliage round,
And with autumnal verdure ſtrews the ground,
The hole is incorrupt, the timber good;
Then whet the ſounding ax to fell the wood.
Provide a mortar three feet deep, and ſtrong;
And let the peſtel be three cubits long.
One foot in length next let the mallet be,
Ten ſpans the wain, ſeven feet her axletree:
Of wood four crooked bits the wheel compoſe,
And give the length three ſpans to each of thoſe.
From hill or field the hardeſt holm prepare,
To cut the part in which you place the ſhare;
Thence your advantage will be largely found,
With that your oxen may long tear the ground:
And next, the ſkilful huſbandman to ſhow,
Faſt pin the handle to the beam below:
Let the draught-beam of ſturdy oak be made,
And for the handle rob the laurel ſhade;
Or, if the laurel you refuſe to fell,
Seek out the elm, the elm will ſerve as well.
Two ploughs are needful; one let art beſtow,
And one let nature to the ſervice bow;
If uſe or accident, the firſt deſtroy,
Its fellow in the furrow'd field employ.
Yoke from the herd two ſturdy males, whoſe
Mature ſecures them from each other's rage;
For if too young they will unruly grow,
Unfiniſh'd leave the work, and break the plough:
Theſe, and your labour ſhall the better thrive,
Let a good ploughman, year'd to forty, drive;
And ſee the careful huſbandman be fed
With plenteous morſels, and of wholeſome bread:
The ſlave, who numbers fewer days, you'll find
Careleſs of work, and of a rambling mind;
Perhaps, neglectful to direct the plough,
He in one furrow twice the ſeed will ſow.
Obſerve the crane's departing flight in time,
Who yearly fears to ſeek a ſouthern clime,
Conſcious of cold; when the ſhrill voice you hear,
Know the fit ſeaſon for the plough is near;
Then he, for whom no oxen graze the plains,
With aching heart, beholds the winter rains;
Be mindful then the ſturdy ox to feed,
And careful keep within the uſeful breed.
You ſay, perhaps, you will entreat a friend,
A yoke of oxen, and a plough to lend:
He your requeſt, if wiſe, will thus refuſe,
I have but two, and theſe I want to uſe;
To make a plough great is th' expence and care;
All theſe you ſhould, in proper time, prepare.
Reproofs like theſe avoid; and to behold
Your fields bright waving with their ears of gold,
Let unimprov'd no hour, in ſeaſon, fly,
But with your ſervants plough, or wet, or dry:
And in the ſpring again to turn the ſoil
Obſerve; the ſummer ſhall reward your toil,
While light and freſh the glebe inſert the grain;
Then ſhall your children ſmile, nor you complain.

Prefer with zeal, when you begin to plough,
To Jove terrene, and Ceres chaſte, the vow:
Then will the rural deities regard
Your welfare, and your piety reward.
Forget not, when you ſow the grain, to mind
That a boy follows with a rake behind;
And ſtrictly charge him, as you drive, with care,
The ſeed to cover, and the birds to ſcare.
Through ev'ry taſk, with diligence, employ
Your ſtrength; and in that duty be your joy;
And, to avoid of life the greateſt ill,
Never may ſloth prevail upon thy will:
(Bleſs'd who with order their affairs diſpoſe!
But rude confuſion is the ſource of woes!)
Then ſhall you ſee, Olympian Jove your friend,
With pond'rous grain the yellow harveſt bend;
Then of Arachne's web the veſſels clear,
To hoard the produce of the fertile year.
Think then, O think! how pleaſant will it be,
At home an annual ſupport to ſee,
To view with friendly eyes your neighbour's ſtore,
And to be able to relieve the poor.
Learn now what ſeaſons for the plough to ſhun:
Beneath the tropic of the winter's ſun
Be well obſervant not to turn the ground,
For ſmall advantage will from thence be found:
How will you ſigh when thin your crop appears,
And the ſhort ſtalks ſupport the duſty ears!
Your ſcanty harveſt then, in baſkets preſs'd,
Will, by your folly, be your neighbour's jeſt;
Sometimes, indeed, it otherwiſe may be;
But who th' effect of a bad cauſe can ſee?
If late you to the ploughman's taſk accede,
The ſymptoms theſe the later plough muſt ſpeed.
When firſt the cuckoo from the oak you hear,
In welcome ſounds, foretel the ſpring-time near,
If Jove, the ploughman's friend, upon the plains,
Three days and nights, deſcends in conſtant rains,
Till on the ſurface of the glebe the tide
Riſe to that height the ox's hoof may hide,
Then may you hope your ſtore of golden grain
Shall equal his who earlier turn'd the plain.
Obſerve, with care, the precepts I impart,
And may they never wander from thy heart;
Then ſhall you know the ſhow'rs what ſeaſons bring,
And what the buſ'neſs of the painted ſpring.
In that bleak and dead ſeaſon of the year,
When naked all the woods and fields appear,
When nature lazy for a while remains,
And the blood almoſt freezes in the veins,
Avoid the public forge where wretches fly
Th' inclement rigour of the winter ſky:
Thither behold the ſlothful vermin ſtray,
And there in idle talk conſume the day;
Half-ſtarv'd they ſit, in evil conſult join'd,
And, indolent, with hope buoy up their mind;
Hope that is never to the hungry kind!
Labour in ſeaſon to increaſe thy ſtore,
And never let the winter find thee poor:
Thy ſervants all employ till ſummer's paſt,
For tell them ſummer will not always laſt.
The month all hurtful to the lab'ring kine,
In part devoted to the god of wine,

Demands your utmoſt care; when raging forth,
O'er the wide ſeas, the tyrant of the north,
Bellowing through Thrace, tears up the lofty woods,
Hardens the earth, and binds the rapid floods.
The mountain oak, high tow'ring to the ſkies,
Torn from his root acroſs the valley lies;
Wide ſpreading ruin threatens all the ſhore,
Loud groans the earth, and all the foreſts roar:
And now the beaſt amaz'd, from him that reigns
Lord of the woods to thoſe which graze the plains,
Shiv'ring the piercing blaſt, affrighted, flies
And guards his tender tail betwixt his thighs.
Now nought avails the roughneſs of the bear,
The ox's hide, nor the goat's length of hair,
Rich in their fleece, alone the well cloth'd fold,
Dread not the bluſt'ring wind, nor fear the cold.
The man, who could erect ſupport his age,
Now bends reluctant to the north-wind's rage:
From accidents like theſe the tender maid,
Free and ſecure, of ſtorms nor winds afraid,
Lives, nurtur'd chaſte beneath her mother's eye,
Unhurt, unſully'd, by the winter's ſky;
Or now to bathe her lovely limbs ſhe goes,
Now round the fair the fragrant ointment flows;
Beneath the virtuous roof ſhe ſpends the nights,
Stranger to golden Venus, and her rites.
Now does the boneleſs polypus, in rage,
Feed on his feet, his hunger to aſſwage;
The ſun no more, bright ſhining in the day,
Directs him in the flood to find his prey;
O'er fwarthy nations while he fiercely gleams,
Greece feels the pow'r but of his fainter beams.
Now all things have a diff'rent face below;
The beaſts now ſhiver at the falling ſnow;
Through woods, and through the ſhady vale, they run
To various haunts, the pinching cold to ſhun;
Some to the thicket of the foreſt flock,
And ſome, for ſhelter, ſeek the hollow rock.
A winter garment now demands your care,
To guard the body from th' inclement air;
Soft be the inward veſt, the outward ſtrong,
And large to wrap you warm, down reaching long:
Thin lay your warp, when you the loom prepare,
And cloſe to weave the woof no labour ſpare.
The rigour of the day a man deſies,
Thus cloth'd; nor ſees his hairs like briſtles riſe.
Next for your feet the well hair'd ſhoes provide,
Hairy within, of a ſound ox's hide.
A kid's ſoft ſkin over your ſhoulders throw,
Unhurt to keep you from the rain or ſnow;
And for your head a well made cov'ring get,
To keep your ears ſafe from the cold and wet.
When o'er the plains the north exerts his ſway,
From his ſharp blaſts piercing begins the day;
Then from the ſky the morning dews deſcend,
And fruitful o'er the happy lands extend.
The waters by the winds convey'd on high,
From living ſtreams in early dew drops lie
Bright on the graſs; but if the north-wind ſwells
With rage, and thick and ſable clouds compells.
They fall in ev'ning ſtorms upon the plain:
And now from ev'ry part the lab'ring ſwain
Foreſees the danger of the coming rain;
Leaving his work, panting behold him ſcour
Homeward, inceſſant to outrun the ſhower.
This month commands your care of all the year,
Alike to man and beaſt the moſt ſevere:
The ox's provender be ſtinted now;
But plenteous meals the huſbandman allow;
For the long nights but tedious paſs away.
Theſe rules obſerve while night ſucceeds the day,
Long as our common parent, earth ſhall bring
Her various offſpring forth to grace the ſpring.
When from the tropic of the winter's ſun,
Thrice twenty days and nights their courſe have run,
And when Arcturus leaves the main to riſe
A ſtar, bright ſhining in the ev'ning ſkies,
Then prune the vine; 'tis dang'rous to delay
Till with complaints the ſwallow breaks the day.
When with their domes the ſlow-pac'd ſnails retreat,
Beneath ſome foliage, from the burning heat
Of the Pleïades, your tools prepare:
The ripen'd harveſt then demands your care.
Now fly the jocund ſhades, your morning ſleep,
And conſtant to their work your ſervants keep;
All other pleaſures to your duty yield;
The harveſt calls, haſte early to the field,
The morning workman always beſt ſucceeds;
The morn the reaper, and the trav'ler ſpeeds:
But when the thiſtle wide begins to ſpread,
And rears in triumph his offenſive head,
When in the ſhady boughs, with quiv'ring wings,
The graſſhopper all day continual ſings,
The ſeaſon when the dog reſumes his reign,
Weakens the nerves of man and burns the brain,
Then the fat fleſh of goats is wholeſome food,
And to the heart the gen'rous wine is good;
Then nature through the ſofter ſex does move,
And ſtimulates the fair to acts of love:
Then in the ſhade avoid the mid day ſun,
Where zephyrs breathe, and living fountains run;
There paſs the ſultry hours with friends away;
And frolic out in harmleſs mirth the day:
With country cates your homely table ſpread,
The goat's new milk, and cakes of milk your bread;
The fleſh of beeves, which broufe the trees, your meat;
Nor ſpare the tender fleſh of kids to eat;
With Byblian wine the rural feaſt be crown'd;
Three parts of water, let the bowl go round.
Forget not, when Orion firſt appears,
To make your ſervants threſh the ſacred ears;
Upon the level floor the harveſt lay,
Where a ſoft gale may blow the chaff away;
Then, of your labour to compute the gain,
Before you fill the veſſels mete the grain.
Sweep up the chaff, to make your work complete,
The chaff and ſtraw the ox and mule will eat.
When in the year's proviſion you have laid,
Take home a ſingle man and ſervant maid:
Among your workmen let this care be ſhewn
To one who has no man ſion of his own;
Be ſure a ſharp tooth'd cur well fed to
Your houſe's guard while you
The harveſt paſs'd, and thus
Unyoke the beaſt, and give your ſervant

Orion and the Dog, each other nigh,
Together mounted to the midmoſt ſky,
When in the roſy morn Arcturus ſhines,
Then pluck the cluſters from the parent vines;
Forget not next the ripen'd grapes to lay
Ten nights in air, nor take them in by day;
Five more remember, ere the wine is made,
To let them lie to mellow in the ſhade;
And in the ſixth briſkly yourſelf employ,
To caſk the gift of Bacchus, ſire of joy.
Next, in the round do not to plough forget,
When the Seven Virgins and Orion ſet:
Thus an advantage always ſhall appear,
In ev'ry labour of the various year.

If o'er your mind prevails the love of gain,
And tempts you to the dangers of the main,
Yet in her harbour ſafe the veſſel keep,
When ſtrong Orion chaſes to the deep
The Virgin ſtars; then the winds war aloud,
And veil the ocean with a ſable cloud:
Then round the bark, already haul'd on ſhore,
Lay ſtones, to fix her when the tempeſts roar;
But firſt forget not well the keel to drain;
And draw the pin to ſave her from the rain.
Furl the ſhip's wings, her tackling home convey,
And o'er the ſmoke the well made rudder lay.
With patience wait for a propitious gale,
And a calm ſeaſon to unfurl the ſail;
Then launch the ſwift wing'd veſſel on the main,
With a fit burden to return with gain.
So our poor father toil'd his hours away,
Careful to live in the unhappy day;
He, fooliſh Perſes, ſpent no time in vain,
But fled misfortunes through the wat'ry plain,
He, from Æolian Cuma, th' ocean paſs'd,
Here in his ſable bark arriv'd at laſt.
Not far from Helicon he fix'd his race,
In Aſcra's village, miſerable place!
How comfortleſs the winter ſeaſon there!
And cheerleſs Aſcra is thy ſummer air.

O Perſes, may'ſt thou ne'er forget thy ſire,
But let thy breaſt his good example fire:
The proper buſ'neſs of each ſeaſon mind;
And, O! be cautious when you truſt the wind.
If large the veſſel, and her lading large,
And if the ſeas prove faithful to their charge,
Great are your gains; but, by one evil blaſt,
Away your hopes are with your venture caſt.
If diligent to live from debtors free,
You raſhly are reſolv'd to trade by ſea,
To my inſtructions an attention pay,
And learn the courſes of the liquid way:
Though nor to build, nor guide a ſhip I know,
I'll teach you when the ſounding main to plough.

Once I have croſs'd the deep, and not before
Nor ſince, from Aulis to Eubœa's ſhore,
From Aulis, where th' aſſembled Greeks lay bound,
All arm'd for Troy, for beauteous dames renown'd:
At Chalcis, there the youth of noble mind,
For ſo their great forefather had enjoin'd,
The games decreed, all ſacred to the grave
Of king Amphidamas, the wiſe and brave;
A victor there in ſong the pride I bore,
A well ear'd tripod, to my native ſhore;
Which to the ſacred Heliconian nine
I offer'd grateful for their gift divine,
Where with the love of verſe I firſt was fir'd,
Where by the heav'nly maids I was inſpir'd;
To them I owe, to them alone I owe,
What of the ſeas or of the ſtars I know;
Mine is the pow'r to tell, by them reveal'd,
The will of Jove, tremendous with his ſhield;
To them who taught me firſt, to them belong
The blooming honours of th' immortal ſong.

When, from the tropic of the Tummer's ſun,
Full fifty days and nights their courſe have run,
Fearleſs of danger, for the voy'ge prepare,
Smooth is the ocean, and ſerene the air: [view,
Then you the bark, ſafe with her freight, may
And gladſome as the day the joyful crew,
Unleſs great Jove, the king of gods, or he,
Neptune, that ſhakes the earth, and rules the ſea,
The two immortal pow'rs on whom the end
Of mortals, good and bad, alike depend,
Should jointly or alone their force employ,
And in a luckleſs hour the ſhip deſtroy:
If, free from ſuch miſchance, the veſſel flies
O'er a calm ſea, beneath indulgent ſkies,
Let nothing long thee from thy home detain,
But meaſure, quickly meaſure back the main.
Haſte your return before the vintage paſt
Prevent th' autumnal ſhow'rs and ſouthern blaſt,
Or you, too late a penitent, will find
A ruffl'd ocean, and unfriendly wind.
Others there are who chooſe to hoiſt the ſail,
And plough the ſea, before a ſpring-tide gale,
When firſt the footſteps of the crow are ſeen
Clearly as on the trees the budding green:
But then, may my advice prevail, you'll keep
Your veſſel ſafe at land, nor truſt the deep;
Many, ſurpriſing weakneſs of the mind,
Tempt all the perils of the ſea and wind,
Face death in all the terrors of the main,
Seeking, the ſoul of wretched mortals, gain.
Would'ſt thou be ſafe, my cautions be thy guide;
'Tis ſad to periſh in the boiſt'rous tide.
When for the voy'ge your veſſel leaves the ſhore,
Truſt in her hollow ſides not half your ſtore;
The leſs your loſs ſhould ſhe return no more:
With all your ſtock, how diſmal would it be
To have the cargo periſh in the ſea!
A load, you know, too ponderous for the wain,
Will cruſh the axletree, and ſpoil the grain.
Let ev'ry action prove a mean conſeſs'd;
A moderation is in all the beſt.

Next to my counſels an attention pay,
To form your judgment for the nuptial day.
When you have number'd thrice ten years in time,
The age mature when manhood dates his prime,
With caution chooſe the partner of your bed:
Whom fifteen ſprings have crown'd, a virgin wed.
Let prudence now direct your choice; a wife
Is or a bleſſing or a curſe in life;
Her father, mother, know, relations, friends,
For on her education much depends:
If all are good, accept the maiden bride;
Then form her manners, and her actions guide:
A life of bliſs ſucceeds the happy choice;
Nor ſhall your friends lament, nor foes rejoice.

Wretched the man condemn'd to drag the chain,
What reſtleſs ev'ning his, what days of pain!
Of a luxurious mate, a wanton dame,
That ever burns with an inſatiate flame,
A wife who ſeeks to revel out the nights
In ſumptuous banquets, and in ſtol'n delights:
Ah! wretched mortal: though in body ſtrong,
Thy conſtitution cannot ſerve thee long;
Old age vexatious ſhall o'ertake thee ſoon;
Thine is the ev'n of life before the noon.
Obſerve in all you do, and all you ſay,
Regard to the immortal gods to pay.
Firſt in your friendſhip let your brother ſtand,
So nearly join'd in blood, the ſtricteſt ban;
Or ſhould another be your heart's ally,
Let not a fault of thine diſſolve the tie;
Nor e'er debaſe the friendſhip with a lie.
Should he offenſive, or in deed, or ſpeech,
Firſt in the ſacred union make the breach,
To puniſh him may your reſentments tend;
For who more guilty than a faithleſs friend!
But if, repentant of his breach of truſt,
The ſelf accuſer thinks your vengeance juſt,
And humbly begs you would no more complain,
Sink your reſentments, and be friends again;
Or the poor wretch, all ſorrowful to part,
Sighs for another friend to eaſe his heart.
Whatever rage your boiling heart ſuſtains,
Let not the face diſcloſe your inward pains.
Be your companions o'er the ſocial bowl
The few ſelected, each a virtuous ſoul.
Never a friend among the wicked go,
Nor ever join to be the good man's foe.
When you behold a man by fortune poor,
Let him not leave with ſharp rebukes the door:
The treaſure of the tongue, in ev'ry cauſe,
With moderation us'd obtains applauſe:
What of another you ſeverely ſay,
May amply be return'd another day.
When you are ſummon'd to the public feaſt,
Go with a willing mind a ready gueſt;
Grudge not the charge, the burden is but ſmall;
Good is the cuſtom, and it pleaſes all.
When the libation of black wine you bring,
A morning off'ring to the heavenly king,
With hands unclean, if you prefer the pray'r,
Jove is incens'd, your vows are loſt in air;
So all th' immortal pow'rs on whom we call,
If with polluted hands, are deaf to all.
When you would have your urine paſs away,
Stand not upright before the eye of day;
And ſcatter not your water as you go;
Nor let it, when you're naked, from you flow:
In either caſe 'tis an unſeemly ſight:
The gods obſerve alike by day and night:
The man whom we devout and wiſe may call
Sits in that act, or ſtreams againſt a wall.
Whate'er you do in amorous delight,
Be all tranſacted in the veil of night;
And when tranſported, to your wife's embrace
You haſte, pollute no conſecrated place;
Nor ſeek to taſte her beauties when you part
From a ſad fun'ral, with a heavy heart:
When from the joyous feaſt you come all gay,
In her fair arms revel the night away.
When to the rivulet to bathe you go,
Whoſe lucid currents never ceaſing, flow,
'Ere to deface the ſtream you leave the land,
With the pure limpid waters cleanſe each hand;
Then on the lovely ſurface fix your look,
And ſupplicate the guardians of the brook:
Who in the river thinks himſelf ſecure,
With malice at his heart, and hands impure,
Too late a penitent, ſhall find ere long,
By what the gods inflict, his raſhneſs wrong.
When to the gods your ſolemn vows you pay,
Strictly attend while at the feaſt you ſtay;
Nor the black iron to your hands apply,
From the freſh parts to pare the uſeleſs dry.
The bowl, from which you the libation pour
To heav'n, profane not in the ſocial hour:
Who things devote to vulgar uſe employ,
Thoſe men ſome dreadful vengeance ſhall deſtroy.
Never begin to build a manſion ſeat,
Unleſs you're ſure to make the work complete;
Leſt on th' unfiniſh'd roof, high perch'd, the crow
Croak horrid, and foretel approaching woe.
'Tis hurtful in the footed jar to eat,
Till purify'd: nor in it bathe your feet.
Who in a ſlothful way his children rears,
Will ſee them feeble in their riper years.
Never by acts effeminate diſgrace
Yourſelf, nor bathe your body in the place
Where women bathe; for time and cuſtom can
Soften your heart to acts beneath a man.
When on the ſacred rites you fix your eyes,
Deride not in your breaſt the ſacrifice;
For know, the god, to whom the flames aſpire,
May puniſh you ſeverely in his ire.
Sacred the fountains, and the ſeas eſteem,
Nor by indecent acts pollute their ſtream.
Theſe precepts keep, fond of a virtuous name,
And ſhun the loud reports of evil fame:
Fame is an ill you may with eaſe obtain,
And ſad oppreſſion to be borne with pain;
And when you would the noiſy clamours drown,
You'll find it hard to lay your burden down:
Fame of whatever kind, not wholly dies;
A goddeſs ſhe, and ſtrengthens as ſhe flies.

NOTES TO THE SECOND BOOK OF THE WORKS AND DAYS.

Ver. 1. I ſhall firſt obſerve that the poet very judiciouſly begins his inſtructions with a general direction when to ſow and to reap; which rule is contained in the two firſt lines, but lengthened

the tranſlation into ſeven. This firſt main precept is to reap when the Pleïades riſe, and to plough when they ſet.

After this he informs his countrymen in their ſeveral duties at home and in the fields. For the poetical and allegorical meaning of the Pleïades, I ſhall uſe the words of the Scholiaſt on this paſſage.

Pleïonebore to Atlas ſeven daughters; the names of which we find in the Phœnomena of Aratus. Alcyone, Merope, Celœno, Electre, Sterope, Taygete, and Maia; but ſix of which, ſays he, are ſeen. Theſe being purſued by Orion, who was in love with them, were changed into doves, and afterwards placed by Jupiter in the Zodiac. Thus much for the fabulous. By Atlas, who is ſaid to ſupport the heavens on his ſhoulders, is meant the pole, which divides and determinates the hemiſpheres; of whom the Pleïades, or ſeven ſtars, and all other ſtars, are ſaid to be born; becauſe, after the ſeparation of the hemiſpheres, they appeared. The riſing of the Pleïades is from the 9th of May to the 23d of June: the ſetting of them from the 8th of October to the 9th of December. *Tzetz.* What our author means by their riſing and ſetting, I have endeavoured to explain in my tranſlation.

Ver. 8 This is, ſays Tzetzes, partly in April and partly in May; which is occaſioned by the vicinity of the ſun to the Pleïades at that time. In April he paſſes through Aries, and in May through Taurus; in the middle of which ſign theſe ſtars are placed. Some, contrary to Tzetzes, date the riſing of theſe from the beginning of June; to which month quite through May, ſay they, the ſun paſſes through Taurus and Gemini.

Ver. 22. It is evident from theſe and other lines, that though Perſes had defrauded his brother of his right, he was ſoon reduced to want his aſſiſtance. It may not be impertinent here to obſerve, that Heſiod, in ſeveral of his moral precepts, had his eye on the preſent circumſtances of his brother; as in the firſt book, ver. 431, ſpeaking of the wicked,

—— like a dream his ill got riches fly.

Ver. 59. The wood that is felled at this time of the year may be preſerved imputrid, the moiſture having been dried away by the heat of the weather, which renders it firm and durable; but if felled with the moiſture in the trunk or bole, it rots. *Tzetz.*

Ver. 60. Some think this was for the ſame uſe of a mill: if ſo, an argument may be brought, from the invention of mills, for the antiquity of Heſiod, who does not mention one in any of his writings.

Ver. 76. On the ploughs here mentioned, αυλογυον και σπηλον, Grævius has a learned note, from the ſcholiaſt of Apollonius Rhodius; the firſt he and other commentators interpret a plough made of a wood that inclines, by nature, to a plough-tail: ſays one, "aratrum quod habet dentale ſolidum et adnatum, non affixum." Tzetzes takes no notice of this paſſage. See the View.

Ver. 94. The crane is a very fearful and tender bird, and ſoon ſenſible of cold and heat, and, through the weight of its body, eaſily feels the quality of the upper air, while flying; which occaſions her ſcreaming in cold weather, leſt ſhe ſhould fall. *Tzetz.*

Ver. 114. Heſiod keeps up an air of piety quite through his poem, which, as Mr. Addiſon obſerves in his Eſſay on the Georgic, ſhould be always maintained. Tzetzes tells us Ζευς χθονιος is Bacchus; and the reaſon for his being joined with Ceres, is becauſe they were in Egypt together, where they inſtructed men in the art of tillage, and planting. It is not unreaſonable to imagine, the poet ſhould invoke Bacchus and Ceres, who are the two deities which preſide over the harveſt and the vintage, two great ſubjects of this book: but the learned Grævius has put it out of diſpute that it is Pluto. Ζευς χθονιος, ſays he, is the infernal Jupiter; by χθονια the Greeks meaned καταχθονια, "what is under ground" This he illuſtrates by many authorities, and proves Χθονιοι Θεοι to be "infernal gods." We find many inſcriptions, continues he, ΧΘΟΝΙΟΙΣ ΘΕΟΙΣ, in other places Θεοις καταχθονιοις. We ſee in ancient monuments χθονιος Ερμης infernal Mercury, becauſe he drives the ſouls of the departed to the ſhades below. Æſchylus calls Pluto Ζευς κεκμηκοτων, the Jupiter of the dead; and Heſiod, likewiſe, in his Theogony, ſtyles him Θεος χθονιος; and the furies are called by Euripides, χθονιαι Θεαι "infernal goddeſſes." Now let us examine why Pluto is invoked by the huſbandmen; he was believed to be author of all the riches which come out of the earth. This we have in a hymn to Pluto aſcribed to Orpheus:

Πλουτοδοτων γενεην βροτειην καρποις ενικυτων.

"The giver of riches to human race in annual fruits:" and Cicero, *de Natura Deorum*, thus accounts for it, "quod recidant omnia in terras, et oriuntur è "terris," becauſe all things muſt be reduced to, and ariſe from, the earth. Thus far Grævius; and Valla, in his tranſlation, has took it in the ſame ſenſe: "Plutonem, in primis, venerare."

Ver. 128. Ει τελος αυτος οπιθεν Ολυμπιος εσθλον οπαζοι, is one line in the original; the conſtruction of which is, "if heaven ſhall afterwards grant you a good end." The natural interpretation of which is, that proper pains may be taken for the tillage; but, if an unlucky ſeaſon ſhould happen, the labour of the huſbandman is fruſtrated.

Ver. 137 After the poet has taught his countrymen what ſeaſons to plough and ſow in, he teaches them what to avoid: which are all the days in the winter tropic, or what the Latins call Solſtice. From the ſetting of Sagitta, and the riſing of Equus, to the riſing of the Pleïades, which is from the eighth degree of Aries to the ſeventh of Cancer, the vernal equinox begins and ends. From the riſing of the Pleïades, which is from the eighth degree of Cancer, to the riſing of Arcturus and Capricorn, is the ſummer ſolſtice, of one hundred and twenty-four days. From the riſing of Arcturus and Capricorn, to the ſetting of the Pleïades and Orion, is the autumn equinox, of fifty-ſix days. From the ſetting of the Pleïades and Orion, to the ſetting of Sagitta, and the riſing of Equus, is the winter ſolſtice of an hundred days. *Tzetz.*

Ver. 164. Grævius changes the common Latin tranſlation of this paſſage, *Æneam ſedem*, into *officinam ærariam*, or *ferrariam*, which is apparently right to all who underſtand the author. Theſe forges, with the λεσχαι, were places always open to poor people, where they uſed to ſleep. Proclus, in his remarks on this verſe, ſays, at one time in Athens were three hundred and ſixty of theſe public places. Θωκος is the ſame with δομος; in this ſenſe our poet uſes it in another place: Φευγειν δε σκιερους θωκους, fly the open houſes, or ſhady places: hence θωκειν ſignifies to loiter, or goſſip, in any place; and hence θωκει, καθηται, and ομιλεῖ, become ſynonimous. Dicæarchus gives this character of the Athenians: a people, ſays he, much inclined to vain prating; a lurking, ſycophantic crew, very inquiſitive after the affairs of other people. Thus much from Grævius. Theſe places, in one ſenſe, are not unlike the *tonſtrinæ*, or barbers-ſhops of the Romans, where all the idle people aſſembled; which were once remarkable, and are now, in ſeveral places among us, for being the rendezvous of idle folks. In this ſenſe, Friſius ſeems to take this paſſage: *fabrorum vitato focos, nugaſque calentes*, &c. This ſame cuſtom of loitering, and goſſiping, at a barber's ſhop, was notorious too at Athens, as we may learn from the Plutus of Ariſtophanes.

Ου πειθομαι
Και τοι λογος γ' ην, νη τ' Ηρακλεα, πολυς
Επι τοισι κουρειοισι των καθημενων.

"By Hercules, I would not believe it, if it was "the common talk among the idle fellows in the "barbers-ſhops."

The laſt part of this note, from Ariſtophanes, by Mr. Theobald.

Ver. 175. Here begins a lively and poetical deſcription. The coming of the north wind, the effect it has on the land, water, woods, man, and beaſt, is naturally and beautifully painted. The incidents of the ſheep, and the virgin, are ridiculed, by Mr. Addiſon, in his Eſſay on the Georgic, as mean. I muſt beg leave to diſſent from that great writer. The repreſentation of their comfortable condition ſerves to enliven the picture of the diſtreſs of the other creatures, who are more expoſed to the inclemency of the weather. All this is carried on with great judgment: the poet goes not out of the country for images: he tells us not of the havoc that is made in towns by ſtorms. That of the polypus, is a very proper circumſtance, and not foreign to a rural deſcription. Valla and Friſus differ in their names of this month; one will have it to be December, and the other January: be it either of which, it is plain from hence it was the month in which the Greeks celebrated the feaſt of Bacchus, Heſiod calls it Ληναιων, from one of the names of that deity.

Ver. 203. The original, which I have tranſlated Polypus, from the example of every Latin verſion, and commentator, is ἀνοστος, which ſignifies any thing that is boneleſs. The Scholiaſt tells us, from Pliny, book ix. the polypus in the ſevere winter ſeaſons keeps in his cave, and gnaws his feet through hunger: and Tzetzes ſays many of them have been found with maimed feet. From theſe accounts, we may reaſonably conclude what Heſiod calls ανοστος to be the ſame fiſh.

Ver. 215. Here is a deſcription of the old Grecian habit for men in winter. The ſoft tunic is an under garment, the other a ſort of a looſe coat to wrap round the body, which he informs you how to make. The warp is that part of the loom, when ſet, which the ſhuttle goes through; the woof is the thread which comes from the ſhuttle in weaving. To keep the neck warm, he adviſes to throw the ſkin of ſome beaſt croſs the ſhoulders. The covering for the head was a thick cap, which came quite over the ears. From his mentioning nothing elſe in particular, we may imagine the ſhoes completed the dreſs. Le Clerc, on this place, merrily obſerves, that the earneſt directions for making the winter dreſs, ſavour very much of old age in the poet: but I muſt beg leave to remark, that ſome allowance is to be made for the bad clime of his country, of which we find himſelf giving a wretched character.

Ver. 233. Hence we may learn the opinion of the ancients concerning the dew. Says Tzetzes, a cloud contracted from humid vapours extenuates into wind: if the vapours are thin, they deſcend into dew; but if thick, they condenſe and fall into rain.

I ſhall recommend to thoſe who would inform themſelves better in the nature of theſe bodies, and how they act on each other, Dr. Woodward's Natural Hiſtory of the Earth, in the third part of which theſe ſubjects are judiciouſly treated of.

Ver. 244. The reaſon the Scholiaſt gives for ſtinting the provender of the oxen at this time, is, becauſe the days are at the ſhorteſt; therefore they are not kept ſo much to labour as in ſome other parts of the year, but they ſleep moſt of their time away, and therefore are recruited by reſt. The caſe is not the ſame with the huſbandmen; their labour is not leſſened, and they require the more food, the more rigorous the weather.

Ver. 250. The ſetting of the Pleïades is from the 8th of October to the 9th of December. The winter ſolſtice continues an hundred days after; and, according to the poet, Arctutus riſes ſixty days after the winter ſolſtice. The uſe of pruning the vines at this time muſt be to cut off the leaves which ſhade the grapes from the ſun.

Ver. 255. The poet calls it παυδιωνις χελιδων, alluding to the ſtory of Progne and Philomela, the daughters of Pandion, king of Athens; the latter of which was married to Tereus, king of Thrace, who was in love with her ſiſter Progne, whom he debauched, and afterwards cut out her tongue. The ſtory is told at large by Ovid, in his Metamorphoſes, book vi.

Ver. 256. The Greek word, which I have tranſlated ſnails, is φερεοικος, which literally ſignifies any animal that carries its houſe about with it. The poet here ſays, it is time to begin the

harveſt when the ground is ſo exceſſive hot, that the ſnail, or φειδικος, cannot bear it

Ver. 269. It is remarkable, that Virgil, and other Latin poets, generally uſe the epithet *rauca* to *cicada*: whereas the Greeks deſcribe the τεττιξ as a muſical creature,—Τεττιγος; επει τογε φερτερον αδες. Theoc. Idyl. 1.

You ſing ſweeter than a graſhopper.

Μακαριζομεν σε, τεττιξ,
Οτι δενδρεων επ' ακρων,
Ολιγην δροσον πεπωκως,
Βασιλευς οπως, αειδεις.

ANACREON.

Graſhopper, we hail thee bleſs'd,
In thy lofty ſhady neſt,
Happy, merry, as a king,
Sipping dew, you ſip and ſing.

We have a fuller deſcription of this creature in the ſhield of Hercules:

The ſeaſon when the graſhopper begun
To welcome with his ſong the ſummer ſun;
With his black wings he flies the melting day
Beneath the ſhade, his ſeat a verdant ſpray;
He early with the morn exerts his voice,
Him mortals hear, and as they hear rejoice;
All day they hear him from his cool retreat;
The tender dew his drink, the dew his meat.

I muſt here take notice, that the graſhopper, in the original, is ηχετα τεττιξ.

* "The Greek poets, agreeing thus in their deſcription of this creature, give me reaſon to believe the common tranſlation of this word into "*cicada* is falſe. Henry Stephens, and others, "give us an account of the *cicada*, and *acheta*, "the latter of which, ſay they, is the finger." The following collection, concerning this creature, by Mr. Theobald. The ηχετα τεττιξ, or male ſinging graſhopper, has ſuch properties aſcribed to it, by the ancients, as ought to leave us greatly in doubt, whether it could be the ſame animal which we now call by that name. I will ſubjoin what I have met with in authors concerning it, and think the contents of ſuch extracts may ſtand for reaſons. Heſiod, Anacreon, Theocritus, Ariſtophanes, &c. all concur to celebrate the ſweetneſs of its note: and the old Scholiaſt upon Ariſtophanes particularly acquaints us, that the Athenians, of the moſt early times, wore golden graſhoppers in their hair; becauſe, being a muſical animal, it was ſacred to Apollo, who was one of their tutelar deities. I can remember but a ſingle paſſage that contains any thing ſpoken in derogation of the melody of the τεττιξ, and that is from Simonides, as quoted by Atheneus. Ταν αμετροι τεττιγες, Lib. xv. cap. 8. Caſaubon renders it, "Quam cicadæ mo"dorum neſciæ;" and tells us, that the τεττιξ here ſtand for bad poets, or bad fingers. The utmoſt talent, I think, of our graſhoppers now known, is an acute, but not over grateful, chirping.

Ælian, in particular, *de Animal.* inſtances, among the preferences that nature gives to the male ſex in animals, the ſinging of the male graſhoppers: and, in another place, he ſeems to rank them with birds; for all the other birds that are vocal, ſays he, expreſs their ſound, like man, with the mouth; but the tone of the τεττιξ is by the verberation of a little membrane about the loins.

Ariſtotle does not give us much light upon the queſtion: he ſays περι ζωων, lib. v. there are two ſorts of τεττιγες, a larger and a ſmaller ſort; that the large and vocal ſpecies were called αχετα, but the ſmall τεττιγονια: and ſubjoins, that no τεττιγες are to be found, where no trees are; a point that will preſently fall under conſideration.

But we learn ſomething farther from Ælian, *Animal.* lib. xii., that theſe τεττιγες were not of more vocal than what are now met with, but a ſize big enough to be ſold for food; that there was likewiſe a ſea graſhopper, if we are to call it ſo, of the bigneſs of a ſmall crab or crayfiſh, which made ſome noiſe when ever it was taken, lib. xiii. Theſe, indeed, were ſeldom made uſe of for food, by reaſon of a ſingular ſuperſtition; for the Serephians paid them ſuch uncommon homage, as to bury, and weep over, any of them which died, becauſe they eſteemed them ſacred to Perſeus, the ſon of Jupiter. There is another circumſtance, aſſerted by a number of authors, in which the τεττιγες differed from our graſhoppers; and that is, of their ſitting and ſinging in trees. It is evident, ſays Euſtathius, *ad Iliad* iii., that the τεττιγες ſing aloft; for a great part of their ſongs come from the branches of trees, and not from the ground. This neceſſarily brings me to remember, ſays he, that ſymbolical threatening, which a certain prince ſent to his enemies, that he would make their τεττιγες ſing on the ground; meaning, that he would cut down their trees, and lay their country waſte. Ariſtotle περι ρητορικης, and Demetrius περι ερμηνειας, both record this expreſſion, but aſcribe it to different perſons: and that may be the reaſon Euſtathius names no particular perſon for it: nor did theſe τεττιγες ſing only upon ſhrubs and buſhes, but on the tops of the moſt lofty trees. Archias, in his epigram, *vid. Anthol. Græc.* mentions the τεττιξ ſitting upon the green boughs of the flouriſhing pitchtree; and Leonidas, in another which immediately follows, gives an epithet alluding to its neſting in the oak, δρυοκοιτα τεττιγι.

Laſtly, Another circumſtance, in which the τεττιγες alſo differed from our graſhoppers, is, that ours only hop and ſkip lightly, the other ſeem to have had a power of flying like birds. Ælian, *de Animal.* lib. v. gives us more than a ſuſpicion of this, or tells us a very ridiculous ſtory, if he did not believe it. He begins with informing us, that the τεττιγες both of Rhegium and Locri, if they were removed out of their own confines into the other, became entirely mute; a change, that nature only could account for. He ſubjoins to this, that as Rhegium and Locri are ſeparated by a ſmall river, though the diſtance from bank to bank was not, at moſt, above an acre's breadth, theſe τεττιγες never fly over [η διαπλουσι] to the oppoſite bank. Pauſanias, Ηλιακων ii. (who gives us the name of this river, Caecinus), puts a different turn

upon the ſtory of theſe memorable τεττιγες, that thoſe on the ſide of Locri were as ſhrill as any whatever, but that none of thoſe within the territories of Rhegium were ever vocal. So much for graſhoppers. I thought what is mentioned by our poet, concerning the ſweetneſs of their voice, and their perching on trees, might make this note neceſſary.

Ver. 284. The Scholiaſt tells us this wine took its name from a country in Thrace abounding with fine wines. Armenidas is of the ſame opinion; and Epicharmus ſays it is ſo called from the Byblian hills. This is mentioned in the catalogue of wines which Philinus gives us; viz. the Leſbian, Chian, Thaſian, Byblian, and Mendæan. Theocritus, in his fourteenth Idyllium, calls it the fine flavoured Byblian. *Le Clerc.*

Ver. 285. The Greeks never accuſtomed themſelves to drink their wine unmixed. When Ulyſſes parted from Calypſo Homer tells us, he took with him "one veſſel of wine, and another large one of water." Meander ſays; τρεις ὑδατος' οινε δ' ἑνα μονον, "three of water; and but one of wine." Barnes's Homer. In the fourth book of the Iliad we find Agamemnon complimenting Idomeneus in this manner:

Though all the reſt with ſtated rules we bound,
Unmix'd, unmeaſur'd, are thy goblets crown'd.
POPE.

Ver. 292. This at firſt ſeems abſurd, to adviſe to ſweep up the chaff after they had threſhed it in a place where the wind blowed it away; but we are to take notice, that the time for threſhing is when a ſoft gale blows, ſufficient only to ſeparate the chaff from the corn.

Ver. 302. As the buſineſs of agriculture is to be minded from the riſing and ſetting of the Pleïades, that of the vintage is from the appearance of Arcturus; when it appears in the evening the vines are to be pruned, and when in the morning the grapes are to be gathered. This, according to the Scholiaſt, is ſometime after the ninth of Auguſt.

Ver. 312. Here the poet ends the labours of the year, ſo far as relates to the harveſt and the vintage, concluding with his firſt inſtruction founded on the ſetting of the Pleïades. For the ſtory of Orion, who was changed into a conſtellation, and the Pleïades, look on the note to the firſt line of this book.

Ver. 316. The directions for the management of the veſſels, to haul them on ſhore, to block them round with ſtones, to keep them ſteady, to drain the keel, &c. and the particular inſtructions for the voyage, ſhow their ſhips not to have been very large, nor their commerce very extenſive. The largeſt man of war, mentioned by Homer, in the Grecian fleet, carrying but one hundred and twenty men.

Ver. 336. The Æolian iſles took their name from Æolus their king, who was a great mathematician for his time, and ſkilful in marine affairs, for which he was afterwards called God of the Winds, *Tzetz.* It is not unlikely that Heſiod uſed this epithet Æolian, to diſtinguiſh this city where his father lived, from Cuma in Italy, famous for the birth of the ſybil of that name.

Ver. 339. Aſcra is mountainous and windy; where the ſnow that is on the mountains often melts, and overflows the country. *Tzetz.*

Ver. 356. When we conſider this poſitive declaration of his travels, which ſeems, as I obſerved before, as if he deſigned to prevent miſtakes, and that Bœotia and Eubœa are both iſlands, we cannot in the leaſt diſpute his being a Bœotian born.

Ver. 365. The honour here paid to poetry, is very great; for we find the tripod the reward only of great and conſiderable actions. Agamemnon, in the eighth book of the Iliad, ſeeing the gallant and wonderful exploits of Teucer, promiſes, if they take Troy, to give him a tripod, as the meed of his valour; and, among other things, the tripod is offered to Achilles, to regain his friendſhip, when he had left the field. Pauſanias, book 5. give us an account of the funeral games in honour of Pelias, viz. the chariot-race, the quoiting, the diſcus, the boxing with the cœſtus, &c. where Jaſon, Peleus, and other heroes of the age, contended, and the victor in each had a tripod for his reward. Tripods were for various uſes; ſome were conſecrated to the ſervice of religion; ſome uſed as ſeats, ſome as tables, and ſome as ornaments; they were ſupported on three feet, with handles to their ſides.

Ver. 383. Neptune is called Earthſhaker, becauſe water, according to the opinion of the ancients, is the cauſe of earthquakes. *Tzetz.* Here the names of Jupiter and Neptune, can be uſed with no other but a phyſical meaning, that is, for the air and the ſea; ſo that the end of mariners are juſtly ſaid to be in the hands of Jupiter and Neptune.

Ver. 419. The reaſon the Spartan lawgiver gave for adviſing men not to marry till ſuch an age, was becauſe the children ſhould be ſtrong and vigorous. Heſiod's advice, both for the age of the man and the woman, ſeems to be reaſonably grounded. A man at thirty is certainly as ſtrong in his underſtanding as ever he can be; ſo far at leaſt as will ſerve him to conduct his family affairs. A maid of fifteen comes freſh from the care of her parents, without any tincture of the temper of another man; a prudent huſband, therefore, may form her mind according to his own: for this reaſon he would have her a virgin, knowing likewiſe that the impreſſion a woman receives from a firſt love is not eaſily eraſed.

Ver. 474. Hector uſes almoſt the ſame words in which the precept is laid down:

Κερσι δ' ανιπτοισιν δι λειβειν αιθοπα οινον
Αζομαι. Il. z.

"I am afraid to pour libations of black wine to "Jove with unwaſhed hands."

I quote this, as I have other paſſages with the ſame view, only to ſhow that the ſame cuſtom was held ſacred in the time of the Trojan wars, according to Homer, as in the days of Heſiod.

Ver. 480. Some of the commentators, and Tzetzes among the reſt, would perſuade us, that the poet

had a secret meaning in each of these superstitious precepts, and that they are not to be took literally, but as so many allegories. In answer to them, we may as well imagine all the Talmud and Levitical laws to be the same. They might as well have said, that the poet would not have us piss towards the sun for fear we should hurt our eyes. I know not whether these and the following precepts favour most of the age of the poet, or of the poet's old age.

Ver. 492. This doubtless is a part of the superstition of the age, though the Scholiast would give us a physical reason for abstinence at that time; which is, lest the melancholy of the mind should affect the fruit of the enjoyment. Indeed, the next lines seem to favour this conjecture; and perhaps the poet endeavoured, while he was laying down a religious precept, to strengthen it by philosophy.

Ver. 530. These verses are rejected by Plutarch, whose authority Proclus makes use of, as not of our poet. *Guietus.*

BOOK III*.

THE ARGUMENT.

The poet here distinguishes holidays from others, and what are propitious and what not, for different works; and concludes with a short recommendation of religion and morality.

Your servants to a just observance train
Of days, as Heav'n and human rites ordain;
Great Jove with wisdom o'er the year presides,
Directs the seasons, and the moments guides.
Of ev'ry month, the most propitious day,
The thirtieth, choose your labours to survey;
And the due wages to your servants pay.
The first of ev'ry moon, we sacred deem,
Alike the fourth throughout the year esteem;
And in the seventh Apollo we adore,
In which the golden god Latona bore;
Two days succeeding these extend your cares,
Uninterrupted in your own affairs;
Nor in the next two days, but one, delay
The work in hand, the bus'ness of the day,
Of which th' eleventh we propitious hold
To reap the corn, the twelfth to sheer the fold;
And then behold, with her industrious train,
The ant, wise reptile, gather in the grain;
Then you may see suspended in the air,
The careful spider his domain prepare;
And while the artist spins the cobweb dome,
The matron cheerful plies the loom at home.
Forget not in the thirteenth to refrain
From sowing, lest your work should prove in vain,
Though then the grain may find a barren soil,
The day is grateful to the planter's toil.

Not so the sixteenth to the planter's care;
A day unlucky to the new-born fair,
Alike unhappy to the marry'd then;
A day propitious to the birth of men:
The sixth, the same both to the man and maid;
Then secret vows are made, and nymphs betray'd;
The fair by soothing words are captives led;
The gossip's tale is told, detraction spread;
The kid of castrate, and the ram, we hold
Propitious now; alike to pen the fold.
Geld in the eighth the goat, and lowing steer;
Nor in the twelfth to geld the mule-colt fear.
The offspring male born in the twenty'th prize,
'Tis a great day, he shall be early wise.
Happy the man-child in the tenth day born;
Happy the virgin in the fourteenth morn;
Then train the mule obedient to your hand,
And teach the snarling cur his lord's command;
Then make the bleating flocks their master know,
And bend the horned oxen to the plough.
What in the twenty-fourth you do beware;
And the fourth day requires an equal care;
Then, then, be circumspect in all your ways,
Woes, complicated woes, attend the days.
When, resolute to change a single life,
You wed, on the fourth day lead home your wife;
But first observe the feather'd race that fly,
Remarking well the happy augury.
The fifths of ev'ry month your care require,
Days full of trouble, and afflictions dire:
For then the furies take their round 'tis said,
And heap their vengeance on the perjur'd head.
In the fev'nteenth prepare the level floor;
And then of Ceres thresh the sacred store;
In the same day, and when the timber's good,
Fell, for the bed-post and the ship, the wood.
The vessel, suff'ring by the sea and air,
Survey all o'er, and in the fourth repair.
In the nineteenth 'tis better to delay,
Till afternoon, the bus'ness of the day.

* *The precepts laid down in this book, concerning the difference of days, from the motion of the moon seem to be founded partly on nature, and partly on the superstition of the times in which they were writ. The whole is but a sort of an almanack in verse, and affords little room for poetry. Our author, I think, has jumbled his days too negligently together; which confusion, Valla, in his translation, has prevented by ranging the days in proper succession; a liberty I was fearful to take, as a translator, because almost every line must have been transposed from the original disposition: I have therefore, at the end of the notes, drawn a table of days in their successive order.*

Uninterrupted in the ninth purſue
The work in hand, a day propitious through;
Themſelves the planters proſp'rous then employ;
To either ſex, in birth, a day of joy;
The twenty-ninth is beſt, obſerve the rule,
Known but to few, to yoke the ox and mule;
'Tis proper then to yoke the flying ſteed;
But few, alas! theſe wholeſome truths can read;
Then you may fill the caſk, nor fill in vain;
Then draw the ſwift ſhip to the ſable main.
To pierce the caſk till the fourteenth delay,
Of all moſt ſacred next the twenty'th day;
After the twenty'th day few of the reſt
We ſacred deem, of that the morn is beſt.

Theſe are the days of which th' obſervance can
Bring great advantage to the race of man;
The reſt unnam'd indiff'rent paſs away,
And nought important marks the vulgar day:
Some one commend, and ſome another praiſe,
But moſt by gueſs, for few are wiſe in days;
One cruel as a ſtepmother we find,
And one as an indulgent mother kind.
O happy mortal! happy he, and bleſs'd,
Whoſe wiſdom here is by his acts conſeſs'd;
Who lives all blameleſs to immortal eyes,
Who prudently conſults the auguries,
Nor by tranſgreſſion works his neighbour pain,
Nor ever gives him reaſon to complain.

NOTES ON THE THIRD BOOK OF THE WORKS AND DAYS.

Ver. 1. That is, teach them how to diſtinguiſh lucky days from other. It was cuſtomary among the Romans to hang up tables, wherein the fortunate and unfortunate days were marked, as appears from Petronius, chap. 30. *Le Clerc.*

Ver. 3. Jove may be ſaid to preſide over the year naturally, from the motion of the celeſtial bodies in the heavens, or, religiouſly, from his divine adminiſtration.

Ver. 10. Tzetzes endeavours to account for Apollo being born in the ſeventh day, by arguments from nature, making him the ſame with the ſun; which error Valla has run into in his tranſlation. The miſtake is very plain, if we have recourſe to the Theogony; where the poet makes Latona bring forth Apollo, and Artemis or Diana, to Jove; and in the ſame poem makes the ſun and moon ſpring from Thia and Hyperion: Heſiod therefore meaned it no otherwiſe than the birth-day of one of their imaginary gods. He tells us alſo the firſt, fourth, and twentieth, of every month are holidays; but he gives us no reaſon for their being ſo. If a conjecture may be allowed, I think it not unlikely but the firſt may be the feaſt of the new moon; which day was always held ſacred by the Jews: in which the people ceaſed from buſineſs. "When will the new moon be gone, that we may ſell corn," Amos. chap. viii. ver. 5: but Le Clerc will not allow ιερον ημαρ here to be a feſtival: yet the ſame critic tells us, from Dionyſius Petavius, that the Orientals, as well as the moſt ancient Greeks, went by the lunar month, which they cloſed with the thirtieth day.

Ver. 18. The poet here makes the ant and the ſpider ſenſible of the days; and indeed Tzetzes is of opinion that the ant is a creature capable of diſtinction from a ſenſe of the winds, and the influence of the moon: he likewiſe tells us, from Pliny, that the ants employ themſelves all the time of the full of the moon, and ceaſe at the change.

Ver. 24. Melancthon and Friſius tell us it is wrong to ſow at this time of the lunar month, becauſe of the exceſſive moiſture, which is hurtful to the corn-ſeed, and advantageous to plants juſt planted.

Ver. 54. I tranſlate it, "the feather'd race that fly," to diſtinguiſh what kind of augury the poet means. Tzetzes tells us, two crows, the halcyon, or king's-fiſher, the dark-coloured hern, a ſingle turtle, and a ſwallow, &c. are inauſpicious; the peacock, and ſuch birds as do no miſchief, auſpicious. I ſuppoſe he does not place the turtle as one of the miſchievous kind, but would have the misfortune be in ſeeing but one.

Ver. 60. He adviſes to threſh the corn at the time of the full moon, becauſe the air is drier than at other times; and the corn that is ſacked, or put up in veſſels, while dry, will keep the longer; but if the grain is moiſt, it will ſoon grow mouldy and uſeleſs.

In the preceding book, the poet tells us the proper month to fell wood in, and in this, the proper day of the month. *Melancthon and Friſius.*

Ver. 92. It is worth obſerving, that the poet begins and ends his poem with piety towards the gods; the only way to make ourſelves acceptable to whom, ſays he, is by adhering to religion; and, to uſe the phraſe of Scripture, by "eſchewing evil."

OBSERVATIONS ON THE ANCIENT GREEK MONTH.

I BELIEVE it will be neceſſary, for the better underſtanding the following table, to ſet in a clear light the ancient Greek month, as we may reaſonably conclude it ſtood in the days of Heſiod, confining ourſelves to the laſt book of his Works and Days.

The poet makes the month contain thirty days, which thirty days he divides into three parts: the firſt he calls ἱσαμένη, or ἱσαμένου μηνός, in the genitive caſe, becauſe of ſome other word which is commonly joined requiring it to be of that caſe; the root of which, ἵστημι or ἵσταω, ſignifies I erect, I ſet up, I ſettle. &c. and Henry Stephens interprets the words ἱσαμένου μηνός, *ineunte menſe*, the entrance of the month, in which ſenſe the poet uſes them; which entrance is the firſt decade, or firſt ten days. The ſecond he calls μεσσόντος, which is from μησόω, I am in the midſt, meaning the middle decade of the month. The third part he calls φθίνοντις, from φθίνω, which is from φθίω, or φθέω, I waſte away, meaning the decline, or laſt decade of the month. Sometimes theſe words are uſed in the nominative caſe.

Before I leave theſe remarks I ſhall ſhow the manner of expreſſion of one day in each decade, from the laſt book of our poet, which will give a clear idea of all.

Ἑκτὴ δ' ἡ μεσσὴ μαλ' ἀσυμφορος ἐστι φυτοισιν. Ver. 18.

"The middle ſixth is unprofitable to plants." That is the ſixth day of the middle decade.

πηφυλαξο δὴ θυμῳ
Τήλεσ' ἀλευάμενος φθινοῦντος θ' ἱσαμένου τε. Ver. 33.

"Keep in your mind to ſhun the fourth of the entrance and end" of the month. That is the fourth of the entrance or firſt decade, and the fourth of the end or laſt decade.

It is proper to obſerve, that thoſe days which are blanks, are by our poet called indifferent days, days of no importance, either good or bad. It is likewiſe remarkable, that he makes ſome days both holidays and working days, as the fourth, fourteenth, and twentieth; but, to clear this, Le Clerc tells us, from our learned countryman, Selden, that ἱερὸν ἡμαρ, though literally a holiday, does not always ſignify a feſtival, but often a day propitious to us in our undertakings.

A TABLE OF THE ANCIENT GREEK MONTH.

AS IN THE LAST BOOK OF THE WORKS AND DAYS OF HESIOD.

DECADE I.

1. Day of Decade I. Holiday.
2.
3.
4. Holiday. Propitious for marriage, and for repairing ſhips. A day of troubles.
5. In which the furies take their round.
6. Unhappy for the birth of women. Propitious for the birth of men, for gelding the kid and the ram, and for penning the ſheep.
7. The birth-day of Apollo. A holiday.
8. Geld the goat and the ſteer.
9. Propitious quite through. Happy for the birth of both ſexes. A day to plant in.
10. Propitious to the birth of men.

DECADE II.

1. Day of Decade II, or 11th of the month. To reap.
2. For women to ply the loom, for the men to ſheer the ſheep, and geld the mule.
3. A day to plant in, and not to ſow.
4. Propitious for the birth of women. Break the mule and the ox. Teach your dog and your ſheep to know you. Pierce the caſk. A holiday.
5.
6. A day unlucky for the marriage, and birth of women. Propitious for the birth of men, and to plant.
7. Threſh the corn, and fell the wood.
8.
9. Luckieſt in the afternoon.
10. Happy for the birth of men. Moſt propitious in the morning. A holiday.

DECADE III.

1. Day of Decade III. or 21ſt of the month.
2.
3.
4.
5.
6.
7.
8.
9. Yoke the ox, the mule, and the horſe. Fill the veſſels. Launch the ſhip.
10. Look over the buſineſs of the whole month; and pay the ſervants their wages.

Thoſe days which are called holidays in the Table, are in the original, ἱερὸν ἡμαρ.

A VIEW OF THE WORKS AND DAYS.

SECT. I. *The Introduction.*

Now we have gone through the Works and Days, it may poſſibly contribute in ſome degree to the profit and delight of the reader, to take a view of the poem as we have it delivered down to us. I ſhall firſt conſider it as an ancient piece, and, in that light, enter into the merit and eſteem that it reaſonably obtained among the ancients: the authors who have been laviſh in their commendations of it are many; the greateſt of the Roman writers in proſe, Cicero, has more than once expreſſed his admiration for the ſyſtem of morality contained in it; and the deference the greateſt Latin poet has paid to it, I ſhall ſhow in my compariſon of the Works and Days with the Latin Georgic; nor is the encomium paid by Ovid to our poet to be paſſed over.

Vive et Aſcræus, dum muſtis uva tumebit,
Dum cadet incurvâ falce reſecta Ceres.

While ſwelling cluſters ſhall the vintage ſtain,
And Ceres with rich crops ſhall bleſs the plain,
Th' Aſcræan bard ſhall in his verſe remain.

Eleg. 15. Book I.

And Juſtin Martyr*, one of the moſt learned fathers in the Chriſtian church, extols the Works and Days of our poet, while he expreſſes his diſlike to the Theogony.

SECT. 2. *Of the firſt book.*

The reaſon why our poet addreſſes to Perſes, I have ſhowed in my notes: while he directs himſelf to his brother, he inſtructs his countrymen in all that is uſeful to know for the regulating their conduct, both in the buſineſs of agriculture, and in their behaviour to each other. He gives us an account of the firſt ages, according to the common received notion among the Gentiles. The ſtory of Pandora has all the embelliſhments of poetry which we can find in Ovid, with a clearer moral than is generally in the fables of that poet. His ſyſtem of morality is calculated ſo perfectly for the good of ſociety, that there is ſcarcely any precept omitted that could be properly thought of on that occaſion. There is not one of the ten commandments of Moſes, which relates to our moral duty to each other, that is not ſtrongly recommended by our poet; nor is it enough, he thinks, to be obſervant of what the civil government would oblige you to; but to prove yourſelf a good man, you muſt have ſuch virtues as no human laws require of you, as thoſe of temperance, generoſity, &c. Theſe rules are laid down in a moſt proper manner to captivate the reader; here the beauties of poetry and the force of reaſon combine to make him in love with morality. The poet tells us what effect we are reaſonably to expect from ſuch virtues and vices as he mentions; which doctrines are not always to be taken in a poſitive ſenſe. If we ſhould ſay a continuance of intemperance in drinking, and of our commerce with women, would carry us early to the grave, it is morally true, according to the natural courſe of things; but a man of a ſtrong and uncommon conſtitution, may wanton through an age of pleaſure, and ſo be an exception to this rule, yet not contradict the moral truth of it. Archbiſhop Tillotſon has judiciouſly told us in what ſenſe we are to take all doctrines of morality; "Ariſtotle," ſays that great divine, "obſerved long ſince, that moral and proverbial ſayings "are underſtood to be true generally, and for the "moſt part; and that is all the truth that is to be "expected in them; as when Solomon ſays, Train "up a child in the way wherein he ſhall go, and "when he is old he will not depart from it. This "is not to be taken, as if no child that is piouſly "educated, did ever miſcarry afterwards, but that "the good education of children is the beſt way to "make good men."

SECT. 3. *Of the ſecond book, &c.*

The ſecond book, which comes next under our view, will appear with more dignity when we conſider in what eſteem the art of agriculture was held in thoſe days in which it was writ: the Georgic did not then concern the ordinary and middling ſort of people only, but our poet writ for the inſtruction of princes likewiſe, who thought it no diſgrace to till the ground which they perhaps had conquered. Homer makes Laertes not only plant, but dung his own lands; the beſt employment he could find for his health, and conſolation, in the abſence of his ſon. The latter part of this book, together with all the third, though too mean for poetry, are not unjuſtifiable in our author. Had he made thoſe religious and ſuperſtitious precepts one entire ſubject of verſe, it would have been a ridiculous fancy, but, as they are only a part, and the ſmalleſt part, of a regular poem, they are introduced with a laudable intent. After the poet had laid down proper rules for morality, huſbandry, navigation, and the vintage, he knew that religion towards the gods, and a due obſervance of what was held ſacred in his age, were yet wanted to complete the work. Theſe were ſubjects, he was ſenſible, incapable of the embelliſhments of

* *In his ſecond diſcourſe or cohortation to the Greeks.* TRANS. H.

poetry; but as they were neceſſary to his purpoſe, he would not omit them. Poetry was not then deſigned as the empty amuſement only of an idle hour, conſiſting of wanton thoughts, or long and tedious deſcriptions of nothing, but, by the force of harmony and good ſenſe, to purge the mind of its dregs, to give it a great and virtuous turn of thinking: in ſhort, verſe was then but the lure to what was uſeful; which indeed has been, and ever will be, the end purſued by all good poets; with this view, Heſiod ſeems to have writ, and muſt be allowed, by all true judges, to have wonderfully ſucceeded in the age in which he roſe.

This advantage more ariſes to us from the writings of ſo old an author: we are pleaſed with thoſe monuments of antiquity, ſuch parts of the ancient Grecian hiſtory, as we find in them.

Sect. 4. *A compariſon betwixt Heſiod and Virgil, &c.*

I ſhall now endeavour to ſhow how far Virgil may properly be ſaid to imitate our poet in his Georgic, and to point out ſome of thoſe paſſages in which he has either paraphraſed, or literally tranſlated, from the Works and Days. It is plain he was a ſincere admirer of our poet, and of this poem in particular, of which he twice makes honourable mention, and where it could be only to expreſs the veneration that he bore to the author. The firſt is in his third paſtoral.

In medio duo ſigna, Conon, et quis fuit alter,
Deſcripſit, radio, totum qui gentibus orbem,
Tempora quæ meſſor, que curvus arator, haberet?

Two figures on the ſides emboſs'd appear,
Conon, and what's his name who made the ſphere,
And ſhow'd the ſeaſons of the ſliding year?
DRYDEN.

Notwithſtanding the commentators have all diſputed whom this interrogation ſhould mean, I am convinced that Virgil had none but Heſiod in his eye. In the next paſſage I propoſe to quote the greateſt honour that was ever paid by one poet to another is paid to ours. Virgil, in his ſixth paſtoral, makes Silenus, among other things, relate how Gallus was conducted by a muſe to Helicon, where Apollo, and all the muſes aroſe to welcome him; and Linus, approaching him, addreſſed him in this manner:

——hos tibi dant calamos, en, accipe, muſæ,
Aſcræa quos ante Seni; quibus ille ſolebat
Cantando rigidas deducere montibus ornos.

Receive this preſent, by the muſes made;
The pipe on which th' Aſtræan paſtor play'd;
With which, of old, he charm'd the ſavage train.
And call'd the mountain aſhes to the plain.
DRYDEN.

The greateſt compliment which Virgil thought he could pay his friend and patron, Gallus, was, after all that pompous introduction to the choir of Apollo, to make the muſes preſent him, from the hands of Linus, with the pipe, or calomos, *Aſcræa quos antè ſeni*, which they had formerly preſented to Heſiod; which part of the compliment to our poet, Dryden has omitted in his tranſlation.

To return to the Georgic. Virgil can be ſaid to imitate Heſiod in his firſt and ſecond books only: in the firſt is ſcarcely any thing relative to the Georgic itſelf, the hint of which is not taken from the Works and Days; nay more, in ſome places, whole lines are paraphraſed, and ſome literally tranſlated. It muſt indeed be acknowledged, that the Latin poet has ſometimes explained, in his tranſlation, what was difficult in the Greek, as where our poet gives directions for two ploughs:

Δοιαι δε ϑιϑαι αροτρα πονησαμενος κατα οικον
Αυτογυον και πηκτον.

by *αυτογυον* he means that which grows naturally into the ſhape of a plough, and by *πηκτον* that made by art. Virgil, in his advice to have two ploughs always at hand, has this explanation of *αυτογυον*:

Continuó in ſylvis magnâ vi flexa domatur
In burim, et curvi formam accipit ulmus aratri.
GEORG. I.

Young elms, with early force, in copſes bow,
Fit for the figure of the crooked plough.
DRYDEN.

Thus we find him imitating the Greek poet in the moſt minute precepts. Heſiod gives directions for making a plough; Virgil does the ſame. Even that which has been the ſubject of ridicule to many critics, viz. "plough and ſow naked," is tranſlated in the Georgic; *nudus ara, ſere nudus*. Before I proceed any farther, I ſhall endeavour to obviate the objection which has been frequently made againſt this precept. Heſiod means to inſinuate, that ploughing and ſowing are labours which require much induſtry and application; and he had doubtleſs this phyſical reaſon for his advice, that where ſuch toil is required it is unhealthful, as well as impoſſible, to go through with the ſame quantity of clothes as in works of leſs fatigue. Virgil doubtleſs ſaw this reaſon, or one of equal force, in this rule, or he would not have tranſlated it. In ſhort, we may find him a ſtrict follower of our poet in moſt of the precepts of huſbandry in the Works and Days. I ſhall give but one inſtance more, and that in his ſuperſtitious obſervance of days:

——quintum fugæ; pallidus Orcus,
Eumenideſque ſatæ, &c.

——the fifths be ſure to ſhun,
That gave the furies, and pale Pluto birth.
DRYDEN.

If the judgment I have paſſed from the verſes of Manilius, and the ſecond book of the Georgic, in my Diſcourſe on the Writings of Heſiod, be allowed to have any force, Virgil has doubtleſs been as much obliged to our poet in the ſecond book of his Georgic, as in the firſt; nor has he imitated him in his precepts only, but in ſome of his fineſt deſcriptions, as in the firſt book deſcribing the effects of a ſtorm:

————quo, maxima, motu,
Terra tremit, fugere feræ, &c.

and a little lower in the same description:

Nunc nemora, ingenti vento, nunc litora plangunt:

which is almost literal from Hesiod, on the power of the north wind:

————μεμυκε δε γαια και υλη, &c.

Loud groans the earth, and all the forests roar.

I cannot leave this head, without injustice to the Roman poet, before I take notice of the manner in which he uses that superstitious precept τεμπτης δ' εξαλεασθαι, &c. what in the Greek is languid, is by him made brilliant:

————quintum fuge: pallidus Orcus,
Eumenidesque satæ: tum partu, terra, nefando,
Cœumq. Japetumq. creat, savumq. Typhœum,
Et conjuratos cœlum rescindere fratres:
Ter sunt conati, &c.

————the fifths be sure to shun,
That gave the furies, and pale Pluto, birth,
And arm'd against the skies the sons of earth;
With mountains pil'd on mountains thrice they strove
To scale the steepy battlements of Jove;
And thrice his lightning, and red thunder play'd,
And their demolish'd works in ruin lay'd.
DRYDEN.

As I have showed where the Roman has followed the Greek, I may be thought partial to my author, if I do not show in what he has excelled him: and first, he has contributed to the Georgic most of the subjects in his two last books; as, in the third, the management of horses, dogs, &c. and, in the fourth, the management of the bees. His style, through the whole, is more poetical, more abounding with epithets, which are often of themselves most beautiful metaphors. His invocation on the deities concerned in rural affairs, his address to Augustus, his account of the prodigies before the death of Julius Cæsar, in the first book, his praise of a country life, at the end of the second, and the force of love in beasts, in the third, are what were never excelled, and some parts of them never equalled, in any language.

Allowing all the beauties in the Georgic, these two poems interfere in the merit of each other so little, that the Works and Days may be read with as much pleasure as if the Georgic had never been written. This leads me into an examination of part of Mr. Addison's Essay on the Georgic; in which that great writer, in some places, seems to speak so much at venture, that I am afraid he did not remember enough of the two poems to enter on such a task. Precepts, says he, of morality, besides the natural corruption of our tempers which makes us averse to them, are so abstracted from ideas of sense, that they seldom give an opportunity for those beautiful descriptions and images which are the spirit and life of poetry. Had he that part of Hesiod in his eye, where he mentions the temporal blessings of the righteous, and the punishment of the wicked, he would have seen that our poet took an opportunity, from his precepts of morality, to give us those beautiful descriptions and images which are the spirit and life of poetry. How lovely is the flourishing state of the land of the just there described, the increase of his flocks, and his own progeny! The reason which Mr. Addison gives against rules of morality in verse is to me a reason for them; for if our tempers are naturally so corrupt as to make us averse to them, we ought to try all the ways which we can to reconcile them, and verse among the rest; in which, as I have observed before, our poet has wonderfully succeeded.

The same author, speaking of Hesiod, says, the precepts he has given us are sown so very thick, that they clog the poem too much. The poet, to prevent this, quite through his Works and Days, has stayed so short a while on every head, that it is impossible to grow tiresome in either; the division of the work I have given at the beginning of this view, therefore, shall not repeat it. Agriculture is but one subject, in many, of the work, and the reader is there relieved with several rural descriptions, as of the northwind, autumn, the country repast in the shades, &c. The rules for navigation are dispatched with the utmost brevity, in which the digression, concerning his victory at the funeral games of Amphidamas, is natural, and gives a grace to the poem.

I shall mention but one oversight more which Mr. Addison has made, in his Essay, and conclude this head: when he condemned that circumstance of the virgin being at home in the winter season, free from the inclemency of the weather, I believe he had forgot that his own author had used almost the same image, and on almost the same occasion, though in other words:

Nec nocturna quidem carpentes pensa puellæ
Nescivere hyemem, &c. GEORG. I.

The difference of the manner in which the two poets use the image is this. Hesiod makes her with her mother at home, either bathing, or doing what most pleases her; and Virgil says, as the young women are plying their evening tasks, they are sensible of the winter season, from the oil sparkling in the lamp, and the snuff hardening. How properly it is introduced by our poet I have showed in my note to the passage.

The only apology I can make for the liberty I have taken with the writings of so fine an author as Mr. Addison, is, that I thought it a part of my duty to our poet, to endeavour to free the reader from such errors as he might possibly imbibe, when delivered under the sanction of so great a name.

Sect. 5. Of the fourth Eclogue of Virgil.

I must not end this view without some observations on the fourth Eclogue of Virgil, since Probus, Grævius, Fabricius, and other men of great learning, have thought fit to apply what has there

been generally ſaid to allude to the Cumœan ſybil to our poet:

Ultima Cumœi venit jam carminis ætas.

This line, ſay they, has an alluſion to the golden age of Heſiod; Virgil therefore is ſuppoſed to ſay, the laſt age of the Cumœan poet now approaches. By laſt, he means the moſt remote from his time; which Fabricius explains by *antiquiſſima*, and quotes an expreſſion from *Cornelius Severus*, in which he uſes the word in the ſame ſenſe, *ultima certamina* for *antiquiſſima certamina*. The only method by which we can add any weight to this reading, is by comparing the Eclogue of Virgil with ſome ſimilar paſſages in Heſiod. To begin, let us therefore read the line before quoted with the two following:

Ultima Cumœi venit jam carmina etas;
Magnus ab integro ſœclorum naſcitur ordo;
Jam redit et Virgo, redeunt Saturnia regna.

Which will bear this paraphraſe. The remoteſt age mentioned in the verſe of the Cumœan poet now approaches; the great order, or round, of ages, as deſcribed in the ſaid poet, revolves; now returns the virgin Juſtice, which, in his iron age, he tells us, left the earth; and now the reign of Saturn, which is deſcribed in his golden age, is come again. If we turn to the golden and iron ages, in the Works and Days, we ſhall find this alluſion very natural.

Let us proceed in our connection, and compariſon, of the verſes. Virgil goes on in his compliment to Pollio on his new-born ſon:

Ille deum vitam accipiet.

He ſhall receive, or lead, the life of gods, as the ſame poet tells us they did in the reign of Saturn.

Ως τε θεοι δ' εζωον———
Νοσφιν ατερ τε πονων.———

They liv'd like gods, and entirely without labour.

———feret omnia tellus;
Non raſtros patietur humus, non vinea falcem:
Robuſtus quoque jam tauris juga ſolvet arator.

The earth ſhall bear all things; there ſhall be no occaſion for inſtruments of huſbandry, to rake the ground, or prune the vine; the ſturdy ploughman ſhall unyoke his oxen, and live in eaſe; as they did in the reign of Saturn, as we are told by the ſame Cumœan poet.

———καρπον δ' ιφερε ζειδωρος αρουρα
Αυτοματη, πολλον τε και αφθονον,

The fertile earth bore its fruit ſpontaneouſly, and in abundance.

Here we ſee ſeveral natural alluſions to our poet, whence it is not unreaſonable, for ſuch as miſtake the country of Heſiod, to imagine, that all Virgil would ſay to compliment Pollio, on the birth of his ſon, is, that now ſuch a ſon is born, the golden age, as deſcribed by Heſiod, ſhall return; and granting the word *cumæi* to carry this ſenſe with it, there is nothing of a prophecy mentioned, or hinted at, in the whole eclogue, any more than Virgil's own, by poetical licenſe.

A learned prelate of our own church aſſerts ſomething ſo very extraordinary on this head, that I cannot avoid quoting it, and making ſome few remarks upon it: his words are theſe, "Virgil "could not have Heſiod in his eye in ſpeaking of "the four ages of the world, becauſe Heſiod makes "five ages before the commencement of the "golden." And ſoon after, continues he, "the "predictions in the prophet (meaning Daniel) of "four ſucceſſive empires, that ſhould ariſe in dif-"ferent ages of the world, gave occaſion to the "poets, who had the knowledge of theſe things "only by report, to apply them to the ſtate of "the world in ſo many ages, and to deſcribe the "renovation of the golden age in the expreſſions "of the prophet concerning the future age of the "Meſſiah, which in Daniel is the fifth kingdom." Bp. Chandler towards the concluſion of his Vindication of his Defence of Chriſtianity. What this learned parade was introduced for, I am at a loſs to conceive! Firſt, In that beautiful eclogue, Virgil ſpeaks not of the four ages of the world. Secondly, Heſiod, ſo far from making five ages before the commencement of the golden, makes the golden age the firſt. Thirdly, Heſiod could not be one of the poets who applied the predictions in the prophet Daniel to the ſtate of the world in ſo many ages, becauſe he happened to live ſome hundred years before the time of Daniel.

This great objection to their interpretation of *cumæi* ſtill remains, which cannot very eaſily be conquered, that Cuma was not the country of Heſiod, as I have proved in my Diſcourſe on the life of our poet, but of his father; and, what will be a ſtrong argument againſt it, all the ancient poets, who have uſed an epithet taken from his country, have choſe that of Aſcræus. Ovid, who mentions him as often as any poet, never uſes any other; and, what is the moſt remarkable, Virgil himſelf makes uſe of it in every paſſage in which he names him; and thoſe monuments of him, exhibited by Urſinus and Boiſſard, have this inſcription:

ΗΣΙΟΔΟΣ
ΔΙΟΤ
ΑΣΚΡΑΙΟΣ.

Aſcræan Heſiod, the ſon of Dius.

INDEX TO THE WORKS AND DAYS.

A.

Addison, his eſſay on the Georgic examined. View of the Works and Days, ſect. 4.
The equinox, vernal, and autumn, book ii. note to the 137th verſe.
Ages, book i. ver. 156.
The golden age, book i. ver. 156.
The ſilver age, book i. ver. 182.
The braſen age, book i. ver. 202.
The age of heroes, book i. ver. 210, and note.
The iron age, book i. ver. 234.
The ant, book iii. ver. 18, and note.

THE THEOGONY;
OR, THE GENERATION OF THE GODS.

To the Most Honourable,

GEORGE MARQUIS OF ANNANDALE*.

My Lord,

The reverence I bear to the memory of your late grandfather, with whom I had the honour to be particularly acquainted, and the obligations I have received from the incomparable lady your mother, would make it a duty in me to continue my regard to their heir; but stronger than those are the motives of this address; since I have had the happiness to know you, which has been as long as you have been capable of distinguishing persons, I have often discovered something in you that surpasses your years, and which gives fair promises of an early great man; this has converted what would otherwise be but gratitude to them to a real esteem for yourself. Proceed, my Lord, to make glad the heart of an indulgent mother with your daily progress in learning, wisdom, and virtue. Your friends, in their different spheres, are all solicitous to form you; and among them, permit me to offer my tribute, which may be no small means to the bringing you more readily to an understanding of the classics: for on the theology of the most ancient Greeks, which is the subject of the following poem, much of succeeding authors depends. Few are the writers, either Greek or Roman, who have not made use of the fables of antiquity; historians have frequent allusions to them; and they are sometimes the very soul of poetry: for these reasons let me admonish you to become soon familiar with Homer and Hesiod, by translations of them: you will perceive the advantage in your future studies; nor will you repent of it when you read the great originals. I have, in my notes, spared no pains to let you into the nature of the Theogony, and to explain the allegories to you; and, indeed, I have been more elaborate for your sake than I should otherwise have been. While I am paying my respect to your Lordship, I would not be thought forgetful of your brother, directing what I have here said, at the same time, to him. Go on, my Lord, to answer the great expectations which your friends have from you; and be your chief ambition to deserve the praise of all wise and good men---I am, my Lord, with the greatest respect, and most sincere affection, your most obedient and most humble servant,

Thomas Cooke.

* *Lord George Johnston, when this was first published in the year* 1728.

THE ARGUMENT.

After the proposition and invocation, the poet begins the generation of the gods. This poem, besides the genealogy of the deities and heroes, contains the story of Heaven, and the conspiracy of his wife and sons against him, the story of Styx and her offsprings, of Saturn and his sons, and of Prometheus and Pandora: hence the poet proceeds to relate the war of the gods, which is the subject of above three hundred verses. The reader is often relieved, from the narrative part of the Theogony, with several beautiful descriptions, and other poetical embellishments.

Begin my song, with the melodious nine
Of Helicon, the spacious and divine:
The muses there, a lovely choir advance,
With tender feet to form the skilful dance,
Now round the sable font in order move,
Now round the altar of Saturnian Jove;
Or if the cooling streams to bathe invite,
In thee, Permessus, they awhile delight;

Or now to Hippocrene resort the fair,
Or Olmius to thy sacred spring repair.
Veil'd in thick air, they all the night prolong,
In praise of Ægis-bearing Jove the song:
And thou, O Argive Juno! golden shod,
Art join'd in praises with thy consort god:
Thee, goddess, with the azure eyes, they sing,
Minerva, daughter of the heav'nly king;
The sisters to Apollo tune their voice,
And Artemis, to thee whom darts rejoice;
And Neptune in the pious hymn they sound,
Who girts the earth, and shakes the solid ground:
A tribute they to Themis chaste allow,
And Venus charming with the bending brow,
Nor Hebe, crown'd with gold, forget to praise,
Nor fair Dione, in their holy lays;
Nor thou, Aurora, nor the day's great light,
Remain unsung, nor the fair lamp of night;
To thee, Latona, next the numbers range;
Iäpetus, and Saturn wont to change,
They chant; thee, Ocean, with an ample breast,
They sing, and Earth and Night in sable dress'd;
Nor cease the virgins here the strain divine;
They celebrate the whole immortal line.
E'er while as they the shepherd swain behold
Feeding, beneath the sacred mount, his fold,
With love of charming song his breast they fir'd;
There me the heav'nly muses first inspir'd;
There, when the maids of Jove the silence broke,
To Hesiod thus, the shepherd swain, they spoke:

Shepherds, attend, your happiness who place
In gluttony alone, the swain's disgrace;
Strict to your duty in the field you keep,
There vigilant by night to watch your sheep;
Attend, ye swains, on whom the muses call,
Regard the honour not bestow'd on all;
'Tis ours to speak the truth in language plain,
Or give the face of truth to what we feign.

So spoke the maids of Jove, the sacred nine,
And pluck'd a sceptre from the tree divine,
To me the branch they gave, with look serene,
The laurel ensign, never-fading green:
I took the gift, with holy raptures fir'd,
My words flow sweeter, and my soul's inspir'd;
Before my eyes appears the various scene
Of all that is to come, and what has been.
Me have the muses chose, their bard to grace,
To celebrate the bless'd immortal race;
To them the honours of my verse belong;
To them I first and last devote the song:
But where, O where, enchanted do I rove,
Or o'er the rocks, or through the vocal grove!

Now with th' harmonious nine begin, whose voice
Makes their great sire, Olympian Jove, rejoice;
The present, future, and the past, they sing,
Join'd in sweet concert to delight their king;
Melodious and untir'd their voices flow;
Olympus echoes, ever crown'd with snow.
The heav'nly songsters fill th' ethereal round;
Jove's palace laughs, and all the courts resound:
Soft warbling endless with their voice divine,
They celebrate the whole immortal line:
From earth and heav'n, great parents, first they
The progeny of gods, a bounteous race; [trace
And then to Jove again returns the song,
Of all in empire, and command, most strong;
Whose praises first and last their bosom fire,
Of mortals, and immortal gods, the sire:
Nor to the sons of men deny they praise,
To such as merit of their heav'nly lays;
They sing the giants of puissant arm,
And with the wond'rous tale their father charm.

Mnemosyne, in the Pierian grove,
The scene of her intrigue with mighty Jove,
The empress of Eleuther, fertile earth,
Brought to Olympian Jove the muses forth;
Bless'd offsprings, happy maids, whose pow'rful art
Can banish cares, and ease the painful heart.
Absent from heav'n, to quench his am'rous flame,
Nine nights the god of gods compress'd the dame.
Now thrice three times the moon concludes her race,
And shows the produce of the god's embrace,
Fair daughters, pledges of immortal Jove,
In number equal to the nights of love;
Bless'd maids, by harmony of temper join'd;
And verse, their only care, employs their mind.
The virgin songsters first beheld the light
Near where Olympus rears his snowy height;
Where to the maids fair stately domes ascend,
Whose steps a constant beauteous choir attend.
Not far from hence the Graces keep their court,
And with the god of love in banquets sport;
Meanwhile the nine their heav'nly voices raise
To the immortal pow'rs, the song of praise;
They tune their voices in a sacred cause,
Their theme the manners of the gods, and laws:
When to Olympus they pursue their way,
Sweet warbling, as they go, the deathless lay,
Meas'ring to Jove, with gentle steps, the ground,
The sable earth returns the joyful sound.
Great Jove, their sire, who rules th' ethereal plains,
Confirm'd in pow'r, of gods the monarch reigns;
His father Saturn hurl'd from his command
He grasps the thunder with his conqu'ring hand,
He gives the bolts their vigour as they fly,
And bids the red-hot lightning pierce the sky:
His subject deities obey his nod,
All honours flow from him, of gods the god;
From him the muses sprung, no less their sire,
Whose attributes the heav'nly maids inspire:
Clio begins the lovely tuneful race,
Melpomene which, and Euterpe, grace,
Terpsichore all joyful in the choir,
And Erato to love whose lays inspire;
To these Thalia and Polymnia join,
Urania, and Calliope divine,
The first, in honour, of the tuneful nine;
She the great acts of virtuous monarchs sings,
Companion only for the best of kings.
Happy of princes, foster sons of Jove,
Whom at his birth the nine with eyes of love
Behold; to honours they his days design;
He first among the sceptre'd hands shall shine;
Him they adorn with ev'ry grace of song,
And soft persuasion dwells upon his tongue;
To him, their judge, the people turn their eye,
On him for justice in their cause rely,

Reason alone his upright judgment guides,
He hears impartial, and for truth decides:
Thus he determines from a sense profound,
And of contention heals the pois'nous wound.
Wise kings, when subjects grow in faction strong,
First calm their minds, and then redress their wrong,
By their good counsels bid the tumult cease,
And sooth contending parties into peace:
His aid with dutcous rev'rence they implore,
And as a god their virtuous prince adore:
From whom the muses love such blessings flow,
To them a righteous prince the people owe.
From Jove, great origin, all monarchs spring,
From mighty Jove of kings himself the king;
From the Pierian maids, the heav'nly nine,
And from Apollo, fire of verse divine,
Far shooting deity whose beams inspire,
The poets spring, and all who strike the lyre.
Blest'd whom with eyes of love the muses view,
Sweet flow his words, gentle as falling dew.
Is there a man by rising woes oppress'd,
Who feels the pangs of a distracted breast,
Let but the bard, who serves the nine, rehearse
The acts of heroes past'd, the theme for verse,
Or if the praise of gods, who pass their days
In endless ease above, adorns the lays,
The pow'rful words administer relief,
And from the wounded mind expel the grief;
Such are the charms which to the bard belong,
A gift from gods deriv'd, the pow'r of song.
Hail maids celestial, seed of heav'n's great king,
Hear, nor unaided let the poet sing,
Inspire a lovely lay, harmonious nine,
My theme th' immortal gods, a race divine,
Of earth, of heav'n which lamps of light adorn,
And of old sable night, great parents born,
And, after, nourish'd by the briny main:
Hear goddesses, and aid the vent'rous strain:
Say whence the deathless gods receiv'd their birth,
And next relate the origin of earth,
Whence the wide sea that spreads from shore to shore,
Whose surges foam with rage, and billows roar,
Whence rivers which in various channels flow,
And whence the stars which light the world below,
And whence the wide expanse of heav'n, and whence
The gods, to mortals who their good dispense;
Say how from them our honours we receive,
And whence the pow'r that they our wants relieve;
How they arriv'd to the ethereal plains,
And took possession of the fair domains:
With these, Olympian minds, my breast inspire,
And to the end support the sacred fire,
In order all from the beginning trace,
From the first parents of the num'rous race.
Chaos, of all the origin, gave birth
First to her offspring the wide-bosom'd earth,
The seat secure of all the gods, who now
Possess Olympus ever cloth'd with snow;
Th' abodes of Hell from the same fountain rise,
A gloomy land that subterranean lies;
And hence does Love his ancient lineage trace,
Excelling fair of all th' immortal race;
At his approach all care is chas'd away,
Nor can the wisest pow'r resist his sway;
Nor man, nor god, his mighty force restrains,
Alike in ev'ry breast the godhead reigns:
And Erebus, black sire, from Chaos came,
Born with his sister Night, a sable dame.
Night bore, the produce of her am'rous play
With Erebus, the sky, and cheerful day.
Earth first an equal to herself in fame
Brought forth, that covers all the starry frame,
The spacious heav'n, of gods the safe domain,
Who live in endless bliss, exempt from pain;
From her the lofty hills, and ev'ry grove,
Where nymphs inhabit, goddesses, and rove:
Without the mutual joys of love she bore
The barren Sea, whose whit'ning billows roar.
At length the Ocean, with his pools profound,
Whose whirling streams pursue their rapid round,
Of Heaven and Earth is born; Cœus his birth
From them derives, and Creus, sons of Earth;
Hyperion and Japhet, brothers, join:
Thea, and Rhea, of this ancient line
Descend; and Themis boasts the source divin
And thou, Mnemosyne, and Phœbe crown'd
With gold, and Tethys for her charms renown'd;
To these successive wily Saturn came,
As fire and son in each a barb'rous name.
Three sons are sprung from Heav'n and Earth's embrace,
The Cyclops bold, in heart a haughty race,
Brontes, and Steropes, and Arges brave,
Who to the hands of Jove the thunder gave;
They for almighty pow'r did lightning frame,
All equal to the gods themselves in fame;
One eye was plac'd, a large round orb, and bright,
Amidst their forehead to receive the light;
Hence were they Cyclops call'd; great was their skill,
Their strength, and vigour, to perform their will.
The fruitful Earth by Heav'n conceiv'd again,
And for three mighty sons the rending pain
She suffer'd; Cottus, terrible to name,
Gyges, and Briareus, of equal fame;
Conspicuous above the rest they shin'd,
Of body strong, magnanimous of mind,
Fifty large heads their lusty shoulders bore,
And, dang'rous to approach, hands fifty more:
Of all from Heav'n, their sire, who took their birth,
These were most dreadful of the sons of Earth;
Their cruel father, from their natal hour,
With hate pursued them, to his utmost pow'r;
He from the parent womb did all convey
Into some secret cave remote from day:
The tyrant father thus his sons oppress'd,
And evil meditations fill'd his breast.
Earth deeply groan'd for these her sons confin'd,
And vengeance for their wrongs employ'd her mind;
She yields black iron from her fruitful vein,
And of it forms an instrument of pain;
Then to her children thus, the silence broke,
Without reserve she deeply sighing spoke.

My sons, descended from a barb'rous sire,
Whose evil acts our breasts to vengeance fire,
Attentive to my friendly voice incline:
Th' aggressor he, and to revenge be thine.
The bold proposal they astonish'd hear;
Her words possest them with a silent fear;
Saturn, at last, whom no deceit can blind,
To her responsive thus declar'd his mind:
Matron, for us the throwing pangs who bore,
Much have we suffer'd, but will bear no more;
If such as fathers ought our will not be,
The name of father is no tie to me;
Patient of wrongs if they th' attempt decline,
Th' aggressor he, all to revenge be mine.
Earth greatly joy'd at what his words reveal'd,
And in close ambush from him all conceal'd;
Arm'd with the crooked instrument she made,
She taught him to direct the sharp-toothed blade.
Great Heav'n approach'd beneath the veil of Night,
Propoſing from his consort, Earth, delight;
As in full length the god extended lay,
No fraud suspecting in his am'rous play,
Out rush'd his son, complotter with his wife,
His right hand grasp'd the long, the fatal knife,
His left the channel of the seed of life,
Which from the roots the rough-toothed metal tore,
And bath'd his fingers with his father's gore;
He throw'd behind the source of Heav'n's pain;
Nor fell the ruins of the god in vain:
The sanguine drops which from the members fall,
The fertile earth receives, and drinks them all:
Hence at the end of the revolving year,
Sprung mighty giants, pow'rful with the spear,
Shining in arms; the Furies took their birth
Hence, and the Wood-nymphs of the spacious earth.
Saturn the parts divided from the wound,
Spoils of his parent god, cast from the ground
Into the sea; long through the watery plain;
They journey'd on the surface of the main:
Fruitful at length th' immortal substance grows,
Whit'ning it foams, and in a circle flows:
Behold a nymph arise divinely fair,
Whom to Cythera first the surges bear;
Hence is she borne, safe o'er the deeps profound
To Cyprus, water'd by the waves around:
And here she walks endow'd with every grace
To charm, the goddess blooming in her face;
Her looks demand respect, and where she goes
Beneath her tender feet the herbage blows;
And Aphrodite, from the foam her name,
Among the race of gods and men the same;
And Cytherea from Cythera came;
Whence, beauteous crown'd she safely cross'd the sea,
And call'd, O Cyprus, Cypria from thee;
Nor less by Philomedea known on earth,
A name deriv'd immediate from her birth:
Her first attendants to th' immortal choir
Where Love, the oldest god, and fair Desire:
The virgin whisper, and the tempting smile,
The sweet allurements that can hearts beguile,
Soft blandishments which never fail to move,
Friendship, and all the fond deceits in love,
Constant her steps pursue, or will she go
Among the gods above, or men below.
Great Heaven was wrath thus by his sons to bleed,
And call'd them Titans from the barbarous deed;
He told them all, from a prophetic mind,
The hours of his revenge were sure behind.
Now darksome Night fruitful begun to prove,
Without the knowledge of connubial love;
From her black womb sad Destiny and Fate,
Death, Sleep, and num'rous Dreams, derive their date:
With Momus the dark goddess teems again,
And Care the mother of a doleful train;
Th' Hesperides she bore, far in the seas,
Guards of the golden fruit, and fertile trees:
From the same parent sprung the rig'rous three,
The goddesses of Fate and Destiny,
Clotho and Lachesis, whose boundless sway,
With Atropos both men and gods obey;
To human race they, from their birth ordain
A life of pleasure, or a life of pain;
To slav'ry or to empire, such their pow'r,
They fix a mortal at his natal hour;
The crimes of men and gods the Fates pursue,
And give to each alike the vengeance due;
Nor can the greatest their resentment fly,
They punish e'er they lay their anger by:
And Nemesis from the same fountain rose,
From hurtful Night, herself the source of woes:
Hence Fraud and loose Desire the bane of life,
Old age vexatious, and corroding Strife.
From Strife pernicious painful labour rose,
Oblivion, famine, and tormenting woes;
Hence combats, murders, wars, and slaughters rise,
Deceits and quarrels, and injurious lies;
Unruly licence hence that knows no bounds,
And loss of spring, and sad domestic wounds;
Hence perjury, black perjury, began,
A crime destructive to the race of man.
Old Nereus to the Sea was born of Earth,
Nereus who claims the precedence in birth
To their descendants; him old god they call,
Because sincere and affable to all;
In judgment moderation he preserves,
And never from the paths of justice swerves.
Thaumas the great from the same parents came,
Phorcys the strong, and Ceto beauteous dame:
To the same sire did Earth Eurybia bear,
As iron hard her heart, a cruel fair.
Doris to Nereus bore a lovely train,
Fifty fair daughters, wand'rers of the main;
A beauteous mother she, of Ocean born,
Whose graceful head the comly'st locks adorn:
Proto, Eucrate, nymphs begin the line,
Sao to whom, and Amphitrite join;
Eudore, Thetis, and Galene, grace,
With Glauce, and Cymothoe, the race;
Swift-footed Spio hence derives her birth,
With thee, Thalia, ever prone to mirth;
And Melite, charming in mien to see,
Did the same mother bear Eulimene,
Agave too, Pasithea and thee;
From whom sprung Erato, Eunice you,
With arms appearing of a rosy hue;

Doto and Proto join the progeny.
With them Pherusa and Dunamene;
Nisea and Actea boast the same,
Protomedia from the fruitful dame,
And Doris honour'd with maternal name;
And hence does Panope her lineage trace,
And Galatea with a lovely face;
And hence Hippothoe who sweetly charms,
And thou Hipponoe with thy rosy arms:
And hence Cymodoce the floods who binds,
And with Cymatolege stills the winds;
With them the power does Amphitrite share,
Of all the main the lovely'st footed fair;
Cumo, Heïone, and Halimed
With a sweet garland that adorns her head,
Boast the same rise, joyful Glauconome,
Pontoporea, and Liagore;
Evagore, Laomedia join,
And thou Polynome, the num'rous line;
Autonoe, Lysianassa, name,
Sisters descended from the fertile dame;
In the bright list Evarne fair we find,
Spotless the nymph both in her form and mind,
And Psamathe of a majestic mien:
And thou divine Menippe there art seen;
To these we Neso add, Eupompe thee,
And thee Themisto next, and Pronoe;
Nemertes, virgin chaste, completes the race,
Not last in honour, though the last in place;
Her breast the virtues of her parent fire,
Her mind the copy of her deathless sire.
From blameless Nereus these, the fruits of joy,
And goodly offices the nymphs employ.
Of Ocean born, Electre plights her word
To Thaumas, and obeys her rightful lord;
Iris to whom, a goddess swift, she bears;
From them the Harpies, with their comely hairs,
Descend, Aëllo who pursues the wind,
And with her sister leaves the birds behind;
Ocypete the other; when they fly,
They seem with rapid wings to reach the sky.
Ceto to Phorcys bore the Graiæ, gray
From the first moment they beheld the day;
Hence gods and men these daughters Graiæ name;
Pephredo lovely veil'd from Ceto came,
And Enyo with her sacred veil: the same
To Phorcys bore the Gorgons, who remain
Far in the seat of night, the distant main,
Where, murm'ring at their task, th' Hesperides
Watch o'er the golden fruit, and fertile trees:
The number of the Gorgons once were three,
Stheno, Medusa, and Euryale;
Of which two sisters draw immortal breath,
Free from the fears of age as free from death;
But thou Medusa felt a pow'rful foe,
A mortal thou, and born to mortal woe;
Nothing avail'd of love thy blissful hours,
In a soft meadow, on a bed of flow'rs,
Thy tender dalliance with the ocean's king,
And in the beauty of the year the spring;
You by the conqu'ring hand of Perseus bled,
Perseus whose sword laid low in dust thy head;
Then started out when you began to bleed,
The great Chrysaor, and the gallant steed
Call'd Pegasus, a name not giv'n in vain,
Born near the fountains of the spacious main.
His birth will great Chrysaor's name unfold,
When in his hand glitter'd the sword of gold;
Mounted on Pegasus he soar'd above,
And sought the palace of Almighty Jove;
Loaded with lightning through he skies he rode,
And bore it with the thunder to the god.
Chrysaor, love the guide, Calliroe led,
Daughter of Ocean to the genial bed;
Whence Geryon sprung, fierce with his triple head;
Whom Hercules laid breathless on the ground,
In Erythea which the waves surround;
His oxen lowing round their master stand,
While he falls gasping from the conqu'ror's hand:
That fatal day beheld Eurytion fall,
And with him Orthus in a gloomy stall;
By his strong arm the dog and herdsmen slain,
The hero drove the oxen cross the main;
The wide-brow'd herds he to Tirynthus bore,
And safely landed on the sacred shore.
Calliroe in a cave conceiv'd again,
And for Ehidna bore maternal pain;
A monster she of an undaunted mind,
Unlike the gods, nor like the human-kind;
One half a nymph of a prodigious size,
Fair her complexion, and asquint her eyes;
The other half a serpent dire to view,
Large, and voracious, and of various hue;
Deep in a Syrian rock her horrid den,
From the immortal gods remote, and men;
There, so the council of the gods ordains,
Forlorn, and ever young, the nymph remains.
In love Echidna with Typhaon join'd,
Outrageous he, and blust'ring as the wind;
Of these the offsprings prov'd a furious race;
Orthus, the produce of the first embrace,
Was vigilant to watch his master's herd,
The dog of Geryon and a trusty guard:
Next Cerberus, the dog of Pluto, came,
Devouring direful of a monstrous frame;
From fifty heads he barks with fifty tongues,
Fierce and undaunted with his brazen lungs:
The dreadful Hydra rose from the same bed,
In Lerna by the fair-arm'd Juno bred,
Juno, with hate implacable, who strove
Against the virtues of the son of Jove;
But Hercules, with Iolaus join'd,
Amphitryon's race, and of a martial mind,
Bless'd with the counsel of the warlike maid,
Dead at his feet the horrid monster laid:
From the same parents sprung Chimæra dire,
From whose black nostrils issued flames of fire;
Strong and of size immense; a monster she,
Rapid in flight, astonishing to see;
A lion's head on her large shoulder's grew,
The goat's and dragon's terrible to view;
A lion she before in mane and throat,
Behind a dragon, in the midst a goat;
Her Pegasus the swift subdued in flight,
Back'd by Bellerophon a gallant knight.
From Orthus and Chimera, foul embrace,
Is Sphinx deriv'd, a monster to the race

Of Cadmus fatal; from the ſame dire veins
Sprung the ſtern ranger of Nemean plains,
The lion nouriſh'd by the wife of Jove,
Permitted lord of Tretum's mount to rove;
Nemea he, and Apeſas, commands,
Alarms the people, and deſtroys their lands;
In Hercules at laſt a foe he found,
And from his arm receiv'd a mortal wound.
Ceto and Phorcys both renew'd their flame;
From which amour a horrid ſerpent came;
Who keeps, while in a ſpacious cave he lies,
Watchful o'er all the golden fruit his eyes.
Tethys and Ocean, born of heav'n, embrace,
Whence ſprings the Nile, and a long wat'ry race,
Alpheus, and Eridanus the ſtrong,
That riſes deep, and ſtately rolls along,
Strymon, Mæander, and the Iſter clear;
Nor, Phaſis, are thy ſtreams omitted here;
To the ſame riſe Rheſus his current owes,
And Achelous that like ſilver flows;
Hence Neſſus takes his courſe, and Rhodius,
With Haliacmon and Hepraporus;
To theſe the Granic and Æſapus join,
Hermus to theſe, and Simoïs divine,
Penëus, and the Caic flood that laves
The verdant margins with his beauteous waves;
The great Sangarius, and the Ladon, name,
Parthenius, and Evenus, ſtreams of fame,
And you, Ardeſcus, boaſt the fruitful line,
And laſtly you Scamender the divine.
From the ſame parents, fertile pair, we trace
A progeny of nymphs, a ſacred race;
Who, from their birth, o'er all mankind the care
With the great king Apollo jointly ſhare;
In this is Jove, the god of gods, obey'd,
Who grants the rivers all to lend their aid.
The nymphs from Tethys, and old Ocean, theſe,
Pitho, Admete, daughters of the ſeas,
Ianthe and Electra, nymphs of fame,
Doris and Prymno, and the beauteous dame
Urania, as a goddeſs fair in face;
Hence Hippo, and hence Clymene we trace,
And thou, Rodia, of the num'rous race;
Zeuxo to theſe ſucceeds Calliroe,
Clytie, Idya, and Paſithoe;
Plexaure here, and Galaxaure join,
And lovely Dion of a lovely nine;
Moloboſis and Thoe add to theſe,
And charming Polydora form'd to pleaſe,
Cerces whoſe beauties all from nature riſe,
And Pluto with her large majeſtic eyes;
Perſëis, Xanthe, in the liſt we ſee,
And Ianira, and Acaſte thee;
Meneſtho, nor Europa, hence remove,
Nor Metis, nor Petræa raiſing love;
Criſie and Aſia boaſt one ancient ſire,
With fair Calypſo, object of deſire,
Teleſtho, ſaffron-veil'd, Eurynome,
Eudore, Tyche, and Ocyroe,
And thou Amphiro of the ſource divine,
And Styx exceeding all the lovely line:
Theſe are the ſons firſt in the liſt of fame,
And daughters, which from ancient Ocean came,
And fruitful Tethys, venerable dame:
Thouſands of ſtreams which flow the ſpacious earth
From Tethys, and her ſons, deduce their birth;

Numbers of tides ſhe yielded to her lord,
Too many for a mortal to record;
But they who on or near their borders dwell,
Their virtues know, and can deſcribe them well.
The fruits of Thia and Hyperion riſe,
And with refulgent luſtre light the ſkies,
The great, the glorious ſun tranſcending bright,
And the fair ſplendid moon the lamp of night;
With them Aurora, when whoſe dawn appears,
Who mortal men and gods immortal cheers.
To Creus, her eſpous'd, a ſon of earth,
Eurybia gave the great Aſtræus birth;
Perſes from them, of all moſt ſkilful came,
And Pallas firſt of goddeſſes in fame.
Aurora brought to great Aſtræus forth
The weſt, the ſouth-wind, and the rapid north;
The morning-ſtar fair Lucifer ſhe bore,
And ornaments of heav'n ten thouſand more.
From Styx, the faireſt of old Ocean's line,
And Pallas ſprung a progeny divine,
Zeal to perform, and Vict'ry in her pace
Fair-footed, Valour, Might, a glorious race!
They hold a manſion in the realms above,
Their ſeat is always near the throne of Jove;
Where the dread thund'ring god purſues his way,
They march, and cloſe behind his ſteps obey.
This honour they by Styx their mother gain'd;
Which by her prudence ſhe from Jove obtain'd:
When the great pow'r that ev'n the gods commands,
Who ſends the bolts from his almighty hands,
Summon'd th' immortals, who obey'd his call,
He thus addreſs'd them in th' Olympian hall:
Ye gods, like gods, with me who dauntleſs dare
To face the Titans in a dreadful war,
Above the reſt in honour ſhall ye ſtand,
And ample recompence ſhall load your hand:
To Saturn's reign who bow'd, and unpreferr'd,
Void of diſtinction, and without reward,
Great, and magnificently rich, ſhall ſhine,
As right requires, and ſuits a pow'r divine.
Firſt, as her father counſell'd, Styx aſcends,
And her brave offſprings to the god commends;
Great Jove receiv'd her with peculiar grace,
Nor honour'd leſs the mother than her race;
Enrich'd with gifts ſhe left the bright abodes,
By Jove ordain'd the ſolemn oath of gods;
Her children, as ſhe wiſh'd, behind remain,
Conſtant attendants on the thund'rer's train:
Alike the god with all maintain'd his word,
And rules in empire ſtrong of lords the lord.
Phœbe with fondneſs to her Cœus cleav'd,
And ſhe a goddeſs by a god conceiv'd;
Latona, fable-veil'd, the produce proves,
Pleaſing to all of their connubial loves,
Sweetly engaging from her natal hour,
The moſt delightful in th' Olympian bow'r:
From them Aſterea ſprung, a nymph renown'd,
And with the ſpouſal love of Perſes crown'd;
To whom ſhe bore Hecate, lov'd by Jove,
And honour'd by th' inhabitants above,
Profuſely gifted from th' almighty hand,
With pow'r extenſive o'er the ſea and land,
And great the honour ſhe by Jove's high leave,
Does from the ſtarry vault of heav'n receive,

When to the gods the sacred flames aspire,
From human off'rings as the laws require,
To Hecate the vows are first preferr'd;
Happy of men whose pray'rs are kindly heard,
Success attends his every act below,
Honour, wealth, pow'r, to him abundant flow.
The gods who all from earth and heaven descend,
On her decision for their lots depend;
Nor what the earliest gods the Titans claim,
By her ordain'd, of honour or of fame,
Has Jove revok'd by his supreme command,
For her decrees irrevocable stand:
Nor is her honour less, nor less her pow'r,
Because she only bless'd the nuptial hour;
Great is her pow'r on earth, and great her fame,
Nor less in heav'n, and o'er the main the same,
Because Saturnian Jove reveres the dame:
The man she loves she can to greatness raise,
And grant to whom she favours public praise;
This shines for words distinguish'd at the bar;
One proudly triumphs in the spoils of war;
And she alone can speedy vict'ry give,
And rich in glory bid the conqu'rer live:
And where the venerable rulers meet
She sits supreme upon the judgment-seat:
In single trials or of strength or skill,
Propitious she presides o'er whom she will:
To honour she extends the beauteous crown,
And glads the parent with the son's renown,
With rapid swiftness wings the gallant steeds,
And in the race the flying courser speeds.
Who, urg'd by want, and led by hopes of gain,
Pursue their journey cross the dang'rous main,
To Hecate they all for safety bow,
And to their god and her prefer the bow.
With ease the goddess, venerable dame,
Gives to the sportsman's hand his wish'd-for game;
Or now the weary'd creature faintly flies,
And for a while eludes the huntsman's eyes,
Who stretches sure to seize the panting prey,
And bear the glory of the chase away,
Till by the kind protect'ress of the plains,
Her strength recovers, and new life she gains,
She starts, surprising, and outstrips the wind,
And leaves the masters of the chase behind.
With Mercury the watchful goddess guards
Of goats the straggling flocks, the lowing herds,
And bleating folds rich with the pond'rous fleece;
By her they lessen, and by her increase.
The only daughter of her mother born,
And her the gods with various gifts adorn:
O'er infants she, so Jove ordain'd, presides,
And the upgrowing youth to merit guides;
Great is the trust the future man to breed,
A trust to her by Saturn's son decreed.

Rhea to Saturn bore her brother god,
Vesta and Ceres: Juno golden shod,
And Pluto hard of heart, whose wide command
Is o'er a dark and subterranean land,
A pow'rful monarch, hence derive their birth,
With Neptune, deity who shakes the earth;
Of these great Jove, the ruler of the skies,
Of gods and men the sire, in counsel wise,
Is born; and him the universe adores,
And the earth trembles when his thunder roars.
Saturn from earth, and heav'n adorn'd with stars,
Had learn'd the rumour of approaching wars,
Great as he was, a greater should arise,
To rob him of the empire of the skies,
The mighty Jove, his son, in counsel wise:
With dread the fatal prophecy he heard,
And for his regal honours greatly fear'd,
And that the dire decree might fruitless prove,
Devour's his pledges, at their birth, of love:
Now Rhea, who her slaughter'd children griev'd,
With Jove, the sire of gods and men, conceiv'd;
To earth and heav'n she for assistance runs,
And begs their counsel to revenge her sons,
To guard her Jove from wily Saturn's ire,
Secret to keep him from a barb'rous sire:
They to their daughter lend a willing ear,
And to her speak the hour of vengeance near,
Nor hide they from her what the fates ordain
Of her great-minded son, and Saturn's reign:
Her safe to Crete the parent gods convey,
In Lyctus there, a fertile soil, she lay;
At length the tedious months their course had run,
When mighty Jove she bore, her youngest son;
Wide-spreading earth receiv'd the child with joy,
And train'd the god up from a new-born boy.
Rhea to Lyctus safely took her flight,
Protected by the sable veil of night;
Far in the sacred earth her son she laid,
On mount Ægæus ever crown'd with shade.
When the old king, who once could boast his reign
O'er all the gods, and the ethereal plain,
Came jealous of the infant's future pow'r,
A stone the mother gave him to devour;
Greedy he seiz'd th' imaginary child,
And swallow'd heedless, by the dress beguild;
Nor thought the wretched god of ought to fear,
Nor knew the day of his disgrace was near;
Invincible remains his Jove alive,
His throne to shake, and from his kingdom drive
The cruel parent, for to him 'tis giv'n
To rule the gods, and mount the throne of heav'n.
Well thriv'd the deity, nor was it long
Before his strength increas'd, and limbs grow'd strong.
When the revolving year his course had run,
By earth thy art and Jove his pow'rful son,
The crafty Saturn, once by gods ador'd,
His injur'd offsprings to the light restor'd:
First from within he yielded to the day
The stone deceitful, and his latest prey;
This Jove, in mem'ry of the wond'rous tale,
Fix'd on Parnassus in a sacred vale,
In Pytho the divine, a mark to be,
That future ages may astonish'd see:
And now a greater task behind remains,
To free his kindred heav'n-born race from chains,
In an ill hour by Saturn rashly bound,
Who from the hands of Jove their freedom found;
With zeal the gods perform'd a thankful part,
The debt of gratitude lay next their heart;
Jove owes to them the bolts which dreadful fly,
And the bright lightning which illumes the sky;
To him th' exchange for liberty they bore,
Gifts deep in earth conceal'd, unknown before;
Now arm'd with them, he reigns almighty Jove,
The lord of men below, and gods above.

Clymene, ocean-born, with beauteous feet,
And Japhet, in the bands of wedlock meet;
From whose embrace a glorious offspring came,
Atlas magnanimous, and great in fame,
Menœtius, thou with lasting honours crown'd,
Prometheus for his artifice renown'd,
And Epimetheus of unstedfast mind,
Lur'd to false joys, and to the future blind,
Who, rashly weak by soft temptations mov'd,
The bane of arts and their inventors prov'd,
Who took the work of Jove, the virgin fair,
Nor saw beneath her charms the latent snare.
Blasted by lightning from the hands of Jove,
Menœtius fell in Erebus to rove;
His dauntless mind that could not brook command,
And prone to ill, provok'd th' almighty hand.
Atlas, so hard necessity ordains,
Erect the pond'rous vault of stars sustains;
Not far from the Hesperides he stands,
Nor from the load retracts his head or hands:
Here was he fix'd by ove in counsel wise,
Who all disposes, and who rules the skies?
To the same god Prometheus ow'd his pains,
Fast bound with hard inexecrable chains
To a large column, in the midmost part,
Who bore his suff'rings with a dauntless heart;
From Jove an eagle flew, with wings wide spread,
And on his never-dying liver fed;
What with his rav'nous beak by day he tore
The night supply'd, and furnish'd him with more:
Great Hercules to his assistance came,
Born of Alcmena, lovely-footed dame;
And first he made the bird voracious bleed,
And from his chains the son of Japhet freed;
To this the god consents, th' Olympian sire,
Who, for his son's renown, suppress'd his ire,
The wrath he bore against the wretch who strove
In counsel with himself, the pow'rful Jove;
Such was the mighty thund'rer's will, to raise
To greatest height the Theban hero's praise.
When at Mecona a contention rose,
Men and immortals to each other foes,
The strife Prometheus offer'd to compose;
In the division of the sacrifice,
Intending to deceive great Jove the wise,
He stuff'd the flesh in the large ox's skin,
And bound the entrails with the fat within,
Next the white bones with artful care dispos'd,
And in the candid fat from sight enclos'd:
The sire of gods and men, who saw the cheat,
Thus spoke expressive of the dark deceit.
In this division how unjust the parts,
O Japhet's son, of kings the first in arts!
Reproachful spoke the god in council wise;
To whom Prometheus full of guile replies:
O Jove, the greatest of the powers divine,
View the division, and the choice be thine.
Wily he spoke from a deceitful mind;
Jove saw his thoughts, nor to his heart was blind;
And then the god, in wrath of soul, began
To plot misfortunes to his subject man:
The lots survey'd, he with his hands embrac'd
The parts which were in the white fat incas'd;
He saw the bones, and anger sat confess'd
Upon his brow, for anger seiz'd his breast:
Hence to the gods the od'rous flames aspire
From the white bones which feed the sacred fire.
The cloud compelling Jove, by Japhet's son
Enrag'd, to him in words like these begun:
O! who in mal-contrivance all transcend,
Thine arts thou wilt not yet, obdurate, end.
So spoke th' eternal wisdom, full of ire,
And from that hour deny'd the use of fire
To wretched men, who pass on earth their time,
Mindful, Prometheus, of thy artful crime:
But Jove in vain conceal'd the splendid flame;
The son of Japhet, of immortal fame,
Brought the bright sparks clandestine from above
Clos'd in a hollow cane; the thund'ring Jove
Soon from the bitterness of soul, began
To plot destruction to the peace of man.
Vulcan, a god renown'd, by Jove's command,
Form'd a fair virgin with a master hand,
Earth her first principle, her native air
As modest seeming as her face was fair.
The nymph, by Pallas, blue-ey'd goddess, dress'd,
Bright shin'd improv'd beneath the candid vest:
The rich wrought veil behind, wond'rous to see,
Fruitful with art, bespoke the deity;
Her brows to compass did Minerva bring
A garland breathing all the sweets of spring:
And next the goddess, glorious to behold,
Plac'd on her head a glitt'ring crown of gold,
The work of Vulcan by his master-hand,
The labour of the god by Jove's command;
There seem'd to scud along the finny breed;
And there the beasts of land appear'd to feed;
Nature and art were there so much at strife,
The miracle might well be took for life.
Vulcan the lovely bane, the finish'd maid,
To the immortal gods and men convey'd;
Graceful by Pallas dress'd the virgin trod,
And seem'd a blessing or for man or god:
Soon as they see th' inevitable snare,
They praise the artist, and admire the fair;
From her, the fatal guile, a sex derives
To men pernicious, and contracts their lives,
The softer kind, a false alluring train,
Tempting to joys which ever end with pain,
Never beheld with the penurious race,
But ever seen where lux'ry shows her face.
As drones oppressive habitants of hives,
Owe to the labour of the bees their lives,
Whose work is always with the day begun,
And never ends but with the setting sun,
From flow'r to flow'r they rove, and loaded home
Return to build the white, the waxen comb,
While lazy the luxurious race remain
Within, and of their toils enjoy the gain,
So woman, by the thund'rer's hard decree,
And wretched man, are like the drone and bee:
If man the galling chain of wedlock shuns,
He from one evil to another runs;
He, when his hairs are winter'd o'er with gray,
Will want a helpmate in th' afflicting day;
And if possessions large have bless'd his life,
He dies, and proves perhaps the source of strife;
A distant kindred, far allay'd in blood,
Contend to make their doubtful titles good;

Or ſhould he, theſe calamities to fly,
His honour plight and join the mutual tie,
And ſhould the partner of his boſom prove
A chaſte and prudent matron worthy love;
Yet he would find this chaſte, this prudent wife
The hapleſs author of a checquer'd life:
But ſhould he, wretched man, a nymph embrace,
A ſtubborn conſort, of a ſtubborn race,
Poor hamper'd ſlave, how muſt he drag the chain!
His mind, his breaſt, his heart, o'ercharg'd with pain!
What congregated woes muſt he endure!
What ills on ills which will admit no cure!
Th' omnipotence of Jove in all we ſee,
Whom none eludes, and what he wills muſt be;
Not thou, to none injurious, Japhet's ſon,
With all thy wiſdom, could his anger ſhun;
His rage you ſuffer'd, and confeſs'd his pow'r,
Chain'd in hard durance in the penal hour.
The brothers Briareus and Cottus lay,
With Gyges, bound in chains, remov'd from day,
By their hard-hearted ſire, who with ſurpriſe
View'd their vaſt ſtrength, their form, and monſtrous ſize:
In the remoteſt parts of earth confin'd
They ſat, and ſilent ſorrows wreck'd their mind,
Till by th' advice of Earth, and aid of Jove,
With other gods, the fruits of Saturn's love,
With Rhea beauteous dreſs'd, they broke the chain,
And from their dungeons burſt to light again.
Earth told them all from a prophetic light,
How gods encount'ring gods ſhould meet in fight,
To them foretold, who ſtood devoid of fear,
Their hour of vict'ry and renown was near;
The Titans, and the bold Saturnian race,
Should wage a dreadful war, ten years the ſpace.
The Titans brave on lofty Othyrs ſtand,
And glorioufly dare the thund'rer's hand:
The gods from Saturn ſprung, ally their pow'r;
(Gods Rhea bore him in a fatal hour):
From high Olympus they like gods engage,
And dauntleſs face, like gods, Titanian rage,
In the dire conflict neither party gains,
In equal balance long the war remains;
At laſt by truce each ſoul immortal reſts,
Each God on nectar and ambroſia feaſts;
Their ſpirits nectar and ambroſia raiſe,
And fire their generous breaſts to acts of praiſe;
To whom, the banquet o'er, in council join'd,
The ſire of gods, and men expreſs'd his mind:
Gods, who from earth and heav'n, great riſe, deſcend,
To what my heart commands to ſpeak attend:
For vict'ry long, and empire, have we ſtrove,
Long have ye battel'd in defence of Jove;
To war again, invincible your might,
And dare the Titans to the dreadful fight;
Of friendſhip ſtrict obſerve the ſacred charms,
Be that the cement of the gods in arms;
Grateful remember, when in chains ye lay,
From darkneſs Jove redeem'd ye to the day.
He ſpoke, and Cottus to the god replies:
O venerable ſire! in council wiſe,
Who freed immortals from a ſtate of woe,
Of what you utter well the truth we know:
Reſcu'd from chains and darkneſs here we ſtand.
O ſon of Saturn! by thy pow'rful hand;
Nor will we, king, the rage of war decline,
ill pow'r, indiſputable pow'r, is thine;
The right of conqueſt ſhall confirm thy ſway,
And teach the Titans whom they muſt obey.
He ends, the reſt aſſent to what he ſays;
And the gods thank him with the voice of praiſe;
He more than ever feels himſelf inſpir'd,
And his mind burns with love of glory fir'd.
All ruſh to battle with impetuous might,
And gods and goddeſſes provoke the fight.
The race that Rhea to her lord conceiv'd,
And the Titanic gods by Jove reliev'd
From Erybus, who there in bondage lay,
Ally their arms in this immortal day.
Each brother fearleſs the dire conflict ſtands,
Each rears his fifty heads, and hundred hands;
They mighty rocks from their foundations tore,
And fiercely brave againſt the Titans bore.
Furious and ſwift the Titan phalanx drove,
And both with mighty force for empire ſtrove:
The ocean roar'd from ev'ry part profound,
And the earth bellow'd from her inmoſt ground:
Heav'n groans, and, to the gods, conflicting bends,
And the loud tumult high Olympus rends.
So ſtrong the darts from god to god were hurl'd,
The clamour reach'd the ſubterranean world;
And where, with haughty ſtrides, each warrior trod,
Hell felt the weight, and ſunk beneath the god:
All Tartarus could hear the blows from far:
Such was the big, the horrid, voice of war!
And now the murmur of incitement flies,
All rang'd in martial order, through the ſkies;
Here Jove above the reſt conſpicuous ſhin'd,
In valour equal to his ſtrength his mind;
Erect and dauntleſs ſee the thund'rer ſtand,
The bolts red hiſſing from his vengeful hand;
He walks majeſtic round the ſtarry frame;
And now the lightnings from Olympus flame:
The earth wide blazes with the fires of Jove,
Nor the flaſh ſpares the verdure of the grove.
Fierce glows the air, the boiling ocean roars,
And the ſeas waſh with burning waves their ſhores;
The dazzling vapours round the Titans glare,
A light too pow'rful for their eyes to bear!
One conflagration ſeems to ſeize on all,
And threatens Chaos with the gen'ral fall.
From what their eyes behold, and what they hear,
The univerſal wreck of worlds is near:
Should the large vault of ſtars, the heav'ns, deſcend,
And with the earth in loud confuſion blend,
Like this would ſeem the great tumultuous jar:
The gods engag'd, ſuch the big voice of war!
And now the batt'ling winds their havoc make,
Thick whirls the duſt, earth, thy foundations ſhake;
The arms of Jove thick and terrific fly,
And blaze and bellow through the trembling ſky;
Winds, thunder, lightning, through both armies drove,
Their courſe impetuous, from the hands of Jove;
Loud and ſtupendous is the raging fight,
And now each warrior god exerts his might.
Cottus, and Briareus, who ſcorns to yield,
And Gyges panting for the martial field,

Foremoſt the labours of the day increaſe,
Nor let the horrors of the battle ceaſe : [throw,
From their ſtrong hands three hundred rocks they
And, oft repeated, overwhelm the foe;
They forc'd the Titans deep beneath the ground,
Caſt from their pride, and in ſad durance bound ;
Far from the ſurface of the earth they lie,
In chains, as earth is diſtant from the ſky;
From earth the diſtance to the ſtarry frame,
From earth to gloomy Tartarus, the ſame.
From the high heav'n a brazen anvil caſt,
Nine nights and days in rapid whirls would laſt,
And reach the earth the tenth, whence ſtrongly
hurl'd,
The ſame the paſſage to th' infernal world,
To Tart'rus ; which, a brazen cloſure bounds,
And whoſe black entrance threefold night ſur-
rounds,
With earth thy vaſt foundations cover'd o'er;
And there the ocean's endleſs fountains roar :
By cloud-compelling Jove the Titans fell,
And there in thick, in horrid darkneſs dwell :
They lie confin'd, unable thence to paſs,
The wall and gates by Neptune made of braſs;
Jove's truſty guards, Gyges and Cottus, ſtand
There, and with Briareus the paſs command.
The entrance there, and the laſt limits, lie
Of earth, the barren main, the ſtarry ſky,
And Tart'rus, there of all the fountains riſe,
A ſight deteſted by immortal eyes :
A mighty chaſm, horror and darkneſs here;
And from the gates the journey of a year;
Here ſtorms in hoarſe, in frightful murmurs play,
The ſeat of Night, where miſts exclude the day.
Before the gate the ſon of Japhet ſtands,
Nor from the ſkies retracts his head or hands;
Where night and day their courſe alternate lead;
Where both their entrance make and both recede,
Both wait the ſeaſon to direct their way,
And ſpread, ſucceſſive, o'er the earth their ſway :
This cheers the eyes of mortals with her light;
The harbinger of Sleep pernicious Night :
And here the ſons of Night their manſion keep,
Sad deities, Death and his brother Sleep;
Whom, from the dawn to the decline of day,
The ſun beholds not with his piercing ray :
One o'er the land extends, and o'er the ſeas,
And lulls the weary'd mind of man to eaſe ;
That iron-hearted, and of cruel ſoul,
Brazen his breaſt, nor can he brook controul,
To whom, and ne'er return, all mortals go,
And even to immortal gods a foe.
Foremoſt th' infernal palaces are ſeen
Of Pluto, and Perſephone his queen ;
A horrid dog, and grim, couch'd on the floor,
Guards, with malicious art, the ſounding door;
On each, who in the entrance firſt appears,
He fawning wags his tail, and cocks his ears :
If any ſtrive to meaſure back the way,
Their ſteps he watches, and devours his prey.
Here Styx, a goddeſs, whom immortals hate,
The firſt-born fair of Ocean, keeps her ſtate ;
From gods remote her ſilver columns riſe,
Roof'd with large rocks her dome that fronts the
ſkies :
Here, croſs the main, ſwift-footed Iris brings
A meſſage ſeldom from the king of kings ;
But when among the gods contention ſpreads,
And in debate divides immortal heads,
From Jove the goddeſs wings her rapid flight
To the fam'd river, and the ſeat of Night,
Thence in a golden vaſe the water bears,
By whoſe cool ſtreams each pow'r immortal ſwears.
Styx from a ſacred fount her courſe derives,
And far beneath the earth her paſſage drives ;
From a ſtupendous rock deſcend her waves,
And the black realms of Night her current laves :
Could any her capacious channels drain,
They'd prove a tenth of all the ſpacious main ;
Nine parts in mazes clear as ſilver glide
Along the earth, or join the ocean's tide ;
The other from the rock in billows rolls,
Source of misfortune to immortal ſouls
Who with falſe oaths diſgrace th' Olympian bow'rs,
Incur the puniſhment of heav'nly pow'rs :
The perjur'd god, as in the arms of death,
Lethargic lies, nor ſeems to draw his breath;
Nor him the nectar and ambroſia cheer,
While the ſun goes his journey of a year;
Nor with the lethargy concludes his pain,
But complicated woes behind remain :
Nine tedious years he muſt an exile rove,
Nor join the council, nor the feaſts of Jove ;
The baniſh'd god back in the tenth they call
To heav'nly banquets and th' Olympian hall :
The honours ſuch the gods on Styx beſtow,
Whoſe living ſtreams through rugged channels
flow,
Where the beginning, and laſt limits lie
Of earth, the barren main, the ſtarry ſky,
And Tart'rus; where of all the fountains riſe;
A ſight deteſted by immortal eyes.
Th' inhabitants through brazen portals paſs,
Over a threſhold of e'erlaſting braſs,
The growth ſpontaneous, and foundations deep ;
And here th' allies of Jove their captives keep,
The Titans, who to utter darkneſs fell,
And in the fartheſt parts of Chaos dwell.
Jove grateful gave to his auxiliar train,
Cottus and Gyges, manſions in the main ;
To Briareus, for his ſuperior might
Exerted fiercely in the dreadful fight,
Neptune who ſhakes the earth, his daughter gave,
Cymopolia, to reward the brave.
When the great victor god, almighty Jove,
The Titans from celeſtial regions drove,
Wide Earth Typhœus bore, with Tart'rus join'd,
Her youngeſt born, and bluſt'ring as the wind ;
Fit for moſt arduous works his brawny hands,
On feet as durable as gods he ſtands ;
From heads of ſerpents hiſs and hundred tongues,
And lick his horrid jaws, untir'd his lungs;
From his dire hundred heads his eye-balls ſtare,
And fire-like, dreadful to beholders glare ;
Terrific from his hundred mouths to hear,
Voices of ev'ry kind torment the ear ;
His utt'rance ſounds like gods in council full ;
And now he bellows like the lordly bull :
And now he roars like the ſtern beaſt that reigns
King of the woods, and terror of the plains ;

And now, surprising to be heard, he yelps,
Like, from his ev'ry voice, the lion's whelps;
And now, so loud a noise the monster makes,
The lofticst mountain from its basis shakes:
And now Typhœus had perplex'd the day,
And over men and gods usurp'd the sway,
Had not the pow'rful monarch of the skies,
Of men and gods the sire, great Jove the wise,
Against the foe his hotteſt vengeance hurl'd,
Which blaz'd and thunder'd through th' ethereal world;
Through land and main the bolts red hissing fell,
And through old Ocean reach'd the gates of Hell.
Th' almighty rising made Olympus nod,
And the earth groan'd beneath the vengeful god.
Hoarse through the cerule main the thunder roll'd,
Through which the light'ning flew, both uncontroul'd;
Fire caught the winds which on their wings they bore,
Fierce flame the earth and heav'n, the seas loud roar,
And beat with burning waves the burning shore;
The tumult of the gods was heard afar:
How hard to lay this hurricane of war!
The god who o'er the dead infernal reigns,
E'en Pluto, trembled in his dark domains:
Dire horror seiz'd the rebel Titan band,
In Tartarus who round their Saturn stand:
But Jove at last collected all his might,
With light'ning arm'd, and thunder for the fight.
With strides majestic from Olympus strode;
What pow'r is able now to face the god!
The flash obedient executes his ire;
The giant blazes with vindictive fire;
From ev'ry head a diff'rent flame ascends;
The monster bellows, and Olympus bends:
The god repeats his blows, beneath each wound
All maim'd the giant falls, and groans the ground,
Fierce flash the lightnings from the hands of Jove,
The mountains burn, and crackles ev'ry grove.
The melted earth floats from her inmost caves,
As from the furnace run metallic waves:
Under the caverns of the sacred ground,
Where Vulcan works, and restless anvils sound,
Beneath the hand divine the iron grows
Ductile, and liquid from the furnace flows;
So the earth melted: and the giant fell,
Plung'd by the arms of mighty Jove to hell.

Typhœus bore the rapid winds which fly
With tempests wing'd, and darken all the sky;
But from the bounteous gods derive their birth
The gales which breathe frugiferous to earth,
The south, the north, and the swift western wind
Which ever blow to profit human kind:
Those from Typhœus sprung, an useless train,
To men pernicious, bluster o'er the main;
With thick and sable clouds they veil the deep,
And now destructive cross the ocean sweep;
The mariner with dread beholds from far
The gathering storms, and elemental war;
His bark the furious blast and billows rend;
The surges rise, and cataracts descend;
Above, beneath, he hears the tempest roar;
Now sinks the vessel, and he fears no more:

And remedy to this they none can find,
Who are resolved to trade by sea and wind.
On land in whirlwinds, or unkindly show'rs,
They blast the lovely fruits and blooming flow'rs;
O'er sea and land the blust'ring tyrants reign,
And make of earth-born men the labours vain.

And now the gods, who fought for endless fame,
The god of gods almighty Jove proclaim,
As Earth advis'd: nor reigns Olympian Jove
Ingrate to them who with the Titans strove;
On those who war'd beneath his wide command
He honours heaps with an impartial hand.

And now the king of gods, Jove, Metis led,
The wisest fair one, to the genial bed;
Who with the blue-ey'd virgin fruitful proves,
Minerva, pledge of their celestial loves;
The fire, from what kind earth and heav'n reveal'd,
Artful the matron in himself conceal'd;
From her it was decreed a race should rise
That would usurp the kingdom of the skies:
And first the virgin with her azure eyes,
Equal in strength, and as her father wise,
Is born, the offspring of th' almighty's brain:
And Metis by the god conceiv'd again,
A son decreed to reign o'er heav'n and earth,
Had not the fire destroy'd the mighty birth:
He made the goddess in himself reside,
To be in ev'ry act th' eternal guide.

The Hours to Jove did lovely Themis bear,
Eunomie, Dice, and Irene fair;
O'er human labours they the pow'r possess,
With seasons kind the fruits of earth to bless:
She by the thund'ring god conceiv'd again,
And suffer'd for the fates the rending pain,
Clotho and Lachesis to whom we owe,
With Atropos, our shares of joy or woe;
This honour they receiv'd from Jove the wise,
The mighty sire, the ruler of the skies.

Eurynome, from ocean sprung, to Jove,
The beauteous graces bore inspiring love,
Aglaia, and Euphrosyne the fair,
And thou Thalia of a graceful air;
From the bright eyes of these such charms proceed
As make the hearts of all beholders bleed.

He Ceres next, a bounteous goddess led
To taste the pleasures of the genial bed;
To him fair-arm'd Persephone she bore,
Whom Pluto ravish'd from her native shore:
The mournful dame he of her child bereft,
But the wise sire assented to the theft.

Mnemosyne his breast with love inspires,
The fair-tress'd object of the god's desires;
Of whom the muses, tuneful nine, are born,
Whose brows rich diadems of gold adorn;
To them uninterrupted joys belong,
Them the gay feast delights, and sacred song.

Latona bore, the fruits of Jove's embrace,
The loveliest offsprings of th' ethereal race;
She for Apollo felt the child-bed throw;
And Artemis for thee who twang the bow.

Last Juno fills th' almighty monarch's arms,
A blooming consort, and replete with charms;
From her Lucina, Mars, and Hebe, spring;
Their sire of gods the god, of kings the king.

Minerva, goddefs of the martial train, [brain;
Whom wars delight, fprung from th' almighty's
The rev'rend dame, unconquerable maid,
The battle rouſes, of no power afraid.
Juno, proud goddefs, with her conſort ſtrove,
And ſoon conceiv'd without the joys of love:
Thee ſhe produc'd without the aid of Jove, 1281
Vulcan, who far in ev'ry art excel
The gods who in celeſtial manſions dwell.
To Neptune beauteous Amphitrite bore
Triton, dread god, who makes the ſurges roar;
Who dwells in ſeats of gold beneath the main,
Where Neptune and fair Amphitrite reign.
To Mars, who pierces with his ſpear the ſhield,
Terror and fear did Cytherea yield;
Dire brothers, who in war diſorder ſpread, 1290
Break the thick phalanx, and increaſe the dead;
They wait in ev'ry act their father's call,
By whoſe ſtrong hand the proudeſt cities fall:
Harmonia, ſprung from that immortal bed,
Was to the ſcene of love by Cadmus led.
Maia, of Atlas born, and mighty Jove,
Join in the ſacred bands of mutual love:
From whom behold the glorious Hermes riſe,
A god renown'd, the herald of the ſkies.
Cadmean Simile, a mortal dame, 1300
Gave to th' almighty's love a child of fame,
Bacchus, from whom our cheerful ſpirits flow,
Mother and ſon alike immortal now.
The mighty Hercules Alcmena bore
To the great god who makes the thunder roar.
Lame Vulcan made Aglaia fair his bride,
The youngeſt grace, and in her blooming pride.
Bacchus, conſpicuous with his golden hair,
Thee Ariadne weds, a beauteous fair,
From Minos ſprung, whom mighty Jove the ſage
Allows to charm her lord exempt from age. 1311
Great Hercules, who with misfortunes ſtrove
Long, is rewarded with a virtuous love,
Hebe, the daughter of the thund'ring god,
By his fair conſort Juno golden ſhod:
Thrice happy he ſafe from his toils to riſe,
And ever young a god to grace the ſkies!
From the bright ſon, and thee, Perſeïs, ſpring
Fam'd offſprings, Circe, and Æetes king.
Æetes thee, beauteous Idya, led, 1320
Daughter of Ocean, to the genial bed; [crown'd;
And with th' applauſe of heav'n your loves were
From whom Medea ſprung, a fair renown'd.
All hail Olympian maids, harmonious nine,
Daughters of Ægis-bearing Jove divine,
Forſake the land, forſake the briny main,
The god and goddeſſes, celeſtial train;
Ye Muſes, each immortal fair record
Who deign'd to revel with a mortal lord,
In whoſe illuſtrious offſprings all might trace
The glorious likeneſs of a godlike race. 1331
Jaſon, an hero through the world renown'd,
Was with the joyous love of Ceres crown'd;
Their joys they acted in a fertile ſoil [toil;
Of Crete, which thrice had bore the ploughman's
Of them was Plutus born, who ſpreads his hand,
Diſperſing wealth o'er all the ſea and land;
Happy the man who in his favour lives,
Riches to him, and all their joys he gives. 1339

Cadmus Harmonia lov'd the fair and young,
A fruitful dame from golden Venus ſprung;
Ino and Simile, Agave fair,
And thee, Autonoë, thy lover's care,
(Young Ariſtæus with his comely hair),
She bore; and Polydore completes the race,
Born in the walls of Thebes a ſtately place.
The brave Chryſaor thee, Calliroe led
Daughter of Ocean to the genial bed;
Whence Geryon ſprung fierce with his triple head;
Whom Hercules laid breathleſs on the ground,
In Erythia which the waves ſurround; 1351
By his ſtrong arm the mighty giant ſlain,
The hero drove his oxen croſs the main.
Two royal ſons were to Tithonus born,
Of thee, Aurora, goddeſs of the morn;
Hemathion from whom and Memnon ſpring,
Known by his brazen helm was Ethiop's king.
Pregnant by Cephalus the goddeſs proves,
A ſon of high renown rewards their loves;
In form like the poſſeſſors of the ſkies, 1630
Great Phaëthon, whom with deſiring eyes
Fair Aphrodite views: in blooming days
She to her ſacred fane the youth conveys;
Inhabitant divine he there remain'd,
His taſk nocturnal by the fair ordain'd.
When Peleis, haughty prince of wide command,
Of much th' atchiever with an impious hand,
Succeſs attending his injurious mind,
Gave the ſwell'd fails to fly before the wind,
Æſonides, ſuch gods were thy decrees, 1370
The daughter of Æetes croſs the ſeas
Rap'd from her ſire; the hero much endur'd
Ere in his veſſel he the fair ſecur'd;
Her to Iolcus in her youthful pride
He bore, and there poſſeſs'd the charming bride;
To Jaſon, her eſpous'd, the lovely dame
Medeus yields, pledge of the monarch's flame;
Whom Chiron artful by his precepts ſway'd:
Thus was the will of mighty Jove obey'd.
The Nereid Pſamathe did Phocus bear 1386
To Æacus, herſelf excelling fair.
To Peleus Thetis, ſilver-footed dame,
Achilles bore in war a mighty name.
Fair Cytherea, ever flush'd with charms,
Reſign'd them to a mortal hero's arms:
To thee, Anchiſes, the celeſtial bride
Æneas bore high in the ſhades of Ide.
Circe, the daughter of the ſun, inclin'd
To thee, Ulyſſes, of a patient mind;
Hence Agrius ſprung, and Hence Latinus came,
A valiant hero, and a ſpotleſs name. 1395
The ſacred iſles were by the brothers ſway'd;
And them the Tyrrhenes, men renown'd, obey'd.
Calypſo with the ſage indulg'd her flame;
From them Nauſithous and Nauſinous came.
Thus each immortal fair the nine record
Who deign'd to revel with a mortal lord;
In whoſe illuſtrious offſprings all might trace
The glorious likeneſs of a godlike race:
And now, Olympian maids, harmonious nine,
Daughters of Ægis-bearing Jove divine, 1401
In laſting ſong the mortal dames rehearſe;
Let the bright belles of earth adorn the verſe.

NOTES ON THE THEOGONY.

Ver. 1. I shall refer the reader to what I have said in the second and fourth sections of my Discourse on the writings of Hesiod, concerning the genuineness of the beginning of this poem, and the explanation of the Theogony. Our author here takes an occasion to celebrate the offices and power of the muses, and to give a short repetition of the greater deities. To what end is this grand assembly of divine personages introduced? To inspire the poet with thoughts suitable to the dignity of their characters; and by raising his imagination to such a height, as to believe they preside over his labours, he becomes the amanuensis of the gods. The muses, says the Earl of Shaftesbury, in his letter concerning enthusiasm, were so many divine persons in the heathen creed. The same noble writer has in that discourse elegantly showed the necessity and beauty of enthusiasm in poetry.

Ver. 2. A mountain in Bœotia, so called from the Phœnician word, *hhalik*, or *hhalikon*, which signifies a high mountain. Bochart, in his Chan. book i. chap. 16, shows that Bœotia was full of Phœnician names and colonies. *Le Clerc.* Pausanias, in his Bœotics, says Helicon excells all the mountains in Greece, in the abundance and virtues of the trees which grow on it: he likewise tells us it produces no leriferous herbs or roots.

Ver. 5. Grævius and Le Clerc both agree in this reading, and derive ιοειδης from ειδος ιω, having the dusky colour of iron; they likewise bring instances from Homer, and other poets, of the same word being used to the sea, rivers, and fountains; by which epithet, say they, they expressed the depth and plenty of the water.

Ver. 8 Pausanias, and Tzetzes after him, reads it *Termessus*; but this may proceed from their ignorance of the radix, which, says Le Clerc, is the Phœnician word *pheer-metso*; the interpretation of which is a pure fountain. The river is at the foot of Helicon.

Ver. 9. The Phœnician word, says Bochart, is *Hipphigran*, which signifies the eruption of a fountain: the word being corrupted into *Hippocrene*, gave rise to the story of the fountain of the horse. *Le Clerc.*

Ver. 10. The Phœnician word is *hhol-maio*, sweet water. *Le Clerc.*

Ver. 12. The historical and physical interpretation of the deities here mentioned, I shall defer till I come to them in the course of the Theogony.

Ver. 22 Some translate this passage *nigris oculis*, and Le Clerc chooses *blandis*: I would correct them, and have it arched or bending. Tzetzes entirely favours my interpretation of ελικοβλεφαρον, eye-brows arched into a circle; a metaphor taken, saye he, εκ των της αμπελου ελικων, from the curling of the vine.

Ver. 33. This extravagance in our poet has been the subject of satire to some; but Lucian has been the most severe in his dialogue betwixt himself and Hesiod. Ovid has an allusion to this passage in the beginning of his Art of Love; which Dryden has thus translated:

Nor Clio, nor her sisters, have I seen.
As Hesiod saw them in the shady green.

This slight, however extravagant it may seem to some, certainly adds a grace to the poem; and whoever consults the nineteenth ode of the second book, and the fourth of the third book of Horace, will find this sort of enthusiasm carried to a great height.

Ver. 46. The poet here, from the mouth of the muse, prepares the reader for what he is to expect. Though he proposes to give an historical and physical relation of the generation of the gods, according to the received opinion, yet supplies from invention are necessary to make the work agreeable as a poem.

Ver. 50. Le Clerc has a long note on this verse, from Claud. Salmasius, proving the rhapsodists to be so called απο της ραβδου, from singing with a bough in their hands, in imitation of the ancient poets; which bough was of laurel: but why of laurel before any other? The Scholiast Tzetzes gave two very good reasons; first, says he, the poet makes the sceptre, which he received from the muses, of laurel, because Helicon, the place on which they presented it, abounds with that tree; secondly, as the laurel is ever green, it is the most proper emblem of works of genius, which never fade.

Ver. 59. Exactly the same is the flight in the fourth ode of the third book of Horace:

——an me ludit amabilis
Infania? Audire et videor pios
Errare per lucos, amœnæ
Quos et aquæ subeunt, et auræ!

The sense of which, in short, is this: "Am I "agreeably deluded, while I seem to wander "through poetic scenes!" And again,

Quo me, Bacche, rapis tui
Plenum! Quæ in nemora, aut quos, agor, in specus,
Velox mente novâ! Lib. 3. Od. 25.

It is worth observing, that the best poets are generally most poetical in their invocations, or in other parts, where a deity is introduced; for then they seem to be overpowered with the inspiration; but here the fine imagination, and exalted genius, are most required, that while fancy takes her full stretch in fiction, it may seem the real "numinis "afflatus."

Ver. 68. Le Clerc judiciouſly obſerves, that the poets frequently make inanimate beings affected, or with joy or grief, when there is reaſon for either, that it may be ſaid, even inanimate beings are moved. This, I think, is a boldneſs ſeldom practiſed but by the beſt poets, and moſt frequently among the ancients. We find it with as much ſucceſs as any where in the poetical parts of the Old Teſtament.

" The vallies ſhall ſtand ſo thick with corn that " they ſhall laugh and ſing." Pſalm lvi. ver. 14.

ιϑιλασσε δε γαια πϑλωϱη,
Γηθησην δε βαθυς πουτος. Theognis.

" The wide earth laugh'd, and the deep ſea re-
" joic'd."

Tibi rident æquora ponti. Lucret.

" To thee the waters of the ocean ſmile."

I give theſe three quotations to ſhow as the Latin were followers of the Greek poets, it is not unlikely the Greek might imitate the ſtyle of the eaſtern writers in many places.

Ver. 81. Mnemoſyne, the ſame with memory, is here made a perſon, and the mother of the muſes; which, with the etymology of the word *pieria*, which Le Clerc tells us, is, in the Phœnician tongue, fruitfulneſs, and the note to the firſt verſe of the Works and Days, will let us clearly into the poetical meaning of the parents and birthplace of the muſes. The ſame critic derives the word muſe from the Phœnician word *metſa*, the feminine for inventor. See farther in the Diſcourſe, &c.

It will now be proper to inquire into the reaſon of the poet making Mnemoſyne empreſs of Eleuther. Eleuther is a part of Bœotia, ſo called from a prince of that name: here, ſays Tzetzes, the poet endeavours to add a glory to his country; for though the muſes themſelves were born on Pieria, he makes their mother a Bœotian. Pieria is the name of a mountain, and a country lying beneath it, bounded on the north with Theſſaly, and on the ſouth with Macedon. Le Clerc derives the word Eleuther from the Phœnician word Halethir, a high place from which we ſee afar off, which word is a compound of *halah*, to aſcend, and *thour*, to ſee afar off. The reader muſt here obſerve, that great part of the art of this poem depends on the etymology of the words, and on the proſopopœias. Plutarch, in his rules for the education of children, has obſerved, that the mythologiſts have judiciouſly made Mnemoſyne the mother of the muſes, intimating that nothing ſo much cheriſhes learning as the memory.

Ver. 96. A mountain in Theſſaly, which, for the extraordinary height, is often uſed for heaven.

Ver. 99. The god of love and the graces are proper companions for the muſes; for the gifts of the muſes are of little value without grace and love: and at banquets, love and good manners, which are implied by the graces, compoſe the harmony. *Tzetz.*

Ver. 109. Le Clerc here raiſes a difficulty, and I think without reaſon; he ſays the poet ſo confounds the man Jupiter with the god, that he knows not how to account for it. The poet could here deſign no other but the Supreme Being; firſt for the honour of poetry, as appears from ſome following verſes; and ſecondly, becauſe God is the ſource of all wiſdom, he is the father of the muſes, who preſide over the principal arts.

Ver. 119. The names of the muſes, and their derivations. Clio, from κλειω, to celebrate, to render glorious. Melpomene, from μελπομαι, to ſing or warble. Euterpe, from ευ and τεϱπω, to delight well. Terpſichore, from τεϱπω to delight, and χοϱος a choir. Erato, from ϵϱαω, to love. Thalia, from ϑαλιαι banquets, or ϑαλλω, to flouriſh. Polymnia, πολυς many, and υμνος a ſong or hymn. Urania, from ουϱανος heaven. Calliope, from καλος beautiful, and ωψ a voice. Our poet attributes no particular art to each muſe; but, according to him, poetry is the province of all. Calliope, indeed, is diſtinguiſhed from the reſt, as preſiding over the greater ſort of poetry. See the Diſcourſe on the Theology of the ancients, &c.

Ver. 134. Le Clerc tells us, from Dionyſius Halicarnaſſeus, that, at firſt, all the cities in Greece looked on their kings as their judges to determine all controverted points; and he was eſteemed the beſt king who was the beſt judge, and the ſtricteſt obſerver of the laws: for the certainty of this, we need no better authority than our own poet, and particularly in his Works and Days: it is worth obſerving how very careful he is to inſpire his readers with ſentiments of reſpect and dignity towards their rulers; and to increaſe our reverence for them, he derives them from the great Ruler of the univerſe; and from the ſame origin are the muſes; all which muſt be thus underſtood, the prince owes all his regal honours and power to the Supreme Being, and no leſs than Almighty aid is neceſſary to make a good poet. I can add nothing more proper to what I have ſaid concerning princes, their office, and derivation of their power, than the firſt three verſes of the ſixth chapter of the Wiſdom of Solomon. " Hear, therefore, O ye " kings, and underſtand; learn ye that be judges " of the ends of the earth, give ear, you that rule " the people, and glory in the multitude of na-" tions; for power is given you of the Lord, and " ſovereignty from the higheſt, who ſhall try your " works, and ſearch out your counſels."

Ver. 156. This, and the nine following verſes, are by ſome attributed to Homer, among the fragments of that poet; where the miſtake lies, I cannot tell; but I ſhall here take an occaſion to account, in general, for ſeveral verſes in the Iliad, Odyſſes, the Works and Days, and the Theogony, being alike; they are either ſuch as where they mention the Pleiades, Hyades, and Orion, conſtellations which were moſt taken notice of by the old poets, and the names of which naturally run into an hexameter verſe; or ſuch as were common or proverbial ſayings of the times; which circumſtances render it very poſſible for divers to have wrote the ſame lines without one ever

ſeeing the works of the other. I am perſuaded that all or moſt of the ſimilar paſſages in theſe two poets are of this nature. If, therefore, ſome of the old ſcholiaſts and commentators had thoroughly conſidered this, they would not have had ſo many impertinencies in their remarks as they have.

Ver. 172. I know not how this is to be taken but phyſically; if we ſuppoſe all things to be the offſprings of Chaos, which are all natural beings, they may properly be ſaid to be nouriſhed by the main, that is by prolific humour. In this ſenſe Milton, in the ſeventh book of his Paradiſe Loſt, judiciouſly uſes the word, ſpeaking of the creation.

Over all the face of the earth
Main ocean flow'd, not idle, but with warm
Prolific humour, ſoft'ning all her glebe,
Fermenting the great mother to conceive,

Ver. 190. In my interpretation of the generation of the deities I ſhall chiefly have regard to the phyſical meanings; ſuch paſſages as I leave unobſerved are what any reader with little trouble may clear to himſelf, after he has ſeen my explanations of the moſt material.

This fable, ſays Lord Bacon, in his Wiſdom of the Ancients, ſpeaking of Heaven, ſeems to contain an enigma of the origin of things, not much different from the truth of the divine word, which tells us of a deformed matter before the works of the ſix days. To this eternity of confuſed matter Milton alludes in the ſeventh book of his Paradiſe Loſt.

Far into Chaos, and the world unborn.

Ver. 191. Plato, in his Phedo, ſays the earth was the ſeat and foundation of the gods, αθανατων he calls them, to ſhow that the gods were once preſerved with pious men. *Tzetz.* This is ſtrange philoſophy, to imagine any beings to have a beginning, and yet immutable and immortal from their firſt riſe; but it is apparent that the poet makes matter precede all things, even the gods. Guietus judges the next verſe to be ſuppoſititious.

Ver. 194. Tartarus, or hell, is ſaid to be brought forth with the earth, becauſe it is feigned to be in the inmoſt receſſes of the earth. The word Tartarus is derived from the Phœnician *tarahhtarahh*, the radix of which is the Hebrew and Arabic *tarahh*, which ſignifies, he created trouble. *Le Clerc.*

Ver. 196. This fable alludes to, and enters into the cradle of nature. Love ſeems to be the appetite, or ſtimulation, of the firſt matter; or, to ſpeak more intelligible, the natural motion of the atoms. *Lord Bacon.*

Ver. 202. It is rightly obſerved that darkneſs was over all till the ſky was illumined by the ſun and the ſtars; Chaos therefore brought forth darkneſs and night. *Tzetz.* Before any thing appeared all was *bereb* or *ereb*, darkneſs or night; the ſame is the account which Moſes gives us. *Le Clerc.*

Ver. 204. I believe the word αιθηρ does not mean the chief, or material, part of the air, but is the ſame with αιθρια ſerenity. *Le Clerc.* So night and darkneſs are properly ſaid to be the parents of day and ſerenity.

Ver. 206. All that the poet means, is, that earth appeared before the firmament which ſurrounds it. Similar to this is the deſcription Milton gives of the offſprings of earth.

——————God ſaid,
Be gather'd now ye waters under heav'n,
Into one place, and let dry land appear,

Immediately the mountains huge appear
Emergent, and their broad bare backs upheave
Into the clouds.

Book 6.

Let us now conſider the difference betwixt πελαγος or ποντος and ωκεανος, which I render the ſea and the ocean, and why the ſea is ſaid to be from earth only, and the ocean from earth and heaven. That part of the ocean is generally agreed to be called ſea which takes a name from any country or particular circumſtance; the ocean, Diodorus Siculus tells us, in his firſt book, comprehends, according to the opinion of the ancients, all moiſture which nouriſhes the univerſe; and Henry Stephens quotes many authorities to ſhow it was always uſed in that ſenſe; I ſhall content myſelf with one from Homer, and another from Pliny.

Εξ ουπερ παντες ποταμοι, και πασα θαλασσα,
Και πασαι κρηναι, &c.

From which are derived all rivers, every ſea, and all fountains.

The ocean, ſays Pliny, is the receptacle of all waters, and from which all waters flow; it is that which feeds the clouds and the very ſtars.

Ver. 214. Le Clerc is inclined to think that theſe names are ſome of real perſons, and ſome only poetical, as Themis and Mnemoſyne which are juſtice and memory. The ſame critic might have quoted Plutarch to countenance this opinion, who names for real perſons Cœus, Creus, Hyperion, and Japhet: nor is it unreaſonable to believe that the poet deſigned ſome as perſons: for, without ſuch to meaſure time, Saturn, or Κρονος, which ſignifies time, would be introduced with impropriety.

The etymology of the names of the Cyclops are literally expreſſive of their nature. The general name to all is from κυκλος a circle, and ωψ an eye, Brontes from βρονταω thunder; Steropes from αστεροπη brightneſs; Arges from αργος white, ſplendid, ſwift. Apollodorus varies from our poet in one of the names of the Cyclops; inſtead of Αργη he calls him Αρπη. It has been often remarked that Homer, Heſiod, Apollodorus, and other mythologiſts, frequently differ in names: I here give one inſtance, from many obſervations which I have made, of their not differing in ſenſe though in name; for as ſwift, or ſplendid, is a proper epithet for lightning; αρπη, a fork, is as ſignificant a name for one of the Cyclops as αργη.

Cottus, Gyges, and Briareus. Grævius will have theſe three to be men, and robbers; he ſays

the ancients intended, by the terrible deſcription of their many heads and hands, to expreſs their violence, ferocity, and injuſtice. The Scholiaſt Tzetzes ſays, they are turbulent winds; which phyſical interpretation ſeems moſt agreeable to me; their heads and hands well expreſs their rage; they being impriſoned by their father in the bowels of the earth, and relieved by their mother in proceſs of time, which is the meaning of Saturn releaſing them, is all pertinent to the winds. I am not inſenſible of an objection that may be ſtarted in this explication, from the manner in which they are made part of the war with the gods; but we are to conſider that the poet does not confine himſelf to direct phyſical truth; for which reaſon he prepared his readers for a mixture of fiction, from the mouth of the muſe, in the beginning of the poem.

Let us come to the explanation of the conſpiracy of Earth and Saturn againſt Heaven. Tzetzes, Guietus, and Le Clerc, have this conjecture likewiſe of the children which were confined by Heaven in the receſſes of the earth; they were the corn-fruits of the earth, which, in time, ſome perſon found to be of benefit to human kind: He diſcovered the metal of which he made a ſickle: the poſture of reaping is deſigned by his left hand applied to the members of his father, and his right to the inſtrument. The giants and nymphs, which are ſaid to ſpring from the blood of Heaven, are thoſe who had the advantages of the invention. The warlike giants and furies are wars and tumults, which were the conſequences of plenty and riches. Saturn throwing the members into the ſea, denotes traffic with foreign countries.

Venus, ſays Lord Bacon, is deſigned to expreſs the concord of things.

Heaven called his ſons Titans, from τιταινω, to revenge: his prophecy may allude to the diſturbances in the world which were the effects of plenty and luxury.

How monſtrous does this ſtory ſeem in the text! Certainly the author muſt have ſome phyſical meaning in view; and what more probable than the laſt which we have offered? This allegorical way of writing will ceaſe to be a wonder, when we conſider the cuſtom of the times, and the love that the ancients bore to fables; and we muſt think ourſelves happy that we can attain ſuch light into them as we have, ſince we are divided by ſuch length of time from the firſt inventors, and ſeeing the poetical embelliſhments ſince added to them, have rendered them more obſcure; but of this I ſhall ſpeak more largely in my diſcourſe at the end.

Ver. 325. The diſtinction which Tzetzes makes betwixt Μοιρα and Κηρα, which I tranſlate Deſtiny and Fate, is this; one confirms the decree concerning our death, and the other the puniſhment attending evil works. Le Clerc infers, from the poet making even the gods ſubject to the Fates, that they muſt be mere men which were immortalized by human adoration; but the paſſage which Plutarch, in his inquiry after God, quotes from Plato, will better reconcile this: Fate, ſays he, is the eternal reaſon and law implanted in the nature of every being.

Momus is called a deity, becauſe he animadverts on the vices both of men and gods; but why is he called the ſon of Night? Becauſe cenſure and backbitings are generally ſpread privately, and as in the dark. His name is from *Moum* or *Mom*, the Phœnician word for vice. Lucian, in his Aſſembly of the Gods, makes Momus ſpeak thus of himſelf: "All know me to be free of my tongue, and "that I conceal nothing ill done: I blab out eve-"ry thing," &c. *Le Clerc.*

The Heſperides are nymphs which are ſaid to watch the golden fruit in the weſtern parts of the world. Tzetzes thus interprets this ſtory: The Heſperides are the nocturnal hours in which the ſtars are in their luſtre; by Hercules who is feigned to have plucked the golden fruit, is meant the ſun, at whoſe appearance the ſtars ceaſe to ſhine.

Nemeſis is called the goddeſs of Revenge, and the etymology of her name ſpeaks her office, which is from νεμεσαω, "to reſent." Our poet, in his Works and Days, ranks her with Modeſty.

Ver. 357. Nereus, which in the Phœnician tongue is *naharo*, "a river," is ſaid to be the ſon of the Sea, becauſe all rivers take their riſe from thence, according to the opinion of the poet. The reaſon, perhaps, for which he has this extraordinary character in the Theogony, is becauſe he was eſteemed a prophetic deity. *Le Clerc.*

Thaumas is here made the ſon of the Sea and Earth, and the father of Iris: Le Clerc ſays he is thus allied to the Sea and Iris; he is the deity that preſides over clouds and vapours, which ariſe from the ſea and the earth, and cauſe Iris, or the rainbow. He is called Thaumas, from θαυμαζω, "to "wonder at, or admire," or from the Phœnician word of the ſame ſignification, *thamah*, becauſe all meteors excite wonder or admiration.

Phorcys, ſays Le Clerc, ſeems to have been one who employed himſelf in navigation; but his derivation of the word is too far fetched from the Syrian *phrak*, "he departed, or travelled." The ſame critic is ſurpriſed, and, indeed, not without reaſon, that Ceto ſhould be called fair, and have ſuch horrid children; he derives her name from *kout*, "to be contentious, to lothe."

Eurybia is from ευρυς, "wide," and βια, "force," one of extenſive power.

Ver. 367. Tzetzes thinks the poet, by the names of the Nereids, deſigned to expreſs ſeveral parts and qualities of the ſea; but Le Clerc believes them only the arbitrary invention of the poets. Spenſer, in the eleventh canto of the fourth book of his Faery Queene, has introduced a beautiful aſſemblage of the Nereids, and other ſea and river-deities, at the marriage of Thames and Medway: and he has imitated and paraphraſed many verſes together out of our poet, and tranſlated many more; and moſt, in my judgment, ſuperior to the Greek; whoſe manner of imitating the ancients will appear by a quotation of one ſtanza.

Stanza 48th.

And after theſe the ſea-nymphs marched all,
All goodly damſels, deck'd with long green hair,

Whom of their ſire Nereides men call,
All which the Ocean's daughter to him bare,
The gray-ey'd Doris; all which fifty are;
All which ſhe there on her attending had;
Swift Proto, mild Eucrate, Thetis fair,
Soft Spio, ſweet Eudore, Sao ſad,
Light Doto, wanton Glauce, and Galene glad.

Ver. 418. The Harpies are violent ſtorms; the etymologies of their names are ſignificant of their nature. The word Harpies is from αρπαζω to tear, to deſtroy; Aëllo from αιλλα a ſtorm; Ocypete from ωκυς ſwift, and πτομαι to fly.

Ver. 423. I ſhall give the ſtory of the Gorgons, and the Graiæ, as related by Lord Bacon, with reflections on the ſame.

Perſeus is ſaid to have been ſent by Pallas to ſlay Meduſa, who was very pernicious to many of the inhabitants of the weſtern parts of Hiberia, for ſhe was ſo dire and horrid a monſter, that by her aſpect only, ſhe converted men into ſtones. Of the Gorgons Meduſa only was mortal: Perſeus, preparing himſelf to kill her, received arms and other gifts from three deities; from Mercury he had wings for his heels, from Pluto, a helmet, and from Pallas a ſhield and a looking-glaſs He went not immediately towards Meduſa, though he was ſo well inſtructed; but firſt to the Graiæ, who were gray and like old women from their birth. They had all but one eye and one tooth, which ſhe who went abroad uſed, and laid down when ſhe returned. This eye and tooth they lent to Perſeus, who finding himſelf thus completely furniſhed for his deſign, flew without delay to Meduſa, whom he found ſleeping: if ſhe ſhould awake he dared not look in her face; therefore, turning his head aſide, he beheld her in the glaſs of Pallas, and in that manner taking his aim he cut off her head: from her blood inſtantly ſprung Pegaſus with wings. Perſeus fixed her head in the ſhield of Pallas, which retained this power, that all who beheld it became ſtupid as if thunderſtruck.

This fable ſeems invented to ſhow the prudence required in waging war; in which three weighty precepts are to be conſidered as from the counſel of Pallas. Firſt, In the enlarging dominions, the occaſion, facility, and profits of a war, are to be thought of before vicinity of territories; therefore Perſeus, though an oriental, did not decline an expedition to the extremeſt parts of the weſt. Secondly, Regard ought to be had to the motives of a war, which ſhould be juſt and honourable; for a war on ſuch terms adds alacrity both to the ſoldiers and thoſe who bear the expence of the war; it obtains and ſecures aids, and has many other advantages. No cauſe of a war is more pious than the quelling tyranny, which ſo ſubdues the people as to deprive them of all ſoul and vigour, which is ſignified by the aſpect of Meduſa. Thirdly, The Gorgons were three, by which wars are repreſented, and Perſeus is judiciouſly made to encounter her only who was mortal; that is, he would not purſue vaſt and endleſs hopes, but undertook a war that might be brought to a period. The inſtruction which Perſeus received is that which conduces to the ſucceſs or fortune of the war: he received ſwiftneſs from Mercury, ſecrecy of counſels from Orcus, and providence from Pallas. Though Perſeus wanted not age nor courage, that he ſhould conſult the Graiæ was neceſſary. The Graiæ are treaſons, and elegantly ſaid to be gray, and like old women, from their birth, becauſe of the perpetual fears and tremblings with which traitors are attended. All their force, before they appear in open rebellion, is an eye, or a tooth; for every faction alienated from a ſtate contemplates and bites: this eye and tooth is in common, for what they learn and know paſſes through the hands of faction from one to the other; the meaning of the tooth is, they all bite alike; Perſeus therefore was to make friends of the Graiæ, that they might lend him the eye and the tooth. Two effects follow the concluſion of the war; firſt, the generation of Pegaſus, which plainly denotes fame, that flies abroad and proclaims the victory; the ſecond is the bearing the head of Meduſa in the ſhield; for one glorious and memorable act happily accompliſhed, reſtrains all the motions of enemies, and makes even malice amazed and dumb. Thus far Lord Bacon. The following phyſical explanation from Tzetzes:

Phorcys ſignifies the vehemence of the waters, Ceto the depth; γραιαι the Scholiaſt interprets τον αφρον the foam, Pephredo and Enyo the deſire of marine expeditions. The poet calls the Heſperides murmuring, becauſe the ſtars in thoſe parts, according to Ariſtotle, move to a muſical harmony: by Stheno and Euryale, which are immortal, he means the immenſe and inexhauſtible parts of the ocean; by Meduſa the waters which the ſun, or Perſeus dries up by his beams. Chryſaor and Pegaſus are thoſe parts of matter which are exalted on high, and break in thunder and lightning. Pegaſus, ſays Grævius, is ſo called, becauſe he was born near πηγας, the fountains of the main; Chryſaor, from his having in his hand χρυσαν αορ, a golden ſword. Le Clerc tells us that this fable is originally Phœnician; he derives the name of Perſeus from *pharſcho* a horſeman, and Chryſaor from the Phœnician word *chriſaor* the keeper of fire.

Ver. 456. Some, ſays the Scholiaſt, will have Geryon to ſignify time; his three heads mean the preſent, paſt, and the future; Erythea is an iſland in the ocean where he kept his herds. *Tzetz.*

Le Clerc tells us that when Hercules invaded the iſland which Geryon poſſeſſed, he was oppoſed by three parties which were inhabitants, and conquered them; which explains his cutting off his three heads.

The ſame critic afterwards ſeems to doubt this interpretation; he quotes Bochart to prove that no oxen were in Erythea, and that the iſland was not productive of graſs; but I think if heads are figuratively meant for parties, the herds may as well be took for the men who compoſed thoſe parties.

Ver. 462. Orthus is the dog of Geryon that watched the herds, which may be ſome chief officer; and his being murdered in a gloomy ſtall,

may ſignify the ſhameful retreat he made in his time of danger.

Ver. 485. Cerberus, Le Clerc derives from *chrabroſch*, having many heads. The Hydra, he tells us, means the inhabitants about the lake Lerna: Juno may therefore ſignify the earth who nouriſhed the Hydra.

Ver. 497. Chimæra is from the Phœnician *chamirah*, burned; it was a mountain ſo called becauſe it emitted flames; of which ſays Pliny, the mountain Chimæra in Phaſelis flames, without ceaſing, night and day. Strabo thinks the fable took a riſe from this mountain: the three heads may be three cliffs; Bochart ſuppoſes them to be three leaders of the people of Piſidia, whoſe names may have a ſimilitude to the nature of the three animals, the lion, the goat, and the ſerpent. Bellerophon is ſaid to conquer this monſter, to whom the poet gives Pegaſus, becauſe to gain the ſummit of the mountain, no leſs than a winged horſe was required. *Le Clerc.* The interpretation of Chimæra, a mountain, is not unnatural, when we conſider her the daughter of Typhaon, of whom we ſhall ſpeak more largely in a following note.

Ver. 508. Sphinx is thus deſcribed by Apollodorus; "ſhe had the breaſt and face of a woman, the feet and tail of a lion, and the wings of a bird." Le Clerc has this interpretation, which ſeems the moſt reaſonable, of this monſter. After deriving the name from *Sphica* which is a murderer, he tells us in Sphinx is ſhadowed a gang of robbers which lurked in the cavities of a mountain; ſhe is ſaid to have had the face and breaſt of a woman, becauſe ſome women were among them, who perhaps allured the travellers; the feet and tail of a lion, becauſe they were cruel and deſtructive; and the wings of a bird, from their ſwiftneſs. She is ſaid to have ſlain thoſe who could not explain her enigma; that is, they murdered ſuch as unwarily came where they were, and knew not their haunts. Oedipus is recorded to have unravelled the enigma, becauſe he found them and deſtroyed them.

The Nemæan lion may be an allegory of the ſame nature, or literally a lion.

The 31ſt verſe, in the original, is commonly given thus:

Κοιρανεων τρητοιο Νημειης ηδ' απεσαντος.

in which τρητοιο is taken as an adjective ſignifying *cavernoſa*; but Mr. Robinſon, in his edition of Heſiod, publiſhed ſince my tranſlation of our poet, rightly judges τρητοιο to be a proper name, and quotes a paſſage from Diodorus Siculus, and another from Pauſanias, in which the den of the Nemæan lion is ſaid to have been in the mountain Tretum: read, therefore, henceforward,

Κοιρανεον Τρητοιο, Νεμειης, ηδ' απεσαντος.

Ver. 517. Serpents are often in fabulous hiſtory conſtituted guards of things of immenſe value. The ſerpent Python kept the oracle at Delphi; and a ſerpent is made to watch the golden fruit. What is the moral of all this? When we are intruſted with affairs of price and importance, we ought to be as vigilant as ſerpents. The word οφις, "a ſer-" pent," from οπτομαι, "to ſee;" and the Phœnician *nahhaſch*, "a ſerpent," is from a verb in the ſame language, to ſee. *Le Clerc.* I muſt add to this explanation, the ſerpent being placed in a cave to guard the fruit, denotes ſecrecy, as well as vigilance.

Ver. 522. The commentators have concluded Heſiod later than Homer, from his naming the chief river in Egypt under the appellation of the Nile, which, they ſay, was not ſo called in the days of Homer, but Egyptus. This argument cannot prevail, when we conſider the word in the radix, which, ſays Le Clerc, is *nuhhul* and *nhhil*, and in Hebrew *nahhal*, which is the common name for any river; Heſiod, therefore, might chooſe Nile, κατ' εξοχην, for eminence, it being the principal river; or for the ſame reaſon, which is not unlikely, that Homer might chooſe Egyptus, becauſe it came more readily into the verſe: but whatever their reaſons were for chooſing theſe different names of the ſame river, here is no foundation to determine ſo difficult a point as the age of either of theſe poets from it.

Ver. 523. Alpheus is a river in Elis, and has ſomething more extraordinary, ſays Pauſanias, in it than any other river; it often flows under ground and breaks out again. Eridanus, a river, ſays the Scholiaſt, of the Sceltæ. Strymon, a river in Thrace. Mæander, in Lydia or Icaria. Iſter, in Scythia. Phaſis, in Colchis. Rheſus, in Troy. Athelous, in Acarnia or Ætolia. Neſſus, in Thrace. Rhodius, in Troy. Haliacmon, in Macedon. Heptaporus, Granicus, and Æſapus, in Troy. Hermus, in Lydia. Simois, in Troy. Peneus, in Theſſaly; and ſome, ſays Tzetzes, ſay Granicus and Simois are in Theſſaly. Caicus, in Myſia. Sangarius, in Upper Phrygia. Ladon, in Arcadia; this river, ſays Pauſanias, exceeds all the rivers in Greece for clearneſs of water. Parthenius, in Paphlagonia. Evenus, in Ætolia. Ardeſcus, in Scythia. Scamander, in Troy. The daughters of Tethys and Ocean, are only poetical names; deſigned, ſays the Scholiaſt, for lakes and rivers of leſs note than the ſons. They are ſaid, continues he, to have the care of mankind from their birth jointly with Apollo, becauſe heat and moiſture contribute to generation, and the nutriment of men through life.

Ver 581. The ſun is called Ηλιος, from the Phœnician word *helojo*, that is, high; though this name may ſuit all the planets, yet it is more properly given to the moſt eminent of them. He is ſprung from Hyperion, that is, from him that exiſts on high.

Ver. 582. The word Σελαννη, the moon, or in the Doric Σελανα, is from the Phœnician word *ſchelanah*, that is, one that wanders through the night Aurora, or the morning, being born of the ſame parents, needs no explanation.

Ver. 585. Le Clerc ſays, the children of Creus and Eurybia, are not to be found in any ancient hiſtory, nor to be explained from the nature of things; but if we conſider the etymologies of the names of the parents, his remark will prove invalid. Creus is from the verb to judge, and Eurybia, as I have before obſerved, ſignifies wide com-

mand; judgment, therefore, and power, are made the parents of three offsprings of renown. I must here observe, that Pallas cannot be the same with her, who is afterwards said to spring from the head of Jove. Our poet calls this Pallas only, and the latter Athena and Tritogenia. The following verses, which tells us the winds sprung from Astræus and Aurora, I should suppose spurious, because we are told in the same poem they sprung from Typhœus, which is every way agreeable to the physical sense; we must therefore suppose them supposititious, or the poet has committed a very great blunder. See farther in the note to ver. 1195.

Ver. 593. Styx, says the Scholiast, is from στυγεω, to hate, to dread; why her offsprings are made attendants on the Almighty, is conspicuous; but I am not satisfied in Pallas being their father: Tzetzes tells us, that he understands by Pallas, the superior motion which produces such effects. The name, I believe, must come from παλλω, a verb, to express extraordinary action; in Latin, *vibro agito*, &c. We are told here, that Styx was ordained by Jove, the oath of the gods; on which Lord Bacon has the following remark. Necessity is elegantly represented by Styx, a fatal and irremeable river. The same noble author goes on to show, that the force of leagues is to take away the power of offending, by making it necessary that the offender should undergo the penalty enacted. Thus he proceeds; if the power of hurting be taken away, or if, on breach of covenant, the danger of ruin, or loss of honour or estate, must be the consequence, the league may be said to be ratified, as by the sacrament of Styx, since the dread of banishment from the banquets of the gods follows; under which terms are signified by the ancients, the laws, prerogatives affluence, and felicity of empire. See farther, ver. 1082.

Ver. 625. Le Clerc derives Phœbe from the Phœnician, *ph.-pah*, which is *os in illâ*, that is, a prophetic mouth; for, in the Phœnician tongue, the oracle is called the mouth of God; and, to say we consult the mouth of God, is the same as to say we consult the oracle. *Latona*, in Greek, *Leto*, the same critic derives from *lout*, or *lito* or *leto*, which is to use magic charms; therefore, says he, Apollo and Diana, who preside over magic arts, are said to be born of her. Asteria, he tells us, comes from *hasschthirab*, which signifies lying hid, not an improper name for an enchantress.

Ver. 633 Hecate is by the Phœnicians called *Echatha*, that is, the only *unica*; for which reason the poet calls her μονογενης, the only begotten. She is esteemed the chief president over magic arts, and reckoned the same with the moon. The Phœnicians invoked her, because she is the regent of the night, the time when all incantations, charms, and the like, are performed. The sun is in the same language called *Ihadad*, the only, or one *unus*. Hecate is here said to have the fate of mariners jointly with Neptune in her power, because the moon has an influence over the sea, as well as over the land. *Le Clerc*. The Scholiast says, the poet gives this great character of Hecate, because the person who was, perhaps, after her death honoured with divine rites, was a Bœotian.

Ver. 694. Εστιη, by the Latins called *Vesta*, is by the learned justly derived from *Esch*, or the Syrian *eschtha*, fire; she is esteemed the goddess of fire. Ceres, the Greek Δημητης, comes from *dai*, a Phœnician word, signifying plenty; a proper name for her who has the honour of being thought the first who taught to cultivate the ground, and to raise fruit-trees. Ηρη, the Greek name of Juno, is from the Phœnician word *bira* or *barab*, jealousy; than which no name could be more apt to Juno, who is often represented as teazing her husband with jealous surmises. Αιδης, or Pluto, is from the Phœnician word *ed* or *ajid*, which is death or destruction; the poet calls him hard of heart, because he spares none. Plutarch tells us, in his life of Theseus, that the descent which that hero is said to make into hell, means nothing more than his journey to Epirus, of which Αιδης, or Pluto, was king. Pluto is sometimes called the god of riches, because he had in his kingdom many mines of silver and gold. We now come to the etymologies of Εννοσιγαιος and Ποσειδων, the names of Neptune, Posedon signifies a destroyer of ships, εννοσιγαιος, earth-shaker. Jupiter is called the father of gods and men, because all sovereigns are fathers of their people. Saturn is said to swallow his children, that is, he imprisoned them. Thus far Le Clerc. I shall conclude this note with the following remark from Lord Bacon. The first distinction of ages is signified by the reign of Saturn, who, through the frequent dissolutions and short continuances of his sons, is said to have devoured them; the second is described by the reign of Jupiter, who drove those continual changes into Tartarus, by which place is meant perturbation. Guietus thinks the twelve lines from ver. 745. to 757. suppositititious.

Ver. 769. The learned will have Japhet to be the son of Noah, whose posterity inhabited Europe; but, since so many interpolations and falsehoods are mixed with the history of antiquity, we cannot wonder if this story, in some degree, remains yet obscure. Atlas is said to support the heavens near where the Hesperides are situated: Atlas might probably have been the founder of the people who possessed the extremest parts of Africa about the mountain Atlas; which mountain, through the extraordinary height, seemed to prop up heaven, and because it was far in the west, where they imagined heaven almost met the earth. This mountain might have had the name from the first ruler of the people. Menœtius is called υβριστης, contumelious, or injurious, which is agreeable to the radix, the Chaldean word *menath*, he terrified. Bochart, in his Phaleg, book 1. chap. 2. tells us the true name of Prometheus was Magog, who was the son of Japhet: he is said to have been bound to Caucasus, because he settled near it, and to have stole fire from heaven, because he found out the use of those metals which were in the mines about Caucasus. Æschylus puts these words into the mouth of Prometheus, "Who will say he found out brass, iron, silver, and gold, before me?"

The etymology of Magog seems to favour the story of the vulture gnawing his liver; the Hebrew name is *moug* or *magag*, which is to waste away. The radix of Gog is, he burned, not an improper name for him who was enamoured with Pandora. *Le Clerc.* To these accounts, I shall add the following from Diodorus Siculus: "The Nile, under the rising of the Dog-star, at which time it was usually full, overflowed the bounds, and laid great part of Egypt under water. Prometheus, who tried to preserve the people, by endeavouring to stop the flood, died through grief, because he could not accomplish his design. Hercules, inured to labour, and to overcome difficulties, stopped the current, and turned it to the former channel. This gave rise, among the Greek poets, to the story of Hercules killing the eagle which preyed on the liver of Prometheus. The name of the river was then Aetos, the Greek word for an eagle."

Since the opinions of the learned are so various on this and several other fables of antiquity, we must rest on those interpretations which come nearest to nature, and which leave us least in the dark. My judgment is, that whatever might give birth to this fable, our poet, not regarding the different relations in his time, designed it as a moral lesson, showing the bad effects of a too free indulgence of the passions; and, in the character of Prometheus, the benefits of regulating them with discretion; which I think I have showed in my remarks on this story, as told in the Works and Days; to which I shall add the following reflections from Lord Bacon, which are more properly introduced here, as they more particularly regard this fable, as told in the Theogony.

"After the improvement of arts and the human understanding, the parable passes to religion, for the cultivation of arts was followed by the institution of divine worship, which hypocrisy soon polluted. Under the twofold sacrifice, the religious person and the hypocrite are truly represented: one contains the fat, which is the portion of God, by the flame and fumes arising, from which the affection and zeal for the glory of God are signified; by the entrails and flesh of the sacrifice, which are good and wholesome, are meant the bowels of charity. In the other is nothing but dry and naked bones, which only stuff up the skin, while they make a fair show of a sacrifice. In the other part of the fable, Prometheus means prudent men who consider for the future, and warily avoid the many evils and misfortunes which human nature is liable to: but this good property is accompanied with many cares, with the deprivation of pleasures; they defraud their genius of various joys of life, they perplex themselves with intestine fears and troublesome reflections, which are denoted by the eagle gnawing his liver while he is bound to the pillar of necessity: from the night they obtain some relief, but wake in the morning to fresh anxieties. Prometheus having assistance from Hercules, means fortitude of mind. The same is the explanation by the Scholiast of the eagle. The poet goes farther than what Tzetzes and Lord Bacon have observed: he makes Hercules free Prometheus by the consent of Jupiter; the meaning of which must be, that such miseries are not to be undergone patiently without divine aid to support the spirits. This story is not yet without obscurities; for Hesiod calls Prometheus ακακητα, blameless, hurtful to none; and at the same time makes him playing tricks with Jupiter in his offerings. I must here observe, that this fable is more consistent in every part as told in the Works and Days; nor is it to be wondered at, when we consider that poem as the work of his riper years, when his genius was more sedate, and his judgment more settled." I shall conclude this note with an allusion which Milton has, in his description of Eve, to the story of Pandora; from which it is evident he took the box of Pandora in the same sense with the forbidden fruit; and, as I have already observed in my notes to the Works and Days, many have been of opinion that both are from one tradition. The lines in Paradise Lost are these:

More lovely than Pandora, whom the gods
Endow'd with all their gifts, (and, O! too like
In sad event!) when, to th' unwiser son
Of Japhet brought by Hermes, she ensnar'd
Mankind with her fair looks. *Book 4.*

Ver. 916. Here begins the battle of the gods, which continues to ver. 1222. In this the learned are much divided concerning the intention of the poet, and from whence he took his account of the war. Some imagine it of Egyptian rise, from the story of Typhon; nor are they few who believe it, from the tradition of the battle of the angels; but Tzetzes thinks it no other than a poetical description of a war of the elements: but they are certainly wrong who think it entirely from either. I do not in the least doubt but the poet had a physical view in some passages, and in some particulars may possibly have had a regard to some relations, fabulous or real, of antiquity; but his main design seems to have been that of relating a war betwixt supernatural beings, and, by raising his imagination to the utmost height, to present the dreadfullest ideas which the human mind is capable of conceiving: and I believe I may venture to say, some parts of this war are the sublimest of the sublime poetry of the ancients. If a nicer eye should discover every part of this war to be entirely physical, which I think impossible, yet I am unjustifiable in my supposing his design to be that of relating a war betwixt supernatural beings; for while those parts of nature are cloathed in prosopopœias they cease to be parts of nature till the allegory is unfolded; our ideas, therefore, are to be placed on the immediate objects of sense, which are the persons of the war, as they directly present themselves to our eyes from the description of the poet. I must here observe, that all the commentators on our poet are silent on the poetical beauties of this war, which makes me think them to have been men of more learning than taste.

Our poet tells us the gods eat nectar and ambrosia; and Homer mentions a river of nectar and ambrosia, αμβροσιης και νεκταρος αιτοφορω.

Odyſſ. τ.: from which we may conclude thoſe words to be uſed both for meat and drink among the gods.

Ver. 973. The reader is to take notice, that though moſt of the Titans were againſt Jupiter, all were not, for Cottus, Gyges, and Briareus, were Titans; what an image in theſe three brothers tearing up the rocks, and throwing them againſt the enemy! Heaven, earth, the ocean, and hell, are all diſturbed by the tumult. The poet artfully takes care to raiſe our ideas, by heightening the images to the laſt. The deſcription of the battle, from ver. 970. to 993. is great, but it is impoſſible that any reader ſhould not feel himſelf more affected with the grandeur and terror with which Jupiter urges the fight. Heaven, earth, the ocean, and hell, are all diſturbed as before, but the additional terror, and the variation of the language, make a new ſcene to the mind.

One conflagration ſeems to riſe on all,
And threatens Chaos with the gen'ral fall.

How elevated are theſe in the original! Could the genius of man think of any thing ſublimer to paint the horror of the day, attended with the roar of all the winds, and the whirling of the duſt! Could he think of ought more adequate to our ideas, to expreſs the voice of the war by, than by likening it to the confuſed meeting of the heavens and the earth, to the wreck of worlds! "Do you "ſee," ſays Longinus on another author, "the "earth opening to her centre, the regions of death "juſt ready to appear, and the whole fabric of the "world upon the point of being rent aſunder and "deſtroyed, to ſignify, that in this combat, hea-"ven, hell, things mortal and immortal, every "thing, co-laboured, as it were, with the gods, "and that all nature was endangered." This paſſage of Longinus could never be applied with more juſtice than here, nor more properly expreſſed in our own language, than in the words of Mr. Welſted, from his tranſlation of that author.

Milton, in his Battle of the Angels, has judiciouſly imitated ſeveral parts of our poet. In one place, ſays he,

Hell heard th' unſufferable noiſe——

And, a little farther,

——— confounded Chaos roar'd,
And felt tenfold confuſion. *Book* 6.

Le Clerc thinks Chaos here means the whole vaſt extent of air; but Grævius takes it for μεγα χασμα, "the vaſt chaſm that leads to hell;" in which laſt ſenſe Milton likewiſe takes it, deſcribing the paſs from hell to earth:

Before their eyes, in ſudden view, appear
The ſecrets of the hoary deep; a dark
Illimitable ocean! without bound,
Without dimenſion; where length, breadth, and height,
And time, and place, are loſt; where eldeſt Night,
And Chaos, anceſtors of nature, hold
Eternal anarchy, amidſt the noiſe
Of endleſs wars. *Book* 2.

And, in the firſt book,

——— the univerſal hoſt upſent
A ſhout that tore Hell's concave, and beyond
Frighted the reign of Chaos and old Night.

Ver. 1030. From this verſe to ver. 1134. the poet judiciouſly relieves the mind from the rage of battle, with a deſcription of Tartarus, Styx, &c. with an intent to end the war, and ſurpriſe us with ſomething more ſublime than we could expect, after what had preceded the ſingle combat betwixt Jupiter and Typhœus. In the deſcription of Tartarus, Milton has many imitations of our poet:

With earth thy vaſt foundations cover'd o'er
Heſiod.

Satan deſcribing his realm.

——— lately heav'n, and earth, another world,
Hung o'er my realm. *Milton, book* 2.

The entrance there, and the laſt limits, lie
Of earth, the barren main, the ſtarry ſky,
And Tart'rus; there of all the fountains riſe.
Heſiod.

——— this wild abyſs,
The womb of nature, and perhaps her grave.
Milton, book 2.

——— where heav'n
With earth and ocean meets. *Book* 4.

And afterwards:

——— and now, in little ſpace,
The confines met of empyrean heav'n,
And of this world, and on the left hand hell.
Book 10.

Here ſtorms in hoarſe, in frightful murmurs play. *Heſiod.*

——— nor was his ear leſs peal'd
With noiſes loud and ruinous. *Milton, book* 2.

And a little lower, in the ſame book:

At length a univerſal hubbub wild
Of ſtunning ſounds, and voices all confus'd,
Borne through the hollow dark, aſſaults his ears.

Tzetzes ſays the beginning and end of things are ſaid to be here figuratively, becauſe we are in the dark as to the knowledge of them. The verſes in which Atlas is made to prop up the heavens, Guictus ſuppoſes not genuine.

Ver. 1082. The ſtory of Styx, with the puniſhment of the perjured gods, is chiefly poetical. Why this river ſhould be deteſtable to immortals I know not, unleſs they think it a ſad reſtraint to be deterred from perjury: this thought has too much impiety in it, therefore we muſt give it another turn; as relating to the oaths of great men, or in the ſame ſenſe that death is called a foe to the gods, which is from the grief they are ſometimes made to ſuffer for the death of any favourite mortal, as Venus for Adonis, and Thetis for Achilles.

Ver. 1136. Typhœus and Typhaon ſeem to be different perſons (though ſome will have them two names of one perſon), becauſe Typhœus is no ſooner born but he rebels, and is immediately deſtroyed: and Typhaon is made the father of

many children. Le Clerc derives the word Typhœus from the Phœnician word *touphon*, the radix of which is *toupb*, to overflow, to overwhelm. He is not injudiciously called the father of the winds, and the son of Earth and Tartarus; the various voices which the poet gives him are agreeable to the several tones of the winds at several times. Lord Bacon has this reflection on the poetical description of this monster. "Speaking of rebellion, he says, because of the infinite evils which it brings on princes and their subjects, it is represented by the horrid image of Typhœus, whose hundred heads are the divided powers and flaming jaws incendious designs.

Ver. 1154. With what dignity Jupiter sets out for this single combat! heaven and earth tremble beneath him when he rises in anger. Similar to this passage, is the seventh verse of the eighteenth Psalm. "Then the earth shook and trembled, the "foundations of the hills also moved, and were "shaken, because he was wroth."

Here are three circumstances which exalt the images above those in the former battles, the winds bearing the fire on their wings, the giant flaming from his hundred heads, and the similitude of the furnace.

Ver. 1195. In the winds which are here said to be from the gods, the poet omits the east wind; though some will have *αργεστης* to be the name of a wind, and as such Mombritius takes it in his translation; Aulus Gellius indeed gives it as the name of a wind, but as one that blows from the west, by the Latins called Caurus. Stephens gives examples of it being used for the epithet swift; and Scapula quotes Aristotle to show he uses it in the same sense, *αργηται κεραυνοι* the swift lightnings: *αργητις* is from the same radix, and of the same signification with *αργεστης*. The poet calls the winds sprung from Typhœus greatly destructive to mortals, and those from the gods profitable; the two following verses from Exodus, therefore, will, in some degree, countenance my interpretation of Argestes; which I make an adjective to agree with *ζεφυρω, i. e. αργεστω ζεφυρω*. "The Lord "brought an east-wind on the land all that day, "and all that night, and when it was morning "the east-wind brought the locusts." Chap. x 13. "The Lord turned a mighty strong "west-wind, which took away the locusts." Ver. 19. Though this is related as a miracle, we may suppose the properest winds were chosen to bring the evil and the good on the land. In whatever sense this word is taken, our poet is not free from absurdity in his philosophy, when he makes the north, south, and west winds, spring from the gods, and those which tyrannize by sea and land from Typhœus; for the winds from each corner are hurtful sometimes, all depending on what circumstances the elements are in, and not from what part the winds come.

Ver. 1222. Here ends the war. Tzetzes says the conquest which Jupiter gained over the foe, was the tranquillity of nature after the confusion of the elements was laid. However the physical interpretation may hold good through the whole, the war is regularly conducted, and justly concluded; the hero is happily situated, the enemy punished, and the allies rewarded.

Ver. 1223. I shall give the explanation of the story of Minerva springing from the head of Jove, in the words of Lord Bacon, from his Essay on Counsel.

The ancient times do set forth in figure, both the incorporation, and inseparable conjunction, of counsel with kings, and the wise and politic use of counsel by kings; the one in that they say Jupiter did marry Metis, which signifieth counsel, whereby they intend that sovereignty is married to counsel; the other in that which followeth, which was thus; they say after Jupiter was married to Metis she conceived by him, and was with child; but Jupiter suffered her not to stay till she brought forth, but eat her up; whereby he became himself with child, and was delivered of Pallas armed out of his head; which monstrous fable containeth a secret of empire, how kings are to make use of their council of state; that first they ought to refer matters unto them, which is the first begetting or impregnation; but when they are elaborate, moulded, and shaped, in the womb of their council, and grow ripe, and ready to be brought forth, that then they suffer not their counsel to go through with the resolution and direction as if it depended on them, but take the matter back into their own hands, and make it appear to the world that the decrees and final directions (which, because they come forth with prudence and power, are resembled by Pallas armed) proceeded from themselves, and not only from their authority, but, the more to add reputation to themselves, from their head and device. Thus far Lord Bacon. What to make of the son whom Jupiter destroyed before his birth, I know not, unless tyranny is shadowed in that allegory, which often follows power, but was here quelled before it could exert itself, by wisdom or reflection. Milton has judiciously applied this image of Pallas springing from the head of Jove to Sin and Satan, in the second book of Paradise Lost, where Sin giving an account of her birth, thus speaks to Satan,

> All on a sudden, miserable pain
> Surpris'd thee, dim thine eyes, and dizzy swum
> In darkness; while thy head flames thick and fast
> Threw forth, till on the left side op'ning wide;
> Likest to thee in shape, and count'nance bright,
> Then shining heavenly fair, a goddess arm'd,
> Out of thy head I sprung.

Ver. 1239. Jupiter and Themis are said to be the parents of the hours; the meaning of which is, power and justice bless the land, or make the seasons or hours propitious, by laying down good laws which preserve property and peace. Some take Eunomie, Dice, and Irene, to be only poetical names for the hours or seasons of the year; but Grævius laughs at the ignorance of such interpreters, and proves, beyond contradiction, they mean good laws, right, and peace; which is the literal

conſtruction of the names. He produces a paſſage from Pindar, Olymp. 13, where they can be underſtood in no other ſenſe; the words of the poet, in Engliſh, are theſe. Here Eunomia dwells with her ſiſters, Dica the ſafe foundations of cities, and Irana endowed with the ſame manners, with the other, the diſpoſers of riches to men, the golden daughters of Themis good in counſel. We are to obſerve the difference of the names in Heſiod and Pindar is only from a change of the dialect in the latter. Mombritius has taken the hours in the ſame ſenſe:

Dein horas Themis ediderat, Jovis altera conjux,
Juſtitiam, legemque bonam pacemque virentem.

The poet before makes the Fates ſpring from Night; a miſtake therefore muſt be in one place; Le Clerc ſuppoſes it here. Mr. Robinſon, to avoid the contradiction which is made by the common interpretation of Μοιρας, &c. here places Μοιρας after ωραιωσι, in the conſtruction, and not after τικεν; which gives it a better ſenſe; however, ωραιωσι Μοιρας, with their names as they ſtand here, will not well admit of this conſtruction which Mr. Robinſon makes, "bonæ leges, juſtitia, et pax, "humanam ſortem pulchram et felicem reddunt." I am inclined to think the three verſes here concerning the fates ſpurious: I am ſure they are abſurd.

Ver. 1251. Aglaia from αγλαος, ſplendid; Euphroſyne ſignifies joy; Thalia from θαλιαι, banquets.

Ver. 1257. Perſephone, by the Latins called Proſerpina, Le Clerc derives from the Phœnician word *periſaphoun*, in Engliſh hidden fruit, which means the fruit committed to the earth; Jove, therefore, whether we underſtand him as the Supreme Being, or phyſically the air, is properly called the father of Perſephone, and Ceres her mother. Pluto is the heat in the earth which contributes towards maturing the fruits. Beſides this interpretation, a ſtory is told of Ceres, a queen of Sicily, whoſe daughter was forced away by Pluto.

Ver. 1264. Grævius makes one inference from the Muſes having diadems of gold on their heads, which is that luxury in dreſs which prevailed among the ancients. On this occaſion he uſes the words of Ælian from his Various Hiſtory, book 1. chap. 18. "Who can deny that the women among "the ancients abounded in luxury?"

Ver. 1267. Le Clerc ſays Phœbus Apollo comes from the Hebrew *phe-bo-hapollon*, having a wonderful mouth; but we muſt take notice that the poet calls him only Apollo here. Artemis, whom the Latins call Diana, the ſame critic derives from the Phœnician words *har*, a mountain, and *thamah*, admired.

Ver. 1271. The poet means by this, that Juno was the laſt of goddeſſes whom he took to his bed, and whom he made his wife; the reſt were only concubines. The word ακοιτις, a wife, our author uſes to none but Juno.

Hebe, the goddeſs of youth is derived from the Hebrew word *eb*, to flouriſh; Αρης, in Latin Mars, from *Hari*, which ſignifies a mountain-man: it is well known that the ſeat of Mars was on the mountains of Thrace. Ειλειθυια, or Lucina, is from *heilidia*, ſhe cauſed to bring forth; a proper name for a goddeſs who preſides over human birth. *Le Clerc.*

The meaning of this may be, that to the ſupreme beings, or to earth and air, which are here Jupiter and Juno, we owe our birth, our bloom of youth, and vigour or maturity; which are denoted by Lucina, Hebe, and Mars.

Ver. 1280. The vulgar reading of this paſſage is this; nor is it in any edition I have ſeen otherwiſe.

Μητ' ὀ' ηφαιστον κλυτον ειν φιλοτητι μιγεισα
Γενατο.

Juno, joining in love, brought forth the renowned Vulcan; than which reading nothing can be more abſurd. This is a flagrant inſtance of the ignorance of the tranſcribers; nor indeed are thoſe free from cenſure who have had the care of the preſs in the printed editions. The very words which follow point out the miſtake of ειν φιλοτητι.

——και ζαμενησε, και ηρισεν ω παρακοιτη.

She uſed her utmoſt endeavours, and contended with her huſband. For what did ſhe contend with her huſband? To bring forth without his aſſiſtance, as he did without her. Had the poet intended to make Vulcan the ſon of Jupiter and Juno, he would have placed him in the liſt with Hebe, Mars, and Lucina; but, inſtead of that, he lets the birth of Minerva, though he had given an account of it before, intervene, that the reaſon of the reſentment of Juno may immediately appear: let us therefore read it ϑ φιλοτητι μιγεισα, and the ſenſe will be this: Juno, without the joys of love, brought forth the renowned Vulcan, reſolving to revenge herſelf on her huſband. Thus Tzetzes and Grævius take it; and thus Mombritius has tranſlated it:

Sic quoque, nullius commixta libidine, Juno
Te Vulcane tulit.

Sic quoque is here very proper, becauſe it alludes to the preceding lines of the birth of Minerva. Ηφαιστος, I believe, comes from απτω, to burn, and from αιστω, to deſtroy. I have another reaſon which may poſſibly enforce this reading, and which I have never met with. As Vulcan is called the god of artificers, in metals he is rightly the ſon of Juno only, who is ſometimes phyſically taken for the earth.

Ver. 1285. Triton is feigned to be the ſon of Neptune and Amphitrite, and by later poets made the trumpeter of Neptune. Le Clerc takes the name from the Chaldean word *retat*, he ſtirred up a clamour.

Ver. 1288. This paſſage, where Terror and Fear are made the ſons of Mars, wants no explanation; why Harmonia is the daughter of him and Venus I know not, unleſs the poet means that beauty is ſometimes the reward of courage.

Ver. 1296. Maia is one of the Pleiades; how ſhe may be ſaid to be the daughter of Atlas, ſee in the Works and Days, book 2. note 1. The Scholiaſt interprets Hermes, being the meſſenger of the

gods, thus; the herald of heaven is that which brings divine things to light.

Ver. 1300. Bacchus is ſaid to be born of Simele, which word Le Clerc derives from the Phœnician *tſmelah*, which ſignifies a virgin ripe for man. The Greek name of Bacchus is Διωνυσος, which is literally the ſon of Jove; ſome have a different derivation; but ſince this agrees with his birth, according to the Theogony, it will be needleſs to ſeek any other. He is the god who preſides over the vintage; therefore, as all pleaſures are from God, he is juſtly derived from the ſame ſource. See farther in the Diſcourſe at the end.

Ver. 1304. The ſtory of Jupiter poſſeſſing Alcmena in the ſhape of her huſband Amphitryon, is well known: Hercules phyſically ſignifies ſtrength and courage, which are from Jove.

Ver. 1306. Vulcan and Aglaia are here huſband and wife; but Venus is made the conſort of Vulcan by other authors. Vulcan, the god of artificers in fire, and Aglaia, one of the Graces, are properly joined, becauſe, by the help of both, all that is ornamental is brought to perfection. Vulcan is called lame, becauſe fire cannot ſubſiſt without fuel. Theſe two are brought together, but no children are born of them, which does not anſwer the title of the generation of the gods, therefore improperly introduced in a poem under that title, as are the other perſons who meet and not propagate.

Ver. 1312. Hercules is married to Hebe, that is, to eternal youth, the reward of great and glorious actions.

Ver. 1318. Circe, as an enchantreſs, is properly ſaid to be a daughter of the Sun; and Medea, for the ſame reaſon, is juſtly derived from the ſame ſource.

Ver. 1332. We are now come to the laſt part of the poem, where goddeſſes ſubmit to the embraces of mortals. How ridiculous would theſe ſtories ſeem, were they to be underſtood in the very letter! Such, therefore, (an obſervation I have made before) as remain obſcure to us, we muſt conclude to have loſt of their explanation through the length of time in which they have been handed down to us. The meeting of Jaſon and Ceres in Crete, plainly ſignifies the land being cultivated by that hero; and Plutus, the god of riches, being the produce of their loves, means the fruits of his labour and induſtry.

Ver. 1340. Cadmus and Harmonia have, doubtleſs, ſome relation to perſons in hiſtory. Polydore, the Scholiaſt, ſays, was ſo called, becauſe the gods diſtributed their gifts at the nuptials of his parents.

Ver. 1347. Theſe verſes of Chryſaor and Callirhoe, are, doubtleſs, placed here by miſtake, ſince they were introduced before in a more proper manner: here they are abſurd, becauſe Chryſaor and Callirhoe are not reckoned mortals.

Ver. 1354. I believe Memnon and Hemathion were called by the ancient Greeks, ſons of Aurora, becauſe they were of the orientals which ſettled in Greece. Memnon was king of Ethiopia, which country is in the eaſt from Greece. *Le Clerc.* Tzetzes tells us, that Macedon was ſo called from Hemathion, who was ſlain by Hercules; but that does not agree with Memnon being ſlain by Achilles, becauſe the diſtance of time betwixt Hercules and Achilles was too long; beſides Memnon was ſlain in his youth, which increaſes the error in point of time. The reaſon which Lord Bacon gives for Memnon being the ſon of Aurora, is, that as he was a youth whoſe glories were ſhort-lived, he is properly ſaid to be the ſon of the morning, whoſe beauties ſoon paſs away. The ſame remark, perhaps, may be applied to Hemathion and Phaëthon.

Ver. 1366. Many paſſages may be collected, from which the Argonauts will appear to have been Theſſalian merchants, who ſailed to Colchis; but, ſince Heſiod intended not to relate the expedition, it would be needleſs to give the hiſtory here. *Le Clerc.*

Ver. 1380. Æacus, Achilles, and Æneas, are names well known in hiſtory, and ſeem to be mentioned only as the reputed ſons of goddeſſes by mortals without any phyſical view; which ſeems to be the end of introducing Agrius, Latinus, and other names.

Ver. 1394. Le Clerc takes Nauſinous to be the inclination which Ulyſſes had to leave Calypſo, and Nauſithous the ſhip in which he ſailed from her; both words, indeed, are expreſſive of ſuch meanings, but as many perſons have had names from their diſpoſitions, offices, or ſome particular circumſtance of their lives, or names given them ſignificant of ſome quality or employment, yet not applicable to thoſe who are ſo named, we are not certain whether theſe are deſigned as real names or not.

Ver. 1403. This concludes the Theogony, as the poem now ſtands, from which it appears, that the poet writ or intended to write, of women of renown; but ſuch a work could not come under the title of the Theogony; of which ſee farther in the fifth ſection of my Diſcourſe on the Writings of Heſiod.

A DISCOURSE

ON THE THEOLOGY AND MYTHOLOGY OF THE ANCIENTS.

In the following diſcourſe I ſhall confine myſelf to the Theology and Mythology of the ancient Greeks, ſhowing their riſe and progreſs, with a view only to the Theogony of Heſiod, intending it but as an appendix to the notes.

The Greeks, doubtleſs, derived great part of their religion from the Egyptians; and though Herodotus tells us, in one place, that Heſiod, with Homer, was the firſt who introduced a Theogony among the Grecians, and the firſt who gave names to the gods, yet he contradicts that opinion in his ſecond book, where he ſays Melampus ſeems to have learned the ſtories of Bacchus from Cadmus and other Tyrians, which came with him from Phœnicia to the country now called Bœotia: he muſt therefore mean that Heſiod and Homer were the firſt who gave the gods a poetical dreſs, and who uſed them with more freedom in their writings than preceding authors.

Herodotus, Diodorus Siculus, and Pauſanias, all mention Cadmus ſettling in Bœotia, and Egyptian colonies in other parts of Greece; and Herodotus ſays almoſt all the names of the gods in Greece were from Egypt: to enforce which, I have tranſlated the following account from Diodorus Siculus.

We learn from the Egyptians that many by nature mortal, were honoured with immortality for their wiſdom, and inventions which proved uſeful to mankind, ſome of which were kings of Egypt; and to ſuch they gave the names of the celeſtial deities. Their firſt prince was called Ἥλιος, from the planet of that name, the ſun. We are told that Ἥφαιστος, or Vulcan, was the inventor of fire, that is, the uſe of it; for ſeeing a tree on the mountains blaſted from heaven, and the wood burning, he received much comfort from the heat, being then winter: from this he fired ſome combuſtible matter, and preſerved the uſe of it afterwards to men; for which reaſon he was made ruler of the people. After this Chronos, or Saturn reigned, who married his ſiſter Rhea, of whom five deities were born, whoſe names were Oſiris, Iſis, Typhon, Apollo, Aphrodite. Oſiris, is Bacchus and Iſis, Ceres, or Demeter. Iſis was married to Oſiris, and, after ſhe ſhared the dominion, made many diſcoveries for the benefit of life; ſhe found the uſe of corn, which grew before neglected in the fields like other herbs; and Oſiris began to cultivate the fruit-trees. In remembrance of theſe perſons annual rites were decreed, which are now preſerved; in the time of harveſt they offer the firſt-fruits of the corn to Iſis, and invoke her. Hermes invented letters, and the lyre of three chords: the firſt inſtituted divine worſhip, and ordained ſacrifices to the gods.

The ſame hiſtorian proceeds to relate the expedition of Oſiris, who was accompanied by his brother Apollo, who is ſaid to be the firſt that pointed out the laurel. Oſiris took great delight in muſic, for which reaſon he carried with him a company of muſicians, among which were nine virgins eminent for their ſkill in ſinging, and in other ſciences, whom the Greeks call the Muſes, and Apollo they ſtyle their preſident. Oſiris at his return was deified, and afterwards murdered by his brother Typhon, a turbulent and impious man. Iſis and her ſon revenged themſelves on Typhon and his accomplices.

Thus far Diodorus in his firſt book; and Plutarch, in his treatiſe of Iſis and Oſiris, ſeems to think the Grecian poets, in their ſtories of Jupiter and the Titans, and of Bacchus and Ceres, indebted to the Egyptians.

Diodorus, in his third book, tells us Cadmus, who was derived from Egypt, brought letters from Phœnicia, and Linus was the firſt among the Greeks who invented poetic numbers and melody, and who writ an account of the actions of the firſt Bacchus; he had many diſciples, the moſt renowned of which were Hercules, Thamyris, and Orpheus. We are told by the ſame author, that Orpheus, who was let into the theology of the Egyptians, applied the generation of the Oſiris of old, to the then modern times, and, being gratified by the Cadmeans, inſtituted new rites. Simele, the daughter of Cadmus, being deflowered, bore a child of the ſame likeneſs, which they attributed to Oſiris of Egypt; Orpheus, who was admitted into the myſteries of the religion, endeavoured to veil her ſhame, by giving out that Simele conceived by Jove, and brought forth Bacchus. Hence men, partly through ignorance, and partly through the honour which they had for Orpheus, and confidence in him, were deceived.

From theſe paſſages we learn that the religion and gods of Egypt were, in part, tranſlated with the colonies into Greece; but they continued not long without innovations and alterations. Linus firſt ſung the exploits of the firſt Bacchus or Oſiris; he, doubtleſs, took all the poetical liberty that he could with his ſubject: Orpheus after him baniſhed the firſt Bacchus from the theology, and introduced the ſecond with a lie to conceal the ſhame of a polluted woman. In ſhort, all the ſtories

which were told in honour of thoſe Egyptians, who had deſerved well of their country, were, with their names, applied to other perſons. Thus, according to the hiſtorian, the divine Orpheus ſet out with bribery, flattery, and deluſion.

Heſiod begins his Theogony with the firſt principle of the heathen ſyſtem, that Chaos was the parent of all, and Heaven and Earth the parents of all viſible things. That Heaven is the father, ſays Plutarch, in his Inquiry after God, appears from his pouring down the waters which have the ſpermatic faculty, and Earth the mother, becauſe ſhe brings forth. This, according to the opinion of Plutarch, and many more, was the origin of the multiplicity of gods, men eſteeming thoſe bodies in the heavens and on the earth, from which they received benefit, the immediate objects of their gratitude and adoration: the ſame were the motives afterwards which induced them to pay divine honours to mortal men, as we ſee in the account we have from Diodorus. The deſign of the poet was to give a catalogue of thoſe deities who were, in any ſenſe, eſteemed as ſuch in the times in which he lived, whether fabulous, hiſtorical, or phyſical; but we muſt take notice, that even where a ſtory had riſe from fable, or hiſtory, he ſeems to labour at reducing it to nature, as in that of the muſes: what was before of mean original, from nine minſtrels, ſlaves to a prince, is rendered great by the genius of the poet.

I ſhall conclude, thinking it all that is farther neceſſary to be ſaid, and particularly on the Mythology, with the following tranſlation from the preface of Lord Bacon to his treatiſe on the Wiſdom of the Ancients.

I am not ignorant how uncertain fiction is, and how liable to be wreſted to this or that ſenſe, nor how prevalent wit and diſcourſe are, ſo as ingeniouſly to apply ſuch meanings as were not thought of originally: but let not the follies and licenſe of few leſſen the eſteem due to parables; for that would be profane and bold, ſince religion delights in ſuch veils and ſhadows: but, reflecting on human wiſdom, I ingeniouſly confeſs my real opinion is, that myſtery and allegory were from the original intended in many fables of the ancient poets; this appears apt and conſpicuous to me, whether raviſhed with a veneration for antiquity, or becauſe I find ſuch coherence in the ſimilitude with the things ſignified, in the very texture of the fable, and in the propriety of the names which are given to the perſons or actors in the fable; and no man can poſitively deny that this was the ſenſe propoſed from the beginning, and induſtriouſly veiled in this manner. How can the conformity and judgment of the names be obſcure to any? Metis being made the wife of Jove, plainly ſignifies counſel. No one ſhould be moved if he ſometimes finds any addition for the ſake of hiſtory, or by way of embelliſhment, or if chronology ſhould happen to be confounded, or if part of one fable ſhould be transferred to another, and a new allegory introduced; for theſe were all neceſſary and to be expected, ſeeing they are the inventions of men of different ages, and who writ to different ends, ſome with a view to the nature of things, and other to civil affairs.

We have another ſign, and that no ſmall one, of this hidden ſenſe which we have been ſpeaking of; which is, that ſome of theſe fables are in the narration, that is, in themſelves literally underſtood, ſo fooliſh and abſurd, that they ſeem to proclaim a parable at a diſtance. Such as are probable may be feigned for amuſement, and in imitation of hiſtory; but where no ſuch deſigns appear, but they ſeem to be what none would imagine or relate, they muſt be calculated for other uſes! What a fiction is this! Jove took Metis for his wife, and as ſoon as he perceived her pregnant, eat her, whence he himſelf conceived, and brought forth Pallas, armed from his head. Nothing can appear more monſtrous, more like a dream, and more out of the courſe of thinking, than this ſtory in itſelf. What has a great weight with me, is, that many of theſe fables ſeem not to be invented by thoſe who have related them, Homer, Heſiod, and other writers; for were they the fictions of that age, and of thoſe who delivered them down to us, nothing great and exalted, according to my opinion, could be expected from ſuch an origin: but if any one will deliberate on this ſubject attentively, theſe will appear to be delivered and related as what were before believed and received, and not as tales then firſt invented and communicated; beſides, as they are told in different manners by authors of almoſt the ſame times, they are eaſily perceived to be common, and derived from old memorial tradition, and are various only from the additional embelliſhments which diverſe writers have beſtowed on them.

In old times, when the inventions of men, and the concluſions deduced from them, were new and uncommon, parables, and ſimiles, of all kinds abounded. As hieroglyphics were more ancient than parables, parables were more ancient than arguments. We ſhall cloſe what we have here ſaid, with this obſervation; the wiſdom of the ancients was either great or happy; great if theſe figures were the fruits of their induſtry, and happy if they looked no farther, that they have afforded matter and occaſion ſo worthy contemplation.

POSTSCRIPT.

I CANNOT take my leave of this work without expreſſing my gratitude to Mr. Theobald for his kind aſſiſtance in it. Much may with juſtice be ſaid to the advantage of that gentleman, but his own writings will be teſtimonies of his abilities, when, perhaps, this profeſſion of my friendſhip for him, and of my zeal for his merit, ſhall be forgot.

Such remarks as I have received from my friends I have diſtinguiſhed from my own, in juſtice to thoſe by whom I have been ſo obliged, leſt, by a general acknowledgment only, ſuch errors as I may have poſſibly committed, ſhould, by the wrong gueſs of ſome, be unjuſtly imputed to them.

THE WORKS

OF

THEOCRITUS.

TRANSLATED FROM THE GREEK,

BY

FRANCIS FAWKES, M. A.

Τοις Βουκολικοις, πλην ολιγων των εξωθεν, ο Θεοκριτος επιτυχεστατος.
LONGINUS.

DEDICATION.

To the Honourable

CHARLES YORKE.

Sir,

The complaint which Theocritus makes in one of his Idylliums, of the neglect ſhown to his muſe, naturally reminded me of my own neceſſity. The utmoſt ambition of my wiſhes could not have aſpired after a more illuſtrious patron than Mr. Yorke; I was not kept long in ſuſpenſe, having, through a worthy friend, received permiſſion to inſcribe to you the ſubſequent ſheets; and the favour was granted in a manner ſo peculiarly polite, that I eſteemed the obligation more than doubled.

It was cuſtomary among the ancient Romans, for the plebeians to chooſe out of the body of the patricians protectors or patrons, whoſe care it was to aſſiſt their clients with their intereſt, and defend them from the oppreſſion of the great; to adviſe them in points of law, to manage their ſuits, and ſecure their peace and happineſs: what a powerful advocate, in this reſpect, you would prove, let the pleadings at the bar, the deciſions in Weſtminſter-hall, and the debates in the ſenate, determine. But the friend I ſeek at preſent, muſt be eminent for his enlivened genius, the delicacy of his taſte in literature, his claſſical learning, and his generous protection of the muſes: and where can I find theſe ſhining abilities, and theſe benevolent virtues ſo happily combined, as in that eminent patron, who does me the honour to countenance the following work? You, Sir, are not only "muſis amicus," but

—Muſarumq. comes, cui carmina ſemper
Et citharæ cordi.

You have long ſince ſacrificed to the muſes with ſucceſs; and had not the tenor of your ſtudies, warmed by the example, and improved by the knowledge and experience of your admirable father, formed you to ſhine with ſo much luſtre in a more active and exalted ſphere, you had been ranked with the moſt celebrated authors in polite learning. But I ceaſe to wonder, that you ſhould have attained qualifications like theſe, in the early culture of your talents, when I conſider your zeal to vindicate the privilege of your predeceſſors; for the great lawgivers of antiquity were generally poets: Themis and the muſes are nearly joined in affinity; both derived from heaven; they both diſtribute concord, harmony, and good will, among the inhabitants of the earth.

To whom, then, can I preſent theſe Arcadian ſcenes with ſo much propriety, as to the friend of ancient eloquence and poetry; one whom I know to have been an intelligent reader and admirer of Theocritus? Let me congratulate myſelf on my good fortune, in having, by this performance, found more diſtinguiſhed favour from Mr. Yorke, than Theocritus experienced at the court of Hiero.

That the honours and reputation you have ſo deſervedly acquired, may increaſe more and more; that you may live long and happily, for the encouragement of the liberal ſciences, and the ſervice of your country, is the earneſt wiſh of,

Sir,

Your moſt obliged, and obedient ſervant,

Francis Fawkes.

Orpington,
January 10. 1767

PREFACE.

When I had formed a reſolution of publiſhing a tranſlation of this inimitable poet, I intended to have availed myſelf of every elegant and faithful verſion of any particular Idyllium that fell in my way; and then have endeavoured, to the beſt of my ability, to make up the deficiency. With this view, I carefully examined Mr. Dryden, who has left tranſlations of four Idylliums, the 3d, the 8th, the 23d, and the 27th. There are many beautiful lines in the third; but take it altogether, and it is a

tedious paraphrase; for the original contains only fifty-four verses, which he has multiplied into no fewer than one hundred and twenty-seven; particularly there are three lines, beginning at the 18th.

Ω το καλων ποθοξωτα· το παν λιθος· ω κυκ
νοφρω
Νυμφα. κ. τ. λ.

Sweet black-eye'd maid, &c.

Which he has expanded into twelve. Now, though English heroic verse consists of no more than ten syllables, and the Greek hexameter sometimes rises to seventeen, but if, upon an average, we say fifteen, then two Greek verses is equal, in point of syllables, to three of English; but if a translator is so extravagantly licentious, he must lose sight of his original, and by introducing new thoughts of his own, disguise his author, so that nobody can know him again. But Mr. Dryden has a far greater foible than this, which effectually prevents me from inserting any of his translations in this volume, which is, that whenever he meets with any sentiment in an author which has the least tendency to indecency, he always renders it worse; nay, even in these Idylliums, where the original has given him no handle at all, he has wrapt the simple meaning of Theocritus into obscenity. "Sed "vitiis nemo sine nascitur;" no man had more excellencies, as a poet, than Mr. Dryden, therefore the hand of candour should draw a veil over constitutional blemishes.

In Dryden's Miscellany Poems, there are seven or eight translations of other Idylliums, viz. the 2d 10th, 14th, and 28th, by W. Bowles; the 11th by Duke, and the 1st, and some others, by different hands: but none of these, I found, would suit my purpose: there are so many wild deviations from the original, such gross mistakes, and so many incorrect and empty lines, that they will sound very harshly in the polished ears of the present age. Fully satisfied with this inquisition, I then determined to undertake the whole work myself; considering that every translation from an ancient author, as well as every original work, is generally most agreeable to the reader which is finished by the same hand: because, in this case, there is kept up a certain uniformity of style an idiomatical propriety of diction, which is infinitely more pleasing than if some different, though more able hand, had here and there interlarded it with a shining version, than if

Purpureus, late qui splendeat, unus et alter
Assuitur pannus.

I have been informed by some venerable critics, that Creech's translation of Theocritus was well done, and a book of reputation; that he thoroughly understood the classics, and had a peculiar facility in unfolding their beauties, and that, if there was published a new edition of his translation, there would be no necessity for its being superseded by another. I beg leave to dissent entirely, from these gentlemen, who probably having read Creech when they were young, and having no ear for poetical numbers, are better pleased with the rough music of the last age, than the refined harmony of this; and will not easily be persuaded, that modern improvements can produce any thing superior. However Creech may have approved himself in Lucretius, or Manilius, I shall venture to pronounce this translation of Theocritus very bald and hard, and more rustic than any of the rustics in the Sicilian bard: he himself modestly intitles his book, "the Idylliums of Theocritus "*done into English*:" and they are done as well as can be expected from Creech, who had neither an ear for numbers, nor the least delicacy of expression.

It will be incumbent upon me to make good this bold assertion, which I can easily do by producing a few examples. In the first Idyllium, he calls that noble pastoral cup, "a fine two handled "pot;" and the ελιξ "the tendrils or claspers," with which scandent plants use to sustain themselves in climbing, he transforms into kids;—— "where kids do seem to brouse." In the description of the fisherman, ver. 43. he has these lines:

The nerves in's neck are swoln, look firm, and
strong,
Although he's old, and fit for one that's young.

Ver. 112. He makes Daphnis say to Venus:

Go now stout Diomed, go soon pursue,
Go nose him now, and boast, my arts o'er
threw:
Young Daphnis, fight, for I'm a match for you.

Ελικας ομον and σαμα Λυκαονιδαο, he renders, "Helick's cliff" and "Licon's tomb" A little further on, and likewise in the 5th Idyllium, he turns nightingales into thrushes.

Idyllium III. Where Olpis is looking out for runnies, he makes him stand, "to snare his trouts." The girl Erithacis he calls tawny Bess, and Alphesiboea's mother, Alphisb's mother,

Idyllium V. ver. 11. He translates Crocylus into Dick, and Idyllium XIV. Argivus, Apis and Cleunicus, into Tom, Will and Dick. Near the end of the 5th, Lacon says:

I love Eumedes much, I gave my pipe,
How sweet a kiss he gave; ah charming lip!

Then come successively the following delicate rhymes, strains, swans; shame, lamb; piece, fees; joy, sky: afterwards he makes Comates say

I'll toot at Lacon. I have won the lamb,
Go foolish shepherd, pine, and die for shame.

Idyllium VII. ver. 120 He renders απιος, *parsley* thinking it the same as *apium*, whereas it signifies a pear.

Idyllium XI. He makes Polyphemus say of himself;

Sure I am somewhat, they my worth can see,
And I myself will now grow proud of me.

He says of Cynisca, Idyl. XIV ver 22.
That you might light a candle at her nose.

Idyllium XV. One of the gossips says to a stranger,

——————You are a a fancy friend,
I'm ne'er beholding t'ye, and there's an end.

And ſo there's an end of my animadverſions upon Mr. Creech; were I to quote all his dull inſipid lines, I ſhould quote above half his book: thus much was proper for me to ſay in my own vindication; and to add more, might, to ſome people, ſeem invidious.

It has been hinted to me by more ingenious judges, that if Theocritus was tranſlated in the language of Spencer, he would appear to great advantage, as ſuch an antique ſtyle would be a proper ſuccedaneum to the Doric idiom. There appeared to me at firſt ſomething plauſible in this ſcheme; but happening to find part of Moſchus's firſt Idyllium, which is a hue and cry after Cupid, paraphraſtically tranſlated by Spenſer himſelf, I had reaſon to alter my opinion. I ſhall tranſcribe the paſſage, that the reader may judge whether ſuch a verſion would be more agreeable than one in modern language.

It fortuned, fair Venus having loſt
Her little ſon, the winged god of love,
Who for ſome light diſpleaſure, which him croſt,
Was from her fled, as ſlit as any dove,
And left her blitſful bower of joy above;
(So from her often he had fled away,
When ſhe for aught him ſharply did reprove,
And wander'd in the world in ſtrange array,
Diſguis'd in thouſand ſhapes, that none might him bewray:

Him for to ſeek, ſhe left her heavenly houſe,
And ſearched every way, through which his wings
Had borne him, or his tract ſhe mote detect:
She promis'd kiſſes ſweet, and ſweeter things,
Unto the man that of him tidings to her brings.
Faery Queen, B. 3. ch. 6.

From this ſpecimen I could not be perſuaded to think, that a tranſlation of Theocritus, even in the pureſt language of Spenſer, would afford any pleaſure to an Engliſh reader: and therefore I have given him the dreſs which I apprehend would beſt become him. How I have executed this work, I leave to the deciſion of the candid and impartial, deſiring they will allow me all the indulgence which the tranſlator of ſo various and difficult an author can reaſonably require; an author on whom there are but few Greek ſcholia publiſhed, only to the 17th Idyllium incluſive, and theſe often extremely puerile; an author on whom fewer notes have been written than upon any other equally excellent. Scaliger, Caſaubon, Heinſius and Meurſius frequently leave the moſt difficult paſſages untouched; their obſervations are ſometimes trifling and unſatisfactory, often repugnant to each other, and now and then learnedly obſcure: amidſt theſe diſadvantages, I have endeavoured to conduct myſelf with the utmoſt caution: and if I may be allowed to ſpeak of the following ſheets, I will briefly explain what I have endeavoured to accompliſh. Firſt, then, as to the tranſlation; I have neither followed my author too cloſely, nor abandoned him too wantonly, but have endeavoured to keep the original in view, without too eſſentially deviating from the ſenſe; no literal tranſlation can be juſt; as to this point, Horace gives us an excellent caution:

Nec verbum verbo curabis reddere fidus
Interpres.

Nor word for word too faithfully tranſlate.

A too faithful interpretation, Mr. Dryden ſays, muſt be a pedantic one; an admirable precept to this purpoſe is contained in the compliment Sir John Denham pays Sir Richard Fanſhaw on his verſion of the Paſtor Fido:

That ſervile path thou nobly doſt decline,
Of tracing word by word, and line by line;
A new and nobler way thou doſt purſue,
To make tranſlations, and tranſlators too;
They but preſerve the aſhes, thou the flame,
True to his ſenſe, but truer to his fame.

And as I have not endeavoured to give a verbal tranſlation, ſo neither have I indulged myſelf in a raſh paraphraſe, which always loſes the ſpirit of an ancient, by degenerating into the modern manners of expreſſion; and to the beſt of my recollection, I have taken no liberties but theſe which are neceſſary for exhibiting the graces of my author, tranſfuſing the ſpirit of the original, and ſupporting the poetical ſtyle of the tranſlation. This is the plan, and theſe are the rules by which every tranſlator ſhould conduct himſelf: how I have acquitted myſelf in theſe points, muſt be left to the determination of ſuperior judges. As to the notes, which I found the moſt laborious part of my taſk, they are intended either to illuſtrate the moſt difficult, and exemplify the beautiful paſſages; or elſe to exhibit the various imitations of authors which I look upon as an agreeable comment, for they not only ſhow the manner in which the ancients copied each other's excellencies, but likewiſe often help to elucidate the paſſages that are quoted. Upon a review of my notes, I am afraid I have inſtanced too many paſſages from Virgil as imitations of Theocritus: what I have to ſay in my defence is, they appeared to me at the time to be ſimilar, if they do not appear in the ſame light to the reader, they are eaſily overlooked: if I have in this reſpect committed a fault, this acknowledgement will plead in mitigation of it.

Beſides theſe errors and miſtakes, I am conſcious of many more, though I hope not very material ones; theſe the learned and judicious, who are ſenſible of the difficulty of this undertaking, will readily excuſe. This work has already met with the approbation of the beſt critics of the age, therefore what the worſt may think or ſay of it, will give me no concern. I muſt acknowledge a fault or two *quas incuria fudit:* there are I believe two or three proper names falſe accented: I have alſo miſtaken the ſenſe of my author in the firſt Idyllium, ver. 31.

This goat with twins I'll give, &c.

It ſhould have been tranſlated, "I will give you

"three milkings of this goat; εἰς τρὶς ἀμέλξαι, that "you may milk her three times; not the goat "herself and twins," which would have been a most extravagant present from a poor goatherd, in return for a song. The reader, therefore, may correct the passage thus:

Thrice shall you milk this goat; she never fails
Two kids to suckle, though she fills two pails;
To this I'll add, &c.

This mistake was imparted to me by the ingenious and learned Dr. Jortin, together with the following emendation; see note on ver. 57, "for χρυσεια "you read, with Pierson, Κρυσσιο; which, as to "the sense, seems to be right. But, as the Ionic "dialect is not often used in a Doric song, I "should prefer the adjective Κρυσσια, which is also "a smaller alteration. As from χρυσος comes "χρυσειος, so from Κρυσσος, Κρυσσιος." I am much obliged to the same gentleman for the following short, but full account:

OF THE BUCOLIC MEASURE.

"Whosoever shall carefully examine in Theo-"critus the composition of his verses, may per-"ceive, that, in his opinion, the nature of bucolic "or pastoral metre, requires that the fourth foot "of the verse be a dactyl, and that the last syl-"lable of this dactyl be the end of a word, which "must not run into the next foot. The first foot "also should rather be a dactyl than a spondee, "and the cæsura is here likewise to be shunned. If "after the fourth foot there be a pause of a com-"ma at least, the verse will be still more elegant; "as

Ἀρχετε | βουκολικας, Μουσαι φιλαι, | ἀρχετ' ἀοιδας.

"Thus the verses will abound with dactyls, which, "together with the broad Doric dialect, gives a "certain rustic vivacity and lightness to the poesy. "But yet the above-mentioned rules, if they were "constantly observed, would displease by a tire-"some uniformity, and confine the poet too much; "and therefore a variety is better, as in the line,

Ἀμφωες, νεοτυκτες, ετι γλυφα | νοιο πονημα.

"And it is sufficient if the other structure predo-"minate. These rules Virgil hath quite neglect-"ed, except in those verses of his eighth eclogue, "which are called *versus intercalares*:

"Incipe Mænalios mecum, mea | tibia, versus,"

And

"Ducite ab urbe domum, mea carmina, | ducite "Daphnim.

"For a further account of this matter, the curious "reader is referred to the Memoires de L'Acad. "Tom. vi. p. 238."

AN ACCOUNT OF SOME MSS. AND CURIOUS EDITIONS OF THEOCRITUS.

It may be asked, why I have not acted the part of a verbal critic in this performance? My reason was, that far more able men had considered Theocritus in that light. The late Mr. D'Orville, the author of the Critica Vannus, and Sicula, during his travels in Italy and Sicily, collated upwards of forty MSS. of Theocritus; his collation is now at Amsterdam. Mr. St. Amand, a few years ago, left to the University of Oxford, a large collection of collations, which Mr. Thomas Warton, who has prepared a noble edition of this author, has the use of. Mr. Taylor, late Greek professor of Cambridge, left likewise a Theocritus almost ready for the press. In the public library at Cambridge, there are some notes on Theocritus by Isaac Casaubon, written in the margin of Henry Stephens's Poetæ Græci; likewise manuscript notes in the edition of Commelin, printed in quarto; and also some notes by Thomas Stanley, the author of the Lives of the Philosophers: all these, and likewise a MS. Theocritus are in the public library at Cambridge. There is also a MS. of the first eight Idylliums in Emanuel College library. Mr. Hoblyn, late member for the city of Bristol, left behind him many notes and observations for an edition of Theocritus. Besides these, there are great materials for illustrating this author in private libraries.

As to the editions of Theocritus, which are very numerous, I think proper to say something; as we have but an imperfect account of them in Fabricius and Maittaire. Reiskie, in the preface to his late edition of this Greek poet, has given us an account of the various editions, but this account is far from being satisfactory. The first edition of Theocritus was printed at Milan in the year 1493, the letter is the same with the Isocrates of the same place and date. See the catalogue of the Leyden library, page 251. The second edition was printed by Aldus Manutius at Venice, in the year 1495; this is the only edition Aldus ever printed; there are some leaves cancelled in it, which is the reason why Reiske and others have imagined that Aldus printed two editions. Mr. Maittaire, in the first volume of his *Annales Typographici* page 244, has given us an account of these differences. In the year 1515, we have an edition by Philip Junta at Florence; and another in 1516, by Zachary Caliergus at Rome.

These are all the editions that came out before the year 1520. Besides these, and those mentioned by Reiske, which I have seen, there are some curious editions, viz. that of Florence by Benedict Junta, printed in the year 1540; the Basil edition of 1558, and the Paris edition of 1627, printed by John Libert. I have purposely omitted mentioning the others, as they are already taken notice of, either by Fabricius, Maittaire, or Reiske.

I cannot conclude this preface without paying my acknowledgments to those gentlemen who have kindly assisted me in this undertaking. Dr. Pearce, the present Lord Bishop of Rochester, many years eminent for his critical disquisitions, has, in the friendliness of conversation, furnished me with several useful rules for conducting my translation. Dr. Jortin has favoured me with a concise, but full account of the old bucolic measure, and a few valuable notes. The celebrated Mr. Samuel Johnson has corrected part of this work, and furnished me

with ſome judicious remarks. In a ſhort converſation with the ingenious Mr. Joſeph Warton, I gathered ſeveral obſervations, particularly in regard to the ſuperiority of Theocritus to Virgil in paſtoral, which are interſperſed among the notes. The learned Dr. Plumptre, Archdeacon of Ely, has, with great candour and accuracy, done me the honour to peruſe and amend every ſheet as it came from the preſs. Dr. Aſkew, ſo eminently diſtinguiſhed in his profeſſion, as well as for a large and moſt curious collection of the claſſics, and an intimate knowledge of them, with the ſincerity of an old acquaintance and a friend, gave me many various readings, ſhowed me every valuable edition of Theocritus that is extant, and furniſhed me with the account of ſome MSS. and ſcarce editions of my author, which were never taken notice of by former editors. Swithin Adee, M. D. and the Rev. Mr. John Duncombe of Canterbury, have, at my own requeſt, ſent me ſeveral notes and ſtrictures upon my performance, which are candid and valuable. Mr. Burnaby Greene, author of Juvenal paraphraſtically imitated, very obligingly ſupplied the Eſſay on Paſtoral, and ſome ingenious obſervations: and Dr. William Watſon lent me his friendly aſſiſtance in the botanical part. I could mention other eminent names of gentlemen who have corrected and improved this work;

——————— Each finding, like a friend,
Something to blame, and ſomething to commend.

The liſt I have given, I am apprehenſive, will appear oſtentatious—however, I had rather be convicted of the foible of vanity, than thought guilty of the ſin of ingratitude.

SOME ACCOUNT OF THE

LIFE AND WRITINGS OF THEOCRITUS.

As the life of Theocritus has been ſeveral times written in Engliſh, I flattered myſelf that I might ſingle out the account I liked beſt, and ſave myſelf the trouble of compiling it afreſh. I depended a good deal upon Kennet, but when I came to peruſe his account of Theocritus, I found it unſatisfactory, and no ways anſwerable to my purpoſe: he ſeems more ſolicitous, in an affected quaintneſs of ſtyle, to exhibit a diſplay of his own learning, than ſtudious, by the inveſtigation of truth, to give information to his readers: his thoughts lie looſe and unconnected, and therefore are generally tedious and perplexing.

The account of our author in the Biographical Dictionary, publiſhed in twelve volumes octavo, is nothing but a ſervile epitome of Kennet, and, where the conciſeneſs of it will allow, expreſſed in his very words. Thus diſſatisfied with the moderns, I had recourſe to the ancients: in the life generally prefixed to his works by Suidas, we are told, "That Theocritus was a Chian, a rhetorician: but that there was another Theocritus, "the ſon of Praxagoras and Philina, though ſome "ſay of Simichidas, a Syracuſan;" others ſay, "he "was born at Cos, but lived at Syracuſe;" now this was the caſe of Epicharmus, and might eaſily occaſion the miſtake. See the note on Epigram XVII.

In another Greek account in the front of his works, we are told, that "Theocritus the Bucolic "poet was born at Syracuſe, and that his father's "name was Simichidas." Gyraldus ſays, "ſome "have thought him of Cos, ſome of Chios." From ſuch a confuſed jumble of relations, what can with certainty be made out?

Then take him to develope if you can,
And hew the block off, and get out the man.

There are but few memorials left of this poet; thoſe that I produce I ſhall endeavour to eſtabliſh on good authority, and whenever an opportunity offers, which is but very reaſonable, will let him ſpeak for himſelf.

Theocritus was a Sicilian, as is evident from many teſtimonies. Virgil invokes the Sicilian muſes, becauſe Theocritus, whom he profeſſedly imitates, was of that country; *Sicilides Muſæ, paulo majora canamus*, Ecl. 4. 1. and, *Extremum hunc, Arethuſa, mihi concede laborem*, Ecl. 10. 1 He is called a Sicilian poet by the emperor Julian, in one of his epiſtles; and by Terentianus Maurus, in his book de Metris, ver. 407, *Siculæ telluris alumnus*: by Manilius, book 2. ver. 40. he is ſaid to be *Siculâ tellure creatus*, which fixes his birth on that iſland: and that he was born at Syracuſe, Virgil ſeems to intimate, when he ſays, *Prima Syracoſio dignata eſt ludere verſu*, Ecl. 6. 1. But in one of his own epigrams, which generally ſtands in the front of his works, probably according to his own original intention, he aſſures us he was born at Syracuſe, and gives us the names of his parents:

Αλλος ὁ Χῖος· ἐγω δὲ Θεοκριτος ὁς ταδε γραψα,
Εις απο τῶν πολλῶν εἰμι Συρακοσιων,
Υιος Πραξαγαρεω, περικλειτης τε Φιλινης.
Μῶσαν δ' οὐνεκεν ἀποτ' ἐφελκυσαμεκν.

A Syracuſian born, no right I claim,
To Chios, and Theocritus my name:

Praxagoras' and fam'd Philina's ſon;
My laurels from unborrow'd verſe are won.

After this plain declaration, it is amazing that the old grammarians will not reſt ſatisfied, but endeavour to rob him both of his parents and his country. The chief view which the poet had in writing this epigram, though perhaps it may not appear at firſt ſight, ſeems to be this; he had a nameſake of Chios, a rhetorician, and pretender to poetry, who, according to Plutarch, ſuffered an ignominious death, for ſome crime committed againſt king Antigonus; and therefore Theocritus the poet, by this epigram, took all poſſible precaution to be diſtinguiſhed from his nameſake the rhetorician. "The other Theocritus," ſays he, "is "of Chios; I that am the author of theſe poems, am "a Syracuſian, the ſon of Praxagoras and the ce-"lebrated Philina: I never borrowed other peo-"ple's numbers." The laſt ſentence is an honeſt declaration, that the poet had not been a plagiary, like many of his predeceſſors and contemporaries.

Theocritus is ſaid to have been the ſcholar of Philetas, and Aſclepiades, or Sicelidas: Philetas was an elegiac poet of the iſland of Cos, had the honour to be preceptor to Ptolemy Philadelphus, and is celebrated by Ovid and Propertius: Sicelidas was a Samian, a writer of epigrams: he mentions both theſe with honour in his ſeventh Idyllium, ſee ver. 53.

As to the age in which he flouriſhed, it ſeems indiſputably to be aſcertained by two Idylliums that remain, one is addreſſed to Hiero king of Syracuſe, and the other to Ptolemy Philadelphus, the Egyptian monarch. Hiero began his reign, as Cauſabon aſſerts in his obſervations on Polybius, in the ſecond year of the 126th Olympiad, or about 275 years before Chriſt; and Ptolemy in the fourth year of the 123d Olympiad. Though the exploits of Hiero are recorded greatly to his advantage by Polybius, in the firſt book of his hiſtory; though he had many virtues, had frequently ſignalized his courage and conduct, and diſtinguiſhed himſelf by ſeveral atchievements in war; yet he ſeems, or at leaſt in the early part of his reign, to have expreſſed no great affection for learning or men of letters: and this is ſuppoſed to have given occaſion to the 16th Idyllium, inſcribed with the name of Hiero; where the poet aſſerts the dignity of his profeſſion, complains that it met with neither favour nor protection, and in a very artful manner, touches upon ſome of the virtues of this prince, and inſinuates what an illuſtrious figure he would have made in poetry, had he been as noble a patron, as he was an argument for the muſes.

His not meeting with the encouragement he expected in his own country, was in all probability the reaſon that induced Theocritus to leave Syracuſe for the more friendly climate of Alexandria, where Ptolemy Philadelphus then reigned in unrivalled ſplendour, the great encourager of arts and ſciences, and the patron of learned men. In his voyage to Egypt he touched at Cos, an iſland in the Archipelago not far from Rhodes, where he was honourably entertained by Phraſidamus and Arigenes, who invited him into the country to celebrate the feſtival of Ceres, as appears by the ſeventh idyllium.

We have all the reaſon in the world to imagine that he met with a more favourable reception at Alexandria, than he had experienced at Syracuſe, from his encomium on Ptolemy, contained in the 17th Idyllium, where he riſes above his paſtoral ſtyle, and ſhows, that he could, upon occaſion (as Virgil did afterwards), exalt his Sicilian muſe to a ſublimer ſtrain, *paula majora*: he derives the race of Ptolemy from Hercules, he enumerates his many cities, he deſcribes his great power and immenſe riches, but above all, he commemorates his royal munificence to the ſons of the muſes. Towards the concluſion of the 14th Idyllium, there is a ſhort, but very noble panegyric on Ptolemy: in the 15th Idyllium, he celebrates Berenice, the mother, and Arſinoe, the wife of Ptolemy.

I do not recollect any more memorials of this poet's life, which can be gathered from his works, except his friendſhip with Aratus, the famous author of the Phenomena; to whom he addreſſes his ſixth Idyllium, and whoſe amours he deſcribes in the ſeventh.

There is one circumſtance more in regard to Theocritus, which is ſo improbable, that I ſhould not have thought it worth while to have troubled the reader with it, if it had not been mentioned by all his biographers, viz. that he lies under the ſuſpicion of having ſuffered an ignominious death: this takes its riſe from a diſtich of Ovid in his Ibis.

Utque Syracoſio præſtrictâ fauce poetæ,
Sic animæ laqueo ſit via clauſa tuæ.

But it does not appear, that by the Syracuſan poet Ovid means Theocritus; more probably, as ſome commentators on the paſſage have ſuppoſed, Empedocles, who was a poet and philoſopher of Sicily, is the perſon pointed at: others think that Ovid, by a ſmall miſtake or ſlip of his memory, might confound Theocritus the rhetorician of Chios, who was executed by order of King Antigonus, with Theocritus the poet of Syracuſe; and the epigram quoted above very ſtrongly indicates how apprehenſive our poet was of being confounded with that perſon. it ſeems, indeed, as I hinted before, compoſed on purpoſe to manifeſt the diſtinction.

After this ſhort account of our author, it will be proper to ſay ſomething of his works; for to write the life of a poet, without ſpeaking of his compoſitions, would be as abſurd as to pretend to publiſh the memoirs of a hero, and omit the relation of his moſt material exploits.

All the writings of Theocritus that now remain are his Idylliums and Epigrams; in regard to the word Idylliums, D. Heinſius tells us, that the grammarians termed all thoſe ſmaller compoſitions Εἴδη (a ſpecies of poetry), which could not be defined from their ſubjects, which are various: thus the Sylvæ of Statius, had they been written in Greek, would have been called Εἴδη and Εἰδύλλια; even the Roman poets make uſe of this term; thus Auſonius ſtyles one of his books of poems ex

various ſubjects Edyllia: this ancient title, then, may ſerve to expreſs the ſmallneſs and variety of their natures; they would now, perhaps, be called Poems on Several Occaſions. Though in deference to ſo great an authority, I ſhall take the liberty to make a conjecture: Heinſius tells us, that originally there were different titles or inſcriptions prefixed to the poems of Theocritus; firſt of all his Bucolics were ſeparated and diſtinguiſhed by the title of Επη Βουκολικα, and were called by the grammarians Ειδυλλια Βουκολικα; but might it not at firſt have been written Επυλλια? which ſignifies Poems or Verſes, and by an eaſy miſtake of the tranſcriber altered into Ειδυλλια? this reading delivers us at once from the embarraſſment attending the derivation of the word Idylliums, and Επυλλια, the ſame as *Verſiculi*, very naturally flows from the word Επη, the plural of Επος, *Carmen*; thus we have Επη χρυσεια: it is to be obſerved, that Ariſtophanes uſes the word three times, ſee his Ranæ, ver. 973, Acharnenſes, ver. 397; and in his Pax, ver. 531 he has επυλλιων Ευριπιδου, *Verſiculorum Euripidis*: this, however, is only conjecture. Under the ſecond title, every poem that was aſcribed to Theocritus, though the character and argument were very different, was inſerted. Under the third were contained a collection of bucolic poems, whether by Theocritus, Moſchus, Bion, or others, and the name of Theocritus prefixed to the whole; on which occaſion there is an Epigram in the Anthologia, aſcribed to Artemidorus:

Βουκολικαι Μουσαι σποραδην ποκα, νυν δ' αμα πασαι
Εντι μιας μανδρας, εντι μιας αγελας.

Wild rov'd the paſtoral Muſes o'er the plains,
But now one fold the ſingle flock contains.

Beſides the Idylliums that we now have, Theocritus is ſaid by Suidas to have written Ηρωιδες, Ελπιδες, Υμνους, Ηρωας, Επικηδεια μιλη, Ελεγειας και Ιαμβους: that is, Prœtides, Hopes, Hymns, Heroines, Dirges, Elegies, and Iambics: the Prœtides were the daughters of Proteus, king of the Argives, who preferring themſelves to Juno, went mad, and imagined themſelves turned into crows, but were cured by Melampus; the Idyllium in praiſe of Caſtor and Pollux is ſuppoſed to be one of the hymns, and there are five verſes remaining of a poem, in praiſe of Berenice, which may be claſſed among the Heroines.

It is to be obſerved, that Theocritus generally wrote in the modern Doric, ſometimes indeed, he uſed the Ionic; the Doric dialect was of two ſorts, the old and new; the old ſounded harſh and rough, but the new was much ſofter and ſmoother; this, as Mr Pope juſtly obſerves, in the time of Theocritus had its beauty and propriety, was uſed in part of Greece, and frequent in the mouths of many of the greateſt perſons. It has been thought by ſome that the Dorian phraſe in which he wrote, has a great ſhare in his honours: but excluſive of this advantage, he can produce other ample claims to ſecure his rural crown from the boldeſt competitor. A proof of this, I think, will appear from this circumſtance; that Virgil, who is the great rival of the Sicilian, has few images in his Eclogues but what are borrowed from Theocritus; nay, he not only continually imitates, but frequently tranſlates ſeveral lines together, and often in theſe very paſſages falls ſhort of his maſter, as will appear in the notes.

Though Theocritus is generally eſteemed only a paſtoral poet, yet he is manifeſtly robbed of a great part of his fame, if his other pieces have not their proper laurels. At the ſame time his Paſtorals are, without doubt, to be conſidered as the foundation of his credit; upon this claim, he will be admitted for the happy finiſher, as well as the inventor of his art; and will be acknowledged to have excelled all his imitators, as much as originals uſually do their copies. He has the ſame advantage in bucolic, as Homer had in epic poetry, which is to make the critics turn his practice into eternal rules and to meaſure nature herſelf by his accompliſhed model: therefore, as to enumerate the glories of heroic poetry, is the ſame thing as to ſum up the praiſes of Homer, ſo to exhibit the beauties of paſtoral verſe, is only an indirect way of making panegyrics on Theocritus. Indeed, the Sicilian has in this reſpect been ſomewhat more fortunate than Homer, as Virgil's Eclogues are reckoned more unequal imitations of his Idylliums, than in the Æneis of the Iliad.

I think I cannot conclude this account of Theocritus with more propriety than by collecting the ſentiments, not only of the ancients, but likewiſe of the moderns, in regard to the character of our author. Longinus ſays, (ſee the motto) "Theocritus has ſhown the happieſt vein imaginable "for paſtorals, excepting thoſe in which he has "deviated from the country:" or perhaps it may more properly be rendered, as Fabricius underſtands it, "excepting in thoſe few pieces that are "of another argument." Quintilian ſays, "Admirabilis in ſuo genere Theocritus, ſed muſa illa "ruſtica et paſtoralis non forum modo verum "etiam urbem reformidat:" "Theocritus is admirable in his way, but his ruſtic and paſtoral "muſe is not only afraid of appearing in the forum, but even in the city:" by which he means, that the language and thoughts of Theocritus's ſhepherds ought not to be imitated in public ſpeaking, nor in polite compoſition; yet, for all this "he was admirable in his way." Manlius in the ſecond book of his Aſtronomicon gives a juſt character of our poet *:

Quinetiam pecorum ritus, et Pana ſonantem
In calamos, Siculâ memorat tellure creatus:
Nec ſylvis ſylveſtre canit perque horrida motus
Rura ferit dulces: muſamque inducit in auras.

The ſweet Theocritus, with ſofteſt ſtrains,
Makes piping Pan delight Sicilian ſwains;
Through his ſmooth reed no ruſtic numbers move,
But all is tenderneſs, and all is love;

* *Inſtead of* pecorum ritus, *Dr. Bently reads* ritus paſtorum.

As if the muſes ſat in every vale,
Inſpir'd the ſong, and told the melting tale.
CREECH.

One would imagine theſe authorities were ſufficient to eſtabliſh, or at leaſt to fix the reputation of Theocritus, on a very ſure footing; and yet Dr. John Martyn, who has tranſlated Virgil's Eclogues and Georgics into proſe, with many learned notes, ſeems to be of a different perſuaſion. In the latter end of his preface to the Eclogues, after obſerving that Virgil, in almoſt every Eclogue, entertains the reader with a rural ſcene, a ſort of fine landſcape, and enumerating theſe ſcenes, he ſays, "and having now ſeen this excellence in Virgil, "we may venture to affirm, that there is ſome-"thing more required in a good paſtoral, than "the affectation of uſing coarſe, rude, or obſolete "expreſſions; or a mere nothingneſs, without "either thought or deſign, under a falſe notion of "rural ſimplicity." That he here means Theocritus, or elſe he means nothing, is plain from his mention of him immediately after: in regard to the charge of his "affectedly uſing coarſe, rude, "and obſolete expreſſions," I imagine he alludes to the fifth Idyllium, which indeed muſt be allowed to be too ruſtic and abuſive: but we muſt remember that Theocritus intended this poem as a ſpecimen of the original old bucolic Idyllium, which was very rude, and often obſcene; as the learned Heinſius has more than once obſerved; his words are, "multum a reliquis differunt quæ "αἰτωλικὰ ſunt, in quibus major eſt incivili-"tas; ut in quinto apparet, quod Idyllium ſingu-"lare eſt, et in ſuo genere exemplum, antiquæ "nimirum βουκολιάς; ubi nunquam fere ſine ob-"ſceno ſenſu rixatur caprarius." And in another place: "versæ βουκολιάς exemplum in quinto The-"ocriti, in Virgilii tertio habemus." Therefore, inſtead of condemning Theocritus, we ought to think ourſelves much obliged to him for leaving us one example of the ancient ruſtic bucolic; Virgil certainly thought ſo, otherwiſe he would not have imitated that very piece. As to the ſcenery with which the Eclogues are embelliſhed, all the Idylliums, or at leaſt the greateſt part of them, are ornamented in the ſame manner, which will appear ſo evident to every reader, that it would be impertinent to point it out. As to the other part of the Doctor's obſervation, "a mere no-"thingneſs, without thought or deſign," it is ſuch a deſpicable falſity, that it is not worth notice.

Throughout his whole preface and life of Virgil, the Doctor is very ſingular in giving Virgil the preference to Theocritus upon every occaſion: particularly he declaims againſt the cup in the firſt Idyllium, ſays the deſcription of it is long and tedious, and far exceeded by Virgil in the third Eclogue; notwithſtanding the Doctor's aſſertion, ſome gentlemen, whoſe critical diſquiſitions have deſervedly announced them the beſt judges of polite literature, think that the images in Theocritus' cup, viz. "the beautiful woman and two "lovers, the ſtriking figure of the fiſherman labouring to throw his net, the rock, the vine-"yard, the foxes, and the boy ſitting careleſsly "and framing traps for graſhoppers," are charming embelliſhments, and far more paſtoral and natural than Virgil's "Orpheaque in medio poſuit "ſylvaſque ſequentes," "Orpheus in the middle, "and the woods following him." In regard to the length of the deſcription, it is obſerved, that the cup of Theocritus was very large and capacious; he calls it βαθὺ κισσυβιον, "a deep paſtoral "cup;" and Cauſabon ſays it was "ampliſſimi "vaſis paſtoritii genus; capacitatem ejus licet col-"ligere ex cælaturæ multiplici argumento:" and I am informed, that when Mr. Thomas Warton's long-expected edition of Theocritus appears, it will be evidently proved, perhaps, from ſome old ſcholia not yet printed, that this κισσυβιον was of an extraordinary ſize, very deep and wide, and therefore capable of being adorned with ſuch a variety of figures in the ſculpture; it was not intended for the uſe of drinking out of, or mixing any paſtoral beverage, but chiefly for ornament: and therefore the veſſel being ſo capacious and remarkable, the poet will be cleared from the charge of being thought tedious in the deſcription of it.

In the preface above mentioned, the Doctor ſays, "It is not a little ſurpriſing, that many of our "modern poets and critics ſhould be of opinion, "that the ruſticity of Theocritus is to be imi-"tated rather than the rural delicacy of Virgil." How can it be thought ſurpriſing that Theocritus ſhould be imitated rather than Virgil? the reaſon is manifeſt, becauſe the generality of poets and critics prefer the Sicilian far before the Roman, as a paſtoral writer. I ſhould not have troubled myſelf about Dr. Martyn's opinion, but only as it is prefixed to Virgil, I thought perhaps it might poſſibly miſlead the unwary young ſcholar into a wrong judgment, and induce him to prefer Virgil, without firſt conſidering the more original beauties of Theocritus. As a contraſt to the Doctor's ſtrange and ſingular deciſion, who acknowledges himſelf to be no poet, and therefore cannot be deemed a competent judge of poetical writings, I ſhall conclude this account with the ſentiments of ſeveral of the fineſt writers, both critics and poets, of the laſt and preſent age, in regard to the matter in queſtion: two of them are tranſlators of Virgil, and therefore cannot be ſuppoſed to be partial to Theocritus.

I ſhall begin with Mr. Dryden: "That which "diſtinguiſhes Theocritus," ſays he, "from all "other poets, both Greek and Latin, and which "raiſes him even above Virgil in his Eclogues, "is the inimitable tenderneſs of his paſſions, and "the natural expreſſion of them in words ſo be-"coming of a paſtoral. A ſimplicity ſhines "throughout all he writes. He ſhows his art and "learning by diſguiſing both. His ſhepherds "never riſe above their country education in their "complaints of love. There is the ſame differ-"ence between him and Virgil, as there is be-"tween Taſſo's Aminta, and the Paſtor Fido of "Guarini. Virgil's ſhepherds are too well read "in the philoſophy of Epicurus and Plato; and "Guarini's ſeem to have been bred in courts.

"

" But Theocritus and Taſſo have taken theirs " from cottages and plains. It was ſaid of Taſſo, " in relation to his ſimilitudes, that he never de- " parted from the woods, that is, all his com- " pariſons were taken from the country: the " ſame may be ſaid of Theocritus. He is ſofter " than Ovid; he touches the paſſions more de- " licately, and performs all this out of his own " fund, without diving into the arts and ſciences " for a ſupply. Even his Doric dialect has an in- " comparable ſweetneſs in its clowniſhneſs, like a " fair ſhepherdeſs, in her country ruſſet, talking " in a Yorkſhire tone. This was impoſſible for " Virgil to imitate, becauſe the ſeverity of the " Roman language denied him that advantage. " Spenſer has endeavoured it in his Shepherd's " Calendar, but it can never ſucceed in Engliſh."

Thus far Mr. Dryden in the preface to his tranſlations; in another place he ſays, " Theocritus " may juſtly be preferred as the original, with- " out injury to Virgil, who modeſtly contents " himſelf with the ſecond place, and glories only " in being the firſt who tranſplanted paſtoral in- " to his own country."

Dr. Felton obſerves, " The Idylliums of Theo- " critus have ſomething ſo inimitably ſweet in " the verſe and thoughts, ſuch a native ſimplicity, " and are ſo genuine, ſo natural a reſult of the " rural life, that I muſt in my judgment allow " him the honour of the paſtoral."

Mr Blackwell upon the claſſics, ſays, " Theo- " critus is another bright inſtance of the happy " abilities and various accompliſhments of the an- " cients. He has writ in ſeveral ſorts of poetry, " and ſucceeded in them all. It ſeems unne- " ceſſary to praiſe the native ſimplicity and eaſy " freedom of his paſtorals, when Virgil himſelf " ſometimes invokes the muſe of Syracuſe; " when he imitates him through all his own " poems of that kind, and in ſeveral paſſages " tranſlates him. In many of his other poems " he ſhows ſuch ſtrength of reaſon and polite- " neſs, as would qualify him to plead among the " orators, and make him acceptable in the courts " of princes. In his ſmaller poems of Cupid " ſtung, Adonis killed by the boar, and others, " you have the vigour and delicacy of Ana- " creon; in his Hylas, and combat of Pollux " and Amycus he is much more pathetical, " clear, and pleaſant, than Apollonius on the " ſame, or any other ſubject. In his converſa- " tion of Alcmena and Tireſias, of Hercules " and the old ſervant of Augeas, in Cyniſca " and Thyonichus, and the women going to the " ceremonies of Adonis, there is all the eaſineſs " and engaging familiarity of humour and dia- " logue which reign in the Odyſſey; and in " Hercules deſtroying the lion of Nemæa, the " ſpirit and majeſty of the Iliad. The panegy- " ric upon King Ptolemy is juſtly eſteemed an " original and model of perfection in that way " of writing. Both in that excellent poem, and " the noble hymn upon Caſtor and Pollux, he " has praiſed his gods and his hero with that de- " licacy and dexterity of addreſs, with thoſe " ſublime and graceful expreſſions of devotion " and reſpect, that in politeneſs, ſmoothneſs of " turn, and refined art of praiſing without of- " fence, or appearance of flattery, he has e- " qualled Callimachus; and, in loftineſs and " flight of thought, ſcarce yields to Pindar or " Homer."

The author of the Guardian, No. 28. ob- ſerves, " The ſoftneſs of the Doric dialect, which " Theocritus is ſaid to have improved beyond " any who came before him, is what the an- " cient Roman writers owned their language " could not approach. But, beſides this beauty, " he ſeems to me to have a ſoul more ſoftly " and tenderly inclined to this way of writing " than Virgil, whoſe genius led him naturally to " ſublimity."

Mr. Pope briefly remarks, that " Theocritus " excels all others in nature and ſimplicity: that " the ſubjects of his Idylliums are purely paſ- " toral: that other paſtoral writers have learned " their excellencies from him; and that his dia- " lect alone has a ſecret charm in it, which no " other could ever attain."

Lord Lyttleton beautifully ſays,

From love Theocritus, on Enna's plains.
Learn'd the wild ſweetneſs of his Doric ſtrains.
Ecl. 2.

Mr. Warton, the worthy maſter of Wincheſ- ter ſchool, gives us his ſentiments on this ſub- ject in his prefatory dedication of Virgil to Lord Lyttleton: " There are few images and ſenti- " ments in the Eclogues of Virgil, but what " are drawn from the Idylliums of Theocritus: " in whom there is a rural, romantic wildneſs " of thought, heightened by the Doric dialect; " with ſuch lively pictures of the paſſions, and " of ſimple unadorned nature, as are infinitely " pleaſing to ſuch lovers and judges of true " poetry as yourſelf. Theocritus is indeed the " great ſtorehouſe of paſtoral deſcription; and " every ſucceeding painter of rural beauty (ex- " cept Thomſon in his Seaſons) hath copied " his images from him, without ever looking " abroad upon the face of nature themſelves." To the ſame purpoſe, in his Diſſertation on Paſ- toral Poetry, he ſays, " If I might venture to " ſpeak of the merits of the ſeveral paſtoral " writers, I would ſay, that in Theocritus we " are charmed with a certain ſweetneſs, a ro- " mantic ruſticity and wildneſs, heightened by " the Doric dialect, that are almoſt inimitable. " Several of his pieces indicate a genius of a " higher claſs, far ſuperior to paſtoral, and e- " qual to the ſublimeſt ſpecies of poetry: ſuch " are particularly his panegyric on Ptolemy, " the fight between Amycus and Pollux, the " Epithalamium of Helen, the young Hercules, " the grief of Hercules for Hylas, the death of " Pentheus, and the killing of the Nemæan " lion."

AN ESSAY ON PASTORAL POETRY.

BY EDWARD BURNBAY GREEN, ESQ.

Gaudentes rure Camœnæ. Hor.

The precise time when the paſtoral muſe made her appearance in the world, hiſtory ſeems to have left uncertain. Conjectures have been hazarded, and * preſumptions multiplied, yet her origin is ſtill unrivalled; and the leſs inquiſitive genius ſits down contented with aſcertaining her firſt perfection in the writings of Theocritus.

Indeed reſearches of this nature are rather curious, than intereſting; for though we may perhaps meet with ſome plauſible accounts, we can trace none that carry conviction. The † very few writers, handed down to us from Greece and Rome in that ſpecies of compoſition, are but inſufficient guides to the riſe of the art itſelf.

As it is more entertaining, it is likewiſe more to the honour of paſtoral to obſerve, that it muſt neceſſarily have exiſted in the earlier ages of the world; exiſted, not indeed in the ſet form and elegance of numbers, but in the genuine ſentiments of the heart, which nature alone inſpired.

For the mind being on all ſides ſurrounded with rural objects, thoſe objects would not fail to make an impreſſion; and whether the patriarchs of old, with our parents in Milton, piouſly broke out into the praiſe of their Creator, or reflected in ſilent admiration on the beauties of the earth, their hymns or their meditations muſt have been purely paſtoral.

It has been remarked by a laborious commentator on the Eclogues of Virgil, that the lives of our earlieſt forefathers were ſpent in huſbandry, and the feeding of cattle. And indeed it could not have been otherwiſe. At a period, when the numbers of mankind were comparatively inſignificant, and their thoughts engaged in procuring ſubſiſtence, while luxury and ambition were yet unknown, it is inconſiſtent to ſuppoſe, but that the ſons of earth were all in a manner the ſons of agriculture.

When the world, however, increaſed, and its inhabitants diſperſed into various regions; when ſocieties were formed, and laws eſtabliſhed; and when (the natural conſequence of ſuch expanſion) the plagues of war and contention aroſe, different orders and conditions were ſettled for the regulation of kingdoms, ruſtic awkwardneſs received the poliſh of civil life, and the ploughſhare was converted into inſtruments of deſtruction. Thus, by degrees, from an honourable ſituation, huſbandry became the employment of thoſe alone who had the leaſt ambition and the greateſt probity

But in thoſe climates, whither emigrations being leſs faſhionable, the people retained their primitive ſimplicity, it is no wonder, if in proceſs of time conſiderable advance was made, and regularity introduced into paſtoral reflections, that the dictates of unrefined nature were improved by the harmony of numbers.

We may accordingly obſerve, that in the countries which ſuffered the leaſt variation from their original form, paſtoral was moſt eſteemed; there the thoughts were ſtill allured, and the imagination feaſted with rural ſcenes unimproved, or more properly uncorrupted, for the cottage had not felt the infection of the court.

Arcadia, ſo uſually painted the flowery kingdom of romance, is more ingeniouſly accounted the land of paſtoral. Its inland ſituation, and the plenty of its paſture, with the * well-known characters of its inhabitants, conſpire to favour the title. That the ancient poets deſcribed this place as the ſeat of paſtoral, is evident, a ſhepherd †, peculiarly ſkilled in ſinging, being familiarly termed an Arcadian. There appears, however, in ma-

* *See what may be called the Prolegomena to the* Θεοκριτε ενρισκομενα cum Græcis Scholiis, *printed at London* 1743, περι τε και της ενρεσεως των βυκολικων, *where the reputed invention of paſtoral poetry has neither the air of probability nor ingenuity.*

† *Moſchus and Bion, with Theocritus among the Greeks, and Virgil among the Romans, are the only ſtandard writers of paſtoral, mentioned by Warton in the diſſertation prefixed to his edition of Virgil; that editor, with the critic ‡ Rapin, ſeeming to explode all other ancient authors in that branch of poetry.*

‡ *Rapin's Critical Works, vol. ii. remarks on paſtoral poetry.*

* *Dr. Martyn, in his preface to the eclogues of Virgil, calls Arcadia "mountainous, and almoſt inacceſſible;" another reaſon in ſupport of the paſtoral diſpoſition of its people.*

† *Virgil, in his 7th eclogue, ſays of two ſhepherds, that they were "Arcades ambo;" upon which Servius remarks, that they were not Arcadians, but ſo ſkilful in ſinging, that they might be eſteemed Arcadians.*

ny traditions of the country, such a strong mixture of the fabulous, that we may well suspect them to be the product rather of fancy than of truth.

Nor less fantastic are the descriptions of the golden age; the ideal manners of which are esteemed, by the more refined critic, the genuine source of pastoral.

To a taste so delicate, the least appearance of the rustic is disgusting. A becoming, indeed an elegant simplicity, and the purest innocence, must compose the character of the shepherd. No passions, but of the softest and most engaging kind, are to be introduced: in short, the swain is to be what no swain ever was.

In these elevated notions of humble pastoral, reality is sacrificed to the phantoms of the imagination: the more characteristic strokes in the picture of rural life being utterly erazed, the bright colours of unspotted integrity are indeed more pleasing to the eye, but in a piece where nature should predominate, are more properly blended with the shade of frailty. For if mankind are to be represented entirely free from faults, we cannot look for their existence later than the fall.

On this fastidious principle, it is esteemed necessary that rural happiness should be described perfect and uninterrupted. The life of the shepherd is to be one perpetual spring, without a cloud to disturb its calmness. The vicissitudes, indeed, of love, which gives birth to more than half our modern pastorals, are admitted into the piece; for it seems to be with some as essential for a shepherd to be in love, as to have been born.

Yet even here the representation is confined The swain, after whining and crying (as Achilles did to his good-mother Thetis), calls on the trees and bushes, and every thing in nature, to be witnesses of his unhappiness; but, after all, the performance, like our novels and romances, those standards of propriety, must have a fortunate conclusion *.

But whatever fond and amusing prospects the country naturally opens to the mind, experience teaches us, that even there vexations will arise: the seasons of quiet and uneasiness succeed as familiarly as summer and winter; groves and lawns, and purling streams, sound very prettily in description, chiefly when flowing through the numbers or some under-aged amorato; but reason cannot set her seal to the luxuriancy of this Mahometan paradise.

From sentiments so extravagantly refined, let us turn to those of a more sordid complexion. As the former satiate the judicious reader with beds of roses, the latter disgust him with the filthiness of a dunghill. With critics of this cast, the manners of the mere peasant are the sole foundation of pastoral; even less rustic and homely appellations are banished from the characters; and the Melibœus, or Neæra of Virgil, are so much too courtly, that in their place are to be substituted the Αιτολος and Βουκολιασκος of Theocritus, and the Colin Clout or Hobbinol of Spenser

The Doric dialect, which transfuses such a natural gracefulness over the idylliums of the Grecian, has been a stumbling-block to these lovers of inelegance. There is a rustic propriety in the language of the dialect, which was familiar to the cottagar in the age of Theocritus: but it must be remembered, that his pastorals contain likewise a delicacy of sentiment which may well be presumed to have attracted the attention of † Ptolemy, whose polished court was the asylum of genius.

But though it should be allowed that pastoral ought strictly to be limited to the actions of the peasant, it is not solely intended for his perusal. The critic, as he cannot on the one hand permit nature to be excluded, cannot relish on the other her being exposed in disgraceful colours.

There are in almost every situation some circumstances over which we should draw the veil, for all is not to be painted with a close exactness. Coarseness of sentiment, and indelicacy of expression, are an offence to decorum, and give modesty the blush. Writings of such illiberal tendency counteract the best and principal end of composition; they hold up the mirror to vice ‡ and immorality, and sacrifice virtue to contempt.

To those who live in our meridian of more refined simplicity, pastoral appears most properly in the dress of rural elegance. Something is indulged to the character of the shepherd, and something to the genius of the writer. They who should place the former on the toilette, would betray an absurdity which would no less extend to the latter, whose thoughts flowed in the rude channel of uninformed rusticity.

The country is the scene in which pastoral is naturally laid; but various may be the subjects of this little drama. The spirit of the poet would be wretchedly cramped, if never permitted to step aside. An insipid sameness runs through the pieces ‡, founded on the impropriety of this indulgence; and most of our later pastorals are in this respect but unmeaning paraphrases of earlier authors.

Were we to attempt an historical epitome of pastoral composition, we might place Theocritus in its dawn, in that earlier age when rural simpli-

---

* *It has indeed a tendency altogether immoral to represent with Theocritus a disappointed lover hanging himself. The present mode of indifference to these concerns, is more eligible, and on the whole may be thought more natural. Love-sorrows are very rarely fatal.*

* *Ptolemy Philadelphus, king of Egypt, to make amends for many atrocious crimes, was remarkable for his singular regard to the welfare of his subjects, and was a distinguished encourager of learned men. See Anc. Univ. Hist. vol. 9. p. 386. note T.*

† *On this principle, it were to be wished that the subject of Virgil's second eclogue were not greatly liable to exception; though the morals of the poet should not be personally impeached, we must lament that he has varnished in his Alexis the depravity of his times. Several representations in Theocritus are glaringly obscene.*

‡ *Modern eclogues, from this reason, abound with repetitions of amorous scenes, or of swains piping for a reward; not to mention other subjects of a like intesting nature, which from constant use are worn to tatters.*

city was cultivated and revered. Though we are sometimes struck with the rays of his genius breaking out into more exalted descriptions, pastoral appears to be his favourite province *.

Considering him as a writer who drew his sentiments from the principles of nature, we may rather admire that his Idylliums are so engaging, than cavil at his blemishes; we may reflect upon Theocritus as the hive whence the most established writers of Eclogues have derived their sweets, or as a diamond, whose intrinsic worth has received a lustre from the refinement of succeeding times.

There is a very considerable gap in the history of pastoral, between the age of Theocritus and Virgil, who was reserved for the noon of its perfection. It would scarcely at first sight appear, that the period when civil war desolated the provinces, and spread all its horrors over the neighbourhood of Rome, should tend to the improvement of the pastoral muse, whose spirit it was likely to have totally destroyed. Yet to this seemingly unfavourable situation, we owe the most pleasing and interesting bucolis of Virgil, who has made the history of his country subservient to the efforts of his genius †.

In those several pieces to which the distresses of his times, or other political considerations gave rise, he seems more elaborately to have exercised the faculty of invention. But where ‡ genuine nature was to be represented, he borrowed largely from Theocritus: many of his similes, sentiments, and descriptions, being literal translations from his Grecian master.

Even in this less original task, the merits of the Roman are conspicuous; he has separated the ore from the dross, and transplanted those flowers alone which could add a fragrance to his work.

On the whole, the pastorals of Virgil are most agreeably conducted; they are not set forth in jewels, or arrayed in silks, nor sordidly dressed in rags. In the "paula majora" of his muse, the poet rarely loses sight of the shepherd; and we may style him the refined Theocritus of an Augustan age.

From this elegant era, when the language of the country and court was purity itself, let us pass over to the days of our excellent Spenser, when the conversation of the latter had just emerged from rusticity.

The genius of Spenser was formed for poetry. The rich luxuriance of fancy which shines through the Faery Queen, surpasses the sublime of antiquity. Such bold conceptions little speak a writer qualified for pastoral. The fire of imagination, which strikes us in more elevated compositions, must in this be suspended; for nature is most advantageously shown, when she seems to borrow the least from art.

Our author was too great to rise by imitation. Though he had both Theocritus and Virgil for his models, his Shepherd's Calendar is altogether original. The dialect of his times is as happily adapted to rustic life, as the Doric of the former, and the easy flow of his descriptions, with the natural variety of his landscapes, rivals the poetic excellence of the latter.

Proverbial sayings, not too closely crowded, add to the simplicity of pastoral; Spenser is fortunate in such applications; but I own myself most peculiarly attracted with his short lessons of morality: they add a pleasing innocence to the character of the shepherd, and reflect a lustre on the poet.

Yet amidst this superior merit, it must be observed, that a masterly writer of our own days has censured the dialogue of Spenser as affectedly barbarous, and the reflections of his peasants as too exalted.

It is necessary, however, to premise, that the criticism of this author is confined to the September of the Shepherd's Calendar; an eclogue which is indeed conveyed in a dialect singularly rustic; and the subject being the depravity of ecclesiastical manners in popish countries, the sordid language, under which the satire is couched, gives the greater offence to the critic; who concludes with this exclamation: "Surely at the same time that a shepherd learns theology, he may gain some acquaintance with his native language!"

The more ancient dialect seems here to have been selected, as a disguise to the real purport or characters of the piece. The reign of Mary, when England was under the bondage of an arbitrary religion, and oppressed by foreign counsels, may be esteemed the period of the Pastoral. The violence, which had been so barbarously exerted throughout the country at that baleful season, was too recent to have been forgotten; and the * Shepherd is very naturally described as having fled from a persecution, the censure of which was a compliment to the principles of Elizabeth.

A rural metaphor is manifestly sustained through the performance, as if to obviate the inconsistency, which is alleged. So far from discussing knotty points of theological learning, the province of the peasant is closely preserved; unless it should be insisted, that nothing relative to religion ought to concern a shepherd.

To descend from the writings of Spenser to the succeeding age, would be to point out the decline of the pastoral muse. Indeed, she has scarcely existed, but in the productions of † Philips and of

---

* *The praises of Ptolemy, the Hylas, and the Hiero, are by no means pastoral; but if Theocritus is entitled to a greater share of praise for any particular parts of those performances, it is where he deviates into pastoral representations.*

† *The first and ninth eclogues deserve attention on this account. To these we may also join the fourth and fifth.*

‡ *See the third, seventh, and eighth eclogues, where imitations from Theocritus abound.*

* *The late Romish brutality was at that time so interesting a topic, and so flattering to the crown, that Spenser has employed three eclogues on the subject.*

† *The pastorals of Gay seem to have been designed, as burlesque representations of scenes altogether rustic, and particularly as a ridicule of preceding authors, of*

Pope. Philips is ſo often on the whine, that we are apt to overlook his leſs exceptionable deſcriptions; he has injudiciouſly blended the poliſh of Virgil's language, with the ſimplicity of Spenſer's; and ſo great is his want of original matter, that he is at beſt to be regarded as a graceful copyiſt*.

whom many, it muſt be confeſſed, deſerved ſuch a treatment. I have, on this account, omitted his name as a paſtoral writer, though his genius ſufficiently qualified him for the taſk of eclogue.

* *The fifth paſtoral, which relates the conteſt of the Swain and Nightingale, is prettily turned on the whole; but the thought, like Philips's other more agreeable ones, is borrowed. The ſame may be remarked of the paſtorals of Pope.*

TRANS. II.

Pope has been ſo aſſiduous to refine his periods, that his ſpirit is greatly evaporated; and his paſtorals, excepting the Meſſiah, only merit our attention as the marks of early genius. Sweetneſs of verſification, and purity of expreſſion, may conſtitute the character of a poet; but courtlineſs is not the whole that is expected in a writer of eclogues.

That love of the country, which is inherent in the boſom of reflection, has occaſionally produced many later attempts on paſtoral, but the moſt ſucceſsful ones are fainter traces of rural life; the muſe has at laſt varied her form, and united the charms of elegance and nature in the Ballads of Shenſtone.

THEOCRITUS'S IDYLLIUMS.

IDYLLIUM I.

THYRSIS, OR THE HIMERÆN ODE.

THE ARGUMENT.

This Idyllium contains a dialogue between the ſhepherd Thyrſis and a goatherd. Thyrſis, at the requeſt of his friend, ſings the fate of Daphnis, who died for love; for which he is rewarded with a milch goat, and a noble paſtoral cup of moſt excellent ſculpture. This piece is with great propriety conſidered as the pattern and ſtandard of the old bucolic poems. The ſcene changes from a riſing ground to a lower ſituation near a fountain, where there is a ſhepherd's bower facing the ſtatues of Priapus and the Nymphs, and not far diſtant a grove of oaks.

Thyrſis.

Sweet are the whiſpers of yon vocal pine,
Whoſe boughs, projecting o'er the ſprings, recline;
Sweet is thy warbled reed's melodious lay;
Thou, next to Pan, ſhalt bear the prize away:
If to the god a horn'd he-goat belong,
The gentler female ſhall reward thy ſong;
If he the female claim, a kid's thy ſhare,
And, till you milk them, kid's are dainty fare.

Goatherd.

Sweeter thy ſong, O ſhepherd, than the rill
That rolls its muſic down the rocky hill;
If one white ewe content the tuneful nine,
A ſtall-fed lamb, meet recompence, is thine;
And if the muſes claim the lamb their due,
My gentle Thyrſis ſhall obtain the ewe.

Thyrſis.

Wilt thou on this declivity repoſe,
Where the rough tamariſk luxuriant grows,
And gratify the nymphs with ſprightly ſtrain?
I'll feed thy goats, and tend the browſing train.

Goatherd.

I dare not, dare not, ſhepherd, grant your boon,
Pan's rage I fear, who always reſts at noon,
When tir'd with hunting, ſtretch'd in ſleep along,
His bitter rage will burſt upon my ſong:
But well you know love's pains, which Daphnis rues,
You the great maſter of the rural muſe;
Let us beneath yon ſhady elm retreat,
Where nature forms a lovely paſtoral ſeat,
Where ſculptur'd Naiads and Priapus ſtand,
And groves of oak extending o'er the land;
There if you ſing as ſweetly as of yore,
When you the prize from Lybian Chromis bore,
This goat with twins I'll give that never fails
Two kids to ſuckle, and to fill two pails:
To theſe I'll add, with ſcented wax o'erlaid,
Of curious workmanſhip, and newly made,
A deep two-handled cup, whoſe brim is crown'd
With ivy, join'd with helichryſe around;
Small tendrils with cloſe-claſping arms uphold
The fruit rich ſpeckled with the ſeeds of gold.
Within, a woman's well-wrought image ſhines,
A veſt her limbs, her locks a caul confines;
And near, two neat-curl'd youths in amorous ſtrains
With fruitleſs ſtrife communicate their pains:
Smiling, by turns, ſhe views the rival pair;
Grief ſwells their eyes, their heavy hearts deſpair.
Hard by, a fiſherman, advanc'd in years,
On the rough margin of a rock appears;
Intent he ſtands t' encloſe the fiſh below,
Lifts a large net, and labours at the throw:
Such ſtrong expreſſion riſes on the ſight,
You'd ſwear the man exerted all his might;
For his round neck with turgid veins appears—
'In years he ſeems, yet not impair'd by years.'
A vineyard next, with interſected lines,
And red ripe cluſtres load the bending vines:
To guard the fruit a boy ſits idly by,
In ambuſh near, two ſkulking foxes lie;
This plots the branches of ripe grapes to ſtrip,
But that, more daring, meditates the ſcrip;
Reſolv'd ere long to ſeize the ſavoury prey,
And ſend the youngſter dinnerleſs away:
Meanwhile on ruſhes all his art he plies,
In framing traps for graſhoppers and flies;
And earneſt only on his own deſigns,
Forgets his ſatchel, and neglects his vines:
All round the ſoft acanthus ſpreads its train—
This cup, admir'd by each Æolian ſwain,
From far a Caledonian ſailor brought,
For a ſhe-goat and new-made cheeſe I bought;
No lip has touch'd it, ſtill unus'd it ſtood;
To you I give this maſterpiece of wood,
If you thoſe Himeræan ſtrains rehearſe
Of Daphnis' woes—I envy not your verſe—
Dread fate, alas! may ſoon demand your breath,
And cloſe your muſic in oblivious death.

Thyrſis.

Begin, ye nine, that ſweetly wont to play,
Begin, ye muſes, the bucolic lay.

" Thyrſis my name, to Ætna I belong,
" Sicilian ſwain, and this is Thyrſis' ſong :"
Where were ye, nymphs, in what ſequeſter'd grove?
Where were ye, nymphs, when Daphnis pin'd with love?
Did ye on Pindus' ſteepy top reſide?
Or where through Tempe Peneus rolls his tide?
For where the waters of Anapus flow,
Fam'd ſtreams! ye play'd not, nor on Ætna's brow;
Nor where chaſte Acis laves Sicilian plains—
Begin, ye muſes, ſweet bucolic ſtrains.
Him ſavage panthers in wild woods bemoan'd
For him fierce wolves in hideous howlings groan'd
His fate fell lions mourn'd the live-long day—
Begin, ye nine, the ſweet bucolic lay.
Meek heifers, patient cows, and gentle ſteers,
Moan'd at his feet, and melted into tears;
Ev'n bulls loud bellowing wail'd the ſhepherd-ſwain—
Begin, ye nine, the ſweet bucolic ſtrain.
Firſt from the mountain winged Hermes came;
" Ah! whence, he cried, proceeds this fatal flame?
" What nymph, O Daphnis, ſteals thine heart " away?"
Begin, ye nine, the ſweet bucolic lay.
Goatherds and hinds approach'd; the youth they hail'd,
And ſhepherds kindly aſk'd him what he ail'd.
Priapus came, ſoft pity in his eye,
' And why this grief, he ſaid, ah! Daphnis, why?'
Meanwhile the nymph diſconſolately roves,
With naked feet through fountains, woods, and ' groves,
And thus of faithleſs Daphnis ſhe complains;
(Begin, ye muſes, ſweet bucolic ſtrains)
' Ah youth! defective both in head and heart,
' A cowherd ſtyl'd, a goatherd ſure thou art,
' Who when aſkance with leering eye he notes
' The amorous gambols of his friſking goats,
' He longs to emulate their wanton play:'
Begin, ye nine, the ſweet bucolic lay.
' So when you ſee the virgin train advance
' With nimble feet, light bounding in the dance;
' Or when they ſoftly ſpeak, or ſweetly ſmile,
' You pine with grief, and envy all the while.'
Unmov'd he ſat, and no reply return'd,
But ſtill with unavailing paſſion burn'd;
To death he nouriſh'd love's conſuming pain—
Begin, ye nine, the ſweet bucolic ſtrain.
Venus inſulting came, the youth addreſs'd,
Forc'd a faint ſmile, with torture at her breaſt;
" Daphnis, you boaſted you could love ſubdue,
" But tell me has not love defeated you?
" Alas! you ſink beneath his mighty ſway."
Begin, ye nine, the ſweet bucolic lay.
' Ah, cruel Venus! Daphnis thus began,
' Abhorr'd and curs'd by all the race of man,
' My day's decline, my fetting ſun I know,
' I paſs a victim to the ſhades below,
' Where riots love with inſolent diſdain'—
Begin, ye nine, the ſweet bucolic ſtrain.
' To Ida, Venus, fly, expoſe your charms,
' Ruſh to Anchiſes', your old cowherd's arms;
' There bowering oaks will compaſs you around,
' Here low cyperus ſcarcely ſhades the ground,
' Here bees with hollow hums diſturb the day.'
Begin, ye nine, the ſweet bucolic lay.
' Adonis feeds his flocks, though paſſing fair,
' With his keen darts he wounds the flying hare,
' And hunts the beaſts of prey along the plain.'
Begin, ye nine, the ſweet bucolic ſtrain.
' Say, if again arm'd Diomed you ſee,
" I conquer'd Daphnis, and will challenge thee;
" Dar'ſt thou, bold chief, with me renew the " fray?"
Begin, ye nine, the ſweet bucolic lay.
' Farewell, ye wolves, and bears and lynxes dire;
' My ſteps no more the tedious chaſe ſhall tire:
' The herdſman, Daphnis, now no longer roves,
' Through flowery ſhrubs, thick woods, or ſhady ' groves.
' Fair Arethuſa, and ye ſtreams that ſwell
' In gentle tides near Thymbrian towers, fare-' well,
' Your cooling waves ſlow-winding o'er the ' plains.'
Begin, ye muſes, ſweet bucolic ſtrains.
' I Daphnis here my lowing oxen fed,
' And here my heifers to their watering led,
' With bulls and ſteers no longer now I ſtray,'
Begin, ye nine, the ſweet bucolic lay.
' Pan, whether now on Mænalus you rove,
' Or loiter careleſs in Lycæus' grove,
' Leave yon aëreal promontory's height
' Of Helicé projecting to the ſight,
' Where fam'd Lycaon's ſtately tomb is rear'd,
' Loſt in the ſkies, and by the gods rever'd;
' Haſte and reviſit fair Sicilia's plains.'
Ceaſe, muſes, ceaſe the ſweet bucolic ſtrains.
' Pan, take this pipe, to me for ever mute,
' Sweet ton'd, and bent your roſy lip to ſuit,
' Compacted cloſe with wax, and join'd with ' art,
' For love, alas! commands me to depart;
' Dread love and death have ſummon'd me a-' way'—
Ceaſe, muſes, ceaſe the ſweet bucolic lay.
' Let violets deck the bramble-buſh and thorn,
' And fair Narciſſus junipers adorn.
' Let all things nature's contradiction wear,
' And lofty pines produce the luſcious pear;
' Since Daphnis dies, let all things change around,
' Let timorous deer purſue the flying hound;
' Let ſcreech-owls ſoft as nightingales complain'—
Ceaſe, ceaſe, ye nine, the ſweet bucolic ſtrain.
He died—and Venus ſtrove to raiſe his head,
But fate had cut the laſt remaining thread—
The lake he paſt, the whelming wave he prov'd,
Friend to the muſes, by the nymphs belov'd.
Ceaſe, ſacred nine, that ſweetly wont to play,
Ceaſe, ceaſe, ye muſes, the bucolic lay.
Now, friend, the cup and goat are fairly mine,
Her milk's a ſweet libation to the nine:
Ye muſes, hail! all praiſe to you belongs,
And future days ſhall furniſh better ſongs.

Goatherd.

O, be thy mouth with figs Ægilean fill'd,
And drops of honey on thy lips diſtill'd!

Thine is the cup (for ſweeter far thy voice
Than when in ſpring the graſhoppers rejoice)
Sweet is the ſmell, and ſcented as the bowers
Waſh'd by the fountains of the bliſsful hours.

Come, Ciſs! let Thyrſis milk thee—kids, forbear
Your gambols, lo! the wanton goat is near.

NOTES ON IDYLLIUM I.

Ver. 1. Poets frequently ſpeak of the whiſpering or murmuring of trees: the word ψιθυρισμα, which Theocritus uſes, is very expreſſive of the thing he deſcribes, and properly ſignifies to whiſper ſoftly in the ear. Thus our author ſays the two lovers, Idyl. 27. αλληλοις ψιθυριζον, and Idyl. 2. ver. 141. ψιθυριοδομις αδυ. Virgil has "argutum nemus, pinoſque loquentes," Ecl. 8. 22. and "Sæpe levi ſomnum ſuadebit inire ſuſurro," Ecl 1. 56. Mr. Pope ſeems to have had this paſſage in view, and even improved it, in his Eloiſa to Abelard:

The darkſome pines that o'er yon rocks reclin'd
Wave high, and murmur to the hollow wind.

He has alſo finely imitated this paſſage, and the beginning of the goatherd's ſpeech, "Sweeter thy ſong," &c.

Thyrſis, the muſic of that murmuring ſpring
Is not ſo mournful as the ſtrains you ſing:
Nor rivers winding through the vales below,
So ſweetly warble, or ſo ſmoothly flow. *Paſt.* 4.

Ver. 4. Virgil comparing a ſhepherd with Pan, ſays,

Tu nunc eris alter ab illo. *Ecl.* 5. 49.

Ver. 9. The Greek is——η το καταχις
Την απο τας πετρας καταλειβεται υψοθεν υδωρ.

Theſe ten words flow with moſt melodious ſweetneſs: every one of them contributes to heighten the image they are to repreſent.

Homer has the ſame image in nearly the ſame words,

——Κατα δι ψυχρον ρεεν υδωρ
Υψοθεν εκ πετρης, &c. *Odyſſ. B.* 17.

Where, from the rock, with liquid lapſe diſtills
A limpid fount, &c. *Pope.*

Virgil has imitated this paſſage,

Tale tuum carmen nobis, divine poeta,
Quale ſopor feſſi in gramine, quale per æſtum
Dulcis aquæ ſaliente ſitim reſtinguere rivo.
Ecl. 5. 45.

And again,

Nam neque me tantùm venientis ſibilus auſtri,
Nec percuſſa juvant fluctu tam litora, nec quæ
Saxoſas inter decurrunt flumina valles. *Ecl.* 5. 82.

Ver. 15. The Greek is, Ως το καταντες τυτο γελασφον, ατε μυρικαι. The ſame verſe occurs, Idyl. 5. ver. 101. in the Greek; in the tranſlation 110.

Ver. 18.
Paſcentes ſervabit Tityrus hœdos—— *Ecl.* 5. 12.

Ver. 20. Goats and their keepers were under the protection of Pan; it is with good reaſon, therefore, that the goatherd is afraid of offending that deity.

Horace, deſcribing the middle of a hot day, ſays, "caretque Ripa vagis taciturna ventis." Ode 29. B. 3. On which Dacier obſerves, 'the ancients believed that at mid-day every thing was calm and ſerene, becauſe at that ſeaſon the Sylvan deities repoſed themſelves,' and quotes this paſſage of Theocritus in confirmation of it.

Ver. 22. Horace deſcribes Faunus as a very choleric god, Ode 18. B. 3. and begs he would paſs through his grounds in good temper. The Greek is remarkable, Και οι αει δριμεια χολα ποτι ρινι καθηται—"And bitter choler always remains on his noſtrils." Caſaubon obſerves, that all violent paſſions cauſe a ſenſation in the noſtrils, ariſing from the ebullition of the ſpirits, which mount towards the brain, and endeavouring to free themſelves from reſtraint, find a vent by the noſtril, and crowding through it, dilate it in their paſſage. This is evident from animals, and the nobler kinds of them, as the bull, the horſe, the lion, whoſe noſtrils always dilate when moved to anger. Homer has a ſimilar expreſſion in his Odyſſey, B. 24. ανα ρινας δι οι ηδη Δειμυ μενος πρυνυψι---"A ſharp ſenſation ſtruck his noſtrils:" though this is to expreſs another paſſion, viz. that of ſorrow ariſing from filial tenderneſs; and is a deſcription of Ulyſſes and his interview with Laertes. Perſius in the ſame manner ſays—

Ira cadat naſo, rugoſaque ſanna. *Sat.* 5. 91.

Ver. 23.
Si quos aut Phyllidis ignes,
Aut Alconis habes laudes, aut jurgia Codri.
Ecl. 5. 10.

Ver. 24.
Montibus in noſtris ſolus tibi certet Amyntas.
Ecl. 5. 8.

Ver 25.
——Si quid ceſſare potes, requieſce ſub umbrâ---
Ecl. 7. 10.

Ver. 32.
Bis venit ad mulctram, binos alit ubere fœtus.
Ecl. 3. 30.

Ver. 33. Heinſius obſerves, that we have here a deſcription of that art which the ancients called Κηρογραφια, or in laying with wax, which in the days of Theocritus was very much practiſed by

the Egyptians and Sicilians. In beautifying the prows of their ſhips, the ancients made uſe of ſeveral colours, which were not barely varniſhed over with them, but very often annealed by wax melted in the fire, ſo as neither the ſun, winds, nor water were able to deface them: the art of doing this was called from the wax Κηρογραφια. See Potter's Ant. and Vitruvius, I. 7. cap. 9.

Ver. 35. This is a very ſtriking deſcription of thoſe large paſtoral cups which the ancient ſhepherds occaſionally filled with wine, milk, &c. We may gueſs at the capaciouſneſs of this cup from the multiplicity of ſubjects which are carved upon it. Virgil imitates this paſſage.

——————— pocula ponam
Fagina, cælatum divini opus Alcimedontis;
Lenta quibus torno facili ſuperaddita vitis
Diffuſos hederâ veſtit pallente corymbos.
Ecl. 3. 36.

And I this bowl where wanton ivy twines,
And ſwelling cluſters bend the curling vines—
Pope, Paſt. I.

Ver. 36. Here are three ſorts of ivy mentioned, κισσος, ελιχρυσος, and ελιξ. Pliny and Theophraſtus ſay, that κισσος is a kind of ivy that grows alone without a ſupport: ελιχρυσος is probably the poetical ivy which Virgil mentions, Ecl. 8. 12. "hanc ſine tempora circum inter victrices hederam tibi ſerpere lauros:" it has golden or ſaffron-coloured berries, and is ſtyled "Hedera baccis aureis, and chryſocarpum:" the ελιξ bears no fruit at all, but has white twigs, and ſmall, angular, reddiſh leaves, which are more neat than the other ſorts. *Martyn.*

Nonnus in his Dionyſiacs, B. 19. has elegantly imitated this and many other paſſages of Theocritus.

Ver. 37. Creech has thus tranſlated this paſſage.

With crocus mix'd, where ſeem the *kids* to brouſe,
The berries crop, and wanton in the boughs—

On which Dr. Martyn obſerves, "it is hardly poſſible for a tranſlation to be more erroneous: καρπω κροκοειδι ſignifies a fruit of a yellow or ſaffron colour, which Creech has rendered crocus; but crocus or ſaffron is a flower, not a fruit. I was a long time puzzled to diſcover where he found the *kids:* but ſuppoſe it muſt be from miſtaking the ſenſe of the word ελιξ; it ſignifies thoſe *tendrils* which ſuſtain the vine in climbing: the Romans call it *capreolus*, hence the tranſlator finding ελιξ to be *capreolus* in Latin, which alſo ſignifies a *kid*, took it in the latter ſenſe: but he ought to have known, that though *capreolus* is uſed both for a *kid* and a *tendril*, yet ελιξ ſignifies only the latter." There is a tranſlation of this Idyllium in the ſecond volume of Whaley's Poems which retains the ſame abſurdity,

Around its lips the circling ivy ſtrays,
And a young *kid* in wanton gambols plays,

Ver. 39.
Orpheaque in medio poſuit, ſylvaſque ſequentes.
Ecl. 3 46.

Ver. 50.
Fert ingens toto connexus corpore ſaxum.
Æn. 10. 127.

Ver. 51.
——Plenis tumuerunt guttura venis—
Ovid. Met. 3. 73.

Ver. 53. This is ſimilar to an image in Homer's Iliad, B. 18. thus tranſlated by Mr. Pope.

Next ripe in yellow gold, a vineyard ſhines,
Bent with the pond'rous harveſt of its vines.

Ver. 56. Foxes are obſerved by many authors to be fond of grapes, and to make great havoc in vineyards; Ariſtophanes in his Equites compares ſoldiers to foxes who ſpoil whole countries, as the other do vineyards: Galen, in his book of Aliments, tells us, that hunters do not ſcruple to eat the fleſh of foxes in autumn, when they were grown fat with feeding on grapes. In the Song of Solomon, chap. ii. ver. 15. we read, "Take us the foxes, the little foxes that ſpoil the vines," &c. And agreeably to this, Nicander in Alexiph. v. 185. aſſures us that foxes will ſpoil the vines, Πολλακις και τ. λ ———

Cum pingui nocuit vulpes verſuta racemo—

Ver. 62.
——gracli fiſcellam texit hibiſco. *Vir. Ecl.* 10. 17.

Ver. 63.
——molli circùm eſt anſas amplexus acantho.
Ecl. 3. 45.

Ver. 67. Though Homer, in his Catalogue of the Ships, reckons Calydon among the Ætolian cities, yet it is certain that formerly it not only belonged to the Æolians, but was likewiſe called Æolis: Thucydides ſays in his third hiſtory αναχωρησαν ες την Αιολιδα την νυν καλουμενην Καλυδωνα. *Caſaubon.*

Ver. 69.
Necdum illis labra admovi, ſed condita ſervo.
Ecl. 3. 47.

Homer mentions the not having been uſed as a commendation of a cup in the 16th Iliad.

From thence he took a bowl of antique frame,
Which never man had ſtained with ruddy wine—
Pope.

Ver. 71. The Greek is τον εφιμερον υμνον, and is generally reckoned "amabile carmen:" thus Horace, Epiſt. 3. B. 1. ver. 24. "ſeu condis amabile carmen:" but the correction which Heinſius makes is undoubtedly genuine; he reads τον ἱφ' Ιμερᾳ υμνον, the Hymn of Himera, a river in Sicily, the banks of which were the ſcene of the loves of Daphnis, as is evident from a paſſage in the 7th Idyllium, ver. in the Greek 73, &c.—Beſides we have the indiſputable authority of Ælian, who, ſpeaking of Daphnis and this Hymn, ſays it is that which the goatherd calls, τον ἱφ' Ιμερᾳ υμνον, and that Steſichorus the Himeræan bard firſt ſung this celebrated Hymn.

Ver. 72.
Non equidem invideo. *Ecl.* 1. 11.

Ver. 75.
Incipe Mænalios mecum, mea tibi verſus.
Ecl. 8. 21.

Ver. 77. Θυρσις οδ' ωξ Αιγωξ, και Θυρσιδος αδεα φωνα, Thyrſis Ætnæus hic eſt, et hæc eſt Thyrſidis cantilena; Heinſius obſerves this is the title or prelude to the hymn, very agreeable to the manner of the ancients; thus Herodotus—"Herodoti Halicarneſſenſis hæc eſt Hiſtoria; he mentions his name, his country, and writings, exactly in the ſame manner as Thyrſis.

Ver. 79. Virgil, Milton, Mr. Pope and Lord Lyttleton have imitated this paſſage—

Quæ nemora, aut qui vos ſaltus habuere, puellæ
Naïdes, indigno cum Gallo amore periret?
Nam neque Parnaſſi vobis juga, nam neque Pindi
Ulla morem fecere, neque Aoniæ Aganippes.
Ecl. 10. 9.

Where were ye, nymphs, when the remorſeleſs deep
Clos'd o'er the head of your lov'd Lycidas?
For neither were ye playing on the ſteep,
Where your old bards, the famous Druids, lie,
Nor on the ſhaggy top of Mona high,
Nor yet where Deva ſpreads her wizard ſtream.
Lycidas.

Where ſtray ye, Muſes, in what lawn or grove,
While your Alexis pines in hopeleſs love?
In thoſe fair fields where ſacred Iſis glides,
Or elſe where Cam his winding vales divides?
Pope.

Where were ye, muſes, &c. See Lord Lyttleton's beautiful Monody—.

The 10th Eclogue of Virgil is indeed only a ſort of parody on this firſt Idyllium of Theocritus.

Ver. 87.

Daphni, tuum Pœnos etiam ingemuiſſeleones
Interitum, monteſque feri ſylvæque loquuntur.
Ecl. 5. 27.

Ver. 91.

Stant et oves circùm— *Ecl.* 10. 16.

Ver. 95.

Pan, deus Arcadiæ venit— *Ecl.* 10. 26.

Ver. 96.

——dicat Opuntiæ
Frater Megillæ, quo beatus
Vulnere, quâ pereat ſagittâ. *Hor. L.* 1. *Od.* 27.

Ver 99.

Venit et upilio; tardi venere babulci;
Omnes, unde amor iſte, rogant, tibi—
Ecl. 10. 19.

Ver. 102.

Galle; quid inſanis? inquit; tua cura, Lycoris,
Perque nives alium, perque horrida caſtra ſecuta eſt. *Ecl.* 10. 22.

Ver. 107. The Greek Scholiaſt ſuppoſes this verſe, and as far as to the 116th verſe inclusive, to be the ſpeech of Priapus comforting Daphnis; whereas it is undoubtedly that of the nymph Echenais, the miſtreſs of Daphnis, upbraiding him for his incontinent paſſion; for he had been guilty of a breach of promiſe to her, and had offended her by following other women; taken in this light, the whole paſſage is beautiful, ſimple, and eaſy; 'Daphnis,' ſays ſhe, 'you was uſed to be ſtyled a cowherd, a man of continency, but, behold! you have adopted the manners of a goatherd, who when he obſerves the laſciviouſneſs of his flock, wiſhes himſelf a goat:' *Heinſius.* Virgil alludes to this place, "Novimus et qui te tranſverſa tuentibus hircis." *Ecl.* 3.

Ταχιται οφθαλμως is a very ſtrong expreſſion, and emphatically denotes the effect which is produced in the eyes of any perſon who vehemently longs after an object which he can never attain. Horace has a ſimilar expreſſion,

Cum ſemel fixæ cibo
Intabuiſſent pupulæ. *Epode* 5. 39.

Ver. 122.

——premit altum corde dolorem—
Virg. Æn. B. 4.

Ver. 129. That is, he foreſaw his death; that he ſhould no more behold the light of the ſun: an expreſſion uſual to the ancient poets; thus in Homer's Odyſſey, B. 20. when the prophet Theoclymenus foreſaw the death of the ſuitors, he ſays, ηελιος δε Ουρανω εξαπολωλε, The ſun has periſhed from heaven. Mr. Pope renders it,

Nor gives the ſun his golden orb to roll,
But univerſal night uſurps the pole.

Ver. 135.

Hîc virides tenerâ pretexit arundine ripas
Mincius éque ſacrâ reſonant examina quercu.
Ecl. 7. 12.

Ver. 137. The Greek verſe is very expreſſive of the ſenſe: we hear the humming and buzzing of bees.

Ωδε καλον βομβιουντι τοτι σμανεσσι μελισσαι—

Ver. 139.

Et formoſus oves ad flumina pavit Adonis—
Ecl. 10. 18.

Adonis was the ſon of Cynaras, king of Cyprus, by his own daughter Myrrha—he was the great favourite of Venus, and has been abundantly celebrated by the Greek poets. *Martyn.*

Ver. 140.

Auritoſque ſequi lepores, tum figere damas.
Geor. 1. 308.

Ver. 143. See Homer's Iliad, B. 5.

Ver. 147. Thus Virgil ſays, Vivite ſylvæ, *i. e.* Valete— *Ecl.* 8. 58.

Ver. 155.

Daphnis ego in ſylvis, hinc uſque ad ſidera notus,
Formoſi pecoris cuſtos— *Ecl.* 5. 43.

Here Virgil exceeds Theocritus, who only mentions the rural employments of Daphnis, whereas Virgil repreſents his Daphnis as a perſon whoſe fame had reached up to heaven. *Martyn.*

Ver. 159.

Ipſe nemus linquens patrium, ſaltuſque Lycæi,
Pan ovium cuſtos, tua ſibi Mænala curæ,
Adſis, O Tegææ ſavens——
Geor. L. 1. *v.* 16.

Ver. 167.
——Hos tibi dant calamos (en accipe) muſæ,
Aſcræo quos antè ſeni————
Ecl. 6. 69.

Ver. 169.
Pan primus calamos cerâ conjungere plures
Inſtituit———— *Ecl.* 2. 32.

The ſhepherd's pipe was compoſed of ſeven reeds, unequal in length, and of different tones, joined together with wax—Indeed in the 8th Idyllium there are two pipes deſcribed, compoſed of nine reeds each, but ſeven was the uſual number—

Ver. 171.
————ſed me
Imperioſa trahit Proſerpina—
Hor. L. 2. *Sat.* 5.

Ver. 172.
Deſine, Mænalios jam deſine, tibia, verſus.
Virg. Ecl. 8. 61.

Ver. 173. Virgil and Pope have imitated this paſſage—

Nunc et oves ultro fugiat lupus; aurea duræ
Mala ferant quercus; narciſſo floreat alnus.
Ecl. 8. 52.

Let opening roſes knotted oaks adorn,
And liquid amber drop from every thorn.
Pope, Paſt. 3.

Ver. 178.
Cum canibus timidi venient ad pocula damæ.
Ecl. 8. 28.

Ver. 179.
Certent et cycnis ululæ— *Ecl.* 8. 55.

Ver. 182.
————Extremaque Lauſo
Parcæ fila legunt——— *Æn. L.* 10. 814.

Ver. 190.
Carmina tum meliùs, cum venerit ipſe, canemus.
Ecl. 9. 67.

Ver. 197. Κισσαιλα, the name of the goat, from κισσος, ivy, and αιθων, bright or ſhining.

IDYLLIUM II.

PHARMACEUTRIA.

THE ARGUMENT.

Simætha is here introduced complaining of Delphis, who had debauched and forſaken her; ſhe makes uſe of ſeveral incantations in order to regain his affection; and diſcovers all the variety of paſſions that are incident to a neglected lover.

Where are my laurels, and my philtres where?
Quick bring them, Theſtylis—the charm prepare;
This purple fillet round the cauldron ſtrain,
That I with ſpells may prove my perjur'd ſwain:
For ſince he rapt my door twelve days are fled,
Nor knows he whether I'm alive or dead:
Perhaps to ſome new face his heart's inclin'd,
For love has wings, and he a changeful mind.
To the Palæſtra with the morn I'll go,
And ſee and aſk him why he ſhuns me ſo?
Meanwhile my charms ſhall work: O queen of night;
Pale moon, aſſiſt me with refulgent light;
My imprecations I addreſs to thee,
Great goddeſs, and infernal Hecate [dread,
Stain'd with black gore, whom ev'n gaunt maſtiffs
Where'er ſhe haunts the manſions of the dead;
Hail, horrid Hecate, and aid me ſtill
With Circe's power, or Perimedo's ſkill,
Or mad Medea's art—Reſtore my charms,
My lingering Delphis to my longing arms.
The cake's conſum'd—burn, Theſtylis, the reſt
In flames; what frenzy has your mind poſſeſt?
Am I your ſcorn, that thus you diſobey,
Baſe maid, my ſtrict commands?—Strew ſalt, and
ſay, [charms,
"Thus Delphis' bones I ſtrew"—Reſtore my
The perjur'd Delphis to my longing arms.

Delphis inflames my boſom with deſire;
For him I burn this laurel in the fire:
And as it fumes and crackles in the blaze,
And without aſhes inſtantly decays,
So may the fleſh of Delphis burn—My charms,
Reſtore the perjur'd Delphis to my arms.
As melts this waxen form, by fire defac'd,
So in love's flames may Myndian Delphis waſte:
And as this brazen wheel, though quick roll'd round,
Returns, and in its orbit ſtill is found,
So may his love return—reſtore my charms,
The ling'ring Delphis to my longing arms.
I'll ſtrew the bran: Diana's power can bow
Rough Rhadamanth, and all that's ſtern below.
Hark! hark! the village dogs! the goddeſs ſoon
Will come—the dogs terrific bay the moon—
Strike, ſtrike the ſounding braſs—Reſtore my charms,
Reſtore falſe Delphis to my longing arms.
Calm is the ocean, ſilent is the wind,
But grief's black tempeſt rages in my mind.
I burn for him whoſe perfidy betray'd
My innocence; and me, ah, thoughtleſs maid!
Robb'd of my richeſt gem—Reſtore my charms,
Falſe Delphis to my long-deluded arms.
I pour libations thrice, and thrice I pray;
O ſhine, great goddeſs, with auſpicious ray!

Whoe'er she be, blest nymph! that now detains
My fugitive in love's delightful chains;
Be she for ever in oblivion lost,
Like Ariadne, 'lorn on Dia's coast,
Abandon'd by false Theseus—O, my charms,
Restore the lovely Delphis to my arms.
Hippomanes, a plant Arcadia bears,
Makes the colts mad, and stimulates the mares,
O'er hills, through streams they rage: O, could I see
Young Delphis thus run madding after me,
And quit the fam'd Palæstra!—O, my charms!
Restore false Delphis to my longing arms.
This garment's fringe, which Delphis wont to wear,
To burn in flames I into tatters tear.
Ah, cruel love! that my best life-blood drains
From my pale limbs, and empties all my veins,
As leeches suck young steeds—Restore my charms,
My lingering Delphis to my longing arms.
A lizard bruis'd shall make a potent bowl,
And charm to-morrow his obdurate soul;
Meanwhile this potion on his threshold spill,
Where, though despis'd, my soul inhabits still;
No kindness he nor pity will repay;
Spit on the threshold, Thestylis, and say, [charms,
"Thus Delphis' bones I strew"—Restore my
The dear, deluding Delphis to my arms.
She's gone, and now, alas! I'm left alone!
But how shall I my sorrow's cause bemoan?
My ill-requited passion, how bewail?
And where begin the melancholy tale?
When fair Anaxa at Diana's fane
Her offering paid, and left the virgin-train,
Me warmly she requested, breathing love,
At Dian's feast to meet her in the grove:
Where savage beasts, in howling deserts bred,
(And with them a gaunt lioness) were led
To grace the solemn honours of the day.—
Whence rose my passion, sacred Phœbe, say—
Theucarila's kind nurse, who lately died,
Begg'd I would go, and she would be my guide;
Alas! their importunity prevail'd,
And my kind stars and better genius fail'd;
I went adorn'd in Clearista's clothes—
Say, sacred Phœbe, whence my flame arose—
Soon as where Lyco's mansion stands I came,
Delphis the lovely author of my flame
I saw with Eudamippus, from the crowd
Distinguish'd, for like helichrysus glow'd
The gold down on their chins, their bosoms far
Outshone the moon, and every splendid star;
For lately had they left the field of fame—
Say, sacred Phœbe, whence arose my flame—
O, how I gaz'd! what ecstasies begun
To fire my soul? I sigh'd, and was undone:
The pompous show no longer should surprise,
No longer beauty sparkled in my eyes:
Home I return'd, but knew not how I came:
My head disorder'd, and my heart on flame:
Ten tedious days and nights sore sick I lay—
Whence rose my passion, sacred Phœbe, say—
Soon from my cheeks the crimson colour fled,
And my fair tresses perish'd on my head:
Forlorn I liv'd, of body quite bereft,
Of bones and skin were all that I had left:
All charms I try'd, to each enchantress round
I sought; alas! no remedy I found:
Time wing'd his way, but not to sooth my woes—
Say, sacred Phœbe, whence my flame arose—
Till to my maid, oppress with fear and shame,
I told the secret of my growing flame;
'Dear Thestylis, thy healing aid impart—
'The love of Delphis has engross'd my heart.
'He in the school of exercise delights,
'Athletic labours, and heroic fights;
'And oft he enters on the lists of fame'—
Say, sacred Phœbe, whence arose my flame—
'Haste thither, and the hint in private give,
'Say that I sent you—tell him where I live.'
She heard, she flew, she found the youth I sought,
And all in secret to my arms she brought.
Soon at my gate his nimble foot I heard,
Soon to my eyes his lovely form appear'd;
Ye gods! how blest my Delphis to survey!
Whence rose my passion, sacred Phœbe, say—
Cold as the snow my freezing limbs were chill'd,
Like southern vapours from my brow distill'd
The dewy damps; faint tremors seiz'd my tongue,
And on my lips the faultering accents hung;
As when from babes imperfect accents fall,
When murmuring in their dreams they on their mothers call.
Senseless I stood, nor could my mind disclose—
Say, sacred Phœbe, whence my flame arose—
My strange surprise he saw, then prest the bed,
Fix'd on the ground his eyes, and thus he said:
'Me, dear Simætha, you have much surpast,
'As when I ran with young Philinus last
'I far out-stript him, though he bravely strove;
'But you have all prevented me with love;
'Welcome as day your kind appointment came'—
Say, sacred Phœbe, when arose my flame—
'Yes, I had come, by all the powers above,
'Or, rather let me swear by mighty love,
'Unsent for I had come, to Venus true,
'This night attended by a chosen few,
'With apples to present you, and my brows
'Adorn'd like Hercules, with poplar boughs,
'Wove in a wreathe with purple ribbands gay'—
Whence rose my passion, sacred Phœbe, say—
'Had you receiv'd me, all had then been well,
'For I in swiftness and in form excel;
'And should have deem'd it no ignoble bliss
'The roses of your balmy lips to kiss:
'Had you refus'd me, and your doors been barr'd,
'With axe and torch I should have come prepar'd,
'Resolv'd with force resistance to oppose'—
Say, sacred Phœbe, whence my flame arose—
'And first to beauty's queen my thanks are due,
'Next, dear Simætha, I'm in debt to you,
'Who by your maid, love's gentle herald, prove
'My fair deliverer from the fires of love:
'More raging fires than Ætna's waste my frame'—
Say, sacred Phœbe, whence arose my flame—
'Love from their beds enraptur'd virgins charms,
'And wives new-married from their husbands' arms.'
He said, (alas what frenzy seiz'd my mind!)
Soft prest my hand, and on the couch reclin'd;

Love kindled warmth as cloſe embrac'd we lay,
And ſweetly whiſper'd precious hours away.
At length, O moon, with mutual raptures fir'd,
We both accompliſh'd—what we both deſir'd.
E'er ſince no pauſe of love or bliſs we knew,
But wing'd with joy the feather'd minutes flew;
Till yeſter morning, as the radiant ſun
His ſteeds had harneſs'd, and his courſe begun,
Reſtoring fair Aurora from the main,
I heard, alas! the cauſe of all my pain;
Philiſta's mother told me, 'ſhe knew well
That Delphis lov'd, but whom ſhe could not tell:
The marks are plain, he drinks his favourite toaſt,
Then hies him to the maid he values moſt:
Beſides with garlands gay his houſe is crown'd:'
All this ſhe told me, which too true I found.
He oft would ſee me twice or thrice a day,
Then left ſome token that he would not ſtay
Long from my arms, and now twelve days are paſt
Since my fond eyes beheld the wanderer laſt—
It muſt be ſo—'tis my unhappy lot
Thus to be ſcorn'd, neglected and forgot.
He wooes, no doubt, he wooes ſome happier maid—
Meanwhile I'll call enchantment to my aid:
And ſhould he ſcorn me ſtill, a charm I know
Shall ſoon diſpatch him to the ſhades below;
So ſtrong the bowl, ſo deadly is the draught;
To me the ſecret an Aſſyrian taught.
Now, Cynthia, drive your courſers to the main;
Thoſe ills I can't redreſs I muſt ſuſtain.
Farewell, dread moon, for I have ceas'd my ſpell,
And all ye ſtars, that rule by night, farewell.

NOTES ON IDYLLIUM II.

Ver. 1. This whole Idyllium, as Heinſius obſerves, ſeems to have been pronounced with great geſticulation, as is evident from the exordium, Πά μοι ται Δαφναι; πα δε τα φιλτρα; which is a direct imitation of the beginning of an ancient ſong, that uſed to be frequently rehearſed in the ſtreets, and was called ανέρμα, Πε μοι τα ρόδα; πε μοι τα ια; Where are my roſes; where are my violets?

Ver. 3. It is uncertain what ſort of veſſel the Κηλεθρα was. Nicander uſes the word in his Theriacis, and there it ſignifies a mortar in which any thing is pounded. Caſaubon thinks it may be taken in the ſame ſenſe here. It is worth obſervation, that though Virgil has ſtudiouſly imitated this whole Idyllium, he choſe not to mention any ſort of veſſel, but ſays, "moll icinge hæc alteria vittâ."

Ecl. 8. 64.

Ver. 4.

Conjugis ut magicis ſanos avertere ſacris
Experiar ſenſus—— *Ecl.* 8. 66.

Ver. 9. The place for wreſtling, and other exerciſes.

Ver. 11. Sorcerers addreſſed their prayers to the Moon and to Night, the witneſſes of their abominations.—Thus Medea in Ovid, Met. B. vii.

Nox, ait, arcanis fidiſſima— [noſtris
Tuque triceps Hecate quæ cœptis conſcia
Adjutrixque venis——

Canidia addreſſes the ſame powers—O rebus meis
Non infideles arbitræ,
Nox, & Diana quæ ſilentium regis
Arcana cum fiunt ſacra;
Nunc, nunc adeſte. *Hor. Epode* 5. 49.

Ver. 19. The Greek is Ιυγξ a bird which magicians made uſe of in their incantations, ſuppoſed to be the wry-neck—Virgil has "Ducite ab urbe domum, mea Carmina, ducite Daphnim."

Ecl. 8. 68.

Ver. 22. Ah, Corydon, Corydon, quæ te dementia cepit? *Ecl.* 2. 69.

Ver. 28.

Fragiles incende bitumine lauros.
Daphnis me maulus urit, ego hanc in Daphnida laurum. *Ecl.* 8. 82.

The laurel was burnt in order to conſume the fleſh of the perſon, on whoſe account the magical rites were performed. It was thought, according to Pliny, B. 16. chap. laſt, by its crackling noiſe, to expreſs a deteſtation of fire. Mr. Gay has finely imitated this paſſage, in his fourth Paſtoral.

Two haſel nuts I threw into the flame,
And to each nut I gave a ſweetheart's name:
This with the loudeſt bounce me ſore amaz'd,
That in a flame of brighteſt colour blaz'd:
As blaz'd the nut, ſo may thy paſſion grow,
For 'twas thy nut that did ſo brightly glow.

Ver. 33. It was cuſtomary to melt wax, thereby to molify the heart of the perſon beloved; the ſorcereſs in Virgil, Ecl. 8. makes uſe of two images, one of mud and the other of wax.

Limus ut hic dureſcit, & hæc ut cera liqueſcit
Uno eodemque igni: ſic noſtro Daphnis amore.

Ver. 35. It was alſo uſual to imitate all the actions they wiſhed the loved perſon to perform: thus Simæthe rolls a brazen wheel, believing that the motion of this magic machine had the virtue to inſpire her lover with thoſe paſſions which ſhe wiſhed. Canidia makes uſe of this wheel. See *Hor. Epode* 17. 6, 7.

Canidia, parce vocibus tandem ſacris,
Citumque retro ſolve, ſolve turbinem.

Ver. 41.——Hylax in limine lattat—
Virg. Ecl. 8. 107.
——viſæquæ canes ululare per umbram.
Adventante Deâ— *Æn.* 6. 257.

The reaſon why Hecate was placed in the public ways, was becauſe ſhe preſided over piacular pollutions: every new moon there was a public ſupper provided at the charge of the richer ſort in a place where three ways met; hence ſhe was cal-

ed Trivia, which was no ſooner brought, but the poor people carried it all off, giving out that Hecate had devoured it; theſe ſuppers were expiatory offerings to move this goddeſs to avert any evils, which might impend, by reaſon of piacular crimes committed in the highways. *Potter's Ant.*

Ver. 43.

Tinnituſque cie, & matris quate cymbala circum.
Virg. Georg. 4. 64.

Ver. 45.

Et nunc omne tibi ſtratum ſilet æquor, & omnes
(Aſpice) ventoſi ceciderunt murmuris auræ.
Ecl. 9. 57.

Ver. 51. The number three was held ſacred by the ancients, being thought the moſt perfect of all numbers, as having a regard to the beginning, middle, and end. We ſhall ſee a further propriety in it, if we conſider that Hecate, who preſided over magical rites, had three faces.

Terna tibi hæc primum triplici diverſa colore
Licia circumdo, terque hæc altaria circum
Effigiem duco: numero deus impare gaudet.
Ecl. 8. 73.

Ver. 59. Hippomanes here undoubtedly ſignifies a plant, which is deſcribed as having the fruit of the wild cucumber, and the leaves of the prickly poppy. perhaps a kind of mullien; though in Virgil, Geor. 3. 280. it means a poiſon. See *Martyn.*

Ver. 60.

Cum tibi flagrans amor & libido,
Quæ ſolet matres furiare equorum, &c.
Hor. B 1. *Od.* 25.

Ver. 65. Simætha burns the borders of Delphis's garment, that the owner may be tortured with the like flame: Virgil's enchantreſs depoſits her lover's pledges in the ground, under her threſhold, in order to retain his love, and ſecure his affections from wandering.

Has olim exuvias mihi perfidus ille reliquit
Pignora cara ſui; quæ nunc ego limine in ipſo,
Terra, tibi mando——— *Ecl.* 8. 91.

Ver. 71.

Has herbas, atque hæc Ponto mihi lecta venena.
Ecl. 8. 95.

Horace has—

Majus parabo, majus infundam tibi
Faſtidienti poculum—— *Epode* 5. 77.

Mr. Gay had this paſſage in view.

Theſe golden lines into his mug I'll throw,
And ſoon the ſwain with fervent love ſhall glow.
Paſt. 4.

Ver. 83. The Athenian virgins were preſented to Diana before it was lawful for them to marry, on which occaſion they offered baſkets full of little curioſities to that goddeſs, to gain leave to depart out of her train, and change their ſtate of life. *Potter.*

Ver. 95. This is a ſtroke on the pride of thoſe women who trick themſelves in hired clothes; and is entirely ſimilar to a paſſage in Juvenal, Sat. 6. 353.

Ut ſpectet ludos conducit Ogulnia veſtem,
Ogulnia borrows clothes to ſee the ſhow.

Ver. 105. The Greek is Χως ιδον, ως εμανην. κ. τ. λ. There is a ſimilar line in the 3d Idyl. ver 42. Ως ιδιν, ως εμανη, ως εισβαθυν αλλιτ' ερωτα.

Virgil has—

Ut vidi, ut perii, ut me malus abſtulit error.
Ecl. 8. 41.

which is confeſſedly inferior to the Greek.

Ver. 113. The literal tranſlation of this paſſage is, *And my colour was like thapſus*—θαψος is a Scythian wood of a boxen or golden colour; ſome take it to be the Indian guaiacum. The women that choſe to look pale, tinged their cheeks with it. *Heinſius's Notes.*

Ver. 116. Our poet uſes the ſame proverb, Idyl. 4. ver. 16. and Virgil has——vix oſſibus hærent.
Ecl. 3. 102.

Ver. 119.

Sed fugit interea, fugit irreparabile tempus.
Geor. B. 3. 284.

Ver. 121.

Cum ſic unanimem alloquitur malè ſana ſororem.
Æn. B. 4. 8.

Ver. 124.

Solus hic inflexit ſenſus, animumque labantem
Impulit——— *Ver.* 22.

Ver. 137. Diriguit viſu in medio: calor oſſa reliquit. *Æn. B.* 3. 308. If the learned reader will compare this paſſage with Sappho's celebrated ode Εις την ερωμενην, he will find great ſimilarity both in the thoughts and expreſſions.

Ver. 153. Heinſius obſerves there was a cuſtom at Athens, that whenever a young man was ſmitten with the beauty of any lady, eſpecially that of a courtezan, he wrote her name in a place appointed for the purpoſe, with ſome encomium upon her; and having acknowledged his paſſion, the day following he appointed for a feſtival, προς την αναδησιν, that is, to crown her head with a wreath of flowers and ribbands. Thus in Plato, Alcibiades, at a feſtival, reſorts to Agatho, with a crown and ribbands to adorn his head.

Ver. 158. The poplar was ſacred to Hercules. Virgil has,

Populeis adſunt evincti tempora, ramis. *Æn.* 8. 286.

Ver. 166. If, after rapping at the door, the lover was refuſed admittance, προς την αναδησιν, to place the flowery crown on the head of his miſtreſs, he then threatened axes and torches to break or burn the door—Thus Horace

Hic hic ponite lucida
Funalia, et vectes, et arcus
Oppoſitis foribus minaces— *B.* 3. *Od.* 26.

Ver. 175. The Greek is παρθενων εκ θαλαμοιο, the thalami ſignified the inner chambers where the virgins were kept cloſely confined, and not permitted to converſe with men. In Homer, Iliad, b. 6. the rooms where Priam's daughters livid are called τηγοι θαλαμοι, as being placed at the top of the houſe; for the womens lodgings were uſually in the uppermoſt rooms, as Euſtathius remarks

upon the paſſage; which was another means to keep them from company.

Ver. 180. Εφιδυεισδομες αδυ. See Idyl. i. v. 1.

Ver. 193. That it was uſual for lovers to adorn their houſes with flowers and garlands in honour of their miſtreſſes, is evident from a paſſage in Catullus, *de Aty*, ver. 66.

Mihi floridis corollis redimita domus erat,
Linquendum ubi eſſet orto mihi ſole cubiculum.

Fair flowery wreaths around my houſe are ſpread,
When with the riſing ſun I leave my bed.

Ver. 202.

His ego Daphnim Aggrediar. *Ecl.* 8. 102.

Ver. 203.

Majus parabo, majus infundam tibi
Faſtidienti poculum. *Hor. Epod.* 5. 77.

Ver. 206.

Has herbas, atque hæc ponto mihi lecta venena
Ipſe dedit mœris. *Ecl.* 8. 95.

The Aſſyrians were greatly addicted to magic.

IDYLLIUM III.

AMARYLLIS.

THE ARGUMENT.

A goatherd declares his paſſion for his miſtreſs Amaryllis, laments her cruelty, commends her charms, ſolicits her favours, and, diſtracted at the thoughts of not obtaining them, threatens to drown himſelf; tries experiments to know if ſhe loves him, ſings love-ſongs, and ſeems reſolved to die, and be devoured by wolves.

To Amaryllis, lovely nymph, I ſpeed,
Meanwhile my goats along the mountain feed:
O Tityrus, tend them with aſſiduous care,
In freſheſt paſture, and in pureſt air;
At evening ſee them to the water led,
And ware the Libyan ram with butting head.
Sweet Amaryllis!—once how bleſt my lot
When here you meet me in the conſcious grot?
I, whom you call'd your dear, your love, ſo late,
Say, am I now the object of your hate?
Does my flat noſe or beard your eyes offend?—
This love will ſurely bring me to my end—
Lo! ten fair apples, tempting to the view,
Pluck'd from your favourite tree, where late they grew;
Accept this boon, 'tis all my preſent ſtore—
To-morrow ſhall produce as many more;
Meanwhile theſe heart-conſuming pains remove,
And give me gentle pity for my love—
Oh! were I made, by ſome transforming power,
A bee to buzz in your ſequeſter'd bower!
To pierce your ivy ſhade with murmuring ſound,
And the fern leaves which compaſs you around—
I know thee, love, and to my ſorrow find
A god thou art, but of the ſavage kind;
A lioneſs ſure ſuckled the fell child,
Fed with her whelps, and nurs'd him in the wild:
On me his ſcorching flames inceſſant prey,
Glow in my veins, and melt my ſoul away—
Sweet black-ey'd maid! what charms thoſe eyes impart!
Soft are your looks, but flinty is your heart;
With kiſſes kind this rage of love appeaſe,
For me the joys of empty kiſſes pleaſe.
Your ſcorn diſtracts me, and will make me tear
The flowery crown I wove for you to wear,
Where roſe-buds mingled with the ivy-wreath,
And fragrant parſley ſweeteſt odours breathe—
Ah me! what pangs I feel? and yet the fair
Nor ſees my ſorrows, nor will hear my prayer—
I'll doff my goat-ſkin, ſince I needs muſt die,
And thence, where Olpis views the ſcaly fry—
Inquiſitive, a dire impending ſteep,
Headlong I'll plunge into the foamy deep;
And though perchance I buoyant riſe again,
You'll laugh to ſee me flouncing in the main—
By one prophetic orpine-leaf I found
Your chang'd affection, for it gave no ſound,
Though on my hand ſtruck hollow as it lay,
But quickly wither'd, like your love, away—
An old witch brought ſad tidings to my ears,
She who tells fortunes with the ſieve and ſheers:
For, leaſing barley in my fields of late,
She told me, 'I ſhould love, and you ſhould hate'——
For you my care a milk-white goat ſupplied,
Two wanton kids ſkip gameſome at her ſide,
Which Mermnon's girl, Erithacis the brown,
Has oft petition'd me to call her own;
And ſince you thus my ardent paſſion ſlight,
Hers they ſhall be before to-morrow night—
My right eye itches; may it lucky prove!
Perchance I ſoon ſhall ſee the nymph I love;
Beneath yon pine I'll ſing diſtinct and clear—
Perchance the fair my tender notes may hear;
Perchance may pity my melodious moan—
She is not metamorphos'd into ſtone—
Hippomanes, provok'd by noble ſtriſe,
To win a miſtreſs, or to loſe his life,
Threw golden fruit in Atalanta's way,
The bright temptation caus'd the maid to ſtay;
She look'd, ſhe languiſh'd, all her ſoul took fire,
She plung'd into the gulf of deep deſire.
From Othry's top the bard Melampus came,
He drove the herd to Pyle, and won the dame:

Alphesiboea's mother, fam'd for charms
Of beauty, bleſt heroic Bias' arms.
Adonis fed his flocks upon the plain,
Yet heavenly Venus lov'd the ſhepherd ſwain;
She mourn'd him wounded in the fatal chace,
Nor dead diſmiſs'd him from her warm embrace.
Though young Endymion was by Cynthia bleſt,
I envy nothing but his laſting reſt.

Iäſion too was happy to obtain
The pleaſures too divine for ears profane.
My head grows giddy---love affects me ſore;
Yet you regard not, ſo I'll ſing no more---
Stretch'd near your grotto when I've breath'd my laſt,
My fleſh will give the wolves a rich repaſt,
This will be ſweet as honey to your taſte.

NOTES ON IDYLLIUM III.

This Idyllium affords us a ſpecimen of ancient gallantry, namely, of the παρακλαυσιθυρον, or mournful ſong, which excluded lovers uſed to ſing at the doors of their miſtreſſes. They had two methods of performing this: one was to ſing it as they lay on the ground: thus Horace, Ode 10. B. 3. was ſung while the lover was *porrectus ante fores*; but this was performed ſtanding, and with great geſticulation of body, and motion of the feet: It is called Comaſtes, which ſignifies, according to Heſychius, a ſhepherd that dances and ſings at the ſame time. The turns in this ſong are very abrupt, ſudden, and ſtriking, and gives us a lively picture of a diſtracted lover.

Ver. 2.

Paſcuntur vero ſylvas et ſumma Lycæi.

Geor. 3. 314.

Ver. 3. Virgil has tranſlated theſe three lines,

Tityre, dum redeo, brevis eſt via, paſce capellas:
Et notum paſtas age, Tityre: et inter agendum
Occurſare capro, cornu ferit ille, caveto. *Ecl.* 9. 23.

This paſſage of Virgil, Dr. Martyn thinks, ſeems to intimate, that he was engaged in tranſlating the Idylliums of our poet.

Ver. 6. The Greek is ενορχαν, which in this place undoubtedly ſignifies a ram. Thus Homer has Πεντηκοντα δ' ενορχας. κ. τ. λ. Full fifty rams to bleed in ſacrifice. *Pope's Iliad. B.* 23.

Creech and Dryden have rendered it Ridgil: Dryden and Warton alſo have rendered the word *capro* in Virgil by the ſame term.

Ver. 10.

Dumque tibi eſt odio mea fiſtula, dumque capellæ,
Hirſutumque ſupercilium, prolixaque barba.

Ecl. 8. 33.

Ver. 12.

Mori me denique coges, *Ecl.* 2. 7.

Ver. 13.

Quod potui, puero ſylveſtri ex arbore lecta
Aurea mala decem miſi: cras altera mittam.

Ecl. 3. 70.

Ver. 20. The Greek is, Α βομβευσα μελισσα, and is very expreſſive of the ſenſe. See Idyl. I. 137.

Ver. 22. The ancient ſhepherds often made themſelves beds of fern, becauſe they imagined that the ſmell of it would drive away ſerpents.

Ver. 23. Virgil has,

Nunc ſcio quid ſit Amor: duris in cotibus illum
Iſmarus, aut Rhodope, aut extremi Garamantes,
Nec noſtri generis puerum nec ſanguinis edunt.

Ecl. 8. 43.

Theſe ideas, not owing their original to rural objects, are not paſtoral, and therefore improper ſentiments like theſe, as they have no ground in nature, are indeed of little value in any poem; but in paſtoral they are particularly liable to cenſure, becauſe they are more proper for tragic, or heroic writings. *Rambler*, No. 37.

Pope, endeavouring to copy Virgil, was carried to ſtill greater impropriety;

I know thee love! on foreign mountains bred,
Wolves gave thee ſuck, and ſavage tygers fed.
Thou wert from Ætna's burning entrails torn,
Got by fierce whirlwinds and in thunder born.

Ver. 32. Εστι και εν κενεοισι φιλαμασιν αδεα τιεψις;

Exactly the ſame verſe occurs, Idyl. 27. l. 4. Moſchus calls it, γυμνον το φιλαμα, *a naked kiſs.*

Ver. 35.

Floribus, atque apio crines ornatus amaro. *Ecl.* 6. 68.

The ancients thought that ivy and parſley had the virtue of diſſipating the vapours of wine.

Ver. 42. Virgil has,

Præceps aërii ſpeculâ de montis in undas
Deferar. *Ecl.* 8. 59.

Ver. 45. Τηλεφιλον is properly orpine, a low plant whoſe branches trail on the ground: the leaves are ſmall, roundiſh, and of a glaucous colour, the flowers ſmall, and of a whitiſh green.

Cool violets, and orpine growing ſtill,
Embathed balm and cheerful galingale. *Spenſer.*

Ver. 49. The Greek is Αγροιω, and generally taken for a proper name; but Heinſius, with good reaſon, thinks it ſhould be wrote α γραια, *an old woman.* We have a ſimilar paſſage in the 6th Idyl. ver. 40. Ταυτα γαρ α γραια με Κοττυταριδι εξεδιδαξεν,

For this the old woman Cottytaris taught me.

Ver. 50. This was another ſort of divination.

Ver. 53. Virgil has entirely copied this;

Præterea duo nec tum mihi valle reperti
Capreoli ſparſis etiam nunc pellibus albo,
Bina die ſiccant ovis ubera; quos tibi ſervo.
Jampridem alme illos abducere Theſtylis orat;
Et faciet; quoniam ſordent tibi munera noſtra.

Ecl. 2. 40.

Ver. 59. The palpitation of the right eye was reckonned a lucky omen. *Potter.*

Ver. 65. See the ſtory in Ovid's Met. B. 10. ver. 664.

Ver. 69. The Greek is,

Ὡς ἐδεν, ὡς ἐμανη, ὡς ἐς βαθυν ἀλλεσ' ἐρωτα!

There is a ſimilar ver. Idyl. 2. 82.

Χως ἰδον, ὡς ἐμανην, ὡς μευ περι θυμος ἰαφθυ——

Virgil has, "Ut vidi, ut perii, ut me malus abſtu-
"lit error!" *Ecl.* 8. 41.

Which is far inferior to the Greek; *abſtulit error* is much more languid.

Ver. 71. This was a mountain in Theſſaly; which country was famous for ſuch an extraordinary breed of oxen, that Neleus, king of Pylus, refuſed to give his daughter in marriage to Melampus, king of Tyrius, except he procured him ſome of them, which he ſoon after accompliſhed by the help of his brother Bias.

Univ. Hiſt. vol. vi. *p.* 215. 8*vo.*

Turpia perpeſſus vates eſt vincia Melampus.
Prop. B. 2. *Ecl.* 3.

Ver. 78. Bion, in his epitaph on Adonis, has a beautiful thought in alluſion to this, ver 45.

Ἐγρεο τυτθον, Ἀδωνι, το δ' αν πυματον με φιλησας,
κ. τ. λ.

Raiſe, lov'd Adonis, raiſe thy drooping head,
And kiſs me ere thy parting breath be fled;
The laſt fond token of affection give,
O kiſs thy Venus, while the kiſſes live;
Till in my breaſt I draw thy lingering breath,
And with my lips imbibe thy love in death. *F. F.*

Ver. 81. The ſon of Jupiter and Electra: he lay with Ceres, and was by Jupiter ſtruck with thunder:

Scarce could Iäſion taſte her heavenly charms,
But Jove's ſwift lightning ſcorch'd him in her arms. *Pope's Od. B.* 5.

Ver. 82.
Procul, ô, procul eſte profani. *Æn. B.* 6. 258.
Ver. 84.
Amor non talia curat. *Ecl.* 10. 28.
Ver. 87.
Hoc juvat, & melli eſt. *Hor. B.* ii. *Sat.* 6 *ver.* 32.

IDYLLIUM IV.

THE SHEPHERDS.

THE ARGUMENT.

We have here a dialogue between Battus, a ſhepherd, and Corydon, a neatherd. The beauty of this Idyllium conſiſts in that natural repreſentation of ſorrow which the poet makes the herds affected with in the abſence of their maſter: Battus laments the death of Amaryllis. The latter part of this piece is very natural, but too much inclining to ruſticity.

Battus.

Are theſe Philonda's cows that graze the mead?
Corydon.
No; Ægon's—Ægon gave them me to feed.
Battus.
Don't you play falſe, and milk them by the by?
Corydon.
My ſhrewd old maſter keeps too ſtrict an eye;
The calves hę ſuckles, and prevents the fraud.
Battus.
But where is Ægon? is he gone abroad?
Corydon.
What, han't you heard it from the mouth of fame?
Milo entic'd him to th' Olympic game.
Battus.
Will he engage in that athletic toil,
Who never yet beheld Olympic oil?
Corydon.
Fame ſays, his ſtrength with Hercules may vie;
Battus.
And that ſtout Pollux is worſe man than I.
Corydon.
He with his ſpade is gone, at honour's call,
And twenty ſheep to keep himſelf withal.

Battus.

To Milo ſurely high regard is had;
The wolves at his perſuaſion will run mad.
Corydon.
Theſe heifers want him, moaning o'er the mead.
Battus.
Alas! they've got a wretched groom indeed.
Corydon.
Poor beaſts, I pity them! they even refrain
To pick the ſcanty herbage of the plain.
Battus.
Yon heifer's bones are all that ſtrike the view:
Say, does ſhe live, like graſhoppers, on dew?
Corydon.
No, troth! by Æſer's banks ſhe loves to ſtray,
And there I bring her many a lock of hay;
And oft ſhe wantons in Latymnus' ſhades,
And crops freſh paſture in the opening glades.
Battus.
That red bull's quite reduc'd to ſkin and bone;
May the Lampriadæ, when they atone
The wrath of Juno, ſacrifice his mate!
A wretched offering ſuits a wretched ſtate.

Corydon.

And yet on Phyſcus, or the marſh, he feeds,
Or where Neæthus laves the verdant meads;
Where bright-ey'd flowers diffuſe their odour round,
Buck-wheat and flea-bane bloom, and honey-bells abound.

Battus.

Alas! Theſe herds will periſh on the plain,
While Ægon courts fair victory in vain;
His pipe, which ſweeteſt muſic could produce,
His pipe, too, will be ſpoil'd for want of uſe.

Corydon.

No fear of that, for when he went away,
He left it me, and I can ſing and play:
I warble Pyrrhus' ſongs, and Glauca's lays,
Zycynthus fair, and healthful Croton praiſe,
And proud Lacinium, riſing to the eaſt,
Where Ægon ſwallow'd four ſcore cakes at leaſt:
There, too, a bull he boldly dar'd purſue,
Seiz'd by the hoof, and down the mountain drew;
Then gave it Amaryllis; with glad ſhout
The maids approv'd the deed, loud laugh'd the lubber lout.

Battus.

Sweet Amaryllis! though entomb'd you lie,
With me your memory ſhall never die:
I lov'd you dearer than my flocks of late,
And now, alas! I mourn your cruel fate.

Corydon.

Yet courage, friend; to-morrow fortune's ray
May ſhine with comfort, though it lowrs to day:
Hopes to the living, not the dead remain;
And the ſoft ſeaſon brightens after rain.

Battus.

Firm is my truſt—but ſee! theſe hungry cows
(White-face, away) my tender olives browze!

Corydon.

Away, Cymætha, to the bank! by Jove,
If I come near you, faith! I'll make you move—
See! ſhe returns—O that I had my pike!
I'd give the beaſt a blow ſhe would not like.

Battus.

Pray, Corydon, ſee here! thy aid I beg;
A long ſharp-pointed prick has pierc'd my leg;
How high theſe thorns and ſpindling brambles grow!
Do'ſt ſee't?—'twas long of her; plague take the cow!

Corydon.

Here comes the thorn! your throbbing pain I've found.

Battus.

How great the anguiſh! yet how ſmall the wound!

Corydon.

Theſe thorny, furzy hills ſhould ne'er be trod
With legs unguarded, and by feet unſhod.

Battus.

Does your old maſter ſtill perſiſt to prize
His quondam miſtreſs with the jet black eyes?

Corydon.

The ſame; for lately in the wattled ground,
In the ſoft ſcene of love the carle I found.

Battus.

O, nobly done! laſcivious old man!
Meet match for ſatyrs, or ſalacious Pan.

NOTES ON IDYLLIUM IV.

Virgil begins his third Eclogue with almoſt the ſame words,

Ver. 1.

Dic mihi, Damœta, cujum pecus? an Melibœi?
D. Non, verum Ægonis: nuper mihi tradidit Ægon.

Ver. 3.

Hic alienus oves cuſtos bis mulget in horâ.

Ecl. 3. 5.

There was a peculiar kind of theft which the mercenary herdſmen among the ancients were guilty of, which was to milk the cattle they tended clandeſtinely in the abſence of their maſters: theſe delinquents were called ἀμολγοι.

Ver. 10. It was cuſtomary for the wreſtlers, and other combatants at the Olympic games, to anoint themſelves with oil, not only to render their limbs more ſupple, but likewiſe that their antagoniſts might have no advantage over them.

Ver. 13. Gaſaubon obſerves, that thoſe who intended to be competitors at the Olympic games, came thirty days at leaſt before they began, to be trained up and exerciſed by thoſe who preſided over the games, which laſted five days; ſo that the combatants remained at Elis near forty, at leaſt five and thirty days: the twenty ſheep therefore which Ægon carried with him were for his proviſion during his ſtay at Elis, and perhaps for ſacrifice, and to entertain his friends. A ſpade, σκαπανη, was the emblem or badge of a wreſtler, and therefore painters and ſculptors, as Feſtus Pompeius obſerves, repreſented wreſtlers with this inſtrument in their hands: his words are, "Rutrum tenentis juvenis eſt effigies in capitolio, ephebi, more Græcorum, arenam ruentis exercitationis gratiâ;" in the capitol there is the effigy of a youth holding a ſpade, and, after the Grecian manner, turning the ſand for the lake of exerciſe.

Ver. 16. The Greek Scholiaſt obſerves, that madneſs is a diſtemper to which dogs, of all animals, are moſt liable: thus Virgil, Geor. 3. 496. "Hinc canibus blandis rabies." Hence gentle dogs run mad; at leaſt much more ſo than wolves: therefore, ſays Battus, if Milo can prevail on the ruſtic Ægon to go to the Olympic games, he might perſuade even wolves to run mad.

Ver. 17. Moſchus, Idyl. 3. ver. 23. has a paſſage extremely ſimilar to this,

Ὡρια δ' ἰσιν αφωνα, και μι βοις αι ποτι ταυροις
Πλαζομενοι γουνοιτι, και ικ ιθιλουσι νεμισθαι.

And now h straggling heifer strays alone,
And to ilent mountains makes her moan;
The bu s loud-bellowing o'er the forests rove,
Forsake their pasture, and forget their love. *F. F.*

Ver. 21. ———vix ossibus hærent. *Ecl.* 3. 102.

Ver. 22.
Dumque thymo pascentur apes, dum rore cicadæ.
Ecl. 5. 77.

Ver. 27.
Eheu, quam pingui macer mihi taurus in arvo;
Ecl. 3.
How lean my bull on yonder clover'd plain.
Warton.

Ver. 28. Heinsius takes the Lampridæ to have been the inhabitants of Lacinium, a promontory not far from Croton, where there was a celebrated temple erected to Juno—*Atollit se diva Lacinia contra.* Æn. 3. 552. They formerly were opulent, but afterwards reduced to extreme penury and wretchedness.

Ver. 31.
Saltibus in vacuis pascant, et plena secundum
Flumina; muscus ubi et viridissima gramine ripa.
Geor. 3.

Ver. 34. The Greek is, Αιγιστυρες, και κνυζα, και ευωδης μελιτεια.
The virgins that attended at the feast held in honour of Ceres, called Θεσμοφορια, strewed on their beds such herbs as were thought effectual to destroy all appetite for venereal pleasures, as κνυζα, *flea bane, agnus castus, &c.* *See Potter.*

Ver. 40.
——— et me fecere poetam
Pierides; sunt et mihi carmina. *Ecl.* 9. 32.

Ver. 41. Glauca was a lutanist of Chios, Pyrrhus a Lesbian poet.

Ver. 44. Horace says of a glutton,
———Porcius infra,
Ridiculus totas simul absorbere placentas.
B. 2. *Sat.* 8.

Ver. 49. This short eulogy on the deceased Amaryllis, late the mistress of Battus, is beautifully introduced on Corydon's mentioning her name.

Ver. 33.
——— sed credula vitam
Spes fovet, et melius cras fore semper ait.
Tibul. B. 2. *El.* 6.

And Horace,
——informes hyemes reducit Jupiter: idem Summovet:
Non, si male nunc et olim Sic erit. *B.* 2. *Od.* 10.

Jove spreads the heavens with dusky clouds;
The clouds he chides away;
To-morrow's sun shall shine serene,
Though fortune lowrs to-day. *Duncombe.*

Ver. 61. Unde mihi lapidem? unde sagittas?
Hor. B. 2. *Sat.* 7.

IDYLLIUM V.

THE TRAVELLERS.

THE ARGUMENT.

This Idyllium is of the dramatic kind: Comates a goatherd, and Lacon a shepherd, after exchanging some very coarse railleries, a true image of vulgar freedom, contend in singing. The beauty of this piece consists in that air of simplicity in which the shepherds are painted; full of themselves, boastful of favours received, and making sudden transitions, agreeable to the desultory genius of uncivilized nature.

Comates.
My goats of Lacon, Sybarite base take heed;
He stole my goatskin—at a distance feed.
Lacon.
Fly, fly, my lambs, these springs—nor longer stay,
Comates comes who stole my flute away.
Comates.
What flute, thou servile Sybaritic brute!
Pray, when wast thou e'er master of a flute?
'Twas all thy pride, with Corydon, to draw
The rustic rout with scrannel pipes of straw.
Lacon.
The flute which Lycon gave me frank and free:
But pray, what goatskin did I steal from thee?
What goatskin e'er hadst thou, thou lubber lout?
It is well known thy master sleeps without.

Comates.
What Crocylus bestow'd, of special note,
When to the nymphs he sacrific'd a goat;
Thou envied'st me the present, and by theft
Hast basely of the speckled pelt bereft.
Lacon.
I stole it not; I swear by mighty Pan;
Comates, thou'rt mistaken in thy man;
Or may I, seiz'd with instant frenzy, leap
Headlong from this high rock into the deep.
Comates.
Thy flute I stole not; by the nymphs I swear,
The fountain nymphs, to me for ever dear.
Lacon.
If I believe thee, goatherd, may I prove
The desperate pains of Daphnis, pin'd with love

Nought now is ſacred—yet a kid ſtake down,
Thoul't find my ſkill ſuperior to thy own.

Comates.

A ſow Minerva brav'd: for ſinging's ſake,
I'll lay a kid, if thou a lamb wilt ſtake.

Lacon.

Ah ſly old fox! but how can this be fair?
For good ſheep's wool who ever ſheer'd goat's hair?
What boohy, blown to folly's utmoſt pitch,
E'er left an udder'd goat to milk a bitch?

Comates.

He that's as ſure as thou art to excel,
Though waſps may ſing with graſhoppers as well:
But leſt thou turn thy challenge to a flam,
I'll ſtake this full-grown goat againſt thy lamb.

Lacon.

Soft, haſty goatherd! let us hence remove
To yon wild olive-ſhade beſide the grove;
There ſing thy beſt, while in pure ſtreams below,
Grateful to ſwains, the cooling fountains flow;
There ſpring ſweet herbs, ſoft couches wait thy choice,
And there the ſprightly graſhoppers rejoice.

Comates.

Haſty I'm not, but greatly vex'd at heart
That thou dar'ſt brave thy teacher at his art;
Requital baſe!—Breed hounds, or wolf-whelps breed,
Ungrateful, they'll devour you for the deed.

Lacon.

Ye goatherds love beyond the truth to ſtretch;
When learnt I ought of thee, invidious wretch?
But, come, vain boaſter, to the grove along,
No more thoul't challenge ſhepherds at the ſong.

Comates.

Here reſt we; lo! cyperus decks the ground,
Oaks lend their ſhade, and ſweet bees murmur round
Their honied hives; here two cool fountains ſpring;
Here merrily the birds on branches ſing;
Here pines in cluſters more umbrageous grow,
Wave high their heads, and ſcatter cones below.

Lacon.

With me retreat, where ſkins of lambs I keep,
Whoſe wool's a pillow ſofter far than ſleep:
Thy goat-ſkins ill with cleanlineſs agree,
So rank they ſmell, nay rather worſe than thee.
There to the nymphs I'll crown, delightful toil
One bowl of milk, and one of ſweeteſt oil.

Comates.

Retire with me to more ſequeſter'd bowers,
There thou ſhalt reſt on fern, and fragrant flowers;
O'er theſe the ſkins of tender kids I'll ſpread,
A ſofter far than thine and ſweeter bed:
Eight bowls of milk, to Pan, great god, ſhall foam,
And eight of honey, and the honey-comb.

Lacon.

Agreed: the conteſt leſt thou ſhouldſt evade,
I'll wait thy ſummons at thy oaken ſhade.
Who ſhall decide the honours of the day?
Perhaps Lycopas is not far away.

Comates.

No need of him for judge, for here's as good,
Morſon the keeper of thy maſter's wood;
He's cleaving faggots.

Lacon.

Call the woodman near.

Comates.

Call him thyſelf, for thou canſt make him hear.

Lacon.

Friend, hither haſte while we in ſong conteſt,
And judge impartial who performs the beſt.

Comates.

Let merit only thy juſt judgment guide,
Lean not to mine, or favour Lacon's ſide.
Thurius commits to Lacon's care his ſheep;
Eumara's goats of Sybaris I keep.

Lacon.

Who aſk'd thee, goatherd, of thy tongue too free,
Whether the flock belong'd to him or me?

Comates.

By Jove, I vow the ſimple truth I've told;
But thou grow'ſt vain, and ſcurrilouſly bold.

Lacon.

Sing on, proud ſwain, nor thus conſume thy breath;
But not, like Sirens, ſing thy judge to death.

Comates.

Me more than Daphnis the chaſte muſes love;
Two kids I offer'd in their laurel grove.

Lacon.

Me Phœbus loves, for him a ram I feed,
Which at the next Carnean feaſt ſhall bleed.

Comates.

Twin-bearing goats I milk; "Ah, hapleſs ſwain,
"Alcippe cries, doſt thou their udders drain?"

Lacon.

Full twenty preſſes I with cheeſe can fill,
And have a love-intrigue whene'er I will.

Comates.

Gay Cleariſta, when perchance we meet,
Pelts me with apples, and ſays ſomething ſweet.

Lacon.

Young Cratidas inſpires my heart to glow,
For down his comely neck the lovely treſſes flow.

Comates.

Can dog-briar, or anemonies that bloom
In hedges, match with roſes in perfume?

Lacon.

Can acorns crude, whoſe coat is rough and dry,
With the ſoft fruitage of the cheſnut vie?

Comates.

In yonder juniper there broods a dove,
The young, when fledg'd, I'll carry to my love.

Lacon.

Soft wool to weave a garment, if I live
To ſhear my ſheep, to Cratidas I'll give.

Comates.

Leave thoſe wild olives, kids, and feed below,
Where the rough tamariſks luxuriant grow.

Lacon.

Conarus, Cymy, leave thoſe oak-crown'd meads,
And paſture eaſtward, where the white ram feeds.

Comates.

A cypreſs pail is mine, and ſculptur'd bowl,
I'll keep them for the charmer of my ſoul.

Lacon.

This wolf-dog, to his flock and maſter true,
I'll give my boy, the wild beaſts to purſue.

Comates.

Ye prowling locuſts, that devour my fruits,
Touch not my vines, for tender are the ſhoots.

Ye grashoppers, how I this goatherd vex!
Thus you the reapers of the field perplex.
Comates.
I hate the brush-tail'd foxes, that by night
Steal Myco's grapes and then escape by flight.
Lacon.
I hate dull beetles, that devour for prey
Philonda's figs, then buzzing wheel away.
Comates.
Have you forgot, when once beneath my stroke,
You writh'd with pain, and ran to yonder oak?
Lacon.
Yes, faith! but when Eumara lash'd thee well,
And bound with thongs, I readily can tell.
Comates.
Morson, who's angry now?—Go, frantic swain,
Go, gather squills to calm your ruffled brain.
Lacon.
Morson, I've nettled somebody full sore—
Go, gather sowbread, and be mad no more.
Comates.
May Himera with milk, and Crathis flow,
With wine, and fruit on plants acquatic grow.
Lacon.
May Sybaris with honey streams distil,
And maids each morn their urns with honey fill.
Comates.
My goats on cytisus and wild oats browse,
And rest on arbutus and lentisck boughs.
Lacon.
With fragrant balm my sheep are daily fed,
And ivy mix'd with roses is their bed.
Comates.
Alcippe charms not, though I sent a dove,
She neither press'd my ears, nor kiss'd me for my love.
Lacon.
I love with warmest ardour young Eumede,
Who gave me kisses for a pastoral reed.
Comates.
Can pies contend with nightingales? the owl
With swans? but you love discord at your soul.
Morson.
Cease, Lacon, cease thy song; for I decree
The lamb, Comates, as thy due to thee:
Go, to the nymphs the welcome offering make,
And let thy Morson of the feast partake.
Comates.
By mighty Pan, thou shalt, auspicious boy;
See how my goats leap wantonly for joy!
I too will leap, victorious as I am,
And laugh at Lacon, since I've gain'd the lamb.
Rejoice, my kids, for in the cooling wave
Of Sybaris to-morrow ye shall lave.
You butting, wanton goat I must forbid,
Till I have sacrific'd, to touch a kid—
What, ruttish still:—your courage I'll abate,
Or may I suffer poor Melanthius' fate.

NOTES ON IDYLLIUM V.

Ver. 1. Sybaris was once a powerful city of Calabria near Croton, in the bay of Tarentum; the inhabitants were so much addicted to pleasure and effeminacy, that their luxury became a proverb.

Ver. 5.
——aut unquam tibi fistula cerâ
Juncta fuit? non tu in triviis, indocte, solebas
Stridenti miserum stipulâ disperdere carmen?
Virg. Ecl. 3. 25.

Ver. 8. The Greek is καλαμὰς αυλου ποσσυνδεν ἐχοντι, the word ποσσυνδεν seems very expressive of the mean idea Comates had of the shepherd's piping.—Milton had both Theocritus and Virgil in view.

——————Their lean and flashy songs
Grate on their scrannel pipes of wretched straw.
Lycidas.

Ver. 9.
——Damœtas dono mihi quam dedit olim.
Ecl. 2. 37.

Ver. 12. The ancients used to sleep on various sorts of skins; thus in Homer, Iliad 10., speaking of Diomed,

Κυδ', υπο δ' ἑρσητο ρινων βοος αγραυλοιο.

A bull's black hide compos'd the hero's bed;
A splendid carpet roll'd beneath his head. *Pope.*

Trans. II.

Ver. 20. The Greek is ες Κραθίν, into Crathis the name of a river near Sybaris.

Ver. 25. This is a proverb that seems to have taken its rise from the following circumstance: Hercules, on his arrival at Dios, a city of Macedonia, saw several people coming out of a temple; and being himself desirous to enter and worship, he inquired to whom it belonged: and being informed it was dedicated to Adonis, he answered, νδεν ιερον, nothing is sacred: for Adonis being no deity, he did not think him deserving of any honour or worship; by which seems to be meant, things that make a show of something great and sacred, but in reality are nothing but sorry and ridiculous trifles. *Potter.*

Ver. 27. Τς ποτ' Αδωναιδν ιριν ηρισεν, an adage that is used, when ignorant people put themselves in competition with men of learning.

Ver. 32. ——Τις κακαν κυνα δηλεσ' αμελγειν.

Virgil has,
——————Idem jungat vulpes & mulgeat hircos.
Ecl. 3. 91.

Ver. 40.
Hic gelidi fontes, hic mollia prata, Lycori;
Hic nemus. *Ecl.* 10. 42.

Ver. 42.
——Resonant arbusta cicadis. *Ecl.* 2. 13.

Ver. 48. There was a necessity in this place to

omit tranſlating four lines in the original, which are infinitely too indelicate for modeſt ears.

Ver. 50.
Efficiam poſthàc ne quenquam voce laceſſas.
Ecl. 3. 51.

Ver 51. The Greek is,
Τεῖο δρυες, ὠδὶ κυπειρος,
Ὠδὶ καλον βομβευντι τεῖι σμαιησι μιλισσαι.

Which occurs in the firſt Idyllium. See ver. 136.

Ver. 52.
Eque ſacrà reſonant examina quercu. *Ecl.* 7. 13.

Ver. 56. The Greek word is, κωνυς; Virgil has Strata jacent paſſim ſua quæque ſub arbore poma.
Ecl. 7. 54.

Ver. 58. The Greek is, υπνω μαλακωτερα. We find the ſame expreſſion in the fifteenth Idyl. ver. 125, in the Greek.

Πορφυρεοι δε ταπητες ανω, μαλακωτεροι ὑπνω.

Virgil has, ſomno mollior herba. *Ecl.* 7. 45.

Softer than ſleep, ſeems full as proper a figure as *downy ſleep*, which is frequently uſed by modern poets.

Ver. 62.
Pocula bina novo ſpumantia lacte quotannis,
Craterasque duos ſtatuam tibi pinguis olivi.
Ecl. 5. 67.

Ver. 64. See the note on ver. 22. Idyl. III.
The Greek is, γλαχων, which an eminent botaniſt informs me is the *horned poppy*.

Ver. 69.
Nunquam hodiè effugies; veniam quocunque vocaris. *Ecl.* 3.

Ver. 77.
————Ocyus, inquit,
Hunc ades, ô Melibœe. *Ecl.* 7. 8.

Ver. 87.
Quin age ſi quid habes, &c. *Ecl.* 7. 52.

Ver. 89. Theocritus, as well as Virgil, lays it down as an indiſpenſible rule to himſelf, in theſe Amœbæan verſes, to make the reſpondent ſhepherd anſwer his opponent in exactly the ſame number of lines: which muſt be allowed to be extremely difficult in a tranſlation: how I have ſucceeded, muſt be left to the determination of the candid reader, who, it is hoped, will make proper allowances for ſuch a conſtraint.

Ver. 91.
Et me Phœbus amat. *Ecl.* 3. 62.

Ver. 92. This was a feſtival obſerved in moſt of the cities of Greece, in honour of Apollo, ſurnamed Carneus, from one Carnus an Arcanian, who was inſtructed by this god in the art of divination, but afterwards murdered by the Dorians; this fact Apollo revenged upon them by a dreadful plague, to avert which, they inſtituted this feſtival. See *Potter's Ant.*

Ver. 97.
Malo me Galatea petit, laſciva puella. *Ecl.* 3. 64.

Ver. 99.
At mihi ſeſe offert ultro meus ignis Amyntas.
Ecl. 3. 66.

Ver. 100. Long hair was peculiar to the Lacedemonians; they looked upon it as the emblem of liberty, and thoſe who wore it as incapable of committing any illiberal action.

Ver 105.
Parta mæe Veneri ſunt munera; namque notavi
Ipſe locum, aëriæ quo congreſſere palumbes.
Ecl. 3. 68.

Ver. 110. See Idyl. I. ver. 16.
Ver. 122. See note of Idyl. I. ver. 56.
Ver. 133. Ovid has a ſimilar paſſage, Met. B. 1. ver. 111.
Flumina jam lactis, jam flumina nectaris ibant.

Ver. 134. The Greek is, σια. which my botanic friend takes to be *water-parſnips*.

Ver. 135.
Mella fluant illi, ferat et rubus aſper amomum.
Ecl. 3.

Ver. 137.
Florentem cytiſum ſequitur laſciva capella.
Ecl. 2. 64.

Ver. 138. The Greek is, σχινος, the tree that produces maſtich.
Ver. 142. There was a particular ſort of kiſs, which is called by Suidas χυλικον, the pot, when they took the perſon, like a pot, by both his ears; it is mentioned by Tibullus,

————Natuſque parenti
Oſcula comprenſis auribus eripiet. *B.* 2. *Eleg.* 5.

Ver 145.
Certent et cycnis ululæ. *Ecl.* 8. 55.

Ver. 155.
Ipſe, ubi tempus erit, omnes in fonte lavabo.
Ecl. 3. 97.

Ver. 160. The fate of Melanthius, one of the ſuitors of Penelope, is thus deſcribed by Homer. See his Odyſſey, B. 22. as tranſlated by Mr. Pope.

Then forth they led Melanthius, and began
Their bloody work: they lopp'd away the man,
Morſel for dogs! then trimm'd with brazen ſheers
The wretch, and ſhorten'd of his noſe and ears;
His hands and feet next felt the cruel ſteel:
He roar'd, and torments gave his ſoul to hell.

IDYLLIUM VI.

THE HERDSMEN.

THE ARGUMENT.

DAMOETAS and Daphnis drive their herds together into one place, and ſing alternately the paſſion of Polyphemus for Galatæa. Daphnis begins firſt, and addreſſes himſelf to Damœtas as to the Cyclops; Damœtas anſwers him, as in the perſon of Polyphemus. Galatea's love is deſcribed from her wanton actions, and Polyphemus's obduracy from his neglect of the ſea-nymph. This Idyllium is inſcribed to Aratus, who was the friend of Theocritus, and ſuppoſed to be the author of an aſtronomical poem, called Arati Phœnomena.

DAMOETUS and young Daphnis, tuneful ſwains,
Late fed their herds, Aratus, on the plains;
The firſt was ruddy with a golden beard;
On Daphnis' cheek ſcarce doubtful down appear'd.
Faſt by the margin of a murmuring ſpring,
'Midſt noon-tide heat, they thus eſſay'd to ſing.
And, while their cattle ſought the cooling wave,
Firſt Daphnis ſung, for he the challenge gave.

Daphnis.

O Polyphemus, while your flocks you keep,
With apples Galatea pelts your ſheep.
And calls you goatherd, and ungrateful ſwain;
Meanwhile you pipe in ſweetly warbled ſtrain,
Nor ſee the wild nymph, ſenſeleſs as a log;
And lo! again ſhe pelts your faithful dog;
Liſt! liſt! he barks, and in a ſtrange amaze
His dancing ſhadow in the ſea ſurveys;
Ah! call him back, leſt on the maid he leap,
And tear her limbs emerging from the deep.
Lo! where ſhe wantons, frolic light, and fair,
As down of bearsfoot in ſoft ſummer air;
And ſtill impell'd by ſtrange capricious fate,
Flies thoſe that love, and follows thoſe that hate.
In vain the blandiſhments of love ſhe plies,
For faults are beauties in a lover's eyes.
Thus Daphnis ſung, Damœtas thus reply'd:

Damœtas.

By mighty Pan, the wily nymph I ſpy'd
Pelting my flock, I ſaw with this one eye—
May heaven preſerve its luſtre till I die:
Though Telemus preſages ills to come;
Let him reſerve them for his ſons at home.
To teaze, I ſeem regardleſs of her game,
And drop ſome items of another flame:
Soon to her ears the ſpreading rumour flies,
For envy then and jealouſy ſhe dies:
And furious, riſing from her azure waves,
She ſearches all my folds and all my caves:
And then my dog, obedient to command,
Barks as ſhe walks, and bays her off the ſtrand:
For when I lov'd, he wagg'd his tail with glee,
Fawn'd, whin'd, and loll'd his head upon her knee
This practice ſhortly will ſucceſsful prove,
She'll ſurely ſend me tidings of her love.
But I'll exclude this ſea-jilt, till ſhe ſwears
To preſs with me the bed herſelf prepares.
Nor am I ſo deform'd, for late I ſtood,
And view'd my face in ocean's tranquil flood;
My beard ſeem'd fair, and comely to the ſight;
My eye, though ſingle, ſparkling, full, and bright:
My teeth array'd in beauteous order ſhone,
Well-match'd, and whiter than the Parian ſtone.
And leſt enchantment ſhould my limbs infeſt,
I three times dropt my ſpittle on my breaſt;
This charm I learnt from an old ſorcereſs' tongue,
Who harveſt-home at Hipocoon's ſung.
Damœtas ended, and with eager joy
Daphnis embrac'd, and kiſs'd the blooming boy;
Then gave, as beſt his ſprightly taſte might ſuit,
A pipe melodious, and receiv'd a flute.
Damœtas deftly on the flute could play,
And Daphnis ſweetly pip'd, and caroll'd to his lay:
Their heifers gambol'd on the graſs green fields;
In ſinging neither conquers, neither yields.

NOTES ON IDYLLIUM VI.

Ver. 1.
Compulerantque gregis Corydon et Thyrſis in unam. *Virg. Ecl.* 7. 2.

Ver. 10. See Idyl. V. ver. 97.

Ver. 12.
——Tu, Tityre, lentus in umbrâ
Formoſam reſonare doces Amaryllida ſylvas. *Ecl.* 1. 4.

Ver. 20. Ἀκανθα; see Martyn's note on Geor. B. 4. 123.

Ver. 22. Horace has a passage similar to this,

———Meus est amor huic similis, nam
Transvolat in medio posita, et fugientia captat.
B. 1. *Sat.* 2.

Ver. 29. Polyphemus, in the 9th Book of Homer's Odyssey, gives an account of Telemus, which I beg leave to lay before the reader in Mr. Pope's translation, ver. 593.

Th' astonish'd savage with a roar replies:
Oh heav'ns! oh faith of ancient prophecies!
This Telemus Eurymedes foretold,
(The mighty seer, who on these hills grew old;
Skill'd the dark fate of mortals to declare,
And learn'd in all wing'd omens of the air)
Long since he menac'd, such was fate's command;
And nam'd Ulysses as the destin'd hand.

Ver. 30.
Dii capiti ipsius generique reservent.
Æn. B. 8. 484.

Ver. 39. Horace, speaking of Cerberus fawning upon Bacchus, expresses himself almost in the same words,

———Leniter atterens
Caudam, et recedentis trilingui
Ore pedes, tetigitque crura. *B.* 2. *Od.* 19.

Ver. 45. Nothing can be better fancied than to make this enormous son of Neptune use the sea for his looking glass; but is Virgil so happy when his little landmen says,

Non sum adeo in ormis: nuper me in littore vidi,
Cum placidum ventis staret mare? *Ecl.* 2. 25.

His wonderful judgment for once deserted him, or he might have retained the sentiment with a slight change in the application.

Hurd's Letter on the Marks of Imitation.

Ovid also imitates this passage in his Metam. B. 13. ver. 840.

Certé ego me novi, liquidæque in imagine vidi
Nuper aquæ: placuitque mihi mea forma videnti.

Ver. 50. Horace has,

———Glyceræ nitor
Splendentis Pario marmore purius. *B.* 1. *Od.* 19.

Ver. 52. The ancients imagined that spitting in their bosoms three times (which was a sacred number, see note on Idyl. II. ver. 51.) would prevent fascination.

Ver. 53. The Greek is α γραια κοτυττειρις, which all the interpreters have taken for a proper name, whereas it undoubtedly signifies an enchantress or sorceress; for Horace calls the magical arts, which Canidia makes use of, Cotyttia. See Canidia's answer.

Inultus ut tu riseris Cotyttia
Vulgata, sacrum liberi Cupidinis?

Safely shalt thou Cotytto's rites
Divulge, and lawless love's delights? *Duncombe.*

Cotys, as Dacier observes, was the goddess that presided over enchantments and all the abominations that were practised in Greece and Thrace. See Juvenal, Sat. 2. ver. 91.

Ver. 54. This verse occurs, Idyl. X. ver. 16.

Ver. 59.
Tu calamos inflare leves, ego dicere versus.
Ecl. 5. 2.

Ver. 61. Horace has the same thought,

Ludit herboso pecus omne campo, &c. *B.* 3. *Od.* 18.

In pastures all the cattle sport,
Soon as returns thy hallow'd day;
To meads the vacant hinds resort,
And, round th' unharness'd oxen play.
Duncombe.

IDYLLIUM VII.

THALYSIA; OR, THE VERNAL VOYAGE.

THE ARGUMENT.

This is a narration of a journey which Theocritus, along with two friends, took to Alexandria; as they are travelling, they happen to meet with the goatherd Lycidas, with whom they join company, and entertain each other with singing. Our poet had contracted a friendship, in the isle of Cos, with Prasidamus and Antigenes, who invited him into the country to celebrate the feast of Ceres. The Thalysia was a sacrifice offered by husbandmen, after harvest, in gratitude to the gods, by whose blessing they enjoyed the fruits of the earth.

When Eucritus and I, with one consent,
Join'd by Amyntas, from the city went,
And in our progress, meditating flow,
March'd where the waters of Halenta flow:
Antigenes and Phrasidamus, names
Renown'd afar, for each bright honour claims,
The sons of Lycopéus, at the shrine
Of fruitful Ceres offer'd rites divine:
In their rich veins the blood divinely roll'd
Of Clytia virtuous, and of Chalcon bold;
Chalcon, supreme of Cos, at whose command
The Burine fountain flow'd, and fertiliz'd the land;

Near it tall elms their amorous arms enwove
With poplars pale, and form'd a shady grove.
Scarce had we measur'd half our destin'd way,
Nor could the tomb of Brasilus survey;
When travelling on the road we chanc'd to meet
The tuneful goatherd, Lycidas of Crete;
His very looks confest his trade; you'd swear
The man a goatherd by his gait and air:
His shoulders broad a goatskin white array'd,
Shaggy and rough, which smelt as newly flay'd;
A threadbare mantle wrapt his breast around,
Which with a wide-wove surcingle he bound:
In his right hand, of rough wild olive made,
A rustic crook his steps securely stay'd;
A smile serenely cheer'd his gentle look,
And thus with pleasure in his eye he spoke:
'Whither, Simichidas, so fast away,
'Now when meridian beams inflame the day?
'Now when green lizards on the hedges lie,
'And crested larks forsake the fervid sky.
'Say, does the proffer'd feast your haste excite,
'Or to the wine-press some old friend invite?
'For such your speed, the pebbles on the ground,
'Dash'd by your clogs, at every step resound!'
Then I; "Dear Lycidas, so sweet your strains,
"You shame the reapers and the shepherd swains;
"Your pipe's sam'd numbers, though they please
" me well,
"Hope spurs me on to rival, or excel:
"We go great Ceres' festival to share;
"Our honour'd friends the sacred rites prepare:
"To her they bring the first fruit of their store,
"For with abundance she has blest their floor.
"But since, my friend, we steer one common way,
"And share the common blessings of the day,
"Let us as thus we gently pace along,
"Divert the journey with bucolic song.
"Me the fond swains have honour'd from my
" youth,
"And call the muses' most melodious mouth;
"They strive my ears incredulous to catch
"With praise in vain; for I, who ne'er can match
"Sicelidas, or sweet Philetas' song,
"Croak like a frog the grashopper's among."
Thus with alluring words I sooth'd the man,
And thus the goatherd with a smile began:
'Accept this crook, small token of my love,
'For sure you draw your origin from Jove!
'I scorn the builder, who, to show his skill,
'Rears walls to match Oromedon's proud hill;
'Nor do those poets merit more regard
'Who dare to emulate the Chian bard.
'Since songs are grateful to the shepherd swain,
'Let each rehearse some sweet bucolic strain;
'I'll sing those lays (and may the numbers please)
'Which late last spring I labour'd at my ease.'
" Oh may Agenax, with prosperous gale,
To Mitylene, the pride of Lesbos, sail!
Though now the south winds the vext ocean sweep,
And stern Orion walks upon the deep;'
So will he sooth those love-consuming pains
That burn my breast and glow within my veins.
May Halcyons smooth the waves, and calm the
seas,
And the rough south-east sink into a breeze;
Halcyons, of all the birds that haunt the main,
Most lov'd and honour'd by the Nereid train.
May all things smile propitious while he sails!
To the wish'd port convey him safe, ye gales!
Then shall my brows with violets be crown'd,
Or dill sweet smelling, or with roses bound:
Before the hearth I'll quaff the Ptelean bowl;
Parch'd beans shall stimulate my thirsty soul:
High as my arms the flowery couch shall swell
Of sleabane, parsley, and sweet asphodel.
Mindful of dear Ageanax, I'll drink,
Till to the lees the rosy bowl I sink.
Two shepherds sweetly on the pipe shall play,
And Tityrus exalt the vocal lay:
Shall sing how Daphnis the coy damsel lov'd,
And, her pursuing, o'er the mountains rov'd;
How the rough oaks bewail'd his fate, that grow
Where Himera's meandring waters flow;
While he still urg'd o'er Rhodope his flight,
O'er Hæmus, Caucasus, or Atho's height,
And like the snow that on their tops appears,
Dissolv'd in love, as that dissolves in tears.
Next he shall sing the much enduring hind
By his harsh lord in cedar chest confin'd;
And how the honey bees, from roseat bowers,
Sustain'd him with the quintessence of flowers;
For on his lips the muse her balm distill'd,
And his sweet mouth with sweetest nectar fill'd.
O blest Comatas! nobly hast thou sped,
Confin'd all spring, to be with honey fed!
O had'st thou liv'd in these auspicious days!
I'd drive thy goats on breezy hills to graze,
While thou should'st under oaken shades recline,
Or sweetly chant beneath the verdant pine."
He sung—and thus I answer'd: 'Friendly swain,
'Far other numbers me the wood nymph train
'Taught, when my herds along the hills I drove,
'Whose fame, perchance, has reach'd the throne
'of Jove.
'Yet, for thy sake, the choicest will I choose;
'Then lend an ear, thou darling of the muse!'
" On me bland Cupids sneez'd, who Myrto love
Dearly, as kids the spring-embellish'd grove:
Aratus too, whose friendship is my joy,
Aratus fondly loves the beauteous boy:
And well Aristis, to the muses dear,
Whose lyre Apollo would vouchsafe to hear,
And well Aristis knows, renown'd for truth,
How fond Aratus loves the blooming youth.
O Pan! whose Omole's fair mountain charms,
Place him, uncall'd, in dear Aratus' arms!
Whether Philinus, or some softer name;
Then may Arcadian youths no longer maim,
With scaly squills, thy shoulders or thy side,
When in the chase no venison is supply'd.
But may'st thou, if thou dar'st my boon deny,
Torn by fell claws, on beds of nettles lie,
All the cold winter freeze beneath the pole
Where Hebrus' waves down Edon's mountains roll;
In summer, glow in Ethiopia's fires,
Where under Blemyan rocks scorch'd Nile retires.
Leave, O ye loves, whose cheeks out-blush the rose!
The meads where Hyetis and Byblis flows,
To fair Dione's sacred hill remove,
And bid the coy Philinus glow with love.

Though as a pear he's ripe, the women ſay,
Thy bloom, alas! Philinus, fades away!
No more, Aratus, let us watch ſo late,
Nor nightly ſerenade before his gate:
But in this ſchool let ſome unmeaning ſot [his lot.
Toil when the firſt cock crows, and hanging be
Reſt be our portion! and, with potent charm,
May ſome enchantreſs keep us free from harm!"
I ſung: he view'd me with a ſmiling look;
And for my ſong preſented me his crook:
Then to the left he turn'd, through flowery meads,
The winding path-way that to Pyxa leads;
While with my friends I took the right-hand road
Where Phraſidamus makes his ſweet abode;
Who courteous bade us on ſoft beds recline
Of lentiſk, and young branches of the vine;
Poplars and elms above, their foliage ſpread,
Lent a cool ſhade, and wav'd the breezy head;
Below, a ſtream, from the nymphs ſacred cave,
In free meanders led its murmuring wave:
In the warm ſun-beams, verdant ſhrubs among,
Shrill graſhoppers renew'd their plaintive ſong:
At diſtance far, conceal'd in ſhades, alone,
Sweet Philomela pour'd her tuneful moan:
The lark, the goldfinch warbled lays of love,
And ſweetly penſive coo'd the turtle dove:
While honey-bees, for ever on the wing, [ſpring.
Hum'm'd round the flowers, or ſipt the ſilver
The rich, ripe ſeaſon gratify'd the ſenſe
With ſummer's ſweets, and autumn's redolence.
Apples and pears lay ſtrew'd in heaps around,
And the plum's loaded branches kiſs'd the ground.
Wine flow'd abundant from capacious tuns,
Matur'd divinely by four ſummers ſuns,
Say, nymphs of Caſtaly! for ye can tell,
Who on the ſummit of Parnaſſus dwell,
Did Chiron e'er to Hercules produce
In Pholus' cave ſuch bowls of generous juice?
Did Polypheme, who from the mountain's ſteep
Hurl'd rocks at veſſels ſailing on the deep,
E'er drain the goblet with ſuch nectar crown'd,
Nectar that nimbly made the Cyclops bound,
As then, ye nymphs! at Ceres' holy ſhrine
Ye mix'd the milk, the honey, and the wine.
O may I prove once more that happy man
In her large heaps to fix the purging fan!
And may the goddeſs ſmile ſerene and bland,
While ears of corn, and poppies grace her hand.

NOTES ON IDYLLIUM VII.

THIS idyllium is called ΘΑΛΥΣΙΑ, ἡ ΕΑΡΙΝΗ ΟΔΟΙΠΟΡΙΑ, which has always been tranſlated Thalyſia; or, the Vernal Journey, but certainly very abſurdly, as it implies a contradiction, the Thalyſia being celebreted in autumn. Heinſius has proved, that ὁδοιπορία ſignifies ὁ πλοῦς, a navigation or voyage, this poem, therefore, may be ſtyled the Vernal Voyage of Ageanax. It is well known that the ancients undertook no voyages but in the ſpring or autumn; the vernal navigation was called ταρινὴ, and the other θερινὴ; Lycidas, therefore, the preceding ſpring, had compoſed a poem on the vernal voyage of his friend, which, as they are travelling on the road, he repeats: It contains the moſt ardent wiſhes and vows for his ſafety, and ſeems to have given Horace the hint for his third Ode of the firſt book, on Virgil's voyage.

Ver. 10. The Scholiaſt ſays, that Clytia was the daughter of Merops, and married to Eurypilus, king of the Coans, who was contemporary with Hercules; ſhe was the mother of Chalcon. Homer mentions Eurypilus as king of Cos;

Cos, where Eurypilus poſſeſt the ſway
Till great Alcides made the realms obey.
Pope's Il. B. 1.

Ver. 13.
——Hic candida populus antro
Imminet, et lentæ texunt umbracula vites.
Ecl. 9. 41.

Here, o'er the grotto, the pale poplar weaves
With bluſhing vines, a canopy of leaves. *Warton.*

Ver. 15.
Hinc adeo media eſt nobis via: namque ſepulchrum
Incipit apparere Bianoris. *Ecl.* 9. 59.

Ancient tombs were uſually placed by the road ſide; hence the expreſſion *ſiſte viator*, which is abſurdly introduced into modern epitaphs not placed in ſuch ſituations.

Ver. 29.
Quo te, Mœri, pedes? an, quo via ducit, in urbem?
Ecl. 9. 1.

The grammarians have puzzled themſelves to find out who this Simichidas was: it is ſtrange they did not recollect a paſſage of Theocritus, in his poem called the Syrinx, where he claims this appellation to himſelf:

Ω, τόδε τυφλοφορῶν ἐρατὸν
Παμα Παρι, θέτο Σιμιχίδας
Ψυχαν. *Cui (Pani) hunc peras-portantium amabilem theſaurum Paris poſuit Simichidas animo;* where, in a myſtical manner, he confeſſes Simichidas and Theocritus to be the ſame perſon: Paris and Theocritus are the ſame; for Paris, when he was made judge of the beauty of the three goddeſſes, was Theocritus, that is, Θεων Κριτης: Thus Paris metaleptically is taken for Theocritus. *Heinſius.*

Ver. 31. The green lizard is very common in Italy; it is larger than our common eft, or ſwift: this circumſtance ſtrongly marks the time of the day. ——Virgil imitates the paſſage,

Nunc virides etiam occultant ſpineta lacertos.
Ecl. 2. 8.

Ver. 36. The Greek is ἀρβυλίδεσσιν: ἀρβύλη was a kind of wooden ſhoe armed with iron nails, peculiar to the Bœotians, with which they uſed to tread the grapes in the wine-preſs.

Ver. 44.

——Neque illum
Flava Ceres alto necquicquam ſpectat Olympo.
Geor. B. 1. 95.

Ver. 47.

Cantantes licet uſque, minus via lædet, eamus.
Ecl. 9. 64.

Ver. 49.

——Et me fecere poetam
Pierides: ſunt et mihi carmina: me quoque dicunt
Vatem paſtores, ſed non ego credulus illis.
Ecl. 9. 64.

Ver. 52. Virgil follows very cloſe;

Nam neque adhuc Varo videor, nec dicere Cinnâ
Digna, ſed argutos inter ſtrepere anſer olores.
Ecl. 9. 35.

Ver. 53. That is, Aſclepiades, the ſon of Sicelidas; the father's name is put for the ſon's: he was a Samian poet, a writer of epigrams. Philetas was of Cos. Both theſe are mentioned in that beautiful Idyllium which Moſchus wrote on the death of Bion; indeed this mention is in the ſix verſes which were wanting in the ancient editions of that poet, and which are ſuppoſed to have been ſupplied by Marcus Muſurus of Crete; though Scaliger affirms that they were written by Moſchus:

Sicelidas, the Samian ſhepherd ſweet,
And Lycidas, the blitheſt bard of Crete,
Whoſe ſprightly looks erſt ſpoke their hearts elate,
Now ſorrowing mourn thy ſad untimely fate;
Mourns too, Philetas' elegiac muſe. *F. F.*

Ver. 57.

At tu ſume pedum. *Ecl.* 5. 88.

Ver. 60. This was the name of a mountain in the iſland of Cos, which ſeems to have taken its appellation from a giant who was ſlain and buried there. Propertius mentions Oromedon as one of the giants who waged war againſt the gods;

——Canam cœloque minantem
Cœum, & Phlegræis Oromedonta jugis. *B.* 3. *El.* 8.

Oromedon on Phlegra's heights I'll ſing,
And Cœus threatening heaven's eternal king.

Ver. 61. The literal ſenſe of the original, is, as Heinſius obſerves: "And thoſe birds, or cocks of the muſes (poets), that pretend to rival the Chian cock or bard (Homer), ſtrive to no purpoſe:" for the word ἀηδὼν and ἀοιδὸς means the ſame thing: Theocritus calls Homer the Chian bard or cock, in the ſame manner as Horace ſtyles Varius the cock of the Mæonian ſong, or the prince of Epic poetry:

Scriberis Vario fortis, & hoſtium
Victor Mæonii carminis alite. *B.* 1. *Ode* 6.

This paſſage of Theocritus might, perhaps, be thus tranſlated:

Nor do thoſe muſe-cocks merit more regard,
Who crow defiance to the Chian bard.

Ver. 65.

Imo hæc, in viridi nuper quæ cortice fagi
Carmina deſcripſi, & modulans alterna notavi,
Experiar. *Ecl.* 5. 13.

Ver. 66. The Greek is ἐν ὄρεϊ, in a mountain; inſtead of which, Heinſius rightly reads ἐν ὥρῃ, in the ſpring; for ὥρα ſometimes ſignifies τὸ ἔαρ, the ſpring.

Ver. 70.

——Quam magnus Orion,
Cum pedes incedit medii per maxima Nerei
Stagna, viam ſcindens, humero ſupereminet undas.
Æn. 10. 763.

So through mid-ocean when Orion ſtrides,
His bulk enormous tow'rs above the tides. *Pitt.*

Mr. Warton obſerves, that Virgil has not borrowed this thought from Homer: but he does not ſeem to have taken it from Theocritus.

Ver. 73. The fable of Ceyx and his wife Halcyone being turned into birds, is beautifully related in the eleventh book of Ovid's Metamorph. The mutual love of theſe perſons ſubſiſted after their change; in honour of which the gods are ſaid to have ordained, that while they ſit on their neſt, which floats on the ſea, there ſhould be no ſtorm;

——Alcyone compreſt,
Seven days ſits brooding on her floating neſt,
A wintery queen: her ſire at length is kind,
Calms every ſtorm, and huſhes every wind;
Prepares his empire for his daughter's eaſe,
And for his hatching nephews ſmoothes the ſeas.
Dryden

Ver. 81.

Ante focum, ſi frigus erit; ſi meſſis, in umbrâ;
Vina novum fundam calathis arviſia nectar.
Ecl. 5. 70.

In winter ſhall the genial feaſt be made
Before the fire; by ſummer in the ſhade. *Dryden.*

The ancients held three things requiſite towards indulging their genius, namely, a good fire, wine, and muſic: Lycidas promiſes himſelf theſe three bleſſings, if Ageanax is favoured with a proſperous voyage. *Heinſius.*

Ver. 84. See note on Idyl. 4. 34. Aſphodel; or the day-lily: Aſphodels were by the ancients planted near burying places, in order to ſupply the manes of the dead with nouriſhment. *Johnſon's Dict.*

By thoſe happy ſouls who dwell
In yellow meads of aſphodel. *Pope's St. Cecilia.*

Ver. 86. At entertainments, when they drank healths, it was uſual to drain the veſſel they drank out of as far as the ſediment: thus Horace, B. 3. Ode 15, addreſſing himſelf to an ancient lady, ſays, it did not become her to empty the veſſel of wine to the lees; *nec poti vetulam fæce tenus cadi.*

Ver. 87.

Cantabunt mihi Damœtas, & Lyctius Ægon.
Ecl. 5. 72.

Ver. 89. The Greek is, Ξένεας, and commonly underſtood as a proper name, but Heinſius obſerves, that it is here only appellative, and ſignifies a certain damſel; as ξένος Ἀθηναῖος is *Athenienſis quidam*, a certain Athenian: the miſtreſs of Daphnis was named Echenais. See note on Idyl. 1. 107.

Ver. 91.

Illum etiam lauri, illum etiam flevere myricæ.
Ecl. 10.

Ver. 92. See note on Idyl. 1. 71.

Ver. 93. Virgil imitates this paſſage twice:

Aut Tmarus, aut Rhodope, aut extremi Garamantes. *Ecl.* 8. 44.

Aut Atho, aut Rhodopen, aut alta Ceraunia. *Geor.* 1. 332.

The disjunctive particle *aut*, in each verſe, is thrice repeated agreeable to Theocritus,

Ἢ Ἄθω, ἢ Ῥοδόπαν, ἢ Καυκάσων.

Ver. 105.

Atque utinam ex vobis unus, veſtrique fuiſſem
Aut cuſtos gregis, &c. *Ecl.* 10. 35.

Ver. 115. Some ſneezes were reckoned profitable, others prejudicial: Cauſabon obſerves, that ſneezing was a diſeaſe, or at leaſt a ſymptom of ſome infirmity: and therefore, when any one ſneezed, it was uſual to ſay, Ζηθι. *May you live*; or Ζευ σωσον, *God bleſs you*. See Potter's Antiq. ch. 17.

Ver. 117. Suppoſed to be the author of the Phænomena.

Ver. 123. A mountain of Theſſaly, near Othrys, the ſeat of the Centaurs. See Virg. Æn. B. 7. 674.

Ver. 126. It was uſual for the ancient heathens to treat the images of their gods well or ill, juſt as they fancied they had been uſed by them: in like manner the modern Indians chaſtiſe their idols with ſcourges whenever any calamity befals them. There is a paſſage in Anacreon, Ode 10. where a ruſtic thus addreſſes a little waxen image of Cupid:

This inſtant, love, my breaſt inſpire,
There kindle all thy gentle fire;
But, if thou fail'ſt to favour me,
I ſwear I'll make a fire of thee. *F. F.*

Pan had a feſtival in Arcadia, the country he chiefly delighted in, at which the Arcadians, if they miſſed of their prey in hunting, in anger at the god whom they reputed the preſident of that ſport, uſed to beat his ſtatue with ſquills, or ſea-onions. *Potter's Ant.* ch. 20.

Ver. 131.

Nec ſi frigoribus mediis Hebrumque bibamus,
Sithoniaſque nives hiemis ſubeamus aquoſæ:
Nec ſi, cum moriens altâ liber aret in ulmo,
Ethiopum verſemus oves ſub ſidere Cancri.
Ecl. 10. 65.

Thus alſo Horace, B. 1. Ode 22. "Pone me pigris," &c.

Place me where no ſoft ſummer gale
Among the quivering branches ſighs,
Where clouds, condens'd, for ever veil
With horrid gloom the frowning ſkies:

Place me beneath the burning zone,
A clime deny'd to human race;
My flame for Lalagé I'll own;
Her voice and ſmiles my ſong ſhall grace.
Duncombe.

Ver. 132. A river, and mountain of Thrace.

Ver. 140. Thus Anacreon, Ode 11th. Ἀεὶ γυναῖκες.

Oft, with wanton ſmiles and jeers,
Women tell me I'm in years.

Ver. 150. This is ſuppoſed to be a city in the iſland of Cos

Ver. 154. See Idyl. 5. 138.

Ver. 160. I am aware, that the Greek word, τεττιξ, and the Latin *cicadia*, means a different inſect from our graſhopper; for it has a rounder and ſhorter body, is of a dark green colour, ſits upon trees, and makes a noiſe five times louder than our graſhopper: it begins its ſong as ſoon as the ſun grows hot, and continues ſinging till it ſets: its wings are beautiful, being ſtreaked with ſilver, and marked with brown ſpots; the outer wings are twice as long as the inner, and more variegated; yet, after the example of Mr. Pope, (ſee Iliad 3. ver. 200.) I retain the uſual term.

Ver. 164.

Nec gemere aëriâ ceſſabit turtur ab ulmo.
Ecl. 1. 59.

Ver. 167.

——Tuis hic omnia plena
Muneribus; tibi pampineo gravidus autumno
Floret ager; ſpumat plenis vindemia labris.
Geor. 2. 5.

Here all the riches of thy reign abound;
Each field replete with bluſhing autumn glows,
And in deep tides for thee the foaming vintage flows.
Warton.

Ver. 172. Horace has, "quadrimum merum."
B. 1. *Ode* 9.

Ver. 175. Two centaurs: Chiron is ſaid to have taught Æſculapius phyſic, Apollo muſic, and Hercules aſtronomy, and was tutor to Achilles.

Ver. 178.

A larger rock then heaving from the plain,
He whirl'd it round; it ſung acroſs the main;
It fell and bruſh'd the ſtern; the billows roar,
Shake at the weight, and refluent beat the ſhore.
Pope's Odyſſ. B. 9.

Ver. 180. Horace ſeems to allude to this,

Paſtorem ſaltaret uti Cyclopa rogabat.
B. 1. *Sat.* 5.

Ver. 182.

Cui tu lacte favos, et miti dilue Baccho.
Geor. B. 1. 344.

Mix honey ſweet, with milk and mellow wine.
Warton.

IDYLLIUM VIII.

THE BUCOLIC SINGERS.

THE ARGUMENT.

A conteſt in ſinging, between the ſhepherd Menalcas and the neatherd Daphnis, is related; a goat-herd is choſen judge; they ſtake down their paſtoral pipes as the reward of victory; the prize is decreed to Daphnis. In this Idyllium, as in the fifth, the ſecond ſpeaker ſeems to follow the turn of thought uſed by the firſt. Dr. Spence obſerves, there are perſons in Italy, and particularly in Tuſcany, named *Improviſatori*, who are like the ſhepherds in Theocritus, ſurpriſingly ready at their anſwers, *reſpondere parati*, and go on ſpeech for ſpeech alternately, *alternis dicetis, amant alterna camenæ*. This Idyllium is addreſſed to his friend Diophantus.

Daphnis, Menalcas, Goatherd.

DEAR Diophantus, ſome few days ago,
Menalcas, on the mountain's breezy brow,
By chance met Daphnis, bonny, blithe, and fair;
This fed his herds, and that his fleecy care.
Both grac'd with golden treſſes, both were young,
Both ſweetly pip'd, and both melodious ſung:
Then firſt Menalcas, with complacent look,
Survey'd the maſter of the herd, and ſpoke:

Menalcas.

Daphnis, thou keeper of the bellowing kine!
Wilt thou to me the palm of ſong reſign?
Or try thy ſkill, and then thy maſter own?
Thus Daphnis anſwer'd:

Daphnis.

Thou ſheep-tending clown,
Poor-piping ſhepherd! ſing'ſt thou e'er ſo well,
Thou canſt not Daphnis at the ſong excel.

Menalcas.

Stake then ſome wager; let us trial make:

Daphnis.

I'll make the trial, and the wager ſtake.

Menalcas.

What ſhall we lay, to equal our renown?

Daphnis.

I'll lay a calf, and thou a lamb full-grown.

Menalcas.

A lamb I dare not: for my parents keep
Strict watch, and ev'ry ev'ning count my ſheep.

Daphnis.

What wilt thou ſtake? and what the victor's gains?

Menalcas.

A pipe I form'd of nine unequal ſtrains,
Sweet-ton'd, with whiteſt wax compacted tight;
This, this I'll ſtake---but not my parent's right.

Daphnis.

And I have one of nine unequal ſtrains,
Sweet-ton'd, and wax'd throughout with niceſt [pains,
Which late I made, ev'n now my finger bleeds,
Sore wounded by a ſplinter of the reeds.
Who ſhall decide the honours of the day?

Menalcas.

Yon goatherd, let him judge the vocal lay;
Our dog barks at him—call—the man is near:
The ſhepherds call'd, the goatherd came to hear:
The laſt decided, while the former ſung.
Menalcas firſt eſſay'd his tuneful tongue:
Thus in alternate ſtrains the conteſt ran,
Daphnis reply'd—Menalcas firſt began;

Menalcas.

Ye vales, ye ſtreams, from ſource celeſtial ſprung,
If e'er Menalcas ſweetly pip'd or ſung,
Feed well my lambs, and if my Daphnis need
Your flowery herbage, let his heifers feed.

Daphnis.

Fountains and herbs, rich paſturage, if e'er
Sung Daphnis meet for nightingales to hear,
Fatten my herds; if to theſe meadows fair
Menalcas drives, O feed his fleecy care.

Menalcas.

When here my fair one comes, ſpring ſmiles around,
Meads flouriſh, and the teats with milk abound,
My lambs grow fat; if ſhe no longer ſtay,
Parch'd are the meads, the ſhepherd pines away.

Daphnis.

Where Milo walks, the flower-enamour'd bees
Work food nectareous, taller are the trees,
The goats bear twins; if he no longer ſtay,
The herdſman withers, and the herds decay.

Menalcas.

O goat, the huſband of the white-hair'd flock!
Drink at the ſhady fount by yonder rock,
'Tis there ſhe lives; and let young Milo know,
Proteus fed ſea-calves in the deep below.

Daphnis.

Not Pelops' lands, not Crœſus' wealth excite
My wiſh, nor ſpeed to match the winds in flight;
But in yon cave to carol with my friend,
And view the ocean, while our flocks we tend.

Menalcas.

To teats the drought, to birds the ſnare, the wind
To trees, and toils are fatal to the hind;
To man the virgin's ſcorn. O, father Jove!
Thou too haſt languiſh'd with the pains of love.

Thus in alternate ſtrains the conteſt ran,
And thus Menalcas his laſt lay began:
" Wolf, ſpare my kids, my young and tender ſheep;
Though low my lot, a numerous flock I keep,

Rouſe, Lightfoot, rouſe from indolence profound;
Ill fits a ſhepherd's dog to ſleep ſo ſound.
Fear not, my ſheep, to crop the verdant plain;
The paſtur'd herbage ſoon will grow again:
Feed well, and fill your udders in the vale,
And when my lambs have ſuckled, fill the pail."

He ſung, and Daphnis ſweetly thus reply'd:
" Me, from her grot, a lovely nymph eſpy'd,
As late I drove my cattle croſs the plain; [ſwain.
A long, long look ſhe caſt, and call'd me handſome
I anſwer'd not, but, as in thought profound,
Purſu'd my road, with eyes upon the ground.
The heifer ſweetly breathes, and ſweetly lows,
Sweet is the bullock's voice, and ſweet the cow's:
'Tis paſſing ſweet to lie by murm'ring ſtreams,
And waſte long ſummer-days in gentle dreams.
On oaks ſmooth acorns ornamental grow,
And golden apples on the pippen glow;
Calves grace the cows, light-ſkipping on the plain,
And luſty cows commend the careful ſwain."

They ſung; the goatherd thus:

Goatherd.

Thy verſe appears
So ſweet, O Daphnis! to my raviſh'd ears,
More pleaſing far thy charming voice to me
Than to my taſte the nectar of the bee.
Receive theſe pipes, the victor's rightful meed:
And wouldſt thou teach me, while my kids I feed,
This goat rewards thy pains, that never fails
Each morn to fill the largeſt of my pails.
As ſkips the fawn her mother doe around,
So Daphnis leap'd for joy, and dancing beat the ground:
As grieve new-married maids their ſires to leave,
So deeply ſighing, did Menalcas grieve.
Since that time Daphnis, chief of ſhepherd-ſwains,
Daphnis ſupreme without a rival reigns:
And, to complete his happineſs, he led
The blooming Nais to his nuptial bed.

NOTES ON IDYLLIUM VIII.

Ver. 1. The Greek is, Μαλα νεμων (ως φαντι) κατ' ωρια μαηρα Μεναλκας' the expreſſion ως φαντι, *as they ſay*, ſeems very flat, and not correſpondent with the native elegance of Theocritus: and therefore the learned and ingenious John Pierſon (ſee his Veriſimilia, p. 46.) propoſes to read Μαλα νεμων, Διοφαντι, κατ' ωρια κ. τ. λ. obſerving that Theocritus inſcribes ſeveral Idylliums to his intimate friends; for inſtance, he addreſſes the 6th to Aratus, the 11th and the 13th to Nicias the phyſician, and to this ſame Diophantus the 21ſt. This very plauſible emendation I have followed in my tranſlation. That the librarians often obliterated proper names will appear in the note on ver. 53. of this Idyllium. Virgil imitates this paſſage;

Compulerantque greges Corydon et Thyrſis in unum;
Thyrſis oves, Corydon diſtentas lacte capellas:
Ambo florentes ætatibus, Arcades ambo:
Et cantare pares, et reſpondere parati. *Ecl.* 7. 2.

Ver. 6.

Tu calamos inflare leves, ego dicere verſus. *Ecl.* 5. 2.

Ver. 15.

Vis ergo inter nos, quid poſſit uterque, viciſſim
Experiamur? *Ecl.* 3. 28.

Ver. 18.

——Ego hanc vitulam, ne forte recuſes, Depono. *Ibid.*

Ver. 19.

De grege non auſim quicquam deponere tecum:
Eſt mihi namque domi pater, eſt injuſta noverca:
Biſque die numerant ambo pecus, alter et hœdos. *Ecl.* 3. 32.

Ver. 22. Though nine ſtrains, or reeds, are here mentioned, yet the ſhepherd's pipe was generally compoſed of ſeven reeds, unequal in length, and of different tones, joined together with wax. See note on Idyl. 1. 169; and Virgil,

Eſt mihi diſparibus ſeptem compacta cicutis
Fiſtula. *Ecl.* 2. 36.

It is difficult to conceive how the ancient ſhepherds could pipe and ſing at the ſame time: certainly that was impracticable: the moſt probable opinion is, that they firſt played over the tune, and then ſung a verſe or ſtanza of the ſong anſwering thereto, and ſo played and ſung alternately; which manner of playing and ſinging is very common with the pipers and fiddlers at our country wakes, who, perhaps, originally borrowed the cuſtom from the Romans, during their reſidence in Britain. We find the old Engliſh minſtrels uſed to warble on their harps, and then ſing—See Percy's eſſay on the ſubject.

Ver. 29. The ſame verſe occurs, Idyl. 5. 71.

Ver. 35.

Alternis igitur contendere verſibus ambo Cœpêre:
Hos Corydon, illos referebat in ordine Thyrſis. *Ecl.* 7. 18.

Ver. 45.

Phyllidis adventu noſtræ nemus omne virebit. *Ecl.* 7. 59.

Ver. 48.

Aret ager; vitio moriens ſitit aëris herba. *Ib.* 57.

Pope has finely imitated both Theocritus and Virgil;

Strephon.

All nature mourns, the ſkies relent in ſhowers,
Huſh'd are the birds, and clos'd the drooping flowers;
If Delia ſmile, the flowers begin to ſpring,
The ſkies to brighten, and the birds to ſing.

Daphnis.

All nature laughs, the groves are freſh and fair,
The ſun's mild luſtre warms the vital air;
If Sylvia ſmiles, new glories gild the ſhore,
And vanquiſh'd Nature ſeems to charm no more.

Ver. 51.

——At ſi formoſus Alexis
Montibus his abeat, videas et flumina ſicca.
Ecl. 7. 55.

Ver. 55. The Greek is, Μη μοι γαν Πελοπος, μη μοι χρυσεια ταλαντα Ειη εχειν! May the territories of Pelops, and golden talents, never fall to my ſhare! χρυσεια ταλαντα is very frigid; one expects ſomething better than this from the Sicilian muſe, and therefore the ingenious Pierſon (ſee his Veriſimilia) obſerving that the librarians frequently obliterated proper names, inſtead of χρυσεια reads Κροισοιο ταλαντα; then a new beauty ariſes in the oppoſition between the extenſive territories of Pelops, and the talents, or treaſures of Crœſus; and what adds to the probability that this is the true reading, Theocritus mentions the riches of Crœſus in the tenth Idyl. ver. 39. and likewiſe Anacreon, Ode 26. ver. 3. Δοκων δ' εχειν τα Κροισου, Rich I ſeem as Lydia's king: indeed every ſchool-boy knows that the riches of Crœſus became a proverb.

Ver. 56.

Proteus turpes paſcit ſub gurgite phocas.
Georg. 4. 395.

Ver. 58.

——Curſuque pedum præverterе ventos.
Æn. 7. 807.

Ver 61. The preſent reading in the original is, υδασι δ' αυχμος, the drought is fatal to waters; but a friend of mine reads ελάσιν αυχμος, drought is fatal to the teats, which is far more natural, and agreeable to the idea of a ſhepherd.

Triſte lupus ſtabulis, maturis frugibus imbres,
Arboribus venti; nobis Amaryllidis iræ.
Ecl. 3. 80.

Ver. 70. This ſeems to be an imitation of a verſe in Homer:

Ου χρη παννυχιον ευδειν βουληφορον ανδρα.
Il. B. 2. 24.

Ill fits a chief, who mighty nations guides,
To waſte long nights in indolent repoſe. *Pope.*

Ver. 72. Thus Virgil,

——Gregibus non gramina deſunt, &c.
Geor. B. 2. 200.

There for thy flocks freſh fountains never fail,
Undying verdure clothes the graſſy vale;
And what is cropp'd by day the night renews.
Warton.

Ver 78.

Et longum, formoſe, vale, vale, inquit, Iola!
Ecl. 3. 79.

Ver. 81. This verſe occurs, Idyl. 9. ver. 7. in the Greek.

Ver 83.

Fortunate ſenex, hic inter flumina nota,
Et fontes ſacros, frigus captabis opacum.
Ecl. 1. 52.

Ver. 85.

Vitis ut arboribus decori eſt, ut vitibus uvæ,
Ut gregibus tauri, ſegetes ut pinguibus arvis.
Ecl. 5. 32.

As vines the trees, as grapes the vines adorn.
As bulls the herds, and fields the yellow corn.
Dryden.

Ver. 91.

Tale tuum carmen nobis, divine poeta, &c.
Ecl. 5. 45.

Mr. Gay has imitated this paſſage, in his fifth paſtoral:

Albeit thy ſongs are ſweeter to mine ear,
Than to the thirſty cattle rivers clear,
Or winter porridge to the labouring youth,
Or bunns and ſugar to the damſel's tooth.

Ver. 93.

Hos tibi dant calamos, en accipe, muſæ.
Ecl. 6. 69.

Ver. 101.

Ex illo Corydon, Corydon eſt tempore nobis.
Ecl. 7. 70.

IDYLLIUM IX.

DAPHNIS AND MENALCAS.

THE ARGUMENT.

The herdſman Daphnis, and the ſhepherd Menalcas, are urged by a neighbouring ſhepherd to contend in ſinging: the ſong is in alternate ſtrains, and each receives a prize; Daphnis a finely-finiſhed club, and Menalcas a conch. The beauty of this Idyllium conſiſts in the true character of low life, full of ſelf-commendation, and boaſtful of its own fortune.

Daphnis, begin! for merrily you play,
Daphnis begin the ſweet bucolic lay;
Menalcas next ſhall ſing; while paſturing near
Calves mix with cows, the heifer with the ſteer;
The bulls together with the herd may browſe,
Rove round the copſe, and crop the tender boughs;

Daphnis, begin the ſweet bucolic ſtrain;
Menalcas next ſhall charm the ſhepherd-ſwain.

Daphnis.

Sweet low the herds along the paſtur'd ground,
Sweet is the vocal reed's melodious ſound;

Sweet pipes the jocund herdſman, ſweet I ſing,
And lodge ſecurely by yon cooling ſpring,
Where the ſoft ſkins of milk-white heifers, ſpread
In order fair, compoſe my decent bed:
Ah luckleſs! browſing on the mountain's ſide,
The ſouth wind daſh'd them headlong, and they died.
There I regard no more bright ſummer's fires
Than youthful lovers their upbraiding ſires.
Thus Daphnis chanted his bucolic ſtrain; 19
And thus Menalcas charm'd the ſhepherd-ſwain:

Menalcas.

Ætna's my parent; there I love to dwell,
Where the rock-mountains form an ample cell:
And there, with affluence bleſt, as great I live,
As ſwains can wiſh, or golden ſlumbers give;
By me large flocks of goats and ſheep are fed,
Their wool my pillow, and their ſkins my bed:
In cauldrons boil'd, their fleſh ſuſtains me well;
Dry beechen faggots wint'ry froſts expel.
Thus I regard no more the cold ſevere
Then toothleſs men hard nuts when pulſe is near. 30
Here ceas'd the youths; I prais'd their paſtoral ſtrains,
And gave to each a preſent for his pains:
A well-form'd club became young Daphnis' due,
Which in my own paternal woodlands grew,
So exquiſitely ſhap'd from end to end,
An artiſt might admire, but could not mend.
A pearly conch, wreath'd beautifully round,
Late on the Icarian rocky beach I found,
The ſhell I gave Menalcas for his ſhare; 39
Large was the conch, its fleſh was rich and rare,
(This in five equal portions I divide)
And to five friends a plenteous meal ſupply'd.
Pleas'd he receiv'd, and lik'd his preſent well,
And thus he ſweetly blew the ſhining ſhell:
Hail, rural muſes, teach your bard thoſe ſtrains
Which once I ſung, and charm'd the liſt'ning ſwains:
Then would my tongue repeat the pleaſing lore,
And painful bliſters never gall it more.
To graſhoppers the graſhoppers are friends,
And ant on ant for mutual aid depends; 50
The ravenous kite protects his brother kite;
But me the muſe and gentle ſong delight.
O, may my cave with frequent ſong be bleſt!
For neither roſeat ſpring, nor downy reſt,
So ſweat the labourer ſooth; nor to the bee
Are flowers ſo grateful, as the muſe to me:
For Circe's ſtrongeſt magic ne'er can harm
Thoſe whom the muſes with ſoft rapture charm.

NOTES ON IDYLLIUM IX.

Ver. 1. The firſt eight lines in the tranſlation of this Idyllium are ſuppoſed to be ſpoken by the ſhepherd, who endeavours to engage Daphnis and Menalcas to ſing:

Incipe, Mopſe, prior. *Ecl.* 4. 10.

Ver. 2.

Incipe, Damoœta; tu deinde ſequêre, Menalca. *Ecl.* 3. 58.

Ver. 9. This verſe occurs Idyllium 8th, 77, in the original:

Dulce ſatis humor, depulſis arbutus hœdis,
Lenta ſalix fœto pecori, mihi ſolus Amyntas. *Ecl.* 3. 82.

Ver. 19.

Hos Corydon, illos referebat in ordine Thyrſis. *Ecl.* 7. 20.

Ver. 22. Ovid has a ſimilar deſcription of Polyphemus's cave:

Sunt mihi pars montis vivo pendentia ſaxo
Antra. *Metamorph. B* 13. 819.

Ver. 28.

Hic focus, et tædæ pingues; hic plurimus ignis
Semper, et aſſiduâ poſtes fuligine nigri.
Hic tantum Boreæ curamus frigora, quantum
Aut numerum lupus, aut torrentia flumina ripas. *Ecl.* 7. 49.

Here ever-glowing hearths embrown the poſts,
Here blazing pines expel the pinching froſts,
Here cold and Boreas' blaſts we dread no more
Than wolves the ſheep, or torrent ſtreams the ſhore. *Warton.*

Ver. 30. The Greek is ἀμυλοιο, which I apprehend ſignifies wheat boiled, without having been firſt ground in the mill, ſomething in the nature of frumenty.

Ver. 31. Here the ſhepherd reſumes his account of the conteſt between Daphnis and Menalcas, and deſcribes the preſents he made them.

Ver. 45.

Nymphæ, noſter amor, Libethrides, aut mihi carmen,
Quale meo Codro, concedite. *Ecl.* 7. 21.

Give me the lays, nymphs of th' inſpiring ſprings,
Which Codrus, rival of Apollo, ſings. *Warton.*

Ver 48. The ancients believed that a lie was always followed by ſome puniſhment, as a bliſter on the tip of the tongue, a pimple on the noſe, &c. See Idyl. 12. verſe 32. ſee alſo Hor B. 2. Ode 8.

Ver. 49. Juvenal has a ſimilar paſſage, Sat. 15. 163.

Indica tigris agit rabidâ cum tygride pacem
Perpetuam: ſævis inter ſe convenit urſis.

Tiger with Tiger, bear with bear you'll find
In leagues offenſive and defenſive join'd. *Tate.*

Ver. 52.
Me verò primùm dulces ante omnia musæ,
Quarum sacra fero, ingenti perculsus amore,
Accipiant. *Geor.* 2. 475.

Ye sacred muses with whose beauty fir'd,
My soul is ravish'd, and my brain inspir'd.
Whose priest I am, give me, &c. *Dryden.*

Tale tuum carmen nobis, divine poeta,
Quale sopor fessis in gramine, quale per æstum
Dulcis aquæ saliente sitim restinguere rivo.
Ecl. 5. 46.

Mr. Pope has something very similar:

Not bubbling fountains to the thirsty swain,
Not balmy sleep to labourers faint with pain,
Not showers to larks, or sunshine to the bee,
Are half so charming as thy sight to me.
Past. 3.

IDYLLIUM X.

THE REAPERS

THE ARGUMENT.

Milo and Battus, two reapers, have a conference as they are at work; Battus not reaping so fast as usual, Milo asks him the reason of it: he frankly confesses it was owing to love; and, at the request of Milo, sings a song in praise of his mistress: Milo afterwards repeats the poetical maxims of Lytierses.

MILLO AND BATTUS.

Milo.

Battus, some evil sure afflicts you sore;
You cannot reap as you have reap'd before;
No longer you your sheaves with vigour bind,
But, like a wounded sheep, lag heavily behind.
If thus you fail with early morning's light,
How can you work till noon or slow-pac'd night?

Battus.

Milo, thou moiling drudge as hard as stone,
An absent mistress did'st thou ne'er bemoan?

Milo.

Not I—I never learnt fair maids to woo;
Pray what with love have labouring men to do?

Battus.

Did love then never interrupt thy sleep?

Milo.

No, Battus: dogs should never run at sheep.

Battus.

But I have lov'd these ten long days and more.

Milo.

Yes, you're a wealthy man, and I am poor.

Battus.

Hence all things round me in confusion lie.

Milo.

But tell me who's this charmer of your eye?

Battus.

Old Polybuta's niece, the gay, the young,
Who harvest-home at Hypocoon's sung.

Milo.

Then for your sins you will be finely sped;
Each night a grizzle grashopper in bed.

Battus.

Yet spare your insults, cruel and unkind!
Plutus, you know, as well as love, is blind.

Milo.

No harm I mean—But, Battus, as you play
On the sweet pipe, and sing an amorous lay,
With music's charm's our pleasing toils prolong;
Your mistress be the subject of your song.

Battus.

Ye muses sweetly let the numbers flow,
For you new beauty on all themes bestow.
Charming Bombyce, though some call you thin,
And blame the tawny colour of your skin;
Yet I the lustre of your beauty own,
And deem you like Hyblæan honey brown.
The letter'd hyacinth's of darksome hue,
And the sweet violet a sable blue;
Yet these in crowns ambrosial odours shed,
And grace fair garlands that adorn the head.
Kids flowery thyme, gaunt wolves the kid pursue,
The crane the plough-share, and I follow you.
Were I as rich as Crœsus was of old,
Our statues soon should rise of purest gold.
In Cytherea's sacred shrine to stand,
You with an apple, rose, and lute in hand;
I like a dancer would attract the sight,
In gaudy sandals gay, and habit light.
Charming Bombyce, you my numbers greet;
How lovely, fair, and beautiful your feet!
Soft is your voice—but I no words can find
To represent the moral of your mind.

Milo.

How sweetly, swain, your carols you rehearse?
How aptly scan the measure of your verse?
A wit so barren with a beard so long—
Attend to tuneful Lytierses' song.
O fruitful Ceres, bless with corn the field;
May the full ears a plenteous harvest yield! [say,
Bind, reapers, bind your sheaves, lest strangers
"Ah, lazy drones! their hire is thrown away."
To the fresh north wind, or the zephyrs rear
Your shocks; those breezes fill the swelling ear.
Ye threshers, never sleep at noon of day;
For then the light chaff quickly blows away,
Reapers should rise with larks to earn their hire,
Rest in the heat, and when they roost, retire.

How happy is the fortune of a frog,
He wants no moiſture in his watery bog. [mean;
Steward, boil all the pulſe; ſuch pinching's
You'll wound your hand by ſplitting of a bean.

Theſe ſongs the reapers of the field improve;
But your ſad lay, your ſtarveling tale of love,
Which ſoon will bring you to a cruſt of bread,
Keep for your mother, as ſhe yawns in bed.

NOTES ON IDYLLIUM X.

This Idyllium, as Dr. Martyn obſerves, being a dialogue between two reapers, is generally excluded by the critics from the number of the paſtorals: and yet, perhaps, if we conſider that a herdſman may very naturally deſcribe a converſation between two of his country neighbours, who entertain each other with a rural ſong, we may ſoften a little the ſeverity of our critical temper, and allow even this to be called a paſtoral.

Ver. 4. Virgil, ſpeaking of a ſickening ſheep, ſays, *you will ſee it.*

Extremaque ſequi, aut medio procumbere campo
Paſcentem. *Georg. B.* 3. 466.

Ver. 12.

Ut canis a corio nunquam abſterrebitur uncto.
Horace, B. 2. *Sat.* 5.

Ver. 14. The original is, Ἐκ πίθω αντλεῖς δηλον· ἐγω δ' ἐχω οὐδ' ἁλις ὀξος, inſtead of δηλον, Hoelzinus (See his notes on Apollonius, B. 3. ver. 902.) reads πηλον, and then the interpretation will be, "You drink red wine out of a hogſhead; but I "have ſcarcely vinegar enough."

Ver. 18. This line occurs Idyllium 6. 54.

Ver. 20. Heinſius obſerves, that the graſhopper, here called μαντις, is the ſame that was called γρυς: σίριφος γρυς was a proverbial expreſſion, and equal to *anus quæ in virginitate conſenuit: metaphora ſumpta eſt a ſylveſtri locuſtâ, quam vocant* γρυν σιριφην καὶ μαντιν. *Suid.* Milo therefore humourouſly laughs at Battus for falling in love with an old virgin.

Ver. 33. The Greek is, Καὶ το ιον μελαν εστι καὶ α γραπτα υακινθος, which Virgil has literally tranſlated;

——Quid tum ſi fuſcus Amyntas?
Et nigre violæ ſunt, et vaccinia nigra. *Ecl.* 10. 38.

What if the boy's ſmooth ſkin he brown to view,
Dark is the hyacinth and violet's hue. *Warton.*

Virgil likewiſe has, "Inſcripti nomina regum flores." *Ecl.* 3. 106.

Ver. 37.

Torva læna lupum ſequitur, lupus ipſe capellam;
Florentem cytiſum ſequitur laſciva capella:
Te Corydon, ô Alexi. *Ecl.* 2. 63.

Ver. 30. A king of Lydia, whoſe riches became a proverb.

Ver. 40.

Nunc te marmoreum pro tempore fecimus: at tu,
Si fœtura gregem ſuppleverit, aureus eſto.
Ecl. 7. 36.

But if the falling lambs increaſe my fold,
Thy marble ſtatue ſhall be turn'd to gold. *Dryden.*

Ver. 46. Thus in Solomon's Song, Ch. vii. 1. we read, "How beautiful are thy feet with ſhoes!" On which Mr. Percy obſerves, "Or more exactly, *within thy ſandals.*" The Hebrew women were remarkably nice in adorning their ſandals, and in having them fit neatly, ſo as to diſplay the fine ſhape of the foot: *Vid. Clerici Comment.* Judith's ſandals are mentioned along with the bracelets and other ornaments of jewels, with which ſhe ſet off her beauty when ſhe went to captivate the heart of Holofernes, chap. x. 4. And it is expreſsly ſaid, that "her ſandals raviſh'd his eyes," chap. xvi. 9.

Ver. 51. A long beard was looked on as a mark of wiſdom: ſee Hor. Sat. 3. B. 2. ver. 35. "Sapientem paſcere barbam."

Ver. 52. Lytierſes was a baſtard ſon of Midas, king of Phrygia; the poets tell us, that in a trial of ſkill in muſic between Apollo and Pan, Midas gave ſentence in favour of the latter, whereupon Apollo clapt a pair of aſſes ears on his head. On the other hand, Conon, in his firſt narration (apud Phot. Biblioth.) tells us, that Midas had a great many ſpies diſperſed up and down the country, by whoſe information he knew whatever his ſubjects did or ſaid; thus he reigned in peace and tranquillity to a great age, none daring to conſpire againſt him. His knowing by this means whatever his ſubjects ſpoke of him, occaſioned the ſaying, that Midas had "long ears;" and as aſſes are ſaid to be endowed with the ſenſe of hearing to a degree of perfection above other animals, he was alſo ſaid to have aſſes ears; thus what was at firſt ſpoken in a metaphorical ſenſe, afterwards ran current in the world for truth. As to Lytierſes, he reigned, after Midas, at Celænæ, the chief city of Phrygia, and is deſcribed as a ruſtic, unſociable and inhuman tyrant: of an inſatiable appetite, devouring, in one day, three large baſkets of bread, and drinking ten gallons of wine. He took great pleaſure in agriculture; but, as acts of cruelty, were his chief delight, he uſed to oblige ſuch as happened to paſs by while he was reaping, to join with him in the work; and then, cutting off their heads, he bound up their bodies in the ſheaves. For theſe, and ſuch like cruelties, he was put to death by Hercules, and his body thrown into the Mæander: however, his memory was cheriſhed by the reapers of Phrygia, and an hymn, from him called Lytierſes, ſung in harveſt time, in honour of their fellow labourer. See Univ. Hiſt. vol. 4. 8vo. page 459.

This anecdote is taken from one of the tragedies of Socibius, an ancient Syracuſan poet, who, according to Voſſius, flouriſhed in the 166th Olym-

piad. As this passage is scarce, I shall take the liberty to lay it before the learned reader, exactly as the illustrious Casaubon has corrected and amended it, together with a translation: the two verses between comma's, are supposed to be spoken by a different person of the drama, and therefore omitted in the translation-

Αιθ' οι Κελαιναι πατρις, αρχαια πολις
Μιδᾳ γεροντος, οσις ωτ' εχων ονε,
Ηνασσε· "και νυν φανος ευειδης' αγαν."
Ουτος δ' εκεινε παις παραπλαγος νοθος.
"Μητρος δ' οποιας η τεκυς' επισταται."
Εσθει μεν αρτων τρεις ονυς πανθελιυς.
Τρις της ϐραχειας ημερας πινειθ' αμα,
Καλων μετρητην τον δεκαμφορον πιθον·
Εργαζεται δ' ελαφρα προς τα σιτια.
Ογμον θεριζει τη μια δ' εν ημερα
Λεκαγυον ομπνην συντιν εις τελος·
Χ' ωταν τις ελθη ξεινος, η παρεξιη,
Φαγειν τ' εδωκεν ευ, και ευ πεχορτασεν.
Και τε ποτε πρητεινεν ως αν εν θερει
Πλεον. φθονειν γαρ ωκνει τοις θανεμενοις·
Επει δ' αγων εδειξε Μαιανδρυ ροαις
Καρπευματων αρδευτα δαψιλει ποτω
Τον ανδρομηκη πυρον ηκονημενη
Αρπη θεριζει. τον ξενον δε δραγματι
Αυτω κυλισας, κρατος ορφανον φερει.
Γελων φερισην ως ανεν ηρισισεν.

Lytierses

Celænæ, city fam'd in former years,
Where Midas reign'd, renown'd for asses ears:
Whose bastard son, that like a monster fed,
Daily devour'd * three asses loads of bread;
A large wine cask, which once a day he drain'd,
He call'd two gallons, though it ten contain'd.
Daily he labour'd in the corn-clad ground,
Reap'd ten whole acres, and in bundles bound.
If chance a stranger in his fields he spy'd,
Abundant wine and viands he supply'd,
Largely to drink, and sumptuously to feed,
Nor envied he the wretch he doom'd to bleed.
He points to meadows, arrogant and vain,
Of richest pasture, fields of golden grain,
Where through irriguous vales Mæander winds;
Then lops his head, and in the sheaves he binds
The trembling carcase, and with horrid jest
Laughs at the rashness of his murder'd guest.

Menander mentions this song in his Carchedonium: Αδοντα Αιτυερσην απ' αριστα τιως, "Singing Lytierses soon after dinner."

Heinsius very justly observes, that this Lytierses is only a set of formulary maxims, or old sayings, and as such I have distinguished them in distichs, as they are in the Greek.

Ver. 59. Virgil has something similar;

At rubicunda Ceres medeo succiditur æstu;
Et medeo tostas æstu terit area fruges.
Geor. B. I. 297.

But cut the golden corn at mid-day's heat,
And the parch'd grain at noon's high ardour beat.
Warton.

The ancients did not thresh or winnow their corn: in the heat of the day, as soon as it was reaped, they laid it on a floor, made on purpose, in the middle of the field, and then they drove horses and mules round about it, till they trod all the grain out.

Benson.

Ver. 66. A sordid miser used formerly to be called κυαμοτριστης, that is, a "bean-splitter.

* *A close translation would be,* "*three asses of bread,*" *that is, the burden which three asses carry; agreeable to that passage in Samuel,* ch. xvi. ver. 10. "*Jesse took an ass laden with bread;*" *the Hebrew is,* "*he took an ass of bread.*" *See Poole's Synopsis.*

IDYLLIUM XI.

CYCLOPS.

THE ARGUMENT.

This is the last of those Idylliums that are generally allowed to be true pastorals, and is very beautiful. The poet addresses himself to Nicas, a physician of Miletus, and observes, there is no cure for love but the Muses he then gives an account of Polyphemus's passion for Galatea, a sea-nymph, the daughter of Nereus and Doris: he describes him sitting upon a rock that overlooked the ocean, and soothing his passion with the charms of poetry.

No remedy the power of love subdues;
No medicine, dearest Nicias, but the muse;
This plain prescription gratifies the mind
With sweet complacence——but how hard to find!
This well you know, who first in physic shine,
And are the lov'd familiar of the nine.
Thus the fam'd Cyclops, Polypheme, when young,
Calm'd his fond passion with the power of song;

When blooming years imbib'd the ſoft deſire,
And Galatea kindled amorous fire:
He gave no wreaths of roſes to the fair,
Nor apples, nor ſweet parſley for her hair:
Love did the tenor of his mind controul,
And took the whole poſſeſſion of his ſoul.
His flocks untended oft refus'd to feed,
And, for the fold, forſook the graſſy mead;
While on the ſedgy ſhore he lay reclin'd,
And ſooth'd with ſong the anguiſh of his mind.
From morn to night he pin'd; for love's keen dart
Had pierc'd the deep receſſes of his heart:
Yet, yet a cure he found—for on a ſteep,
Rough-pointed rock, that overlook'd the deep,
And with brown horror high impending hung,
The giant monſter ſat, and thus he ſung:
"Fair nymph, why will you thus my paſſion ſlight!
Softer than lambs you ſeem, than curds more white,
Wanton as calves before the udder'd kine,
Harſh as the unripe fruitage of the vine.
You come when pleaſing ſleep has clos'd mine eye,
And like a viſion with my ſlumbers fly,
Swift as before the wolf the lambkin bounds,
Panting and trembling, o'er the furrow'd grounds.
Then firſt I lov'd, and thence I date my flame,
When here to gather hyacinths you came:
My mother brought you—'twas a fatal day;
And I, alas! unwary led the way:
E'er ſince my tortur'd mind has known no reſt;
Peace is become a ſtranger to my breaſt:
Yet you nor pity, nor relieve my pain—
Yes, yes, I know the cauſe of your diſdain;
For, ſtretch'd from ear to ear with ſhagged grace,
My ſingle brow adds horror to my face:
My ſingle eye enormous lids encloſe,
And o'er my blubber'd lips projects my noſe.
Yet homely as I am, large flocks I keep,
And drain the udders of a thouſand ſheep; [fill,
My pails with milk, my ſhelves with cheeſe they
In ſummer ſcorching, and in winter chill.
The vocal pipe I tune with pleaſing glee,
No other Cyclops can compare with me:
Your charms I ſing, ſweet apple of delight!
Myſelf and you I ſing the live long night.
For you ten fawns, with collars deck'd I feed,
And four young bears for your diverſion breed:
Come, live with me; all theſe you may command,
And change your azure ocean for the land:
More pleaſing ſlumbers will my cave beſtow,
There ſpiry cypreſs and green laurels grow;
There round my trees the ſable ivy twines,
And grapes as ſweet as honey loads my vines;
From grove-crown'd Ætna, rob'd in pureſt ſnow,
Cool ſprings roll nectar to the ſwains below.
Say, who would quit ſuch peaceful ſcenes as theſe
For bluſtering billows and tempeſtuous ſeas?
Though my rough form's no object of deſire,
My oaks ſupply me with abundant fire;
My hearth unceaſing blazes—though I ſwear
By this one eye, to me for ever dear,
Well might that fire to warm my breaſt ſuffice,
That kindled at the lightning of your eyes.
Had I, like fiſh, with fins and gills been made,
Then might I in your element have play'd,
With eaſe have div'd beneath your azure tide,
And kiſs'd your hand though you your lips deny'd?
Brought lilies fair, or poppies red that grow
In ſummer's ſolſtice or in winter's ſnow;
Theſe flowers I could not both together bear
That bloom'd in different ſeaſons of the year.
Well, I'm reſolv'd, fair nymph, I'll learn to dive,
If e'er a ſailor at this port arrive,
Then ſhall I ſurely by experience know
What pleaſures charm you in the depths below.
Emerge, O Galatea! from the ſea,
And here forget your native home like me.
O would you feed my flock and milk my ewes,
And e'er you preſs my cheeſe the runnet ſharp in-
fuſe!—
My mother is my only foe I fear;
She never whiſpers ſoft things in your ear,
Although ſhe knows my grief, and every day
Sees how I languiſh, pine, and waſte away.
I, to alarm her, will aloud complain,
And more diſorders than I ſuffer feign,
Say my head aches, ſharp pains my limbs oppreſs,
That ſhe may feel and pity my diſtreſs.
Ah Cyclops, Cyclops, where's your reaſon fled!—
If with the leafy ſpray your lambs you fed,
Or ev'n wove baſkets, you would ſeem more wiſe;
Milk the firſt cow, purſue not her that flies:
You'll ſoon, ſince Galatea proves unkind,
A ſweeter, fairer Galatea find.
Me gameſome girls to ſport and toy invite,
And meet my kind compliance with delight:
Sure I may draw this fair concluſion hence,
Here I'm a man of no ſmall conſequence.
Thus Cyclops learn'd love's torment to endure,
And calm'd that paſſion which he could not cure.
More ſweetly far with ſong he ſooth'd his heart,
Than if his gold had brib'd the doctor's art.

NOTES ON IDYLLIUM XI.

Ver. 1. Ovid makes Apollo expreſs the ſame ſentiment as he is purſuing Daphne;

Hei mihi, quod nullis Amor eſt medicabilis herbis!
Nec proſunt domino, quæ proſunt omnibus, artes!
Metam. B. 1. 523.

To cure the pains of love no plant avails;
And his own phyſic the phyſician fails. *Dryden.*

Ver. 11. The Greek is, Ἤρατο δ' ὑπὶ ῥοδοις, ἢ μάλοις, ἢδὲ κιχινοις; which Heinſius has very properly corrected, and reads διὶς σελινοις, nor with parſley-wreaths; and obſerves, that our author is never more entertaining than when he alludes to ſome old proverb, as in this place he does: your common lovers, ſuch as were not quite ſtark ſtaring

mad, and not extravagantly profuse in their presents to their mistresses, were said, τραν μήλοις, καὶ ῥόδοις, to love with apples and roses; or, as others affirm, μήλοις καὶ στέφανοις, with apples and garlands, which were generally composed of roses and parsley. See Idyllium 3. ver. 35.

Where rose-buds mingled with the ivy wreath,
And fragrant parsley sweetest odours breath.

Ver. 21. Bion imitates this passage, see his 7th Idyl. ver. 3.

Such as the Cyclops, on a rock reclin'd,
Sung to the sea-nymph to compose his mind,
And sent it in the whispers of the wind. *F. F.*

This fable of Polyphemus and Galatea has furnished matter for several poets, particularly Ovid, who, in the 13th book of the Metamorphoses, fable the 6th, has borrowed very freely from Theocritus. See Dryden's elegant translation of that fable.

Ver. 25.

Nerine Galatea, thymo mihi dulcior Hyblæ,
Candidior cycnis, hederâ formosior albâ. *Ecl.* 7. 37.

O Galatea! nymph than swans more bright,
More sweet than thyme, more fair than ivy white.
Warton.

Are not our author's images far more natural, and consequently more adapted to pastoral than Virgil's?

Ver. 27. Ovid has,

Splendidior vitro; tenero lascivior hœdo.

Brighter than glass seems but a puerile sentiment.

Ver. 31.

Quem tu, cervus uti vallis in alterâ
Visum parte lupum graminis immemor,
Sublimi fugies mollis anhelitu. *Hor. B.* 1. *Ode* 15.

Whose rage thou fly'st, with trembling fear,
As from the wolf the timorous deer. *F. F.*

——Quam tu fugis, ut pavet acres Agna lupos.
Ibid. B. 5. *Ode* 12.

Ver. 34.

Sepibus in nostris parvam te roscida mala,
(Dux ego vester eram) vidi cum matre legentem.
Ecl. 8.

Ver. 41.

O digno conjuncta viro! dum despicis omnes,
Dumque tibi est odio mea fistula, dumque capellæ,
Hirsutumque supercilium, prolixaque barba.
Ecl. 8. 32.

Has not Virgil's wonderful judgment once more deserted him? *Hirsutum supercilium*, the shaggy eyebrow, being mentioned only as a single one, might suit a Cyclops with great propriety; it is indeed a translation of Theocritus's λασια ὀφρυς μια μακρα; but can this horrid eyebrow, with any accuracy, come into the description of an Italian shepherd?

Ver. 43. Unum est in mediâ lumen mihi fronte.
Ovid. Metam.

Ver. 45.

Mille meæ Siculis erant in montibus agnæ;
Lac mihi non æstate novum, non frigore defit.
Ecl. 2. 21.

Ver. 47. Martyn thinks this τυρος, or, as in Virgil, "pressi copia lactis," means curd, from which the milk has been squeezed out, in order to make cheese. We find in the third Georgic, ver. 400, that the shepherds used to carry the curd, as soon as it was pressed, into the town; or else salt it, and so lay it by for cheese against winter, "Quod sur- "gente die," &c.

Ver. 53. The Greek is ενδεκα νεβρως Πασας αμνοφορως, eleven young hinds, and all of them pregnant; which, certainly, as Casaubon observes, cannot be probable, viz. that young hinds should be pregnant: there is an old Roman edition of Theocritus, which elucidates this passage, for it reads, σασας μαννοφορος, all bearing collars: and nothing is more manifest, than that the ancients, as well as moderns, were fond of ornamenting those animals which they brought up tame with such sort of appendages.

Ver. 54. Ovid imitates Theocritus,

Invenі geminos, qui tecum ludere possunt,
Villosæ catulos in summis montibus ursæ.
Met. 13. 831.

These bears are highly in character, and well adapted presents from Polyphemus to his mistress.

Ver. 55.

Huc ades, O Galatea! quis est nam ludus in udus?
Hic ver purpureum, varios hic flumina circum
Fundit humus flores; hic candida populus antro
Imminet, & lentæ texunt umbracula vites.
Huc ades: insani feriant sine littora fluctus.
Ecl. 9. 39.

O lovely Galatea! hither haste!
For what delight affords the watery waste?
Here purple spring her gifts profusely pours,
And paints the river-banks with balmy flowers;
Here, o'er the grotto, the pale poplar weaves
With blushing vines a canopy of leaves;
Then quit the seas! against the founding shore
Let the vext ocean's billows idly roar. *Warton.*

Ver. 69. I here follow the interpretation of Heinsius.

Ver. 75.

Tibi lilia plenis
Ecce ferunt nymphæ calathis: tibi candida Naïs
Pallentes violas, & summa papavera carpens.
Ecl. 2. 45.

Ver. 85.

O tantum libeat mecum tibi sordida rura,
Atque humiles habitare casas, & figere cervos,
Hœdorumque gregem viridi compellere hibisco!
Ecl. 2. 28.

O that you lov'd the fields and shady grots,
To dwell with me in bowers and lowly cots,
To drive the kids to fold! &c. *Warton.*

Ver. 95.

Ah, Corydon, Corydon, quæ te dementia cepit?
Ecl. 2.

What phrenzy, Corydon, invades thy breast?

Ver. 98. Thus Ovid,

Melius sequerere volentem
Optantemque eadem, parilique cupidine captam.
Met. B. 14. 28.

When maids are coy, have manlier arts in view;
Leave those that fly, but those that like pursue.
Garth.

Ver. 100.

Invenies alium, si te hic fastidit, Alexim. *Ecl.* 2. 73.

Theocritus here greatly excels his imitator; for to wave the superiority he holds in his application to one of the fair sex, there seems to be great consolation implied in the assurance that he shall find ισως και καλλιον καλλαν, "perhaps a fairer mistress;" in Virgil is implied desperation, *si et hic fastidit.*

IDYLLIUM XII.

AITES.

THE ARGUMENT.

This piece is in the Ionic dialect, and supposed not to have been written by Theocritus. The word Aites is variously interpreted, being taken for *a person beloved, a companion, a man of probity, a cohabitant* and *fellow-citizen:* see the argument. The amorous addresses his friend, and wishes an union of their souls, a perpetual friendship, and that, after death, posterity may celebrate the affection and harmony that subsisted between them. He then praises the Megarensians for the divine honours they paid to Diocles, who lost his life in the defence of his friend.

Say, are you come? but first three days are told:
Dear friend, true lovers in one day grow old.
As vernal gales exceed the wint'ry blast,
As plums by sweeter apples are surpast;
As in the woolly fleece the tender lambs
Produce not half the tribute of their dams;
As blooming maidens raise more pleasing flames
Than dull, indifferent, thrice married dames;
As fawns outleap young calves; as Philomel
Does all her rivals in the grove excel;
So me your presence cheers; eager I run,
As swains seek umbrage from the burning sun.
O may we still to nobler love aspire,
And every day improve the concord higher!
So shall we reap renown from loving well,
And future poets thus our story tell!
'Two youths late liv'd in friendship's chain com-
'bin'd,
'One was benevolent, the other kind;
'Such as once flourish'd in the days of old,
'Saturnian days, and stampt the age with gold.'
O grant this privilege, almighty Jove!
That we, exempt from age and woe, may rove
In the blest regions of eternal day;
And when six thousand years have roll'd away,
Some welcome shade may this glad message bear,
Ev'n in Elysium would such tidings cheer;
'Your friendship and your love by every tongue
'Are prais'd and honour'd—chiefly by the young.'
But this I leave to Jove's all-ruling care;
If right he'll grant, if wrong reject my prayer.
Meantime my song shall celebrate your praise,
Nor shall the honest truth a blister raise:
And though keen sarcasms your sharp words impart,
I find them not the language of your heart;
You give me pleasure double to my pain,
And thus my loss is recompens'd with gain.
Ye Megarensians, fam'd for well tim'd oars,
May bliss attend you still on Attic shores!
To strangers kind, your deeds themselves commend,
To Diocles the lover and the friend:
For at his tomb each spring the boys contest
In amorous battles who succeeds the best;
And he who master of the field is found,
Returns with honorary garlands crown'd.
Blest who decides the merits of the day!
Blest, next to him, who bears the prize away!
Sure he must make to Ganymede his vow,
That he sweet lips of magic would bestow,
With such resistless charms and virtues fraught,
As that fam'd stone from Lydia's confines brought,
By whose bare touch an artist can explore
The baser metal from the purer ore.

NOTES ON IDYLLIUM XII.

Ver. 1.

—Longo post tempore venit. *Ecl.* 1. 32.

Ver. 3.

Lenta salix quantum pallenti cedit olivæ,
Puniceis humilis quantum saliunca rosetis:
Judicio nostro tantum tibi cedit Amyntas.
Ecl. 5. 16.

Ver. 4. Βραβυλος is a sort of large indifferent plum.

Ver. 11. Horace has something similar:

—Vultus ubi tuus
Affulsit populo, gratior it dies,
Et soles melius nitent. *B.* 4. *Ode* 5.

So, in thy presence, smoother run
The hours, and brighter shines the sun. *Duncombe.*

Ver. 17.
His amor unus erat. *Æn.* 9. 182.

Ver. 20. The Greek is, χρύσιοι ἀνθρῶς, which Heinsius takes to mean something amiable and delightful; thus Horace,

Qui nunc te fruitur credulus aureâ :
Qui semper vacuam, semper amabilem
Sperat. *B.* 1. *Ode* 5.

Auream et amabilem he looks upon as synonymous : The Greeks have χρυσῆ Ἀφροδίτη, and Virgil, *Venus aurea*,
Aureus hanc vitam in terris Saturnus agebat.
Georg. B. 2. 538.

Ver. 22. ἀγείρω, thus in the Odyssey, B. 5. Calypso says of Ulysses,

She promis'd (vainly promis'd) to bestow
Immortal life, exempt from age and woe. *Pope.*

Ver. 24. The Greek is, γενεαῖς διηκοσίησιν, two hundred ages : an age, according to the common computation, is thirty years; thus Mr. Pope understands the word γενεὰ in the first book of the Iliad, speaking of the age of Nestor,

Two generations now had pass'd away,
Wise by his rules, and happy by his sway.

Ver. 32. See Idyl. 9. ver. 48. and the note.

Ver. 40. At Megara, a city of Achaia, between Athens and the Isthmus of Corinth, was an annual festival held in the spring, in memory of the Athenian hero Diocles, who died in the defence of a certain youth whom he loved : whence there was a contention at his tomb, wherein a garland was given to the youth who gave the sweetest kiss. *Potter's Arch. ch.* 20.

IDYLLIUM XIII.

HYLAS.

THE ARGUMENT.

If the severity of critics will not allow this piece the title of a pastoral, yet as the actions of gods and heroes used to be sung by the ancient herdsmen, we may venture to affirm that our author intended it as such. It contains a relation of the rape of Hylas by the nymphs, when he went to fetch water for Hercules, and the wandering of that hero, and his extreme grief for the loss of him.

Love, gentle Nicias, of celestial kind,
For us alone, sure never was design'd ;
Nor do the charms of beauty only sway
Our mortal breasts, the beings of a day :
Amphitryon's son was taught his power to feel,
Though arm'd with iron breast and heart of steel,
Who slew the lion fell, lov'd Hylas fair,
Young Hylas graceful with his curling hair.
And, as a son by some wise parent taught,
The love of virtue in his breast he wrought,
By precept, and example was his guide,
A faithful friend, for ever at his side :
Whether the morn return'd from Jove's high hall
On snow-white steeds, or noontide mark'd the wall,
Or night the plaintive chickens warn'd to rest,
When careful mothers brood, and flutter o'er the nest :
That, fully form'd and finish'd to his plan,
Time soon might lead him to a perfect man.
But when bold Jason, with the sons of Greece,
Sail'd the salt seas to gain the golden fleece,
The valiant chiefs from every city came,
Renown'd for virtue, or heroic fame,
With these assembled for the host's relief,
Alcmena's son, the toil enduring chief,
Firm Argo bore him cross the yielding tide
With his lov'd friend, young Hylas, at his side ;
Between Cyane's rocky isles she past,
Now safely fix'd on firm foundations fast,
Thence as an eagle swift with prosperous gales
She flew, and in deep Phasis furl'd her sails.
When first the pleasing Pleiades appear,
And grass-green meads pronounc'd the summer near,
Of chiefs a valiant band, the flower of Greece,
Had plann'd the empriſe of the golden fleece,
In Argo lodg'd they spread their swelling sails,
And soon pass'd Hellespont with southern gales,
And smooth Propontis, where the land appears
Turn'd in straight furrows by Cyanean steers.
With eve they land; some on the greensward spread
Their hasty meal; some raise the spacious bed
With plants and shrubs that in the meadows grow,
Sweet-flowering rushes, and cyperus low.
In brazen vase fair Hylas went to bring
Fresh fountain-water from the crystal spring.
For Hercules, and Telamon his guest :
One board they spread, associates at the feast :
Fast by, in lowly dale, a well he found
Beset with plants, and various herbage round,
Cerulean celandine, bright maiden-hair,
And parsley green, and bindweed flourish'd there.
Deep in the flood the dance fair Naiads led,
And kept strict vigils to the rustic's dread,
Eunica, Malis form'd the festive ring,
And fair Nychéa, blooming as the spring :
When to the stream the hapless youth apply'd
His vase capacious to receive the tide,

The Naiads ſeiz'd his hand with frantic joy,
All were enamour'd of the Grecian boy:
He fell, he ſunk; as from th' ethereal plain
A flaming ſtar falls headlong on the main;
The boatſwain crys aloud, 'Unfurl your ſails,
'And ſpread the canvaſs to the riſing gales.'
In vain the Naiads ſooth'd the weeping boy,
And ſtrove to lull him in their laps to joy.
But care and grief had mark'd Alcides' brow,
Fierce as a Scythian chief he graſp'd his bow,
And his rough club, which well he could command,
The pride and terror of his red right hand:
On Hylas thrice he call'd with voice profound,
Thrice Hylas heard the unavailing ſound;
From the deep well ſoft murmurs touch'd his ear,
The ſound ſeem'd diſtant, though the voice was near.
As when the hungry lion hears a fawn
Diſtreſsful bleat on ſome far diſtant lawn,
Fierce from his covert bolts the ſavage beaſt,
And ſpeeds to riot on the ready feaſt.
Thus, anxious for the boy, Alcides takes
His weary way through woods and pathleſs brakes;
Ah wretched they that pine away for love!
O'er hills he rang'd and many a devious grove.
The bold adventurers blam'd the hero's ſtay,
While long equipt the ready veſſel lay;
With anxious hearts they ſpread their ſails by night,
And wiſh'd his preſence with the morning light:
But he with frantic ſpeed regardleſs ſtray'd,
Love pierc'd his heart, and all the hero ſway'd.
Thus Hylas, honour'd with Alcides' love,
Is number'd with the deities above,
While to Amphitryon's ſon the heroes give
This ſhameful term, 'The Argo's fugitive:'
But ſoon on foot the chief to Colchos came,
With deeds heroic to redeem his fame.

NOTES ON IDYLLIUM XIII.

Theocritus addreſſes this Idyllium, as he did the eleventh, to his friend Nicias, a Mileſian phyſician.

Ver. 1.

Omne adeo genus in terris hominum, &c.
Georg. 3. 242.

Thus man and beaſt, the tenants of the flood,
The herds that graze the plain, the feathery brood,
Ruſh into love, and feel the genial flame,
'For love is lord of all, and is in all the ſame.'
Warton.

Ver. 6. Thus Horace, "Illi robur et æs triplex Circa pectus erat." *B.* 1. *O.* 3.

And Moſchus, in his poem intituled Megara, ſpeaking of Hercules,

———Πιστης ογ' ιψων νοον, τε σιδηρε
Καρτερον ην στηθεσσι.

———His heart, like iron or a rock,
Unmov'd, and ſtill ſuperior to the ſhock.

Ver. 7. Hylas was the ſon of Theodamus, whom Hercules ſlew, becauſe he denied him a ſupply of proviſion.

Ver. 9.

——Inſuevit pater optimus hoc me, &c.
Hor. B. 1. *Sat.* 4.

Ver. 14. The Greek is λευκιππος· Dr. Spence very juſtly obſerves, that the poets are very inconſiſtent in their deſcriptions of Aurora, particularly in the colour of her horſes; here they are *white*, whereas Virgil repreſents them *roſe-coloured*, "*roſeis* Aurora quadrigis." Æn. 6. 535. and B. 7. 26. "Aurora in *roſeis* fulgebat lutea bigis." The beſt critics have ever thought, that conſiſtency is required in the moſt unbounded fictions: if I miſtake not, Homer is more regular in this, as in all other fictions. *Eſſay on the Odyſſey.*

Ver. 18. Thus Bion,

——Ην δ' ανηρ ες μιτρεον ελθης. *Idyl.* 2.
As ſoon as time ſhall lead you up to man. *F. F.*

Ver. 21.

Alter erit tum Tiphys et altera quæ vehat Argo
Delectos heroas. *Ecl.* 4. 34.

Ver. 27. The Cyanean iſles, or Symplegades, are two ſmall iſlands near the entrance of the Euxine, or Black Sea, in the mouth of the Straits of Conſtantinople, over againſt one another; at ſo ſmall a diſtance, that to a ſhip paſſing by they appear but one; whence the poets fancied, that they ſometimes met, and came together, therefore called them *concurrentia ſaxa Cyanes*. *Juvenal, Sat.* 15. 19. See alſo *Idyl.* 22. *ver.* 29.

Ver. 29.

——Illa noto citius, volucrique ſagittâ
Ad terram fugit, et portu ſe condidit alto.
Æn 5. 242.

Ver. 30. A large river of Colchis, which diſchargeth itſelf into the Euxine. Ovid, ſpeaking of the Argonauts, ſays,

Multaque perpeſſi claro ſub Jaſone, tandem
Contigerant rapidas limoſi Phaſidos undas.
Met. B. 7. 5.

Ver. 31. The Pleiades riſe with the ſun on the twenty-ſecond of April, according to Columella.

Ver. 33. The Argonauts were fifty-two in number: Pindar calls them *the flower of ſailors*, Theocritus, *the flower of heroes*, and Virgil, *choſen heroes*, "delectos heroas;" ſee ver. 21.

Ver. 42. The Greek is βατομον οξυ, which there is great reaſon to believe is the *carex acutu* of Virgil,

Frondibus hirſutis, et carice paſtus acutâ.
Georg. B. 3. 231.

On prickly leaves and pointed ruſhes fed. *Warton.*

Ovid applies the same epithet to the *juncus, acutâ cuspide junci.* The word comes from βυς, an ox, and τεμνω to cut; so called, because the leaves of this plant are so sharp, that the tongue and lips of oxen, who are great lovers of it, are wounded by it. See Butomus in Miller.

Ver. 49. The Greek is. Κυανεον χελιδονιον.

Χλοερον τ' αδιαντον. *Capillus Veneris.*

Ver. 50. The Greek is, Ειλιτενης αγρωστις: as it is difficult to determine what plant Theocritus here means. I have rendered it *bindweed*, or *convolvulus*, which seems an exact translation of ειλιτενης.

Ver. 55. The Greek is, Ητοι ο κυδος επειχε ποτον πολυχανδεα κρωσσον; instead of ποτον, Pierson reads ροον, which is probably right. being the same word which Appollonius Rhodius makes use of, when treating of the same subject. See b. 1. ver. 1234.

Αυταρ ογ' ως ταπρωτα ροον ενι καλπιν ερεισε.

Ver. 59. Hylas falling into a well, was said to be snatched away by the Nymphs. Ovid, speaking of Phæton, has something very similar to this passage.

Volvitur in præceps, longoque per aëra tractu
Fertur; ut interdum de cœlo stella sereno,
Etsi non cecidit, potuit cecidisse videri.
Met. B. 2. 319.

The breathless Phæton, with flaming hair,
Shot from the chariot, like a falling star
That in a summer's evening from the top
Of heav'n drops down, or seems at least to drop.
Addison.

Ver. 60. These sort of meteors were reckoned prognostics of winds,

Sæpe etiam stellas, vento impendente, videbis
Præcipites cœlo labi. *Geor. B.* 1. 365.

Ver. 61.

Solvite vela citi. *Æn.* 4. 574.

Ver. 65. Virgil of Hercules,

Hic vero Alcidæ furiis exarserat atro
Felle dolor; rapit arma manu, nodisque gravatum
Robur. *Æn. B.* 8. 219.

Alcides seiz'd his arms, inflam'd with ire,
Rage in his looks, and all his soul on fire;
Fierce in his hands the ponderous club he shook.
Pitt.

Ver. 69.

Ut littus, Hyla, Hyla, omne sonaret. *Ec.* 6. 44.

And Spenser,

And every wood, and every valley wide,
He fill'd with Hyla's name, the Nymphs eke Hylas cride. *Faery Queen, B.* 3. *c.* 12.

Antoninus has given us an explanation of the circumstance of Hyla's name being so often repeated, which is so particularly insisted on by the poets: "Hercules," says he, "having made the hills and forests tremble, by calling so mightily on the name Hylas; the Nymphs who had snatched him away, fearing lest the enraged lover should at last discover Hylas in their fountain, transformed him into Echo, which answered Hylas to every call of Hercules." *Warton's Observations.*

Ver. 73. This simile seems to have pleased Apollonius so well, that writing on the same subject, the Rape of Hylas, he has imitated it twice; see book 1. ver. 1243, &c. Ovid also had it in view;

Tigris ut, auditis diversâ valle duorum
Extimulata fame mugitibus armentorum, &c.
Met. B. 5. 164.

Ver. 79.

Ah, virgo infelix, tu nunc in montibus erras!
Ec. 6. 52.

Ver. 87. Horace says,

———Sic Jovis interest
Optatis epulis impiger Hercules. *B.* 4. *Ode* 8.

This Κατακοιμησις, or fate of Hylas, as Heinsius observes, with which the poet concludes this charming poem, is extremely elegant and agreeable;

Ουτο μεν καλλιξος Υλας μακαρον αριθμειται,

Thus the beautiful Hylas is numbered among the blessed.

He would not say, Ουτος ο Υλας τεθνηκεν, "thus Hylas died;" but, "thus he is numbered with the blessed." See his notes.

IDYLLIUM XIV.

CYNISCA'S LOVE.

THE ARGUMENT.

ÆSCHINES being in love with Cynisca, is despised by her, she having placed her affections on Lycus. Æschines accidentally meets with his friend Thyonichus, whom he had not seen of a long time, and tells him his lamentable tale, and that he is determined to turn soldier. Thyonichus advises him to enter into the service of Ptolemy Philadelphus, on whom he bestows a short but very noble encomium.

ÆSCHINES AND THYONICHUS.

Æschines.

All health to good Thyonichus, my friend.

Thyonichus.

May the same blessing Æschines attend.

Æschines.

I see you seldom.—*Thy.* Well, what ails you now?

Æschines.

All is not well with me.—*Thy* You therefore grow
So much a sloven, so exceeding thin, [chin.
Your hair untrimm'd, your beard deforms your

A poor Pythag'rift late I chanc'd to meet,
Pale fac'd, like you, and naked were his feet;
He came from learned Athens, as he ſaid,
And was in love too—with a loaf of bread.

Æſchines.

You jeſt; but proud Cyniſca makes me ſad;
Nay, I'm within a hair-breadth raving mad.

Thyonichus.

Such is your temper, ſo perverſe you grow,
You hope all ſmooth: but what affects you now?

Æſchines.

I and Cleunicus and the Greek agreed
With Apis ſkill'd Theſſalian colts to breed,
In my green court, with wine to cheer our ſouls:
A ſucking pig I dreſs'd, and brace of fowls:
And fragrant wine produc'd, four ſummers old,
Phœnicia's generous wine that makes us bold:
Onions and ſhell fiſh laſt the table crown'd,
And gaily went the cheering cup around;
Then healths were drank, and each oblig'd to name
The lovely miſtreſs that inſpir'd his flame.
Cyniſca (ſhe was by) then charm'd my ſoul,
And to her health I drain'd the foaming bowl:
She pledg'd me not, nor deign'd a kind reply:
Think how my rage, inflam'd with wine, ran high.
'What, are you mute?' I ſaid—a waggiſh gueſt,
'Perhaps ſhe's ſeen a Wolf,' rejoin'd in jeſt:
At this her cheeks to ſcarlet turn'd apace;
Sure you might light a candle at her face.
Now Wolf is Laba's ſon, whom moſt men call
A comely ſpark, is handſome, young, and tall.
For him ſhe ſigh'd; and this by chance I heard;
Yet took no note, and vainly nurſt my beard.
We four, now warm, and mellow with the wine,
Arch Apis, with a miſchievous deſign,
Nam'd Wolf, and ſung encomiums of the boy,
Which made Cyniſca fairly weep for joy,
Like a fond girl, whom love maternal warms,
That longs to wanton in her mother's arms.
I ſwell'd with rage, and, in revengeful pique,
My hand diſcharg'd my paſſion on her cheek:
"Since thee," I cry'd, "my love no more endears,
"Go court ſome other with thoſe tender tears."
She roſe, and gathering in a knot her veſt,
Flew ſwiftly; as the ſwallow from her neſt,
Beneath the tiling ſkims in queſt of food,
To ſtill the clamours of her craving brood.
Thus from her downy couch in eager haſte,
Through the firſt door, and through the gate ſhe paſs'd.
Where'er her feet, where'er her fancy led;
The proverb ſays, 'The bull to wood is fled.'
Now twenty days are paſt, ten, nine, and eight,
Two and eleven add—two months complete,
Since we laſt met, and like the boors of Thrace,
In all that time I never trimm'd my face.
Wolf now enjoys her, is her ſole delight:
She, when he calls, unbars the door at night:
While I, alas! on no occaſion priz'd,
Like the forlorn Megareans am deſpis'd.
Oh could I from theſe wild deſires refrain,
And love her leſs, all would be well again!
Now like a mouſe enſnar'd on pitch I move;
Nor know I any remedy for love.
Yet in love's flames our neighbour Simus burn'd,
Sought eaſe by travel, and when cur'd return'd;
I'll ſail, turn ſoldier, and though not the firſt
In fighting fields I would not prove the worſt.

Thyonichus.

May all that's good, whate'er you wiſh, attend
On Æſchines, my favourite and friend.
If you're reſolv'd, and ſailing is your plan.
Serve Ptolemy, he loves a worthy man.

Æſchines.

What is his character? *Thy.* A royal ſpirit,
To point out genius, and encourage merit:
The poet's friend, humane, and good, and kind;
Of manners gentle, and of generous mind.
He marks his friend, but more he marks his foe;
His hand is ever ready to beſtow:
Requeſt with reaſon, and he'll grant the thing,
And what he gives, he gives it like a king.
Go then, and buckle to your manly breaſt
The brazen corſlet, and the warrior veſt;
Go brave and bold, to friendly Egypt go,
Meet in the tented field, the ruſhing foe.
Age ſoon will come, with envious hand to ſhed
The ſnow of winter on the hoary head,
Will ſap the man, and all his vigour drain,
'Tis our's to act while youth and ſtrength remain.

NOTES ON IDYLLIUM XIV.

Ver. 1. Thus Terence,

Salvere Hegionem plurimùm Jubeo.

Adelph. Act 3. *Sc.* 5.

Ver. 6.

—Vultus gravis, horrida ſiccæ Sylva comæ.

Juv Sat. 9. 12.

Ver. 8. He ridicules and diſtinguiſhes the Pythagoriſts by the ſame marks as Ariſtophanes does the diſciples of Socrates,

Τους ωχριωντας, τους ανυποδητους λεγεις.

Plut. Act 1. *Sc.* 1.

"You would ſay that they were pale-faced and "barefoot."

Ver. 9.

——Mediis ſed natus Athenis. *Juv. Sat.* 3.

Ver. 17. The Greek is, Εν χωρῳ παρ' ἑμιν, which Heinſius corrects Εν χορτῳ παρ' ἑμιν, that is, in that part of the houſe where the ancients uſed to dine and ſup; which being originally εν χορτῳ, "on the graſs," well adapted to the ancient ſhepherds ſtill retained its name, though it was afterward

furrounded with various apartments; therefore it probably means the inner court.

Ver. 20. The Greek is, βυβλινον οινον, which Athenæus, B. 1. chap. 28. allows to be Phœnician wine.

Ver. 28.

Quid mihi tunc animi credis, germane, fuiſſe?
Ovid. Epiſt. Can. to Macar.

Ver. 30. That is, Λυκον, "Wolf," her ſweetheart.

——Lupi Mœrim videre priores. *Ec. 9. 54.*

On which Dr. Martyn obſerves, 'that a notion obtained among the ancient Italians, that if a wolf ſaw any man firſt, it deprived him of his voice for the preſent; but, ſays he, Theocritus gives this ſtory a contrary turn; as if the ſeeing a wolf, inſtead of being ſeen by him, made a perſon mute.' The doctor, and likewiſe Mr. Warton, did not obſerve our author's double meaning, viz. that λυκο ſignified not only a wolf, but was likewiſe the name of Cyniſca's lover.

Ver. 36. Ματαν ες ανδρα γενειων, "quod de iis dicebatur, quorum conjuges impune cum aliis ſolebant; quique hanc contumeliam leni et placato animo ferebant." *Heinſius.*

Ver. 47.

Nodoque ſinus collecta fluentes. *Æn. 1. 324.*
Cloſe, in a knot, her flowing robes ſhe drew. *Pitt.*

Ver. 48. Virgil has plainly borrowed this ſimile from our author, though Mr. Warton ſays he is obliged to Apollonius for it: it is not improbable but that Virgil's may be the copy of the copier.

Nigra velut magnas domini cum divitis ædes
Pervolat, et pennis alta atria luſtrat hirundo,
Pabula parva legens, nidiſque loquacibus eſcas,
Et hunc porticibus vacuis, nunc humida circum
Stagna ſonat. *Æn. B. 12. 473.*

As the black ſwallow, that in queſt of prey,
Round the proud palace wings her wanton way,
When for her children ſhe provides the feaſt,
To ſtill the clamours of the craving neſt;
Now wild excurſions round the cloyſter takes;
Now ſportive winds, or ſkims along the lakes.
Pitt.

Virgil has ſpun this ſimile into more than four lines, whereas Theocritus comprehends it in two.

Ver. 54. A proverb ſignifying that he will not return.

Ver. 55. The literal interpretation is, "And now twenty and eight, and nine, and ten days are paſt, to-day is the eleventh, add two more, and there will be two months." A ſimilar but more perplexing method of numeration we meet with in the 17th Idyl. ver. 95.

Ver. 62. The Megareans entertaining a vain conceit that they were the moſt valiant of the Grecians, inquired of the oracle if any nation excelled them: the concluſion of the anſwer was,

Τμεις δ', Μεγαρεις, ουτε τριτοι, ουτε τεταρτοι,
Ουτε δυωδεκατοι, ουτ' εν λογω, ουτ' εν αριθμω.

Nor in the third, nor in the fourth, Megareans call,
Nor in the twelfth, nor any rank at all.

Ver. 65. The Greek is, ως μυς γευμιδα πισσας, "like a mouſe I have taſted pitch."

Ver. 71.

Tibi Di, quæcunque preceris, Commoda dent.
Hor. B. 2. Sat. 8.

Ver. 82. To this noble encomium of Ptolemy by the Sicilian poet, I ſhall briefly ſhow the favourable ſide of his character, as it is given by the hiſtorians. He was a prince of great learning, and a zealous promoter and encourager of it in others, an induſtrious collector of books, and a generous patron to all thoſe who were eminent in any branch of literature. The fame of his generoſity drew ſeven celebrated poets to his court, who, from their number, were called Pleïades: theſe were Aratus, Theocritus, Callimachus, Lycophron, Apollonius, Nicander, and Philicus. To him we are indebted for the Greek tranſlation of the ſcripture, called the Septuagint. Notwithſtanding his peculiar taſte for the ſciences, yet he applied himſelf with indefatigable induſtry to buſineſs, ſtudying all poſſible methods to render his ſubjects happy, and raiſe his dominions to a flouriſhing condition. Athenæus called him the richeſt of all the princes of his age; and Appian ſays, that he was the moſt magnificent and generous of all kings in laying out his money, ſo he was of all the moſt ſkilful and induſtrious in raiſing it. He built an incredible number of cities, and left ſo many other public monuments of his magnificence, that all works of an extravagant taſte and grandeur, were proverbially called Philadelphian works. *Univer. Hiſt.*

Ver. 90.

Dumque virent genus. *Hor. Epod. 13.*

IDYLLIUM XV.

THE SYRACUSIAN GOSSIPS.

THE ARGUMENT.

Two Syracuſian women, who had travelled to Alexandria, go to ſee the ſolemnity of Adonis's feſtival, which had been prepared by Arſinoe, the queen of Ptolemy Philadelphus: the humours of theſe goſſips are naturally deſcribed. Theocritus, to gratify the queen, introduces a Grecian ſinging girl who rehearſes the magnificence of the pomp which Arſinoe had provided.

GORGO, EUNOE, PRAXINOE, OLD WOMAN AND STRANGER.

Gorgo.

PRAY, is Praxinoe at home?

Eunoe.

Dear Gorgo, yes,—how late you come!

Praxinoe.

Well! is it you? Maid, bring a chair
And cuſhion. *Gor.* Thank you. *Prax.* Pray ſit there.

Gorgo.

Lord bleſs me! what a buſtling throng!
I ſcarce could get alive along:
In chariots ſuch a heap of folks!
And men in arms, and men in cloaks—
Beſides I live ſo diſtant hence
The journey really is immenſe.

Praxinoe.

My huſband, heav'n his ſenſes mend!
Here will inhabit the world's end,
This horrid houſe, or rather den;
More fit for ſavages than men.
This ſcheme with envious aim he labours,
Only to ſeparate good neighbours---
My plague eternal!

Gorgo.

Softly, pray,
The child attends to all you ſay;
Name not your huſband when he's by---
Obſerve how earneſt is his eye!---

Praxinoe.

Sweet Zopy! there's a bonny lad,
Cheer up! I did not mean your dad.

Gorgo.

'Tis a good dad---I'll take an oath,
The urchin underſtands us both.

Praxinoe.

(Let's talk as if *ſome time ago*,
And then we ſhall be ſafe, you know)
This perſon happen'd once to ſtop
To purchaſe nitre at a ſhop,
And what d' ye think? the ſilly creature
Bought ſalt, and took it for ſaltpetre.

Gorgo.

My huſband's ſuch another honey,
And thus, as idly ſpends his money;
Five fleeces for ſeven drachms he bought,
Coarſe as dog's hair; not worth a groat.
But take your cloak, and garment grac'd
With claſps, that lightly binds your waiſt;
Adonis' feſtival invites,
And Ptolemy's gay court delights:
Beſides our matchleſs queen, they ſay,
Exhibits ſome grand ſight to-day.

Praxinoe.

No wonder---every body knows
Great folks can always make fine ſhows:
But tell me what you went to ſee,
And what you heard---'tis new to me.

Gorgo.

The feaſt now calls us hence away,
And we ſhall oft keep holiday.

Praxinoe.

Maid? water quickly---ſet it down---
Lord! how undelicate you're grown!
Diſperſe theſe cats that love their eaſe---
But firſt the water, if you pleaſe---
Quick! how ſhe creeps; pour, huſſey, pour;
You've ſpoil'd my gown---ſo, ſo---no more.
Well, now I'm waſh'd---ye gods be bleſt!---
Here---bring the key of my large cheſt.

Gorgo.

This robe becomes you mighty well;
What might it coſt you? can you tell?

Praxinoe.

Three pounds or more; I'd not have done it,
But that I'd ſet my heart upon it.

Gorgo.

'Tis wonderous cheap. *Prax.* You think ſo?--Maid,
Fetch my umbrella and my ſhade;
So, put it on---fy, Zophy, fy!
Stay within doors, and don't you cry:
The horſe will kick you in the dirt---
Roar as you pleaſe, you ſhan't get hurt.
Pray, maid, divert him---come, 'tis late:
Call in the dog, and ſhut the gate.
Lord! here's a buſtle and a throng---
How ſhall we ever get along?
Such numbers cover all the way,
Like emmets on a ſummer's day.
O Ptolemy! thy fame exceeds
Thy godlike ſire's in noble deeds:
No robber now with Pharian wiles
The ſtranger of his purſe beguiles;

No ruffians now infeſt the ſtreet,
And ſtab the paſſengers they meet.
What ſhall we do? lo here advance
The king's war-horſes---how they prance!
Don't tread upon me, honeſt friend---
Lord, how that mad horſe rears an end!
He'll throw his rider down, I fear---
I'm glad I left the child my dear.

Gorgo.

Don't be afraid; the danger's o'er;
The horſes, ſee! are gone before.

Praxinoe.

I'm better now, but always quake
Whene'er I ſee a horſe or ſnake:
They rear, and look ſo fierce and wild—
I own, I've loath'd them from a child.
Walk quicker---what a crowd is this?

Gorgo.

Pray, come you from the palace? *Old Wo.* Yes.

Gorgo.

Can we get in, d'ye think? *Old Wo.* Make trial---
The ſteady never take denial;
The ſteady Greeks old Ilium won:
By trial all things may be done.

Gorgo.

Gone, like a riddle in the dark;
Theſe crones, if we their tales remark,
Know better far than I or you know
How Jupiter was join'd to Juno.
Lo! at the gate what crowds are there!

Praxinoe.

Immenſe, indeed! Your hand, my dear;
And let the maids join hands, and cloſe us,
Leſt in the buſtle they ſhould loſe us.
Let's crowd together through the door---
Heav'ns bleſs me! how my gown is tore!
By Jove, but this is paſt a joke---
Pray, good Sir, don't you rend my cloak.

Man.

I can't avoid it; I'm ſo preſt.

Praxinoe.

Like pigs they juſtle, I proteſt.

Man.

Cheer up, for now we're ſafe and ſound.

Praxinoe.

May you in happineſs abound:
For you have ſerv'd us all you can---
Gorgo!---a mighty civil man---
See how the folks poor Eunoe juſtle!
Puſh through the crowd, girl!---buſtle, buſtle---
Now we're all in; as Dromo ſaid,
When he had got his bride in bed.

Gorgo.

Lo! what rich hangings grace the rooms---
Sure they were wove in heavenly looms.

Praxinoe.

Gracious! how delicately fine
The work! how noble the deſign!
How true, how happy is the draught!
The figures ſeem inform'd with thought---
No artiſts ſure the ſtory wove;
They're real men---they live, they move.
From theſe amazing works we find,
How great, how wiſe the human mind.
Lo! ſtretch'd upon a ſilver bed,
Scarce has the down his cheeks o'erſpread)
Adonis lies; O charming ſhow!
Lov'd by the ſable pow'rs below.

Stranger.

Hiſt! your Sicilian prate forbear:
Your mouths extend from ear to ear,
Like turtles that forever moan;
You ſtun us with your ruſtic tone.

Gorgo.

Sure! we may ſpeak! what fellow's this?
And do you take it, Sir, amiſs?
Go, keep Egyptian ſlaves in awe:
Think not to give Sicilians law:
Beſides, we're of Corinthian mold,
As was Bellerophon of old:
Our language is entirely Greek—
The Dorians may the Doric ſpeak.

Praxinoe.

O ſweet Proſerpina, ſure none
Preſumes to give us law but one!
To us there is no fear you ſhould
Do harm, who cannot do us good.

Gorgo.

Hark! the Greek girl's about to raiſe
Her voice in fair Adonis' praiſe;
She's a ſweet pipe for funeral airs:
She's juſt beginning, ſhe prepares:
She'll Sperchis, and the world excel,
That by her prelude you may tell.

The Greek Girl ſings.

" O chief of Golgos, and the Idalian grove,
And breezy Eryx, beauteous queen of Love!
Once more the ſoft-foot hours approaching ſlow,
Reſtore Adonis from the realms below;
Welcome to man they come with ſilent pace,
Diffuſing beniſons to human race.
O Venus, daughter of Dione fair,
You gave to Berenice's lot to ſhare
Immortal joys in heavenly regions bleſt,
And with divine ambroſia fill'd her breaſt.
And now in due return, O heavenly born!
Whoſe honour'd name a thouſand fanes adorn,
Arſinoe pays the pompous rites divine,
Rival of Helen, at Adonis' ſhrine;
All fruits ſhe offers that ripe autumn yields,
The produce of the gardens, and the fields;
All herbs and plants which ſilver baſkets hold;
And Syrian unguents flow from ſhells of gold.
With fineſt meal ſweet paſte the women make,
Oil, flowers and honey mingling in the cake:
Earth and the air afford a large ſupply
Of animals that creep, and birds that fly.
Green bow'rs are built with dill ſweet-ſmelling crown'd,
And little Cupids hover all around;
And as young nightingales their wings eſſay,
Skip here and there, and hop from ſpray to ſpray.
What heaps of golden veſſels glittering bright!
What ſtores of ebon black, and ivory white!
In ivory carv'd large eagles ſeem to move,
And through the clouds bear Ganymede to Jove.
Lo! purple tapeſtry arrang'd on high
Charms the ſpectators with the Tyrian dye,
The Samian and Mileſian ſwains, who keep
Large flocks, acknowledge 'tis more ſoft than ſleep:
Of this Adonis claims a downy bed,
And lo! another for fair Venus ſpread!

Her bridegroom ſcarce attains to nineteen years,
Roſy his lips, and no rough beard appears.
Let raptur'd Venus now enjoy her mate,
While we, deſcending to the city gate,
Array'd in decent robes that ſweep the ground,
With naked boſoms, and with hair unbound,
Bring forth Adonis, ſlain in youthful years,
Ere Phœbus drinks the morning's early tears.
And while to yonder flood we march along,
With tuneful voices raiſe the funeral ſong.
Adonis, you alone of demigods,
Now viſit earth, and now hell's dire abodes:
Not fam'd Atrides could this favour boaſt,
Nor furious Ajax, though himſelf an hoſt;
Nor Hector, long his mother's grace and joy
Of twenty ſons, not Pyrrhus ſafe from Troy,
Not brave Patroclus of immortal fame,
Nor the fierce Lapithæ, a deathleſs name;
Nor ſons of Pelops, nor Deucalion's race,
Nor ſtout Pelaſgians, Argos' honour'd grace.
As now, divine Adonis, you appear
Kind to our prayers, O bleſs the future year!
As now propitious to our vows you prove,
Return with meek benevolence and love.

Gorgo.

O, fam'd for knowledge in myſterious things!
How ſweet, Praxinoë, the damſel ſings!
Time calls me home to keep my huſband kind,
He's prone to anger if he has not din'd.
Farewell, Adonis, lov'd and honour'd boy;
O come propitious, and augment our joy.

NOTES ON IDYLLIUM XV.

Ver. 1.
Anne eſt intus Pamphilus? *Ter. And. Act 5. Sc. 2.*
Ver. 17.
Ni dictu fœdum, viſuque, &c. *Juv. Sat. 14. 44.*

Suffer no lewdneſs, or indecent ſpeech
Th' apartment of the tender youth to reach.
Dryden.

Ver. 33. A drachma is ſeven-pence three-farthings.

Ver. 35. Hence we learn, ſays Caſaubon, that the ladies formerly had an under garment, which was faſtened to the breaſt by claſps: the ladies of faſhion had claſps of gold;

Aurea purpuream ſubnectit fibula veſtem.
Æn. B. 139.

A golden claſp her purple garment binds. *Pitt.*

Ver. 51.
—Move vero occys Te, nutrix. *Ter. Eun. Act 5.*
Ver. 67.
Di boni quid turbæ eſt! *Ter. Heaut. Act 2.*
Ver 70.
Ac veluti ingentem formicæ, &c. *Æn 4. 401.*
Ver. 78.
Poſt bellator equus. *Æn. 11. 98.*
Ver. 80.
Tollit ſe arrectum quadrupes. *Æn. 10. 892.*

Ver. 86. The Greek is Ψυχρὸν ὄφιν, a cold ſnake, thus Virgil,

Frigidus, ô pueri, fugite hinc latet anguis in herbâ.
Ecl. 3. 93.
And
Frigidus in partis cantando rumpitur anguis.
Ecl. 8. 71.

Ver. 97. Plautus ſeems to have imitated this,

Id quod in aurem rex reginæ dixerit
Sciunt; quod Juno fabulata eſt cum Jove.

Ver. 117. Thus Telemachus expreſſes his ſurpriſe to Piſiſtratus at the magnificent furniture of Menelaus's palace at Sparta;

View'ſt thou unmov'd, O ever honour'd moſt!
Theſe prodigies of art and wondrous coſt!
Above, beneath, around the palace ſhines
The ſumleſs treaſure of exhauſted mines;
The ſpoils of elephants the roof inlay,
And ſtudded amber darts a golden ray:
Such, and not nobler, in the realms above
My wonder dictates is the dome of Jove.
Pope's Odyſſ. B. 4.

Ver. 124.
——Velut ſi
Re verâ pugnent, ferient, vitentque moventes
Arma viri. *Hor. B. 2. Sat. 7.*

Ver. 127. At the feaſt of Adonis they always placed his image on a magnificent bed; thus Bion,

Ἐς' αγαθα τιβας κ. τ. λ. *Idyl. 1. 69.*

——Behold the ſtately bed,
On which Adonis, now depriv'd of breath,
Seems ſunk in ſlumbers, beauteous ev'n in death.
F. F.

Ver. 128.
——Flaventem prima lanugine malas.
Æn. B. 10. 324.

Ver. 134. A citizen of Alexandria finds fault with the Syracuſian goſſips for opening their mouths ſo wide when they ſpeak; the good women are affronted, and tell him, that as they are Dorians, they will make uſe of the Doric dialect: hence we may obſerve, that the pronunciation of the Dorians was very coarſe and broad, and founded harſh in the ears of the politer Grecians.
Martyn's Preſ. to Virgil.

Ver. 145. Here I entirely follow the ingenious interpretation of Heinſius.

Ver. 151. A celebrated ſinger.

Ver. 153. Golgos was a ſmall but very ancient town in Cyprus, where Venus was worſhipped. Catullus has tranſlated this verſe of Theocritus.

Quæque regis Golgos, quæque Idalium frondosum.
De Nup. Pl. & Thet.

Ver. 154. Eryx was a mountain in Sicily.

Ver. 162. Ovid has imitated this passage; speaking of the deification of Æneas, he says,

———Ambrosiâ cum dulci nectare mistâ
Contigit, os; fecitque Deum. *Met. B.* 14. 606.

Ver. 164. This is similar to the beginning of Sappho's first ode,

Ποικιλόθρον' κ. τ. λ.

Venus, bright goddess of the skies,
To whom unnumber'd temples rise. *F. F.*

Ver. 169. The Greeek is *απαλοι κηποι, soft gardens;* Archbishop Potter observes, that at the feast of Adonis, there were carried shells filled with earth, in which grew several sorts of herbs, especially lettuces, in memory that Adonis was laid out by Venus on a bed of lettuces: these were called *κηποι, gardens;* whence Αδωνιδος κηπος are proverbially applied to things unfruitful, or fading, because those herbs were only sown so long before the festival, as to sprout forth, and be green at that time, and afterwards cast in the water. *See Anziquit. vol.* I.

Nam quotcunque ferunt campi, quos Thessala magnis
Montibus ora creat. *Catull. & de Pel. & Thet.*

Ver. 176. Thus Bion, Αμφι δε μιν κ. τ. λ.
Epit. Adon.

Surrounding Cupids heave their breasts with sighs.

And Moschus,
The little loves, lamenting at his doom,
Strike their fair breasts, and weep around his tomb.
F. F.

But as Longepierre observes, images of Cupids were never omitted at this festival. Ovid seems to have had this in view when he wrote,

Ecce puer Veneris fert eversamque pharetram,
Et fractos arcus, et sine luce facem.
Aspice demissis ut eat miserabilis alis,
Pectoraque infestâ tundit aperta manu.
Excipiunt lacrymas sparsi per colla capilli,
Oraque singultu concutiente sonant.
Amor. B. 3 *El.* 9.

See Venus' son his torch extinguish'd brings,
His quiver all revers'd, and broke his bow!
See, pensive how he droops with flagging wings,
And strikes his bared bosom many a blow!
Loose and neglected, scatter'd o'er his neck,
His golden locks drink many a falling tear;
What piteous sobs, as if his heart would break,
Shake his swol'n cheek? Ah, sorrow too severe!

Ver. 178. Thus Bion, speaking likewise of Cupid,

τα και τα τον Ερωτα μεταλλευον,

How here and there he skipt, and hopt from tree to tree,

Ver. 181. Virgil has an image of this sort,

Intextusque puer———quem præpes ab Idâ, &c.
Æn. B. 5.

There royal Ganymede, inwrought with art,
O'er hills and forests hunts the bounding hart;
The beauteous youth, all wondrous to behold:
Pants in the moving threads, and lives in gold:
From towering Ida shoots the bird of Jove,
And bears him struggling through the clouds above;
With out-stretch'd hands his hoary guardians cry,
And the loud hounds spring furious at the sky.
Pitt.

I transcribed this fine passage from Mr. Pitt's translation of Virgil, that I might lay before the reader Mr. Warton's note upon it. "The description of this beautiful piece of tapestry is extremely picturesque: the circumstances of the boy's panting, the old men lifting up their hands, and above all, the dogs looking up and barking after him, are painted in the liveliest manner imaginable. There is a very fine painting by Michael Angelo on this subject, who has exactly copied Virgil's description, except that he has omitted the circumstance of the dogs, which Spenser has likewise, in describing this story, as part of the tapestry with which the house of Busyrane was adorned."

———When as the Trojan boy so faire
He snatch'd from Ida hill, and with him bare,
Wondrous delight it was, there to behold,
How the rude shepherds after him did stare,
Trembling through fear lest he down fallen should,
And often to him calling to take surer holde.
F. Q. B. 3. *c.* 11.

Ver. 185. Thus Virgil,
Quamvis Milesia magno
Vellera mutentur Tyrios incocta rubores.
Geor. B. 3. 306.

Ver. 186. See Idyl. v. ver. 58, and the note.

Ver. 210.
Sis bonus ô felixque tuis. *Ecl.* 5. 65.
Sis felix, nostrumque leves quæcunque laborem.
Æn. 1. 330.

Ver. 212. This superstitious mystery, of lamenting for Adonis, may be thus explained: Adonis was the sun; the upper hemisphere of the earth, or that which we think so, was anciently called Venus, the under Proserpine, therefore; when the sun was in the six inferior signs, they said, he was with Proserpine; when he was in the six superior, with Venus. By the boar that slew Adonis, they understood Winter; for they made the boar, not unaptly, the emblem of that rigid season. Or, by Adonis, they meant the fruits of the earth, which are for one while buried, but at length appear flourishing to the sight; when, therefore, the seed was thrown into the ground, they said, Adonis was gone to Proserpine; but when it sprouted up, they said, he had revisited the light and Venus. Hence probably it was

that they sowed corn, and made gardens for Adonis. *Universl. Hist. vol* ii.

Milton has some fine melodious lines on this subject.

——Thammuz came next behind,
Whose annual wound in Lebanon allur'd
The Syrian damsels to lament his fate
In amorous ditties all a summer's day,
While smooth Adonis, from his native rock,
Ran purple to the sea, suppos'd with blood
Of Thammuz yearly wounded.

Par. Lost. B. 1.

Give me leave here to insert the account given by the late Mr. Maundrel of this ancient piece of worship, and probably the first occasion of such a superstition. "We had the fortune to see what "may be supposed to be the occasion of that opi- "nion which Lucian relates, viz. That this stream "(the river Adonis) at certain seasons of the year, "especially about the feast of Adonis, is of a "bloody colour; which the Heathens looked "upon as proceeding from a kind of sympathy in "the river for the death of Adonis, who was "killed by a wild boar in the mountains, out of "which this stream rises. Something like this we "saw actually come to pass; for the water was "stained to a surprising redness; and as we ob- "served in travelling, had discoloured the sea a "great way into a reddish hue, occasioned, doubt- "less, by a sort of minium or red earth, washed "into the river by the violence of the rain, and "not by any stain from the blood of Adonis." The prophet Ezekial saw the women at Jerusalem lamenting Tammuz, ch. viii. ver. 14. "He "brought me to the door of the gate of the Lord's "house which was towards the north, and be- "hold there sat women weeping for Tammuz."

Ver. 216.

——Thus Horace,
Impransus non qui ovem dignoscere hoste.

B. 1. *Ep.* 15.

——With hunger keen,
On friends and foes he vented his chargrin.

Duncombe.

IDYLLIUM XVI.

THE GRACES, OR HIERO.

THE ARGUMENT.

This Idyllium is addressed to Hiero, the last tyrant of Sicily. Theocritus having before celebrated this prince, without being recompensed for his trouble, composed this poem, in which he complains of the ingratitude of princes to poets, who can alone render their actions immortal. He observes that not only the Lycian and Trojan heroes, but even Ulysses himself, would have been buried in oblivion, if their fame had not been celebrated by Homer.

It fits the muse's tongue, the poet's pen,
To praise th' immortal gods, and famous men:
The nine are deities and gods resound,
But bards are men, and sing of men renown'd.
Yet who that lives beneath heav'ns cope regards
The incense, or the sacrifice of bards?
Who opens now the hospitable door,
And makes the muses richer than before?
Barefoot, unpaid, indignant they return,
Reproach my zeal, and unavailing mourn;
To the dark chest their labours they consign,
And on cold knees the languid head recline;
For none, alas! the race of men among,
Receives the bard, or hears his lofty song;
Men thirst not now for glory as of old,
But all their passions are confin'd to gold;
To their mean breast their thrifty hands they join,
And scarce will give the canker of their coin.
Hint at a recompense, they thus begin;
'Close is my shirt, but closer is my skin:
'My own I'll keep; and may the gods reward,
'And crown with honours every living bard.
'Homer's the prince of poets—sure 'tis sense,
'To read the noblest works at no expence.'
What profit, wretched churls, can gold afford,
Which thus in coffers ye abundant hoard?
The wise a different use for riches know,
And love on men of genius to bestow;
Part on themselves, to others part they spare,
And some their friends, and some their kinsmen share:
To every man their bounty shines display'd,
And yet the offerings of the gods are paid.
With prudent hospitality they spend,
And kindly greeting speed the parting friend.
But most the muses' sons these honours claim,
Whose deathless lays immortalize their fame;
Then will they never rove, inglorious shades,
(Like those who living labour'd with their spades)
Along cold Acheron's infernal river,
And mourn hereditary want for ever.
Alcus and Antiochus we're told,
Reign'd rich, and mighty potentates of old,
And to a thousand slaves, their menial train,
In lots distributed the monthly grain:
In Scopas' fields unnumber'd heifers fed, [head:
And bulls that proudly toss'd the rough-horn'd
For good Creondas' use the shepherd-swains
Fed flocks in myriads on Cranonian plains:

These after death their sweet enjoyments lost,
When in hell's spacious barge their ghosts had cross
Th' infernal river, and unhonour'd all,
To other heirs their vast possessions sall;
And these among the miserable train
Had long in darkness and oblivion lain,
Had not the Cean muse extoll'd their name,
Awak'd his sounding lyre, and giv'n them deathless fame.
Verse crowns the race-horse with fair honour's meed,
That in the field has signaliz'd his speed.
Who had the Lycian thiefs, and Trojan known,
Or Cycnus, delicate with milk-white crown,
Had not the BARD delighted to rehearse
Their bold atchievements in heroic verse?
Ulysses ne'er had endless glory gain'd,
Though for ten tedious summers he sustain'd
Unnumber'd toils, while he observant stray'd
From clime to clime, and men and states survey'd;
Ev'n though he 'scap'd the Cyclops' gloomy cell,
And quick descended to the realms of hell:
Philœtius and Eumæus with the dead
Had lain as nameless as the beasts they fed;
And brave Laertes with his parting breath
Had dy'd, but Homer snatch'd their names from death.

All human fame is by the muses spread,
And heirs consume the riches of the dead.
Yet 'tis an easier task, when tempests roar,
To count the waves that ceaseless lash the shore:
'Tis easier far to bleach the Ethiop soul,
Than turn the tenor of the miser's soul.
Curse on the wretch, that thus augments his store!
And much possessing, may he wish for more!
I still prefer fair fame, with better sense,
And, more than riches, mens benevolence.
And yet, alas! what guardian shall I choose,
What princely chief to patronize my muse?
In perilous paths the race of poets rove,
Dubious their fate, without the aid of Jove.
But still the sun rolls glorious in the skies;
And future victors in the race will rise:
The chief will rise, who shall my numbers claim,
Equal to great Eacides in fame,
Equal to Ajax on the Phrygian plains,
Where Illus' tomb near Simois' streams remains.
The bold Phœnicians, sons of Libya far,
Shrink at the rumour of approaching war:
For lo! their spears the Syracusians wield,
And bend the pliant sallow to a shield:
These Hiero leads, superior to the rest,
And on his helmet nods the horse-hair crest.
O Jupiter, and thou Minerva chaste,
And Proserpine, to our protection haste,
With Ceres thou delightest to partake
Those fair built walls by Lysimelia's lake:
Oh, may the fates, in pity to our woes,
On the Sardonian main disperse our foes!
And let the few that reach their country tell
Their wives and children how their fathers fell!
And let the natives dwell in peace and rest
In all the cities which the foes possest!
May swains, along the pastures, fat and fair,
In flocks of thousands tend their bleating care!
And lowing herds, returning to the stall,
Wind o'er the plain, as slow as foot can sall!
May the crops flourish, and with feeble voice,
On leafy shrubs the grashopper rejoice!
While spiders stretch their webs along the shore,
And war's dread name be never mention'd more!
May godlike poets, in undying strain,
Bear Hiero's praise beyond the Scythian main,
Beyond the walls, with black bitumen made,
Where proud Semiramis the sceptre sway'd.
I am but one; Jove's daughters fair regard
With sweetest favour many a living bard;
These shall Sicilian Arethusa sing,
The happy people, and the valiant king.
Ye Graces Eteoclean, who reside
Where Minyas, curst by Thebans, rolls his tide,
Unask'd I'll rest; yet not, if call'd, refuse
With you to bring my sweet associate muse:
Without you what to men can pleasures give?
Oh! may I ever with the Graces live!

NOTES ON IDYLLIUM XVI.

This little piece abounds with so many beauties and graces, that it is with great propriety styled Χαριτες, or, the Graces. Hiero, the subject of this poem, was the son of Hierocles, one of the descendants of Gelon the first king of Syracuse. Hiero succeeded to the throne of Syracuse 265 years before Christ. He was remarkable for his constant attachment to, and generous friendship for the Romans.

Ver. 2. In like manner Horace says,

Quem virum, aut heroa, lyrâ, vel acri
Tibiâ sumes celebrare, Clio?
Quem Deum? *B. 1. Ode 12.*

What man, what hero shall inspire,
My Clio's fife with sprightly lays?
Or will she choose to strike the lyre
Devoted to the gods in hymns of praise?

Ver 5.

Quis tibi Mæcenas? quis nunc erit aut Proculeius,
Aut Fabius? quis Cotta iterum? quis Lentulus alter? *Juv. Sat. 7. 94.*

All these great men were celebrated for their generosity and liberality to the Muses.

Ver. 7.

Nemo cibo, nemo hospitia, tectoque juvabit. *Juv. Sat. 3. 211.*

Through the wide world a wretched vagrant roam,
For where can starving merit find a home?
In vain your mournful narrative disclose,
While all neglect, and most insult your woes.
S. Johnson.

Ver. 9. The protection of princes is the greateſt incentive to the diligence of poets, and often of more avail than the inſpiration of Apollo, " Et " ſpes & ratio ſtudiorum in Cæſare tantum." Juvenal ſays,

Tædia tunc ſubeunt animos, tunc ſeque, ſuamque
Terpſichoren odit facunda & nuda ſenectus. *Sat.* 7.

Laſt, cruſh'd by age, in poverty ye pine,
And ſighing curſe the unavailing nine.
Bur. Greene.

Ver. 17. Illiberal perſons were ſaid to hold their hands in their boſoms.

Ver. 20. The Greek is ακροτατῳ η γονυ κνημα, My leg is further off than my knee. I would not recollect an Engliſh proverb more correſpondent to the original than what I have ſubſtituted; the Romans have one ſimilar,

Tunica pallio proprior. *Plaut.*

My waiſtcoat is nearer than my cloak.

Ver. 23.

Priores Mæonius tenet
Sedes Homerus. *Hor. B.* 4. *Ode* 9.

Ver. 25.

Nullus argento color eſt, avaris
Abditæ terris inimice lamnæ
Criſpe Salluſti, niſi temperato
Splendeat uſu. *Hor. B.* 2. *Ode* 2.

My Salluſt's generous thoughts diſdain
The ſordid miſer's hoarded gain;
Since ſilver with no luſtre glows,
But what a moderate uſe beſtows. *Duncombe.*

Ver. 28. Horace has ſomething ſimilar;

Cur eget indignus quiſquam te divete? &c.
B. 2. *S.* 2.

Then, like the ſun let bounty ſpread her ray,
And ſhine that ſuperfluity away.
Oh, impudence of wealth! with all thy ſtore,
How dar'ſt thou let one worthy man be poor?
Pope.

Ver. 34. Here are ſome admirable precepts for ſocial life; ſome of them ſeem to be borrowed from Homer's Odyſſey, B. 15. which I ſhall give in Mr. Pope's verſion.

True friendſhip's laws are by this rule expreſt,
Welcome the coming, ſpeed the parting gueſt.

Which he has adopted in his imitation of the 2d ſatire of the 2d book of Horace.

Ver. 38. The ſenſe of the original is, " Like " ſome ditcher, who by labouring hard with his " ſpade, has rendered his hands callous."

Ver. 40.

Nunc et pauperiem & duros perferre labores.
Æn. B. 6. 636.

Ver. 41. Antiochus was king of Syria: the Alenadæ and Scopadæ reigned in Theſſaly and the neighbouring iſlands.

Ver. 44. Anciently the maſters of families uſed to diſtribute to their ſlaves, every month, ſuch a meaſure of corn as would keep them the month, which they called *Demenſum*; thus Terence,

Quod ille unciatim vix de demenſo ſuo,
Suum defraudans genium, comparſit miſer.
Phor. Act 1. *Sc.* 1.

Ver. 48. Cranon was a city of Theſſaly.

Ver. 50.

Et ferrugineâ ſubvectat corpora cymbâ.
Æn. 6. 304.

Ver. 52.

Linquenda tellus, et domus, et placens
Uxor—— *Hor. B.* 2. *Ode* 14.

Ver. 53.

—Omnes illachrymabiles Urgentur, &c.
Hor. B. 4. *Ode* 9.

Vain was the chief's, the ſage's pride!
They had no poet, and they dy'd.
In vain they ſchem'd, in vain they bled!
They had no poet, and are dead. *Pope.*

Ver. 53. Simonides, a native of Céos, an iſland in the Ægéan Sea. He was a moving and a paſſionate writer, and ſucceeded chiefly in elegies: he gained as much honour as he gave by his poems on the four celebrated battles at Marathon, Thermopylæ, Salamis and Platæa.

Ver. 59. Theſe were Sarpedon and Glaucus: Cycnus, the ſon of Neptune, was ſlain by Achilles, and turned into a ſwan: Heſiod, according to the Scholiaſt, deſcribes Cycnus with a white head.

Ver. 65. Thus Horace,

——Multorum providus urbes,
Et mores hominum inſpexit, latumque per æquor,
Dum ſibi, dum ſociis reditum parat, aſpera multa
Pertulit. *B.* 1. *Ep.* 2.

Ver. 69. It is here worth obſervation, that after the enumeration of theſe great heroes, Theocritus does not forget his paſtoral capacity, or omit to mention the ſwineherd Eumæus, and the neatherd Philœtius. See *Homer's Odyſſey.*

Ver. 73.

Dignum laude virum muſam vetat mori.
Hor. B. 4. *Ode* 8.

Ver. 74.

—Extructis in altum Divitiis potietur hæres.
Hor. B. 2. *Ode* 3.

Ver. 75. Virgil ſeems to have imitated this paſſage:

Quem qui ſcire velit, &c. *Geor. B.* 2. 105.

Or tell the billows, as they beat the ſhores,
When all th' Ionian ſea with raging Boreas roars.
Warton.

Ver. 88. Thus Virgil:

Alter erit Tiphys, et altera quæ vebat Argo
Delectas heroas: erunt etiam altera bella,
Atque iterum ad Trojan magnus mittetur Achilles. 4.

Another Tiphys ſhall new ſeas explore,
Another Argos land the chiefs on ſhore;
New wars the bleeding nations ſhall deſtroy,
And great Achilles find a ſecond Troy.
Dryd. and War.

Ver. 92. Homer has,

——Διὸς ἀγχοῦ σήματι Ἴλου. *Iliad, B.* 11. 415.

From ancient Ilus' ruin'd monument. *Pope.*

Ver. 96. Thus Virgil,

——Flectuntque falignas
Umbonum crates. *Æn. B.* 7. 632.

And for the ſhield the pliant ſallow bend. *Pitt.*

Pindar ſeems to make an alluſion to this circumſtance, in his firſt Pythian Ode, which I ſhall give in the excellent tranſlation of the late Gilbert Weſt, Eſq.

And do thou aid Sicilia's hoary lord,
To form and rule his ſon's obedient mind;
And ſtill in golden days of ſweet accord,
And mutual peace the friendly people bind,
Then grant, O ſon of Saturn, grant my pray'r!
The bold Phœnician on his ſhore detain, &c.

Ver. 98.

—Criſtâ hirſutus equinâ. *Æn.* 10. 869.

High on his head the creſted helm he wore. *Pitt.*

Ver. 99. Αι γαϱ, Ζηυ κυδιϛι πατϵϱ κ. τ. λ.

This verſe is an imitation of that of Homer;

Αι γαϱ Ζϵυ τι πατϵϱ καὶ Αθηναιη καὶ Απολλων.

Sic pater ille deûm faciat, ſic altus Apollo.
Virg. Æn. 10. 875.

So may great Jove, and he, the god of light. *Pitt.*

Ver. 100. Theſe deities were worſhipped by the Syracuſians.

Ver. 102. A lake not far from Syracuſe.

Ver. 104. Theſe were the Carthaginians, who uſed frequently to invade Sicily.

Ver. 105. The Greek is αριθματως, numerabiles, *eaſy to be told*, which is elegantly uſed for a *few:* Horace has the ſame expreſſion, "Quo "ſane populus numerabilis, utpote parvus.
Art. Poet. 206.

Ver. 110. Thus the Pſalmiſt, "That our flocks "may bring forth thouſands and ten thouſands in "our ſtreets;" that is, in their paſtures or walks; or, may they increaſe ſo as not only to fill our paſtures, but the ſtreets of our villages.

Ver. 114.

Sole ſub ardenti reſonant arbuſta cicadis.
Virg. Ecl. 2.

Ver. 115.

In foribus laxos ſuſpendit aranea caſſes.
Virg. Georg. 4. 247.

Ver. 119. Thus Ovid;

——Ubi dicitur altam
Coctilibus muris cinxiſſe Semiramis arbem.
Met. 4. 57.

——Where proud Semiramis, for ſtate,
Rais'd walls of brick magnificently great. *Euſden.*

Ver. 125. By the Graces are meant the Muſes: Eteocles was the elder ſon of Oedippus by Jocaſta: he is ſaid to have firſt ſacrificed to the Muſes at Orchomenos: whence they are called the Eteoclean Deities, or Graces. Homer mentions the river Minyas. *Iliad, B.* 11.

Soft Minyas rolls his waters to the main. *Pope.*

Ver. 130. Milton ſeems to allude to this,

Theſe delights if thou caſt give,
Mirth, with thee I mean to live.

There is a beautiful paſſage in my friend Mr. William Whitehead's excellent poem called, "The "Danger of Writing Verſe," which I ſhall beg leave to tranſcribe, as the ſubject is the ſame with this Idyllium, and the laſt line refers to our next poem, "The Encomium of Ptolemy:" complaining that the great ſhowed no regard to the Muſes, he ſays,

Yet let ev'n theſe be taught in myſtic rhyme,
'Tis verſe alone arreſts the wings of time.
Faſt to the thread of life annex'd by fame,
A ſculptur'd medal bears each human name:
O'er Lethe's ſtreams the fatal threads depend,
The glittering medal trembles as they bend;
Cloſe but the ſhears, when chance or nature calls,
The birds of rumour catch it as it falls;
A while from bill to bill the trifle's toſt,
The waves receive it, and 'tis ever loſt.
But ſhould the meaneſt ſwan that cuts the ſtream,
Conſign'd to Phœbus, catch the favour'd name,
Safe in her mouth ſhe bears the ſacred prize,
To where bright Fame's eternal altars riſe:
'Tis there the Muſe's friends true laurels wear,
There * Egypt's monarch reigns, and great Auguſtus there.

* *Ptolemy Philadelphus.*

IDYLLIUM XVII.

PTOLEMY.

THE ARGUMENT.

THEOCRITUS riſes above his paſtoral ſtyle when he celebrates the praiſes of Ptolemy Philadelphus, the ſon of Ptolemy Lagus and Berenice: he derives his race from Hercules; enumerates his many cities; deſcribes his immenſe treaſures, and though he extols him for his military preparations, he commends his love of peace: but above all he commemorates his royal munificence to the ſons of the Muſes.

WITH Jove begin, ye nine, and end with Jove,
Whene'er ye praiſe the greateſt god above:
But if of nobleſt men the ſong ye caſt,
Let Ptolemy be firſt, and midſt, and laſt.

Heroes of old, from demigods that sprung,
Those lofty poets who their actions sung:
Well skill'd, I tune to Ptolemy my reed;
Hymns are of gods above the honour'd meed.
To Ida, when the woodman winds his way,
Where verdant pines their towering tops display,
Doubtful he stands, with undetermin'd look,
Where first to deal the meditated stroke:
And where shall I commence? new themes arise,
Deeds that exalt his glory to the skies.
If from his fathers we commence the plan,
Lagus, how great, how excellent a man!
Who to no earthly potentate would yield
For wisdom at the board, or valour in the field:
Him with the gods Jove equals, and has given
A golden palace in the realms of heaven;
Near him sits Alexander, wise and great,
The fell destroyer of the Persian state.
Against them, thron'd in adamant, in view
Alcides, who the Cretan monster slew,
Reclines, and, as with gods the feast he shares,
Glories to meet his own descendant heirs,
From age and pain's impediments repriev'd,
And in the rank of deities receiv'd.
For in his line are both these heroes class'd,
And both deriv'd from Hercules the last.
Thence, when the nectar'd bowl his love inspires,
And to the blooming Hebe he retires,
To this his bow and quiver he allots,
To that his iron club, distinct with knots;
Thus Jove's great son is by his offspring led
To silver-footed Hebe's rosy bed.

How Berenice shone! her parents pride;
Virtue her aim, and wisdom was her guide:
Sure Venus with light touch her bosom prest,
Infusing in her soft ambrosial breast
Pure, constant love: hence faithful records tell,
No monarch ever lov'd his queen so well;
No queen with such undying passion burn'd,
For more than equal fondness she return'd.
Whene'er to love the chief his mind unbends,
To his son's care the kingdom he commends.
Unfaithful wives, dissatisfied at home,
Let their wild thoughts on joys forbidden roam:
Their births are known, yet of a numerous race,
None shows the features of the father's face.
Venus, than all the goddesses more fair,
The lovely Berenice was thy care;
To thee 'twas owing, gentle, kind and good,
She past not Acheron's woe-working flood.
Thou caught'st her e'er she went where spectres dwell,
Or Charon, the grim ferryman of hell;
And in thy temple plac'd the royal fair,
Thine own high honour's privilege to share.
Thence gentle love in mortals she inspires,
And soft solicitudes, and sweet desires.
The fair Deïpyle to Tydeus bare
Stern Diomed, the thunderbolt of war:
And Thetis, goddess of the azure wave,
To Peleus brought Achilles, bold and brave:
But Berenice nobler praise hath won,
Who bore great Ptolemy as great a son:
And sea-girt Cos receiv'd thee soon as born,
When first thine eyes beheld the radiant morn.
For there thy mother to Lucina pray'd,
Who sends, to those that suffer child-bed, aid.
She came, and friendly to the genial bed,
A placid, sweet tranquillity she shed
O'er all her limbs: and thus serene and mild,
Like his lov'd sire, was born the lovely child.
Cos saw, and fondling in her arms the boy,
Thus spoke transported, with the voice of joy;
"Quick rise to light, auspicious babe be born!
"And me with equal dignity adorn
"As Phœbus Delos;—on fam'd Triop's brow,
"And on the neighbouring Dorian race bestow
"Just honours, and as favourably smile, [isle."
"As the god views with joy Rhenæa's fertile
The island spoke; and thrice the bird of Jove
His pinions clang'd, resounding from above;
Jove's omen thunder'd from his eagle's wings;
Jove loves and honours venerable kings.
But whom in infancy his care befriends,
Him power, and wealth, and happiness attends:
He rules below'd unbounded tracts of land,
And various oceans roll at his command.
Unnumber'd nations view their happy plains,
Fresh fertiliz'd by Jove's prolific rains:
But none, like Egypt, can such plenty boast,
When genial Nile o'erflows the humid coast:
No realm for numerous cities thus renown'd,
Where arts and fam'd artificers abound:
Three times ten thousand towery towns obey
Illustrious Ptolemy's pacific sway.
He o'er Phœnicia, Syria, Libya reigns,
Arabian deserts, Ethiopian plains,
Pamphylians, and Cilicians bold in war,
And Carians brave, and Lycians fam'd afar;
The distant Cyclades confess his reign,
Whose fleets assert the empire of the main;
So far his ships their conquering flags display,
Him seas, and lands, and sounding fluods obey.
Horsemen and spearmen guard the monarch round,
Their arms resplendent send a brazen sound;
Such tributes daily aggrandize his store,
No king e'er own'd such boundless wealth before.
His peaceful subjects ply at ease their toil,
No foes invade the fertile banks of Nile,
Nor pitch their camps along the peaceful plains
With war to terrify the village swains:
No pirates haunt the shore in quest of prey,
Nor bear by stealth the lowing herds away;
For graceful Ptolemy renown'd in arms,
Guards his extended plains from hostile harms,
Like a wise king, the conquests of his sire.
He knows to keep, and new ones to acquire.
And yet he hoards not up his useless store,
Like ants still labouring, still amassing more;
The holy shrines and temples are his care,
For they the first-fruits of his favour share:
To mighty kings his bounties he extends,
To states confederate, and illustrious friends.
No bard at Bacchus' festival appears,
Whose lyre has power to charm the ravish'd ears,
But he bright honours and rewards imparts,
Due to his merits, equal to his arts:
And poets hence, for deathless song renown'd,
The generous fame of Ptolemy resound.

At what more glorious can the wealthy aim,
Than thus to purchaſe fair and laſting fame?
The great Atridæ this alone enjoy,
While all the wealth and ſpoil of plunder'd Troy,
That ſcap'd the raging flame, or whelming wave,
Lies buried in oblivion's greedy grave.
Cloſe trode great Ptolemy, at virtue's call,
His father's footſteps, but ſurpaſt them all.
He rear'd the fragrant temple, and the ſhrine,
And to his parents offer'd rites divine:
Whoſe forms in gold and ivory are deſign'd,
And worſhipp'd as the guardians of mankind.
There oft as circling moons divide the year,
On the red altar bleeds the fatten'd ſteer;
His hands the thighs for holy flames divide,
Fair blooms the lov'd Arſinoë at his ſide;
Than whom no nobler queen of mortal race,
A greater prince detains in fond embrace;
And, as kind nature the ſoft tie approves,
Dearly the brother and the huſband loves.
Such are the nuptials in the bleſt abodes,
And ſuch the union of immortal gods:
Iſis, who ſtill retains her virgin bloom,
Whoſe radiant fingers breathe divine perfume,
For Jove prepares the bed, where at his ſide
Fair Juno ſleeps, his ſiſter and his bride.
Hail, noble Ptolemy! illuſtrious king!
Thee peer to mighty demigods I'll ſing;
And future ages ſhall the verſe approve:
Hail! and fair virtue only aſk of Jove.

NOTES ON IDYLLIUM XVII.

The common title of this Idyllium is "The "Encomium of Ptolemy." Heinſius makes no doubt but that the inſcription ſhould be ſimply "Ptolemy:" for Theocritus had written two poems, one was called "Ptolemy," the other "Berenice;" the firſt celebrated the virtues of that illuſtrious monarch, the ſecond thoſe of his royal mother, who at that time was enrolled among the gods. For Ptolemy's character, ſee Idyllium XIV. and the note on verſe 82.

Ver. 1. The Greek is, Ἐκ Διὸς ἀρχώμεσθα, which are the very words with which Aratus begins his poem called *Phænomina:* as Theocritus and Aratus were intimate friends, and flouriſhed nearly at the ſame time, though the Sicilian bard was older, it is hard to ſay which borrowed from the other: Virgil has,

A Jove principium, Muſæ. *Ecl.* 3.
A te principium, tibi deſinet. *Ecl.* 8.
With thee began my ſongs, with thee ſhall end.
Wart.

Ver. 4. Milton has,

On earth join all ye creatures to extol
Him firſt, him laſt, him midſt, and without end.

Milton has greatly improved this by adding, "and without end;" as he is celebrating God, and Theocritus only a man,

Ver. 8.
Carmine Di ſuperi placantur, carmine manes.
Hor. B. 2. *Ep.* 1.

Verſe can the gods of heaven and hell appeaſe.

Ver. 16. Ptolemy Lagus was one of Alexander's captains, who upon that monarch's death, and the diviſion of his empire, had Egypt, Libya, and that part of Arabia which borders upon Egypt, allotted to his ſhare: but at the time of his death, he held ſeveral other countries, which are enumerated below. See ver. 97, &c.

Ver. 21.
Quos inter Auguſtus recumbens. *Hor. B.* 3. *O.* 3.

—τοῖσε, &c.] I would chooſe to read, αἰολομητάς, varium conſilium habens, and not αἰολομήτας with Caſaubon.

Ver. 24.
Tu Creſſia mactas Prodigia. *Æn.* 8. 294.

You ſlew the bull whoſe rage diſpeopled Crete.
Pitt.

Ver. 25.
———Sic Jovis intereſt
Optatis epulis impiger Hercules. *Hor. B.* 4. *Ode* 8.

Ver. 26. The Greek is, Ἀθάνατοι δὲ καλεῦνται θεοὶ νεποδες γεγαῶτες, which is rendered, "immor- "tales vero vocantur Dii, ſine pedum uſu facti;" and being formed without feet they are called immortal gods. It is amazing how a clear and elegant paſſage ſhould be corrupted into ſuch nonſenſe: Heinſius undoubtedly reads right; ἠοῖ νεπόδες γεγαῶτες, that is, αὐτῷ υἱωνοὶ ὄντες, "thoſe that "were his nephews;" he rejoices that his nephews are called (or are become) immortal.

Ver. 30.
Juliùs, a magno demiſſum nomen Jülo. *Æn.* 1. 288.

Ver. 31.
Purpureo bibit ore nectar. *Hor. B.* 3. *O.* 3.

Ver. 33. Thus Ovid. Met. B. 3. 165.

——Nympharum tradidit uni
Armigeræ jaculum, pharetramque arcuſque retentos.

Ver. 45. Ptolemy made his ſon Philadelphus partner with him in the empire.

Ver. 49. The Greek is, Ῥηΐδιαι δὲ γοναί, which is wrong tranſlated, "facilesquidem partus ſunt," their births are eaſy; whereas it ſhould be rendered, as Caſaubon rightly obſerves, "their births are eaſily "to be judged of," viz. that they are adulterous; the latter part of the verſe explains the former, Ῥηΐδιαι δὲ γοναί, τέκνα δ' ἕπποτ' ἐοικότα πατρί, "their "births are eaſy to be judged, for the children do "not reſemble their father." The ancients imagined thoſe children not to be legitimate who

were unlike their parents; and therefore Heſiod reckons it among the felicities which attend good men, that

The wives bear ſons reſembling their own ſires.

Τίκτουσιν δὲ γυναῖκες ὁμοῖα τέκνα γονεῦσι.

Ver. 233.

Ver. 56.

Portitor has horrendus aquas at flumina ſervat
Terribili ſqualore Charon. *Æn. B.* 6. 298

Ver. 73. Virgil has ſomething ſimilar.

At Venus Aſcanio placidam per membra quietem
Irrigat, &c. *Æn B.* 1. 695.

Mean time the goddeſs on Aſcanius throws
A balmy ſlumber, and a ſweet repoſe;
Lull'd in her lap to reſt, &c. *Pitt.*

Ver. 75. The perſonifying of this iſland is ſublime and noble, and bear a great reſemblance to that paſſage in Iſaiah; "Break forth into ſinging, "ye mountains! O foreſt, and every tree there-"in!" Virgil has,

Ipſi latitiâ voces ad ſidera jactant
Intonſi montes. *Ecl.* 5. 62.

Ver 79. An iſland in the Ægean ſea, where Latona was delivered of Apollo and Diana; it was once a floating iſland, but fixed by Apollo.

Quam pius Arcitenens, &c. *Virg. Æn.* 3. 75.

Which Phœbus fix'd; for once ſhe wander'd round
The ſhores, and floated on the vaſt profound;
But now, unmov'd the peopled region braves
The roaring whirlwinds, and the furious waves. *Pitt.*

Ver. 79. The Scholiaſt ſays Triops was a king of Cos, from whom the promontory near Cnidus took its denomination.

Ver. 82. An iſland ſeparated from Delos by a narrow ſtrait about three times as big as Delos.

Ver. 86. Thus Callimachus, Ἐκ δὲ Διὸς βασιλῆες "kings are from Jupiter;" which Virgil has tranſlated, "Ab Jove ſunt reges;" but they all ſeem to have copied after Heſiod. Theog. ver. 96.

Ἐκ δὲ Διὸς βασιλῆες· ὁ δ' ὄβλιος οὔνεκα Μοῦσαι
Φίλμνηται.————

————Kings are deriv'd from Jove;
And bleſt the mortal whom the muſes love.

Ver. 94 The Nile is the greateſt wonder of Egypt: as it ſeldom rains there, this river, which waters the whole country by its regular innundations, ſupplies that defect, by bringing, as a yearly tribute, the rains of the other countries. To multiply ſo beneficent a river, Egypt was cut into numberleſs canals, of a length and breadth proportioned to the different ſituation and wants of the lands; the Nile brought fertility every where with its ſalutary ſtreams; it united cities one with another, and the Mediterranean with the Red-ſea; maintained trade at home and abroad, and fortified the kingdom againſt the enemy; ſo that it was at once the nouriſher and protector of Egypt. There cannot be a more delightful proſpect than the Nile affords at two ſeaſons of the year; for if you aſcend ſome mountain, or one of the great pyramids of Grand Cairo about the month, of July and Auguſt, you behold a vaſt ſea, in which a prodigious number of towns, villages, turrets, and ſpires appear, like the iſles in the Ægean ſea, with cauſways leading from place to place, intermixed with groves and fruit-trees, whoſe tops only are viſible; this view is terminated by mountains and woods, which, at a diſtance, form the moſt agreeable perſpective that can be imagined. But in the winter, that is, in the months of January and February, the whole country is like one continued ſcene of beautiful meadows, enamelled with all kinds of flowers: you ſee on every ſide herds and flocks ſcattered over the plain, with infinite numbers of huſbandmen and gardeners: the air is then embalmed by the great quantity of bloſſoms on the orange, lemon, and other trees; and is ſo pure, that a wholeſomer and more agreeable is not to be found in the world: ſo that nature, which is then as it were dead in ſo many other climates, ſeems to revive only for the ſake of ſo delightful an abode. *Rollin's Ant. Hiſt.*

Ver. 97. The original is extremely perplexing; literally tranſlated it would run thus,

He has three hundred cities, - -	300
Add three thouſand - - -	3000
To thirty thouſand, - - -	30000
Twice three - - - - -	6
And three times eleven, - - -	33
	33339

I have made it the round number of thirty thouſand. We meet with an embaraſſed method of numeration in the 14th Idyl. ver. 55.

Ver. 104. Waller has a paſſage reſembling this,

Where'er thy navy ſpreads her canvaſs wings,
Homage to thee, and peace to all ſhe brings.

Which Creech ſtuck in his tranſlation. Ptolemy intended to engroſs the whole trade of the eaſt and weſt to himſelf, and therefore fitted out two great fleets to protect his trading ſubjects: one of theſe he kept in the Red ſea, the other in the Mediterranean: the latter was very numerous, and had ſeveral ſhips of an extraordinary ſize; two of them in particular had thirty oars on a ſide, one of twenty, four of fourteen, two of twelve, fourteen of eleven, thirty of nine, thirty-ſeven of ſeven, five of ſix, ſeventeen of five, and beſides theſe, an incredible number of veſſels with four and three oars on a ſide. By this means, the whole trade being fixed at Alexandria, that place became the chief mart of all the traffic that was carried on between the eaſt and the weſt, and continued to be the greateſt emporium in the world above ſeventeen hundred years, till another paſſage was found out by the Cape of Good Hope: but as the road to the Red ſea lay croſs the deſerts, where no water could be had, nor any convenience of towns or houſes for lodging

paſſengers, Ptolemy, to remedy both theſe evils, opened a canal along the great road, into which he conveyed the water of the Nile, and built on it houſes at proper diſtances; ſo that paſſengers found every night convenient lodgings, and neceſſary refreſhments for themſelves, and their beaſts of burden.

Univ. Hiſt. vol. ix. 8*vo. p.* 383.

Ver. 111. The amiable picture Theocritus here gives us of the happineſs the Egyptians enjoyed under the mild adminiſtration of Ptolemy, very much reſembles that which Paterculus gives of the happineſs of the Romans, in the reign of Auguſtus, B. 2. ch. 89. "Finita viceſimo anno "bella civilia, ſepulta externa, revocata pax, ſo- "pitus ubibue armorum furor; reſtituta vis legi- "bus, judiciis auctoritas, ſenatui majeſtas, &c. "priſca illa et antiqua reipublicæ forma revocata; "rediit cultus agris, ſacris honos, ſecuritas homi- "nibus, certa cuique rerum ſuarum poſſeſſio; le- "ges emendatæ utiliter, latæ ſalubriter" 'In 'his twentieth year, all wars, both civil and fo- 'reign, were happily extinguiſhed: peace return- 'ed; the rage of arms ceaſed; vigour was reſto- 'red to the laws; authority to the tribunals; ma- 'jeſty to the ſenate, &c. the ancient and venera- 'ble form of the republic revived; the fields were 'again cultivated; religion honoured, and every 'one enjoyed his own poſſeſſions with the utmoſt 'ſecurity; the old laws were reviſed and improv- 'ed, and excellent new ones added.'

Ver. 118. Thus Horace;

Cuſtode rerum Cæſare, non furor
Civilis, aut vis exiget otium. *B.* 4. *Ode* 15.

While Cæſar reigns, nor civil jars
Shall break our peace, nor foreign wars.
Duncombe.

Ver. 122.

Ore trahit quodcunque poteſt, atque addit acervo.
Hor. B. 1. *Sat.* 1.

Ver. 123.

——Tua largâ
Sæpe manu multiſque oneravit limina donis.
Virg. Æn. B. 10. 619.

To thy great name due honours has he paid,
And rich oblations on thy altars laid. *Pitt.*

Ver. 131. The fame of Ptolemy's munificence drew ſeveral celebrated poets to his court. See Note on verſe 82. Idyl. XIV.

Ver. 139. The original is a little perplexed, but I follow Heinſius, and take the ſenſe to be this: "Ptolemy alone treading cloſe in the footſteps of "his foreſathers, yet warm in the duſt, defaced "and roſe over them." Theocritus alludes to a conteſt uſual among the ancients, wherein the antagoniſt uſed to place his right-foot in the left footſtep of his competitor, who went before him, and his left foot in the right footſtep, which if he could exceed, he would cry aloud. Επιβεβηκα σοι Υπερθεν ειμι, "I have ſtept over you, I am beyond "you" Homer, ſpeaking of Ulyſſes contending with Ajax in the race, has ſomething very ſimilar. *Iliad. B.* 23. 763.

——Αυτὰρ οπιſθεν
Ἰχνια τυπτε ποδεσσι, παρος κονιν αμφιχυθηναι.

Graceful in motion thus, his foe he plies,
And treads each footſtep e'er the duſt can riſe.
Pope.

Ver. 150. Virgil thus ſpeaks of Venus embracing Vulcan,

——Niveis hinc atque hinc, &c.
Æn. B. 8. 387.

——Her arms, that match the winter ſnows,
Around her unreſolving lord ſhe throws. *Pitt.*

Ver. 158. Juno, ſpeaking of herſelf, ſays,

Aſt ego, quæ divûm incedo regina, Joviſque
Et ſoror et conjux. *Æn* 1. 47.

But I, who move ſupreme in heav'n's abodes,
Jove's ſiſter-wife, and empreſs of the gods.
Pitt.

Ver. 162. Theocritus having already celebrated Ptolemy's riches and power, which were ſo great, that he could not even wiſh an increaſe of them, nobly concludes his poem with this fine precept, Αρεταν γε μεν εκ Διος αιτευ, "Aſk virtue of Jupi- "ter." as if he could not have too large a ſhare of virtue, though eminently renowned for it: by this the poet proves himſelf an excellent moraliſt, and plainly hints at that maxim of the Stoics, who maintained that virtue was entirely ſufficient for a happy life.

IDYLLIUM XVIII.

THE EPITHALAMIUM OF HELEN.

ARGUMENT.

TWELVE Spartan virgins of the firſt rank are here introduced ſinging this ſong at the nuptials of Helen, before the bride-chamber: firſt they are jocular; then they congratulate Menelaus on his being preferred to ſo many rival princes, and made the ſon-in-law of Jupiter: they celebrate the beauty of Helen, and conclude with wiſhing the married couple proſperity.

WHEN Sparta's monarch, Menelaus, led
The beauteous Helen to his bridal bed,
Twelve noble virgins, blooming, young, and fair,
With hyacinthine wreaths adorn'd their hair,

And pleas'd the vocal beniſon to ſhower,
To the ſoft cithern danc'd before the bower;
As bounding light in circling ſteps they move,
Their feet beat time, and every heart beat love:
This was the nuptial ſong—' Why, happy groom,
Steal you thus early to the genial room?
Has ſleep or wine your manly limbs oppreſt,
That thus, thus ſoon you ſeek the bed of reſt?
If drowſy ſlumbers lull you to a drone,
Go take refreſhing ſleep, but ſleep alone;
Leave Helen with her maiden mates, to play
At harmleſs paſtimes till the dawn of day:
This night we claim, then yield her yours for life,
From morn to night, from year to year your wife.
Hail happy prince! whom Venus wafted o'er,
With proſperous omens to the Spartan ſhore;
To bleſs her bed, from all the princely crowd,
Fair Helen choſe you—Cupid ſneez'd aloud.
Of all our demigods 'tis you aſpire,
Alone, to call Saturnian Jove your ſire:
Jove's daughter now your warm embraces meets,
The pride of Greece between two lily ſheets.
Sure will the offſpring from that ſoft careſs,
The mother's charms in miniature expreſs.
Thrice eighty virgins of the Spartan race,
Her equals we in years, but not in face,
Our limbs diffuſing with ambroſial oil,
Were wont on ſmooth Eurota's banks to toil
In manly ſports; and though each nymph was fair,
None could with her in beauty's charms compare:
When winter thus in night no longer lours,
And ſpring is uſher'd by the blooming hours,
The riſing morning with her radiant eyes,
Salutes the world, and brightens all the ſkies.
So ſhines fair Helen, by the Graces dreſt,
In face, ſhape, ſize, ſuperior to the reſt:
As corn the fields, as pines the garden grace,
As ſteeds of Theſſaly the chariot race;
So Helen's beauties bright encomiums claim,
And beam forth honour on the Spartan name.
What nymph can rival Helen at the loom,
And make fair art like living nature bloom?
The blended tints in ſweet proportion join'd,
Expreſs the ſoft ideas of her mind.
What nymph like her of all the tuneful quire,
Can raiſe the voice, or animate the lyre?
Whether of Pallas great in arms ſhe ſings,
Or Dian bathing in the ſilver ſprings.
A thouſand little Loves in ambuſh lie,
And ſhoot their arrows from her beaming eye.
O lovely Helen, whom all hearts adore,
A matron now you riſe, a maid no more!
Yet ere another ſun ſhall gild the morn,
We'll gather flowers your temples to adorn,
Ambroſial flowers, as o'er the meads we ſtray,
And frequent ſigh that Helen is away:
Mindful of Helen ſtill, as unwean'd lambs
Rove round the paſtures bleating for their dams;
Fair flowers of lote we'll cull, that ſweetly breathe,
And on yon ſpreading plane ſuſpend the wreath.
But firſt from ſilver ſhells ſhall unguents flow,
Bedew the ſpreading plane and all the flowers below:
And on the rind we'll write, that all may ſee,
" Here pay your honours, I am Helen's tree "
Joy to the bride, and to the bridegroom joy,
And may Latona bleſs you with a boy!
May Venus furniſh both with equal love!
And laſting riches be the gift of Jove!
May theſe deſcend and by poſſeſſion grow,
From ſire to ſon, augmenting as they flow!
Now ſweetly ſlumber, mutual love inſpire,
And gratify the fulneſs of deſire:
Riſe with the bluſhing morning, not forget
The due of Venus, and diſcharge the debt:
And, ere the day's loud herald has begun
To ſpeak his early prologue to the ſun,
Again we'll greet your joys with cheerful voice,
O Hymen, Hymen, at this match rejoice!

NOTES ON IDYLLIUM XVIII.

There are two ſorts of Epithalamiums, or Nuptial Songs among the ancients; the firſt was ſung in the evening, after the bride was introduced into the bride-chamber, it was named Κοιμητικον, and intended to diſpoſe the married couple to ſleep: the ſecond was ſung in the morning, termed Εγερτικον, and deſigned to awaken them. See the concluſion of this Idyllium. As Theocritus lived at the polite court of Ptolemy Philadelphus, during the time that the ſeventy interpreters reſided there, he would probably, by reading their tranſlation of the Old Teſtament, borrow ſome beautiful images from the Scriptures, conceived in oriental magnificence; a few ſpecimens of theſe will be found in the notes on this Idyllium.

Ver. 6 Thus Horace,

Junctæque Nymphis Gratiæ decentes
Alterno terram quatiunt pede. *B. 1. Ode 4.*

Ver. 22 Sneezing was ſometimes reckoned a lucky omen. See Potter's Archæologia, ch. 17. and Catullus de Acme & Septimio;

Hoc ut dixit, Amor ſiniſtram, ut ante
Dextram, ſternuit approbationem.

See alſo the note on Idyllium 7. ver. 115.

That new-married perſons were attended by ſingers and dancers, Homer acquaints us in his deſcription of the ſhield of Achilles, Iliad, B. 18.

Here ſacred pomp and genial feaſt delight,
And ſolemn dance, and Hymenæal rite;
Along the ſtreet the new-made brides are led,
With torches flaming, to the nuptial bed:
The youthful dancers in a circle bound
To the ſoft flute and cithern's ſilver ſound:
Through the fair ſtreets, the matrons in a row,
Stand in their porches, and enjoy the ſhow. *Pope*

Ver. 31. Thus the handmaids of Nauſicäa in Homer anoint themſelves with oil. Odyſ. B. 6.

Then with a ſhort repaſt relieve their toil,
And o'er their limbs diffuſe ambroſial oil. *Pope.*

Ver. 35. Thus Solomon's Song, ch. ii. ver, 11. "Lo the winter is paſt, the rain is over and gone."

Ver. 37. "Who is ſhe that looketh forth as the "morning," ch. vi. ver. 10. and in the book of Job, ch. xli. ver. 18. ſpeaking of the Leviathan, we read "His eyes are like the eye-lids of the "morning."

Here the marks of imitation appear very ſtrong.

Ver 41. Virgil has,

Fraxinus in ſylvis pulcherrima, pinus in hortis.
Ecl. 7. 65.

Ver. 42. Theocritus ſtill ſeems to borrow from the royal author; "I have compared thee, O my "love to a company of horſes in Pharoah's cha-"riots." Solomon's Song, ch. i. ver. 9.—The original literally ſignifies, "I have compared thee to "my mare, &c." Nor ought we to think the compariſon coarſe or vulgar, if we conſider what beautiful and delicate creatures the eaſtern horſes are, and how highly they are valued.

See Percy on Solomon's Song.

Ver. 53. Thus Hero is deſcribed in Muſæus,

Εις δε τις Ηρης Οφθαλμος γελοων. κ. τ. λ.
Ver. 64.

When Hero ſmiles, a thouſand Graces riſe,
Sport on her cheek, and rival in her eyes. *F. F.*

Ver. 63. Millar ſays the leaves of the lote-tree, or nettle-tree, are like thoſe of the nettle; the flower conſiſts of five leaves, expanded in form of a roſe, containing many ſhort ſtamina, in the boſom; the fruit, which is a roundiſh berry, grows ſingle in the boſom of its leaves. Dr. Martyn ſays, it is more probable, that the lotus of the Lotophagi is what we call zizyphus or the jujube-tree; The leaves of this are about an inch and a half in length, an inch in breadth, of a ſhining green colour and ferrated, about the edges; the fruit is of the ſhape and ſize of olives, and the pulp of it has a ſweet taſte like honey; and therefore cannot be the nettle-tree, the fruit of which is far from that delicacy which is aſcribed to the lotus of the ancients. See Martyn on the Geor. B. 2. 84. But the lotus here ſpoken of is moſt probably an herb the ſame which Homer deſcribes in the Odyſſey, B. 9. and which Euſtathius takes to be an herb; he ſays, there is an Egyptian lotus which grows in great abundance along the Nile, in the time of its inundations. Proſper Alpinus, an author of good credit, who travelled into Egypt, aſſures us, that the Egyptian lotus does not at all differ from our great white water-lily.

Ver. 67. The cuſtom of writing on the bark of trees was very common among the ancients, thus Virgil;

Centum eſt in ſylvis, inter ſpelæa ferarum
Malle pati, teneriſque meos incidere amores
Arboribus: creſcent illæ, creſcetis amores *Ecl.* 10.

See Ovid in Oenone, Propertius, B. 1. Eleg. 18. &c.

Nothing can be more beautifully paſtoral than this inſcription on the bark of the plane-tree, as alſo the ſimile at the 61ſt and 62d verſes.

Ver. 75.

Quæ ſepirabat amores. *Hor. B.* 4. *Ode* 13.

Ver. 81. The chorus of virgins here promiſe to return early in the morning, and ſing the carmen Εγιφτικον.

Ver. 82. Thus Catullus, Carm. Nup.

Hymen, O Hymenæe, Hymen ades, O Hymenæe.

IDYLLIUM XIX.

THE HONEY-STEALER.

THE ARGUMENT.

As Cupid is ſtealing honey from a bee-hive, he is ſtung by a bee; on which he runs and complains to his mother, that ſo ſmall an animal ſhould inflict ſo great a wound; ſhe immediately anſwers, that he himſelf is but little like a bee, yet the wounds he gives are grievous.

As Cupid, the flieſt young wanton alive,
Of its hoard of ſweet honey was robbing a hive,
The centinel bee buzz'd with anger and grief,
And darted his ſting in the hand of the thief.
He ſobb'd, blew his fingers, ſtamp'd hard on the ground,
And leaping in anguiſh ſhow'd Venus the wound;
Then began in a ſorrowful tone to complain,
That an inſect ſo little ſhould cauſe ſo great pain.
Venus ſmiling, her ſon in ſuch taking to ſee,
Said, "Cupid, you put me in mind of a bee;
"You're juſt ſuch a buſy, diminutive thing,
"Yet you make woful wounds with a deſperate "ſting."

NOTES ON IDYLLIUM XIX.

In this ſmall poem Theocritus has copied the 40th Ode of Anacreon, in every thing but the meaſure of his verſe: the original of this is in Hexameter, and therefore I thought it improper to give it Anacreontic numbers. I ſhall take the liberty to inſert a tranſlation of the Teian bard's little poem, that the Engliſh reader may have the pleaſure to ſee the manner in which the ancient poets copied their predeceſſors.

Once, as Cupid, tir'd with play,
On a bed of roſes lay,
A rude bee that ſlept unſeen,
The ſweet breathing buds between,
Stung his finger, cruel chance!
With its little pointed lance.

Straight he fills the air with cries,
Weeps and ſobs, and runs and flies;
Till the god to Venus came,
Lovely, laughter-loving dame:
Then he thus began to plain;
" Oh! undone—I die with pain—
" Dear mamma, a ſerpent ſmall,
" Which a bee the ploughmen call,
" Imp'd with wings, and arm'd with dart,
" Oh!—has ſtung me to the heart."
Venus thus replied, and ſmil'd;
' Dry thoſe tears, for ſhame! my child;
' If a bee can wound ſo deep,
' Cauſing Cupid thus to weep,
' Think, O think, what cruel pains
' He that's ſtung by thee ſuſtains.' *F. F.*

IDYLLIUM XX.

EUNICA, OR THE NEATHERD.

THE ARGUMENT.

A ROUGH neatherd complains of the pride and inſolence of a city girl, who refuſed to let him kiſs her, and rallied his awkward figure: he appeals to the neighbouring ſhepherds, and aſks them if he is not handſome; if his voice is not ſweet, and his ſongs enchanting; and relates examples of goddeſſes that have been enamoured of herdſmen. In this Idyllium the poet is thought to be ſevere on thoſe who with arrogance deſpiſe the ſweetneſs and ſimplicity of bucolic numbers. It is ſtrange that the commentators will not allow this piece to be ſtyled a paſtoral: ſurely it is bucolical enough.

WHEN lately I offer'd Eunica to kiſs,
She fleer'd, and ſhe flouted, and took it amiſs;
" Begone, you great booby, ſhe cry'd with a frown, clown?
" Do you think that I long to be kiſs'd by a
" The ſparks of the city my kiſſes eſteem;
" You never ſhall kiſs me, no, not in a dream.
" How pleaſing you look, and how gently you play!
" How ſoft is your voice! and what fine things you ſay!
" So neat is your beard, and ſo comely your hair!
" Your hands are ſo white, and your lips, a ſweet pair!
" But on your dear perſon, I never ſhall doat:
" So pray keep your diſtance—you ſmell like a goat"
Thus ſpoke the pert huſſey, and view'd me all round
With an eye of diſdain, and thrice ſpit on the ground,
Look'd proud of her charms, with an inſolent ſneer,
And ſent me away with a flea in my ear.
My blood quickly boil'd in a violent pique,
And red as a roſe, paſſion glow'd on my cheek;
For it vex'd me, that thus in deriſion ſhe jeer'd
My looks, and my voice, and my hair and my beard.
But, am I not handſome, ye ſhepherds, ſay true?
Or has any god alter'd my perſon anew?
For lately on oaks, like the ivy, with grace
My hair and my beard added charms to my face:
My eyebrows were ſable, my forehead milkwhite,
And my eyes, like Minerva's, were azure and bright;
My lips, ſweet as cream, were with muſic replete,
For from them flow'd ſounds as the honey-comb. ſweet;
My ſongs are enchanting; nor ought can exceed
The tunes of my pipe, or the notes of my reed.
The girls of the country, if they had their wills,
Would kiſs me, and preſs me to ſtay on the hills;
For they ſay that I'm fair; but this flirt of the town
Refuſ'd my ſweet kiſſes, and call'd me a clown.
Alas! ſhe forgot, or perhaps did not know,
That Bacchus fed herds in the valley below;
That Venus a ſwain lov'd with hearty goodwill,
And help'd him his cattle to tend on the hill;

Adonis, while living, in groves ſhe ador'd,
And dead in the groves and on mountains deplor'd.
If right my conjecture, Endymion, I ween,
Like me too once tended his ſteers on the green;
Yet the Moon in this neatherd took ſuch a delight,
That ſhe met him at Latmos, and kiſs'd him all night.
Ev'n Cybele mourn'd for a herdſman; and Jove
Snatch'd a boy from his herd to be waiter above.
But Eunica diſdains me, nor liſts to my vow;
Is ſhe better than Cynthia, or Cybele, trow?
Does ſhe think that in bloom, and the beauty of face
She is equal to Venus? if that be the caſe,
May ſhe never behold ſweet Adonis again
On the hill, in the vale, in the city or plain;
And may the proud minx, for her crime to atone,
If ſhe can, ſleep contented—but always alone!

NOTES ON IDYLLIUM XX.

This Idyllium has by Daniel Heinſius, and other learned critics, been aſcribed to Moſchus, and for that reaſon I publiſhed a tranſlation of it ſome time ago, along with a verſion of the other beautiful pieces of that, and of four other Greek poets, viz. Anacreon, Sappho, Bion, and Muſæus; but as in all probability Theocritus is the real author, I here inſert it with ſeveral alterations and corrections, as I ſhall entirely omit it in the ſecond edition of my work abovementioned, which will ſhortly be publiſhed; the firſt having been very favourably received by the public.

Ver. 5. The Greek is μεμαμηκα αϱυκα χειλεα βλιβειν. "Didici urbana labra terere," which Virgil ſeems to have had an eye to, when he ſays, "Calamo triviſſe labellum:" on which Mr. Warton obſerves, there is a fondneſs in mentioning this circumſtance of "wearing his lip." The conſtant effect of playing on the "fiſtula," which is uſed to this day in the Grecian iſlands, is making the lips thick and callous. Mr. Dawkins aſſured me he ſaw ſeveral ſhepherds with ſuch lips.

Ver. 13. Virgil has ſomething ſimilar.

Talia dicentem jamdudum averſa tuetur,
Huc illuc volvens oculos, totumque pererrat
Luminibus tacitis. *Æn. B.* 4. 362.

Ver. 14. The Greek is, τϱις εις εον στϱυϕος κολπον, and ſhould be rendered, "She thrice ſpit into her boſom." Archbiſhop Potter obſerves, ſee Archæol. ch. xvii. it was cuſtomary for the ancient Grecians to ſpit three times into their boſoms at the ſight of a madman, or one troubled with an epilepſy; this they did in defiance, as it were, of the omen: for ſpitting was a ſign of the greateſt contempt and deteſtation, whence στυειν, "to ſpit," is put for "to contemn."

Ver. 22. The poet here ſeems to allude to a paſſage in Homer's Odyſ. B. 13. where Minerva changes Ulyſſes into the figure of an old beggar,

She ſpake, and touch'd him with her powerful wand;
The ſkin ſhrunk up, and wither'd at her hand:
A ſwift old age o'er all his members ſpread;
A ſudden froſt was ſprinkled on his head;
No longer in the heavy eye-ball ſhin'd
The glance divine, forth beaming from the mind.
Pope.

Ver. 26. Theocritus ſeems to have Anacreon in view, Ode 28.

All thy art her eyes require,
Make her eyes of living fire,
Glowing with celeſtial ſheen,
Like Minerva's, bright and keen;
On her lips, that ſweetly ſwell,
Let divine perſuaſion dwell. *F. F.*

Ver. 27. This is entirely taken from Solomon's Song, ch. iv. 11. "Thy lips, O my ſpouſe, drop as the honeycomb; honey and milk are under thy tongue."

Ver. 40. See Bion's beautiful Idyllium on the death of Adonis.

Ver. 41.
Latmius Endymion non eſt tibi, Luna, rubori.
Ovid. Art Amat. 3. 85.

Ver. 54. Sappho, with the moſt elegant ſimplicity complains, that ſhe is deſerted and left alone

Δηδυκες μεν α σελανα, κ. τ. λ. *See her Frag.*

The Pleiads now no more are ſeen,
Nor ſhines the ſilver moon ſerene,
In dark and diſmal clouds o'ercaſt;
The love appointed hour is paſt;
Midnight uſurps her ſable throne,
And yet, alas! I lie alone. *F. F.*

IDYLLIUM XXI.

THE FISHERMEN.

ARGUMENT.

This piece is a dialogue between two fiſhermen; which for its ſingular ſimplicity of ſentiment, as well as character, is peculiarly beautiful and regular: one of them relates his dream; which was

that he had caught a large fish of solid gold, on which he resolves to follow his laborious occupation no longer, but live luxuriously: in the morning his fish and his hopes vanish, and necessity compels him to return to his accustomed labours. This Idyllium admonishes every one to rest content with his lot; and, under the shadow of a golden dream, beautifully displays the vanity of all human hopes and desires.

NEED, Diophantus, ready wit imparts,
Is labour's mistress, and the nurse of arts:
Corroding cares the toiling wretch infest,
And spoil the peaceful tenor of his breast;
And if soft slumbers on his eye-lids creep,
Some cursed care steals in, and murders sleep.
Two ancient fishers in a straw-thatch'd shed,
Leaves were their walls, and sea-weed was their bed,
Reclin'd their weary limbs: hard by were laid
Baskets, and all their implements of trade, [hairs,
Rods, hooks, and lines, compos'd of stout horse-
And nets of various sorts, and various snares,
The seine, the cast-net, and the wicker maze,
To waste the watery tribes a thousand ways:
A crazy boat was drawn upon a plank;
Matts were their pillow, wove of osier dank;
Skins, caps, and rugged coats, a covering made:
This was their wealth, their labour, and their trade,
No pot to boil, no watch-dog to defend;
Yet blest they liv'd with penury their friend.
None visited their shed, save every tide
The wanton waves that wash'd its tottering side.
When half her course the moon's bright car had sped,
Joint labour rous'd the tenants of the shed.
The dews of slumber from their eyes they clear'd,
And thus their minds with pleasing parley cheer'd:

Asphalion.

I hold, my friend, that trite opinion wrong,
That summer-nights are short when days are long.
Yes—I have seen a thousand dreams to-night,
And yet no morn appears, nor morning-light:
Sure on my mind some strange illusions play,
And make short nights wear heavily away.

Friend.

Fair summer seasons you unjustly blame,
Their bounds are equal, and their pace the same;
But cares, Asphalion, in a busy throng,
Break on your rest, and make the night seem long.

Asphalion.

Say, hast thou genius to interpret right
My dream? I've had a jolly one to-night.
Thou shalt go halves, and more thou can'st not wish,
We'll share the vision as we share our fish.
I know thee shrewd, expert of dreams to spell;
He's the best judge who can conjecture well.
We've leisure time, which can't be better spent
By wretched carles in wave-wash'd cabin pent,
And lodg'd on leaves; yet why should we repine,
While living lights in Prytaneum shine?

Friend.

To thy fast friend each circumstance recite,
And let me hear this vision of the night.

Asphalion.

Last evening, weary with the toils of day,
Lull'd in the lap of rest secure I lay;
Full late we supp'd, and sparingly we eat;
No danger of a surfeit from our meat.
Methought I sat upon a shelfy steep,
And watch'd the fish that gambol'd in the deep:
Suspended by my rod, I gently shook
The bait sallacious, which a huge one took;
(Sleeping, we image what awake we wish;
Dogs dream of bones, and fishermen of fish.)
Bent was my rod, and from his gills the blood
With crimson stream distain'd the silver flood.
I stretch'd my arm out, lest the line should break;
The fish so vigorous, and my hook so weak!
Anxious I gaz'd; he struggled to be gone:
'You're wounded—I'll be with you, friend, anon'—
'Still do you teaze me?" for he plagu'd me sore;
At last, quite spent, I drew him safe on shore,
Then grasp'd him with my hand, for surer hold,
A noble prize, a fish of solid gold!
But fears suspicious in my bosom throng'd,
Lest to the god of ocean he belong'd;
Or, haply wandering in the azure main,
Some favourite fish of Amphitrite's train.
My prize I loos'd, and strictest caution took,
For fear some gold might stick about the hook;
Then safe secur'd him, and devoutly swore
Never to venture on the ocean more;
But live on land as happy as a king:
At this I wak'd: what think you of the thing?
Speak free, for know I am extremely loth,
And greatly fear to violate my oath.

Friend.

Fear not, old friend; you took no oath, for why?
You took no fish—your vision's all a lie.
Go search the shoals, not sleeping, but awake,
Hunger will soon discover your mistake;
Catch real fish; you need not sure be told
Those fools must starve who only dream of gold.

NOTES ON IDYLLIUM XXI.

Ver. 1. Thus Virgil,

Tum variæ venêre artes: labor omnia vincit
Improbus, et duris urgens in rebus egestas.
Geor. I. 145.

Then all those arts that polish life succeed;
What cannot ceaseless toil, and pressing need!
Warton.

And Perſius, Prol.

Quis expedivit pſittaco ſuum χαιρε,
Picaſque docuit verba noſtra conari?
Magiſter artis, ingenſque largitor Venter.

Who taught the parrot human notes to try,
Or with a voice endued the chattering pye?
'Twas witty want, fierce hunger to appeaſe:
Want taught their maſters, and their maſters theſe.
Dryd.

Ver. 3.
Nec placidam membris dat cura quietem. *Virg.*

Ver. 5. Juvenal has,
Nocte brevem ſi forte indulſit cura ſoporem.
Sat. 13. 217.

Ver. 6.
——Sub noctem cura recurſat. *Virg. Æn. B.* 1.

Ver. 19. The Greek is ϗ κυνα, and is an emendation of the learned Johannes Auratus; before it was read ϗχ ενα. *Heinſius.*

Ver. 33. Here I entirely follow the emendation of Heinſius; the text ſtands thus:

Ασφαλιων, μεμφη το καλον ἐαρος, ϗ γαρ ο καιρος
Αυτοματως παρεβα τον εον δρομον.

"Aſphalion, you accuſe the fair ſummer; for that ſeaſon never willingly paſſes its bounds:" which is nonſenſe; but, by tranſpoſing the firſt word of each verſe, thus,

Αυτοματως, μεμφη το καλον ἐαρος, ϗ γαρ ο καιρος,
Ασφαλιων, παρεβα τον εον δρομον.

"In vain, and without any reaſon, you accuſe the
" fair ſummer, &c.

Ver. 42. This ſeems to be taken from that verſe of Euripides, which we read in Plutarch,

Μαντις δ' ἀριστος ὁστις εικαζει καλως,

Which Tully has thus tranſlated,

Qui bene conjecit, vatem perhibebo optumum.

Ver. 46. The Prytaneum was a common-hall in the cities of Greece, where thoſe that had deſerved well of their country were maintained at the public charge; where alſo the fire conſecrated to Vulcan was kept, as that ſacred to Veſta was at Rome. Cicero de Orat. 1. 54. ſays, "Ut ei victus quotidianus in Prytaneo publice præberetur." If this be underſtood of the Prytaneum at Athens, Scaliger obſerves that there is great impropriety in Sicilian fiſhermen mentioning places ſo far remote from the ſcene of their labours; but from what follows, it appears that there was a place in the neighbourhood, very commodious for fiſhing, named Prytaneum, on which nocturnal lamps were fixed, as was cuſtomary, for the convenience of fiſhing by night. Sannazarius was not ignorant of this cuſtom, who in his ſecond Piſcatory Eclogue ſays,

Dumque Alii notoſque ſinus, piſcoſaque circum
Æquora colluſtrant flammis.

While others on the well-known bay,
Or fiſhy ſeas, their lights diſplay.

Ver. 55. Ovid has ſomething ſimilar,

Nunc in mole ſedens moderabar arundine limum.
Met. B. 13. 923.

Ver. 57. There is ſomething very beautiful in what Ovid makes Sappho ſay to Phaon,

Tu mihi cura, Phaon; te ſomnia noſtra reducunt;
Somnia formoſo candidiora die, &c.

Which Mr. Pope has greatly improved upon,

Oh night more pleaſing than the brighteſt day,
When fancy gives what abſence takes away,
And, dreſſed in all its viſionary charms,
Reſtores my fair deſerter to my arms!

Ver. 77. The expreſſion in the original is remarkable, τῳ χρυσῳ βασιλευειν, "to reign in riches;" ſpeaking of the happineſs of the old Corycian farmer, Virgil ſays,

Regum æquabat opes animis. *Geor.* 4. 132.

Ver. 81. Solve metus. *Virg.*

IDYLLIUM XXII.

CASTOR AND POLLUX.

THE ARGUMENT.

This is a hymn, after the manner of the ancient Arcadians, in praiſe of Caſtor and Pollux. The firſt part deſcribes the combat between Pollux and Amycus, the ſon of Neptune, and king of the Bebrycians; who valuing himſelf on his ſuperiority in ſtrength, and the art of boxing, uſed to compel every ſtranger that touched upon his coaſt to take up the cæſtus, and make trial of his ſkill in the management of that rude inſtrument of death; for ſo it proved to many, till Pollux, who arrived there with the Argonauts, encountered him, and conquered: Apollonius ſays he ſlew him; but this is denied by other authors.

The ſons of Leda, and of Jove, I ſing,
Immortal Jove, the ægis-bearing king,
Caſtor and Pollux, with the ceſtus grac'd, [brac'd:
Which round his wriſt thick thongs of bull-hide

In ſtrains repeated ſhall my muſe reſound
The Spartan twins with manly virtues crown'd:
Saſeguards of men diſtreſt, and generous ſteeds,
When in the fields of death the battle bleeds;

Safeguards of ſailors, who the Twins implore,
When on the deep the thundering tempeſts roar.
Theſe in the hollow veſſel from the ſide,
Or head or helm pour the high ſwelling tide:
Burſt are the planks, the tackling torn, the maſt
Snapt, the ſails rent before the furious blaſt:
Suſpended ſhowers obſcure the cheerful light,
Fades the pale day before approaching night,
Riſe the rough winds reſounding ſtorms prevail,
And the vext ocean roars beneath the ſcourging hail.
Still you the wreck can ſave, the ſtorm diſpel,
And ſnatch the ſailors from the jaws of hell.
The winds diſperſe, the roaring waves ſubſide,
And ſmooth'd to ſtillneſs ſleeps the lenient tide.
When ſhine the Bears, and 'twixt the Aſſes ſeen,
Though faint their manger, ocean proves ſerene.
O, friends of human kind, in utmoſt need,
Fam'd for the ſong, the lyre, the gauntlet, and the ſteed!
Whoſe praiſes firſt ſhall my rapt muſe rehearſe?
Both claim my praiſe, but Pollux firſt my verſe.
When Argo reach'd (Cyane's iſlands paſt)
Cold Pontus haraſs'd by the northern blaſt,
Soon to Bebrycia, with the ſons of fame,
A freight of chiefs and demigods, ſhe came.
Forth from her ſides, the country to explore,
The crew deſcended to the breezy ſhore:
On the dry beach they raiſed the leafy bed,
The fires they kindled, and the tables ſpread.
Meanwhile the royal brothers devious ſtray'd
Far from the ſhore, and fought the cooling ſhade.
Hard by, a hill with waving foreſts crown'd
Their eyes attracted; in the dale they found
A ſpring perennial in a rocky cave,
Full to the margin flow'd the lucid wave:
Below ſmall fountains guſh'd, and murmuring near,
Sparkled like ſilver, and as cryſtal clear:
Above tall pines and poplars quivering play'd,
And planes and cypreſs in dark green array'd:
Around balm-breathing flowers of every hue,
The bee's ambroſia, in the meadows grew.
There ſat a chief, tremendous to the eye,
His couch the rock, his canopy the ſky:
The gauntlet's ſtrokes his cheeks and ears around,
Had mark'd his face with many a deſp'rate wound.
Round as a globe, and prominent his cheſt,
Broad was his back, but broader was his breaſt;
Firm was his fleſh, with iron ſinews fraught,
Like ſome Coloſſus, on an anvil wrought.
As rocks, that in the rapid ſtreams abound,
Are waſh'd by rolling torrents ſmooth and round,
The ridges riſe, in cryſtal ſtreams beheld:
So on his brawny arms the riſing muſcles ſwell'd.
A lion's ſpoils around his loins he draws,
Beneath his chin ſuſpended by the paws:
Victorious Pollux, with attentive look,
View'd, and complacent, thus the chief beſpoke:

Pollux.

Peace, gentle friend! to wandering ſtrangers tell
What tribes, what nations in theſe regions dwell?

Amycus.

What peace to me, while on my native ſhore,
I ſee ſtrange gueſts I never ſaw before?

Pollux.

Fear not; no foes, nor mean of birth are here.

Amycus.

Thou haſt no cauſe to bid me not to fear.

Pollux.

Rude are your words, and wrongfully apply'd,
Your manners fierce, your boſom ſwoln with pride.

Amycus.

Thou ſee'ſt me as I am: theſe lands are mine;
I never yet have troubled thee or thine.

Pollux.

Whene'er you come, you will a welcome find,
And preſents, as befits a liberal mind.

Amycus.

Nor I thy welcome, nor thy gifts partake;
I gave no welcome, and no preſents make.

Pollux.

May I not taſte the ſtream that murmurs by?

Amycus.

I'll ſolve that queſtion when thy throat is dry.

Pollux.

Will gold, or other bribe the purchaſe gain?

Amycus.

Nought but to prove thy proweſs on the plain;
Stand forth; let man oppos'd to man provoke,
With gauntlet-guarded arm, th' impending ſtroke;
Eye meeting eye, exert thy utmoſt might,
By feint or force to triumph in the fight.

Pollux.

Whom muſt I fight? mine adverſary who?

Amycus.

Thou ſeeſt thy match, no deſpicable foe.

Pollux.

But what reward ſhall the ſtout victor have?

Amycus.

The conquer'd man ſhall be the conqueror's ſlave.

Pollux.

This is cock's play, and ſuch the terms ſevere
In fight of ſcarlet-creſted chanticleer.

Amycus.

Or be it cock's, or be it lion's play,
Theſe are the fix'd conditions of the fray.

This ſaid, his hollow conch he inſtant blew,
Quick through the coaſt the ſounds alarming flew;
The ſignal rous'd the ſtout Bebrycian train,
Who join'd their chief beneath the ſhady plain.
Illuſtrious Caſtor from the neighbouring ſtrand,
Call'd to the conflict Argo's choſen band.
Meanwhile the combatants, of mind elate,
Drew on their hands the dreadful gloves of fate;
The leathern thongs, that brac'd their ſhoulders round,
Firm to their arms the ponderous gauntlets bound,
Amid the circle now the champions ſtood,
Breathing revenge, and vehement for blood.
Studious each ſtrove the piercing light to ſhun,
And on his ſhoulders catch the gleaming ſun:
You call'd, O Pollux, prudence to your aid;
In Amycus's eyes the ſolar ſplendors play'd.
This did th' enormous chieftain's rage provoke
To ſtrike at once ſome death-denouncing ſtroke;
But watchful Pollux dealt a weighty blow
Full on the cheek of his advancing foe;

Incens'd more ardent to the fight he came,
And forward bent to take the furer aim.
Through the Bebrycian band loud clamours run;
Nor leſs the Greeks encourag'd Leda's ſon.
Yet riſing fears their generous breaſts appal,
Leſt on their friend the bulk of Amycus ſhould fall:
Vain fears! for with both hands brave Pollux ply'd
His furious blows, and ſtorm'd on every ſide;
The quick-repeated ſtrokes his rival ſtun,
And curb the force of Neptune's lawleſs ſon.
Giddy with blows the tottering hero ſtood,
And from his mouth diſcharg'd the purple blood.
Loud ſhouted the Greek warriors when they ſaw
Bebrycia's champion's batter'd cheeks and jaw.
His eyes, within their ſockets deep impell'd,
Seem'd leſſen'd, and his bruiſed viſage ſwell'd.
Still the prince ply'd his mighty rival hard,
And feintful ſoon ſurpris'd him off his guard;
And as he ſtagger'd, full upon his brow
With all his force he drove the furious blow,
And maſh'd his front; the giant with the wound
Fell flat, and ſtretch'd his bulk unwieldy on the ground.
But ſoon his vigour and his ſtrength return'd,
He roſe, and then again the battle burn'd:
With iron hands their hollow ſides they pound,
And deal vindictive many a deſperate wound.
Fierce on his foe Bebrycia's monarch preſt,
And made rude onſets on his neck and breaſt:
But Jove's unconquer'd ſon far better ſped,
Who aim'd his thunder at his rival's head.
Faſt down their limbs the ſweat began to flow,
And quickly lay the lofty champion low;
Yet Pollux firmer ſtood with nobler grace,
And freſher was the colour of his face.
How Amycus before Jove's offſpring fell,
Sing, heaven-deſcended muſe; for you can tell:
Your mandates I implicitly obey,
And gladly follow where you lead the way.
Reſolv'd by one bold ſtroke to win renown,
He ſeiz'd on Pollux' left hand with his own;
Then bent oblique to guard againſt a blow,
And ſped his right with vengeance on the foe,
In hopes to ſtrike his royal rival dead,
Who 'ſcap'd the blow, declining back his head;
Then Pollux aim'd his weighty ſtroke ſo well,
Full on the creſt of Amycus it fell,
And gor'd his temples with an iron wound;
The black blood iſſuing flow'd and trickled to the ground.
Still with his left he maul'd his faultering foe,
Whoſe maſh'd teeth crackled with each boiſterous blow;
With ſtrokes redoubled he deform'd his face;
Bruis'd cheeks and jaws proclaim'd his foul diſgrace.
All on the ground he meaſur'd out his length,
Stunn'd with hard thwacks, and deſtitute of ſtrength,
And, hands up-rais'd, with death-preſaging mind,
At once the fight and victory declin'd.
Brave ſon of Jove, though you the conqueſt gain'd,
With no baſe deed the glorious day you ſtain'd;
The vanquiſh'd by his father Neptune ſwore,
That he would never, never injure ſtrangers more.

NOTES ON IDYLLIUM XXII.

Virgil, in his deſcription of the conteſt between Dares and Entellus, has borrowed ſome circumſtances from this encounter between Amycus and Pollux, which ſhall be ſpecified in their courſe: Apollonius Rhodius, in his ſecond book of the Argonautics, has likewiſe deſcribed this laſt-mentioned conteſt but is, in the opinion of Caſaubon, far ſurpaſſed by Theocritus. Speaking of the firſt part of this Idyllium, he ſays, "Porro qui contulerit priorem partem, quæ Pollucis pugilatum cum Amyco deſcribit, cum iis quæ habet Apollonius, reperiet profecto Theocritum tantum excellere Apollonium,

Quantum lenta ſolent inter viburna cupreſſi.

As lofty cypreſſes low ſhrubs exceed. *Warton.*

And yet Scaliger, in his dogmatical manner, gives the preference to Apollonius: "Splendore & arte ab Apollonio Theocritus ſuperatur" Poet. B 5. C. 6 whoſe determination the ingenious tranſlator of Virgil's Eclogues and Georgics has adopted; but I am inclined to think, that my friend Mr Warton, who perhaps admires Apollonius more, and underſtands him better than any man in the kingdom may be too partial to his favourite author I ſhall not take upon me to decide in this point, but after the [illegible] of Theocritus, I propoſe to print a tranſlation of the combat between Pollux and Amycus from Apollonius, which I hope will be acceptable to the curious reader, as it has never, that I know of, been tranſlated into Engliſh; he will then have an opportunity of forming a compariſon, and in ſome ſort judging of the merits of the two originals: I profeſs, without any kind of partiality, I have endeavoured to do all the juſtice in my power to them both. It is to be obſerved, that Apollonius flouriſhed in the reign of Ptolemy Evergetes, and, therefore, as he wrote after Theocritus, he probably borrowed many things from him.

Ver. 1. In the ſame manner Horace,

Dicam et Alcidem, puerosque Ledæ;
Hunc equis, illum ſuperare pugnis
Nobilem. *B. 1. Ode 12.*

Ver. 3. "The cæſtus, ſays Gilbert Weſt, Eſq. conſiſted of many thongs of leather, or raw hides of balls, wound about the hand and arm up to the elbow: I muſt here obſerve that none of the three Greek poets, Homer Il. B. 23 Appolonius, nor our author, who all have given us a deſcription of the cæſtus, make any mention of plates of lead or iron;" as Virgil has done,

———Tantorum ingentia ſeptem
Terga boum plumbo inſuto, ferroque regebant.
Æn. B. 5.

Seven thick bull-hides, their volumes huge diſpread,
Ponderous with iron and a weight of lead. *Pitt.*

Amycus is ſaid to have invented the combat of the cæſtus.

Ver. 19. Archbiſhop Potter obſerves, "When the two lambent flames, about the heads of Caſtor and Pollux, appeared together, they were eſteemed an excellent omen, foreboding good weather." Thus Horace,

Clarum Tyndaridæ ſidus, &c. *B. 4. Ode 8.*

Thus the twin-ſtars, indulgent, ſave
The ſhatter'd veſſel from the wave. *Duncombe.*

And B. 1. Ode 12. Quorum ſimul alba nautis Stella refulſit, &c.

Soon as their happy ſtars appear,
Huſh'd is the ſtorm, the waves ſubſide,
The clouds diſperſe, the ſkies are clear,
And without murmurs ſleeps th' obedient tide.
Duncombe.

Ver. 24 According to Aratus, there is a little cloud in the ſhell of the crab, between the ſhoulders, on each ſide of which is a ſtar, called the *Aſſes*, the intermediate cloud therefore is properly ſtyled their *Manger*.

Ver. 29. See Idyllium xiii. ver. 27. and note.

Ver. 31 A country near Bithynia in Aſia, bounded on the north by the Euxine ſea.

Ver. 35.
Tunc littore curvo Extruimus toros. *Virg.*

Ver. 37. We may look upon every circumſtance relating to this remarkable combat to commence here, the preceding lines being chiefly a noble encomium on theſe illuſtrious twin-ſons of Jupiter, and then it is obſervable, that this conflict in Theocritus takes up 103 verſes, and the epiſode on the ſame ſubject in Apollonius 97.

Ver. 45.
Qua pinus ingens, albaque populus. *Hor.*

Ver. 49. Virgil, ſpeaking of the Cyclops, ſays,
Nec viſu facilis, nec dictu affabilis ulli.
Æn. 3. 621.

A ſavage fiend! tremendous to the ſight. *Pitt.*

Ver. 57. This is ſurely a new and noble thought, to compare the protuberant muſcles of a giant to the rocky ſhelves under water, that are worn ſmooth and round by the tranſparent ſtream.

Ver. 61. Diomed is thus array'd. Il. B. 10.

This ſaid, the hero o'er his ſhoulder flung
A lion's ſpoils, that to his ancles hung. *Pope.*

Ver. 95. Before trumpets were invented, conchs were uſed to ſound the ſignal for battle. Virgil ſays of Miſenus,

Sed tum forte cavâ dum perſonat æquora conchâ.
Æn. B. 5.

Ver. 97. Thus in Virgil, the ruſtics are ſtirred up to war by Alecto.

Tum vero ad vocem celeres, &c. *Æn. 7. 519.*

Then the mad ruſtics caught the dire alarms,
And at the horrid ſignal flew to arms.
Nor leſs in ſuccour of the princely boy,
Pour forth to battle all the troops of Troy. *Pitt.*

Ver. 101.
Satus Anchiſâ cæſtus pater extulit æquos, &c.
Æn. 5. 424.

Then the great prince with equal gauntlets bound
Their vigorous hands, and brac'd their arms around
Pitt.

Ver. 105. Theocritus has Homer frequently in view in deſcribing the combat of the cæſtus. See Il. 23. 685.

Ες μεσσον αγῶνα.

Amid the circle now each champion ſtands. *Pope.*

Ver. 113.
Επι δ' ωρνυτο θεῖος Επειος,
Κοψε δε παπταινοντα παρηϊον.

At length Epëus dealt a weighty blow,
Full on the cheek of his unwary foe. *Pope.*

Ver. 115.
Tum pudor incendit vires. *Æn. 5. 455.*

Ver. 117.
It clamor cœlo, &c. 451.

At once the Trojans and Sicilians riſe,
And with divided clamours rend the ſkies. *Pitt.*

Ver. 121. Thus Virgil.
Creber utrâque manu pulſat verſatque Dareta. 460.

Ver. 126. Thus Homer,
Αιμα παχυ πτυοντα.

His mouth and noſtrils pour the clotted gore. *Pope.*

And Virgil,
——Craſſumque cruorem Ore ejectantem. 469.

Ver 137.
Acrior ad pugnam, &c. 454.
Improv'd in ſpirit to the fight he came. *Pitt.*

Ver. 139.
Multa viri nequicquam inter ſe vulnera jactant,
Multa cavo lateri ingeminant, et pectore vaſtos
Dant ſonitus. 433.

Ver. 145.
———Ερρεε δ' ιδρως
Παντοθεν εκ μελλιων. *Il. B. 23. 688.*

And painful ſweat from all their members flows. *Pope.*

Ver. 150. Theſe addreſſes to the muſes are frequent in the beſt poets.

Pandite nunc Helicona, Deæ, &c. *Æn. 7. 641.*
Et meminiſtis enim, Divæ, et memorare poteſtis,

Ver. 156. Virgil follows very cloſe;
Oſtendit dextram inſurgens Entellus, et alte,

Extulit: ille ictum venientem a vertice velox
Prævidit, celerique elapsus corpore cessit.
Æn. B. 5. 443.

Ver. 163.

——Erratque aures et tempora circum
Crebra manus: duro crepitant sub vulnere malæ.
435.

With swift repeated words their hands fly round
Their heads and cheeks; their crackling jaws resound. *Pitt.*

Ver. 162. The Greek verse consists of seventeen syllables,

Ἐκ δὲ χυθὲν μελαν αιμα θοως κροταφοιο χανοντος,

and was certainly intended to image the trickling of the blood, which I have endeavoured to preserve in an Alexandrine.

Ver. 169. It was customary in the ancient combats for the vanquished person to stretch out his hands to the conqueror, signifying that he declined the battle, acknowledged that he was conquered, and submitted to the discretion of the victor: thus Turnus in Virgil:

Victi, et victum tendere palmas Ausonii vidêre.

Thine is the conquest; lo! the Latian bands
Behold their general stretch his suppliant hands.
Pitt.

I shall finish my observations on this Idyllium, with a translation of a Greek opinion of Lucillius, showing that the consequences of these kind of battles were sometimes very terrible, though the combatants might escape with their lives and limbs.

On a Conqueror in the Cæstus, *Anthol. B. 2.*

This victor, glorious in his olive wreathe,
Had once eyes, eye-brows, nose and ears, and teeth;
But turning cæstus champion, to his cost,
These and still worse! his heritage he lost;
For by his brother su'd, disown'd at last,
Confronted with his picture he was cast.

IDYLLIUM XXII.

PART II.

THE ARGUMENT.

CASTOR and Pollux had carried off Phœbe and Talaira, the daughters of Leucippus, brother of the deceased Aphareus, who were betrothed to Lynceus and Idas, the sons of Aphareus; the husbands pursued the ravishers, and claimed their wives; on this a battle ensued, in which Castor kills Lynceus, and Idas is slain by lightning. Ovid relates the event of this combat very differently. See the Note.

POLLUX, thy name has dignify'd my song:
To Castor now the lofty lays belong;
Fam'd for bright armour on th' embattled plain,
And forming fleeds obedient to the rein.
The bold twin sons of Jove by stealth had led
Leucippus' daughters to their lawless bed.
Lynceus and Idas, much for strength renown'd,
Long since by promise to the damsels bound,
Aphareus' sons, the foul dishonour view'd,
And fir'd with wrath the ravishers pursued.
But when they reach'd deceas'd Aphareus' tomb,
Encompass'd round with venerable gloom,
Each hero leap'd impetuous from his car,
All arm'd, and well appointed for the war.
Lynceus aloud beneath his helmet spoke:
'Why will ye frantic thus the fight provoke?
'Of others wives why make unjust demands?
'Why gleam the naked faulchions in your hands?
'To us Leucippus has betroth'd them both
'Long since, and seal'd the contract with an oath:
'Tis base to make of others wives your prey,
'And bear their riches, mules, and lowing herds away,
'To threat the fire with force, or bribe with wealth,
'And seize on others properties by stealth.
'Oft, though ungrac'd with eloquence and art,
'Thus have I spoke the language of my heart:'
"Princes, my friends, should not on any score
"Solicit maids that are espous'd before:
"Sparta for virgins, Elis for swift steeds
"Are fam'd, large flocks and herds Arcadia breeds;
"Messene, Argos numerous natives boast,
"And fair looks Corinth on the sea-beat coast:
"There nymphs unnumber'd bloom, a lovely race,
"Acknowledg'd beauties both of mind and face:
"There ye may gain the dames your fancies choose;
"No parents will the rich and brave refuse.
"For you the love of noble deeds inspires;
"Ye are the sons of honourable sires.
"Let us our nuptials undisturb'd pursue,
"And we'll unite to find fit brides for you."
'My words ne'er mov'd your unrelenting minds,
'The waves receiv'd them from the driving winds.
'Yet now, ev'n now your deeds let justice guide;
'We both are cousins by the father's side.
'But if mad rage impels you not to yield,
'And arms must fix the fortune of the field;
'Let Idas and brave Pollux both refrain
'From the fell combat on the lifted plain:
'And only I and Castor prove our might,
'By birth the youngest in decisive fight.

'Why ſhould we give our parents cauſe to grieve,
'And their fond arms of all their ſons bereave:
'Let ſome ſurvive our drooping friends to cheer,
'And mate the virgins whom they held ſo dear,
'The wiſe with prudence their diſſenſions ſtate,
'And leſſer ills conclude the great debate.'
Thus he, nor thus in vain; for on the ground
Pollux and Idas plac'd their arms around.
Lynceus firſt march'd undaunted to the field,
And ſhook his ſpear beneath his ample ſhield.
Caſtor to war his brandiſh'd lance addreſt;
And on each helmet wav'd the nodding creſt.
Firſt with their ſpears began the dreadful ſtrife,
Each chief explor'd the avenues of life.
But thus unhurt the battle they maintain'd,
Broke in their ſhields the ſpears ſharp points remain'd: [drew.
Then from their ſheaths their ſhining ſwords they
And fierce to fight the raging heroes flew:
On Lynceus' buckler Caſtor boldly preſt,
And his bright helmet with the triple creſt;
Lynceus, ſharp-ſighted, kept his foe at bay,
And ſtruck his helmet's purple plume away;
Who quick retreating all his art diſplay'd,
And lopt the hand that held the glittering blade:
Down dropt the ſword; to his ſire's tomb he flew,
Where Idas ſat the fatal fight to view:
Cloſe follow'd Caſtor, all his force apply'd,
And furious drove the faulchion in his ſide,
Outguſh'd his bowels through the gaping wound,
And vanquiſh'd Lynceus preſt the gory ground;
In dim, dark miſts the ſhades of death ariſe,
And in eternal ſlumber ſeal his eyes.
Nor was brave Idas by his mother led,
Laocooſſa to the nuptial bed:
For he, vindictive of fall'n Lynceus' doom,
Tore up a column from Aphareus' tomb,
Aiming at Caſtor, dreadfully he ſtood,
The bold avenger of his brother's blood;
Jove interpos'd, and with the forked brand
Quick ſtruck the poliſh'd marble from his hand;
He wreath'd convulſive, ſcorch'd on every ſide,
And in a peal of rattling thunder dy'd.
Thus ſhall the brothers be with conqueſt crown'd,
Brave of themſelves, and ſprung from chiefs renown'd.
Hail, Leda's valiant ſons! my muſe inſpire,
And ſtill preſerve the honour of my lyre.
Ye, and fair Helen, to all bards are dear,
With joy the names of thoſe bold chiefs they hear,
Who in the cauſe of Menelaus drew
Their conquering ſwords, proud Ilium to ſubdue.
Your praiſe, O kings, the Chian muſe recites
Troy's famous city, and the Phrygian fights,
He ſings the Grecian fleet renown'd afar,
And great Achilles, bulwark of the war.
I bring the tribute of a feebler lyre,
Sweet warbling what the rapturous nine inſpire,
The beſt I may; verſe to the gods belongs;
The gods delight in honorary ſongs.

NOTES ON IDYLLIUM XXII. PART II.

Ver. 5. Ovid's account of this battle begins at verſe 700 of the 5th book of his Faſti; "Abſtulerant raptas Phœben," &c.

The ſons of Tyndarus, with conqueſt crown'd,
For boxing one, and one for ſteeds renown'd,
Had ſtol'n, injurious, as their lawful prey,
Leucippus' daughters from their mates away;
Lynceus and Idas claim ſuperior right,
Long ſince affianc'd, and prepare for fight.
Love urges both to combat on the plain,
Theſe to retake, the others to retain.
The brother-twins might well eſcape by ſpeed,
But held it baſe by flying to ſucceed.
All on an open plain the champions ſtood,
Aphidna nam'd, fit place for ſcenes of blood.
Caſtor by Lynceus' ſword receiv'd a wound
Deep in his ſide, and lifeleſs preſt the ground;
Avengeful Pollux, quick advancing near,
Through Lynceus' ſhoulders drove the forceful ſpear:
On him preſt Idas, but Jove's flaming brand
Daſh'd the pois'd javelin from his lifted hand.
F. F.

Ver. 16.

Quo, quo ſceleſti, ruitis? aut cur dexteris
Aptantur enſes conditi? *Hor. Epode 7.*
Say, ye vile race, what phrenzy draws
Your darling faulchions in ſedition's cauſe?
Duncombe.

Ver. 33. Thus Æneas ſays,

Sunt aliæ innuptæ Latio & Laurentibus agris,
Nec genus indecores. *Æn. B. 12. 24.*

Ver. 38.

Turnus avis ataviſq. potens. *Æn. 7. 56.*

Ver. 47.

Teucrûm arma quieſcant
Et Rutilûm; noſtro dirimamus ſanguine bellum.
Æn. 12 78.

The celebrated ballad called Chevy Chace, has the ſame thought;

Let thou and I the battle try,
And ſet our men aſide, &c.

Ver. 51. Thus Niſus addreſſes Euryalus in the ſame ſenſe,

Neu matri miſeræ tanti ſim cauſa doloris.
Æn. 9. 216.

Why ſhould I cauſe thy mother's ſoul to know
Such heart-felt pangs! unutterable woe! *Pitt.*

Ver. 60. Thus Mezentius in Virgil,

At vero ingentum quatiens Mezentius haſtam
Ingreditur campo. *Æn. 10. 762.*

Ver. 63. In almoſt all heroic duels, the combatants firſt threw their ſpears, and then made uſe of their ſwords. Thus Hector and Achilles, Iliad, B. 20. and 22. Menelaus and Paris, B. 3. and the reſt of the heroes attack one another. *Potter.*

Ver. 64.

Partes rimatur apertas,
Quà vulnus lethale ferat. *Virg. Æn. B.* 11. 748.

Ver. 67.

Vaginâque cavâ fulgentem diripit enſem.
Æn. B. 10.

And from the ſheath the ſhining faulchion drew.
Pitt.

Ver. 71. Horace ſays,

Non poſſis oculo quantum contendere Lynceus.
B. 1. *Ep.* 1.

Hence the proverb of Lyncean eyes: Pindar tells us, Lynceus could diſcover Caſtor and Pollux hid in the trunk of a tree from the top of mount Taygetus: nay, he had ſo piercing a ſight, that if we believe the poets, he could ſee what was doing in heaven and hell: the ground of the fable was, that he underſtood the ſecret powers of nature. Though it may admit of a doubt, whether this is the ſharp-ſighted Lynceus that attended the Argonautic expedition; from the poet's words, Ακριδης ομμασι Λυγκευς, I think it manifeſt that he was.

Ver. 72.

Summaſq. excuſſit vertice criſtas. *Æn.* 12. 492.

But the ſwift javelin ſtrikes his plume away.
Pitt.

Ver. 74.

Strymonio dextram fulgenti diripit enſe.
Æn. B. 10. 414.

The faulchion lops his hand.

Ver. 81.

Olli dura quies oculos, et ferreus urget
Somnus; in æternum clauduntur lumina noctem.
Æn. 10. 745.

Ver. 94.

Fortes Creantur fortibus. *Hor. B.* 4. *Ode* 4.

Ver. 99.

Quincunque Iliacos ferro violavimus agros.
Æn. 11. 255.

Ver. 101. I do not remember that Homer any where mentions Caſtor and Pollux, except in the third book of the Iliad, where the commemoration of them by their ſiſter Helen is finely introduced, and in the true ſpirit of poetry. I ſhall beg leave to tranſcribe the whole paſſage in the admirable tranſlation of Mr. Pope, becauſe I think it as beautiful and pathetic as almoſt any part of the whole work;

Yet two are wanting of the numerous train,
Whom long my eyes have ſought, but ſought in vain;
Caſtor and Pollux, firſt in martial force,
One bold on foot, and one renown'd for horſe:
My brothers theſe; the ſame our native ſhore,
One houſe contain'd us, and one mother bore.
Perhaps the chiefs, from warlike toils at eaſe,
For diſtant Troy refuſe'd to ſail the ſeas:
Perhaps their ſword ſome nobler quarrel draws,
Aſham'd to combat in their ſiſter's cauſe.
So ſpoke the fair, nor knew her brother's doom,
Wrapt in the cold embraces of the tomb;
Adorn'd with honours in their native ſhore,
Silent they ſlept, and heard of wars no more.

As Theocritus both here and in the 7th Idyllium, ſtyles Homer the Chian Bard, Χιον Αοιδον, we have reaſon to conjecture, that Chios has the honour of being the place of his nativity: Simonides in his Epigram on Human Life, calls him the Man of Chios; for quoting a verſe of Homer, he ſays,

Εν δε το καλλιστον Χιος εειπεν ανηρ.

The Chians pleaded theſe ancient authorities for Homer's being born among them: they mention a race they had, called the Homeridæ, whom they accounted his poſterity; they caſt medals of him; they ſhow to this day an Homerium, or temple of Homer, near Boliſſus; and cloſe their arguments with a quotation from the hymn to Apollo (which is acknowledged for Homer's by Thucydides), where he calls himſelf, "The blind man that inhabits Chios." One cannot avoid being ſurpriſed at the prodigious veneration for his character, which could engage mankind with ſuch eagerneſs in a point ſo little eſſential; that kings ſhould ſend to oracles for the inquiry of his birth-place; that cities ſhould be in ſtrife about it; that whole lives of learned men ſhould be employed upon it; that ſome ſhould write treatiſes, others call up ſpirits about it: that thus, in ſhort, heaven, earth and hell, ſhould be ſought to, for the deciſion of a queſtion which terminates in curioſity only. Thus far Mr. Pope, in his Eſſay on Homer. Yet, though this point is not eſſential, and only matter of curioſity, we may obſerve, that theſe inquiries, diſputes, and contentions, plead ſtrongly in favour of the muſes, and ſet the character of a poet in the moſt eminent and exalted ſtation.

IDYLLIUM XXIII.

THE DESPAIRING LOVER.

THE ARGUMENT.

An unhappy lover, deſpairing to gain the affections of his miſtreſs, by whom he is deſpiſed, makes away with himſelf: the cruel fair is ſoon after killed by the image of Cupid, that fell upon her as ſhe was bathing.

An amorous ſhepherd lov'd a cruel fair;
The haughty beauty plung'd him in deſpair:
She loth'd the ſwain, nor aught her breaſt could move
She ſcorn'd the lover, and the god of love;

Nor knew the puiſſance of his bow and darts,
To tame the ſtubborneſs of human hearts.
With cold diſdain ſhe griev'd the ſhepherd ſore,
The more he ſigh'd, ſhe ſcorn'd him ſtill the more.
No ſolace ſhe afforded, no ſoft look,
Nor e'er the words of ſweet compaſſion ſpoke:
Her eye, her cheek, ne'er glow'd her flame to prove,
No kiſs ſhe gave, the lenient balm of love:
But as a lion, on the deſert plain,
With ſavage pleaſure views the hunter train;
Thus in her ſcorn ſevere delight ſhe took;
Her words, her eyes, were fierce, and death was in her look.
She look'd her ſoul; her face was pal'd with ire;
Yet ſhe was fair; her frowns but rais'd deſire.
At length, he could no more, but ſought relief
From tears, the dumb petitioners of grief;
Before her gate he wept, with haggard look,
And, kiſſing the bare threſhold, thus he ſpoke:
'Ah, ſavage fair, whom no entreaties move!
'Hard heart of ſtone, unworthy of my love!
'Accept this cord, 'tis now in vain to live,
'This friendly gift, the laſt that I ſhall give;
'I go where doom'd; my love, my life are o'er,
'No more I grieve, and you are teaz'd no more;
'I go the laſt kind remedy to prove,
'And drink below oblivion to my love.
'But, ah! what draughts my fierce deſires can tame,
'Or quench the raging fury of my flame? [doors!
'Adieu, ye doors! eternally adieu!
'I ſee the future, and I know it true.
'Fragrant the roſe, but ſoon it fades away;
'The violet ſweet, but quickly will decay;
'The lily fair a tranſient beauty wears;
'And the white ſnow ſoon weeps away in tears:
'Such is the bloom of beauty, cropt by time,
'Full ſoon it fades, and withers in its prime.
'The days will come when your hard heart ſhall burn
'In ſcorching flames, yet meet no kind return.
'Yet grant this boon, the laſt that I implore:
'When you ſhall ſee, ſuſpended at your door,
'This wretched corſe, paſs not unheeding by,
'But let the tear of ſorrow dim your eye:
'Then looſe the fatal cord, and from your breaſt
'Lend the light robe, and ſcreen me with your veſt:
'Imprint one kiſs when my ſad ſoul is fled;
'Ah, grudge not thus to gratify the dead!
'Fear not---your kiſſes cannot life reſtore:
'Though you relent, yet I ſhall wake no more.
'And laſt, a decent monument prepare,
'And bury with my love my body there;
'And thrice repeat, "Here reſts my friend his head;"
'Or rather add, "My deareſt lover's dead."
'With this inſcription be the ſtone ſupplied;
"By Cupid's dart this hapleſs ſhepherd dy'd:
"Ah! paſſenger, a little moment ſpare
"To ſtop, and ſay, He lov'd a cruel fair."
This ſaid, he tries againſt the wall to ſhove
A mighty ſtone, and to a beam above
Suſpends the cord, impatient of delay,
Fits the dire nooſe, and ſpurns the ſtone away;
Quivering in air he hung, till welcome death
Securely clos'd the avenues of breath.
The fair one, when the pendant ſwain ſhe ſaw,
Nor pity felt, nor reverential awe;
But as ſhe paſs'd, for not a tear ſhe ſhed,
Her garments were polluted by the dead.
Then to the circus, where the wreſtlers fought,
Or the more pleaſing bath of love ſhe ſought:
High on a marble pedeſtal above,
Frown'd the dread image of the god of love,
Aiming in wrath the meditated blow,
Then fell revengeful on the nymph below;
With the pure fountain mix'd her purple blood---
Theſe words were heard emerging from the flood:
"Lovers, farewell; nor your admirers ſlight;
"Reſign'd I die, for Heav'n pronounces right."

NOTES ON IDYLLIUM XXIII.

The argument of this Idyllium is ſimilar to the argument of Virgil's ſecond eclogue, though this is more tragical: I have taken the liberty to make a general tranſformation, which renders it a thouſand times more natural, decent, and gallant.

Ver. 1.

Formoſum paſtor Corydon ardebat Alexim.
Virg. Ec. 2.

Young Corydon with hopeleſs love ador'd
The fair Alexis, favourite of his lord. *Warton.*

Ver. 7. Ovid ſays of Anaxareté,

Spernit et irridet; factiſque immitibus addit
Verba ſuperba ferox; et ſpe quoque fraudat amantem. *Met. B.* 14. 714.

Ver. 16. The Greek is, Ειχεν αναγκαν, or, as Heinſius more plauſibly reads, Ειδεν αναγκαν, "ſhe looked neceſſity," that is, death or fate; thus Horace has,

Scmotique priûs tarda neceſſitas
Lethi corripuit gradum. *B.* 1. *O.* 3.

And, Te ſemper anteit ſæva neceſſitas. *B.* 1 *O.* 35.

Which elegant uſe of the word *neceſſitas* he has taken from the Grecians: Pindar has, εχθρα αναγκα: and Euripides, δεινη αναγκη, which is exactly the *dira neceſſitas* of Horace, B. 3. O. 24.

Ver. 21. Thus Ovid, ſpeaking of Iphis,

Non tulit impatiens longi tormenta doloris
Iphis, et ante fores hæc verba noviſſima dixit.
Met. B. 14.

Ver. 30. Virgil ſays of ſouls that endure tranſmigration,

Lethæi ad fluminis undam
Securos latices, et longa oblivia potant. *Æn. B.* 6.

To yon dark ſtreams the gliding ghoſts repair,
And quaff deep draughts of long oblivion there.
Pitt.

Ver. 34.
Haud ignara futuri. *Virg. Æn.* 4. 50.

Ver. 36. Thus Ovid, in his Art of Love,
Nec violæ ſemper nec hiantia lilia florent,
Et riget amiſſâ ſpina relicta roſâ. *E.* 2. 115.

Ver. 39. Thus Horace,
Fugit retrò
Levis juventas et decor. *B.* 2. *O.* 11.

Ver. 46.
Debitâ ſparges lacrymâ favillam
Vatis amici. *Hor. B.* 2. *O.* 6.

Ver. 53. Thus Virgil,
Et tumulum facite, et tumulo ſuperaddite carmen. *Ec.* 5.
With grateful hands his monument erect,
And be the ſtone with this inſcription deck'd.
Warton.

Ver. 55. Of the inclamation at the tomb, Æneas thus tells Deïphobus,
Magnâ Manes ter voce vocavi. *Æn.* 6. 506.

Ver. 61. The fate of Iſis in Ovid is very ſimilar,
Dixit, et ad poſtes, &c. *Met. B.* 14.
Then o'er the poſts, once hung with wreathes, he throws
The ready cord, and fits the fatal nooſe,
For death prepares, and bounding from above,
At once the wretch concludes his life and love.
Garth.

Ver. 79. Moſchus, Idyl. 6. has nearly the ſame thought. Ταυτα λεγω πασιν, κ. τ. λ.
Ye ſcornful nymphs and ſwains, I tell
This truth to you; pray mark it well:
" If to your lovers kind you prove,
" You'll gain the hearts of thoſe you love." *F. F.*

The fate of this ſcornful beauty is ſimilar to that of a youth who was killed by the ſtatue of his ſtepmother falling upon him. See Callimachus, Epig. 11. thus tranſlated by Mr. Duncombe.
A youth, who thought his father's wife
Had loſt her malice with her life,
Officious with a chaplet grac'd
The ſtatue on her tomb-ſtone plac'd;
When, falling ſudden on his head,
With the dire blow it ſtruck him dead:
Be warn'd from hence, each foſter-ſon,
Your ſtepdame's ſepulchre to ſhun.

IDYLLIUM XXIV.

THE YOUNG HERCULES.

THE ARGUMENT.

This Idyllium is entirely narrative: it firſt of all gives an account how Hercules, when only ten months old, ſlew two monſtrous ſerpents which Juno had ſent to devour him; then it relates the prophecy of Tireſias, and afterwards deſcribes the education of Hercules, and enumerates his ſeveral preceptors. The concluſion of this poem is loſt.

Waſh'd with pure water, and with milk well fed,
To pleaſing reſt her ſons Alcmena led,
Alcides, ten months old, yet arm'd with might,
And twin Iphiclus, younger by a night:
On a broad ſhield, of fine braſs metal made,
The careful queen her royal offſpring laid;
(The ſhield from Pterilus Amphitryon won
In fight, a noble cradle for his ſon!)
Fondly the babes ſhe view'd, and on each head
She plac'd her tender hands, and thus ſhe ſaid:
" Sleep, gentle babes, and ſweetly take your reſt,
" Sleep, deareſt twins, with ſofteſt ſlumbers bleſt;
" Securely paſs the tedious night away,
" And riſe refreſh'd with the fair riſing day."
She ſpoke, and gently rock'd the mighty ſhield;
Obſequious ſlumbers ſoon their eye-lids ſeal'd.
But when at midnight ſunk the bright-ey'd Bear,
And broad Orion's ſhoulder 'gan appear,
Stern Juno, urg'd by unrelenting hate,
Sent two fell ſerpents to Amphitryon's gate,
Charg'd with ſevere commiſſion to deſtroy
The young Alcides, Jove-begotten boy:
Horrid and huge, with many an azure fold,
Fierce through the portal's opening valves they roll'd;
Then on their bellies prone, high ſwoln with gore,
They glided ſmooth along the marble floor;
Their fiery eye-balls darted ſanguine flame,
And from their jaws deſtructive poiſon came.
Alcmena's ſons, when near the ſerpents preſt,
Darting their forked tongues, awoke from reſt;
All o'er the chamber ſhone a ſudden light,
For all is clear to Jove's diſcerning ſight.
When on the ſhield his foes Iphiclus ſaw,
And their dire fangs that arm'd each horrid jaw;
Aghaſt he rais'd his voice with bitter cry,
Threw off the covering, and prepar'd to fly:
But Hercules ſtretch'd out his hands to claſp
The ſcaly monſters in his iron graſp;
Faſt in each hand the venom'd jaws he preſt
Of the curſt ſerpents, which ev'n gods deteſt.
Their circling ſpires, in many a dreadful fold,
Around the ſlow-begotten babe they roll'd,
The babe unwean'd, yet ignorant of fear,
Who never utter'd cry, nor ſhed a tear.
At length their curls they loos'd, for rack'd with pain
They ſtrove to 'ſcape the deathful gripe in vain.
Alcmena firſt o'erheard the mournful cries,
And to her huſband thus: " Amphitryon, riſe;

" Diſtreſsful fears my boding ſoul diſmay;
" This inſtant riſe, nor for thy ſandals ſtay:
" Hark, how for help the young Iphiclus calls!
" A ſudden ſplendour, lo! illumes the walls!
" Though yet the ſhades of night obſcure the ſkies;
" Some dire diſaſter threats: Amphitryon, riſe."
She ſpoke: the prince, obedient to her word,
Roſe from the bed, and ſeiz'd his rich-wrought ſword,
Which, on a glittering nail above his head,
Hung by the baldric to the cedar bed;
Then from the radiant ſheath, of lotos made,
With ready hand he drew the ſhining blade:
Inſtant the light withdrew, and ſudden gloom
Involv'd again the wide-extended room.
Amphitryon call'd his train, that ſlumbering lay,
And ſlept ſecure the careleſs hours away.
" Riſe, riſe, my ſervants, from your couches ſtrait,
" Bring lights this inſtant, and unbar the gate."
He ſpoke: the train, obedient to command,
Appear'd with each a flambeau in his hand:
Rapt with amaze, young Hercules they ſaw
Graſp two fell ſerpents cloſe beneath the jaw:
The mighty infant ſhow'd them to his ſire,
And ſmil'd to ſee the wreathing ſnakes expire;
He leapt for joy that thus his foes he ſlew,
And at his father's feet the ſcaly monſters threw.
With tender care Alcmena fondly preſt,
Half-dead with fear, Iphiclus to her breaſt;
While o'er his mighty ſon Amphitryon ſpread
The lamb's ſoft fleece, and ſought again his bed.
When thrice the cock pronounc'd the morning near,
Alcmena call'd the truth-proclaiming ſeer,
Divine Tireſias; and to him ſhe told
This ſtrange event, and urg'd him to unfold
Whate'er the adverſe deities ordain:
' Fear not,' ſhe cried, ' but fate's whole will ex-
' For well thou know'ſt, O! venerable ſeer,
' Thoſe ills which fate determines, man muſt
' bear.'
She ſpoke: the holy augur thus reply'd:
" Hail, mighty queen, to Perſeus near ally'd;
" Parent of godlike chiefs: by theſe dear eyes,
" Which never more ſhall view the morning
" riſe,
" Full many Grecian maids, for charms renown'd,
" While merrily they twirl the ſpindle round,
" Till day's decline thy praiſes ſhall proclaim,
" And Grecian matrons celebrate thy fame.
" So great, ſo noble will thy offſpring prove,
" The moſt gigantic of the gods above,
" Whoſe arm, endow'd with more than mortal
" Shall many men and many monſters ſlay:
" Twelve labours paſt, he ſhall to heav'n aſpire,
" His mortal part firſt purified by fire,
" And ſon-in-law be nam'd of that dread power
" Who ſent theſe deadly ſerpents to devour
" The ſlumbering child: then wolves ſhall rove
" the lawns,
" And ſtrike no terror in the paſturing fawns.
" But, O great queen! be this thy inſtant care,
" On the broad hearth dry faggots to prepare,
" Aſpalathus, or prickly brambles, bind,
" Or the tall thorn that trembles in the wind,
" And at dark midnight burn (what time they
" came
" To ſlay thy ſon) the ſerpents in the flame.
" Next morn, collected by thy faithful maid,
" Be all the aſhes to the flood convey'd,
" And blown on rough rocks by the favouring
" Thence let her fly, but caſt no look behind.
" Next with pure ſulphur purge the houſe, and
" bring
" The pureſt water from the freſheſt ſpring;
" This, mix'd with ſalt, and with green olive
" crown'd,
" Will cleanſe the late contaminated ground.
" Laſt, let a boar on Jove's high altar bleed,
" That ye in all atchievements may ſucceed."
Thus ſpoke Tireſias, bending low with age,
And to his ivory car retir'd the reverend ſage,
Alcides grew beneath his mother's care,
Like ſome young plant, luxuriant, freſh, and fair,
That ſcreen'd from ſtorms defies the baleful blaſt,
And for Amphitryon's valiant ſon he paſt.
Linus, who claim'd Apollo for his ſire,
With love of letters did his youth inſpire,
And ſtrove his great ideas to enlarge,
A friendly tutor, faithful to his charge.
From Eurytus his ſkill in ſhooting came,
To ſend the ſhaft unerring of its aim.
Eumolpus tun'd his manly voice to ſing,
And call ſweet muſic from the ſpeaking ſtring.
In liſted fields to wreſtle with his foe,
With iron arm to deal the deathful blow,
And each atchievement where fair fame is ſought,
Harpalycus, the ſon of Hermes, taught;
Whoſe look ſo grim and terrible in fight,
No man could bear the formidable ſight.
But fond Amphitryon, with a father's care,
To drive the chariot taught his godlike heir,
At the ſharp turn with rapid wheels to roll,
Nor break the grazing axle on the goal:
On Argive plains, for generous ſteeds renown'd,
Oft was the chief with race-won honours crown'd;
And ſtill unbroke his ancient chariot lay,
Though cankering time had eat the reins away.
To launch the ſpear, to ruſh upon the foe,
Beneath the ſhield to ſhun the faulchion's blow,
To marſhal hoſts, oppoſing force to force,
To lay cloſe ambuſh, and lead on the horſe,
Theſe Caſtor taught him, of equeſtrian fame,
What time to Argos exil'd Tydeus came,
Where from Adraſtus he high favour gain'd,
And o'er a kingdom, rich in vineyards, reign'd.
No chief like Caſtor, till conſuming time
Unnerv'd his youth, and crop'd the golden prime.
Thus Hercules, his mother's joy and pride,
Was train'd up like a warrior: by the ſide
Of his great father's his rough couch was ſpread,
A lion's ſpoils compos'd his grateful bed.
Roaſt meat he lov'd at ſupper to partake,
The bread he fancied was the Doric cake,
Enough to ſatisfy the labouring hind;
But ſtill at noon full ſparingly he din'd.
His dreſs, contriv'd for uſe, was neat and plain;
His ſkirts were ſcanty, for he wore no train.

The concluſion of this Idyllium is wanting in the original.

NOTES ON IDYLLIUM XXIV.

Ver. 7. Virgil says nearly the same thing of the coat of mail which was taken from Demoleus,

Loricam quam Demoleo detraxerat ipse
Victor apud rapidum Simoenta sub Ilio alto.
Æn. B. 5. 260.

By observing the use this shield is put to, we have an agreeable picture presented to the mind: it is an emblem of the peace and tranquillity which always succeed the tumults of war; and likewise a prognostic of the future greatness of this mighty champion in embryo.

Ver. 19. Pindar, in his first Nemæan Ode, tells this same story, which, as it may be a satisfaction to the curious to see how different writers manage the same subject, I shall take the liberty to give in Mr. West's translation.

Then glowing with immortal rage,
The gold-enthroned empress of the gods,
Her eager thirst of vengeance to assuage,
Strait to her hated rival's curs'd abodes
Bade her vindictive serpents haste.
They through the opening valves with speed
On to the chamber's deep recesses past,
To perpetrate their murderous deed:
And now, in knotty mazes to infold
Their destin'd prey, on curling spires they roll'd,
His dauntless brow, when young Alcides rear'd,
And for their first attempt his infant arms prepar'd.
Fast by their azure necks he held,
And grip'd in either hand his scaly foes;
Till from their horrid carcases expell'd,
At length the poisonous soul unwilling flows.

Ver. 27. The Greek is, *απ' οφθαλμων δε κακον πυρ Ερχομενοις λαμπτισκε*; "a pernicious flame shot from their eyes as they approached:" Pierson, (see his Versimilia) reads with much more elegance and propriety *Δερχομενοις*, "looking very keenly," as the eyes of serpents are always represented: Hesiod, speaking of dragons, uses the same word twice, *εκ κεφαλων πυρ καιεσθο δερκομενοις*. Theog. ver. 828. and in the shield of Hercules, ver. 145, *λαμπομενοισι δεδορκως*. He brings likewise the authorities of Homer, Æschylus and Oppian, to support this reading. Virgil has,

Ardentesq; oculi suffecti sanguine et igni,
Sibila lambebant linguis vibrantibus ora.
Æn. B. 2. 210.

Ver. 41. Thus Virgil, speaking of the serpents that devoured Laocoon's sons,

——Parva duorum
Corpora natorum, &c.
Æn. B. 2. 213.

And first in curling fiery volumes bound
His two young sons, and wrapt them round and round. *Pitt.*

Ver. 64. The Greek is, *υπνον βαθυν εκφυσωντας*, similar to what Virgil says of Rhamnes, Æn. 9. 326.

——In slumbers deep he lay,
And, labouring, slept the full debauch away.

Ver. 75. Thus Virgil,
Et trepidæ matres prestere ad pectora natos.
Æn. B. 7. 518.

Ver. 84. Thus Achilles says to Calchas, Il. B. 1.

From thy inmost soul
Speak what thou know'st, and speak without controul. *Pope.*

Fix'd is the term to all the race of earth,
And such the hard condition of our birth:
No force can then resist, no flight can save;
All sink alike, the fearful and the brave.

Ver. 96. The words of Theocritus are *απο φειονω πλατυς ηρως*, "the broad-breasted hero;" I am in doubt how it should be rendered: Creech has translated it, "The noblest burden of the bending sky." In Homer's Odyssey, B. 11. Hercules is thus represented among the shades below,

Now I the strength of Hercules behold,
A towering spectre of gigantic mould;
A shadowy form! for high in heaven's abodes
Himself resides, a god among the gods. *Pope*

On which Mr. Pope observes, 'The ancients imagined, that immediately after death, there was 'a partition of the human composition into three 'parts, the *body*, *image*, and *mind*; the *body* is hu'ried in the earth; the *image*, or *ειδωλον*, descends 'into the regions of the departed; the *mind*, or '*φρην*, the divine part, is received into heaven; 'thus the body of Hercules was consumed in the 'flames, his image is in hell, and his soul in 'heaven.'

Ver. 100. The Greek is, *θνητα δε παντα πυρα Τραχινιος εξει*, "The Trachinian pyre will consume his mortal part." Trachin was a city of Thessaly built by Hercules, and the place to which he sent to Dejanira for the shirt which proved fatal to him, and was the occasion of throwing himself into the fire that consumed him; hence therefore, probably, Theocritus calls it the Trachinian pyre.

Ver. 103. Virgil has, "Nec lupus insidias pecori," &c. Both authors seem to have borrowed from Isaiah, chap. ii. ver. 6. "The wolf shall dwell with the lamb, and the leopard shall lie down with the kid."

Ver. 105. Archbishop Potter observes, 'Some'times the ominous thing was burnt with *ligna* '*infelicia*, that is, such sort of wood as was in '*tutelâ inferûm deorum avertentiumque*, sacred to the 'gods of hell, and those which averted evil omens, 'being chiefly thorns and such other trees as 'were fit for no other use than to be burned.

'Sometimes the prodigy, when burnt, was caſt
'into the water, and particularly into the ſea,
'as Theocritus has deſcribed.' Chap. xvii.

Ver. 107. A plant called the Roſe of Jeruſalem, or our Lady's Thorn. *Johnſon's Dict.*

The Greek is παλιουρος, "paliuros," which Martyn ſays, is moſt probably the plant which is cultivated in our gardens under the name of Chriſt's Thorn, and is ſuppoſed to be the thorn, of which the crown was made, that was put upon our Saviour's head. Notes on Virg. Ecl. 5.

Ver. 108. The Greek is η ανεμῳ δεδονημενον ἀνον αχερδον, "or the dry acherdus which is agitated by the wind:" it is uncertain what plant will anſwer to the acherdus of the ancients: Homer in the Odyſſey, B. 14. ver. 10. has fenced the ſylvan lodge of Eumœus with acherdus, Και ῥ' ἑρκιγωσεν ἀχερδῳ,

The wall was ſtone, from neighb'ring quarries borne,
Encircled with a fence of native thorn. *Pope.*

Ver. 111. The moſt powerful of all incantations was to throw the aſhes of the ſacrifice backward into the water. Thus Virgil, "Fer cineres, Amarylli, foras; rivoq; fluenti."

Tranſque caput jace; ne reſpexeris. *Ecl.* 8.

Ver. 124. Theocritus has borrowed this from Homer, Il. B. 18. Thetis, ſpeaking of her ſon, ſays,

Τον μεν εγω θρεψασα, φυτον ως γεννῳ αλωης.

Like ſome fair plant, beneath my careful hand,
He grew, he flouriſh'd, and he grac'd the land.
Pope.

Ver. 140. Virgil ſays of Dares,

——Nec quiſquam ex agmine tanto
Audet adire virum, manibuſq; inducere cæſtus.
Æn. B. 5.

Ver. 144. In the chariot-race, the greateſt care was to be taken to avoid running againſt the goal; Neſtor, in the 23d book of the Iliad, very particularly cautions his ſon in regard to this point; and Horace ſays,

——Metaque ſervidis Evitata rotis. *Ode* 1.

Ver. 154. The Greek is,

Καστορ ιπποδαμας εδαεν, φυγας Αργεος ελθων,
Οπποκα κληρον απαντα και οινοπεδον μεγα Τυδευς
Ναιε, παρ' Ἀδραστοιο λαεων ιππηλατον Αργος.

"These accompliſhments Caſtor, ſkilled in horſemanſhip, taught him, when he came an exile from Argos, at the time that Tydeus ruled over the whole kingdom famed for vineyards, having received Argos from Adraſtus. There is great inconſiſtency in this paſſage, which nobody, that I know of, has obſerved or tried to remedy: we have no account in hiſtory, that Caſtor came a fugitive to Argos, but that Tydeus did, we have indiſputable authority. See Homer's Il. B. 14. ver. 119. Diomed ſays of his father, πατηρ δ' εμος Αργει ναιεθ', κ. τ. λ.

——My ſire: from Calydon expell'd
He paſt to Argos, and in exile dwell'd;
The monarch's daughter there (ſo Jove ordain'd)
He won, and flouriſh'd where Adraſtus reign'd:
There rich in fortune's gifts his acres till'd,
Beheld his vines their liquid harveſt yield,
And numerous flocks that whiten'd all the field.
Pope.

On which Euſtathius obſerves; "This is a very "artful colour: Diomed calls the flight of his "father, for killing one of his brothers, *travelling* "*and dwelling* at Argos, without mentioning the "cauſe or occaſion of his retreat." Might I venture to offer an emendation, I would read, φυγας Αργει ελθων, and then the conſtruction might be, "Caſtor taught him theſe accompliſhments at the time that Tydeus reigned over the kingdom of Argos, whither he had fled an exile, having received the ſovereignty from Adraſtus." Thus the paſſage becomes correſpondent with Homer, with good ſenſe and hiſtory; for Tydeus fled from Calydonia to Argos for manſlaughter, where he married Deipyle, the daughter of Adraſtus, and it ſhould ſeem by this paſſage, afterwards ſucceeded him in the kingdom.

Ver. 164. A coarſe bread like thoſe cakes which the Athenians called πελανοι.

IDYLLIUM XXV.

HERCULES THE LION-SLAYER.

THE ARGUMENT.

HERCULES having occaſion to wait upon Augéas king of Elis, meets with an old herdſman, by whom he is introduced to the king, who, with his ſon Phyleus, had come into the country to take a view of his numerous herds: afterwards Hercules and Phyleus walk together to the city; in the way, the prince admiring the monſtrous lion's ſkin which Hercules wore, takes occaſion to inquire where he had it; this introduces an account how Hercules ſlew the Nemæan lion.

The beginning is wanting.

THE good old herdſman laid his work aſide,
And thus complacent to the chief reply'd;

'Whate'er you aſk, O ſtranger, I'll impart,
'Whate'er you wiſh, and with a cheerful heart;
'For much I venerate the ſon of May,
'Who ſtands rever'd in every public way;

'Thoſe moſt he hates of all the gods on high
'Who the lone traveller's requeſt deny.
'The numerous flocks your eyes behold around,
'With which the vales are ſtor'd, the hills are
'crown'd,
'Augeas owns; o'er various walks they ſpread,
'In different meads, in different paſtures fed;
'Some on the banks of Eliſuntus ſtray,
'Some where divine Alphëus winds his way,
'Some in Bupraſium, where rich wines abound,
'And ſome in this well-cultivated ground.
'And though exceeding many flocks are told,
'Each ſeparate flock enjoys a ſeparate fold.
'Here, though of oxen numerous herds are ſeen,
'Yet ſprings the herbage ever freſh and green
'In the moiſt marſh of Menius: every mead,
'And vale irriguous, where the cattle feed,
'Produce ſweet herbs, embalm'd in dewy tears,
'Whoſe fragrant virtue fattens well the ſteers.
'Behold that ſtall beyond the winding flood,
'Which to the right appears by yonder wood,
'Where the wild olive, and perennial plane,
'Grow, ſpread, and flouriſh, great Apollo's fane,
'To which the hinds, to which the ſhepherds bow,
'And deem him greateſt deity below!
'Next are the ſtalls of ſwains, whoſe labours bring
'Abundant riches to the wealthy king;
'Four times each year the fertile ſoil they plough,
'And gather thrice the harveſts which they ſow;
'The lab'ring hinds, whoſe hands the vineyards
'dreſs,
'Whoſe feet the grapes in purple autumn preſs,
'Know well the vaſt domain Augéas owns,
'Rich fields, whoſe lap the golden ear imbrowns,
'Or ſhaded gardens, far as yonder hills,
'Whoſe brows are water'd by reſplendent rills;
'This ſpacious tract we tend with daily care,
'As fits thoſe ſwains who rural labours ſhare.
'But ſay (and all my ſervice you ſhall claim),
'Say for what cauſe you here a ſtranger came:
'Would you the king or his attendants ſee?
'I can conduct you; only truſt to me.
'For ſuch your form, and ſuch your manly grace,
'You ſeem deriv'd from no ignoble race:
'Sure thus the gods, that boaſt celeſtial birth,
'Appear majeſtic to the ſons of earth.'
He ſpoke: and thus Jove's valiant ſon reply'd:
'My wandering ſteps let ſome kind ſhepherd
'guide
'To king Augéas, whom theſe realms obey;
'To ſee Augéas am I come this way.
'But if fair juſtice the good monarch draws
'To Elis, to adminiſter the laws,
'Conduct me to ſome honourable ſwain,
'Who here preſides among his rural train,
'That I to him my purpoſe may diſcloſe,
'And follow what his prudence ſhall propoſe:
'For heaven's eternal wiſdom has decreed,
'That man of man ſhould ever ſtand in need.'
Thus he: the good old herdſman thus reply'd:
'Sure ſome immortal being is your guide:
'For lo! your buſineſs is already done;
'Laſt night the king, deſcendant of the ſun,
'With royal Phyleus, from the town withdrew,
'His flocks unnumber'd, and his herds to view.
'Thus when great kings their own concerns ex-
'plore,
'By wiſe attention they augment their ſtore.
'But let me quick, for time is on the wing,
'In yonder tent conduct you to the king.'
This ſaid, he walk'd before his royal gueſt,
Much wondering, much revolving in his breaſt,
When at his back the lion's ſpoils he ſaw,
And in his hand the club infuſing awe.
He wiſh'd to aſk the hero whence he ſprung?
The riſing query dy'd upon his tongue:
He fear'd the freedom might be deem'd a fault:
'Tis difficult to know another's thought.
The watchful dogs, as near the ſtalls they went,
Perceiv'd their coming by their tread and ſcent,
With open mouths from every part they run,
And bay'd inceſſant great Amphitryon's ſon;
But round the ſwain they wagg'd their tales and
play'd,
And gently whining ſecret joy betray'd.
Looſe on the ground the ſtones that ready lay
Eager he ſnatch'd, he drives them far away;
With his rough voice he terrified them all,
Though pleas'd to find them guardians of his ſtall.
'Ye gods! (the good old herdſman thus began)
'What uſeful animals are dogs to man?
'Had Heav'n but ſent intelligence to know
'On whom to rage, the friendly or the foe,
'No creature then could challenge honour more,
'But now too furious, and too fierce they roar.'
He ſpoke; the growling maſtiffs ceas'd to bay,
And ſtole obſequious to their ſtalls away.
The ſun now weſtward drove his radiant ſteeds,
And evening mild the noontide heat ſucceeds;
His orb declining from the paſtures calls
Sheep to their folds, and oxen to their ſtalls.
Herd following herd, it joy'd the chief to ſee
Unnumber'd cattle winding o'er the lea.
Like watery clouds ariſing thick in heaven,
By the rough ſouth or Thracian Boreas driven;
So faſt the ſhadowy vapours mount on high,
They cover all the region of the ſky;
Still more and more the gathering tempeſt brings,
And weightier burdens on its weary wings.
Thus thickening march the cattle o'er the plain,
More than the roads or meadows can contain;
The luſty herds inceſſant bellowing keep,
The ſtalls are fill'd with ſteers, the folds with
ſheep.
Though numerous ſlaves ſtand round of every kind,
All have their ſeveral offices aſſign'd.
Some tie the cow's hind legs, to make her ſtand
Still, and obedient to the milker's hand:
Some give to tender calves the ſwelling teat,
Their ſides diſtend with milky beverage ſweet.
Some form fat cheeſes with the houſewife's art,
Some drive the heifers from the bulls apart.
Augéas viſited the ſtalls around,
To ſee what ſtores in herds and flocks abound;
With curious eye he mov'd majeſtic on,
Join'd by Alcides and his royal ſon.
Here Hercules, of great and ſteady ſoul,
Whom mean amazement never could controul,
Admir'd ſuch droves in myriads to behold,
Such ſpreading flocks that never could be told.

Not one king's wealth he thought them, nor of ten,
Though greateſt of the rulers over men:
The ſun his ſire this privilege aſſign'd, [kind;
To be in flocks and herds more rich than all man-
Theſe ſtill increas'd; no plague e'er render'd vain
The gainful labour of the ſhepherd ſwain;
Year following year his induſtry was bleſt, [beſt.
More calves were rear'd, and ſtill the laſt were
No cows e'er caſt their young, or e'er declin'd,
The calves were chiefly of the female kind.
With theſe three hundred bulls, a comely ſight,
Whoſe horns were crooked, and whoſe legs were white;
And twice an hundred of bright gloſſy red,
By whom the buſineſs of increaſe was ſped:
But twelve, the flower of all, exulting run
In the green paſtures, ſacred to the ſun;
The ſtately ſwan was not ſo ſilver white,
And in the meads they took ineffable delight:
Theſe, when gaunt lions from the mountain's brow
Deſcend terrific on the herds below,
Ruſh to the war, the ſavage foe they gore,
Their eyes look death, and horribly they roar.
But moſt majeſtic theſe bold bulls among
Stalk'd Phaëton, the ſturdy and the ſtrong;
So radiant, ſo refulgent from afar,
The ſhepherd-ſwains compar'd him to a ſtar.
When round the ſhoulders of the chief he ſpy'd,
Alarming ſight! the lion's tawny hide,
Full at his flank he aim'd his iron head,
And proudly doom'd the matchleſs hero dead:
But watchful Hercules, devoid of fear,
Seiz'd his left horn, and ſtopp'd his mad career;
Prone to the earth his ſtubborn neck he preſt,
Then writh'd him round, and bruis'd his ample cheſt,
At one bold puſh exerted all his ſtrength,
And high in air upheld him at arm's length.
Through all the wondering train amazement ran,
Silent they gaz'd, and thought him more than man.
Phyleus and Hercules (the day far ſpent)
Left the rich paſtures, and to Elis went:
The footpath firſt, which tow'rd the city lay,
Led from the ſtalls, but narrow was the way:
Through vineyards next it paſt, and gloomy glades,
Hard to diſtinguiſh in the greenwood ſhades.
The devious way as noble Phyleus led,
To his right ſhoulder he inclin'd his head,
And ſlowly marching through the verdant grove,
Thus mild beſpoke the progeny of Jove:

'By your laſt bold atchievement it appears,
'Great chief, your fame long ſince has reach'd my ears,
'For here arriv'd a youthful Argive ſwain,
'From Helicé that borders on the main,
'Who for a truth among th' Epëans told,
'That late he ſaw a Grecian, brave and bold,
'Slay a fell lion, fell to huſbandmen,
'That in the Nemean foreſt made his den:
'Whether the chief from ſacred Argos came,
'Or proud Mycené, or Tirynthé claim
'His birth, I heard not: yet he trac'd his line,
'If true my tale, from Perſeus the divine.
'No Greek but you could ſuch a toil ſuſtain;
'I reaſon from that mighty monſter ſlain.
'A perilous encounter! whoſe rough hide
'Protects your ſhoulders, and adorns your ſide.
'Say then, if you are he, the Grecian bold,
'Of whom the Argive's wond'rous tale was told:
'Say, what dread weapon drunk the monſter's blood,
'And how he wander'd to the Nemean wood,
'For not in Greece ſuch ſavages are found,
'No beaſts thus huge infeſt Achaian ground;
'She breeds the ravenous wolf, the bear, the boar,
'Pernicious monſters! but ſhe breeds no more.
'Some wonder'd at accounts ſo ſtrange and new,
'Thought the Greek boaſtful, and his tale untrue.'

Thus Phyleus ſpoke, and as the path grew wide,
He walk'd attentive by the hero's ſide,
To hear diſtinct the toil-ſuſtaining man,
Who thus, obſequious to the prince, began:

"Son of Augéus, what of me you heard
"Is ſtrictly true, nor has the ſtranger err'd.
"But ſince you wiſh to know, my tongue ſhall tell,
"From whence the monſter came, and how he fell
"Though many Greeks have mention'd this affair
"None can the truth with certainty declare.
"'Tis thought ſome god, by vengeful angerſway'd,
"Sent this for a plague for ſacrifice unpaid,
"To puniſh the Phoroneans: like a flood
"He delug'd the Piſæan fields with blood:
"The Bembinæans, miſerable men,
"Felt his chief rage, the neighbours to his den.
"The hardy taſk, this hideous beaſt to kill,
"Euryſtheus firſt enjoin'd me to fulfil,
"But hop'd me ſlain: on the bold conflict bent,
"Arm'd to the field with bow and darts I went,
"A ſolid club, of rude wild olive made,
"Rough in his rugged rind my right hand ſway'd:
"On Helicon's fair hill the tree I found,
"And with the roots I wrench'd it from the ground.
"When the cloſe covert I approach'd, where lay
"The lordly lion lurking for his prey,
"I bent my bow, firm fix'd the ſtring, and ſtrait
"Notch'd on the nerve the meſſenger of fate:
"Then circumſpect I pry'd with curious eye,
"Firſt, unobſerv'd, the ravenous beaſt to ſpy.
"Now mid-day reign'd; I neither could explore
"His paw's broad print, nor hear his hideous roar;
"Nor labouring ruſtic find, nor ſhepherd ſwain,
"Nor cowherd tending cattle on the plain,
"To point the lion's lair: fear chill'd them all,
"And kept the herds and herdſmen in the ſtall.
"I ſearch'd the groves and ſaw my foe at length;
"Then was the moment to exert my ſtrength.
"Long ere dim evening cloſ'd, he ſought his den,
"Gorg'd with the fleſh of cattle and of men:
"With ſlaughter ſtain'd his ſqualid mane appear'd,
"Stern was his face, his cheſt with blood beſmear'd,
"And with his pliant tongue he lick'd his gory beard.
"Mid ſhady ſhrubs I hide myſelf with care,
"Expecting he might iſſue from his lair,

" Full at his flank I ſent a ſhaft, in vain,
" The harmleſs ſhaft rebounded on the plain.
" Stunn'd at the ſhock, from earth the ſavage
" rais'd
" His tawny head, and all around him gaz'd:
" Wondering from whence the feather'd ven-
" geance flew,
" He gnaſh'd his horrid teeth, tremendous to the
" view.
" Vex'd that the firſt had unavailing fled,
" A ſecond arrow from the nerve I ſped:
" In his broad cheſt, the manſion of his heart,
" I launch'd the ſhaft with ineffectual art;
" His hair, his hide the feather'd death repel;
" Before his feet it innocently fell.
" Enrag'd, once more, I try'd my bow to draw,
" Then firſt his foe the furious monſter ſaw:
" He laſh'd his ſturdy ſides with ſtern delight,
" And riſing in his rage prepar'd for fight.
" With inſtant ire his main erected grew,
" His hair look'd horrid, of a brindled hue;
" Circling his back, he ſeem'd in act to bound,
" And like a bow he bent his body round:
" As when the fig-tree ſkilful wheelers take,
" For rolling chariots rapid wheels to make;
" The ſellies firſt, in fires that gently glow,
" Gradual they heat, and like a circle bow;
" Awhile in curves the pliant timber ſtands,
" Then ſprings at once elaſtic from their hands.
" On me thus from afar, his foe to wound,
" Sprung the fell lion with impetuous bound.
" My left hand held my darts direct before,
" Around my breaſt a thick ſtrong garb I wore;
" My right, club guarded, dealt a deadly blow
" Full on the temples of the ruſhing foe:
" So hard his ſkull, that with the ſturdy ſtroke,
" My knotted club of rough wild-olive broke:
" Yet ere I clos'd, his ſavage fury fled,
" With trembling legs he ſtood, and nodding
" head;
" The forceful onſet had confus'd his brain,
" Dim miſts obſcur'd his eyes, and agonizing pain.
" This I perceiv'd; and now, an eaſy prey,
" I threw my arrows and my bow away,
" And ere the beaſt recover'd of his wound,
" Seiz'd his thick neck, and pinn'd him to the
" ground;
" With all my might on his broad back I preſt,
" Leſt his fell claws ſhould tear my adverſe breaſt;
" Then mounting, cloſe my legs in his I twin'd,
" And with my feet ſecur'd his paws behind;
" My thighs I guarded and with all my ſtrength
" Heav'd him from earth, and held him at arms
" length,
" And ſtrangled thus the felleſt of the fell;
" His mighty ſoul deſcending ſunk to hell.
" The conqueſt gain'd, freſh doubts my mind
" divide,
" How ſhall I ſtrip the monſter's ſhaggy hide?
" Hard taſk! for the tough ſkin repell'd the
" dint
" Of pointed wood, keen ſteel, or ſharpeſt flint:
" Some god inſpir'd me, ſtanding ſtill in pauſe,
" To flay the lion with the lion's claws.
" This I accompliſh'd, and the ſpoil now yields
" A firm ſecurity in fighting fields:
" Thus, Phyleus, was the Nemean monſter ſlain,
" The terror of the foreſt and the plain,
" That flocks and herds devour'd, and many a
" village ſwain."

NOTES ON IDYLLIUM XXV.

Though this noble Idyllium is by far the longeſt of any that Theocritus has left us, containing, excluſive of the beginning which is loſt, no leſs than 281 verſes, yet the commentators, Scaliger, Caſaubon, and D. Heinſius, have not left us one ſingle emendation or note upon it: and therefore I ſhall trouble the reader with but few obſervations: yet theſe gray old critics have been laviſh of their remarks upon the 27th Idyllium, infinitely the moſt obſcene of all the pieces that have been attributed to Theocritus. One remark is very obvious, that the firſt part of this Idyllium, as far as ver. 178 in the tranſlation, is entirely paſtoral and bucolic; containing beautiful deſcriptions of meadows, paſtures, hills, vales, rivers, ſhepherds, herdſmen, and their ſtalls and dogs, flocks and herds innumerable: the ſecond part is an account of a famous exploit performed by Hercules, and therefore the whole muſt ſurely belong to the Arcadian poetry.

Ver. 6. The ancients erected ſtatues to Mercury in the public roads, as guides to travellers, which they called Hermæ; they were of marble and four ſquare; nothing but the head was finiſhed; thus Juvenal, Sat. 8. 53.

——Truncoque ſimillimus Hermæ.
Nullo quippe alio vincis diſcrimine, quam quod
Illi marmoreum caput eſt, tua vivit imago.

Ver 13. A river near Elis.

Ver. 14. A famous river of Arcadia near Elis, which the ancients feigned to have ſunk under ground, and ſo paſſed through the ſea, without mixing its ſtreams with the ſalt waters, till arriving at Sicily, it mingled its current with the fountain Arethuſa near Syracuſe. Thus Virgil, Æn. 3. 694. " Alpheum fama eſt," &c.

Hither 'tis ſaid Alphëus from his ſource
In Elis' realms, directs his watery courſe:
Beneath the main he takes his ſecret way,
And mounts with Arethuſa up to day. *Pitt.*

Ver. 15. A city and country of Achaia near Elis, from Buprafius its founder.

Theſe where fair Elis and Buprafium join.
Pope's Il. B. 2.

Ver. 29
Non liquidi gregibus fontes, non gramina desunt.
Geor. 2. 200.

There for thy flocks fresh fountains never fail,
Undying verdure clothes the grassy vale. *Warton.*

Ver. 27. This tree was sacred to Apollo, and substituted as a temple where presents were offered to him: Virgil, speaking of an olive tree, Æn. 12. 766. says,

Servati ex undis ibi figere dona solebant
Laurenti divo.

The shipwreck'd sailors, on the hallow'd wood,
Hung their devoted vests in honour of the god.
Pitt.

Ver. 33. Virgil says, that the soil for vines,
Quotannis
Terque quaterque solum scindendum. *Geor. B.* 2.

Thrice and four times, the soil, each rolling year,
The ponderous ploughs and heavy drags must bear.
War.

Ver. 46.
Credo equidem, nec vana fides, genus esse deorum.
Virg.

Ver. 55.
Evandrum petimus. *Æn. B.* 8.

Ver. 55. Thus Dido in Virgil,

Jura dabat legesq. viris, operumque laborem
Partibus æquabat justis. *Æn. B.* 1. 511.

Ver. 64.
Dis equidem auspicibus reor, et Junone secundâ,
Huc cursum Iliacas vento tenuisse carinas. *Æn.* 4.

Ver. 81. Here Theocritus imitates Homer; see Odyss. B. 14. 20.

Soon as Ulysses near th' enclosure drew,
With open mouths the furious mastiffs flew. *Pope.*

On which Mr. Pope observes, 'What Homer speaks of Ulysses, Theocritus applies to Hercules; a demonstration that he thought it to be a picture of nature, and therefore inserted it in that heroic Idyllium.'

Ver. 88. Thus also Eumæus did,

With show'rs of stones he drives them far away,
The scattering dogs around at distance bay. *Pope.*

Ver. 100. Thus the herds in Virgil return home in the evening,

Vesper ubi e pastu vitulos ad tecta reducit.
Geor. 4. 433.

When evening homewards drives the calves and sheep. *Warton.*

Ver. 105. This simile finely represents the unnumbered herds of Augéas, and is very like a passage in Homer's Il. B. 4. which I shall beg leave to transcribe.

In one firm orb the bands were rang'd around,
A cloud of heroes blacken'd all the ground.
Thus from a lofty promontory's brow,
A swain surveys the gathering storm below;
Slow from the main the heavy vapours rise,
Spread in dim streams, and sail along the skies,
Till black as night the swelling tempest shows
The clouds condensing as the west-wind blows.
Pope.

Ver. 122. Thus Virgil says in regard to the management of bulls,

Aut intus clausos satura ad præsepia servant.
Geor. 3. 214.

Ver. 126. Thus Virgil,

————Ibat rex obsitus ævo;
Et comitem Æneam juxta natumque tenebat. *B. S.*

Ver. 133. We may here observe, that Theocritus makes the great increase of the herds of Augéas, to arise from the gift and influence of the sun, his father.

Ver. 140. This circumstance must occasion a prodigious propagation: thus exceedingly increased the cattle of Jacob. Genesis xxx. 30—43. "Thy cattle is now increased to a multitude: and the man increased exceedingly, and had much cattle." And chap. xxxi. 38. Jacob says, "These twenty years have I been with thee; thy ewes and thy she-goats have not cast their young."

Ver. 149. The Greek word is *ὄφεις*, and in this place properly signifies *lions*, as it does also in the Iliad, B. 15. ver. 586.; and the bull Phaëton's being alarmed at seeing the skin of the Nemean lion, ver. 158. seems in a very agreeable manner to determine this construction.

Ver. 182. Was once a city of Achaia, three quarters of a league from Corinth, but swallowed up by the sea.

Ver. 186. Thus Virgil,

Tu mactus vastum Nemeâ sub rupe leonem.
Æn. 8. 294.

Beneath thy arm the Nemean monster fell. *Pitt.*

Ver. 188. A city near Argos where Hercules was nursed, whence he is called Tirynthius.

Ver. 190. Was grandfather to Amphitryon, the husband of Alcmena.

Ver. 200. Thus Horace,

Quale portentum neque militaris
Daunia in latis alit esculetis, &c. *B.* 1. *Od.* 22.

Ver. 202.
At rabidæ tigres absunt, et sæva leonum semina.
Virg. Geor. 2. 151.

Ver. 211.
At si tantus amor casus cognoscere nostros.
Æn. B. 2. 10.

Ver. 217. Inhabitants of a city in Argos: Phoroneus, the son of Inachus, succeeded his father, enlarged his territories, and gathered the people, who were before dispersed about the country into one city, which was called from him Phoronium.
Universal Hist. B. 1. *Ch.* 16.

Virgil compares Pyrrhus to a flood. *Æn.* 2. 496.

Not half so fierce the foamy deluge bounds,
And bursts resistless o'er the level'd mounds;
Pours down the vale, and roaring o'er the plain,
Sweeps herds and hinds, and houses to the main.
Pitt.

Ver. 222.

——Ut duros mille labores
Reges ſub Euryſtheo, fatis Junonis iniquæ,
Pertulerit. *Æn. B.* 8. 291.

The thouſand labours of the hero's hands,
Enjoin'd by proud Euryſtheus' ſtern commands.

Ver. 224. Virgil ſays of Hercules:

——Raptit armo manu, nodiſque gravatum
Rubor. *Æn. B.* 8. 220.

Ver. 232. Thus Pandarus in Homer, Il. 4.

——Couching low,
Fits the ſharp arrow to the well-ſtrung bow.
Pope.

Ver. 237. Ovid ſpeaking of the Calydonian boar, ſays,

Diffugiunt populi; nec ſe, niſi mœnibus urbis,
Eſſe putant tutos. *Met. B.* 8. 298.

Ver. 256. Thus Hector is vexed, that his lance did not penetrate the armour of Ajax, Il. B. 14.

Then back the diſappointed Trojan drew,
And curs'd the lance that unavailing flew.
Pope.

Ver. 264. There is an image in Virgil very ſimilar to this; B. 12. v. 6. "Tum demum," &c.

As, pierc'd at diſtance by the hunter's dart,
The Libyan lion rouſes at the ſmart;
And loudly roaring traverſes the plain;
Scourges his ſides; and rears his horrid mane;
Tugs furious at the ſpear; the foe defies,
And grinds his teeth for rage, and to the combat flies. *Pitt.*

Ver. 270. The Greek is, συκεὸς, *caprificus*, a wild fig-tree: the ſame word occurs in Homer, Il. B. 21, 37, which Mr. Pope renders a ſycamore;

As from a ſycamore, his founding ſteel
Lopp'd the green arms, to ſpoke a chariot wheel.

Ver. 278. Thus Cadmus encountering with the dragon;

Inſtantiaque ora retardat
Cuſpide pretentâ. *Ovid. Metam. B.* 3.

Ver. 297. The conſtruction of this paſſage is perplexed, but I hope I have hit upon the right, as the circumſtance of Hercules's heaving the lion from the ground, is exactly the ſame as happened to the bull Phaëton,

And high in air upheld him at arm's length.
Ver. 166.

Indeed the words in the original are very ſimilar.

Ver. 298. Thomſon in his Seaſons, joins this epithet to the hyena: "The keen hyena, felleſt of the fell."

Ver. 306. Aventinus, the ſon of Hercules, is repreſented by Virgil in the ſame dreſs.

Ipſe pedes tegmen torquens immane leonis, &c.
Æn. B. 7. 666.

He ſtalk'd before his hoſt; and, wide diſpread,
A lion's teeth grinn'd horrid o'er his head;
Then fought the palace in this ſtrange attire,
And look'd as ſtern, and dreadful as his ſire.
Pitt.

IDYLLIUM XXVI.

BACCHÆ.

THE ARGUMENT.

This Idyllium contains a ſhort account of the death of Pentheus, king of Thebes; who refuſing to own the divinity of Bacchus, and endeavouring to prohibit his orgies, is torn in pieces by his own mother Agavé, and by his aunts Ino and Autonoë.

Autonoe, and Agavé, whoſe rough cheeks
Reſembled the ripe apple's ruddy ſtreaks,
With frantic Ino had reſolv'd to keep
Three holy revels on the mountain's ſteep:
Green ivy, and ſweet aſphodel they took,
And leafy branches from the ſhagged oak,
With theſe the madding Bacchanalians made
Twelve verdant altars in an opening glade;
Three to fair Semele they rais'd, and nine
To youthful Bacchus, jolly god of wine.
From cheſts they take, and joyful ſhouting, lay
Their offerings on the freſh erected ſpray;
Such rites they practis'd, and ſuch offerings brought,
As pleas'd the god, and what himſelf had taught.
Lodg'd in a lentiſk-tree, conceal'd from ſight,
Aſtoniſh'd Pentheus ſaw the myſtic rite;
Autonoë firſt the latent monarch ſpy'd,
With horrid yellings down the hill ſhe hy'd,
The orgies of the frantic god o'erthrew,
Which no profane, unhallow'd eye muſt view.
Maddening ſhe rag'd, the reſt all rag'd: and dread
Supplied with pinions Pentheus as he fled;
He hop'd by flight their fury to elude:
With robes tuck'd up they eagerly purſu'd:
Then Pentheus thus: "What means this rage? forbear;"
Autonoë thus: 'You'll feel before you hear.'
His mother roar'd, and ſnatch'd his head away,
Loud as the female lion o'er her prey;

Ino, her foot upon his breaſt diſplay'd,
Wrench'd off his ſhoulder, and the ſhoulder blade;
Autonoë ſteep'd her hands in royal gore;
And all the monarch limb from limb they tore:
Thus drench'd in blood the Theban towers they ſought,
And grief, not Pentheus, from the mountain brought.
Be warn'd; let none the jolly god offend,
Leſt ſorer penalties the wretch attend;
Let none behold his rites with eyes impure;
Age is not ſafe, nor blooming youth ſecure.
For me, the works of righteouſneſs I love,
And may I grateful to the righteous prove!
For this is pleaſing to almighty Jove.
The pious bleſſings on their ſons derive;
But can the children of the impious thrive?
Hail Bacchus, whom the ruler of the ſky,
Great Jove, enclos'd, and foſter'd in his thigh!
Hail, with thy ſiſters, Semele renown'd!
Offſpring of Cadmus, with bright praiſes crown'd,
In hymns of heroines: let none deſame
This act: from Bacchus the incentive came;
'Tis not for man the deeds of deities to blame.

NOTES ON IDYLLIUM XXVI.

Mr. Warton obſerves, "That Euripides, in his Bacchantes, has given a very fine deſcription of the Bacchanalian women tearing Pentheus in pieces, for ſecretly inſpecting their myſteries, which is worked up with the greateſt fire, and the trueſt poetical enthuſiaſm. Theocritus has likewiſe nobly deſcribed this event.

Ver. 1. Theſe were all ſiſters and the daughters of Cadmus and Harmonia.

Ver. 5. Anacreon, Epig. 4. deſcribes three Bacchæ, and ivy is one of their oblations to Bacchus:

Firſt Heliconias with a thyrſus paſt,
Xanthippe next, and Glauca was the laſt;
Lo! dancing down the mountains they repair,
And grateful gifts to jolly Bacchus bear;
Wreaths of the ruſtling ivy for his head,
With grapes delicious, and a kid well fed. *F. F.*

Ver. 8. Thus Virgil, Ecl. 5.

En quatuor aras:
Ecce duas tibi, Daphni, quoque altaria Phœbo.

Ver. 15. The ſtory of Pentheus is told by Ovid in the Metam. B. 3. in a manner ſomething different, which I ſhall give in Mr. Addiſon's tranſlation.

Here the raſh Pentheus, with unhallow'd eyes,
The howling dames and myſtic orgies ſpies.
His mother ſternly view'd him where he ſtood,
And kindled into madneſs as ſhe view'd:
Her leafy javelin at her ſon ſhe caſt,
And cries, "The boar that lays our country waſte!
"The boar, my ſiſters! aim the fatal dart,
"And ſtrike the brindled monſter to the heart."
Pentheus aſtoniſh'd heard the diſmal ſound,
And ſees the yelling matrons gathering round,
He ſees, and weeps at his approaching fate,
And begs for mercy, and repents too late.
"Help! help! my aunt Autonoë, he cry'd;
"Remember how your own Actæon dy'd."
Deaf to his cries, the frantic matron crops
One ſtretch'd-out arm, the other Ino lops.
In vain does Pentheus to his mother ſue,
And the raw bleeding ſtumps preſents to view:
His mother howl'd, and heedleſs of his prayer,
Her trembling hand ſhe twiſted in his hair,
"And this, ſhe cry'd, ſhall be Agavé's ſhare;"
When from the neck his ſtruggling head ſhe tore,
And in her hands the ghaſtly viſage bore.
With pleaſure all the hideous trunk ſurvey;
Then pull'd and tore the mangled limbs away,
As ſtarting in the pangs of death it lay.
Soon as the wood its leafy honours caſts,
Blown off and ſcatter'd by autumnal blaſts,
With ſuch a ſudden death lay Pentheus ſlain,
And in a thouſand pieces ſtrew'd the plain.

Ver. 27.

Quid? caput abſciſſum demens cum portat Agave
Nati infelicis, ſibi tum furioſa videtur?
Hor. B. 2. Sat. 3.

Ver. 34. There is great beauty in the original. Εξ ορεος πενθημα, και ὁ Πενθευς, φερουσαι, which, ariſing from the ſimilarity of the words πενθημα and Πενθευς, cannot be kept up in the tranſlation.

Ver 45. Ovid mentions the ſame thing, Met. B. 3. 310.

Imperfectus adhuc infans genetricis ab alvo
Eripitur, patrioque tener (ſi credere dignum)
Inſuitur femori, maternaque tempora complet.

Ver. 46. She was the mother of Bacchus, and ſiſter to Ino, Agavé, and Autonoë.

Ver. 50. There is a ſimilar thought in Bion, Idyl. 6.

Κρινειν δε τρεσκει θειϊα εργα βροτοισι.
It ill becomes frail mortals to define
What's beſt and fitteſt of the works divine. *F. F.*

IDYLLIUM XXVII.,

Is by the commentators generally attributed to Moſchus, and therefore I may well be excuſed from tranſlating it as the work of Theocritus. Were that not the caſe, it is of ſuch a nature that it cannot

be admitted into this volume: Scaliger, Caſaubon, and Dan. Heinſius, have left more notes upon it in proportion than upon any of the other Idylliums. Creech has *done it* into Engliſh; but the ſpirit is evaporated, and nothing remains but a *caput mortuum*. Dryden generally improves and expatiates upon any ſubject that is ludicrous, and therefore the tenor of his tranſlation will be found very different. The laſt five lines in Greek he has expanded into fourteen.

IDYLLIUM XXVIII.

THE DISTAFF.

ARGUMENT.

Theocritus, going to viſit his friend Nicias, the Mileſian phyſician, to whom he has addreſſed the 11th and 13th Idylliums, carries an ivory diſtaff as a preſent for Theugenis, his friend's wife, and accompanies it with theſe verſes, in which he modeſtly commends the matron's induſtry and virtue.

O distaff, friend to warp and woof,
Minerva's gift in man's behoof,
Whom careful houſewives ſtill retain,
And gather to their houſehold's gain;
With me repair, no vulgar prize,
Where the fam'd towers of Nileus riſe,
Where Cytherea's ſwayful power
Is worſhipp'd in the reedy bower.
Thither, would Jove kind breezes ſend,
I ſteer my courſe to meet my friend,
Nicias, the graces' honour'd child,
Adorn'd with ſweet perſuaſion mild;
That I his kindneſs may requite,
May be delighted, and delight.
Thee, ivory diſtaff I provide,
A preſent for his blooming bride.
With her thou wilt ſweet toil partake,
And aid her various veſts to make.
For Theugenis, the ſhepherds ſhear
The ſheep's ſoft fleeces twice a-year.
So dearly induſtry ſhe loves,
And all that wiſdom points approves.
I ne'er deſign'd to bear thee hence
To the dull houſe of indolence:
For in that city thou wert fram'd
Which Archias built, Corinthian fam'd,
Fair Syracuſe, Sicilia's pride,
Where troops of famous men abide.
Dwell thou with him whoſe art can cure
Each dire diſeaſe that men endure;
Thee to Miletus now I give,
Where pleaſure-crown'd Ionians live,
That Theugenis by thee may gain
Fair honour with the female train;
And thou renew within her breaſt
Remembrance of her muſe-charm'd gueſt.
Admiring thee, each maid will call
The favour great, the preſent ſmall;
For love the ſmalleſt gift commends;
All things are valued by our friends.

NOTES ON IDYLLIUM XXVIII.

Ver. 6. That is, Miletus, a famous city of Ionia, lying ſouth of the river Mæander on the ſea-coaſt. It was founded, according to Strabo, by Nilius the ſon of Codrus, king of Athens, when he firſt ſettled in that part of Aſia. See Univerſal Hiſtory. The fine garments made of Mileſian wool were in great eſteem with the Roman ladies: Horace has, "Mileti textam chlamydem," B. 1. Ep. 17. and "Virgil, Mileſia vellera," Geor. 3.

Ver. 25. Syracuſe, once the metropolis of all Sicily, and a moſt flouriſhing commonwealth, was, according to Tully, the greateſt and moſt wealthy of all the cities poſſeſſed by the Greeks. Thucydides equals it to Athens, when that city was at the height of its glory; and Strabo calls it one of the moſt famous cities of the world for its advantageous ſituation, the ſtatelineſs of its buildings, and the immenſe wealth of its inhabitants. It was built by Archias, one of the Heraclidæ, who came from Corinth into Sicily, in the ſecond year of the eleventh Olympiad. *Univ. Hiſt.*

Ver. 38. Ineſt ſua gratia parvis,

IDYLLIUM XXIX.

THE MISTRESS.

THE ARGUMENT.

THIS is an expoſtulation with his miſtreſs for her inconſtancy in love. In the original it is called Παιδικα. I have taken the liberty to make a change in the application of it, which renders it far more obvious and natural.

WINE, lovely maid, and truth agree;
I'm mellow—learn this truth from me;
And hear my ſecret thoughts; "I find,
"You love me not with all your mind."
Your beauty life and vigour gives,
In you my half exiſtence lives;
The other half has ſadly ſped,
The other half, alas! is dead.
Whene'er you ſmile auſpicious love,
I'm happy as the gods above;
Whene'er your frowns diſpleaſure ſhow,
I'm wretched as the fiends below.
Sure 'tis unmeet with cold diſdain
To torture thus a love ſick ſwain:
But could my words your thoughts engage,
Experience is the boaſt of age,
Take counſel, and when crown'd with ſtore
Of bleſſings, then you'll praiſe me more.
"Build in one tree a ſingle neſt,
"Which no curſt reptile can infeſt."
Fond and unfix'd you wander now
From tree to tree, from bough to bough.
If any youth your charms commends
You rank him with your faithful friends,
Your firſt true lovers ſet aſide;
This looks like vanity and pride.
Would you live long and happy too,
Love ſome kind equal that loves you.
This will eſteem and favour gain,
Such love will never give you pain;
This wins all hearts, and will controul
The ſtubborn temper of my ſoul.
If with my counſel you agree,
Give me ſweet kiſſes for my fee.

NOTES ON IDYLLIUM XXIX.

Ver. 1.

In vino veritas.

Ver. 6. Thus Horace,

Et ſerves animæ dimidium meæ.

B. 1. *Ode.* 3.

Ver. 10.

Decorum vitam adepti ſumus. *Ter. Heaut. Act* 4. *Sc.* 3.

Ver. 16.

——Seris venit uſus ab annis:
Conſilium ne ſperne meum. *Ovid. Met. B.* 6.

IDYLLIUM XXX.

THE DEATH OF ADONIS.

THE ARGUMENT.

VENUS orders the Cupids to bring the boar that had ſlain Adonis before her: ſhe ſeverely upbraids him with his crime, but being ſatisfied that it was accidentally done, ſhe orders him to be releaſed. The meaſure of the verſe is Anacreontic.

WHEN Venus ſaw Adonis dead,
And from his cheeks the roſes fled,
His lovely locks diſtain'd with gore:
She bade her Cupids bring the boar,
The boar that had her lover ſlain,
The cauſe of all her grief and pain.
Swift as the pinion'd birds they rove
Through every wood, throughe very grove;

And when the guilty boar they found,
With cords they bound him, doubly-bound;
One with a chain, ſecure and ſtrong,
Haul'd him unwillingly along;
One pinch'd his tail to make him go,
Another beat him with his bow:
The more they urg'd, the more they dragg'd,
The more reluctantly he lagg'd.
Guilt in his conſcious looks appear'd;
He much the angry goddeſs fear'd.
To Venus ſoon the boar they led—
" O cruel, cruel beaſt! ſhe ſaid,
" Durſt thou that thigh with blood diſtain?
" Haſt thou my deareſt lover ſlain?"
Submiſſive he replies; ' I ſwear
' By thee, fair queen; by all that's dear;
' By thy fond lover; by this chain;
' And by this numerous hunter-train;
' I ne'er deſign'd, with impious tooth,
' To wound ſo beautiful a youth:
' No; but with love and frenzy warm,
' (So far has beauty power to charm!)
' I long'd, this crime I'll not deny
' To kiſs that fair, that naked thigh.
' Theſe tuſks then puniſh, if you pleaſe,
' Theſe are offenders, draw out theſe.
' Of no more uſe they now can prove
' To me, the votaries of love!
' My guilty lips, if not content,
' My lips ſhall ſhare the puniſhment,'
Theſe words, ſo movingly expreſt,
Infus'd ſoft pity in her breaſt;
The queen relented at his plea,
And bade her Cupids ſet him free:
But from that day he join'd her train,
Nor to the woods return'd again;
And all thoſe teeth he burnt with fire,
Which glow'd before with keen deſire.

NOTES ON IDYLLIUM XXX.

This little poem is a fine imitation of Anacreon: Theocritus had before, in his nineteenth Idyllium, copied that delicate maſter in every thing but the meaſure of his verſe. Bion has a moſt beautiful Idyllium on the ſame ſubject. Longepierre ſays of this Ode of Theocritus, " Cette petite piéce " m'a toujours paru ſi jolie, que je croy qu'on me " pardonnera eiſément ſi j'en donne icy une tra- " duction."

Ver. 14. Thus Ulyſſes drives the horſes of Rheſus with his bow, Il. B. 10.

Ulyſſes now the ſnowy ſteeds detains,
And leads them, faſten'd by the ſilver reins;
Theſe, with his bow unbent, he laſh'd along.
Pope.

Ver. 23. Thus Sinon in Virgil,

Vos, æterni ignes, &c.

You, the eternal ſplendours, he exclaims,
And you divine inviolable flames,
Ye fatal ſwords, and altars, which I fled,
Ye wreaths which circled this devoted head;
All, all atteſt.
Pitt.

Ver. 45. The Greek is, Εκαιε τως ἐρωτας, *exuſſit amores*, i. e. *amatorios dentes*.

THE

EPIGRAMS OF THEOCRITUS.

I. *Offerings to the Muſes and Apollo.*

This wild thyme, and theſe roſes, moiſt with dews,
Are ſacred to the Heliconian Muſe,
The bay, Apollo, with dark leaves is thine;
Thus art thou honour'd at the Delphic ſhrine;
And there to thee this ſhagg'd he-goat I vow,
That loves to crop the pine-tree's pendant bough.

II. *An Offering to Pan.*

Daphnis the fair, who with bucolic ſong,
And paſtoral pipe could charm the liſtening throng,
To Pan preſents theſe emblems of his art,
A fawn's ſoft ſkin, a crook, and pointed dart,
Three rural pipes, adapted to his lip,
And for his homely food a leathern ſcrip.

III. *To Daphnis Sleeping.*

On earth's ſoft lap, with leafy honours ſpread,
You, Daphnis, lull to reſt your weary head:
While on the hill your ſnares for birds are laid,
Pan hunts your footſteps in the ſecret ſhade,
And rude Priapus, on whoſe temples wave
Gold ivy's leaves, reſolv'd to find your cave:
Ah! fly theſe revellers, at diſtance keep,
And inſtant burſt the ſilken bands of ſleep.

IV. *A Vow to Priapus.*

If by thoſe oaks with roving ſtep you wind,
An image freſh of fig-tree form'd you'll find;
Though cloth'd with bark, three legg'd and void of ears,
Prompt for the pranks of pleaſure he appears
Springs guſh perennial from the rocky hill,
And round the grotto roll their ſparkling rill:
Green myrtles, bays, and cypreſs ſweet abound,
And vines diffuſe their circling arms around.
The vernal ouſels their ſhrill notes prolong,
And modulate the loudly varied ſong;
Sweet nightingales in ſoft-opponent ſtrain,
Perch'd on the ſpray melodiouſly complain.
Repoſe you there, and to Priapus pray,
That Daphne may no more my boſom ſway:
Grant this, a goat ſhall at his altar bleed;
But if I gain the maid, three victims are decreed;
A ſtall-fed lamb, a goat, and heifer fair:
Thus may the god propitious hear my prayer.

V. *The Concert.*

Say wilt thou warble to thy double flute,
And make its melody thy muſic ſuit?
Then, by the nymphs I ſwear, I'll ſnatch the quill,
And on the rural lyre eſſay my ſkill:
The herdſman, Daphnis, on his reed ſhall play,
Whoſe ſprightly numbers make the ſhepherds gay,
Faſt by yon rugged oak our ſtand, we'll keep,
And rob th' Arcadian deity of ſleep.

VI. *Thyrſis has loſt his Kid.*

What profit gain you, wretched Thyrſis, ſay,
Thus, thus to weep and languiſh life away!
Loſt is your favourite kid; the wolf has tore
His tender limbs, and feaſted on his gore;
Your very dogs exclaim, and cry, "What gain,
'When neither bones, nor aſhes now remain!"

VII. *On the Statue of Æſculapius.*

At fam'd Miletus, Pæon's ſon the wiſe
Arriv'd, with learned Nicias to adviſe,
Who to his ſhrine with daily offerings came,
And rais'd this cedar ſtatue to his fame;
The cedar ſtatue by Eëtion wrought,
Illuſtrious artiſt! for large ſums he bought;
The work is finiſh'd to the owner's will,
For here the ſculptor laviſh'd all his ſkill.

VIII. *Orthon's Epitaph.*

To every toping traveller that lives,
Orthon of Syracuſe this warning gives,
With wine o'erheated, and depriv'd of light,
Forbear to travel on a winter's night;
This was my fate; and for my native land
I now lie buried on a foreign ſtrand.

IX. *On the Fate of Cleonicus.*

O stranger! ſpare thy life ſo ſhort and frail,
Nor, but when times are ſeaſonable, ſail.
Poor Cleonicus, innocent of guile,
From Syria haſten'd to rich Thaſos' iſle;
The Pleiads ſunk as he approach'd the ſhore;
With them he ſunk, to riſe, alas! no more.

X. *On a Monument Erected to the Muſes.*

Here Xenocles hath rais'd this marble ſhrine,
Skill'd in ſweet muſic to the tuneful nine:
He from his art acquires immortal fame,
And grateful owns the fountain whence it came.

XI. *Epitaph on Euſthenes the Phyſiognomiſt.*

To Euſthenes, the firſt in wiſdom's liſt,
Philoſopher and phyſiognomiſt,
This tomb is rais'd: he from the eye could ſcan
The cover'd thought, and read the very man.
By ſtrangers was his decent bier adorn'd,
By ſtrangers honour'd, and by poets mourn'd:
Whate'er the ſophiſt merited he gain'd,
And dead, a grave in foreign realms obtain'd.

XII. *On a Tripod dedicated to Bacchus, by Demoteles.*

Demoteles, who near this ſacred ſhrine
This tripod plac'd, with thee, O god of wine!
Whom blitheſt of the deities we call,
In all things prov'd, was temperate in all;
In manly dance the victory he gain'd,
And fair the tenor of his life maintain'd.

XIII. *On the Image of the Heavenly Venus.*

Here Venus, not the vulgar, you ſurvey;
Style her celeſtial, and your offering pay:
This in the houſe of Amphicles was plac'd,
Fair preſent of Chryſogona the chaſte:
With him a ſweet and ſocial life ſhe led,
And many children bore, and many bred.
Favour'd by thee, O venerable fair,
Each year improv'd upon the happy pair;
For long as men the deities adore,
With large abundance heav'n augments their ſtore.

XIV. *Epitaph on Eurymedon.*

Dead in thy prime, this tomb contains,
Eurymedon, thy dear remains:
Thou, now with pious men enſhrin'd,
Haſt left an infant here behind;
The ſtate due care of him will take,
And love him for his father's ſake.

XV. *On the ſame.*

O traveller, I wiſh to know
If you an equal praiſe beſtow
On men of honourable fame,
Or to poltroons you give the ſame:
Then "Fair befal this tomb," you'll cry,
As oft you paſs attentive by,
"Eurymedon, alas! is dead;
"Light lie the ſtone upon his head."

XVI. *On Anacreon's Statue.*

With curious eye, O traveller, ſurvey
This ſtatue's form, and home-returning ſay,

" At Teos late with infinite regard,
" I ſaw the image of the ſweeteſt bard,
" Anacreon; who, if ancient poets claim
" The meed of praiſe, deſerves immortal fame;"
Add this; " He lov'd (for this with truth you can)
" The fair, the gay, the young," you'll paint the very man.

XVII. *On Epicharmus.*

The ſtyle is Doric; Epicharmus he,
The poet who invented comedy:
This ſtatue, Bacchus, ſacred ſtands to you;
Accept a brazen image for the true.
The finiſh'd form at Syracuſe is plac'd,
And as is meet, with laſting honours grac'd.
Far fam'd for wiſdom, the preceptive bard
Taught thoſe who gave the merited reward;
Much praiſe he gains who form'd ingenuous youth,
And ſhow'd the paths to virtue, and to truth.

XVIII. *Epitaph on Clita, the Nurſe of Medeus.*

Medeus rais'd, inſpir'd by grateful pride,
This tomb to Clita by the high way ſide:
We ſtill commend her for her foſtering care;
And praiſe the matron when we praiſe the heir.

XIX. *On Archilochus.*

Archilocuus, that ancient bard, behold!
Arm'd with his own iambics keen and bold;
Whoſe living fame with rapid courſe has run
Forth from the riſing to the ſetting ſun.
The muſes much their darling ſon approv'd,
The muſes much, and much Apollo lov'd:
So terſe his ſtyle, ſo regular his fire,
Compoſing verſe to ſuit his ſounding lyre.

XX. *On the Statue of Piſander, who wrote a Poem ſtyled, The Labours of Hercules.*

This ſtatue fam'd Piſander's worth rewards,
Born at Camirus, firſt of famous bards
Who ſung of Hercules, the ſon of Jove,
How with the lion he victorious ſtrove,
And all the labours of this hero bold
The faithful bard in lofty numbers told.
The ſtate regardful of the poet's name,
Hath rais'd this brazen ſtatue to his fame.

XXI. *Epitaph on the Poet Hipponax.*

Old Hipponax the ſatiriſt lies here;
If thou'rt a worthleſs wretch, approach not near:
But if well-bred, and from all evil pure,
Repoſe with confidence, and ſleep ſecure.

XXII. *Theocritus on his own Works.*

A syracusian born, no right I claim
To Chios, and Theocritus my name:
Praxagoras' and fam'd Philina's ſon;
All praiſe I ſcorn'd but what my numbers won.

NOTES ON THE EPIGRAMS.

Theſe epigrams were never tranſlated into Engliſh before. The ſix that firſt preſent themſelves, are a true model of the ruſtic ſweetneſs, and delicate ſimplicity of the ancient Greek epigram.

I. Ver. 2. That the roſe was conſecrated to the Muſes, appears from Anacreon, Ode 53. χαριεν φυτον τε Μουσων.

In fabled ſong, and tuneful lays,
Their favourite roſe the Muſes praiſe.

And Sappho, Frag. 2.

For thy rude hand ne'er pluck'd the lovely roſe,
That on the mountain of Pieria blows. *F. F.*

Ver. 5. Virgil and Horace have ſomething ſimilar.

————Illius aram
Sæpe tener noſtris ab ovilibus imbuit agnus.
Ecl. 1.
Voveram album Libero caprum. *B.* 3. *Ode* 8.

II. Ver. 1. This Daphnis was probably the ſon of Mercury, the fame whoſe ſtory is ſung in the firſt Idyllium. Diodorus Siculus ſuppoſes him to be the author of bucolic poetry; and, agreeable to this, Theon, an old Scholiaſt on Theocritus, in his note on the firſt Idyllium, ver. 141. mentioning Daphnis, ſays, Καθο πρωτως ευρατο Βυκολικην, Inaſmuch as he was the inventer of bucolics: however that be, probably this Daphnis was the firſt ſubject of bucolic ſongs.

III. Ver. 6. The Greek is, κεχοιντα κισσον. This is probably the *pallens*, or *alba hederas* of Virgil, on which Dr. Martyn obſerves (ſee his notes on Ecl. 7. ver. 38.), it is moſt likely that ſort of ivy with yellow berries, which was uſed in the garlands with which poets uſed to be crowned, and Ecl. 8. ver. 13. The poetical ivy is that ſort with golden berries, or *hedera baccis aureis*.

IV. Ver. 2. The ancients often hewed the image of Priapus out of a fig-tree.

Olim truncus eram ficulnus, &c. *Hor. Sat.* 8. *B.* 1.

Ver. 14. I have taken the liberty to addreſs this Epigram to Daphne, inſtead of Daphnis, *puellæ et non paſtori*.

Ver. 15. Here I follow the ingenious interpretation of Dan. Heinſius.

V. Ver. 8. In the firſt Idyllium, the ſhepherds are afraid of diſturbing the Arcadian god's repoſe. See ver. 20.

VII. Ver. 1. Æſculapius, the ſon of Apollo, was called Pæon or Παιων, becauſe of his art in aſſuaging and curing diſtaſes.

VIII. Ver. 5. I here follow the ingenious emendation of Heinſius.

IX. In all the editions of Theocritus in the original, there is only the firſt diſtich of this Epi-

gram, but in Pierſon's Veriſimilia, I find two more added from a MS. in the Palatine library, which was collated by D. Ruhnkenius; as I have tranſlated, I likewiſe take the liberty to tranſcribe the whole.

Ανθρωπε ζωης περιφειδεο, μηδε παρ ωραν
Ναυτιλος ισθι, ως ε πολυς ανθρι βιος.
Δειλαιε Κλεονικη, συ δ' εις λιπαρην Θασον ελθειν
Ηπειγεν κοιλης ημπαρος εκ Συριης.
Εμπορος ω Κλεονικε, δυσιν δ' απο πλειαδος αυτεν,
Ποντοπορων αυτην πλειαδι συνκατεδυς.

Ver. 4. An iſland near Thrace, formerly famous for gold, marble, and wine.

XI. Heinſius has rendered this epigram intelligible, whoſe emendations I follow.

XII. Ver. 6. The Greek is,

Και το καλον, και το προσηκων οφων.

Thus Horace,

Quid verum, atque decens, curo et rogo, et omnis in hoc ſum. *B.* 1. *Ep.* 1. 11.

XIII. Ver. 1. Plato *in Convivio* ſays, there were two Venuſes, one was the daughter of Cœlus, which we call ουρανιαν or celeſtial: the other the daughter of Jupiter and Dione, which we call παν-δημον or popular.

XVII. Ver. 1. Was brought to Sicily when an infant from the iſland of Cos, and is therefore called a Sicilian; he was the diſciple of Pythagoras, and ſaid to be the firſt inventor of comedy. Plautus imitated him, according to Horace.

Plautus ad exemplar Siculi properare Epicharmi. *B.* 2. *Ep.* 1. 58.

Even Plato himſelf borrowed many things from him. He preſented fifty-five, or as ſome ſay, thirty-five plays, which are all loſt. He lived, according to Lucian, 97 years. Laertius has preſerved ſome verſes which were inſcribed on one of his ſtatues, which, as they are a teſtimony of the high eſteem antiquity had for his worth, I ſhall tranſcribe.

Ει τι παραλλασσει φαεθων μεγας αλιος αξων,
Και ποντος ποταμων μειζον εχει δυναμιν
Φαμι τοσσυτον εγω σοφια προεχειν Επιχαρμον,
Ον πατρις εσφανως'. αδε Συρακοσιων.

As the bright ſun outſhines the ſtarry train,
And ſtreams confeſs the empire of the main;
We firſt in wiſdom Epicharmus own,
On whom fam'd Syracuſe beſtow'd the crown.

Ver. 9. The Greek is,

Πολλα γαρ ποτ' ην ζωαν τοις παισιν εντε χρησιμα·
Μεγαλα χαρις αυτω.

Mr. Upton, in his obſervations on Shakſpeare, inſtead of παισιν "children," reads πασιν "all mankind; which is plauſible, for the philoſophic comedian ſpoke what was uſeful for all mankind to know, and fitting for common life; and then the tranſlation may run,

Much praiſe, much favour he will ever find,
Whoſe uſeful leſſons mended all mankind.

XIX. Ver. 1. He was a Greek poet, born at Paros, in the third Olympiad. His invectives againſt Lycambes (who after having promiſed his daughter in marrirge, gave her to another) were ſo keen and ſevere, that they made him hang himſelf. He is ſaid to have been the inventor of iambic verſe.

Thus Horace,

Archilochum proprio rabies armavit iambo.

XX. Piſander was a native of Camirus, a city of Rhodes; he is mentioned by Strabo and Macrobius, as the author of a poem ſtyled Heraclea, which comprehended in two books all the exploits of Hercules: he is ſaid to have been the firſt that repreſented Hercules with a club.

Univ. Hiſt. B. 2. *Ch.* 1.

XXI. Hipponax was a witty poet of Epheſus, but ſo deformed, that the painters drew hideous pictures of him; particularly Bupalus and Anthermus, two brothers, eminent ſtatuaries, made his image ſo ridiculous, that in reſentment he dipped his pen in gall, and wrote ſuch bitter iambics againſt them, that, it is ſaid, they diſpatched themſelves: at leaſt they left Epheſus upon the occaſion. Horace calls Hipponax, *Acer hoſtis Bupalo*; *Epod.* 6.

Alcæus on Hipponax. *Anthol. B.* 3. *Ch.* 25.

No vines the tomb of this old bard adorn
With lovely cluſters, but the pointed thorn,
And ſpiry brambles that unſeen will tear
The eyes of paſſengers that walk too near:
Let travellers that ſafely paſs requeſt,
That ſtill the bones of Hipponax may reſt.

Leonidas on the ſame. *Ibid.*

Softly this tomb approach, a cautious gueſt,
Leſt you ſhould rouſe the hornet in his neſt:
Here ſleeps at length old Hipponax's ire,
Who bark'd ſarcaſtic at his harmleſs ſire.
Beware; ſtay not on this unhallow'd ground;
His fiery ſatires ev'n in death will wound.

Another on the ſame. *Ibid.*

Fly, ſtranger, nor your weary limbs relax
Near the tempeſtuous tomb of Hipponax,
Whoſe very duſt, depoſited below,
Stings with iambics Bupalus his foe.
Rouſe not the ſleeping hornet in his cell:
He loads his limping lines with ſatires fell;
His anger is not pacified in hell.

THE COMBAT BETWEEN POLLUX AND AMYCUS*.

FROM APOLLONIUS, BOOK II.

Fast by the beach ox ſtalls and tents were ſpread
By bold Bebrycians, Amycus their head,
Whom, on the precincts of the winding ſhore.
A fair Bithynian Hamadryad bore
To genial Neptune, in baſe commerce join'd,
Proud Amycus, moſt barbarous of mankind,
Who made this ſtern, inequitable law,
That from his realm no ſtranger ſhould withdraw,
Till firſt with him compell'd in fight to wield
The dreadful gauntlet in the liſted field:
Unnumber'd gueſts his matchleſs proweſs ſlew:
Stern he accoſts ſwift Argos' valiant crew,
Curious the reaſon of their courſe to ſcan,
Who, whence they were: and ſcornful thus began:
'Learn what 'tis meet, ye knew, ye vagrant hoſt,
'None that e'er touches on Bebrycia's coaſt,
'Is hence by law permitted to depart,
'Till match'd with me he prove the boxer's art.
'Chooſe then a chief that can the gauntlet wield,
'And let him try the fortune of the field:
'If thus my edicts ye deſpiſe, and me,
'Yield to the laſt immutable decree.'
Thus ſpoke the chief with inſolent diſdain,
And rous'd reſentment in the martial train:
But moſt his words did Pollux' rage provoke,
Who thus, a champion for his fellows, ſpoke:
"Threat not, whoe'er thou art, the bloody fray;
"Lo, we obſequious thy decrees obey!
"Unforc'd this inſtant to the liſts I go,
"Thy rival I, thy voluntary foe."
Stung to the quick with this ſevere reply,
On him he turn'd his fury-flaming eye:
As the grim lion pierc'd by ſome keen wound,
Whom hunters on the mountain top ſurround;
Though cloſe hemm'd in, his glaring eye-balls glance
On him alone who threw the pointed lance.
Then Pollux doff'd his mantle, richly wrought,
Late from the Lemnian territory brought,
Which ſome fair nymph who had her flame avow'd,
The pledge of hoſpitable love beſtow'd:
His double cloak, with claſps of ſable hue,
Bebrycia's ruler on the greenſward threw,
And his rough ſheephook of wild olive made,
Which lately flouriſh'd in the woodland ſhade.
Then fought the heroes for a place at hand
Commodious for the fight, and on the ſtrand
They plac'd their friends, who ſaw, with wondering eyes,
The chiefs how different, both in make and ſize;
For Amycus like fell Typhœus ſtood
Enormous, or that miſcreated brood
Of mighty monſters, which the heaving earth,
Incens'd at Jove, brought forth, a formidable birth.
But Pollux ſhone like that mild ſtar on high
Whoſe riſing ray illumes the evening ſky.
Down ſpread his cheek, ripe manhood's early ſign,
And in his eye fair beam'd the glance divine:
Such ſeem'd Jove's valiant ſon, ſupremely bright,
And equal to the lion in his might.
His arms he pois'd, advancing in the ring,
To try if ſtill they kept their priſtine ſpring,
If pliant ſtill and vigorous as before,
Accuſtom'd to hard toil, the labour of the oar.
But Amycus aloof and ſilent ſtood,
Glar'd on his foe, and ſeem'd athirſt for blood:
With that his ſquire Lycoreus in full view
Two pair of gauntlets in the circle threw,
Of barbarous faſhion, harden'd, rough, and dried;
Then thus the chief, with inſolence and pride:
'Lo, two ſtout pair, the choice I give to thee;
'Accuſe not fate, the reſt belong to me.
'Securely bind them, and hereafter tell
'Thy friends how much thy proweſs I excel:
'Whether to make the ceſtus firm and good,
'Or ſtain the cheeks of enemies with blood.'
Thus ſpoke he boaſtful; Pollux nought reply'd,
But ſmiling choſe the pair which lay beſide.
Caſtor, his brother both by blood and fame,
And Talaüs, the ſon of Bias, came;
Firm round his arms the gloves of death they bind,
And animate the vigour of his mind.
To Amycus, Aratus, and his friend,
Bold Ornytus, their kind aſſiſtance lend:
Alas! they little knew, this conflict o'er,
Thoſe gauntlets never ſhould be buckled more.
Accoutred thus each ardent hero ſtands,
And raiſes high in air his iron hands;
With claſhing gauntlets fiercely now they cloſe,
And mutual meditate death-dealing blows.
Firſt Amycus a furious onſet gave,
Like the rude ſhock of an impetuous wave,
That, heap'd on high by driving wind and tide,
Burſts thundering on ſome gallant veſſel's ſide;
The wary pilot, by ſuperior ſkill,
Foreſees the ſtorm, and ſhuns the menac'd ill.
Thus threatening Amycus on Pollux preſt,
Nor ſuffer'd his antagoniſt to reſt:
But Jove's brave ſon obſerves each coming blow,
Quick leaps aſide, and diſappoints the foe;
And where a weak unguarded part he ſpies,
There all the thunder of his arms he plies.
As buſy ſhipwrights ſtoutly labouring ſtrive
Through ſturdy planks the piercing ſpikes to drive,
From head to ſtern repeated blows go round,
And ceaſeleſs hammers ſend a various ſound.

* *See this combat deſcribed by Theocritus, page* 137. &c.

Thus from their batter'd cheeks loud echoes ſprung,
Their daſh'd teeth crackled, and their jaw-bones rung:
Nor ceas'd they from the ſtrokes that threaten'd death,
Till faint with toil they fairly gaſp'd for breath:
Then firſt awhile remit the bloody fray,
And panting wipe the copious ſweat away.
But adverſe ſoon they meet, with rage they glow,
Fierce as two bulls fight for ſome favourite cow.
Then Amycus, collecting all his might,
Roſe to the ſtroke, reſolv'd his foe to ſmite,
And by one blow the dubious war conclude;
His wary foe, the ruin to elude,
Bent back his head; defeated of its aim
The blow impetuous on his ſhoulder came.
Then Pollux with firm ſtep approaching near,
Vindictive ſtruck his adverſary's ear;
Th' interior bones his ponderous gauntlet broke;
Flat fell the chief beneath his dreadful ſtroke;
The Grecians ſhouted, with wild rapture fir'd,
And, deeply groaning, Amycus expir'd.

NOTES ON THE COMBAT BETWEEN POLLUX AND AMYCUS.

Ver. 33. Mr. Paul Whitehead has written a ſpirited poem, called the Gymnaſiad, and beſides ſeveral other things, ſeems to have borrowed this ſimile;

Like the young lion wounded by a dart,
While fury kindles at the galling ſmart;
The hero rouſes with redoubled rage,
Flies on his foe, and foams upon the ſtage. *B.* 3.

Ver. 112. Mr. Whitehead has improved upon his original;

As when two monarchs of the brindled breed
Diſpute the proud dominion of the mead,
They fight, they foam, then, wearied in the fray,
Aloof retreat, and lowering ſtand at bay.

THE WORKS

OF

ANACREON.

TRANSLATED FROM THE GREEK.

BY

FRANCIS FAWKES, M. A.

INTRODUCTION.

It may be neceſſary to inform the reader that many of the following odes were tranſlated ſeveral years ago, at College, for the author's amuſement, without any intention of making them public. But being encouraged by the partiality of friends, and allowed to inſert thoſe odes * of Anacreon, which are elegantly tranſlated by the late Dr. Broome, and a few others †; he determined to give an entire verſion of the Teian bard, as no one of this nation had hitherto done it. Mr. John Addiſon's tranſlation is incomplete, and, excepting a few odes, harſh and crude, and far from being well done. What the late ingenious and learned Mr. Weſt ſays of Cowley's Pindar, may be applied to his odes of Anacreon: "That they have not the "leaſt reſemblance to the manner of the author "whom they pretend to imitate, or, if any, it is "ſuch a reſemblance only as is expreſſed by the "Italian word *caricatura*, a monſtrous and diſtorted likeneſs."

It may be thought a bold undertaking to attempt Sappho, after the high encomiums which Mr. Addiſon, in the Spectator, has paſſed on Philips's tranſlation of her two odes. But, with deference to the authority of ſo good a judge, beſides what the reader will find obſerved with regard to Mr. Philips's miſtaking the true ſenſe of his author, the three firſt lines are amazingly rough and awkward.

Bleſt as th' immortal gods is *he*,
The youth who fondly ſits by thee,
And hears and ſees thee *all the while*, &c.

It is ſurpriſing, that ſuch unpoetical expreſſions, as thoſe here marked ſhould eſcape the cenſure of the accurate Mr. Addiſon, unleſs we ſuſpect that the partiality of the friend biaſſed the judgment of the critic.

It is equally ſurpriſing, that the beautiful Idylliums of Bion and Moſchus, which charm every reader in the original, ſhould ſcarce ever have been attempted in Engliſh. The tranſlator, therefore, may juſtly claim ſome merit in endeavouring to make theſe elegant Greek writers ſpeak his native language.

He cannot conclude this ſhort introduction, without returning his thanks to an ingenious and worthy friend (whoſe name would do honour to the title page) for his reviſal and correction of this little work, and for thoſe excellent tranſlations of the Idylliums of Moſchus, marked D.

* *Dr. Broomes's Odes were printed in the Gentleman's Magazine, under the name of Charles Cheſter, M. D.*

† *Viz. Odes* 2, 11, 45, 49, and 51.

THE LIFE OF ANACREON.

Anacreon was born at Teos, a ſea-port town of Ionia. Who were his parents is uncertain, though it is conjectured, from good authority, that his family was noble. The time of his birth, according to Barnes, was in the ſecond year of the 55th Olympiad, about the beginning of the reign of Cyrus, in the year of Rome 194, and the 554th before Chriſt. According to this account, he was about eighteen years of age, when Harpagus, the general of Cyrus, came with an army againſt the confederate cities of the Ionians and Æolians. The Teians, finding themſelves too weak to withſtand the enemy, rather choſe to abandon their country, than their liberty, and therefore tranſported themſelves and their families to the city of Abdera in Thrace; where they had not been long ſettled, before the Thracians, jealous of their new neighbours, endeavoured to give them diſturbance. It is probable, that in theſe conflicts, Anacreon loſt thoſe friends whom he laments in ſome of his epigrams.

We cannot expect many particulars of the life of this poet, becauſe he ſeems to have been a profeſſed deſpiſer of buſineſs, and the cares of the

world. It is certain, that wine, love, and the muſe, had the diſpoſal of all his hours.

From Abdera he went to the court of Polycrates, tyrant of Samos, at that time one of the moſt gay and flouriſhing in Aſia. A perſon of Anacreon's character muſt undoubtedly meet with a welcome reception, wherever wit and pleaſure were eſteemed: Accordingly we find, that he was ſo highly honoured by Polycrates, as not only to be admitted into a ſhare of his friendſhip, but even into his moſt ſecret counſels. How long he continued at Samos is uncertain; but it is probable, that the friendſhip of Polycrates, and the ſplendour of his court, had influence enough to detain him there the greateſt part of his reign. This opinion alſo ſeems confirmed by Herodotus, who aſſures us, that Anacreon was with that prince in his chamber, when he received a meſſage from Orœtes, governor of Sardis, by whoſe treachery Polycrates was ſoon after betrayed, and inhumanly crucified *.

A little before this remarkable incident, Anacreon left Samos, and removed to Athens, having been invited thither by Hipparchus the eldeſt ſon of Piſiſtrates, one of the moſt virtuous and learned princes of his time; who, as Plato aſſures us, ſent the moſt obliging letters, with a veſſel of fifty oars, to convey him over the Ægean. The ſame philoſopher who relates this, does Anacreon the honour to ſtyle him "the wiſe Anacreon;" which is the foundation of Monſieur Fontenelle's ingenious dialogue, where he introduces Anacreon and Ariſtotle diſputing the prize of wiſdom, and gives the advantage to our poet.

Hipparchus being aſſaſſinated, he returned to his native country Teos; for, after the death of Cyrus, the Teians had been ſuffered to reinhabit their country unmoleſted. Here he remained, as Suidas informs us, till another commotion in the ſtate obliged him once more to fly to Abdera; where he died in the 85th year of his age.

The manner of his death was very extraordinary; for we are told, that he was choked with a grape-ſtone, as he was regaling on ſome new wine: which has afforded Mr. Cowley a ſubject for a fine elegy, the concluſion of which is very happy:

It grieves me, when I ſee what fate
Does on the beſt of mankind wait,
Poets or lovers let them be;
'Tis neither love nor poeſy
Can arm againſt death's ſmalleſt dart
The poet's head, or lover's heart.
But when their life in its decline
Touches th' inevitable line,
All the world's mortal to them then,
And wine is aconite to men.
Nay, in death's hand the grape-ſtone proves
As ſtrong as thunder is in Jove's.

A ſmall part only of his works has eſcaped the malice of time; for, beſides the odes and epigrams that ſtill remain, he compoſed elegies hymns, and iambics. Some writers honour him with the invention of the lyre. How much he was the delight both of the ancients and moderns, appears ſufficiently from thoſe extravagant praiſes which they have beſtowed on him. Horace mentions him with honour:

"Nec, ſi quid olim luſit Anacreon,
"Delevit ætas———— *Lib. 4. Ode 9.*

———blithe Anacreon's ſportive lay
Still lives, in ſpite of time's deſtructive ſway.
Duncombe.

Anacreon had a delicate genius, and there are inexpreſſible charms and graces in his poetry. "His chief excellence, ſays Madam Dacier, conſiſts in imitating nature, and following reaſon: "He preſents no images to the mind but what are "noble and natural." "The odes of Anacreon," ſays Rapin, "are flowers, beauties, and perpetual "graces: it is familiar to him to write what is "natural: He has an air ſo delicate, eaſy, and "graceful, that among all the ancients, there is "nothing comparable to the method he took, nor "to that kind of writing he followed. He flows "ſoft and eaſy, every where diffuſing the joy and "indolence of his mind through all his compoſi-"tions, and turning his harp to the pleaſant and "happy temper of his ſoul."

But no one has given us a juſter character of his writings, than that little god who inſpired them, as Mr. Cowley has made him ſpeak:

All thy verſe is ſofter far
Than the downy feathers are
Of my wings, or of my arrows,
Of my mother's doves, or ſparrows;
Graceful, cleanly, ſmooth, and round,
All with Venus' girdle bound.

I cannot better conclude this account of Anacreon, than with the following epitaph, as it is tranſlated in the Spectator, No. 551.

On Anacreon. By Antipater.

This tomb be thine, Anacreon; all around
Let ivy wreath, let flow'rets deck the ground,
And from its earth, enrich'd by ſuch a prize,
Let wells of milk, and ſtreams of wine ariſe:
So will thine aſhes yet a pleaſure know,
If any pleaſure reach the ſhades below.

To which let me add a fine ſtanza from Dr. Akenſide's Ode on Lyric Poetry, in honour of our poet:

I ſee Anacreon ſmile and ſing:
His ſilver treſſes breathe perfume;
His cheek diſplays a ſecond ſpring
Of roſes, taught by wine to bloom.
Away, deceitful cares, away!
And let me liſten to his lay,
While flowery dreams my ſoul employ;
While, turtle-wing'd the laughing hours
Lead hand in hand the feſtal powers,
Lead youth, and love, and harmleſs joy.

* *See Univerſal Hiſtory, vol. 8. 8vo. page 271.*

ODES OF ANACREON.

With roſes crown'd, on flowers ſupinely laid,
Anacreon blithe the ſprightly lyre eſſay'd,
In light fantaſtic meaſures beat the ground,
Or dealt the mirth-inſpiring juice around:
No care, no thought, the tuneful Teian knew,
But mark'd with bliſs each moment as it flew.

PROGRESS OF POETRY. *By a Lady.*

ODE I.

ON HIS LYRE.

WAKE, O lyre, thy ſilent ſtrings,
" Celebrate the brother-kings,
" Sons of Atreus, fam'd afar,
" Cadmus and the Theban war "---
Rapt I ſtrike the vocal ſhell——
Hark---the trembling chords rebel;
All averſe to arms they prove,
Warbling only ſtrains of love.
Late I ſtrung anew my lyre——
" Heavenly muſe my breaſt inſpire;
" While the ſwelling notes reſound
" Hercules for toils renown'd."
Still the chords rebellious prove,
Anſwering only ſtrains of love!
Farewell heroes, farewell kings!
Love alone ſhall tune my ſtrings.

ODE II.

By another Hand.

ON WOMEN.

NATURE gives all creatures arms,
Faithful guards from hoſtile harms;
Jaws, the lion to defend,
Horrid jaws that wide diſtend!
Horns, the bull, reſiſtleſs force!
Solid hoofs, the vig'rous horſe;
Nimble feet, the fearful hare;
Wings to fly, the birds of air;
Fins to ſwim, the wat'ry kind;
Man, the bold undaunted mind.
Nature laviſhing her ſtore,
What for woman had ſhe more?
Helpleſs woman! to be fair;
Beauty fell to woman's ſhare.
She that's beauteous needs not fear
Sword, or flame, or ſhield, or ſpear:
Beauty ſtronger aid affords,
Stronger far than flames or ſwords,
Stronger far than ſwords or ſhields;
Man himſelf to beauty yields.

ODE III.

CUPID BENIGHTED.

THE ſable night had ſpread around
This nether world a gloom profound;
No ſilver moon nor ſtars appear,
And ſtrong Beötes urg'd the Bear:
The race of man, with toils oppreſt
Enjoy the balmy ſweets of reſt;
When from the heav'nly court of Jove
Deſcended ſwift the god of love,
(Ah me! I tremble to relate)
And loudly thunder'd at my gate.
" Who's there?" I cry'd, " Who breaks my door
" At this unſeaſonable hour?"
The god, with well-diſſembled ſighs,
And moan inſidious thus replies:
" Pray ope the door, dear Sir——'tis I,
" A harmleſs miſerable boy;
" Benumb'd with cold and rain I ſtray
" A long, uncomfortable way——
" The winds with bluſt'ring horror roar——
" 'Tis diſmal dark---Pray ope the door."
Quite unſuſpicious of a foe
I liſten'd to the tale of woe,
Compaſſion touch'd my breaſt, and ſtrait
I ſtruck a light, unbarr'd the gate;
When, lo! a winged boy I ſpy'd,
With bow and quiver at his ſide:
I wonder'd at his ſtrange attire;
Then friendly plac'd him near the fire.
My heart was bounteous and benign,
I warm'd his little hands in mine,
Cheer'd him with kind aſſiduous care,
And wrung the water from his hair.
Soon as the fraudful youth was warm,
" Let's try," ſays he, " if any harm

" Has chanc'd my bow this ſtormy night;
" I fear the wet has ſpoil'd it quite:"
With that he bent the fatal yew,
And to the head an arrow drew:
Loud twang'd the ſounding ſtring, the dart
Pierc'd through my liver and my heart.
Then laugh'd amain the wanton boy,
And, " Friend," he cry'd, " I wiſh thee joy;
" Undamag'd is my bow, I ſee,
" But what a wretch I've made of thee."

ODE IV.

ON HIMSELF.

RECLIN'D at eaſe on this ſoft bed,
With fragrant leaves of myrtle ſpread
And flow'ry lote, I'll now reſign
My cares, and quaff the roſy wine.
In decent robe behind him bound,
Cupid ſhall ſerve the goblet round:
For faſt away our moments ſteal,
Like the ſwift chariot's rolling wheel:
The rapid courſe is quickly done,
And ſoon the race of life is run.
Then, then, alas! we droop, we die,
And ſunk in diſſolution lie;
Our frame no ſymmetry retains;
Nought but a little duſt remains.
Why on the tomb are odours ſhed?
Why pour'd libations to the dead?
To me far better while I live,
Rich wines and balmy fragrance give;
Now, now the roſy wreath prepare,
And hither call the lovely fair.
Now, while I draw my vital breath,
Ere yet I lead the dance of death,
For joy my ſorrows I'll reſign,
And drown my cares in roſy wine.

ODE V.

ON THE ROSE.

To make the beverage divine,
Mingle ſweet roſes with the wine;
Delicious will the liquor prove,
For roſes are the flowers of love:
And while with wreaths of roſes crown'd,
Let laughter and the cup go round.
Hail, lovely roſe! to thee I ſing,
Thou ſweeteſt daughter of the ſpring:
All mortals prize thy beauties bright;
In thee the pow'rs above delight.
Gay Cupid, with the graces bland,
When lightly bounding hand in hand,
With nimble feet he beats the ground,
Shows his bright locks with roſes crown'd.
Here then the flow'ry garland bring;
With numbers ſweet I'll wake the ſpring,
And crown'd with roſes, heav'nly flow'rs!
Admitted, Bacchus, to thy bow'rs,
With ſnowy-boſom'd Sappho gay
I'll dance the feather'd hours away.

ODE VI.

THE PARTY OF PLEASURE.

WHILE roſes round our temples twine,
We'll gayly quaff the ſparkling wine:
And, lo! the love alluring fair
Her Thyrſus brandiſhes in air,
With cluſt'ring ivy wreath'd around,
Whoſe branches yield a ruſtling ſound;
With graceful eaſe her ſteps ſhe ſuits
To notes of ſoft Ionian lutes.
A youth, whoſe hair luxuriant flows,
In curls, with breath ambroſial blows
The well-pair'd pipes, and ſweetly clear,
Pours melting muſic on the ear.
Here Cupid too with golden hair,
And Bacchus, ever young and fair,
With Cytherea, who inſpires
Delightful thoughts and warm deſires,
Gay-ſmiling join the feſtive train,
And make an old man young again.

ODE VII.

THE POWER OF LOVE.

LOVE waving awful in his hand
His hyacinth-encircled wand,
Forc'd me, averſe, with him to run;
In vain I ſtrove the taſk to ſhun.
Swift o'er the plain our courſe we ply'd,
Through foaming floods, o'er foreſts wide,
O'er hills where rocks impending hung,
Till me, alas! a ſerpent ſtung:
Sore heav'd my heart with dire diſmay,
My ſpirits ſunk---I dy'd away---
Pleas'd Cupid caught my trembling hand,
My face with his ſoft pinions fann'd,
And cry'd, 'Since now my pow'r you prove,
'Dare you ſtill boaſt, you will not love?'

ODE VIII.

THE DREAM.

As on a purple bed ſupine,
Rapt in the pleaſing joys of wine,
I lull'd my weary limbs to reſt,
Methought, with nymphs ſupremely bleſt,
A beauteous band, I urg'd the chaſe,
Contending in the rapid race;
While faireſt youths, with envy ſtung,
Fair as Lyæus ever young,
With jealous leer, and bitter jeſt,
Their keen malevolence expreſt.
Intent on love, I ſtrive to greet
The gameſome girls with kiſſes ſweet,
And, as on pleaſure's brink I ſeem,
Wake, and, behold! 'tis all a dream.
Vex'd to be thus alone in bed,
My viſionary charmer's fled,
To dream once more I cloſe my eyes:
Again, ye ſoft illuſions, riſe!

ODE IX.

THE DOVE.

" TELL me, dear, delightful dove,
" Emblematic bird of love,
" On your waving wings deſcending,
" Whence you come, and whither tending?

" Tell me whence your snowy plumes
" Breathe such fragrance of perfumes?
" And what master you obey,
" Gentle bird of Venus, say!"
" Blithe Anacreon, the wise,
(Thus the feather'd page replies)
" Sends me o'er the meads and groves
" To Bathyllus whom he loves,
" To Bathyllus, beauteous boy,
" Men's delight, and maidens joy.
" For a sonnet terse and trim,
" Which the poets call a hymn,
" Venus, in her sweet regard,
" Sold me to the gentle bard:
" Happy in his easy sway,
" All his mandates I obey;
" Often through the fields of air
" Song or billet-doux I bear.
" If you serve me well, says he,
" I will shortly make you free.
" He may free me, if he will,
" Yet I'll stay and serve him still:
" For what comfort can I know
" On the mountain's barren brow?
" Or in deserts left alone,
" There to murmur and to moan?
" Or in melancholy wood,
" Pecking berries, nauseous food!
" Now I eat delicious bread,
" By my liberal master fed;
" Now I drink of his own bowl,
" Rosy wine that cheers my soul;
" Sometimes dance, and sometimes play,
" Ever easy, ever gay;
" Or my fragrant pinions spread,
" Hovering o'er my master's head:
" When my limbs begin to tire,
" Then I perch upon his lyre;
" Soothing sounds my eye-lids close,
" Sweetly lulling my repose.
" Now I've told you all I know,
" Friend, adieu——'tis time to go;
" You my speed so long delay,
" I have chatter'd like a jay."

ODE X.

CUPID IN WAX.

A RUSTIC brought, of curious mold,
A waxen Cupid to be sold,
" What price, I cry'd, ingenuous say,
" For this small image shall I pay?"
" Small is the price, reply'd the clown,
" Take it, e'en take it at your own:
" To tell you all without a lie,
" I make no images, not I;
" But dare not in my mansion trust
" This patron of unbounded lust."
" If so, then for this little coin,
" Said I, the deity is mine.
" And now, great god, my breast inspire,
" There kindle all thy gentle fire:
" But, if thou fail'st to favour me,
" I swear I'll make a fire of thee."

ODE XI.

By another Hand.

ON HIMSELF.

OFT, with wanton smiles and jeers,
Women tell me, I'm in years;
I, the mirror when I view,
Find, alas! they tell me true;
Find my wrinkled forehead bare,
And regret my falling hair;
White and few, alas! I find
All that time has left behind.
But my hairs, if thus they fall,
If but few, or none at all,
Asking not, I'll never share
Fruitless knowledge, fruitless care.
This important truth I know,
If indeed in years I grow,
I must snatch what life can give;
Not to love, is not to live.

ODE XII.

ON A SWALLOW.

SAY, chattering bird, that dar'st invade
My slumbers with thy serenade,
And steal'st my visionary bliss,
How shall I punish thee for this?
Say, shall I clip thy soaring wing;
Or, like stern Tereus, Thracian king,
To swallows name of dire dismay,
Tear by the roots thy tongue away?
For, with thy execrable scream,
Thou wak'st me from a golden dream,
And from my arms had snatch'd away
Phyllis the fair, the young, the gay.

ODE XIII.

ON ATYS.

As o'er the mountains, o'er the plains,
Unmanly Atys, in loud strains
Great Cybele invoking, mourn'd,
His love to sudden madness turn'd.
Some to the Clarian fountain throng
Of laurell'd Phœbus, god of song,
And, with prophetic draughts inspir'd,
Enraptur'd rave, with frenzy fir'd;
I too, inspir'd with generous wine,
While round me breathe perfumes divine,
And with fair Chloe blest, will prove
The sweetest madness—wine and love.

ODE XIV.

LOVE IRRESISTIBLE.

YES, I yield—thy sovereign sway,
Mighty Cupid, I'll obey.
Late with soft persuasive art
Love essay'd to win my heart:
I, inflam'd with rebel pride,
His omnipotence defy'd——

With revengeful fury ſtung,
Strait his bow he bent, he ſtrung,
Snatch'd an arrow wing'd for flight,
And provok'd me to the fight:
I, diſdaining baſe retreat,
Clad in radiant arms complete,
Like Achilles, boldly wield
Glittering ſpear, and ample ſhield;
Thus equipt, reſolve to prove
The terrific power of love.
From his bow the arrows ſped;
I, alas! inglorious fled——
When the quiver at his ſide
Feather'd ſhafts no more ſupply'd,
Love, transform'd into a dart,
Pierc'd, like light'ning, through my heart,
Of my vitals made his prey,
And diſſolv'd my ſoul away.
Now, alas! in vain I wield
Glittering ſpear, and ample ſhield,
Victory in vain diſpute,
Love, I find is abſolute;
All defence to folly turns
When within the battle burns.

ODE XV.

By Dr. Broome.

HAPPY LIFE.

The wealth of Gyges I deſpiſe,
Gems have no charms to tempt the wiſe;
Riches I leave, and ſuch vain things,
To the low aim and pride of kings.
Let my bright hair with unguents flow,
With roſy garlands crown my brow:
This ſun ſhall roll in joy away;
To-morrow is a diſtant day.
Then while the hour ſerenely ſhines,
Toſs the gay die, and quaff thy wines;
But ever in the genial hour,
To Bacchus the libation pour,
Leſt death in wrath approach, and cry,
Man—taſte no more the cup of joy.

ODE XVI.

By Dr. Broome.

THE POWER OF BEAUTY.

Some ſing of Thebes, and ſome employ
Their numbers on the ſiege of Troy.
I mourn, alas! in plaintive ſtrains,
My own captivity and chains.
No navy, rang'd in proud array,
No foot, no horſeman arm'd to ſlay,
My peace alarm: far other foes,
Far other hoſts create my woes;
Strange dangerous hoſts, that ambuſh'd lie
In every bright, love-darting eye!
Such as deſtroy, when beauty arms,
To conquer, dreadful in its charms!

ODE XVII.

THE SILVER BOWL.

Mulciber, this ſilver take,
And a curious goblet make,
Let thy utmoſt ſkill appear
Not in radiant armour there;
Let me there no battles ſee;
What are arms or wars to me?
Form it with a noble ſweep,
Very wide, and very deep.
Carve not there the Northern Team,
Nor Orion's dreadful beam;
Pleiads, Hyads, Bears diſpleaſe;
What have I to do with theſe?
Why ſhould ſlow Boötes roll,
Why ſhould horrid monſters prowl,
On the margin of my bowl?
Draw me, what I value more,
Vines with purple cluſters ſtore,
Bacchus, ever young and fair,
Cupid with the golden hair,
Gay Bathyllus too be there.
See that, beautiful and bold,
All theſe figures riſe in gold:
In the wine-preſs let them join
Hand in hand to tread the wine.

ODE XVIII.

ON THE SAME.

Contrive me, artiſan, a bowl
Of ſilver ample as my ſoul;
And in the bright compartments bring
The ſweet profuſion of the ſpring;
Let that fair ſeaſon, rich in flowers,
Shed roſes in ambroſial ſhowers;
Yet ſimply plain be thy deſign,
A feſtive banqueting of wine;
No hieroglyphics let it have,
No foreign myſteries engrave:
Let no blood-thirſty heroes wield
Rough armour in the ſilver field;
But draw me Jove's delightful boy,
Bacchus the god of wine and joy:
Let Venus with light ſtep advance,
And with gay Hymen lead the dance.
Beneath the leaf-embeliſh'd vine,
Full of young grapes that promiſe wine,
Let love, without his armour meet
The meek-ey'd graces laughing ſweet.
And on the poliſh'd plain diſplay
A group of beauteous boys at play;
But no Apollo, god of day.

ODE XIX.

WE OUGHT TO DRINK,

The thirſty earth ſucks up the ſhowers
Which from his urn Aquarius pours;
The trees, which wave their boughs profuſe,
Imbibe the earth's prolific juice;
The ſea, in his prodigious cup,
Drinks all the rain and rivers up;
The ſun too thirſts, and ſtrives to drain
The ſea, the rivers, and the rain,
And nightly, when his courſe is run,
The merry moon drinks up the ſun.

Then give me wine, and tell me why,
My friends, ſhould all things drink but I!

ODE XX.

By Dr. Broome.

TO HIS MISTRESS.

THE gods o'er mortals prove their ſway,
And ſteal them from themſelves away.
Transform'd by their almighty hands,
Sad Niobe an image ſtands;
And Philomel up-borne on wings,
Through air her mournful ſtory ſings.
Would heaven indulgent to my vow,
The happy change I wiſh allow;
Thy envy'd mirror I would be,
That thou might'ſt always gaze on me;
And, could my naked heart appear,
Thoud'ſt ſee thyſelf—for thou art there!
Or were I made thy folding veſt,
That thou might'ſt claſp me to thy breaſt!
Or, turn'd into a fount, to lave
Thy naked beauties in my wave!
Thy boſom cincture I would grow,
To warm thoſe little hills of ſnow:
Thy ointment, in ſuch fragrant ſtreams
To wander o'er thy beauteous limbs;
Thy chain of ſhining pearl, to deck
And cloſe embrace thy graceful neck:
A very ſandal I would be,
To tread on—if trod on by thee.

ODE XXI.

SUMMER.

FILL, fill, ſweet girls, the foaming bowl,
And let me gratify my ſoul:
I faint with thirſt—the heat of day
Has drank my very life away.
O! lead me to yon cooling bowers,
And give me freſher wreaths of flowers;
For thoſe that now my temples ſhade,
Scorch'd by my burning forehead, fade:
But O! my heart, what can remove,
What winds, what ſhades, this heat of love?
Theſe are all vain, alas! I find;
Love is the fever of the mind.

ODE XXII.

By E. G. B. Eſq.

THE BOWER.

HERE, my Cloe, charming maid,
Here, beneath the genial ſhade,
Shielded from each rude wind,
Lovely Chloe, lie reclin'd!
Lo! for thee the balmy breeze
Gently fans the waving trees!
Streams that whiſper through the grove
Whiſper low the voice of love,
Sweetly bubbling wanton ſport,
Where perſuaſion holds her court.
Ye who paſs th' enamell'd grove
Through the ruſtling ſhade who rove,
Sure my bliſs your breaſt muſt fire!
Can you ſee, and not admire?

ODE XXIII.

THE VANITY OF RICHES.

IF the treaſur'd gold could give
Man a longer term to live,
I'd employ my utmoſt care
Still to keep, and ſtill to ſpare;
And when death approach'd, would ſay,
"Take thy fee, and walk away."
But ſince riches cannot ſave
Mortals from the gloomy grave,
Why ſhould I myſelf deceive,
Vainly ſigh, and vainly grieve?
Death will ſurely be my lot,
Whether I am rich or not.
Give me freely while I live
Generous wines, in plenty give
Soothing joys my life to chear,
Beauty kind, and friends ſincere;
Happy! could I ever find
Friends ſincere, and beauty kind.

ODE XXIV.

ENJOYMENT.

SINCE I'm born a mortal man,
And my being's but a ſpan?
'Tis a march that I muſt make;
'Tis a journey I muſt take:
What is paſt I know too well;
What is future who can tell?
Teazing care, then ſet me free,
What have I to do with thee?
Ere I die, for die I muſt,
Ere this body turns to duſt,
Every moment I'll employ
In ſweet revelry and joy,
Laugh and ſing, and dance and play,
With Lycœus young and gay.

ODE XXV.

WINE BANISHES CARES.

WHEN gay Bacchus cheers my breaſt,
All my cares are lull'd to reſt:
Griefs that weep, and toils that teaze,
What have I to do with theſe?
No ſolicitudes can ſave
Mortals from the gloomy grave.
Shall I thus myſelf deceive?
Shall I languiſh? ſhall I grieve?
Let us quaff the generous juice;
Bacchus gave it for our uſe.
For when wine tranſports the breaſt,
All our cares are lull'd to reſt.

ODE XXVI.

THE TRANSPORTS OF WINE.

WHEN gay Bacchus fills my breaſt,
All my cares are lull'd to reſt,

Rich I ſeem as Lydia's king,
Merry catch or ballad ſing;
Ivy-wreaths my temples ſhade,
Ivy that will never fade:
Thus I ſit in mind elate,
Laughing at the farce of ſtate.
Some delight in fighting fields,
Nobler tranſports Bacchus yields:
Fill the bowl—I ever ſaid,
'Tis better to lie drunk than dead.

ODE XXVII.

THE PRAISE OF BACCHUS.

BACCHUS, Jove's delightful boy,
Generous god of wine and joy,
Still exhilarates my ſoul
With the raptures of the bowl;
Then with feather'd feet I bound,
Dancing in a feſtive round;
Then I feel, in ſparkling wine,
Tranſports delicate, divine;
Then the ſprightly muſic warms,
Song delights and beauty charms:
Debonair, and light, and gay,
Thus I dance the hours away.

ODE XXVIII.

From the Guardian.

HIS MISTRESS'S PICTURE.

BEST and happieſt artiſan,
Beſt of painters, if you can,
With your many-colour'd art
Paint the miſtreſs of my heart.
Deſcribe the charms you hear from me
(Her charms you could not paint and ſee)
And make the abſent nymph appear
As if her lovely ſelf were here.
Firſt draw her eaſy-flowing hair,
As ſoft and black as ſhe is fair;
And, if your art can riſe ſo high,
Let breathing odours round her fly.
Beneath the ſhade of flowing jet,
The ivory forehead ſmoothly ſet,
With care the ſable brows extend,
And in two arches nicely bend;
That fair ſpace which lies between
The meeting ſhade may ſcarce be ſeen.
The eye muſt be uncommon fire,
Sparkle, languiſh, and deſire;
The flames, unſeen, muſt yet be felt,
Like Pallas kill, like Venus melt.
The roſy cheeks muſt ſeem to glow
Amidſt the white of new-fall'n ſnow.
Let her lips perſuaſion wear,
In ſilence elegantly fair:
As if the bluſhing rivals ſtrove,
Breathing and inviting love.
Below her chin be ſure to deck
With every grace her poliſh'd neck;
While all that's pretty, ſoft, and ſweet,
In the ſwelling boſom meet.
The reſt in purple garments veil,
Her body, nor her ſhape conceal.
Enough!——the lovely work is done,
The breathing paint will ſpeak anon.

THE SAME ODE IMITATED.

IN THE YEAR 1755,

By another Hand.

BEST of painters, ſhow thy art,
Draw the charmer of my heart;
Draw her as ſhe ſhines away
At the rout, or at the play:
Carefully each mode expreſs,
Woman's better part is dreſs.
Let her cap be mighty ſmall,
Bigger juſt than none at all,
Pretty, like her ſenſe, and little,
Like her beauty, frail and brittle.
Be her ſhining locks confin'd
In a threefold braid behind;
Let an artificial flower
Set the fiſſure off before;
Here and there weave ribbon pat in,
Ribbon of the fineſt ſatin.
Circling round her ivory neck
Frizzle out the ſmart Vandyke;
Like the ruff that heretofore
Good Queen Beſs's maidens wore;
Happy maidens, as we read,
Maids of honour, maids indeed.
Let her breaſt look rich and bold
With a ſtomacher of gold;
Let it keep her boſom warm,
Amply ſtretch'd from arm to arm;
Whimſically travers'd o'er,
Here a knot, and there a flower,
Like her little heart that dances,
Full of maggots, full of fancies.
Flowing looſely down her back
Draw with art the graceful ſack;
Ornament it well with jimping,
Flounces, furbelows and crimping.
Let of ruffles many a row
Guard her elbows, white as ſnow;
Knots below, and knots above,
Emblems of the ties of love.
Let her hoop, extended wide,
Show what petticoats ſhould hide,
Garters of the ſofteſt ſilk,
Stockings whiter than the milk;
Charming part of female dreſs,
Did it ſhow us more or leſs.
Let a pair of velvet ſhoes
Gently preſs her pretty toes,
Gently preſs, and ſoftly ſqueeze,
Tottering like the fair Chineſe,
Mounted high, and buckled low,
Tott'ring every ſtep they go.
Take theſe hints, and do thy duty,
Faſhions are the teſts of beauty;
Features vary and perplex,
Mode's the woman and the ſex.

ODE XXIX.

BATHYLLUS.

Now, illuſtrious artiſan,
Paint the well proportion'd man;

Once again the tints prepare,
Paint Bathyllus young and fair.
Draw his treſſes ſoft and black,
Flowing graceful down his back,
Auburn be the curl'd extremes,
Glowing like the ſolar beams;
Let them negligently fall,
Eaſy, free, and artleſs all.
Let his bright cerulean brow
Grace his forehead white as ſnow.
Let his eyes, that glow with fire,
Gentleſt, mildeſt love inſpire;
Steal from Mars his radiant mien,
Softneſs from th' Idalian queen;
This with hope the heart to bleſs,
That with terror to depreſs.
Next, his cheeks with roſes crown,
And the peach's dubious down;
And, if art can this beſtow,
Let the bluſh ingenuous glow.
But deſcription would be faint,
Teaching you his lips to paint:
There let fair perſuaſion dwell,
Let them gently, ſoftly ſwell,
Seem in ſweeteſt ſounds to break
Willing air, and ſilent ſpeak.
Now you've finiſh'd high the face,
Draw his ivory neck with grace;
All the charms and beauty add,
Such as fair Adonis had.
Let me, next, the boſom ſee,
And the hands of Mercury.
But I'll not preſume to tell,
Artiſt, you who paint ſo well,
How the foot ſhould be expreſt,
How to finiſh all the reſt.
I the price you aſk will give,
For the picture ſeems to live:
Gold's too little, view this piece,
'Tis the pictur'd pride of Greece;
This divine Apollo take,
And from this Bathyllus make.
When to Samos you repair,
Aſk for young Bathyllus there,
Fineſt figure eye e'er ſaw,
From Bathyllus Phœbus draw.

ODE XXX.

CUPID TAKEN PRISONER.

LATE the muſes Cupid found,
And with wreaths of roſes bound,
Bound him faſt, as ſoon as caught,
And to blooming beauty brought.
Venus with large ranſom ſtrove
To releaſe the god of love.
Vain is ranſom, vain is fee,
Love refuſes to be free.
Happy within his roſy chain,
Love with beauty will remain.

ODE XXXI.

THE PLEASING FRENZY.

INDULGE me, Stoics, with the bowl,
And let me gratify my ſoul;
Your precepts to the ſchools confine,
For I'll be nobly mad with wine.
Alcmœon and Oreſtes grew
Quite mad when they their mother's ſlew:
But I, no man, no mother kill'd,
No blood but that of Bacchus ſpill'd,
Will prove the virtues of the vine,
And be immenſely mad with wine.
When Hercules was mad, we know
He graſp'd the Iphitean bow;
The rattling of his quiver ſpread
Aſtoniſhment around and dread.
Mad Ajax with his ſevenfold ſhield,
Tremendous ſtalk'd along the field.
Great Hector's flaming ſword he drew,
And hoſts of Greeks in fancy ſlew.
But I with no ſuch fury glow,
No ſword I have, nor bend no bow:
My helmet is a flowery crown;
In this bright bowl my cares I'll drown,
And rant in ecſtacies divine,
Heroically mad with wine.

ODE XXXII.

THE NUMBER OF HIS MISTRESSES.

WHEN thou can'ſt fairly number all
The leaves on trees that fade and fall,
Or count the foaming waves that roar,
Or tell the pebbles on the ſhore:
Then may'ſt thou reckon up the names
Of all my beauties, all my flames.
At Athens, flames that ſtill ſurvive,
Firſt count me only thirty-five.
At Corinth next tell o'er the fair,
Tell me a whole battalion there.
In Greece the faireſt nymphs abound,
And worſe than banner'd armies wound.
Count all that make their ſweet abodes
At Leſbos, or delightful Rhodes.
Then Carian and Ionian dames,
Write me at leaſt two thouſand flames.
What! think'ſt thou this too large a ſum?
Egypt and Syria are to come.
And Crete where Love his ſway maintains,
And o'er a hundred cities reigns.
Yet ſtill unnumber'd, ſtill remain
The nymphs of Perſia and of Spain,
And Indians, ſcorch'd by Titan's ray,
Whoſe charms have burnt my heart away.

ODE XXXIII.

THE SWALLOW.

LOVELY ſwallow, once a year,
Pleas'd you pay your viſit here;
When our clime the ſun-beams gild,
Here your airy neſt you build;
And, when bright days ceaſe to ſmile,
Fly to Memphis or the Nile:
But, alas! within my breaſt
Love for ever makes his neſt;
There the little Cupids lie,
Some prepare their wings to fly,

Some unhatch'd, ſome form'd in part,
Lie cloſe neſtling at my heart,
Chirping loud; their ceaſeleſs noiſe
All my golden peace deſtroys:
Some, quite fledg'd and fully grown,
Nurſe the younglings as their own;
Theſe, when feather'd, others feed,
And thus propagate their breed.
Dreadful torment I ſuſtain,
What, alas! can eaſe my pain:
The vaſt flocks of loves that dwell
In my breaſt no tongue can tell.

ODE XXXIV.

TO HIS MISTRESS.

Though cold winter o'er my brow
Sheds a ſcatter'd ſhower of ſnow,
Waving locks of ſilver hair;
Fly me not, capricious fair.
Though the ſpring's enlivening power
Bloſſoms in your beauty's flower,
Fly me not, nor ſlight my love;
In this chaplet, lo! are wove
Lucid colours blending bright
Roſes red, and lilies white:
We, methinks, reſemble thoſe;
I the lily, you the roſe.

ODE XXXV.

ON THE PICTURE OF EUROPA.

This pictur'd bull is mighty Jove,
Who meditates ſome prank of love;
On his broad back, with pleaſing care,
He ſafely bears the Tyrian fair:
Lo! buoyant on the foaming tide,
He throws the circling winds aſide,
Securely ſteering through the ſea.
No other daring bull but he,
Would leave his heifers on the plain,
To tempt the dangers of the main.

ODE XXXVI.

By Dr. Broome.

LIFE SHOULD BE ENJOYED.

Talk not to me of pedant rules,
I leave debates to learned fools,
Who ſolemnly in form adviſe;
At beſt impertinently wiſe.
To me more pleaſing precepts give,
And teach the ſcience how to live;
To bury in the friendly draught
Sorrows that ſpring from too much thought;
To learn ſoft leſſons from the fair,
How life may glide exempt from care.
Alas! I'm old—I ſee my head
With hoary locks by time o'erſpread:
Then inſtant be the goblet brought,
To make me young—at leaſt in thought.
Alas! inceſſant ſpeeds the day,
When I muſt mix with common clay;
When I muſt tread the diſmal ſhore,
And dream of love and wine no more.

ODE XXXVII.

By Dr. Broome.

THE SPRING.

See! winter's paſt; the ſeaſon's bring
Soft breezes with returning ſpring;
At whoſe approach the graces wear.
Freſh honours in their flowing hair;
The raging ſeas forget to roar,
And ſmiling, gently kiſs the ſhore;
The ſportive duck, in wanton play,
Now dives, now riſes into day;
The cranes from freezing ſkies repair,
And ſailing float to warmer air;
Th' enlivening ſuns in glory riſe,
And gayly dance along the ſkies;
The clouds diſperſe, or, if in ſhowers
They fall, it is to wake the flowers.
See! verdure clothes the teeming earth;
The olive ſtruggles into birth;
The ſwelling grapes adorn the vine,
And kindly promiſe future wine:
Bleſt juice! already I in thought
Quaff an imaginary draught.

ODE XXXVIII.

ON HIMSELF.

Yes, I'm old, I'm old, 'tis true;
What have I with time to do?
With the young and with the gay,
I can drink as much as they.
Let the jovial band advance,
Still I'm ready for the dance:
What's my ſceptre, if you aſk,
Lo! I ſway a mighty flaſk.
Should ſome mettled blade delight
In the bloody ſcenes of fight,
Let him to this ſtage aſcend,
Still I'm ready to contend—
Mix the grape's rich blood, my page,
We in drinking will engage.
Yes, I'm old; yet with the gay
I can be as briſk as they;
Like Silenus 'midſt his train,
I can dance along the plain.

ODE XXXIX.

ON HIMSELF.

When I drain the roſy bowl,
Joy exhilarates my ſoul:
To the nine I raiſe my ſong,
Ever fair and ever young.
When full cups my cares expel,
Sober counſels, then farewell:
Let the winds that murmur, ſweep
All my ſorrows to the deep.
When I drink dull time away,
Jolly Bacchus, ever gay,
Leads me to delightful bowers,
Full of fragrance, full of flowers.

When I quaff the ſparkling wine,
And my locks with roſes twine,
Then I praiſe life's rural ſcene,
Sweet, ſequeſter'd, and ſerene.
When I ſink the bowl profound,
Richeſt fragrance flowing round,
And ſome lovely nymph detain,
Venus then inſpires the ſtrain.
When from goblets deep and wide
I exhauſt the generous tide,
All my ſoul unbends—I play
Gameſome with the young and gay.
When the foaming bowl I drain,
Real bleſſings are my gain;
Bleſſings which my own I call:
Death is common to us all.

ODE XL.

CUPID WOUNDED.

Once as Cupid, tir'd with play,
On a bed of roſes lay,
A rude bee that ſlipt unſeen,
The ſweet-breathing buds between,
Stung his finger, cruel chance!
With its little pointed lance.
Strait he fills the air with cries,
Weeps, and ſobs, and runs, and flies;
Till the god to Venus came,
Lovely laughter-loving dame;
Then he thus began to plain;
" Oh! undone—I die with pain——
" Dear mamma, a ſerpent ſmall,
" Which a bee the ploughmen call,
" Imp'd with wings, and arm'd with dart,
" Oh!—has ſtung me to the heart."
Venus thus reply'd, and ſmil'd;
' Dry thoſe tears, for ſhame! my child;
' If a bee can wound ſo deep,
' Cauſing Cupid thus to weep,
' Think, O think! what cruel pains
' He that's ſtung by thee ſuſtains.'

ODE XLI.

THE BANQUET OF WINE.

Now let us gaily drink, and join
To celebrate the god of wine,
Bacchus, who taught his jovial throng
The dance, and patroniz'd the ſong;
In heart, in ſoul, with love the ſame,
The favourite of the Cyprian dame.
Revelry he nam'd his heir;
The graces are his daughters fair:
Sadneſs in Lethe's lake he ſteeps;
Solicitude before him ſleeps.
When in large bowls fair boys produce
The heart-exhilerating juice,
Then all our ſorrows are reſign'd,
They fly and mingle with the wind.
The generous bowl then let us drain,
Diſmiſſing care, forgetting pain:
For life, what pleaſure can it give,
If with anxiety we live?
And what hereafter may betide
No living caſuiſt can decide.
The days of man are fix'd by fate,
Dark and obſcure, though ſhort the date.
Then let me, warm with wine, advance,
And revel in the tipſey dance;
Or, breathing odours, ſport and play
Among the fair, among the gay.
As for thoſe ſtubborn fools that will
Be wretched, be they wretched ſtill.
But let us gaily drink, and join
To celebrate the god of wine.

ODE XLII.

ON HIMSELF.

When Bacchus, jolly god, invites,
In ſprightly dance my heart delights;
When with blithe youths I drain the bowl,
The lyre can harmonize my ſoul:
But when, indulging amorous play
I frolic with the fair and gay,
With hyacinthine chaplet crown'd,
Then, then the ſweeteſt joys abound;
My honeſt heart nor envy bears,
Nor envy's poiſon'd arrows tears;
By rankling malice never ſtung,
I ſhun the venom-venting tongue.
And at the jovial banquet hate
Contentions, battles, and debate:
When to the lyre's melodious ſound
With Phyllis in the dance I bound,
The blooming fair, the ſilver lyre,
Should only dance and love inſpire:
Then let us paſs life's peaceful day
In mirth and innocence away.

ODE XLIII.

THE GRASHOPPER.

Thee, ſweet graſhopper, we call
Happieſt of inſects all,
Who from ſpray to ſpray canſt ſkip,
And the dew of morning ſip:
Little ſips inſpire to ſing;
Then thour't happy as a king.
All, whatever thou canſt ſee,
Herbs and flowers belong to thee;
All the various ſeaſons yield,
All the produce of the field.
Thou, quite innocent of harm,
Lov'ſt the farmer and the farm;
Singing ſweet when ſummer's near,
Thou to all mankind art dear;
Dear to all the tuneful nine
Seated round the throne divine;
Dear to Phœbus, god of day,
He inſpir'd thy ſprightly lay,
And with voice melodious bleſt,
And in vivid colours dreſt,
Thou from ſpoil of time art free;
Age can never injure thee.
Wiſeſt daughter of the earth!
Fond of ſong, and full of mirth;

Free from flesh, exempt from pains,
No blood riots in thy veins;
To the blest I equal thee;
Thou'rt a demi-deity.

ODE XLIV.

THE DREAM.

I DREAM'D that late I pinions wore,
And swiftly seem'd through air to soar;
Me fleeter Cupid quick as thought,
Pursu'd, and in an instant caught,
Though at his feet hung weights of lead:
What can this vision mean, I said?
Its mystic sense I thus explain;
I who ere-while have worn the chain
Of many a fair-one for a day,
Then flung the flowery band away,
Am now involv'd and fetter'd fast
In links that will for ever last.

ODE XLV.

By another Hand.

CUPID'S DARTS.

As the god of manual arts
Forg'd at Lemnos missile darts,
Darts of steel for Cupid's bow,
Source of joy, and source of woe;
Venus, fast as Vulcan wrought,
Ting'd them in a honey'd draught:
But her son in bitter gall
Ting'd them, doubly-ting'd them all.
Here, releas'd from wars alarms,
Enters the fierce god of arms;
Whether led by will or chance,
Here he shakes his weighty lance.
Cupid's shafts with scornful eyes
Strait he views, and strait decries:
"This is slight, and that a toy,
'Fit for children to employ."
'These (said Cupid) I admit
'Toys indeed, for children fit:
'But, if I divine aright,
'Take it———this is not so slight.'
Mars receives it; Venus smiles
At her son's well-season'd wiles.
Mars with sudden pain possest,
Sighs from out his inmost breast:
"Cupid, you aright divine,
"Not so slight this shaft of thine;
"Small of size: but strong of make!
"Take it—I have try'd it—take."
'No, reply'd the wanton boy,
'Keep it, Mars, 'tis but a toy.'

ODE XLVI.

THE POWER OF GOLD.

LOVE's a pain that works our woe;
Not to love, is painful too:
But, alas! the greatest pain
Waits the love that meets disdain.

What avails ingenuous worth,
Sprightly wit, or noble birth?
All these virtues useless prove;
Gold alone engages love.
May he be completely curst,
Who the sleeping mischief first
Wak'd to life, and vile before,
Stamp'd with worth the fordid ore.
Gold creates in brethren strife;
Gold destroys the parent's life;
Gold produces civil jars,
Murders, massacres, and wars:
But the worst effect of gold,
Love, alas! is bought and sold.

ODE XLVII.

YOUNG OLD-AGE.

YES, yes, I own, I love to see
Old men facetious, blithe, and free;
I love the youth that light can bound,
Or graceful swim th' harmonious round:
But when old-age jocose though gray,
Can dance and frolic with the gay;
'Tis plain to all the jovial throng,
Though hoar the head, the heart is young.

ODE XLVIII.

By Dr. Broome.

GAY LIFE.

GIVE me Homer's tuneful lyre,
Let the sound my breast inspire!
But with no troublesome delight
Of arms, and heroes slain in fight:
Let it play no conquests here,
Or conquests only o'er the fair!
Boy, reach that volume—book divine!
The statutes of the god of wine:
He, legislator, statutes draws.
And I, his judge, enforce his laws;
And, faithful to the weighty trust,
Compel his votaries to be just;
Thus, round the bowl impartial flies,
Till to the sprightly dance we rise;
We frisk it with a lively bound,
Charm'd with the lyre's harmonious sound;
Then pour forth, with an heat divine,
Rapturous songs that breathe of wine.

ODE XLIX.

By another Hand.

TO A PAINTER.

WHILE you my lyre's soft numbers hear,
Ingenious painter, lend an ear,
And, while it charms your ravish'd heart,
Display the wonders of your art.
First draw a nation blithe and gay,
Laughing and sporting life away;
Let them in sprightly dances bound,
While their shrill pipes the Bacchæ sound;

And, if you can perfection give,
Bid every breathing figure live:
And then, left life inſpir'd prove,
To make them happy, bid them love.

ODE L.

By Dr. Broome.

THE HAPPY EFFECTS OF WINE.

See! ſee! the jolly god appears,
His hand a mighty goblet bears;
With ſparkling wine full char'd it flows,
The ſov'reign cure of human woes
Wine gives a kind releaſe from care,
And courage to ſubdue the fair;
Inſtructs the cheerful to advance,
Harmonious in the ſprightly dance.
Hail, goblet rich with generous wines!
See! round the verge a vine-branch twines.
See! how the mimic cluſters roll,
As ready to refil the bowl.
Wine keeps its happy patients free
From every painful malady;
Our beſt phyſician all the year;
Thus guarded, no diſeaſe we fear,
No troubleſome diſeaſe of mind
Until another year grows kind,
And loads again the fruitful vine,
And brings again our health—new wine.

ODE LI.

By another Hand.

ON A DISK, REPRESENTING VENUS.

Rare artiſt, whoſe inventive ſkill
Could this orb with wonders fill!
Where the mimic ocean glides
Soft with the well diſſembled tides;
The waves ſeem floating, and above
Shines the beauteous queen of love:
The workman's fancy mounted high,
And ſtole th' idea from the ſky.
Tranſporting ſight!—the waves conceal
But what 'twere impious to reveal!
She, like ſome flower all bloſſom'd gay;
Shines along the ſmiling way.
The amorous waters, as ſhe ſwims,
Crowd to embrace her ſnowy limbs;
Then, proudly ſwelling to be preſt,
Beneath her ſnowy fragrant breaſt,
Ambitiouſly upriſe on high,
And liſt the goddeſs to the ſky:
And, while her lucid limbs they lave,
She brightens the tranſparent wave;
So violets enlighten'd glow,
Surrounded by the lily's ſnow.
But ſee! a lovely ſmiling train,
Conſpicuous o'er the limpid main,
The queen attends! in triumph moves
Gay Cupid with his laughing loves.
On dolphins borne, in ſtate they ride,
And beautify the ſilver tide;
Dancing around in ſhoals they play,
And humble adoration pay.
Rare art, that life to phantoms gives!
See! ſee! a ſecond Venus lives.

ODE LII.

By Dr. Broome.

GRAPES, OR THE VINTAGE.

Io! the vintage now is done!
And purpled with th' autumnal ſun:
The grapes gay youths and virgins bear,
The ſweeteſt product of the year!
In vats the heavenly load they lay,
And ſwift the damſels trip away:
The youths alone the wine preſs tread,
For wine's by ſkilful drunkards made.
Meantime the mirthful ſong they raiſe,
Io! Bacchus to thy praiſe!
And viewing the bleſt juice in thought,
Quaff an imaginary draught.
Gaily through wine the old advance,
And doubly tremble in the dance:
In fancy'd youth they chant and play,
Forgetful that their locks are gray.
Through wine the youth completes his loves;
He haunts the ſilence of the groves:
Where ſtretch'd beneath th' embowering ſhade
He ſees ſome love-inſpiring maid;
On beds of roſy ſweets ſhe lies,
Inviting ſleep to cloſe her eyes:
Faſt by her ſide his limbs he throws,
Her hand he preſſes—breathes his vows;
And cries, "My love, my ſoul, comply
"This inſtant, or alas! I die."
In vain the youth perſuaſion tries!
In vain!—her tongue at leaſt denies:
Then, ſcorning death through dull deſpair,
He ſtorms th' unwilling willing fair;
Bleſſing the grapes that could diſpenſe
The happy, happy impudence.

ODE LIII.

By Dr. Broome.

THE ROSE.

Come, lyriſt, tune thy harp, and play
Reſponſive to my vocal lay;
Gently touch it, while I ſing
The roſe, the glory of the ſpring.
To heaven the roſe in fragrance flies,
The ſweeteſt incenſe of the ſkies.
Thee, joy of earth, when vernal hours
Pour forth a blooming waſte of flowers,
The gaily ſmiling graces wear,
A trophy in their flowing hair:
Thee Venus, queen of beauty, loves,
And, crown'd with thee, more graceful moves.
In fabled ſong, and tuneful lays,
Their favourite roſe the muſes praiſe:
To pluck the roſe the virgin train
With blood their pretty fingers ſtain;

Nor dread the pointed terrors round,
That threaten and inflict a wound:
See! how they wave the charming toy,
Now kiss, now snuff the fragrant joy.
The rose the poets strive to praise,
And for it would exchange their bays;
O! ever to the sprightly feast
Admitted, welcome, pleasing guest!
But chiefly when the goblet flows,
And rosy wreaths adorn our brows!
Lovely smiling rose, how sweet
All objects where thy beauties meet!
Aurora, with a blushing ray,
And rosy fingers, spreads the day:
The graces more enchanting show,
When rosy blushes paint their snow;
And every pleas'd beholder seeks
The rose in Cytherea's cheeks.
When pain afflicts, or sickness grieves,
Its juice the drooping heart relieves;
And, after death, its odours shed
A pleasing fragrance o'er the dead;
And when its withering charms decay,
And sinking, fading, die away,
Triumphant o'er the rage of time,
It keeps the fragrance of its prime.
Come, lyrist, join to sing the birth
Of this sweet offspring of the earth!
When Venus from the ocean's bed
Rais'd o'er the waves her lovely head;
When warlike Pallas sprung from Jove,
Tremendous to the powers above,
To grace the world the teeming earth
Gave the fragrant infant birth;
And, "This," she cry'd, "I this ordain
"My favourite, queen of flowers to reign."
But first, th' assembled gods debate
The future wonder to create;
Agreed at length, from heaven they threw
A drop of rich nectareous dew:
A bramble-stem the drop receives,
And strait the rose adorns the leaves.
The gods to Bacchus gave the flower,
To grace him in the genial hour.

ODE LIV.

By Dr. Broome.

GROWN YOUNG.

When sprightly youth my eyes survey,
I too am young, and I am gay;
In dance my active body swims,
And sudden pinions lift my limbs.
Haste, crown, Cybeba, crown my brows,
With garlands of the fragrant rose!
Hence, hoary age!—I now am young,
And dance the mirthful youths among.
Come then, my friends, the goblet drain!
Blest juice!—I feel thee in each vein!
See! how with active bounds I spring!
How strong, and yet how sweet I sing!
How blest am I, who thus excel
In pleasing arts of trifling well!

ODE LV.

By Dr. Broome.

THE MARK.

The stately steed expressive bears
A mark imprinted on his hairs:
The turban, that adorns the brows
Of Asia's sons, the Parthian shows:
And marks betray the lover's heart,
Deeply engrav'd by Cupid's dart:
I plainly read them in his eyes,
That look too foolish, or too wise.

ODE LVI.

By Dr. Broome.

OLD AGE.

Alas! the powers of life decay!
My hairs are fall'n, or turn'd to gray;
The smiling bloom, and youthful grace,
Is banish'd from my faded face:
Thus man beholds, with weeping eyes,
Himself half-dead before he dies.
For this, and for the grave I fear,
And pour the never-ceasing tear:
A dreadful prospect strikes my eye,
I soon must sicken, soon must die.
For this the mournful groan I shed,
I dread—alas! the hour I dread!
What eye can stedfastly survey
Death, and its dark tremendous way?
For soon as fate has clos'd our eyes,
Man dies—for ever, ever dies!
All pale, all senseless in the urn!
Never, ah! never to return.

ODE LVII.

THAT WE SHOULD DRINK WITH MODERATION.

Bring hither, boy, a mighty bowl,
And let me quench my thirsty soul;
Fill two parts water, fill it high,
Add one of wine, for I am dry:
Thus let the limpid stream allay
The jolly god's too potent sway.
Quick, boy, dispatch—My friends, no more,
Thus let us drinking rant and roar;
Such clamorous riot better suits
Unpolish'd Scythia's barbarous brutes:
Let us, while music tunes the soul,
Mix temperance in the friendly bowl.

ODE LVIII.

THE LOVE-DRAUGHT.

As late of flow'rets fresh and fair
I wove a chaplet for my hair,
Beneath a rose, gay summer's pride,
The wanton god of love I spy'd,
I seiz'd him, resolute of soul,
And plung'd him in my flowing bowl,
Resolv'd to have a draught divine,
And fairly swallow'd him in wine:
E'er since his fluttering wings impart
Strange titillations to my heart.

ODE LIX.

TO A SCORNFUL BEAUTY.

Why thus with ſcornful look you fly,
Wild Thracian filly, tell me why?
Think'ſt thou that I no ſkill poſſeſs,
And want both courage and addreſs?
Know, that whenever I think fit
To tame thee with a galling bit,
Juſt where I pleaſe, with tighten'd rein,
I'll urge thee round the duſty plain,
Now on the flowery turf you feed,
Or lightly bound along the mead,
So wild, ſo wanton, and untry'd,
You want ſome youth to mount and ride.

ODE LX.

EPITHALAMIUM ON THE MARRIAGE OF STRATOCLES AND MYRILLA.

Venus, fair queen of gods above,
Cupid thou mighty power of love,
And Hymen bland, by heaven deſign'd
The fruitful ſource of human kind:
To you, as to the lyre I ſing,
Flows honour from the ſounding ſtring;
Propitious to the numbers prove,
O, Venus, Hymen, god of love.
View, gentle youth, with rapture view
This blooming bride, ordain'd for you:
Riſe quick, and feaſt on all her charms,
Leſt, like a bird, ſhe fly your arms.
O happy youth! by Venus bleſt,
But happier on Myrilla's breaſt:
'See how the fair-one, ſweetly coy,
'All ſoft confuſion, meets the joy,
'Blooming as health, freſh as May-flowers,
'And bright as radiant noon-tide hours.'
Of all the flowers upon the plains,
The roſe unmatch'd in beauty reigns;
Myrilla thus in charms excells,
She ſhines the roſe among the belles.
O may, bleſt youth, the god of day
The pleaſing toils of love ſurvey;
And may a beauteous blooming boy
Crown your ſoft vows with laſting joy!

ODE LXI.

ON GOLD.

When gold, that fugitive unkind,
With pinions ſwifter than the wind,
Flies from my willing arms away,
(For gold with me will never ſtay)
With careleſs eyes his flight I view,
Who would perfidious foes purſue?
When from the glittering miſchief free,
What mortal can compare with me?
All my inquietudes of mind
I give to murmur with the wind:
Love ſweetly tunes my melting lyre
To tender notes of ſoft deſire.
But when the vagrant finds I burn
With rage, and ſlight him in his turn,
He comes, my quiet to deſtroy,
With the mad family of joy:
Adieu to love, and ſoft deſire!
He ſteals me from my ſoothing lyre.
O faithleſs gold! thou dear deceit!
Say, wilt thou ſtill my fancy cheat?
This lute far ſweeter tranſport brings,
More pleaſing theſe love-warbled ſtrings:
For thou with envy and with wiles
Me of my deareſt love beguiles,
Daſhing the cup of ſweet deſire,
And robb'ſt me of my golden lyre.
Then, for with me thou wilt not ſtay,
To faithleſs Phrygians ſpeed'ſt away,
Proud and aſſiduous to pleaſe
Thoſe ſons of perfidy and eaſe.
Me from the muſe thou would'ſt detain,
But all thy tempting arts are vain;
Ne'er ſhall my voice forget to ſing,
Nor this right hand to touch the ſtring:
Away to other climes! Farewell!——
Leave me to tune the vocal ſhell.

ODE LXII.

ON THE SPRING.

What bright joy can this exceed,
This of roving o'er the mead?
Where the hand of Flora pours,
Sweeteſt, voluntary flow'rs:
Where the zephyr's balmy gale
Wantons in the lovely vale.
O! how pleaſing to recline
Underneath the ſpreading vine,
In the cloſe concealment laid
With a love inſpiring maid!
Fair, and ſweet, and young, and gay,
Chatting all the live-long day.

ODE LXIII.

TO CUPID.

Mighty god of flames and darts,
Great controuler of all hearts;
With thee Venus, lovely fair,
Venus with the golden hair,
And the bright-ey'd Dryads play,
Nymphs that on the mountains ſtray:
Come, propitious to my vow;
Leave the the mountain's rugged brow;
Quick deſcend into the plain,
Where the object of my pain,
Sweet Eurypyle imparts
Anxious hopes to youthful hearts;
Melt to love the yielding fair,
Teach her not to give deſpair;
Thou my paſſion muſt approve,
Melt the yielding fair to love.

ODE LXIV.

TO THE SAME.

Idalian god, with golden hair,
O Cupid, ever young and fair,

Fly to my aid, and ſafely ſhroud
Me in a purple-beaming cloud,
And on thy painted wings convey
A faithful lover on his way.
Thy blandiſhments diſturb my reſt,
And kindle tumults in my breaſt;
The pleaſing poiſon was convey'd
Late from the lovely Leſbian maid;
Her ſun-bright eye diſcharg'd a dart,
That rankling preys upon my heart:
In ſparkling wit beyond compare,
She ſlights, alas! my ſilver hair,
Regardleſs of my heart-felt pain,
And fondly loves ſome happier ſwain.

ODE LXV.

ON HIMSELF.

I LATELY thought, delightful theme!
Anacreon ſaw me in a dream,
The Teian ſage, the honey'd bard,
Who call'd me with a ſweet regard;
I, pleas'd to meet him, ran in haſte,
And with a friendly kiſs embrac'd.
'Tis true, he ſeem'd a little old,
But gay and comely to behold;
Still bow'd to Cytherea's ſhrine,
His lip was redolent of wine:
He reel'd as if he ſcarce could ſtand,
But Cupid led him by the hand.
The poet, with a gentle look,
A chaplet from his temples took,
That did of ſweet Anacreon breathe,
And ſmiling gave to me the wreath.
I from his brow the flow'ry crown
Receiv'd, and plac'd it on my own:
Hence all my woes unnumber'd flow,
E'er ſince with raging love I glow.

ODE LXVI.

By Dr. Broome.

ON APOLLO.

ONCE more, not uninſpir'd, the ſtring
I waken and ſpontaneous ſing:
No Pythic laurel-wreath I claim,
That liſts ambition into fame:
My voice unbidden tunes the lay;
Some god impells and I obey.
Attend, ye groves! the muſe prepares
A ſacred ſong in Phrygian airs;
Such as the ſwan expiring ſings,
Melodious, by Cayſter's ſprings,
Where liſtening winds in ſilence hear,
And to the gods the muſic bear.
Celeſtial muſe! attend and bring
Thy aid, while I thy Phœbus ſing;
To Phœbus and the muſe belong
The laurel, lyre, and Delphic ſong.
Begin, begin the lofty ſtrain!
How Phœbus lov'd, but lov'd in vain!
How Daphne fled his guilty flame,
And ſcorn'd a god that offer'd ſhame.
With glorious pride his vows ſhe hears,
And heaven, indulgent to her prayers,
To laurel chang'd the nymph, and gave
Her foliage to reward the brave.
Ah! how, on wings of love convey'd,
He flew to claſp the panting maid!
Now, now o'ertakes!—but heaven deceives
His hope—he ſeizes only leaves.
Why burns my raptur'd breaſt? ah! why?
Ah! whither ſtrives my ſoul to fly;
I feel the pleaſing frenzy ſtrong,
Impulſive to ſome nobler ſong:
Let, let the wanton fancy play,
But guide it, leſt it devious ſtray.
But, O! in vain—my muſe denies
Her aid, a ſlave to lovely eyes;
Suffice it to rehearſe the pains
Of bleeding nymphs and dying ſwains;
Nor dare to wield the ſhafts of love
That wound the gods, and conquer Jove.
I yield! Adieu the lofty ſtrain!
Anacreon is himſelf again:
Again the melting ſong I play,
Attemper'd to the vocal lay,
See! ſee! how, with attentive ears,
The youths imbibe the nectar'd airs!
And quaff, in bow'ry ſhades reclin'd,
My precepts, to regale the mind.

ODE LXVII.

ON LOVE.

To love I wake the ſilver ſtring,
And of his ſoft dominion ſing:
A wreath of flowers adorns his brow,
The ſweeteſt, faireſt flowers that blow:
All mortals own his mighty ſway,
And him the gods above obey.

ODE LXVIII.

THE SUPPLICATION.

QUEEN of the woodland chaſe, whoſe darts
Unerring pierce the mountain-harts,
Diana chaſte, Joves daughter fair,
Suppliant to thee I breathe my prayer.
Deſcend, propitious to my vow,
To where the ſtreams of Lethe flow:
In pity aid a hapleſs race,
Bright goddeſs of the woodland chaſe;
With holy awe they own thy ſway,
And meek in reverence obey.

ODE LXIX.

ARTEMON.

A Fragment.

Now Artemon, a favourite name,
Inſpires Eurypyle with flame:
An upſtart of ignoble blood,
Who plodded late in ſhoes of wood;
And round his waiſt, inſtead of veſt,
Wore a cow's ſtinking hide undreſt,
Which might, on fit occaſion, yield
Rank covering for a rotten ſhield.

This wretch, with other wretches vile,
Liv'd hard by drudgery and toil;
Oft ſentenc'd cruel pains to feel
At whipping-poſt, or racking-wheel:
But now, conſpicuous from afar,
He rides triumphant in his car;
With golden pendants in his ears,
Aloft the ſilken reins he bears,
Proud, and effeminately gay:
His ſlaves an ivory ſkreen diſplay,
To guard him from the ſolar ray.

ODE LXX.

TO HIS BOY.

Boy, while here I ſit ſupine,
Bring me water, bring me wine;
Bring me, to adorn my brow,
Wreaths of flowers that ſweetly blow:
Love invites——O! let me prove
The joys of wine, the ſweets of love.

NOTES ON THE ODES.

ODE I.

This ode is, with great reaſon and propriety, placed at the head of theſe beautiful little poems: for love, the argument, is in a good meaſure the argument of all the reſt.—The invention of it has been eſteemed ſo happy and gallant, and the turn ſo delicate, that the beſt maſters of antiquity have copied this excellent original. Horace had it in view, Ode 12. Book 2.

Nolis longa feræ bella Numantiæ,
Nec dirum Hannibalem, nec Siculum mare,
Pæno purpureum ſanguine, mollibus
Aptari citharæ modis.

Dire Hannibal, the Roman dread,
Numantian wars which rag'd ſo long,
And ſeas with Punic ſlaughter red,
Suit not the ſofter lyric ſong.
Lord Chief Baron Gilbert.

Ovid has imitated it in ſeveral of his elegies: In the following diſtich he ſeems to have comprehended the ſubſtance of the whole ode. *Eleg.* 12. *Book* 3.

Cum Thebæ, cum Troja forent, cum Cæſaris acta;
Ingenium movit ſola Corinna meum.

Though Thebes and Troy remain, and Cæſar's praiſe,
Illuſtrious themes that might my fancy raiſe,
Corinna only can inſpire my lays.

Bion of Smyrna has beautifully imitated this ode at the end of the fourth idyllium.

Ην μην γαρ βρατον αλλον η αθανατον τινα μελπω,
Καμβαινει μευ γλοσσα, και ὡς παρος κε τ' ἀει-
δει. [δω,
Ην δ' αυτ' ες τον Ερωτα και ες Λυκιδαν τι μελισ-
Και τοκα μοι ὀμιροισα δια σοματος ρεει ωδα.

To praiſe a hero, when I ſtrike the lyre,
Or nobly daring to ſome god aſpire,
In ſtrains more languid flows the nerveleſs ſong,
The fault'ring accents die upon my tongue;
But when with love or Lycidas I glow,
Smooth are my lays, the numbers ſweetly flow.

Ver. 3. Agamemnon and Menelaus, the chief commanders at the ſiege of Troy. By the Atridæ the poet means the Trojan, and by Cadmus the Theban war.

Ver. 9. M. Dacier judiciouſly obſerves, in his notes on the twenty-ſixth ode of the firſt book of Horace, that the poets, when they would celebrate any extraordinary ſubject, were wont to ſay they had new-ſtrung their lyre.

— —Hunc fidibus novis,
Hùnc Leſbio ſacrare plectro,
Teque tuaſque decet ſorores.

To ſound his praiſe, O muſe, is thine,
In concert with the tuneful nine,
On the fam'd Leſbian lyre new-ſtrung,
In numbers ſweet, as old Alcæus ſung.

Ver. 14. The Greek word, *αντιφονειν*, is very ſtrong and expreſſive, and means, "to return a contrary ſound." To underſtand this paſſage clearly, we muſt imagine that Anacreon is ſinging and playing upon the lyre; which, inſtead of anſwering to his voice in heroic numbers, returned only the ſounds of love. Tibullus has a ſimilar expreſſion, Eleg. 4. Book 3.

Tunc ego nec cithara poteram gaudere ſonora,
Nec ſimiles chordis reddere voce ſonos.

No more I tun'd the loud reſounding ſtring,
Nor to the lyre's ſweet melody could ſing.

Ver. 15.

——Heroum clara valete
Nomina, non apta eſt gratia veſtra mihi.
Ovid, Eleg. 1. *Book* 2.

Ye heroes of immortal fame, adieu!
Ill ſuits the warbling of my lyre with you.

ODE II.

Phocylides has copied great part of this ode in his admonitory poem:

Ὅπλον ἑκάστῳ κεῖται Θεὸς φύσιν· πτεροφοίτοις
Ὄρνισι μὲν πολλὴν ταχυΐην· ἀλκὴν τε λέουσι,
Ταύροις δ' αὐτοχύτοις κεράεσσιν, κέντρα μελίσσαις·
Ἐμφυλον ἀλκὰρ ἔδωκε· λόγος δ' ἐρυμ' ἀνθρώποισι.

Arms to all creatures God's abundant care
Affords; light pinions to the birds of air;
The lordly lion boasts his matchless might;
The bull's bright horns are terrible in fight;
The sting sharp-pointed is the bee's defence;
The shield and buckler of mankind is sense.

Ver. 10. The Greek word φρονημα generally signifies prudence; and so Stephens has translated it: But as it would be highly absurd to suppose that nature had forgot that useful ingredient in the composition of the ladies, we must look out for another interpretation. Φρονημα equally signifies magnanimity. It is similar to an expression of Tully, in Off. 1. 19.—"Elatio et magnitudo animi:" And as Mr. John Addison in his note on this passage observes, "By courage, when applied to man, is properly meant that superiority "of mind, which is man's peculiar characteristic "and charter of dominion."

Ver. 14. Coluthus, in his poem on the Rape of Helen, has the same thought, speaking of Venus:

Μουνη Κυπρις αναλκις ενη Θεος· ὁ βασιλευων
Κοιρανιην· ὑδ' ἐγχος ἀρηιον, ὁ θελος ἑλκω·
Αλλα τι δειμαινω περιφησιον· αντι μεν αιχμης,
Ὡς θυον ἐγχος ἐχουσα μειλιχρονα δεσμον ἐρωτων.

Of all the gods, no regal sway I bear,
Nor, weak and timid, wield the martial spear;
Yet great my pow'r, for my resistless darts
Are smiles and loves that triumph over hearts.

And a little further,

Ἐργα μοθων ουκ οἶδα· τι γαρ σακεων Ἀφροδιτη;
Ἀγλαιη πολυ μαλλον ἀριζηλοι γυναικες.

No fights I know, averse to war's alarms;
Idalian Venus has no need of arms:
The fair are irresistible in charms.

Nonnus introduces Venus speaking after the same manner:

Ἐγχος εμον πτελε καλλος, εμον ξιφος απλε το μορφη.

Resistless beauty for a sword I wear,
And charms more piercing than the pointed spear.

The Romans were so fully convinced of the power of beauty, that the word *fortis*, strong or valiant, signifies likewise fair or handsome; as appears by two passages in Plautus.——Bacchid. Act 2. Sc. 2. 38. "Sed Bacchis etiam tibi fortis visa est? Et Miles Glor. Act. 4. Sc. 3. 13. Ecquid fortis visa est?

ODE III.

This, as Longepierre observes, is one of the most beautiful of Anacreon's odes. Nothing can be more ingenious than the fiction, which is something similar to the fable of the Serpent and the Labourer.

Ver. 4 Two constellations near the northern pole Bootes is also called Arctophylax, or the Bear-keeper. Aratus, in his Phenomena, has three lines perfectly similar to this passage of Anacreon.

Ἐξοπιθεν δ' Ελικης φερεμεν ελαουνι εοικως
Ἀρκτοφυλακ-α, τον ῥ' ανδρες επικλειουσι Βοωτην,
Οὐνεκ' ἀμαξαιης ὑπαφωμενος εἰδεται Ἀρκτῳ.

Behind, and seeming to urge on the Bear,
Arctophylax, on earth Boötes nam'd,
Sheds o'er the arctic car his silver light.

Ver. 16. The ancients placed the seat of love in the liver, as might be proved from several passages.

Cum tibi fervens amor et libido,
Quæ solet matres furiare equorum,
Sæviet circa jecur ulcerosum.
Hor. B. 1. Ode 2.

And burning love and lothsome lust,
Such as the madding fillies fires,
Still in thy canker'd liver rage. *Duncombe.*

Theocritus, Idyll. 11. ver. 16.

—το οἱ ἡπαλι παξις βελεμνον.

—She in his liver fix'd a dart.

And in the thirteenth Idyl. ver. 72. speaking of Hercules, he says,

—— Χαλεπος γαρ ἐσω θεος ἡπαρ αμυσσειν.

For in his liver love had fix'd a wound.

There is an epigram in the seventh book of the Anthalogia, to the same purpose.

Ληξον, Ἐρως· κραδιης τε και ἡπαλος ει δ' ἐπιθυμεις
Βαλλειν, αλλο τι μοι των μελεων μελαθα.

Cease, love, to wound my liver and my heart:
If I must suffer, choose some other part.

ODE IV.

Ver. 2. Madam Dacier observes, that the ancients, by way of indulgence, used to repose themselves on large heaps of fragrant herbs, leaves, and flowers.

Ver. 7. Seneca, in his Hercules Furens, Act 1. Scene 2. Ver. 177. has the same sentiment.

——Properat cursu
Vita citato, volucrique die
Rota præcipitis vertitur anni.

With rapid motion, never at a stay,
Life swiftly posts along, and, day by day,
The year's great wheel incessant rolls away.

Ver. 14. Anthologia, Book 7.

Εν ζωοισι τω τεφνα τα Κωπριδος· εν δ' Αχερουσι
Οστεα και στυγιη, παρθενε, κεισομεθα.

Phyllis, while living, let us life employ
In the ſoft tranſports of Idalian joy:
For when we die, (and die alas! we muſt)
All that remains is aſhes, bones, or duſt.

Nos ubi decidimus
Quo pius Æneas quo Tullus dives, et Ancus,
Pulvis et umbra fumus. *Hor.*

But to the dreary realms below
Who ſink, muſt no return for ever know!
Enroll'd among the mighty dead,
Our body will be duſt, our ſoul a ſhade.
Duncombe.

There are two epigrams in the ſecond book of the Anthologia, very ſimilar to this paſſage of Anacreon:

Και πινε, και, τερπνε, Δημοκρατες· ω γαρ εις αει
Πιομεθ', ωδ αιει τερψιος ἑξομεθα.
Και στεφανως κεφαλος πυκασωμεθα, και μυρισωμεν
Αυτως, πριν τυμβοις ταυτα φερειν ἑτερους.
Νυν εν εμοι πιετω μεθυ το πλεον οσσα τάμια.
Νεκρα δε Δευκαλιων αυτα κατακλυσατω.

Drink and rejoice, for let us wiſely think,
My friend, we muſt not always laugh and drink:
Our heads we'll crown with flow'rs and rich perfumes
Before they're vainly laviſh'd on our tombs.
Cares and anxieties I now reſign,
Or drown them in a mighty bowl of wine.
When dead, Deucalion may, if he thinks good,
Drench my cold carcaſe in a wat'ry flood.

Με μυρα, μη στεφανως λιθιναις σηλαιτι χαριζε,
Μηδε το πυρ φλεξης· εις κενον ἡ δαπανη.
Ζωντι μοι, οτι θελεις χαρισαι.

On the cold tomb no fragrant unguents ſhed,
No flow'ry chaplets unavailing ſpread,
Nor kindle living lamps to light the dead.
Vain are theſe honours; rather while I live,
To me the ſweet, the rich oblation give.

Of theſe cuſtoms of the ancients of pouring ſweet unguents on the tombs of the dead, and crowning them with flowers, &c. See Potter's Antiquities.

Ver. 22. The ancients believed, that the happy ſouls in the Elyſian fields enjoyed thoſe pleaſures which they moſt delighted in when living. Thus Virgil,

Pars pedibus plaudunt choreas, et carmina dicunt.

Thoſe raiſe the ſong divine, and theſe advance
In meaſur'd ſteps to form the ſolemn dance. *Pitt.*

Tibullus, Book 1. Eleg. 3.
Sed me, quod facilis tenero ſum ſemper amori,
Ipſa Venus campos ducet in Elyſios:
Hic choreæ, cantus vigent, &c.

Then love my ghoſt (for love I ſtill obey'd)
Will grateful uſher to th' Elyſian ſhade:
There joy and ceaſeleſs revelry prevail,
There ſoothing muſic floats on ev'ry gale;
There painted warblers hop from ſpray to ſpray,
And, wildly-pleaſing, ſwell the gen'ral lay:
There ev'ry hedge, untaught, with caſſia blooms,
And ſcents the ambient air with rich perfumes:
There ev'ry mead a various plenty yields;
There laviſh Flora paints the purple fields:
With ceaſeleſs light a brighter Phœbus glows,
No ſickneſs tortures, and no ocean flows:
But youths aſſociate with the gentle fair,
And ſtung with pleaſure, to the ſhades repair:
With them love wanders whereſoe'er they ſtray,
Provokes to rapture, and inflames the play:
But chief the conſtant few, by death betray'd,
Reign, crown'd with myrtle, monarchs of the ſhade.
Grainger.

I hope the reader will not think this quotation tedious, as the paſſage is admirably tranſlated, and contains a beautiful deſcription of Elyſium.

ODE V.

The Grecians eſteemed the roſe more than any other flower, and admitted it to all their entertainments, of which there needs no other proof than this ode of Anacreon, and likewiſe the fifty-third, where he praiſes this beautiful flower with the greateſt addreſs and delicacy. The Romans equally valued it. Horace ſays,

Hunc vina et unguenta, et nimium breves
Flores amenæ ferra jube roſæ.

Here wine, and oil, and roſes bring,
Too ſhort-liv'd daughters of the ſpring.
Duncombe.

His complaint of the ſhortneſs of the roſe's duration is an artful and delicate manner of praiſing that flower.

Ver. 5. The ancients uſed wreaths of flowers, and perfumes at their entertainments, not only for pleaſure, but becauſe they imagined that odours prevented the wine from intoxicating them.

ODE VI.

This ode, in the original bears the ſame title as the former, Εις ῥοδον, On the Roſe, But, as it is univerſally agreed, to be a miſtake of the copyiſts, the editors of Anacreon have given it various appellations. Barnes calls it Κωμος, which he tranſlates *Feſtivium amatoria*, The Feſtivial of Love. Dr. Trapp intitles it Συμποσιον. *Convivium*, The Banquet. Madam Dacier would have it called The Maſquerade: but I agree with Longepierre, who thinks it ought to be ſtyled The Party of Pleaſure.

Ver. 4. The hyrſus was a ſpear enriched with wreaths of ivy, and ſometimes of vine-leaves: It was uſed as a weapon by thoſe who attended the revels of Bacchus.

Ver. 10. Mr. Longepierre quotes a moſt beautiful epigram from the ſeventh book of the Anthologia, near the end, ſimilar to this paſſage; which, I think, cannot have juſtice done it in an Engliſh tranſlation:

Κερη τις μ' εφιλησε ποθησπερα χειλεσιν ὑγροις·
Νεκταρ ειην το φιλημα· το γαρ στομα νεκταρος επ-
πει.
Νυν μεθυω το φιλημα, πολυν τον ερωτα πεπωκως.

Phyllis the gay, in robe of beauty dreſt,
Late on my lips a humid kiſs impreſt;
The kiſs was nectar which the fair beſtow'd,
For in her am'rous breath a gale of nectar flow'd.
What love, ye gods! what raptures in her kiſs!
My ſoul was drunk with ecſtaſy of bliſs.

Ver. 12. Προχεων λιγειαν ομφην, "pouring a "liquid ſound" The expreſſion is very delicate. Horace has ſomething like it, Ode 24 B. 1.

Cui liquidam pater vocem cum cithara dedit.

Who ſhar'ſt from Jove the melting voice and lyre.
Duncombe.

Ver. 14 The ancient poets always repreſented Bacchus young and beautiful. So Ovid, Metam. book 4. ver. 17.

——Tibi enim incomſumpta juventas,
Tu puer æternas, tu formoſiſſimus alto
Conſpiceris cœlo: tibi, cum ſine cornibus adſtas,
Virgineum caput eſt——

To thee eternity of youth is giv'n;
Unrivall'd in thy bloom thou ſhin'ſt in heav'n:
Conceal thy horns, and ev'ry charming grace
Of virgin beauty brightens in thy face.

ODE VII.

Ver. 2. Madam Dacier and Barnes thought, ὑακινθινη might ſignify the colour of the wand or rod; but as the hyacinth is no where deſcribed to be of any colour, the interpretation will not hold good. The thought is poetical, and worthy of Anacreon, to ſuppoſe Cupid's wand adorned with little wreaths of that delicate flower tied round it: Or perhaps, by ὑακινθινη ραβδῳ, the poet meant only a ſingle hyacinth; for ραβδος may ſignify the ſtalk or ſtem of a flower: and then the moral of this charming ode will latently inculcate the irreſiſtible force of love, in whoſe hands a flower is as powerful as his bow and arrows that are tipt with fire.

A late right reverend author, much admired for the elegance of his writings, ſeems to have had an eye to this ode when he compoſed the following lines on a fan:

Flavia the leaſt and flighteſt toy
Can with reſiſtleſs art employ:
This fan, in meaner hands, would prove
An engine of ſmall force in love;
Yet ſhe, with graceful air and mien,
Not to be told or ſafely ſeen,
Directs its wanton motions ſo,
That it wounds more than Cupid's bow;
Gives coolneſs to the matchleſs dame,
To every other breaſt a flame.

Ver. 8. His being ſtung by a ſerpent, as Madam Dacier obſerves, was to puniſh his inſenſibility, and to ſhow that love, if he would ſubmit to his dominion, would take him under his protection.

ODE VIII.

Ver. 8. Lyæus was a name given to Bacchus. It is derived from the word λυειν, to looſe or free, becauſe wine frees the mind from anxieties.

Ver. 15. Madam Dacier commends the delicacy and beauty of this ode, though in her tranſlation all the ſpirit evaporates: The two laſt lines

Μεμονωμενος δ' ὁ τλημεων Παλιν εθελον καθευδην.

Thus miſerably left alone, I wiſh'd to ſleep again;

ſhe has rendered thus: "Etant donc tout triſte de "me voir ainſi demeure ſeul, je ne trouvai point "de meilleure conſolation, que de me remettre à "dormir." There are ſome beautiful lines in Ovid's Epiſtle of Sappho to Phaon, as Mr. Pope has taught her to ſpeak, which will elucidate this paſſage of Anacreon.

O night more pleaſing than the brighteſt day,
When fancy gives what abſence takes away,
And dreſt in all its viſionary charms,
Reſtores my fair deſerter to my arms!
But when with day the ſweet deluſions fly,
And all things wake to life and joy but I,
As if once more forſaken, I complain,
And cloſe my eyes, to dream of you again.

ODE IX.

Faber ſays of this ode, that it does not ſeem to be the work of one man only, but that the Graces joined in concert with the Muſes to finiſh this beautiful little piece.

To underſtand it properly, we muſt remember, that it was a cuſtom among the ancients, when they undertook long journeys, and were deſirous of ſending back any news with uncommon expedition, to take tame pigeons along with them. When they thought proper to write to their friends, they let one of theſe birds looſe, with letters faſtened to its neck: The bird, once releaſed, would never ceaſe its flight till it arrived at its neſt and young ones. The ſame cuſtom ſtill obtains among the Turks, and in ſeveral eaſtern countries. Longepierre has a quotation from Ælian, book 6. chap. 7. which proves that the crow, Κορωνη was ſometimes employed in this office. The paſſage may be thus tranſlated: "In Egypt, near the lake "Myris, the natives ſhow the monument of a "crow, of which they give the following ac-"count: That it was brought up by one of their "kings called Marrhes, whoſe epiſtles it carried, "whereſoever he pleaſed, with greater expedi-"tion than the ſwifteſt of his meſſengers: That, "when he gave his orders, it immediately under-"ſtood which way to direct its flight, through "what country to paſs, and where to ſtop. To "recompenſe theſe ſervices, when it died, Marrhes "honoured it with a monument and an epi-"taph."

Ver. 6. 'The Greeks perfumed their birds, as we perfume our lap-dogs.' *Madam Dacier.*

Ver. 12. Bathyllus was a young Samian of great beauty, and admired by Anacreon. See Ode 29th. Horace has taken notice of this paſſion:

Non aliter Samio dicunt arſiſſe Bathyllo
Anacreonta Teium,
Qui perſæpe carvâ teſtudine flevit amorem,
Non elaboratum ad pedem. *Epod.* 14.

Such was the fate Anacreon prov'd
So fondly he Bathyllus lov'd,
Accuſtom'd his complaints to ſuit
In eaſy meaſures to the lute. *Duncombe.*

This youth was alſo a favourite of Polycrates, who erected a ſtatue to him that repreſented Apollo playing upon the lyre.

Ver. 15, 16. The poet could not pay himſelf a more delicate compliment, than by ſaying that Venus, the mother of the Graces, was glad to purchaſe a little hymn of his compoſing at the price of one of her favourite doves. This paſſage is a proof, that Anacreon wrote hymns in honour of the gods; which are all loſt, except, perhaps, part of the 50th and 52d odes to Bacchus, the 58th to Cupid, the 60th to Diana, and the 64th to Apollo. The 62d ode is alſo an hymeneal hymn.

Ver. 35. The dove praiſes the liberality of his maſter for admitting him to drink of the ſame wine as himſelf; which was an indulgence the ancients never allowed to any but their favourites. Thus Homer introduces Achilles entertaining Ajax, Ulyſſes, and Phœnix, Iliad 9. ver. 202.

With that the chiefs beneath his roof he led,
And plac'd in ſeats with purple carpets ſpread.
Then thus—Patroclus, crown a larger bowl,
Mix purer wine, and open every ſoul.
Of all the warriors yonder hoſt can ſend,
Thy friend moſt honours theſe, and theſe thy friend.
Pope.

ODE X.

The commentators obſerve, that Anacreon makes this young country man ſpeak in the Doric dialect, which was the moſt ruſtic, to ridicule the unpoliteneſs of a perſon who could be ſo inſenſible of the charms of love, as to wiſh to part with his images.

Ver. 11. In the Greek, the price offered is a drachm, an Attic coin, value about ſevenpence halfpenny Engliſh.

Ver 16. Barnes obſerves, that it was uſual for the ancient heathens to treat the images of their gods well or ill, juſt as they fancied they had been uſed by them. The modern Indians chaſtiſe their idols with ſcourges, whenever any calamity befalls them. There is a paſſage in the ſeventh Idyllium of Theocritus, ſimilar to this of our poet, where a perſon, after having made his ſupplication to the god Pan, pleaſantly enough threatens him:

Ει δ' αλλως νευσαις, καλα μεν χροα παντ' ονυχεσσι
Δακνομενος κνασαιο, κ. τ. λ.

But may'ſt thou, if thou dar'ſt my boon deny,
Torn by ſell claws on beds of nettles lie;
All the cold winter freeze beneath the pole,
Where Heber's waves down Edon's mountains roll;
And in the ſcorching heats of ſummer glow,
Where under Blemyan rocks Nile's boiling waters flow.

ODE XI.

That natural facility of thought, and that ſweet ſimplicity of expreſſion, which are ſo deſervedly admired in the writings of Anacreon, abound in the original of this beautiful ode. Horace gives us his true character, when he tells us he wrote, "non elaboratum ad pedem," in unlaboured verſe; verſe that flows with ſo much eaſe, that it ſeems to have coſt him no care or trouble. He played upon his lyre, and the numbers came; therefore he ſays of him in another place:

Nec, ſi quid olim luſit Anacreon,
Delevit ætas——— *Hor. L.* 4. *Od.* 9.

———and blithe Anacreon's ſportive lay
Still lives, in ſpite of time's deſtructive ſway.
Duncombe.

We have an imitation of this ode in an epigram of Palladas, in the 47th chapter of the 2d book of the Anthologia.

Γεραλεον με λυνκικες απασκωπ]ησι, λεγον]ες
Εις το κατοπ]ρον ὁραν λειψανον ἡλικιης.
Αλλ' εγω ει λευκας φορεω τριχας, ειτε μελαινας;
Ουκ αλεγω. βιοτῳ προς τελος ερχομενος.
Ευοδμοις δε μυροισι. και ευπε]αλοις ςεφανοισι,
Και βρομιῳ πανυ φρον]ιδας αργαλεας.

To me the wanton girls inſulting ſay,
'Here in this glaſs thy fading bloom ſurvey:'
Juſt on the verge of life, 'tis equal quite,
Whether my locks are black, or ſilver white;
Roſes around my fragrant brows I'll twine,
And diſſipate anxieties in wine.

Ver. 6. The hair was always eſteemed by the ancients the principal ornament of beauty. Apuleius has this remarkable paſſage in the ſecond book of his Mileſiacks: "Even Venus herſelf, if "ſhe was deſtitute of hair, though ſurrounded by "the Graces and Loves, would not have charms to "pleaſe her own huſband Vulcan." Longepierre quotes a paſſage from Petronius, where Eumolpus calls the hair the chief grace of beauty:

Quod ſummum formæ decus, cecidere capilli,
Vernantesque comas triſtis abegit hyems.
Nunc umbrâ nudata ſuâ jam tempora mœrunt,
Arcaque attritis nidet aduſta pilis.
O fallax natura deûm! quæ prima dediſti
Ærati noſtræ gaudia, prima rapis.
Infelix modo crinibus nitebas
Phœbo pulchrior, & ſorore Phœbi:
At nunc lævior ære, vel rotundo
Horti tubere, quod creavit unda,
Ridentes fugis & times puellas.

Ut mortem citius venire credas,
Scito jam capitis periſſe partem.

Fall'n is thy hair, for woeful winter hoar
Has ſtol'n thy bloom, and beauty is no more;
Thy temples mourn their ſhady honours ſhorn,
Parch'd like the fallow, deſtitute of corn.
Fallacious gods! whoſe bleſſings can betray;
What firſt ye give us, firſt ye take away.
Thou, late exulting in thy golden hair,
As bright as Phœbus, or as Cynthia fair,
Now view'ſt, alas! thy forehead ſmooth and plain
As the round fungus, daughter of the rain;
Smooth as the ſurface of well-poliſh'd braſs,
And fly'ſt with fear each laughter-loving laſs.
Death haſtes amain; thy wretched fate deplore;
Fall'n is thy hair, and beauty is no more.

ODE XII.

Ver. 6. The poet very judiciouſly endeavours to terrify the ſwallow with the mention of Tereus, whoſe palace, as the ancients have remarked, was carefully avoided by thoſe birds. Pliny ſays, "Arx "Regum Thraciæ, a Terei nefaſto crimine inviſa "Hirundinibus." See alſo Solinus. From this paſſage of Anacreon it ſhould ſeem, that Philomela was changed into a ſwallow, and not Progne, as Ovid and others have aſſerted.

Ver. 10. Madam Dacier ſays, that this paſſage, and another in the eight ode——

Intent on love, I ſtrive to greet
The gameſome girls with kiſſes ſweet,
And, as on pleaſure's brink I ſeem,
Wake, and, behold! 'tis all a dream.

undoubtedly furniſhed Horace with that beautiful ſentiment in the firſt ode of the fourth book:

Nocturnis te ego ſomniis
Jam captum teneo; jam volucrem ſequor
Te per gramina Martii
Campi, te per aquas, dure volubiles.

Which Mr. Pope has admirably imitated:

Thee dreſs'd in fancy's airy beam,
Abſent I follow through th' extended dream;
Now, now I ſeize, I claſp thy charms,
And now you burſt (ah cruel!) from my arms;
And ſwiftly ſhoot along the Mall,
Or ſoftly glide by the Canal,
Now ſhorn by Cynthia's ſilver ray,
And now on rolling waters ſnatch'd away.

Argentarius imitates this paſſage in an epigram, in the firſt book of the Anthologia, which begins,

Ορνι, τι μοι φιλον υ πνον αφηρπασας; ηδυ δη
Πυρρης
Ειδωλον κοιτης ωχεθ' αποπταμενον.

Invidious ſwallow, with thy horrid ſcream
Why haſt thou wak'd me from ſo ſweet a dream?
Stunn'd by thy noiſe fair Pyrrha, like the wind,
Flew from my arms, juſt yielding to be kind.

Agathias has alſo imitated it in an epigram, in the ſeventh book of the Anthologia.

Παστην εγω την νυκτα κινυρομαι· ευτε δ' επελθη
Ορθρος, ελιννυσαι μικρα χαριζομενος.
Αμφιπεριτρυζυσι χελεδονις· εις δε με δακρυ
Βαλλυσι, γλυκερον κωμα παρωσαμεναι.
Ω φθονεραι παυσασθε λαλητριδες· ε γαρ εγωγε
Την φιλομελειαν γλωσσαν απεθρισαμην.
Αλλ' Ιτυλον κλαιοιτε κατ' αρσεν, ης γοαοιτε
Εις αιπος, κρανιην αυλιν εφιζομεναι,
Βαιον ινα κνωσσοιμεν· ισως δε τις ηξει ονειρος
Ος με Ροδανθειοις πεχεσιν αμφιβαλοι.

All night I ſigh with cares of love oppreſt,
And when the morn indulges balmy reſt,
Theſe twitt'ring birds their noiſy mattins keep,
Recall my ſorrows, and prevent my ſleep;
Ceaſe envious birds, your plaintive tales to tell,
I raviſh'd not the tongue of Philomel.
In deſerts wild, or on ſome mountain's brow,
Pay all the tributary grief you owe
To Itys, in an elegy of woe.
Me leave to ſleep: in viſionary charms,
Some dream perhaps may bring Rodanthe to my arms.

ODE XIII.

Ver. 2. A young Phrygian of great beauty, beloved by Cybele the mother of the gods, who made him her prieſt, on condition that he ſhould live chaſte: but he broke his vow, and as a puniſhment, ſhe afflicted him with madneſs, in the tranſports of which he deprived himſelf of the diſtinction of his ſex, and would have killed himſelf, had not Cybele, moved with compaſſion, transformed him into a pine-tree.

Ver. 5. Claros was a city of Ionia near Colophon, rendered famous for a fountain conſecrated to Apollo, who from thence was called Clarius. Tacitus gives an account of it in the ſecond book of his Annals, where, ſpeaking of Germanicus, he ſays, "Apellitque Colophona, ut Clarii Apollinis "oraculo uteretur. Non femina illic, ut apud "Delphos; ſed certis è familiis, & ferme Mileto "accerſitus ſacerdos, numerum modo conſultan-"tium & nomina audit: tum in ſpecum degreſſus, "hauſtâ fontis arcani aquâ, ignarus plerumque li-"terarum & carminum, edit reſponſa verſibus com-"poſitis ſuper rebus quas quis mente concepit.— He landed at Colophon, to conſult the oracle of Apollo at Claros. The perſon that delivers the oracles there, is not a woman, as at Delphos, but a man ſelected out of certain families, and frequently from Miletus. This prieſt only inquires the number and names of thoſe that conſult the deity. After that, having entered his grotto, and drank of the myſterious water, he anſwers the queſtion of his inquirers in verſe, though he is generally illiterate, and unacquainted with the muſes.

Ver. 6. The Greek is δαφνηφορου, laurel-wearing Phœbus; becauſe when Daphne eſcaped his purſuit by being changed into a laurel, he conſecrated that tree to himſelf. *Ovid Metamorph.*

Cui Deus, At quoniam conjux mea non potes eſſe,
Arbor eris certe, dixit, mea: ſemper habebunt
Te coma, te citharæ, te noſtræ, Laure, pharetræ.

To whom the God—" Becauſe thou canſt not be
" My miſtreſs, I eſpouſe thee for my tree:
" Be thou the prize of honour and renown,
" The deathleſs poet and the poem crown."

Dryden.

ODE XIV.

The ſubject of this ode is to ſhow the irreſiſtible nature of love. In this little piece, Anacreon diſcovers a wonderful delicacy of invention: Nothing can be imagined more entertaining than this combat, the preparation for it, the iſſue of it, and that natural and admirable reflection with which it concludes.

Ver. 12. Anacreon arms himſelf with a ſpear and ſhield, to contend with love. In an ancient epigram of the Anthologia, book 7. we have an account of a combatant, who put on the breaſtplate of reaſon, to withſtand the attacks of this dangerous enemy

Ωπλισμαι προς ερωτα περι στερνοισι λογισμον,
Ουδε με νικησει, μαινος εων προς ενεμ.
Θνατος δ' αθανατω συνελευσομαι· ην δε βοηθον
Βακχον εχη, τι μοιρος προς δυ' εγω δυναμαι;

With love I war, and reaſon is my ſhield,
Nor ever, match'd thus equally, will yield:
If Bacchus joins his aid, too great the odds;
One mortal cannot combat two ſuch gods.

Ver. 19, 20.
The author of an epigram, in the ſeventh book of the Anthologia, complains, in like manner, that love had exhauſted his quiver by ſhooting at him.

Μηκετι τις στηξειε Ποθε βελος· ιοδοκην γαρ
Εις εμε λαος Ερως εξεκενωσεν ολην.

No more let Cupid's ſhafts the world appal,
For in my boſom he has lodg'd them all.

Ver. 21. This thought is very beautiful and ingenious. It is taken from an ancient piece of gallantry, which ought not to be paſſed over in ſilence The heroes of antiquity, when in any deſperate engagement they found their darts ſpent, their ſtrength exhauſted, and ſaw no proſpect of ſurviving long, would collect all their ſpirits and ſtrength, and ruſh headlong with amazing impetuoſity upon their enemies, that even in death the weight of their bodies, thus violently agitated, might bear down their adverſaries. Examples of this kind of heroiſm are frequent in Lucan. Book 3d, ſpeaking of a brave veteran:

——Tum vulnere multo
Effugientem animam lapſus collegit in artus
Membraque contendit toto, quicunque manebat,
Sanguine, et hoſtilem, defeſſis robore membris,
Inſiliit ſolo nociturus pondere puppin.

B. 3. Ver. 622.

And, book 6. ver. 204. ſpeaking of Scæva:

——tot munera belli
Solus obit, denſamque ferens in pectore ſylvam
Jam gradibus feſſis, in quem cadat, elegit hoſtem.

Encumber'd ſore with many a painful wound,
Tardy and ſtiff he treads the hoſtile round;
Gloomy and fierce his eyes the crowd ſurvey,
Mark where to fix, and ſingle out the prey.

Rowe.

ODE XV.

Ver. 1. Gyges was the favourite of Candaules, king of Lydia, whoſe queen was remarkably beautiful, and paſſionately admired by her huſband. In his vanity, he extolled her charms above meaſure to Gyges, and, to convince him of her beauty, determined to ſhow her to him naked; which he effected, but not without the queen's diſcovering that affront; who next morning ſent privately for Gyges, and reſolutely told him, he muſt either ſuffer immediate death for what he had done, or diſpatch Candaules, and take her and the kingdom of Lydia for his recompenſe. The choice was difficult, as he greatly valued his maſter: However, the love of life prevailed—he ſtabbed Candaules, married the queen, and took poſſeſſion of the kingdom.

Ver. 8. There is an epigram in the ſecond book of the Anthologia, that has the ſame turn:

Πινε, και ευφραινε· τι γαρ αυριον η τι το, μελλον,
Ουδεις γινωσκει· μη τρεχε, μη κοπια.
Ως δυνασαι χαρισαι, μεταδος, φαγε, ζητα λογιζε,
Το ζην τε μη ζην ωδεν ολως απεχει.
Πας ο βιος τοιοσδε βροτην μονον αν προλαβοι τις.
Αν δε ζανης, ἑτερε παντα, συ δ' ωδεν εχεις.

Ceaſe from thy cares and toils, be ſweetly gay,
And drink—to-morrow is a diſtant day:
Improve on time; to bliſs each moment give;
Not to enjoy this life, is not to live:
Our goods are now our own, but when we die
They come to others, whilſt in duſt we lie,
And then, alas! have nothing to enjoy.

Horace expreſſes himſelf in the ſame manner, Book 1. Ode 9.

Quid ſit futurum cras fuge quærere: et
Quem ſors dierum cumque dabit, lucro
Appone: nec dulces amores
Sperne puer, neque tu choreas;
Dum virenti canities abeſt
Moroſa——

To-morrow and her works defy;
Lay hold upon the preſent hour,
And ſnatch the pleaſures paſſing by,
To put them out of fortune's pow'r
Nor love, nor love's delights, diſdain,
Whate'er thou gett'ſt to-day is gain. *Dryden.*

ODE XVI.

Ver. 1. Anacreon alludes to the famous war of the ſeven captains againſt Thebes, occaſioned

by Eteocles, the ſon of Œdipus and Jocaſta, refuſing his brother Polynices his ſhare in the government, though they had previouſly agreed, after their father's death, to rule alternately year by year. Æſchylus wrote a tragedy on this ſubject.

Ver. 3. Ovid has imitated this paſſage—Amor. L. 2. Eleg. 18.

Vincor, et ingenium ſumptis revocatur ab armis,
Reſque domi geſtas, et mea bella cano.

I'm conquer'd, and renounce the glorious ſtrain
Of arms and war, to ſing of love again:
My themes are acts which I myſelf have done,
And my muſe ſings no battles but my own.

Ver. 9. Nonnus calls the eyes the archers of love, ακοντιστηρες ερωτων: and there is ſomething ſimilar to this in an epigram of the Anthologia, book 7.—which, ſpeaking of love, ſays,

Ου με λεληθας,
Τοξοτα, Ζηνοφιλας ομμασι κρυπτομενος.

Inſidious archer, not unſeen you lie,
Though ambuſh'd cloſe in Zenephelia's eye.

ODE XVII.

This elegant ode is quoted by Gellius, who ſays it was ſung and played upon inſtruments at an entertainment where he was preſent.

Ver. 9. The poet alludes to the conſtellations, which Vulcan deſcribed on the ſhield of Achilles. See Homer's Iliad, book 18.

There ſhone the image of the maſter-mind:
There earth, there heav'n, there ocean he deſign'd;
Th' unweary'd ſun, the moon completely round,
The ſtarry lights that heaven's high convex crown'd,
The Pleiads, Hyads, with the Northern Team,
And great Orion's more refulgent beam,
To which, around the axle of the ſky,
The Bear revolving points his golden eye,
Still ſhines exalted on th' ethereal plain,
Nor bathes his blazing forehead in the main.
Pope.

Ver. 10. Anacreon calls Orion, στυγνον, odious, becauſe he is the forerunner of tempeſts, and therefore dreadful to mariners. Horace calls him *infeſtus*, Epode 15.

Dum pecori lupus, et nautis infeſtus Orion.

As long as wolves purſue the fearful ſheep,
And ſtern Orion rages o'er the deep.

ODE XVIII.

Ver. 19. It is not without reaſon that Anacreon, after having mentioned Venus, introduces love among the graces; being ſenſible, that, though beauty alone might pleaſe, yet, without the aid of other charms, it could not long captivate the heart.

Καλλος ανευ χαριτων τερπει μονον· ὃ κατεχει δε,
Ὡς ατιζ αγκιστρ' ηλεμενον δελεαρ.

Beauty without the graces may impart
Charms that will pleaſe, not captivate the heart;
As ſplendid baits without the bearded hook
Invite, not catch, the tenants of the brook.

Ver. 23. The poet deſires that Apollo may not be deſcribed upon his bowl, becauſe he was ſo unfortunate as to kill his favourite Hyacinthus, as he was playing with him at quoits.

ODE XIX.

Ver. 5. The original is, Πινει θαλασσα δ' αυρας, 'The ſea drinks up the air.' All the commentators are ſilent here, except Dr. Trapp, who owns he did not underſtand the expreſſion. Might I venture to make an eaſy alteration of the text, I would read, Πινει θαλασσ' αναυρους, 'The ſea drinks up the rivers.' See Ode vii. Δια δ' ὀξεων μ' αναυρων, 'Through rapid rivers,' or 'torrents.' It is likewiſe uſed in the ſame ſenſe by the beſt authors. Moſchus, Idyllium 2. 31. See alſo Hoelzinus on Apollonius Rhodius, Book 1. 9. This emendation makes the ſenſe full and complete.

Ver. 10. The moon is ſaid to drink up the ſun, becauſe ſhe borrows her light from that luminary.

ODE XX.

Ver. 4. Niobe was the daughter of Tantalus, king of Phrygia, and wife of Amphion, king of Thebes, by whom, according to Homer, having ſix ſons and ſix daughters, ſhe became ſo proud of her offspring and high birth, that ſhe had the vanity to prefer herſelf to Latona, the mother of Apollo and Diana, who, to revenge the affront offered to their parent, in one day ſlew all her children; upon which Niobe was ſtruck dumb with grief, and remained ſtupid. For that reaſon, the poets have feigned her to be turned into a ſtone. The ſtory is told by Ovid in the ſixth book of the Metamorphoſes; but perhaps better by Pope, in his tranſlation of the twenty-fourth book of the Iliad, where Achilles is introduced thus ſpeaking to Priam:

Nor thou, O father! thus conſum'd with woe,
The common cares that nouriſh life forego.
Not thus did Niobe, of form divine,
A parent once whoſe ſorrows equall'd thine;
Six youthful ſons, as many blooming maids,
In one ſad day beheld the Stygian ſhades;
Theſe by Apollo's ſilver bow were ſlain,
Thoſe Cynthia's arrows ſtretch'd upon the plain:
So was her pride chaſtis'd by wrath divine,
Who match'd her own with bright Latona's line:
But two the goddeſs, twelve the queen enjoy'd;
Thoſe boaſted twelve the avenging two deſtroy'd.
Steep'd in their blood, and in the duſt outſpread,
Nine days neglected lay expos'd the dead;
None by to weep them, to inhume them none,
(For Jove had turn'd the nation all to ſtone)
The gods themſelves, at length relenting, gave
Th' unhappy race the honours of a grave.
Herſelf a rock (for ſuch was heaven's high will)
Through deſerts wild now pours a weeping rill;

Where, round the bed whence Acheloüs ſprings,
The watery fairies dance in mazy rings,
There high on Sipylus's ſhaggy brow
She ſtands, her own ſad monument of woe;
The rock for ever laſts, the tears for ever flow.
Pope.

There are two ſhort epigrams in the Anthologia, which perhaps the reader will be glad to ſee in Engliſh.

Ὁ τυμβος ὁτος ενδον εκ εχει νεκρον.
Ὁ νεκρος ὁτος εκτος εκ εχει ταφον.
Αλλ' αυτος αυτε νεκρος εϛι και ταφος.

This weeping tomb within no corſe contains;
This weeping corſe without a tomb remains:
For, by a ſtrange irrevocable doom,
This image is the carcaſe and the tomb.

Εκ ζωης με Θεοι τευξαν λιθον· εκ δε λιθοιο
Ζωην Πραξιτελης εμπαλιν ειργασα[το.

I once was Niobe, and fill'd a throne,
Till fate ſevere transform'd me into ſtone:
Behold the change which mimic art can give!
From ſtone Praxiteles has made me live.

I cannot conclude my notes on this ode without firſt obſerving, that this gallant original has been copied by ſeveral maſters. I ſhall produce one example, becauſe it is the ſhorteſt, which is an epigram of Dionyſius the ſophiſt.

Ειθ' ανεμος γενομην ϛυ δε γε ϛειχηϛα παρ' αυγας,
Ϛτηθεα γυμνωσαις, και με πνεονϛα λαβοις.
Ειθε ροδον γενομην ὑποπορφυρον, οφρα με χερϛιν
Αραμενη, κομιϛαις ϛηθεϛι χιονϛοις
Ειθε κρινον γενομην λευκοχροον, οφρα με χερϛιν
Αραμενη, μαλλον ϛης χρυτης κορϛης.

I wiſh myſelf a gentle breeze to blow,
O'er your fair boſom unconfin'd I'd flow,
And wanton on thoſe little hills of ſnow.
I wiſh myſelf a roſe in purple dreſt,
That you might place me on your ſnowy breaſt.
I wiſh myſelf a lily, lovely fair,
That I might kiſs your ſkin, and gather whiteneſs there.

ODE XXI.

Ver. 2. The Greek is, πιειν αμυϛι. Amyſtis, as Madam Dacier obſerves, was a manner of drinking among the Thracians, ſo called from their ſwallowing down a certain quantity of liquor without fetching breath, or ſhutting the mouth. Horace takes notice of it in Book 1. Ode 39.

"Neu multi Damalis meri
"Baſſum Threiciâ vincat amyſtide."

Baſſus ſhall Damalis o'ercome,
And drain the goblet at a draught.
Duncombe.

Ver. 9. The reflection the poet here makes is exceedingly natural, beautiful, and ſtrong; "When "love has once got poſſeſſion of the heart, all ex- "terior remedies will have no effect;" agreeably to the concluſion of the fourteenth ode:

All defence to folly turns,
When within the battle burns.

ODE XXII.

This ode is by Anacreon addreſſed to Bathyllus; but the tranſlator has, with more decency and gallantry, applied it to a lady.

Ver. 10. The original is, Πηγη ῥεουϛα πειθυς, *a Fountain rolling Perſuaſion*, than which nothing can be more delicate or poetical, as moſt of the commentators have obſerved.

Longepierre quotes a beautiful epigram from the Anthologia, book 1. ſimilar to this ode; where the god Pan is ſuppoſed to ſpeak.

Ερχευ και κατ' εμαν ἱδευ πιτυν, ἁ το μελιχρον
Προς μαλακως εχει κεκλιμενα ζεφυρῳ·
Ηνι δε και κρηνιϛμα μελιϛαγες ενθα μελιϛοδων
Ἡδυν εφεμαιοις ὑπνον αγοι καλαμοις.

Reſt here beneath my ſhady pine reclin'd,
Whoſe tall top ſweetly murmurs to the wind;
Here too a brook mellifluous flows along,
And woos me with its ever gurgling ſong;
Here on my ſolitary pipe I play,
Or ſweetly ſleep the tranquil hours away.

ODE XXIII.

One cannot but be ſurpriſed at the wretched taſte of Faber, who has rejected this ode as ſpurious, and not Anacreon's, when perhaps it is not inferior in beauty to the beſt of them; as Barnes and Trapp have amply proved by explaining a Greek idiom, with which it is ſcarce worth while to trouble the Engliſh reader.

Ver. 3, 4. Theſe words ſeem to allude to an anecdote in the hiſtory of Anacreon, which I ſhall explain. Stobæus tell us, that Anacreon, having received a preſent of five talents of gold from Polycrates, tyrant of Samos, was ſo embarraſſed with cares and ſolicitudes about his treaſure, that he could not ſleep for two nights ſucceſſively: Whereupon he ſent back the preſent, with this apology to his patron, 'That, however valuable the ſum 'might be, it was not a ſufficient price for the 'trouble and anxiety of keeping it."

ODE XXIV.

Ver. 7. Tibullus ſays, "Ite procul durum curæ "genus, ite labores."

Hence all ye troubles, vaniſh into air,
And all the wrinkled family of care.

Macedonius concludes an epigram with this diſtich, Anthologia, book 1.

Την γαρ Ανακρεοντος ενι παραπιδεσσι φυλασσω
Παρρασιην, ὁτι δει φροντιδα μη κατεχειν.

I like Anacreon's counſel wond'rous well,
To let no troubles in my boſom dwell.

Ver. 13, 14. Julian, in an epitaph he compoſed

on Anacreon, makes him repeat the same lesson after he was dead.

Πολλακι μεν τοδ' ειπα, και εκ τυμβου δε βοησω·
Πινετε, πριν ταυτην αμφιπαλησθε κονιν.

What oft alive I sung, now dead I cry
Loud from the tomb, " Drink, mortals, ere you
" die."

ODE XXV.

Ver. 1, 2.

Dissipat Evius cutas edaces. *Hor. B.* 2. 11.

Th' enlivening god will fordid care refine.
Duncombe.

——neque aliter
Mordaces diffugiunt sollicitudines. *Book* 1. 18.

'Tis wine, wine alone, that can drown ev'ry care.
Duncombe.

ODE XXVI.

This ode, as Longepierre observes, is in the same style as the two preceding, and the next ensuing. There is a fragment of Bacchylides remaining, which has great affinity to these four, but chiefly to this very ode.

Γλυκει αναγκη σευομενα κυλικων
Θαλπησι θυμον Κυπριδος·
Ελπις δ' αιθυσσει φρενας
Αναμιγνυμενα Διονυσιοισι δωροις,
Ανδρασι δ' υψοβαλω
Πεμπει μεριμνας.
Αυλος μεν πολεων
Κρηδεμνον λυει.
Πασι δ' ανθρωποις
Μοναρχησειν δοκει.
Χρυσω δε ελεφανθ τε
Μαρμαιρουσιν οικοι.
Πυροφοροι δε κατ αιγληεντα
Νηες αγουσιν απ' Αιγυπτου
Μεγιστον πλουτον,
Ως πινοντος ὁρμαινει κεαρ.

When the rosy bowl we drain,
Gentle love begins to reign:
Hope, to human hearts benign,
Mingles in the friendly wine,
And with pleasing visions fair
Sweetly dissipates our care.
Warm with wine we win renown,
Conquer hosts, or storm a town,
Reign the mighty lords of all,
And in fancy rule the ball:
Then our villas charm the sight,
All with gold and ivory bright;
Ships with corn from Egypt come,
Bearing foreign treasures home:
Thus each bliss that fills the soul,
Luxuriant rises from the bowl.

Ver. 5, 6.

Pastores hederâ crescentem ornate poetam.
Virg.

With ivy wreaths your youthful poet crown.

On which passage Servius remarks, that poets are crowned with ivy, as being consecrated to Bacchus; either because they are enthusiasts, like the Bacchanals, or because ivy, being an evergreen, is a symbol of that eternity which they acquire by their compositions. Horace says,

Me doctarum hederæ præmia frontium
Dis miscent superis.

An ivy crown ennobles me,
Whose darling joy is poetry. *Duncombe.*

ODE XXVII.

Ver. 5, 6. In the forty-first ode, Anacreon calls Bacchus, τον εφευρετην χορειας, The inventor of dancing. So Tibullus,

Ille liquor docuit voces inflectere cantu;
Movit et ad certos nescia membra modos.
L. 1. *Eleg.* 7.

This as swains quaff'd, spontaneous numbers came,
They prais'd the festal cask, and hymn'd thy name;
All ecstasy! to certain time they bound,
And beat in measur'd awkwardness the ground.
Grainger.

ODE XXVIII.

Ver. 10. Neither the Greeks nor Romans seem to have esteemed one particular colour of the hair more than another; for we find both black and light colour equally admired.

Ver. 19, 20. Baxter, Barnes, and Stephens, trifle ridiculously on this passage. The Greek, ὑγρον, is humid. Madam Dacier judiciously observes, 'That eyes, in which there is the least 'degree of humidity, are uncommonly vivid and 'full of fire.'

Ver. 25. The ancients, to give us an idea of a mouth perfectly agreeable, generally represented it by the lips of persuasion. Anthol. B. 7.

Καλλος εχεις Κυπριδος, Πειθως σομα σομα και ακμην
Εαρινων ωρων.

Persuasion's lips, and Cyprian charms are your's,
And the fresh beauty of the vernal hours.

Ver. 30. The Greek is, Αυγδινω, that is, marble; from Lygdos, a place in the island of Paros, famous for the finest marble. *Trapp.*

Ver. 33, 34. Ovid has a similar passage in the first book of the Metamorphoses, V. 500.

——laudat digitosque manusque,
Brachiaque, et nudos mediâ plus parte lacertos;
Si qua latent meliora putat.———

———He view'd
Her taper fingers, and her panting breast;
He praises all he sees, and for the rest,
Believes the beauties yet unseen are best.
Dryden.

ODE XXIX.

Ver. 7, 8. Anacreon describes the hair of Bathyllus black towards the head, but lower down gradually inclining to a yellow. Horace calls

this colour Myrrheus, " Myrrheum nodo cohibere crinem," book 3, ode 14. On which an ancient critic remarks, " Colorem myrrheum in " crinibus hodie quoque dicunt qui medius eſt " inter flavum et nigrum:"—Even at this day they call that hair of a myrrh colour, which is between black and yellow. Ovid deſcribes the colour of his miſtreſs's hair thus, Amor. l. 1. eleg. 14.

Nec tamen ater erat, nec erat color aureis illis;
Sed quamvis neuter, miſtus uterque color:
Qualem clivoſæ madidis in vallibus Idæ
Ardua, direpto cortice, cedrus habet.

Nor of a black, nor of a golden hue
They were, but of a dye between the two:
Such as in rindleſs cedar we behold,
The black confounded with the duſky gold.

Ver. 9, 10. Petronius ſays, " Crines ingenio ſuo " flexi, per totos ſe humeros effuderant:"—Her hair, negligently floating where it pleaſed, diffuſed itſelf over her ſhoulders.

Ver. 23. Meleager, as Longepierre obſerves, calls his miſtreſs ῥόδον ψιθύρε, *The ſweet Roſe of Perſuaſion.* Anthologia.

Ver. 43, 44. The poet could not give us a more perfect idea of the beauty of this young Samian: He tells the painter, " If he would draw " a good likeneſs of Bathyllus, he muſt copy the " portrait of Apollo, the moſt beautiful of the " gods; and if he would make a good picture of " Apollo, he muſt paint Bathyllus."

Ver. 45. Bathyllus had a celebrated ſtatue erected to his honour at Samos by Polycrates. See Apuleius.

ODE XXX.

This ode is very fine, and the fiction extremely ingenious. I believe Anacreon would inculcate that beauty alone cannot long ſecure a conqueſt; but that when wit and beauty meet, it is impoſſible for a lover to diſengage himſelf.

Madam Dacier.

Ver. 5, 6. Moſchus in his Run-away Love, makes Venus offer a reward to any one who ſhould only diſcover where he was.

——ὁ μανυσας γεῤας ἕξει
Μισθος τοι το φιλημα το Κυπριδος.——

Whoe'er ſhall bring the news, his fee is this,
I Venus will reward him with a kiſs.

ODE XXXI.

Ver. 3. Alcmæon was the ſon of Amphiaraüs and Eriphyle. His father had been put to death by the contrivance of his mother, whom, on that account, he ſlew. Oreſtes ſlew his mother Clytemneſtra, to revenge the death of his father Agamemnon, who, at his return from the Trojan war, had been murdered by her and her lover Ægiſthus. They were both tormented by the furies.

Ver. 12. Iphytus was the ſon of Eurytus king of Oechalia, and ſlain by Hercules, who carried off his bow.

Ver. 15. When the armour of Achilles was adjudged to Ulyſſes, Ajax was ſo enraged at the affront, that he ran mad; and falling upon a flock of ſheep, which he took for ſo many Grecians, firſt ſlew them, and then himſelf. Homer celebrates his ſhield for its extraordinary ſize. Iliad, Book 7.

Huge was its orb, with ſeven thick folds o'ercaſt
Of tough bull-hides; of ſolid braſs the laſt.

Pope.

Ver. 17. Hector and Ajax made an exchange of preſents (ſee Iliad 7.) which gave birth to a proverb, ' That the preſents of enemies are ge-' nerally fatal:' For Ajax with this ſword afterwards killed himſelf; and Hector was dragged, by the belt which Ajax gave him, at the chariot of Achilles.

There is an epigram to this purpoſe, Anthol. B. 3. C. 14.

Ἕκτωρ Αιαντι ξιφος ωπασέν· Ἕκτορι δ' Αιας
Ζωστηρ, αμφοτερων ἡ χαρις εις Θανατον.

Hector beſtowed on Telamon the brave
A ſword; the Greek to godlike Hector gave
A radiant belt: each gift was ſtamp'd with woe,
And prov'd alike deſtructive to the foe.

ODE XXXII.

Ver. 9. Corinth, the metropolis of Achaia, was ſo famous for rich courtezans, who would only entertain the wealthy, that it occaſioned the proverb, " Non cuivis homini contingit adire Corinthum," ' Every man cannot go to Corinth.' Laïs aſked Demoſthenes a thouſand drachms for one favour; to which he replied, ' I will not buy re-' pentance at ſo dear a rate.' *Longepierre.*

Ver. 19. Anacreon ſays of Crete, παντ' ἐχουσης, ' abounding with all things,' to expreſs its fertility. Virgil ſays it had an hundred cities:

Creta Jovis magni medio jacet inſula ponto,
Centum urbes habitant magnas, uberrima regna.

Fair Crete ſublimely towers amid the floods,
Proud nurſe of Jove the ſovereign of the gods;
A hundred cities the bleſt iſle contains,
And boaſts a vaſt extent of fruitful plains. *Pitt.*

Homer, in the Iliad, gives Crete a hundred cities, B. 2.

Crete's hundred cities pour forth all her ſons.

But, in the Odyſſey, only ninety;

Crete awes the circling waves; a fruitful ſoil!
And ninety cities crown the ſea-born iſle. *B. 19.*

Therefore, it is probable, that in the time of the Trojan war it had no more than ninety cities, but a hundred in the days of Homer.

ODE XXXIII.

Ver. 5. It was an opinion generally received among the ancients, that ſwallows, and ſeveral other birds croſſed the ſea, on the approach of winter, in ſearch of warmer climates. Thus Virgil, Æneid 6. v. 311.

Quàm multæ glomerantur aves, ubi frigidus annus
Trans pontum fugat, et terris immittit apricis.

Thick as the feather'd flocks in cloſe array,
O'er the wide fields of ocean wing their way,
When from the rage of winter they repair,
To warmer ſuns and more indulgent air. *Pitt.*

Others thought they hid themſelves in the cleſts of the rocks. Thus Ovid, "Cum glaciantur aquæ, ſcopulis ſe condit hirundo."

Pecklinius, in his book "De Aëris et Elementi defectu, et vitâ ſub aquis," aſſures us, that ſwallows retire to the bottom of the water during the winter; and that it is common for the fiſhermen on the coaſts of the Baltic to take them in their nets in large knots, clinging together by their bills and claws; and that, upon their being brought into a warm room, they will ſeparate, and begin to flutter about as in ſpring. Kercher, in his book "De mundo ſubterraneo," affirms the ſame, and that in the northern countries they hide themſelves under ground in the winter, whence they are often dug out. *Longepierre.*

Ver 6 Memphis was a city ſituated on the Nile, a little below Delta, and the reſidence of the kings of Egypt. By the Nile, Anacreon means Ethiopia, whence that river derives its ſource.

Ver. 8. Anacreon is not ſingular in repreſenting Cupid as a bird, and with propriety, becauſe he is furniſhed with wings, and his flight is ſurpriſingly rapid. Bion ſpeaks of love as a bird: See his ſecond Idyllium.

ODE XXXIV.

Ver. 10. Virgil has very happily mixed theſe two colours, though upon a different occaſion, Æneid. l. 12. v. 67.

Indum ſanguineo veluti violaverit oſtro
Si quis ebur, aut mixta rubent ubi lilia multâ
Alba roſâ——

So looks the beauteous ivory ſtain'd with red;
So roſes mix'd with lilies in the bed,
Blend their rich hues.—— *Pitt.*

ODE XXXV.

This ode was compoſed on a picture repreſenting the rape of Europa. See an Idyllium of Moſchus upon the ſame ſubject.

ODE XXXVI.

Ver. 12. A philoſopher in Petronius makes the ſame reflection. "Ego ſic ſemper et ubique vixi, ut ultimam quamque lucem tanquam non redituram conſumerem." "Wherever I am, I always enjoy "the preſent day, as if I never expected to ſee "another."

Ver. 18. Horace ſays in the ſame ſenſe,

Jam te premet nox, fabulæque manes,
Et domus exilis Plutonia.——

Too ſoon cut off from cheerful light,
We muſt deſcend to ſullen night,
And in the realms of fabled ſhades below,
Thy pining ghoſt no joy ſhall know.
Duncombe.

ODE XXXIV.

Ver. 5. The expreſſion in Greek is extremely delicate and happy. The waves of the ſea are mollified into tranquillity: Απαλυνεται γαληνη. Every letter, every ſyllable, is as liquid and ſmooth as the calm he deſcribes. A famous old Scotch biſhop, Gawin Douglas, in his Deſcription of May, ſeems to have had this paſſage in view.

For to behald it was an glore to ſe
The ſtabyllit wyndys and the calmyt ſe,
The ſoft ſeſſoun, the firmament ſerene,
The loune illuminate are, and firth amene.

Or, as it is tranſlated by Mr. Fawkes,

How calm! how ſtill! how pleaſing to behold
The ſea's broad boſom where no billows roll'd:
The ſeaſon ſoft, the firmament ſerene,
Th' illumin'd landſcape, and the wat'ry ſcene!

ODE XXXVIII.

Ver. 7. In the Bacchanalian dances among the ancients, the leader of them bore a rod or ſceptre.

Ver. 17. Silenus was the foſter-father and tutor of Bacchus, repreſented by a little, flat-noſed, bald, fat, tun-bellied, old drunken fellow, riding on an aſs. Ovid draws his picture thus:

——Bacchæ ſatyrique ſequuntur,
Quique ſenex ferulâ titubantes ebrius artus
Suſtinet, et pando non fortiter hæret aſello.
Metamorph. L. 4.

Around the Bacchæ and the Satyrs throng;
Behind, Silenus drunk lags ſlow along;
On his dull aſs he nods from ſide to ſide,
Forbears to fall, yet half forgets to ride.
Euſden.

ODE XXXIX.

Ver. 3. Anacreon is not the only one who aſſerts, that Bacchus is the beſt friend to the muſes. If, as Horace ſays, you give credit to old Cratinus, the comic Greek poet, "Nulla placere diu, nec vivere carmina poſſunt. Quæ ſcribuntur aquæ potoribus." "No verſes long can pleaſe, or long can "live, which water-drinkers write." There is an epigram in the firſt book of the Anthologia, which begins thus:

Οινος τοι χαριεντι μεγας παλαι ἱππος ἀοιδω,
Ὑδωρ δε πινων, καλον ου τεκνοις ἐπος.

Wine is the poet's generous horſe;
But water-drinkers works of courſe
Are languid, cold, and void of force.

Ariſtophanes, in his comedy called Peace, humorouſly tells us, that, when the Lacedemonians came to beſiege Athens, Cratinus died of grief on ſeeing a hogſhead broken, and the wine running out.

Ver. 7. Horace has expreſſed himſelf in the ſame manner:

——Triſtitiam et metus
Tradam protervis in mare Creticum
Portare ventis——

Lov'd by the muſes, to the wind
Be all my fears and griefs reſign'd,
To drown them in the Cretan main. *Duncombe.*

ODE XL.

Theocritus has imitated this beautiful Ode in his nineteenth Idyllium.

Τον κλεπταν ποτ' Ερωτα, κ. τ. λ.

As Cupid once, the ſlyeſt rogue alive,
Was ſtealing fragrant honey from the hive,
A little bee, inflam'd with rage and grief,
Pierc'd with his ſting the finger of the thief.
He blew the tortur'd hand, he ſtamp'd the ground,
He ran, and to his mother ſhow'd the wound;
And loud began through anguiſh to complain,
That a ſmall bee ſhould cauſe ſuch racking pain.
Fair Venus ſmil'd her ſobbing ſon to ſee,
And ſaid, 'Thou too art little, like a bee,
'And yet what mighty wounds are made by
'thee!'

Ver. 13. Madam Dacier ſays, that Anacreon makes Cupid ſpeak in this manner, becauſe, according to the Pagan theology, the language of the gods was different from that of men: but, as Longepierre ingeniouſly obſerves, to render a paſſage of this nature learned, is to make it obſcure; for nothing can be more natural to imagine, than that an infant, who had heard of the ſtinging of ſerpents, when he found himſelf ſtung by a little creature, he hardly knew what, ſhould immediately think it one. The labourers might call it a bee, if they pleaſed; his pain and fright made him perſiſt that it was a ſerpent.

ODE XLI.

Ver. 3, 4. Tibullus ſays the ſame:

Ille liquor docuit voces inflectere cantu;
Movit et ad certos neſcia membra modos.
L. 1. Ecl. 7.

This as ſwains quaff'd, ſpontaneous numbers came,
They prais'd the feſtal caſk, and hymn'd thy name;
All ecſtacy! to certain time they bound,
And beat in meaſur'd awkwardneſs the ground.
Grainger.

Ver. 8. Madam Dacier ſuppoſes this to be the paſſage on which the opinion, that the graces were the daughters of Bacchus and Venus, was founded.

Ver. 16. Macedonius, in an epigram in the firſt book of the Anthologia, C. 25. ſays, that to baniſh care was a precept of Anacreon's.

Την γαρ Ανακρεοντος ενι ῥαπιδεσσι φυλασσω
Παῤῥασιην, ὁτι δει φροντιδα μη κατεχειν.

For ſtill I hold Anacreon's rule the beſt,
To baniſh care for ever from my breaſt.

Ver. 19, 20. Anacreon is not ſingular in enforcing the neceſſity of enjoying life from the brevity and uncertainty of it. Rufinus has an epigram in the ſeventh book of the Anthologia, Epigram 143, to this purpoſe:

Let us, my friend, in joy refine,
Bathe, crown our brows, and quaff the wine:
Short is the ſpace for human joys;
What age prevents not, death deſtroys.

And Martial,

Non eſt, crede mihi, ſapienti dicere, 'Vicam;'
Sera nimis vita eſt craſtina, vive hodie.

"I'll live to-morrow," 'tis not wiſe to ſay:
'Twill be too late to-morrow---live to day.

ODE XLII.

Ver. 13, 14. Thus our poet in his ſeventh epigram ſays,

I ne'er can think his converſation good,
Who o'er the bottle talks of wars and blood;
But his, whoſe wit the pleaſing talk refines,
And lovely Venus with the graces joins.

Ver. 19. The Greek is, Βιον ησυχον φερωμεν. Anacreon eſteemed tranquillity the happieſt ingredient of life: Thus, Ode 39th, he praiſes the γαληνην βιοτην,

——Life's rural ſcene,
Sweet, ſequeſter'd, and ſerene.

ODE XLIII.

Ver. 4, 5. Dew is the nouriſhment of graſhoppers. Thus Virgil, Eclogue 5. ver. 77.

Dumque thymo paſcentur apes, dum rore cicadæ.

Bees feed on thyme, and graſhoppers on dew.

The Greek poets alſo deſcribe the graſhopper as a muſical inſect. Thus Theocritus, Idyll. 1.

—Τεττιγος επει τυγε φερτερον ᾠδις.

Thy ſong is ſweeter than the graſhopper's.

Antipater, in an epigram of the Anthologia, Book 1. ſays,

Αρκει Τεττιγας μεθυσκει δροσος, αλλα σιωπης
Ασιδιην κυκνων εισι γεγωνοτεροι.

Inſpir'd by dew the graſhoppers rejoice,
Nor boaſts the ſwan ſo muſical a voice.

Ver. 15. Ælian, writing againſt thoſe who eat graſhoppers, ſays, They are ignorant how much they offend the muſes, the daughters of Jupiter. Whence it appears, that theſe animals were eſteemed ſacred to the muſes, and the eating of them accounted an impiety. The following is a tranſlation of an epigram from the firſt book of the Anthologia, chap. 33. containing a beautiful complaint of a graſhopper againſt that practice.

Τιπτε μὲ τον, κ. τ. λ.

Why do ye, ſwains, a graſhopper purſue,
Content with ſolitude, and roſy dew?
Me, whoſe ſweet ſong can o'er the nymphs prevail;
I charm them in the foreſt, hill, or dale,
And me they call their ſummer-nightingale.
See, on your fruits the thruſh and blackbird prey!
See, the bold ſtarlings ſteal your grain away!
Deſtroy your foes---why ſhould you me purſue
Content with verdant leaves, and roſy dew?

Ver. 23. The Athenians called themſelves Τεττιγες, graſhoppers, and ſome of them wore little graſhoppers of gold in their hair, as badges of honour, to diſtinguiſh them from others of later duration; and likewiſe as a memorial that they were born of the earth like thoſe inſects.

Ver. 25, 26. Homer repreſents the gods as free from blood. Speaking of Venus wounded, book 5. he ſays,

From the clear vein a ſtream immortal flow'd,
Such ſtream as iſſues from a wounded god;
Pure emanation! uncorrupted flood!
Unlike our groſs, diſeas'd, terreſtrial blood:
(For not the bread of man their life ſuſtains,
Nor wine's inflaming juice ſupplies their veins.)
Pope.

ODE XLIV.

Nothing can be more politely imagined than this ode, nor more courtly than the turn of it. Behold, ſays Madam Dacier, one of the fineſt and moſt gallant odes of antiquity; and if ſhe, for whom it was compoſed, was as beautiful, all Greece could produce nothing more charming.

ODE XLV.

Monſ. Le Fevre was ſo tranſported with this ode, that he could not forbear crying out,

Felix, ah! nimium felix, cui carmine tali
Fluxit ab Aoniis vena beata jugis.
Quid melius dictaret amor, riſuſque jocique,
Et cum germanis gratia juncta ſuis?

Thrice happy he! to whoſe enraptur'd ſoul
Such numbers from th' Aonian mountains roll:
More finiſh'd what could love or laughter write,
Or what the graces dictate more polite?
John Addiſon.

Ver. 2. Lemnos was an iſland of the Ægean Sea ſacred to Vulcan, who in the firſt book of the Iliad, gives an account of Jupiter's throwing him down from heaven, and his fall upon that iſland:

Once in your cauſe I felt his matchleſs might,
Hurl'd headlong downward from th' ethereal height;
Toſs'd all the day in rapid circles round;
Nor, till the ſun deſcended, touch'd the ground:
Breathleſs I fell, in giddy motion loſt;
The Sinthians rais'd me on the Lemnian coaſt.
Pope.

Ver. 6. Horace calls it the nectar of Venus:

——oſcula quæ Venus
Quintâ parte ſui nectaris imbuit.

Lips, which Venus bath'd for joy
In her celeſtial dew. *Jeffreys.*

Ver. 23, 24. This ſentiment is extremely delicate, intimating, that one cannot even touch the darts of Cupid with ſafety. Moſchus concludes his firſt Idyllium with a ſimilar thought:

Perhaps he'll ſay, 'Alas! no harm I know,
'Here take my darts, my arrows, and my bow.'
Ah! touch them not, fallacious is his aim,
His darts, his arrows all art tipt with flame.

ODE XLVI.

Ver. 6.
Nil tibi nobilitas poterit conducere amanti.
Propertius.

Your noble birth pleads not the cauſe of love.

Ver. 8. Ovid ſays the ſame:

Aurea ſunt verè nunc ſecula: plurimus auro
Venit honos: auro conciliatur amor.

This is the golden age; all worſhip gold:
Honours are purchas'd, love and beauty ſold.
Our iron age is grown an age of gold,
'Tis who bids moſt, for all men would be ſold.
Dryden.

Ver. 13. Phocylides, in his Admonitory Poem, ver. 38, &c. ſeems to have imitated this paſſage.

Ἡ φιλοχρημοσυνη, κ. τ. λ.

On ſordid avarice various evils wait,
And gold, falſe, glittering, is the tempting bait.
O curſed gold! in whom our woes combine,
Why doſt thou thus with pleaſing ruin ſhine?
Cauſe of the parent's curſe, of brethren's ſtrife,
Wars, murders, and all miſeries of life.

ODE XLVII.

Ver. 8. Longepierre quotes a paſſage from Guarini, where the ſame ſentiment is expreſſed, though in a different manner; and which is tranſlated by John Addiſon.

——O Coriſca mia cara,
D'anima Linco e non di forze ſono;
E'n queſto vecchio tronco
E più che foſſe mai verde il deſio.

Yes, my Coriſca, Lincus is the ſame,
Though not in youthful force, in youthful flame;

Though age and wrinkles on my front appear,
My heart is green, and love ſtill bloſſoms there.

ODE XLVIII.

Ver 8. It was cuſtomary with the ancients, at their entertainments, to chooſe a king or maſter of the revels, who both regulated the ſize of the cups, and the quantity each perſon was to drink: He was generally choſen by the caſt of a die.

Nec regna vini fortiere talis. *Hor.*

No longer by the die's ſucceſsful caſt
Shalt thou controul the gay repaſt. *Duncombe.*

—Quem Venus arbitrum
Dicet bibendi--- *L. 2. Ode 7.*

Who, nam'd by Venus, at the jovial board
The laws of drinking ſhall preſcribe? *Duncombe.*

ODE XLIX.

Ver. 5. It is probable, that in this ode Anacreon had in view the image of peace, which Vulcan repreſented upon the ſhield of Achilles. *Iliad* 18.

Two cities radiant on the ſhield appear,
The image one of peace, and one of war;
Here ſacred pomp and genial feaſt delight,
And ſolemn dance, and hymeneal rite;
Along the ſtreets the new-made brides are led,
With torches flaming, to the nuptial bed:
The youthful dancers in a circle bound
To the ſoft flute and cittern's ſilver ſound;
Through the fair ſtreets the matrons in a row
Stand in the porches, and enjoy the ſhow. *Pope.*

ODE L.

Ver. 4. Homer introduces Helen mixing ſuch a bowl. *Odyſſey, B* 4.

Meantime with genial joy to warm the ſoul,
Bright Helen mix'd a mirth-inſpiring bowl;
Temper'd with drugs of ſovereign uſe, t' aſſwage
The boiling boſom of tumultuous rage;
To clear the cloudy front of wrinkled care,
And dry the tearful ſluices of deſpair. [mind
Charm'd with that virtuous draught, th' exalted
All ſenſe of woe delivers to the wind.
Though on the blazing pile his parent lay,
Or a lov'd brother groan'd his life away,
Or darling ſon, oppreſs'd by ruffian force,
Fell breathleſs at his feet, a mangled corſe,
From morn to eve, impaſſive and ſerene,
The man entranc'd would view the deathful ſcene.
Fenton.

ODE LI.

Ver. 6. There are ſeveral epigrams in the fourth book of the Anthologia, on Venus riſing from the ſea. I ſhall give a tranſlation of one of them, beginning,

Των εκφυγεσων, κ. τ. λ.

Apelles, rapt in ſweet ſurpriſe,
Saw Venus from the ocean riſe;
What art before could never give,
He made the breathing picture live.
Her radiant locks luxuriant flow'd;
Her lovely eyes ſerenely glow'd:
Like two round apples ripe, her breaſt
Roſe, gently ſuing to be preſt.

Ver 23.

So when bright Venus riſes from the flood,
Around in throngs the wondering Nereids crowd;
The Tritons gaze, and tune the vocal ſhell,
And every grace unſung the waves conceal.
Garth's Diſp. B. 6.

As when ſweet Venus, ſo the fable ſings,
Awak'd by Nereids from the ocean ſprings;
With ſmiles ſhe ſees the threatening billows riſe,
Spreads ſmooth the ſurge, and clears the louring ſkies;
Light o'er the deep, with fluttering Cupids crown'd,
The pearly * conch and ſilver turtles bound;
Her treſſes ſhed ambroſial odours round.
Tickell. Proſp. of Peace.

ODE LII.

Ver. 3. Homer, in his beautiful deſcription of the Vintage book 18 introduces young men and maids employed in the ſame office.

To this one path-way gently winding leads,
Where march a train with baſkets on their heads,
(Fair maids and blooming youths) that ſmiling bear
The purple product of th' autumnal year. *Pope.*

ODE LIII.

This ode will be underſtood by ſuppoſing that Anacreon celebrates a roſe, and requeſts a lyriſt to play to his voice.

Ver. 13, 14 The roſe was conſecrated to the muſes. See Sappho.

For thy rude hand ne'er pluck'd the lovely roſe
That on the mountain of Pieria blows.

Ver. 21. The roſe is celebrated in the fifth ode of Anacreon: in a fragment of Sappho: and in the fourteenth Idyllium of Auſonius, in which are the following beautiful lines:

Quàm longa una dies, ætos tam longa roſarum,
Quas puheſcentes longa fenecta premit:
Quam modo naſcentem rutilus conſpexit Eoüs,
Hanc veniens ſero veſpere vidit anum.

See! in the morning blooms the roſe!
But ſoon her tranſient glories cloſe:
She opens with the riſing day,
And with the ſetting fades away. *Duncombe.*

---

* *In Dodſley's Miſcellanies it is by miſtake printed, the pearly couch. Venus, ſpeaking of a beautiful woman, ſays,*

Hæc et cœruleis mecum conſurgere digna
Fluctibus; et noſtrâ potuit conſidere conchâ.
Statius.

Ver. 30. Ῥοδοδακτυλος, "rosy finger'd," is an epithet frequently used by Homer, and applied to the morning. Dryden also uses it:

The rosy-finger'd morn appears,
And from her mantle shakes her tears.

Milton's description of the morning is also very beautiful:

——The morn,
Wak'd by the circling hours, with rosy hand
Unbarr'd the gates of light—— *B. 6. V. 2.*

Ver. 35. It is well known, that the rose is used as an ingredient in the composition of several medicines.

Ver. 37. The ancients used roses in embalming their dead. Venus anoints the body of Hector with unguent of roses, to prevent it from corruption, Iliad, book 23.

Celestial Venus hover'd o'er his head,
And roseate unguents, heavenly fragrance shed.
Pope.

They also crowned the tombs of their friends with roses and other flowers.

Ver. 41. Nothing preserves its fragrance, when dried, longer than the rose.

——και ῥοδον αυον ολειται. *Theocr. Id. 27.*

Blown roses hold their sweetness to the last.
Dryden.

Ver. 46. Bion tells us, that the blood of Adonis gave birth to the rose. Αἱμα ῥοδον τικτει.

Both tears and drops of blood were turn'd to flowers;
From these in crimson beauty sprung the rose,
Cærulean-bright anemonies from those.

ODE LIV.

Ver. 5. Cybeba, or Cybele, seems to be the name of a female attendant, taken from Cybele the mother of the gods.

ODE LV.

Ver. 3, 4. The Greek is τιαρα, *tiara*, an ornament for the head, like the modern turban. Addison quotes a passage from Dionysius, containing a description of the situation and manners of the Parthians, which he has thus translated:

Beyond the Caspian streights those realms extend,
Where circling bows the martial Parthians bend.
Vers'd only in the rougher arts of war,
No fields they wound, nor urge the shining share.
No ships they boast to stem the rolling tide,
Nor lowing herds o'er flowery meadows guide:
But infants wing the feather'd shaft for flight,
And rein the fiery steed with fond delight.
On every plain the whistling spear alarms,
The neighing courser, and the clang of arms;
For there no food the little heroes taste,
Till warlike sweat has earn'd the short repast.

ODE LVI.

We are indebted for this ode to Henry Stephens, It is also extant in Stobæus, who acknowledges it to be Anacreon's.

Ver. 1, 2. Theocritus finally touches upon the progress which old age makes on the human body.

——απο κροταφων πελομεσθα
Παντες γηραλεοι, και επισαχερω ες γενυν ερπει
Λευκαινων ὁ χρονος.——

First from our temples age begins her race,
Thence whitening time creeps softly o'er the face.
Creech.

Ver. 3.

——fugit retro
Levis juventas, et decor, aridâ
Pellente lascivos amores
Canitie, facilemque somnum. *Hor. B. 2. O. 14.*

Behold our years! how fast they fly;
Youth vanishes, and beauty fades;
Age drops her snow upon our heads,
And drives sweet slumbers from our eye!
Duncombe.

Ver. 14. Catullus, speaking of Lesbia's sparrow, says,

Qui nunc et per iter tenebricosum,
Illuc unde negant redire quenquam.

Death has summon'd it to go,
Pensive to the shades below:
Dismal regions! from whose bourne,
Alas! no travellers return.

See also Moschus on the death of Bion:

But we, the great, the brave, the learn'd, the wise,
Soon as the hand of death has clos'd our eyes,
In tombs forgotten lie, no suns restore,
We sleep, for ever sleep, to wake no more.

ODE LVII.

Ver. 3. The ancients usually drank their wine mixed with water. Madam Dacier observes, that Hesiod prescribes three measures of water to one of wine, in summer.

Ver. 10. The Scythians were remarkable for their intemperance in drinking and quarrelling over their cups.

ODE LVIII.

This little ode is extant in the seventh book of the Anthologia, and ascribed to Julian, απο των ὑπαρχων Αιγυπτε, a king of Egypt, who wrote several other things with elegance. As its beauty has hitherto procured it a place in most of the editions of Anacreon, it was thought worthy to be retained in this translation.

ODE LIX.

Ver. 9, 10. Horace has imitated this ode at the beginning of the 23d ode of the first book, the 5th of the second; but particularly in the 11th of the third.

Quæ, velut latis equa trima campis
Ludit exultim, metuitque tangi,
Nuptiarum expers, et adhuc protervo
Cruda marito.

She ſports along the verdant plain
Like a fleet filly, ſhuns the rein,
Fears to be touch'd: nor yet will prove,
Wild and untry'd, the pleaſing pains of love.
Duncombe.

ODE LX.

Theodorus Prodromus, who wrote the amours of Doſicles and Rodanthe, has preſerved this Epithalamium; which, as Madam Dacier obſerves, is a ſort of poem that uſed to be ſung to a new-married couple on the morning after the ceremony.

Ver. 4. Dionyſius of Halicarnaſſus calls marriage, Σωτηριον τω γενει, "The preſerver of mankind."

Ver. 12. The Greek is Μη σε φευγη περδικος αγρα, "Leſt the partridge ſhould eſcape you;" alluding to the coyneſs of a young bride.

Ver. 15. Theſe four lines are taken from a tranſlation of this poem, which appeared in the Student.

Ver. 25. The Greek is, Κυπαρισσοι πεφυκοι σεν ενικητω, "May a cypreſs grow in your gardens!" that is, 'May a child, as beautiful and as long 'lived as a cypreſs, crown your happineſs.' Madam Dacier obſerves, this was a proverbial way of ſpeaking.

ODE LXI.

The Vatican manuſcript acknowledges this ode to be Anacreon's.

Ver. 9. 10. Horace has imitated this paſſage, Book i. Ode 26. which is an argument for the authenticity of this ode. See ode 39th.

Let the winds that murmur, ſweep
All my ſorrows to the deep.

Ver. 28. The poet calls the Phrygians, faithleſs, from their king Laomedon's deceiving Apollo and Neptune of the reward he had promiſed them for building the walls of Troy: and from his defrauding Hercules of his recompence, who had delivered his daughter Heſione from being devoured by a ſea-monſter. *Madam Dacier.*

ODE LXII.

This ode has alſo the authority of the Vatican manuſcript to claim Anacreon for its author.

Ver. 7. 8. Madam Dacier remarks, that the vines in Greece were ſo high as to form a commodious ſhade.

ODE LXIII.

We owe the preſervation of this fragment to Dion Chryſoſtom.

ODE LXIV.

This fragment is cited by Athenæus. Barnes ſuppoſes it to have been written on the poetes's Sappho; and, to confirm his opinion, produces the teſtimonies of Chamælon and Hermeſianax the Colophonian; the laſt of which in his third elegy, ſays,

Καί γαρ τον ὁ μελιχρος κ. τ. λ.

For ſweet Anacreon lov'd the Leſbian dame;
The muſe-rapt maid inſpir'd the brighteſt flames,
And oft his native iſle he would reſign
For wit more brilliant, and for better wine.

Ver. 10. The following lines are ſuppoſed to be part of the anſwer which Sappho returned to Anacreon:

Κεινον, ω χρυσοθρονε Μυς', ενισπες
Υμνον, εκ της καλλιγυναικος εφθλας
Ταιος χαιρας ὁν αειδε τιτανως
Προισθυς αγανος.

Ye muſes ever fair and young,
High ſeated on the golden throne,
Anacreon ſent to me a ſong
In ſweeteſt numbers, not his own;
For by your ſacred raptures fir'd,
The poet warbled what the muſe inſpir'd.

ODE LXV.

This and the five following odes are not tranſlated by Addiſon.

Some have imagined that this ode was not written by Anacreon, becauſe he himſelf is the ſubject of it: but Barnes endeavours to prove it genuine from the ninth ode and the ſixty-ſixth, in both which Anacreon makes mention of himſelf; and from the frequent liberties which the beſt poets have taken of mentioning themſelves in their own compoſitions.

ODE LXVI.

It is certain, that Anacreon wrote hymns in honour of the gods: this is undoubtedly one of them, and perhaps the moſt entire of any that remain. See the note on the 16th verſe of the ninth ode.

ODE LXVIII.

This is, as Madam Dacier remarks, an entire hymn, or part of one, compoſed in honour of Diana, in favour of ſome town ſituated on the river Lethe, which ſhe ſuppoſes to be Magneſia, near Epheſus.

It was probably made on occaſion of ſome battle in which the Magneſians had been defeated. The poet entreats Diana to aſſiſt a people in diſtreſs, who depended only upon her protection.

ODE LXIX.

The fourth epode of Horace has a great ſimilitude to this ode:

Licet ſuperbus ambules pecuniâ, &c.

Though ſtore of wealth you now poſſeſs,
Condition changes not with dreſs
" Shall he who tir'd the lictor's hand,
" Scourg'd by the magiſtrate's command.
" With corn a thouſand acres load,
" With chariots wear the Appian road,
" And, in contempt of Otho, ſit
" With the knight's order in the pit?"

Duncombe.

THE EPIGRAMS OF ANACREON.

EPIGRAM I.

ON TIMOCRITUS.

THE tomb of great Timocritus behold!
Mars ſpares the baſe, but ſlays the brave and bold.

EPIGRAM II.

ON AGATHON.

FOR Agathon, in fighting fields renown'd,
Abdera mourns his funeral pile around;
For him ſhe mingles tears with bright applauſe,
Who nobly ſuffer'd in his country's cauſe;
No youth ſo brave, unknowing how to yield,
E'er periſh'd in the thunder of the field.

EPIGRAM III.

ON THE SON OF CLEENOR.

THEE, Cleënorides the bold, the brave,
Stern Neptune ſunk beneath the whelming wave:
Thy country's love ſo nobly fill'd thy mind,
Thou dar'dſt to truſt, too credulous, the wind:
The fair, though faithleſs, ſeaſon urg'd thy doom,
And wrapp'd thy beauties in a wat'ry tomb.

EPIGRAM IV.

ON A PICTURE REPRESENTING THREE BACCHÆ.

FIRST Heliconias with a Thyrſus paſt,
Xanthippe next, and Glauca is the laſt;
Lo! dancing down the mountains they repair,
And grateful gifts to jolly Bacchus bear;
Wreath'd of the ruſt'ling ivy for his head,
With grapes delicious, and a kid well fed.

EPIGRAM V.

ON MYRON'S COW.

FEED, gentle ſwain, thy cattle far away,
Leſt they too near the cow of Myron ſtray,
And thou, if chance fallacious judgment err'd,
Drive home the breathing ſtatue with the herd.

EPIGRAM VI.

ON THE SAME.

THIS heifer is not caſt, but rolling years
Harden'd the life to what it now appears:
Myron unjuſtly would the honour claim,
But nature has prevented him in fame.

The following Epigrams were collected by Barnes, and firſt added to his Edition of our Poet: The firſt five on the authority of a Manuſcript Anthologia at Paris; the reſt on the credit of a Heidleberg Manuſcript.

EPIGRAM VII.

ON COMPANY.

I NE'ER can think his converſation good,
Who o'er the bottle talks of wars and blood;
But his whoſe wit the pleaſing talk refines,
And lovely Venus with the Graces joins.

EPIGRAM VIII.

A DEDICATION TO JUPITER, IN THE NAME OF PHIDOLA.

PHIDOLA, as a monument of ſpeed,
This mare, at Corinth bred, to Jove decreed.

EPIGRAM IX.

TO APOLLO IN THE NAME OF NAUCRATES.

GOD of the ſilver bow, and golden hair,
Hear Naucrates's vows, and grant his prayer!

EPIGRAM X.

ANOTHER DEDICATION.

LYCÆUS' ſon Praxagoras, beſtow'd
This marble ſtatue to his guardian god:
View well the whole—what artiſt can ſurpaſs
The finiſh'd work of Anaxagoras?

EPIGRAM XI.

ANOTHER.

MINERVA'S grove contains the favour'd ſhield,
That guarded Python in the bloody field.

EPIGRAM XII.

ANOTHER, BY LEOCRATES.

WHEN Hermes' buſt, Leocrates, you rais'd,
The Graces bland the beauteous image prais'd;
The joyful academe extoll'd your name;
The ſpeaking buſt ſhall eternize your fame.

EPIGRAM XIII.

ON THE SON OF ARISTOCLES.

To Ariſtoclides, the beſt of friends,
This honorary verſe the muſe commends:
Bold and adventurous in the martial ſtrife,
He ſav'd his country, but he loſt his life.

EPIGRAM XIV.

PRAXIDICE this flowery mantle made,
Which fair Dyſeris firſt deſign'd;
Mark how the lovely damſels have diſplay'd
A pleaſing unity of mind.

EPIGRAM XV.

UNDER A STATUE.

CALITILES firſt fix'd me on this baſe
Fair riſing to the view:
His ſons gave ornament and grace;
To them your thanks are due.

EPIGRAM XVI.

ANOTHER.

THIS trophy Areiphilus's ſon
To Bacchus conſecrates, for battles won.

EPIGRAM XVII.

ANOTHER.

THESSALIA's monarch, Echecratides,
Has fix'd me on this baſe,
Bacchus, the jolly god of wine, to pleaſe,
And give the city grace.

EPIGRAM XVIII.

To Mercury your oraiſons addreſs,
That Timonactes meet with wiſh'd ſucceſs,
Who fix'd theſe porticoes, my ſweet abode,
And plac'd me ſacred to the herald-god.
All who the bright-ey'd ſciences revere,
Strangers and citizens, are welcome here.

EPIGRAM XIX.

GREAT Sophocles, for tragic ſtory prais'd,
Theſe altars to the gods immortal rais'd.

EPIGRAM XX.

O MERCURY! for honours paid to thee
May Tlæas live in calm ſecurity;
Years of ſereneſt pleaſure may he gain,
And o'er th' Athenian race a long and happy reign!

NOTES ON THE EPIGRAMS.

EPIGRAM I.

Ver. 2. Priam, ſpeaking of the moſt valiant of his ſons, ſays,

Τυς μεν απωλεσ' Αρης—— *Iliad, B. 2. ver. 260.*

All thoſe relentleſs Mars untimely ſlew,
And left me theſe, a ſoft and ſervile crew. *Pope.*

EPIGRAM II.

Ver. 2. The Teians, after their expulſion from Iona by Harpagus the general of Cyrus, ſailed into Thrace, and ſettled in the city of Abdera; where they had not been long, before the Thracians, jealous of their new neighbours, endeavoured to give them diſturbance. It ſeems to be in theſe conflicts that Anacreon loſt thoſe friends whom he celebrates in his epigrams. See the firſt, ſecond, and thirteenth.

EPIGRAM III.

This Cleonorides, as Barnes obſerves, ſeems to have been caſt away in attempting a voyage from Abdera to his native country Teios, in the winter.

EPIGRAM V.

Myron was the moſt celebrated artiſt of his time for caſting ſtatues in braſs. Petronius ſpeaking of him, ſays, "Pene hominum animas ferarumque æra comprehenderat:" He had almoſt found the art to encloſe the ſouls of men and beaſts in braſs.

Among the many epigrams, which have been compoſed on Myron's cow, the following from Auſonius deſerves commendation:

Bucula ſum, cælo genitoris facta Myronis
Ærea; nec factam me puto, ſed genetam.
Sic me taurus init; ſic proxima bucula mugit;
Sic vitulus ſitiens ubera noſtra petit.
Miraris quid fallo gregem? gregis ipſe magiſter
Inter paſcentes me numerare ſolet.

By Myron's chiſſel I was form'd of braſs;
Not art, but nature, my great mother was.
Bulls court my love; the heifers lowing ſtand;
And thirſty calves my ſwelling teat demand.
Nor deem this ſtrange—the herdſman oft has err'd,
And number'd me among the grazing herd.

EPIGRAM VI.

I found this epigram, thus excellently tranſlated, in a paltry edition of Anacreon in Engliſh, printed by Curl.

The following epigram on an excellent modern work has expreſſed the ſame thought with the ſame ſimplicity.

ON CLARISSA.

This work is nature's, every title in't
She wrote, and gave it Richardſon to print.

EPIGRAM VIII.

Ver. 2. Pauſanias, Eliac. l. 2. c. 13. mentions this mare of Phidola's, and tells us ſhe was named Aura, or Air; and that ſhe won the race herſelf, after her rider was thrown.

EPIGRAM X.

Ver. 4. Anaxagoras, a native of Ægina, was a celebrated ſtatuary. He flouriſhed both before and after the expedition of Xerxes. *Barnes.*

EPIGRAM XI.

When the ancients eſcaped any imminent danger, it was uſual for them to conſecrate ſome memorial of it in the temples of their gods. Thus Horace, l. 1. Ode 5.

Me tabula ſacer, &c.

For me, the ſacred tablet ſhows,
That I have hung my dripping clothes
At Neptune's ſhrine——— *Duncombe.*

EPIGRAM XII.

Ver. 3. The Athenian academy was not far diſtant from the Areopagus, in a grove without the city.

EPIGRAM XIII.

Nothing among the ancient Greeks and Romans was eſteemed a greater act of piety, than to fight for the good of the community; and they, who have greatly fallen in ſo righteous a cauſe, are embalmed with immortal honours. Tyrtæus wrote ſome noble poems on martial virtue. The following lines are tranſlated from a fragment of his: Speaking of the hero that dares to die for his country, he ſays,

His fair renown ſhall never fade away,
Nor ſhall the mention of his name decay,
Who glorious falls beneath the conqueror's hand,
For his dear children, and his native land,
Though to the duſt his mortal part we give,
His fame in triumph o'er the grave ſhall live.
Anon.

EPIGRAM XIV.

Addiſon quotes a paſſage from Shakſpeare ſimilar to this epigram:

We Hermia, like two artificial gods,
Created with our needles both one flower,
Both on one ſamplar, ſitting on one cuſhion;
Both warbling of one ſong, both in one key;
As if our hands, our ſides, voices, and minds,
Had been incorporate. So we grew together,
Like to a double cherry, ſeeming parted,
But yet an union in partition,
Two lovely berries molded on one ſtem;
Or with two ſeeming bodies, but one heart.
Midſummer Night's Dream.

EPIGRAM XVIII.

Ver. 1. The ancients eſteemed Mercury the general protector of learning; and therefore uſually placed his ſtatue in their libraries, and in the porticoes before their public ſchools and academies.
Addiſon.

EPIGRAM XIX.

This epigram, notwithſtanding what Barnes ſays to the contrary, is thought not to be Anacreon's; the mention of Sophocles being too repugnant to chronology, to admit it for genuine.

THE WORKS

OF

SAPPHO.

TRANSLATED FROM THE GREEK.

BY

FRANCIS FAWKES, M. A.

THE LIFE OF SAPPHO.

Sappho was a native of Mitylene in the iſland of Leſbos. Who was her father is uncertain, there being no leſs than eight perſons who have contended for that honour; but it is univerſally acknowledged that Cleis was her mother. She flouriſhed, according to Suidas, in the 42d Olympiad; according to Euſebius, in the 44th Olympiad, about 600 years before our Saviour Chriſt. She was contemporary with Pittacus, the famous tyrant of Mitylene, and the two celebrated poets, Steſichorus and Alcæus. Barnes has endeavoured to prove, from the teſtimonies of Chamæleon and Hermeſianax, that Anacreon was one of her lovers; but this amour has been generally eſteemed too repugnant to chronology, to be admitted for any thing but a poetical fiction.

She married one Cercolas, a man of great wealth and power in the iſland of Andros, by whom ſhe had a daughter named Cleis. He leaving her a widow very young, ſhe renounced all thoughts of a ſecond marriage, but not the pleaſures of love; not enduring to confine that paſſion to one perſon, which, as the ancients tell us, was too violent in her to be reſtrained even to one ſex.

But no one ſeems to have been the object of her admiration ſo much as the accompliſhed Phaon, a young man of Leſbos; who is ſaid to have been a kind of ferryman, and thence fabled to have carried Venus over the ſtream in his boat, and to have received from her, as a reward, the favour of becoming the moſt beautiful man in the world. She fell deſperately in love with him, and took a voyage into Sicily in purſuit of him, he having withdrawn himſelf thither on purpoſe to avoid her. It was in that iſland, and on this occaſion, that ſhe compoſed her hymn to Venus.

Her poem was ineffectual for the procuring that happineſs which ſhe prayed for in it. Phaon was ſtill obdurate, and Sappho was ſo tranſported with the violence of her paſſion, that ſhe reſolved to get rid of it at any rate.

There was a promontory in Acarnania called Leucate, on the top of which was a little temple dedicated to Apollo. In this temple it was uſual for deſpairing lovers to make their vows in ſecret, and afterwards to fling themſelves from the top of the precipice into the ſea. For it was an eſtabliſhed opinion, that all thoſe who were taken up alive, would immediately be cured of their former paſſion. Sappho tried the remedy; but periſhed in the experiment. The original of this unaccountable humour is not known. Ovid repreſents Sappho as adviſed to undertake this ſtrange project by the viſion of a ſea-nymph, of which ſhe ſent the following account to the cruel Phaon:

Hic ego cum laſſos, &c.

Here as I lay, and ſwell'd with tears the flood,
Before my ſight a wat'ry virgin ſtood;
She ſtood and cry'd, " O you that love in vain!
" Fly hence and ſeek the fair Leucadian main:
" There ſtands a rock, from whoſe impending
" ſteep
" Apollo's ſhrine ſurveys the rolling deep;
" There injur'd lovers, leaping from above,
" Their flames extinguiſh, and forget to love.
" Haſte, Sappho, haſte, from high Leucadia throw
" Thy wretched weight, nor dread the deeps be-
" low!"
She ſpoke, and vaniſh'd with the voice—I riſe
And ſilent tears fall trickling from my eyes.
I go ye, nymphs, thoſe rocks and ſeas to prove:
How much I fear, but, ah, how much I love!
I go, ye nymphs, where furious love inſpires;
Let female fears ſubmit to female fires.
To rocks and ſeas I fly from Phaon's hate,
And hope from ſeas and rocks a milder fate.
Ye gentle gales, beneath my body blow,
And ſoftly lay me on the waves below!
And thou, kind love, my ſinking limbs ſuſtain,
Spread thy ſoft wings, and waft me o'er the main,
Nor let a lover's death the guiltleſs flood pro-[fane!

Pope.

The Romans erected a moſt noble ſtatue of porphyry to her memory: and the Mitylenians, to expreſs their ſenſe of her worth, and the glory they received from her being born amongſt them, paid her ſovereign honours after her death, and coined money with her head for the impreſs.

The beſt idea we can have of her perſon, is from her own deſcription of it in Ovid:

Si mihi difficilis formam, &c.

To me what nature has in charms deny'd,
Is well by wit's more laſting charms ſupply'd.

Though ſhort my ſtature, yet my name extends
To heaven itſelf, and earth's remoteſt ends.
Brown as I am, an Ethiopian dame
Inſpir'd young Perſeus with a generous flame;
Turtles and doves of differing hues unite,
And gloſſy jet is pair'd with ſhining white.
If to no charms thou wilt thy heart reſign,
But ſuch as merit, ſuch as equal thine,
By none, alas! by none thou canſt be mov'd,
Phaon alone by Phaon muſt be lov'd.

Pope.

To give the Engliſh reader a true notion what opinion the ancients entertained of her works, would be to collect a volume in her praiſe. She was honoured with the glorious title of the tenth muſe. Horace ſays,

Spirat adhuc amor,
Vivuntque commiſſi calores
Æoliæ fidibus puellæ. *L. 4. Ode 9.*

Enchanting Sappho's lyric muſe
In every breaſt muſt love infuſe;
Love breathes on every tender ſtring,
And ſtill in melting notes we hear her ſing.

Duncombe.

On the revival of learning, men of the moſt refined taſte accounted the loſs of her writings inеſtimable, and collected the ſacred relics with the utmoſt aſſiduity: though Mr Addiſon (in the Spectator, No. 223.) judiciouſly obſerves: "I do "not know, by the character that is given "of her works, whether it is not for the benefit "of mankind that they are loſt. They were "filled with ſuch bewitching tenderneſs and rap- "ture, that it might have been dangerous to have "given them a reading."

Voſſius, in the third book of his Inſtitutiones Poeticæ, ſays, that none of the Greek poets excelled Sappho in ſweetneſs of verſe; and that ſhe made Archilochus the model of her ſtyle, but at the ſame time took great care to ſoften and temper the ſeverity of his expreſſion.

Hoffman, in his Lexicon, ſays, "Some authors "are of opinion, that the elegy which Ovid made "under the name of Sappho, and which is in- "finitely ſuperior to his other elegies, was all, "or at leaſt the moſt beautiful part of it, ſtolen "from the poems of the elegant Sappho."

She was the inventreſs of that kind of verſe which (from her name) is called the Sapphic. She wrote nine books of Odes, beſides Elegies, Epigrams, Iambics, Monodies, and other pieces; of which we have nothing remaining entire, but an Hymn to Venus, an Ode preſerved by Longinus (which, however, the learned acknowledge to be imperfect), two Epigrams, and ſome other little Fragments. I ſhall conclude my account of this celebrated lady in the words of Mr. Addiſon, taken from the above-mentioned Spectator.

"Among the mutilated poets of antiquity, there "is none whoſe fragments are ſo beautiful as thoſe "of Sappho. They gave us a taſte of her way of "writing, which is perfectly conformable with "that extraordinary character we find of her in "the remarks of thoſe great critics who were "converſant with her works when they were en- "tire. One may ſee, by what is left of them, "that ſhe followed nature in all her thoughts, "without deſcending to thoſe little points, con- "ceits, and turns of wit with which many of our "modern lyrics are ſo miſerably infected. Her "ſoul ſeems to have been made up of love and "poetry: ſhe felt the paſſion in all its warmth, "and deſcribed it in all its ſymptoms. She is "called by ancient authors the tenth muſe; and "by Plutarch is compared to Cacus the ſon of "Vulcan, who breathed out nothing but flame."

THE WORKS OF SAPPHO.

Mark, muſe! the conſcious ſhade and vocal grove,
Where Sappho tun'd her melting voice to love,
While echo each harmonious ſtrain return'd,
And with the ſoft complaining Leſbian mourn'd.

PROGRESS OF POETRY.

ODES.

ODE I.

AN HYMN TO VENUS.

VENUS, bright goddeſs of the ſkies,
To whom unnumber'd temples riſe,
Jove's daughter fair, whoſe wily arts
Delude fond lovers of their hearts;
O! liſten gracious to my prayer,
And free my mind from anxious care.

If e'er you heard my ardent vow,
Propitious goddeſs, hear me now!
And oft my ardent vow you've heard,
By Cupid's kindly aid preferr'd,
Oft left the golden courts of Jove,
To liſten to my tales of love.

The radiant car your ſparrows drew;
You gave the word, and ſwift they flew,
Through liquid air they wing'd their way,
I ſaw their quivering pinions play;
To my plain roof they bore their queen,
Of aſpect mild, and look ſerene.

Soon as you came, by your command,
Back flew the wanton feather'd band,
Then, with a ſweet, enchanting look,
Divinely ſmiling, thus you ſpoke:
'Why didſt thou call me to thy cell?
'Tell me, my gentle Sappho, tell.

'What healing medicine ſhall I find
'To cure thy love-diſtemper'd mind?
'Say, ſhall I lend thee all my charms,
'To win young Phaon to thy arms?
'Or does ſome other ſwain ſubdue
'Thy heart? my Sappho, tell me who?

'Though now, averſe, thy charms he ſlight,
'He ſoon ſhall view thee with delight;
'Though now he ſcorns thy gifts to take,
'He ſoon to thee ſhall offerings make;
'Though now thy beauties fail to move,
'He ſoon ſhall melt with equal love.'

Once more, O Venus! hear my prayer,
And eaſe my mind of anxious care;
Again vouchſafe to be my gueſt,
And calm this tempeſt in my breaſt!
To thee, bright queen, my vows aſpire;
O grant me all my heart's deſire!

ODE II.

Whatever might have been the occaſion of this ode, the Engliſh reader will enter into the beauties of it, if he ſuppoſes it to have been written in the perſon of a lover ſitting by his miſtreſs.

Addiſon, Spectator, No. 229.

MORE happy than the gods is he
Who, ſoft-reclining, ſits by thee;
His ears thy pleaſing talk beguiles,
His eyes thy ſweetly dimpled ſmiles.

This, this, alas! alarm'd my breaſt,
And robb'd me of my golden reſt:
While gazing on thy charms I hung,
My voice died faultering on my tongue.

With ſubtle flames my boſom glows,
Quick through each vein the poiſon flows:
Dark, dimming miſts my eyes ſurround;
My ears with hollow murmurs ſound.

My limbs with dewy chillneſs freeze,
On my whole frame pale tremblings ſeize,
And loſing colour, ſenſe and breath,
I ſeem quite languiſhing in death.

NOTES ON THE ODES.

ODE I.

We are indebted for this hymn to Dionyſius of Halicarnaſſus, who quotes it as a pattern of perfection. Madam Dacier ſuppoſes it to be entirely hiſtorical; and that it was written after Phaon, her inconſtant lover, had withdrawn himſelf from the iſland of Leſbos to Sicily, in order to avoid the importunities of an amorous miſtreſs. It was in Sicily, therefore, and on the abovementioned occaſion, that ſhe is ſuppoſed to have made this hymn.

Ver. 13. Sappho ſays, the chariot of Venus was drawn by ſparrows, becauſe they are of all birds the moſt amorous.

Ver. 20. There is ſomething very pretty in this circumſtance, wherein Venus is deſcribed as ſending away her chariot, upon her arrival at Sappho's lodgings, to denote that it was not a ſhort tranſient viſit which ſhe intended to make her.

Madam Dacier.

ODE II.

This beautiful ode is preſerved by Longinus, in his treatiſe of the Sublime.

Ver. 1. There is an epigram in the Anthologia, which ſeems to be an imitation of this ſtanza.

Εὐδαίμων ὁ βλέπων σε, τρισόλβιος ὅστις ἀκούει,
Ἡμίθεος δ' ὀφίλων, ἀθάνατος δ' ὁ συνών.

The youth who ſees thee may rejoice,
But bleſt is he who hears thy voice,
A demigod who ſhall thee kiſs,
Who gains thee is a god in bliſs.

Longinus has obſerved, that "this deſcription of "love in Sappho is an exact copy of nature; and "that all the circumſtances, which follow one "another in ſuch a hurry of ſentiments, notwithſtanding they appear repugnant to each other, "are really ſuch as happen in the frenzies of "love." He farther ſays: "Sappho, having obſerved the anxieties and tortures inſeparable to "jealous love, has collected and diſplayed them "all with the moſt lively exactneſs." And Dr. Pierce judiciouſly obſerves, that "in this ode ſhe "endeavours to expreſs that wrath, jealouſy, and "anguiſh, which diſtracted her with ſuch a va"riety of torture. And therefore, in the following verſes of Boileau's tranſlation, the true ſenſe "is miſtaken:

——dans les doux tranſports, où s'egare mon ame.
"And,
——je tombe en des douces langueurs.

"As the word *doux* will by no means expreſs the "rage and diſtraction of Sappho's mind; it being "always uſed in a contrary ſenſe." There are two lines in Philips's tranſlation of this ode which are liable to the ſame objection:

For while I gaz'd in tranſport toſt.
And,
My blood with gentle horrors thrill'd.

Mr. Addiſon, in his Spectator on this ode, relates the following remarkable circumſtance from Plutarch: "That author, in the famous ſtory of "Antiochus, who fell in love with Stratonice, "his mother-in-law, and (not daring to diſcover "his paſſion) pretended to be confined to his bed "by ſickneſs, tells us, that Eraſtratus, the phyſician, found out the nature of his diſtemper by "thoſe ſymptoms of love which he had learned "from Sappho's writings. Stratonice was in the "room of the love-ſick prince, when theſe ſymptoms diſcovered themſelves to his phyſician; "and it is probable, that they were not very diſferent from thoſe which Sappho here deſcribes "in a lover ſitting by his miſtreſs."

Madam Dacier ſays, that this ode of Sappho is preſerved entire in Longinus, whereas, whoever looks into that author's quotation of it, will find, that there muſt at leaſt have been another ſtanza, which is not tranſmitted to us.

FRAGMENTS.

FRAGMENT I.

The Pleiads now no more are ſeen,
Nor ſhines the ſilver moon ſerene,
In dark and diſmal clouds o'ercaſt;
The love appointed hour is paſt:
Midnight uſurps her ſable throne,
And yet, alas! I lie alone.

FRAGMENT II.

This ſeems to have been addreſſed to an arrogant unlettered lady, vain of her beauty and riches.

Whene'er the fates reſume thy breath,
No bright reverſion ſhalt thou gain;
Unnotic'd ſhalt thou ſink in death,
Nor ev'n thy memory remain:

For thy rude hand ne'er pluck'd the lovely rose,
Which on the mountain of Pieria blows.

To Pluto's mansions shalt thou go,
The stern, inexorable king,
Among th' ignoble shades below
A vain, ignoble thing;
While honour'd Sappho's muse-embellish'd name
Shall flourish in eternity of fame.

FRAGMENT III.

TO VENUS.

VENUS, queen of smiles and love,
Quit, O! quit the skies above,
To my lowly roof descend,
At the mirthful feast attend,
Hand the golden goblet round,
With delicious nectar crown'd:
None but joyous friends you'll see,
Friends of Venus, and of me.

FRAGMENT IV.

CEASE, gentle mother, cease your sharp reproof,
My hands no more can ply the curious woof,
While on my mind the flames of Cupid prey,
And lovely Phaon steals my soul away.

FRAGMENT V.

ON THE ROSE.

WOULD Jove appoint some flower to reign
In matchless beauty on the plain,
The rose (mankind will all agree),
The rose the queen of flowers should be,
The pride of plants, the grace of bowers,
The blush of meads, the eye of flowers:
Its beauties charm the gods above;
Its fragrance is the breath of love;
Its foliage wantons in the air
Luxuriant, like the flowing hair:
It shines in blooming splendour gay,
While zephyrs on its bosom play.

The following is Part of an Ode which Sappho is supposed to have written to Anacreon.—See the Notes on the 64th Ode of Anacreon.

YE muses, ever fair and young,
High-seated on the golden throne,
Anacreon sent to me a song
In sweetest numbers, not his own;
For, by your sacred raptures fir'd,
The poet warbled what the muse inspir'd.

TWO EPIGRAMS OF SAPPHO.

EPIGRAM I.

MENISCUS, mourning for his hapless son,
The toil-experienc'd fisher, Pelagon,
Has plac'd upon his tomb a net and oar,
The badges of a painful life and poor.

EPIGRAM II.

THE much-lov'd Timas lodges in this tomb,
By death insatiate ravish'd in her bloom;
Ere yet a bride, the beauteous maid was led
To dreary coasts, and Pluto's mournful bed.
Her lov'd companions pay the rites of woe,
All, all, alas! the living can bestow:
From their fair heads the graceful curls they shear,
Place on her tomb, and drop the tender tear.

NOTES ON THE FRAGMENTS.

FRAGMENT I.

Ver. 6. A shepherd, in the idyllium intituled ΘΑΡΙΣΤΤΣ (which is generally ascribed to Theocritus, but by Daniel Heinsius is attributed to Moschus) wishes a city-girl, who had slighted him, the punishment of living and dying an old maid.

——may you ne'er find one
Worthy your love in country or in town,
But, to a virgin bed condemn'd, for ever lie
alone!

Bowles.

FRAGMENT II.

Sappho is not the only good writer, who, from a due sense of the excellence of their works, have promised themselves immortality. Virgil has expressed himself in the same manner at the beginning of the third Georgic:—Horace, in several places, particularly in the ode Exegi Monumentum:—But Ovid, in the strongest terms,

Jamque opus exegi, &c.

I've now compil'd a work, which nor the rage
Of Jove, nor fire, nor sword, nor eating age,
Is able to destroy———

Ver. 5. Pieria was a mountain in Macedonia, dedicated to the muses. By this expression, Sappho seems to hint, that the lady who furnished the occasion of this satire, was not conversant in the politer studies, nor acquainted with the muses.

FRAGMENT III.

This fragment should be joined with the fourth ode of Anacreon; for as Sappho desires Venus to be her cup-bearer, so Anacreon appoints Cupid the same office:

In decent robe, behind him bound,
Cupid shall serve the goblet round.

FRAGMENT IV.

Hephæſtion produces this fragment from the ſeventh book of Sappho's Odes. Horace ſeems to have had it in view, Book 3. Ode 12.

Tibi qualem Cytheræ puer ales
Tibi tales, operoſæque Minervæ
Studium auſert, Neobule, Liparæi nitor Hebri.

The winged boy, in wanton play,
Thy work and baſket ſteals away:
Thy web and Pallas' curious toils
Are now become fair Hebrus' ſpoils. *Duncombe.*

FRAGMENT V.

We are indebted to Achilles Tatius for this fragment, which is generally aſcribed to Sappho. In the beginning of the ſecond book of that romancer, Clitophon tells us, his miſtreſs ſung this eulogy on the roſe at an entertainment. If the reader turns back to the fifth and fifty-third odes of Anacreon, he will find other encomiums on this beautiful flower.

NOTES ON THE EPIGRAMS.

EPIGRAM I.

Longepierre obſerves, that it was uſual among the ancients to place on the tombs of their friends the inſtruments peculiar to the art or myſtery which they exerciſed when alive. Of this we have examples in Homer and Virgil. In the eleventh book of the Odyſſey, ver. 75. Elpenor makes this requeſt to Ulyſſes in hell:

Σημα τε μοι χευαι, &c.

A tomb along the wat'ry margin raiſe,
The tomb with manly arms and trophies grace,
To ſhow poſterity Elpenor was:
There high in air, memorial of my name,
Fix the ſmooth oar, and bid me live to fame.
Broome.

In the beginning of the twelfth book we find the ſuit was granted:

A riſing tomb, the ſilent dead to grace,
Faſt by the roarings of the main we place;
The riſing tomb a lofty column bore,
And high above it roſe the tapering oar. *Pope.*

In the ſixth book of the Æneid, ver. 232. Æneas places on the tomb of Miſenus,

——ſuaque arma viro, remumque, tubamque.

This done; to ſolemnize the warrior's doom,
The pious hero rais'd a lofty tomb;
The towering top his well-known enſigns bore,
His arms, his once-lov'd trump, and tapering oar.
Pitt.

Theſe ſort of epitaphs were more general, conciſe, and inſtructive, than thoſe which afterwards prevailed. *Longepierre.*

Madam Dacier alſo obſerves, that emblems of the humours of the deceaſed were ſometimes placed on their monuments, as in this epigram on a woman named Myro:

Μη θαμβει μασιγα Μυρως επι σηματι λευσσων,
Γλαυκα, βιον, χαραταν χηνα, θοαν σκυλακα.

O'er Myro ſee the emblems of her ſoul,
A whip, a bow, a gooſe, a dog, an owl.

The whip denoted, that ſhe uſed to chaſtiſe her ſervants; the bow, that her mind was always bent on the care of her family: the gooſe, that ſhe loved to ſtay at home; the dog, that ſhe was fond of her children; and the owl, that ſhe was aſſiduous in ſpinning and tapeſtry, which were the works of Pallas, to whom the owl was conſecrated. *Dacier.*

At the Earl of Holderneſs's, at Aſke in Yorkſhire, is an old picture, with a device which ſeems to be borrowed from this. It is ſuppoſed to be drawn by Hans Holbein, and repreſents a woman (ſaid to be Queen Elizabeth's houſekeeper) ſtanding on a tortoiſe, with a bunch of keys by her ſide, her finger on her lips, and a dove on her head. Under it is this inſcription:

Uxor amet, ſileat, ſervet, nec ubique vagetur;
Hoc teſtudo docet, claves, labra, junctaque turtur.

Which has been thus tranſlated:

Be frugal, ye wives, live in ſilence and love,
Nor abroad ever goſſip and roam,
This learn from the keys, the lips, and the dove,
And tortoiſe, ſtill dwelling at home!

EPIGRAM II.

Ver. 7. The ceremony of cutting off the hair among the ancients, in honour of the dead, was a token of a violent affection. Thus Achilles, in the twenty-third book of the Iliad, offers his to Patroclus. And the little Cupids tear their hair for grief at the death of Adonis: See *Bion.* Herodotus tells us, that Mardonius cut off his, after his defeat. Many more inſtances of this extraordinary cuſtom might be produced; but theſe will, probably, be thought ſufficient. I ſhall finiſh my obſervations on this excellent poeteſs, with an ingenious ſurmiſe in regard to the above-mentioned ceremony: it was practiſed, perhaps, not only in token of ſorrow, but might alſo have a concealed meaning, that, as the hair was cut from the head, and was never more to be joined to it, ſo was the dead for ever cut off from the living, never more to return.

THE WORKS

OF

B I O N.

TRANSLATED FROM THE GREEK,

BY

FRANCIS FAWKES, M. A.

THE LIVES OF BION AND MOSCHUS.

We know little relating to theſe two celebrated paſtoral poets: And therefore their hiſtory may be compriſed in few words.

Bion was born at Smyrna, a famous city of Aſia Minor, which alſo has the faireſt title to the birth of Homer: For this father of poets is ſaid to have been the ſon of the river Meles, which flows not far from its walls; and therefore he is called Meleſigenes. To this river Moſchus, in his Idyllium on the death of Bion, addreſſes himſelf; and makes that fine compariſon between theſe two poets:

Τυτο τοι, ω ποταμων λιγυφωνατε, κ. τ. λ.

Meles! of ſtreams in melody the chief,
Now heaves thy boſom with another grief;
Thy Homer died, great maſter of the ſong,
Thy Homer died, the muſes ſweeteſt tongue;
Then did thy waves in plaintive murmurs weep,
And roll'd thy ſwelling ſorrows to the deep.
Another ſon demands the meed of woe,
Again thy waters weep in long-drawn murmurs flow.
Dear to the fountains was each tuneful ſon,
This drank of Arethuſe, that Helicon.
He ſung Atrides' and Achilles' ire,
And the fair dame that ſet the world on fire:
This form'd his numbers on a ſofter plan,
And chanted ſhepherds loves, and peaceful Pan.

We are not informed in what part of the world he lived, though it is evident that he ſpent much of his time in Sicily; and there it was, probably, that the wonderful ſweetneſs of his compoſitions drew together great numbers of admirers and diſciples; among whom was Moſchus, as may be deduced from the above-mentioned poem:

I too, with tears, from Italy have brought
Such plain bucolics as my maſter taught;
Which, if at all, with tuneful eaſe they flow,
To thy learn'd precepts, and thy art I owe.
To other heirs thy riches may belong;
I claim thy paſtoral pipe and Doric ſong.

Theſe two laſt verſes prove, that he was not in neceſſitous circumſtances. From the ſame Idyllium, it appears, that he died by poiſon, not accidentally, but by the appointment of ſome great man:

O hapleſs Bion! poiſon was thy fate;
The baneful potion circumſcrib'd thy date,
How could fell poiſon cauſe effect ſo ſtrange,
Touch thy ſweet lips, and not to honey change?

Which probably was not unpuniſhed:

But ſoon juſt vengeance will the wretch purſue.

It is likewiſe evident from the above-mentioned authority, that he was contemporary with Theocritus. And this famous Syracuſan flouriſhed under Ptolemy Philadelphus, who began his reign in the fourth year of the 123d Olympiad, that is, about 285 years before Chriſt.

Moſchus was born at Syracuſe, and was the diſciple of Bion, as was before obſerved. Suidas will have him to have been a profeſſor of grammar at Syracuſe: but it is certain, that when he wrote his beautiful elegy on the death of his maſter, his reſidence was among the Italians, (though perhaps in thoſe parts that lie over againſt Sicily, called Great Greece); and probably he ſucceeded him in governing the poetic ſchool. Some critics have formerly aſſerted, that Moſchus and Theocritus are the ſame perſon; but they are ſufficiently confuted by a paſſage in the elegy, where Moſchus introduces Theocritus bewailing the ſame misfortune in another country which he was lamenting in Italy.

"The few remains of theſe two poets," ſays Kennet, "are reckoned among the ſweeteſt pieces "of the ancient delicacy. They ſeem, in a great "meaſure, to have neglected that blunt ruſticity "and plainneſs, which was ſo admired an art of "their great rival Theocritus; for they always "aim at ſomething more polite and genteel, "though equally natural, in their compoſitions." Mr. Longepierre obſerves, that "the beauty of "theſe Idylliums can never be ſufficiently ad-"mired. If I dare not, ſays he, affirm, that theſe "two poets are ſuperior to Theocritus himſelf; "yet, I may ſafely aver, that in general they are "more correſpondent to the taſte of the preſent "age; which can never be brought to reliſh that "extreme ſimplicity, which abounds in Theo-"critus. Bion and Moſchus are not leſs natural "than he is; but though their ſimplicity is pure "nature, it is leſs ruſtic, and more elegant; and "their poems, having a more pleaſing and agree-"able air, one may with juſtice affirm, that Bion "has more grace, ſweetneſs, and delicacy, and "leſs ruſticity (if I may be allowed the expreſ-"ſion) than Theocritus; and that Moſchus keeps "the middle track between them both. How-"ever, if their works are not admitted among "ſome for ſuch true paſtorals, they will certainly "paſs among the beſt judges for better poems."

There is a remarkable paper in the Guardian, No. 40. containing a parallel between the paſtorals of Mr. Pope and Mr. Phillips (by the way written by Pope himſelf, though the former papers on paſtoral poetry were compoſed by Mr. Tickell). It abounds with the fineſt ſarcaſtic irony, which Phillips not having penetration enough to ſee through, made an apology to Pope on the occaſion, declaring that he had no hand in it, nor knew the author. It concludes thus: 'After all 'that has been ſaid, I hope none can think it any 'injuſtice to Mr. Pope, that I forebore to mention 'him as a paſtoral writer: ſince, upon the whole, 'he is of the ſame claſs with Moſchus and Bion, 'whom we have excluded that rank; and on 'whoſe eclogues, as well as ſome of Virgil's, it 'may be ſaid, that they are by no means paſto-'rals, but ſomething better.'

THE WORKS OF BION.

Begin, Sicilian Muſe, the mournful lay——
Alas! the Muſes will no longer ſtay,
No longer on theſe lovely coaſts abide;
With him they warbled, and with him they died:
With Bion periſh'd all the grace of ſong,
And all the kiſſes of the fair and young:
The little Loves, lamenting at his doom,
Beat their fair breaſts, and weep around his tomb.

MOSCHUS ON THE DEATH OF BION.

IDYLLIUMS.

IDYLLIUM I.

ON THE DEATH OF ADONIS.

THE death of fair Adonis I deplore;
The lovely youth Adonis is no more:
The cruel fates have cut his vital thread,
And all the Loves lament Adonis dead.
Ah Venus! never more in purple reſt,
For mournful ſable change thy flow'ry veſt;
Thy beauteous boſom beat, thy loſs deplore
Aloud with ſighs, Adonis is no more!
For the lov'd youth theſe copious tears I ſhed,
And all the Cupids mourn Adonis dead
Methinks I ſee him on the mountain lie,
The boar's keen tuſk has pierc'd his tender thigh;
Weltering he lies, expiring on the ground,
And near him Venus all in ſorrow drown'd;
I ſee the crimſon flood faſt trickling flow
Down his white ſkin that vies with winter ſnow;
I ſee the luſtre of his eyes decay,
And on his lips the roſes fade away:
Yet who can Venus from thoſe lips divide,
Though their ſweet kiſſes with Adonis dy'd?
To Venus ſweet, ev'n now his breath is fled,
Yet all her kiſſes cannot warm the dead.
The fate of fair Adonis I deplore;
The Loves lament, Adonis is no more!
A deep wide wound is in his thigh impreſt,
But Venus bears a deeper in her breaſt.
His beagles round a mournful howling keep;
And all the Dryads of the mountains weep:
But Venus quite abandon'd to deſpair,
Her locks diſhevell'd, and her feet all bare,
Flies through the thorny brake, the bri'ry wood,
And ſtains the thickets with her ſacred blood:
With piercing cries Adonis ſhe bewails,
Her darling youth, along the winding vales;
While the blood ſtarting from his wounded thigh,
Streams on his breaſt, and leaves a crimſon dye.
Ah me! what tears fair Cytherea ſhed,
And how the Loves deplor'd Adonis dead!
The Queen of Love no longer now a bride,
Has loſt her beauty ſince Adonis dy'd;
Though bright the radiance of her charms before,
Her lover and her beauty are no more!
The mountains mourn, the waving woods bewail,
And rivers roll lamenting through the vale;
The ſilver ſprings deſcend in ſtreams of woe
Down the high hills, and murmur as they flow:
And every flower in drooping grief appears
Depreſs'd, and languiſhingly drown'd in tears:
While Venus o'er the hills and vallies flies,
And, "Ah! Adonis is no more," ſhe cries.
Along the hills and vales, and vocal ſhore,
Echo repeats, "Adonis is no more."
Who could unmov'd theſe piteous wailings hear,
Or view the love-lorn queen without a tear?
Soon as ſhe ſaw him wounded on the plain,
His thigh diſcolour'd with the crimſon ſtain,
Sighing ſhe ſaid, and claſp'd him as he lay,
"O ſtay, dear hapleſs youth! for Venus ſtay!
"Our breaſts once more let cloſe embraces join,
"And let me preſs my glowing lips to thine,
"Raiſe, lov'd Adonis, raiſe thy drooping head,
"And kiſs me ere thy parting breath be fled,
"The laſt fond token of affection give,
"O! kiſs thy Venus, while the kiſſes live;

" Till in my breaſt I draw thy lingering breath,
" And with my lips imbibe thy love in death.
" This farewell kiſs, which ſorrowing thus I take,
" I'll keep for ever for Adonis' ſake.
" Thee to the ſhades the Fates untimely bring
" Before the drear, inexorable king;
" Yet ſtill! live unhappy and forlorn;
" How hard my lot to be a goddeſs born!
" Take, cruel Proſerpine, my lovely boy,
" Since all that's form'd for beauty, or for joy,
" Deſcends to thee, while I indulge my grief,
" By fruitleſs tears ſoliciting relief.
" Thou dy'ſt, Adonis, and thy fate I weep,
" Thy love now leaves me like a dream in ſleep,
" Leaves me bereav'd no more a blooming bride,
" With unavailing Cupids at my ſide.
" With thee my zone, which coldeſt hearts could
" warm,
" Loſt every grace, and all its power to charm.
" Why didſt thou urge the chaſe, and raſhly dare
" T' encounter beaſts, thyſelf ſo wond'rous fair!"
Thus Venus mourn'd, and tears inceſſant ſhed,
And all the Loves bewail'd Adonis dead;
Sighing they cry'd, " Ah! wretched queen,
" deplore
" Thy joys all fled, Adonis is no more."
As many drops of blood as from the wound
Of fair Adonis trickled on the ground,
So many tears ſhe ſhed in copious ſhowers:
Both tears and drops of blood were turn'd to
flowers.
From theſe in crimſon beauty ſprung the roſe,
Cerulean-bright anemonies from thoſe.
The death of fair Adonis I deplore,
The lovely youth Adonis is no more.
No longer in lone woods lament the dead,
O Queen of Love! behold the ſtately bed,
On which Adonis, now deprivd of breath,
Seems ſunk in ſlumbers, beauteous ev'n in death.
Dreſs him, fair goddeſs, in the ſofteſt veſt,
In which he oft with thee diſſolv'd to reſt;
On golden pillow be his head reclin'd,
And let paſt joys be imag'd in thy mind.
Though death the beauty of his bloom devours,
Crown him with chaplets of the faireſt flowers;
Alas! the flowers have loſt their gaudy pride,
With him they flouriſh'd, and with him they dy'd.
With odorous myrtle deck his drooping head,
And o'er his limbs the ſweeteſt eſſence ſhed:
Ah! rather periſh every rich perfume,
The ſweet Adonis periſh'd in his bloom.
Clad in a purple robe Adonis lies;
Surrounding Cupids heave their breaſts with ſighs,
Their locks they ſhear, exceſs of grief to ſhow,
They ſpurn the quiver, and they break the bow.
Some looſe his ſandals with officious care,
Some in capacious golden veſſels bear
The cleanſing water from the cryſtal ſprings;
This bathes his wound, that fans him with his
wings.
For Venus' ſake the pitying Cupids ſhed
A ſhower of tears, and mourn Adonis dead.
Already has the nuptial god diſmay'd,
Quench'd his bright torch, for all his garlands fade.
No more are joyful hymenæals ſung,
But notes of ſorrow dwell on ev'ry tongue;
While all around the general grief partake
For lov'd Adonis, and for Hymen's ſake.
With loud laments the Graces all deplore,
And cry, 'the fair Adonis is no more.'
The Muſes wailing the wild woods among,
Strive to recal him with harmonious ſong:
Alas! no ſounds of harmony he hears,
For cruel Proſerpine has clos'd his ears.
Ceaſe, Venus, ceaſe, thy ſoft complaints forbear,
Reſerve thy ſorrows for the mournful year.

IDYLLIUM II.

CUPID AND THE FOWLER.

A YOUTH, once fowling in a ſhady grove,
On a tall box-tree ſpy'd the God of Love,
Perch'd like a beauteous bird; with ſudden joy
At ſight ſo noble leap'd the ſimple boy.
With eager expedition he prepares
His choiceſt twigs, his bird-lime, and his ſnares,
And in a neighb'ring covert ſmil'd to ſee
How here and there he ſkipt, and hopt from tree
to tree.
When long in vain he waited to betray
The god, enrag'd he flung his twigs away,
And to a ploughman near, an ancient man,
Of whom he learnt his art, the youngſter ran,
Told the ſtrange ſtory, while he held his plough,
And ſhow'd the bird then perch'd upon a bough,
The grave old ploughman archly ſhook his head,
Smil'd at the ſimple boy, and thus he ſaid:
" Ceaſe, ceaſe, my ſon, this dangerous ſport give
" o'er,
" Fly far away, and chaſe that bird no more:
" Bleſt, ſhould you fail to catch him!—Hence,
" away!
" That bird, believe me, is a bird of prey;
" Though now he ſeems to ſhun you all he can,
" Yet ſoon as time ſhall lead you up to man,
" He'll ſpread his flutt'ring pinions o'er your
" breaſt,
" Perch on your brow, and in your boſom neſt."

IDYLLIUM III.

THE TEACHER TAUGHT.

As late I ſlumbering lay, before my ſight
Bright Venus roſe in viſions of the night:
She led young Cupid; as in thought profound
His modeſt eyes were fix'd upon the ground;
And thus ſhe ſpoke: " To thee, dear ſwain, I
" bring
" My little ſon; inſtruct the boy to ſing."
No more ſhe ſaid; but vaniſh'd into air,
And left the wily pupil to my care:
I, ſure I was an idiot for my pains,
Began to teach him old bucolic ſtrains;
How Pan the pipe, how Pallas form'd the flute,
Phœbus the lyre, and Mercury the lute:
Love, to my leſſons quite regardleſs grown,
Sung lighter lays, and ſonnets of his own,
Th' amours of men below, and gods above,
And all the triumphs of the Queen of Love,
I, ſure the ſimpleſt of all ſhepherd ſwains,
Full ſoon forget my old bucolic ſtrains:

The lighter lays of love my fancy caught,
And I remember'd all that Cupid taught.

IDYLLIUM IV.

THE POWER OF LOVE.

The ſacred nine delight in cruel love,
Tread in his ſteps, and all his ways approve:
Should ſome rude ſwain whom love could ne'er refine,
Woo the fair Muſes, they his ſuit decline;
But if the love-ſick ſhepherd ſweetly ſing,
The tuneful choir attending in a ring,
Catch the ſoft ſounds, and tune the vocal ſhell;
This truth by frequent precedent I tell:
For when I praiſe ſome hero on my lyre,
Or, nobly daring to a god aſpire,
In ſtrains more languid flows the nerveleſs ſong,
Or dies in faultering accents on my tongue:
But when with love or Lycidas I glow,
Smooth are my lays, the numbers ſweetly flow.

IDYLLIUM V.

LIFE TO BE ENJOYED.

If merit only ſtamps my former lays,
And thoſe alone ſhall give me deathleſs praiſe,
But if ev'n thoſe have loſt their bright applauſe,
Why ſhould I labour thus without a cauſe?
For if great Jove or Fate would ſtretch our ſpan,
And give of life a double ſhare to man,
One part to pleaſures and to joy ordain,
And vex the other with hard toil and pain;
With ſweet complacence we might then employ
Our hours, for labour ſtill enhances joy.
But ſince of life we have but one ſmall ſhare,
A pittance ſcant which daily toils impair,
Why ſhould we waſte it in purſuit of care?
Why do we labour to augment our ſtore,
The more we gain, ſtill coveting the more?
Alas, alas! we quite forget that man
Is a mere mortal, and his life a ſpan.

IDYLLIUM VI.

CLEODAMUS AND MYRSON.

Cleodamus.

Say, in their courſes, circling as they tend,
What ſeaſon is moſt grateful to my friend?
Summer, whoſe ſuns mature the teeming ground,
Or golden Autumn, with full harveſts crown'd?
Or Winter hoar, when ſoft reclin'd at eaſe,
The fire fair blazing, and ſweet leiſure pleaſe?
Or genial Spring, in blooming beauty gay?
Speak, Myrſon, while around the lambkins play.

Myrſon.

It ill becomes frail mortals to define
What's beſt and fitteſt of the works divine;
The works of nature all are grateful found,
And all the ſeaſons in their various round.
But ſince my friend demands my private voice,
Then learn the ſeaſon that is Myrſon's choice.
Me the hot Summer's ſultry heats diſpleaſe;
Fell Autumn teems with peſtilent diſeaſe;
Tempeſtuous Winter's chilling froſts I fear;
But wiſh for purple Spring through all the year.
Then neither cold nor heat moleſts the morn;
But roſy plenty fills her copious horn;
Then burſting buds their odorous blooms diſplay,
And Spring makes equal night and equal day.

IDYLLIUM VII.

THE EPITHALAMIUM OF ACHILLES AND DEIDAMIA.

MYRSON AND LYCIDAS.

Myrſon.

Say, wilt thou, Lycidas, ſweet ſhepherd ſwain,
Begin ſome ſoothing, ſoft Sicilian ſtrain,
Such as the Cyclops, on a rock reclin'd,
Sung to the ſea-nymph, to compoſe his mind,
And ſent it in the whiſpers of the wind?

Lycidas.

What can I ſing that Myrſon will commend?
With pleaſure I would gratify my friend.

Myrſon.

Repeat the ſong which moſt my taſte approves,
Achilles' ſtol'n embrace, and hidden loves;
How the bold hero laid his arms aſide,
A woman's robe the manly ſex belied,
And Deidamia ſoon became his bride.

Lycidas.

When with fair Helen Paris croſs'd the deep,
Brought her to Troy and made Oenone weep;
The injur'd ſtates of Greece were all alarm'd,
Spartans, Mycenians, and Laconians arm'd:
The treachery ſtung their ſouls, and bloody vengeance warm'd;
In cloſe diſguiſe his life Achilles led,
Among the daughters of King Lycomed:
Inſtead of arms the hero learn'd to cull
The ſnowy fleece, and weave the twiſted wool.
Like theirs, his cheeks a roſy bloom diſplay'd,
Like them he ſeem'd a fair and lovely maid;
As ſoft his air, as delicate his tread,
Like them he cover'd with a veil his head;
But in his veins the tides of courage flow'd,
And love's ſoft paſſion in his boſom glow'd;
By Deidamia's ſide from morn to night
He ſat, and with ineffable delight
Oft kiſs'd her ſnow-white hand, or gently preſs'd
The blooming virgin to his glowing breaſt.
His ſoul was all enraptur'd with her charms,
Ardent he long'd to claſp her in his arms;
Oft in her ear theſe words enamour'd ſaid,
" By pairs your ſiſters preſs the downy bed;
" But we, two maids of equal age and bloom,
" Still ſleep divided in a ſeparate room.
" Why ſhould the night, more cruel than the day,
" Steal the ſweet virgin whom I love away?"

* * * * * * * * *

IDYLLIUM VIII.

LOVE RESISTLESS.

Sweet Venus, daughter of the main,
Why are you pleas'd with mortals pain?
What mighty treſpaſs have they done,
That thus you ſcourge them with your ſon?
A guileful boy, a cruel foe,
Whoſe chief delight is human woe.
You gave him wings, alas! and darts,
To range the world and ſhoot at hearts;

For man no safety thus is found———
His flight o'ertakes, his arrows wound.

IDYLLIUM IX.

FRIENDSHIP.

THRICE happy they! whose friendly hearts can burn
With purest flame, and meet a kind return.
With dear Pirithoüs, as poets tell,
Theseus was happy in the shades of hell:
Orestes' soul no fears, no woes depress;
'Midst Scythians he with Pylades was blest.
Blest was Achilles while his friend survived,
Blest was Patroclus every hour he liv'd;
Blest when in battle he resign'd his breath,
For his unconquer'd friend reveng'd his death.

NOTES ON THE IDYLLIUMS.

IDYLLIUM I.

All the beauties and graces that can possibly embellish a poem of this nature, are united in this delicate Idyllium. And, therefore, the most polite scholars, and the best critics of every age, have deservedly esteemed it one of the finest and most perfect remains of antiquity.

Ver. 20. See Moschus, ver. 97, &c.

See Venus too her beauteous bosom beat!
She lov'd her shepherd more than kisses sweet,
More than those last dear kisses which in death
She gave Adonis, and imbib'd his breath.

Ver. 43. Virgil, Eclogue 5.

Daphni, tuum interitum, montes sylvæque loquuntur.

The death of Daphnis woods and hills deplore.
Dryden.

And Eclogue 10.

Illum etiam lauri illum etiam flevere myricæ,
Pinifer illum etiam solâ sub rupe jacentem
Mænalaus, & gelidi fleverunt saxa Lycæi.

For him the lofty laurel stands in tears,
And hung with humid pearls the lowly shrub appears.
Mænalian pines the godlike swain bemoan,
When spread beneath a rock he sigh'd alone;
And cold Lycæus wept from every dropping stone. *Dryden.*

Ver. 44. See the beginning of Moschus's Idyllium on the death of Bion.

Ver. 47.

Ye drooping flowers, diffuse a languid breath,
And die with sorrow at sweet Bion's death.
Moschus.

Ver. 55. There is a similar beautiful description in Ovid's Metamorphoses, Book 4.

But when her view her bleeding love confess'd,
She shriek'd, she tore her hair, she beat her breast:
She rais'd the body, and embrac'd it round,
And bath'd with tears unfeign'd the gaping wound:
Then her warm lips to the cold face apply'd,
"And is it thus, ah! thus we meet?" she cry'd!
"My Pyramus! whence sprung thy cruel fate?
My Pyramus! ah! speak, ere 'tis too late:
"I, thy own Thisbe, but one word implore,
"One word thy Thisbe never ask'd before."
At Thisbe's name awak'd, he open'd wide
His dying eyes; with dying eyes he try'd
On her to dwell, but clos'd them slow, and dy'd.
Addison.

Ver. 69. Virgil says of Orpheus, Georg. B. 4.

——Manesque adiit, regemque tremendum,
Nesciaque humanis precibus mansuescere corda.

Ev'n to the dark dominions of the night
He took his way, through forests void of light;
And dar'd amidst the trembling ghosts to sing,
And stood before th' inexorable king. *Dryden.*

Ver. 72. Thus Spenser, Faery Queen, B. 3. C. 4. St. 38.

O! what avails it of immortal seed
To been ybred, and never born to die?
For better I it deem to die with speed,
Than waste in woe, and wailful miserie.

Ver. 74 Thus Catullus,

At vobis malè sit, malæ tenebræ
Orci, quæ omnia Bella devoratis.

Ah! death, relentless to destroy
All that's form'd for love or joy.

Ver. 81. The Cestus of Venus is thus described by Homer.

Η, ῥα ἀπο στηθεσφιν ελυσατο κεστον, κ. τ. λ.
Iliad 14. *ver.* 214.

She from her fragrant breast the zone unbrac'd,
With various skill and high embroidery grac'd;
In this was every art, and every charm,
To win the wisest, and the coldest warm:
Fond love, the gentle vow, the gay desire,
The kind deceit, the still surviving fire,
Persuasive speech, and more persuasive sighs,
Silence that spoke, and eloquence of eyes. *Pope.*

Ver. 93. Some authors say, that anemonies, and not roses, sprung from the blood of Adonis. See Ovid's Metamorph. Book 10. at the end.

——Where the blood was shed,
A flower began to rear its purple head:
Such as on Punic apples is reveal'd,
Or in the filmy rind, but half conceal'd.
Still here the fate of lovely forms we see,
So sudden fades the sweet anemony.

The feeble ſtems to ſtormy blaſts a prey,
Their ſickly beauties droop, and pine away.
The winds forbid the flow'rs to flouriſh long,
Which owe to winds their name in Grecian ſong.
Euſden.

Ver. 114. Moſchus imitates this in his poem on the death of Bion:

The little loves, lamenting at his doom,
Beat their fair breaſts, and weep around his tomb.

Thus Ovid,

Ecce puer Veneris fert everſamque pharetram,
Et fractos arcus, & ſine luce facem.
Aſpice demiſſis ut eat miſerabilis alis,
Pectoraque infeſta tundit aperta manu.
Extipiunt lacrymas ſparſi per colla capilli,
Oraque ſingultu concutiente ſonant.
Amor. B. 3. El. 9.

See Venus' ſon his torch extinguiſh'd brings,
His quiver all revers'd, and broke his bow;
See, penſive how he droops with flagging wings,
And ſtrikes his bared boſom many a blow.
Looſe and neglected, ſcatter'd o'er his neck,
His golden locks drink many a falling tear:
What piteous ſobs, as if his heart would break,
Shake his ſwoln cheek? Ah ſorrow too ſevere!
Anon.

Ver. 115. For the ceremony of cutting off the hair in honour of the dead, ſee the Notes on the ſecond Epigram of Sappho.

Ver. 118. The cuſtom of waſhing the dead is very ancient. At the latter end of the fourth book of the Æneid, Anna ſays of the body of her ſiſter Dido,

——date vulnera lymphis
Abluam, &, extremus ſi quis ſuper halitus errat,
Ore legam———

Bring, bring me water; let me bathe in death
Her bleeding wounds, and catch her parting breath.
Pitt.

The cuſtom of catching the parting breath may be compared with the 65th and 66 verſes above, "Till in my breaſt," &c. See a beautiful complaint made by the mother of Euryalus, in the Æneid, book 9. ver. 486.

——nec te tua funera mater
Produxi, preſſive oculos, aut vulnera lavi, &c.

Nor did thy mother cloſe thy eyes in death,
Compoſe thy limbs, nor catch thy parting breath;
Nor bathe thy gaping wounds, nor cleanſe the gore,
Nor throw the rich embroider'd mantle o'er. *Pitt.*

Ver. 120.

—Cupid caught my trembling hand,
And with his wings my face he fann'd.

Ver. 136. The time appointed for mourning for the dead, among the ancients, was ten months which was originally the year both of the Greeks and Romans.

The anniverſary of the death of Adonis was celebrated through the whole Pagan world. The ancients differ greatly in their accounts of this divinity. Plutarch maintains, that he and Bacchus are the ſame; and that the Jews abſtained from ſwine's fleſh, becauſe Adonis was killed by a boar. Auſonius, in Epigram 30. affirms that Bacchus, Oſiris, and Adonis, are one and the ſame.
Langhorne.

Ovid makes Venus inſtitute this feſtival, Metamorph. book 10 at the end.

——luctus monumenta manebunt
Semper, Adoni, mei repetitaque mortis imago
Annua plangoris peraget ſimulamina noſtri.

For thee, loſt youth, my tears and reſtleſs pain,
Shall in immortal monuments remain:
With ſolemn pomp, in annual rites return'd,
Be thou for ever, my Adonis mourn'd. *Euſden.*

IDYLLIUM II.

Spenſer has imitated this Idyllium in his Shepherd's Calendar for the month of March, but in a language too harſh for modern ears.

Ver. 8. The original Greek, Τα και τα του Ερωτα μεταλμενον, admirably deſcribes a bird, hopping about from bough to bough, which the tranſlator has endeavoured to imitate.

IDYLLIUM III.

This beautiful Idyllium, which in a pleaſing fiction deſcribes the power of love, is preſerved by Stobæus.

IDYLLIUM IV.

Ver. 12 Sappho's ſituation is much the ſame, though on a different occaſion. See ſtanza 2d.

While gazing on thy charms I hung,
My voice died faultering on my tongue.

Anacreon's firſt Ode bears a great ſimilitude to this Idyllium.

IDYLLIUM V.

This fragment is preſerved by Stobæus.

Ver. 11.

Vitæ ſumma brevis ſpem nos vetat inchoare longam. *Hor. L. 1. Ode 4.*

——Life's ſhort, fleeting ſpan
Allows no long protracted plan. *Duncombe.*

Non ſemper idem floribus eſt honos, &c.

——quid æternis
Conſiliis animum fatigas? *L. 2. Ode 11.*

Not always vernal flowers their pride retain,
And full orb'd moons are ſure to wane:
Why tire we then the narrow mind,
For cares eternal too confin'd? *Duncombe.*

Thus Manilius,

Quid tam ſolicitis vitam conſummimus annis,
Torquemurque metu, cæcaque cupidine rerum,
Æterniſque ſenes curis, dum quærimus ævum
Perdimus; & nullo votorum fine beati,
Victuros agimus ſemper, nec vivimus unquam?

Why do we thus conſume our years
In blind deſires and anxious fears?
For in the ſearch, grow gray with pain,
We loſe the bliſs we ſtrive to gain:
And thus, abſorb'd by diſtant views,
In thoughts of living life we loſe. *D.*

IDYLLIUM VI.

Ver. 18.

Et nunc omnis ager, nunc omnis parturit arbos,
Nunc frondent ſylvæ, nunc formoſiſſimus annus.
Virg. Ecl. 3.

The trees are cloth'd with leaves, the fields with graſs;
The bloſſoms blow; the birds on buſhes ſing;
And nature has accompliſh'd all the ſpring.
Dryden.

IDYLLIUM VII.

Ver. 3. The fable of Polyphemus and Galatea has furniſhed matter for ſeveral poets, particularly Theocritus in his 6th and 11th Idylliums, and Ovid in the 13th book of the Metamorphoſes, Fable 8th; who has borrowed freely from Theocritus. See alſo Bion's 6th Fragment.

Ver. 9. The ſtory of Achilles and Deidamia is told at large by Statius in the Achilleid.

IDYLLIUM VIII.

Ver. 7. There is a ſimilar thought in a Greek epigram:

Φευγειν δη τον Ερωτα κενος πονος· ω γαρ αλυξω
Πεζος απο πτηνω πυκνα διωκομενος.

Of ſhunning love 'tis vain to talk,
When he can fly, and I but walk.

IDYLLIUM IX.

Ver. 9. Longepierre and Laurentius Gambara have given the ſame interpretation of this paſſage; and it ſeems to be confirmed by what Patroclus ſays to Hector, in the 16th book of the Iliad, when he is juſt expiring:

Inſulting man! thou ſhalt be ſoon as I;
Black fate hangs o'er thee, and thy hour draws nigh;
Ev'n now on life's laſt verge I ſee thee ſtand,
I ſee thee fall, and by Achilles' hand. *Pope.*

EPIGRAMS.

FRAGMENT I.

ON HYACINTHUS.

Deſponding ſorrow ſeiz'd Apollo's heart;
All cures he try'd, and practis'd every art;
With nectar and ambroſia dreſt the wound:
Uſeleſs, alas! all remedies are found,
When fate with cruel ſhears encompaſſes around.

FRAGMENT II.

Thus to the ſmith, It is not fair,
My friend, for ever to repair,
And ſtill another's aid to aſk:
Make your own pipe; 'tis no ſuch arduous taſk.

FRAGMENT III.

Invite the Muſes, Love, and in your train,
Ye ſacred Muſes bring me Love again!
And ever grant, my wiſhes to complete,
The gift of ſong—no remedy ſo ſweet!

FRAGMENT IV.

Incessant drops, as proverbs ſay,
Will wear the hardeſt ſtones away.

FRAGMENT V.

On a ſteep cliff, beſide the ſandy beach,
Sudden I ſtop, and, whiſpering ſoft, beſeech
Relentleſs Galatea; even in age
Love ſtill ſhall bloom, and ſtill my hopes engage.

FRAGMENT VI.

Let me not paſs without reward!
For Phœbus on each tuneful bard
Some gift beſtows: the nobleſt lays
Are owing to the thirſt of praiſe.

FRAGMENT VII.

In beauty boaſts fair womankind;
Man, in a firm, undaunted mind.

NOTES ON THE FRAGMENTS.

FRAGMENT I.

This is a ſmall fragment of an Idyllium on the death of Hyacinthus, whom Apollo unfortunately ſlew as he was playing with him at quoits.

Ver. 2. Apollo is ſaid to have invented phyſic. He tells Daphne, Ovid Metamorph. book 1.

Inventum medicina meum eſt, opiferque per orbem
Dicor, et herborum ſubjecta potentia nobis.

Medicine is mine; what herbs and ſimples grow
In fields and foreſts, all their powers I know;
And am the great phyſician call'd below.
Dryden.

FRAGMENT II.

I have always thought, that this fragment ſhould be underſtood, allegorically, of thoſe who, though they have riches (or talents) in abundance, yet make no uſe of them. *Longepierre.*

FRAGMENT III.

Thus Apollo, in Ovid, Metamorph. Book 1.

Hei mihi, quod nullis amor eſt medicabilis herbis!

To cure the pains of love, no plant avails. *Dryden.*

FRAGMENT IV.

This proverb is common almoſt to every nation. Thus Ovid,

Quid magis eſt durum ſaxo, quid mollius undâ?
Dura tamen molli ſaxa cavantur aquâ.

And,

Gutta cavat lapidem non vi, ſed ſæpe cadendo.

FRAGMENT V.

This ſeems to have been part of a ſpeech of Polyphemus, in an Idyllium on the ſubject of Acis and Galatea; which Ovid probably imitated in his Metamorph. Book 13. For, ſimilar to this fragment, are the following lines;

—gradiens ingenti littora paſſu
Degravat———

——with ſtalking pace he ſtrode,
And ſtamp'd the margin of the briny flood.

And,

Prominet in pontum, &c.

A promontory, ſharpening by degrees,
Ends in a wedge, and overlooks the ſeas:
On either ſide, below, the water flows;
This airy walk the giant lover choſe. *Dryden.*

FRAGMENT VII.

Similar to this is the ſecond Ode of Anacreon.

THE WORKS

OF

MOSCHUS.

TRANSLATED FROM THE GREEK,

BY

FRANCIS FAWKES, M. A.

THE WORKS OF MOSCHUS.

O Solitude, on me beſtow
The heart-felt harmony of woe,
Such, ſuch as on th' Auſonian ſhore
Sweet Dorian Moſchus trill'd of yore!
GRAINGER'S ODE ON SOLITUDE.

IDYLLIUMS.

IDYLLIUM I.

IN ſearch of her ſon, to the liſtening crowd,
T' other day lovely Venus thus cry'd him aloud:
'Whoever may chance a ſtray Cupid to meet,
'My vagabond boy, as he ſtrolls in the ſtreet,
'And will bring me the news, his reward ſhall be this,
'He may freely demand of fair Venus a kiſs;
'But if to my arms he the boy can reſtore,
'He's welcome to kiſſes, and ſomething ſtill more.
'His marks are ſo plain, and ſo many, you'll own
'That among twenty others he's eaſily known.
'His ſkin is not white, but the colour of flame;
'His eyes are moſt cruel, his heart is the ſame:
'His delicate lips with perſuaſion are hung;
'But, ah! how they differ, his mind and his tongue! troul,
'His voice ſweet as honey; but nought can con-
'Whene'er he's provok'd, his implacable ſoul.
'He never ſpeaks truth, full of fraud is the boy;
'And woe is his paſtime, and ſorrow his joy.
'His head is embelliſh'd with bright curling hair;
'He has confident looks, and an inſolent air.
'Though his hands are but little, yet darts they can fling
'To the regions below, and their terrible king.
'His body quite naked to view is reveal'd,
'But he covers his mind, and his thoughts are conceal'd.
'Like a bird light of feather, the branches among,
'He ſkips here and there, to the old, to the young,
'From the men to the maids on a ſudden he ſtrays,
'And hid in their hearts on their vitals he preys.
'The bow which he carries is little and light,
'On the nerve is an arrow wing'd ready for flight,
'A little ſhort arrow, yet ſwiftly it flies
'Through regions of ether, and pierces the ſkies.
'A quiver of gold on his ſhoulders is bound,
'Stor'd with darts, that alike friends and enemies wound:
'Ev'n I, his own mother, in vain ſtrive to ſhun
'His arrows—ſo fell and ſo cruel my ſon,
'His torch is but ſmall, yet ſo ardent its ray,
'It ſcorches the ſun, and extinguiſhes day.
'O you, who perchance may the fugitive find,
'Secure firſt his hands, and with manacles bind;
'Show the rogue no compaſſion, though oft he appears
'To weep—his are all hypocritical tears.
'With caution conduct him, nor let him beguile
'Your vigilant care with a treacherous ſmile.
'Perhaps with a laugh kiſſes ſweet he will proffer;
'His kiſſes are poiſon, ah! ſhun the vile offer.
'Perhaps he'll ſay, ſobbing, "No miſchief I know;
"Here take all my arrows, my darts, and my bow!"
'Ah! beware, touch them not—deceitful his aim;
'His darts and his arrows are all tipt with flame.'

IDYLLIUM II.

EUROPA.

THE Queen of Love, on amorous wiles intent,
A pleaſing dream to fair Europa ſent.
What time ſtill night had roll'd the hours away,
And the freſh dawn began to promiſe day,
When balmy ſlumbers, and compoſing reſt,
Cloſe every eye, and ſooth the penſive breaſt,
When dreams and viſions fill the buſy brain,
Prophetic dreams, that never riſe in vain:
'Twas then Europa, as ſhe ſleeping lay,
Chaſte as Diana, ſiſter of the day,
Saw in her cauſe the adverſe ſhore engag'd
In war with Aſia; terribly they rag'd:
Each ſeem'd a woman; that in foreign guiſe,
A native this, and claim'd the lovely prize

With louder zeal: 'The beaute us nymph, she
'said,
'Her daughter was, and in her bosom bred.'
But she, who as a stranger was array'd,
Forc'd to her arms the unresisting maid:
Call'd her her right, by all the powers above,
Giv'n her by Fate, and Ægis-bearing Jove.
The fair Europa, struck with sudden dread,
All pale and trembling started from her bed;
Silent she sat, and thought the vision true,
Still seem'd their forms to strive before her view:
At length she utter'd thus the voice of fear;
"Ye gods, what spectres to my sight appear?
"What dreams are these, in fancy's livery dress't,
"That haunt my sleep, and break my golden rest?
"And who that form that seem'd so wond'rous
"kind?
"The dear idea still delights my mind.
"She, like a mother, press'd me in her arms:
"But, O ye gods! that send such strange a-
"larms,
"Preserve these visionary scenes from harms."
She said, and lightly from her couch she sprung,
Then sought her comrades, beautiful and young,
Her social mates; with them she lov'd to lave
Her limbs unblemish'd in the crystal wave:
With them on lawns the sprightly dance to lead,
Or pluck sweet lilies in the flowery mead.
The nymphs assembled soon, a beauteous band!
With each a curious basket in her hand;
Then reach'd those fields where oft they play'd
before,
The fragrant fields along the sea-beat shore,
To gather flowers, and hear the billows roar.
Europa's basket, radiant to behold,
The work of Vulcan, was compos'd of gold;
He gave it Lybia, mighty Neptune's bride,
She Telephassa, next in blood ally'd;
From her bequeath'd to fair Europa came
This splendid basket of celestial frame.
Fair in the work the milk-white Iö stood
In roughen'd gold, and lowing paw'd the flood,
(For Vulcan there had pour'd the azure main)
A heifer still, nor yet transform'd again.
Two men stood figur'd on the ocean's brim,
Who watch'd the cow, that seem'd inclin'd to
swim.
Jove too appear'd enamour'd on the strand,
And strok'd the lovely heifer with his hand:
Till, on the banks of Nile again array'd,
In native beauty shone the blooming maid:
The seven-mouth'd Nile in silver currents roll'd,
And Jove was sculptur'd in refulgent gold.
Near piping Hermes sleepless Argus lies,
Watching the heifer with his hundred eyes:
From Argus slain a painted peacock grew,
Fluttering his feathers stain'd with various hue,
And, as a ship expands her swelling sail,
He round the basket spread his starry tail.
Such were the scenes the Lemnian god display'd,
And such the basket of the Tyrian maid.
The lovely candids gather'd flow'rets bright,
Sweet to the smell and beauteous to the sight;
The fragrant hyacinth of purple hue,
Narcissus, wild thyme, and the violet blue;
Some the gilt crocus or pale lily chose,
But fair Europa cropp'd the blooming rose;
And all her mates excell'd in radiant mien,
As 'midst the graces shines the Cyprian queen.
Not long, alas! in these fair fields she shone,
Nor long unloos'd preserv'd her virgin zone;
Saturnian Jove beheld the matchless maid,
And sudden transports the rapt god invade;
He glows with all the fervid shame of love;
For Cupid's arrows pierce the breast of Jove.
But, best his amorous intent to screen,
And shun the jealous anger of his queen,
He laid his immortality aside,
And a bull's form th' intriguing god bely'd;
But not of earthly shape, or mortal breed,
Such as at large in flowery pastures feed;
Whose stubborn necks beneath the yoke we bow,
Break to the wain, or harness to the plough.
His golden hue distinguish'd him afar;
Full in his forehead beam'd a silver star:
His large blue eyes, that shone serenely bright,
Languish'd with love, and sparkled with delight:
On his broad temples rose two equal horns,
Like that fair crescent which the skies adorns.
Gently he moves with peaceful look and bland,
And spreads no terror in the virgin band:
Nearer they drew, with eager longing led
To stroke his sides, and pat his comely head:
His breath divine ambrosial odours yields,
Sweeter than fragrance of the flowery fields.
At fair Europa's feet with joy he stands,
And prints sweet kisses on her lily hands.
His foamy lips she wipes, unaw'd by dread,
And strokes his sides, and pats his comely head.
Gently he low'd, as musical and clear
As notes soft warbled on the raptur'd ear:
And, as on earth his pliant knees he bent,
Show'd his broad back, that hinted what he
meant;
Then turn'd his suppliant eyes, and view'd the
maid;
Who thus, astonish'd to her comrades said:
"Say dearest mates, what can this beast in-
"tend?
"Let us (for lo! he stoops) his back ascend,
"And ride in sportive gambols round the mead;
"This lovely bull is sure of gentlest breed;
"So meek his manner, so benign his mind,
"He wants but voice to equal human kind."
So spoke the fair, and up she rose to ride,
And call'd her lingering partners to her side:
Soon as the bull his pleasing burden bore,
Vigorous he sprung, and hasten'd to the shore.
The nymph dismay'd invok'd the virgin band
For help, and wav'd her unavailing hand.
On the soft bosom of the azure flood
With his fair prize the bull triumphant rode:
Up-rose the Nereids to attend his train,
And all the mighty monsters of the main.
Cerulean Neptune was the Thunderer's guide,
And for the passing pomp he smooth'd the tide:
The Tritons hail'd him as he steer'd along,
And sounded on their conchs the nuptial song.
On Jove's broad back the lovely damsel borne,
Grasp'd with her fair right hand his polish'd
horn,

Her left eſſay'd her purple robe to ſave,
That lightly bruſh'd the ſurface of the wave:
Around her head ſoft breath'd the gentle gale,
And fill'd her garment like a ſwelling ſail.
Europa's heart throbb'd quick with chilling fear,
Far from her much-lov'd home, and comrades dear;
No ſea-beat ſhore ſhe ſaw, nor mountain's brow,
Nor aught but ſky above, and waves below.
Then with a mournful look the damſel ſaid:
"Ah! whither wilt thou bear a wretched maid?
"Who, and whence art thou, wond'rous creature, "ſay?
"How can'ſt thou fearleſs tread the wat'ry way?
"On the broad ocean ſafely ſails the ſhip,
"But bulls avoid, and dread the ſtormy deep.
"Say, can a bull on ſea-born viands feed?
"Or, if deſcended from celeſtial breed,
"Thy acts are inconſiſtent with a god: [flood;
"Bulls rove the meads, and dolphins ſwim the
"But earth and ocean are alike to thee. [ſea.
"Thy hoofs are oars that row thee through the
"Perhaps, like airy birds, thou ſoon wilt fly,
"And ſoar amidſt the regions of the ſky.
"Ah! wretched maid, to leave my native home,
"And ſimply dare with bulls in meads to roam!
"And now on ſeas I ride—ah! wretched maid!
"But, O! I truſt, great Neptune, in thy aid;
"Soon let my eyes my great conductor hail,
"For not without a deity I fail."
Thus ſpoke the nymph, and thus the bull reply'd:
"Courage, fair maid, nor fear the foaming tide:
"Though now a bull I ſeem to mortal eyes,
"Thou ſoon ſhalt ſee me ruler of the ſkies.
"What ſhape I pleaſe, at will I take and keep,
"And now a bull I croſs the boundleſs deep;
"For thy bright charms inſpire my breaſt with "love:
"But ſoon ſhall Crete's fair iſle, the nurſe of Jove,
"Receive Europa on its friendly ſtrand,
"To join with me in Hymen's bliſsful band:
"From thee ſhall kings ariſe in long array,
"To rule the world with delegated ſway."
Thus ſpoke the god; and what he ſpoke prov'd true:
For ſoon Crete's lofty ſhore appear'd in view:
Jove ſtrait aſſum'd another form and air,
And loos'd her zone; the Hours the couch prepare,
The nymph Europa thus, through powerful love,
Became the bride of cloud-compelling Jove:
From her ſprung mighty kings in long array,
Who rul'd the world with delegated ſway.

IDYLLIUM III.

ON THE DEATH OF BION

Ye woods, with grief your waving ſummits bow,
Ye Dorian fountains, murmur as ye flow,
From weeping urns your copious ſorrows ſhed,
And bid the rivers mourn for Bion dead:
Ye ſhady groves, in robe of ſable hue
Bewail; ye plants, in pearly drops of dew:
Ye drooping flowers, diffuſe a languid breath,
And die with ſorrow at ſweet Bion's death:
Ye roſes change from red to ſickly pale,
And, all ye bright anemonies, bewail:
Now, hyacinth, thy doleful letters ſhow
Inſcrib'd in larger characters of woe
For Bion dead, the ſweeteſt ſhepherd ſwain.
Begin, Sicilian Muſe, begin the mournful ſtrain!
Ye nightingales, that perch among the ſprays,
Tune to meoldious elegy your lays,
And bid the ſtreams of Arethuſe deplore
Bion's ſad fate; lov'd Bion is no more:
Nor verſe nor muſic could his life prolong,
He died, and with him died the Doric ſong.
Begin, Sicilian Muſe, the mournful ſtrain!
Ye ſwans of Strymon, in loud notes complain,
Penſive, yet ſweet, and droop the ſickly wing,
As when your own ſad elegy ye ſing.
All the fair damſels of Oëagria tell,
And all the nymphs that in Biſtonia dwell,
That Doric Orpheus charms no more the plains.
Begin, Sicilian Muſe, begin the mournful ſtrains!
No more he ſooths his oxen at the yoke,
No more he chants beneath the lonely oak.
Compell'd, alas! a doleful dirge to ſing
To the grim god, the deaf Tartarean king.
And now each ſtraggling heifer ſtrays alone,
And to the ſilent mountains makes her moan;
The bulls loud bellowing o'er the foreſts rove,
Forſake their paſture, and forget their love.
Begin, Sicilian Muſe, the mournful lay!
Thy fate, O Bion, wept the god of day;
Pan griev'd; the dancing Satyrs and the Fauns
March'd ſlow and ſad, and ſigh'd along the lawns:
Then wail'd the Nymphs, that o'er the ſtreams preſide,
Faſt flow'd their tears, and ſwell'd the cryſtal tide,
Mute Echo now laments the rocks among,
Griev'd ſhe no more can imitate thy ſong.
The flow'rets fade, and wither'd are the trees,
Thoſe loſe their beauty, and their verdure theſe.
The ewes no more with milky udders thrive,
No more drops honey from the fragrant hive;
The bees, alas! have loſt their little ſtore,
And what avails it now to work for more,
When from thy lips the honey's ſtol'n away?
Begin, Sicilian Muſe, begin the mournful lay!
Ne'er did the dolphin on the azure main
In ſuch pathetic energy complain;
Nor Philomel with ſuch melodious woe,
E'er wail'd, nor ſwallow on the mountains brow;
Nor did Alcyone transform'd deplore
So loud her lover daſh'd upon the ſhore.
Not Memnon's birds ſuch ſigns of ſorrow gave,
When, ſcreaming round, they hover'd o'er his grave;
As now in melancholy mood they ſhed
Their plaintive tears, lamenting Bion dead.
Begin, Sicilian Muſe, the mournful lay!
The nightingales, that perch upon the ſpray,
The ſwallows ſhrill, and all the feather'd throng,
Whom Bion taught, and raviſh'd with his ſong,
Now ſunk in grief their penſive muſic ply,
And ſtrive to ſing their maſter's elegy;
And all the birds in all the groves around
Strain their ſweet throats to emulate the ſound:

Ye turtles too, the gentle bard deplore,
And with deep murmurs fill the founding ſhore.
Begin, Sicilian Muſe, the mournful lay!
Who now, lov'd ſhepherd, on thy pipe ſhall play?
Still, ſtill, methinks, the melting notes I hear,
But ah! more faint they die upon my ear.
Echo, ſtill liſtening, roves the meads along,
Or near the rocks ſtill meditates thy ſong.
To Pan I'll give thy tuneful pipe, though he
Will fear, perchance, to be ſurpaſs'd by thee.
Begin, Sicilian Muſe, the mournful ſtrain!
Thee Galatea weeps, ſweet ſhepherd-ſwain;
For oft thy graceful form her boſom warm'd,
Thy ſong delighted, and thy muſic charm'd:
She ſhunn'd the Cyclops, and his numbers rude,
But thee with ardent love the nymph purſu'd:
She left the ſea, her element, and feeds,
Forlorn, thy cattle on the flowery meads.
Begin, Sicilian Muſe, the mournful lay!
Alas! the muſes will no longer ſtay,
No longer on theſe lonely coaſts abide;
With thee they warbled, and with thee they died:
With Bion periſh'd all the grace of ſong,
And all the kiſſes of the fair and young.
The little Loves, lamenting at his doom,
Strike their fair breaſts, and weep around his tomb.
See Venus too her beauteous boſom beat?
She lov'd her ſhepherd more than kiſſes ſweet,
More than thoſe laſt dear kiſſes, which in death
She gave Adonis, and imbib'd his breath.
Meles! of ſtreams in melody the chief,
Now heaves thy boſom with another grief;
Thy Homer died, great maſter of the ſong,
Thy Homer died, the Muſes ſweeteſt tongue:
Then did thy waves in plaintive murmurs weep,
And roll'd thy ſwelling ſorrows to the deep:
Another ſon demands the meed of woe,
Again thy waters weep in long-drawn murmurs flow.
Dear to the fountains was each tuneful ſon,
This drank of Arethuſe, that Helicon:
He ſung Atrides' and Achilles' ire,
And the fair dame that ſet the world on fire:
This form'd his numbers on a ſofter plan,
And chaunted ſhepherds loves, and peaceful Pan;
His flock he tended on the flower, meads,
And milk'd his kine, or join'd with wax the reeds;
Oft in his boſom he would Cupid take,
And Venus lov'd him for her Cupid's ſake.
Begin, Sicilian Muſe, the mournful ſtrains!
Thee all the cities of the hills and plains,
Illuſtrious bard, in ſilent grief deplore;
Aſcra for Heſiod ne'er lamented more;
Not thus Bœotia mourn'd her Theban ſwan,
Nor thus the tears for bold Alcœus ran;
Not Ceos for Simonides, nor thus
Griev'd Paros for her bard Archilocus:
The ſhepherds of the Leſbian iſle have long
Neglected Sappho's for thy ſweeter ſong:
And all that breathe the paſt'ral reed rehearſe
Thy fate, O Bion, in harmonious verſe.
Sicelidas, the Samian ſhepherd ſweet,
And Lycidas, the blitheſt bard of Crete,
Whoſe ſprightly looks erſt ſpoke their hearts elate,
Now ſorrowing mourn thy ſad untimely fate;
Mourns to Philetas' elegiac muſe,
And ſweet Theocritus of Syracuſe:
I too, with tears, from Italy have brought
Such plain bucolics as my maſter taught;
Which, if at all with tuneful eaſe they flow,
To thy learn'd precepts and thy art I owe,
To other heirs thy riches may belong,
I claim thy paſt'ral pipe and Doric ſong;
In Doric ſong my penſive boon I pay:
Begin, Sicilian Muſe, begin the mournful lay!
Alas! the meaneſt flowers which gardens yield,
The vileſt weeds that flouriſh in the field,
Which dead in wint'ry ſepulchres appear,
Revive in ſpring, and bloom another year:
But we, the great, the brave, the learn'd, the wiſe,
Soon as the hand of death has clos'd our eyes,
In tombs forgotten lie, no ſuns reſtore,
We ſleep, for ever ſleep, to wake no more.
Thou too lieſt buried with the ſilent dead:
Fate ſpares the witlings, but thy vital thread
Snapp'd cruel chance! and now its my hard lot
To hear the dull bards (but I envy not)
Grate their harſh ſonnets flaſhly, rude, and vain:
Begin, Sicilian Muſe, begin the mournful ſtrain!
O hapleſs Bion! poiſon was thy fate;
The baneful potion circumſcrib'd thy date:
How could fell poiſon cauſe effect ſo ſtrange,
Touch thy ſweet lips, and not to honey change?
How could the ſavage wretch, that mix'd the draught,
Hear heavenly muſic with a murderous thought?
Could not thy ſongs his helliſh purpoſe ſway?
Begin, Sicilian Muſe, begin the mournful lay!
But ſoon juſt vengeance will his crime purſue,
While I with pious tears thy tomb bedew.
Could I like Orpheus, as old poets tell,
Or mighty Hercules, deſcend to hell;
To Pluto's dreary manſion I would go,
To hear what muſic Bion plays below.
Liſt to my counſel gentle ſhepherd ſwain,
And ſoftly warble ſome Sicilian ſtrain,
(Such as, when living, gave divine delight)
To ſooth the empreſs of the realms of night:
For ſhe, ere Pluto ſeiz'd the trembling maid,
Sung Dorian lays, and in theſe meadows play'd.
Not unrewarded ſhall thy numbers prove,
The dame will pity, though ſhe cannot love:
At once ſhe heard the Thracian's tuneful prayer,
And gave him back Eurydice the fair,
She'll pity now thy more melodious ſtrain,
And ſend thee to thy hills and woods again.
Could I in powerful harmony excel,
For thee my pipe ſhould charm the rigid king of [hell.

IDYLLIUM IV.

MEGARA.

Megara.

"Why theſe complaints, and whence that dread-
"ful ſigh?
"Why on thy cheek do thus the roſes die?
"Is it to ſee thy glorious ſun ſuſtain,
"From worthleſs hands, pre-eminence of pain?
"A lion tortur'd by a fawn—Great Jove!
"Why ſuch injurious treatment muſt I prove?

" Why with ſuch adverſe omens was I born?
" Wretch that I am! E'er ſince the nuptial morn
" When to my arms my matchleſs lord was given,
" Dear have I priz'd him as the light of heaven,
" And prize him ſtill——Sure none has ſuffer'd more,
" Or drank ſuch draughts of ſorrow's cup before.
" With Phœbus' gift, his bow, he pierc'd the hearts
" Of his own ſons; or rather arm'd with darts
" Which fates or furies furniſh'd, every child
" In his own houſe he ſlew, with frenzy wild.
" Than dreams more dreadful, with theſe ſtream-ing eyes,
" (While to their mother, with inceſſant cries,
" Their helpleſs mother, they exclaim'd in vain)
" By their own ſire I ſaw the children ſlain.
" But as a bird bewails her callow brood,
" While in the brake a ſerpent drains their blood,
" And all too weak the wiſh'd relief to bring,
" Twittering her ſhrill complaints, on feeble wing
" At diſtance hovers, nor will venture near
" The fell deſtroyer, chill'd with conſcious fear;
" So I, all frantic, the wide manſion o'er,
" Unhappy mother, my loſt ſons deplore.
" O bleſt Diana, goddeſs of the chaſe,
" Tyrant confeſs'd o'er woman's helpleſs race,
" With my dear ſons, had thy envenom'd dart
" Kindly transfix'd their mother's bleeding heart,
" Then my ſad parents might with friendly care,
" Have ſeen one pile our breathleſs bodies bear,
" At once with many a tear, to every ſhade
" The decent rites of ſepulture have paid,
" And in one golden urn that ſacred earth
" Our aſhes have receiv'd, which gave us birth.
" But Thebes they now inhabit fam'd for ſteeds,
" Or toilſome till Aönia's fruitful meads:
" While to my ſorrows no relief is given,
" At Tiryns, ſacred to the queen of heaven,
" In tears unnumber'd waſting life away,
" To joy a ſtranger, to deſpair a prey.
" But ſoon my lord will bliſs my eyes again,
" For various labours he muſt yet ſuſtain
" By land and ſea, like iron or a rock
" Unmov'd, and ſtill ſuperior to the ſhock:
" While like a ſtream thy ſorrows ever flow,
" By day, by night, alike diſſolv'd in woe.
" Of all to me by ties of kindred join'd,
" Thou only now canſt cheer my anxious mind:
" Far from this manſion, though in blood ally'd,
" Beyond the pine-clad iſthmus they reſide.
" Not one remains who can conſole my grief,
" Or to a wretched woman give relief,
" Except my ſiſter Pyrrha; all the day
" She too bewails her huſband ſnatch'd away,
" Thy Iphiclus: wretched all thy line,
" Whether their ſire be mortal or divine!"
Faſt while ſhe ſpoke, th' o'erflowing tears diſtill'd
Adown her cheeks, and her fair boſom fill'd;
Her ſons her parents riſing to her view:
In ſad ſociety, Alcmena too
Roll'd the big tear; and from her heaving breaſt,
In accents ſage, her daughter thus addreſt:

" Why, hapleſs parent, ſhould thine eyes o'er-flow?
" Why ſhould remembrance thus renew thy woe?
" Why thus afflict us both? or why once more
" Repeat the loſs we oft have wept before?
" Sure each ſad day ſufficient ſorrow bears;
" And none but wretches would recount our cares!
" Be cheer'd, my daughter, and, theſe ills forgot,
" Think that the gods a happier doom allot.
" And though on grief thy thoughts are all em-ploy'd,
" I no excuſe require, with pleaſure cloy'd.
" Much I lament, that thou ſo vaſt a weight
" Of woe ſhouldſt ſhare in our diſaſtrous fate.
" For, O bleſt Proſerpine and Ceres, know,
" (Powers juſtly dreaded by the perjur'd foe)
" That I not more could love thee, if my womb
" With thee had teem'd, or had thy virgin-bloom
" Alone remain'd a parent's hope to crown:
" A truth, Megara, not to thee unknown!
" Then think I view thee with no careleſs eye;
" No, though in grief with Niobe I vie:
" Grief for a ſon indulgence ſure may gain,
" To me endear'd by ten long months of pain;
" And, ere I brought him to the realms of day,
" My life by pangs was nearly ſnatch'd away,
" Sent on new toils he to a diſtant ſhore
" Now roams, and I may ne'er behold him more.
" Beſides, I lately ſaw, with wild affright,
" A direful viſion in the dead of night:
" Some great impending ill, if right I deem,
" Awaits my ſons, from this myſterious dream.
" In ſleep, methought, my Hercules I ſpy'd,
" His garments like a labourer, thrown aſide,
" And, ſpade in hand, employ'd, with arduous toil,
" To delve a ditch in ſome well cultur'd ſoil,
" But when his taſk the wiſh'd ſucceſs had crown'd,
" And his wide fence had girt the vineyard round,
" He left his ſpade fix'd deeply in the plain,
" And ſtrait prepar'd to clothe his limbs again;
" When, quick as thought, above the trench, behold
" Deſtructive flames, which round the hero roll'd!
" From theſe reſiſtleſs foes alarm'd he flew,
" With footſteps ſwift, as ſwiftly they purſue:
" While, like a ſhield, the ſpade now ſerves to guard
" His half-ſcorch'd body, and the fire to ward.
" At length Iphiclus, running to his aid,
" (Such was my viſion) by his feet betray'd,
" Before he reach'd him, fell with headlong force,
" And there unable to reſume his courſe,
" Lay ſtiff and proſtrate, like a feeble ſage,
" Who falling to the ground through helpleſs age,
" There fix'd remains, till by ſome ſtranger rear'd,
" Pitying his hoary hairs, and ſilver beard:
" So on the plain was brave Iphiclus thrown.
" To ſee my ſons unaided and alone,
" Faſt flow'd my tears, till morn with roſeate ray
" Diſpell'd my ſlumbers, and reſtor'd the day.
" Such were the viſions of this night of dread!
" Far from our houſe, on curs'd Euryſtheus' head
" Theſe omens turn! Be my preſages true,
" And him, O fate, with vengeance juſt purſue!"

ILYLLIUM V.

THE CHOICE.

When zephyrs gently curl the azure main,
On land, impatient, I can scarce sustain
At ease to dwell; a calm yields more delight:
But when old ocean to a mountain's height
Rolls, with tremendous roar, his foaming floods,
I lothe the sea, and sigh for fields and woods.
Safe is the land; then piny forests please, [trees:
Though hoarse winds whistle through the bending
Hapless the fisher's life! the sea his toil,
His house a bark, and faithless fish his spoil.
But O! to me how sweet are slumbers, laid
Beneath a lofty plane's embowering shade;
And thence the tinkling of a rill to hear,
Whose sound gives pleasure unallay'd by fear! D.

IDYLLIUM VI.

CAPRICIOUS LOVE.

Pan sighs for Echo o'er the lawn:
Sweet Echo loves the dancing Faun;
The dancing Faun fair Lyda charms;
As Echo Pan's soft bosom warms,
So for the Faun sweet Echo burns;
Thus all, inconstant in their turns,
Both fondly woo, are fondly woo'd,
Pursue, and are themselves pursu'd.
As much as all slight those that woo,
So those that slight are slighted too:
Thus rages by capricious fate,
Alternate love, alternate hate.
Ye scornful nymphs and swains, I tell
This truth to you, pray, mark it well:
"If to your lovers kind you prove,
"You'll gain the hearts of those you love."

IDYLLIUM VII.

TO THE EVENING STAR.

Hail, golden star! of ray serene
Thou fav'rite of the Cyprian queen,
O Hesper! glory of the night,
Diffusing through the gloom delight;
Whose beams all other stars outshine,
As much as silver Cynthia thine;
O! guide me, speeding o'er the plain,
To him I love, my shepherd swain;
He keeps the mirthful feast, and soon
Dark shades will cloud the splendid moon.
Of lambs I never robb'd the fold,
Nor the lone traveller of gold:
Love is my crime: O lend thy ray
To guide a lover on her way!
May the bright star of Venus prove
The gentle harbinger of love!

IDYLLIUM VIII.

ALPHEUS.

From Pisa where the sea his flood receives,
Alpheus, olive-crown'd, the gift of leaves,
And flowers, and sacred dust is known to bring,
With secret course to Arethusa's spring;
For, plunging deep beneath the briny tide,
Unmix'd, and unperceiv'd his waters glide.
Thus wonder-working love, with mischief fraught
The art of diving to the river taught.

D.

IDYLLIUM IX.

EUNICA; OR THE HERDSMAN.

When lately I offer'd Eunica to kiss,
She fleer'd and she flouted, and took it amiss;
"Be gone, you great booby, she cry'd with a frown, [clown!
"Do you think that I long for your kisses, you
"The sparks of the city my favours esteem—
"You never shall kiss me; no, not in a dream.
"How pleasing you look! and how gently you "play! [you say!
"How soft is your voice! and what fine things
"So neat is your beard, and so comely your hair!
"And your lips, to be sure, are a delicate pair.
"But on your dear person I never shall doat;
"So pray keep your distance—you smell like a "goat."
Thus spoke the proud huffey, and view'd me all round, [ground;
With an eye of disdain, and thrice spit on the
Then mimick'd my voice with satirical sneer,
And sent me away with a flea in my ear.
My blood quickly boil'd, in a violent pique,
And, red as a rose, passion glow'd on my cheek;
For it vex'd me, that thus in derision she jeer'd
My looks, and my voice, and my hair, and my beard.
But, am I not handsome, ye shepherds, say true?
Or has any god alter'd my person anew?
For lately, on oaks like the ivy, with grace
My hair and my beard added charms to my face;
My brows were coal-black, and my forehead milk-white,
And my eyes like Minerva's were azure and bright; [flow
My lips sweet as cream, and from them would
Words sweeter than honey, and softer than snow.
My songs are enchanting: nor aught can exceed
The tunes of my pipe, or the notes of my reed.
The girls of the country, if they had their wills,
Would kiss me, and press me to stay on the hills;
For they say that I'm fair, but this minx of the town
Refus'd my sweet kisses, and call'd me a clown.
Alas! she forgot, or perhaps did not know,
That Bacchus fed herds in the valley below;
That beauty's fair queen fell in love with a swain,
And help'd him his cattle to tend on the plain;
Adonis, while living, in groves she ador'd,
And when dead, she in groves and on mountains deplor'd.
If right my conjecture, Endymion, I ween,
Like me, too, once tended his steers on the green;
Yet the moon in this herdsman took such a delight,
That she met him at Latmos, and kiss'd him all night.

Ev'n Cybele mourn'd for a herdſman; and Jove
Snatch'd a boy from his flock to be waiter above.
But Eunica diſdains me, nor liſts to my vow;
Is ſhe better than Cynthia or Venus, I trow?
May ſhe never find lovers in city or plain,
But lie always alone, yet ſtill wiſhing in vain! 50

CUPID TURN'D PLOUGHMAN.

AN EPIGRAM.

Diſguis'd like a ploughman, Love ſtole from the ſky,
His torch, and his bow, and his quiver, thrown by;
And with pouch at his ſhoulder, and goad in his hand,
Began with yok'd oxen to furrow the land:
And, "O Jove, be propitious, he cry'd, or I vow,
"That I'll yoke thee, Europa's fam'd bull, to my "plough."

This juſtly-admired epigram makes us regret that Moſchus has left us no more. Tibullus, as Broekhuſius obſerves, probably alludes to this epigram in the beginning of his Elegy 3. Book 2. particularly in this verſe.

Verbaque aratoris ruſtica diſcit amor.

Now Cupid joys to learn the ploughman's phraſe,
And, clad a peaſant, o'er the fallow ſtrays. *Grainger.*

NOTES ON THE IDYLLIUMS.

IDYLLIUM I.

This beautiful Idyllium is imitated by Spenſer, in his Faery Queen, B. 3. c. 6. ſt. 11.

It fortuned, fair Venus having loſt
Her little ſon, the winged god of love,
Who for ſome light diſpleaſure, which him croſt,
Was from her fled, as flit as airy dove,
And left her bliſsful bower of joy above;
(So from her often he had fled away,
When ſhe for aught him ſharply did reprove,
And wander'd in the world in ſtrange array,
Diſguis'd in thouſand ſhapes, that none might him bewray.)
Him for to ſeek, ſhe left her heavenly houſe,
And ſearched every way through which his wings
Had borne him, or his tract ſhe mote detect:
She promiſs'd kiſſes ſweet, and ſweeter things,
Unto the man that of him tidings to her brings.

Meleager alſo has copied this fine original of Moſchus, and given us a picture of Cupid much in the ſame manner. See Anthologia, B. 7. Epig. 16.

Κηρυσσω τον Ερωτα, κ. τ. λ.

I'm in ſearch of a Cupid that late went aſtray,
And ſtole from my bed with the dawn of the day.
His aſpect is bold, his tongue never lies ſtill,
And yet he can whine, and has tears at his will.
At human misfortunes he laughs and he ſneers;
On his ſhoulders a quiver and pinions he wears:
'Tis unknown from what ſire he deduces his birth;
'Tis not from the air, nor the ſea, nor the earth;
For he's hated by all—but, good people, beware;
Perhaps for a heart he's now laying a ſnare—
Ha, ha, cunning Cupid, I ſee where you lie,
With your bow ready bent:—In Zenophila's eye

Ver. 13, 14. Thus the royal Pſalmiſt, Pſalm lv. ver. 22. "The words of his mouth are ſofter "than butter, having war in his heart; his words "were ſmoother than oil, and yet be they very "ſwords." And Solomon, Proverbs, chap. v. ver. 3. "For the lips of a ſtrange woman drop as "an honey-comb, and her mouth is ſmoother than "oil."

Ver. 41. There is an epigram of Crinagoras, Anthol. B. 4. chap. 12 which may illuſtrate this paſſage: It is on an image of Cupid bound.

Και κλαις κα ϛεναζεις, κ. τ. λ.

Perfidious wretch, you now may cry,
And wring your hands, and ſob, and ſigh:
Who now your advocate will be?
Who now from chains will ſet you free?
You oft, by cauſeleſs doubts and fears,
From other eyes have forc'd the tears,
And, by your bitter biting darts,
Inſtill'd love's poiſon into hearts.
O love, who laugh'd at human bail,
Now all your arts eluſive fail,
And juſtice will at laſt prevail.

Ver. 46. Thus Virgil, Æneid, Book 1. ver. 687.

Cum dabit amplexus, atque oſcula dulcia figet,
Occultum inſpires ignem, falſaque veneno.

And when the queen ſhall ſtrain thee in her arms,
The gentle paſſion by degrees inſpire
Through all her breaſt, then fan the riſing fire,
And kindle all her ſoul—— *Pitt.*

IDYLLIUM II.

This poem has been printed in ſome of the moſt ancient editions of Theocritus; and therefore ſome critics have taken it for granted that he was the author, without recollecting, that, in the time of the later Grecians, all the ancient Idylliums were collected together in one volume, and the name of Theocritus prefixed to the whole; on which occaſion there is an epigram in the Anthologia, aſcribed to Artemidorus:

Βυκολικας μουσας στορεσεις ποκα νυν ὁ ἁμα πασαι
Εντι μιας μανδρας, εντι μιας αγελας.

The paſt'ral muſes, ſcatter'd o'er the plains,
A ſingle flock, a ſingle fold contains.

This is one of thoſe Idylliums which has been adjudged to Moſchus Beſides, Urſinus tells us (as we are informed by Mr. Heſkin) "that in "two very ancient manuſcripts which he had "ſeen, one belonging to the Vatican, the other "to the Medicean Library, he obſerved, that the "Idyllium intituled Europa, was aſcribed to Moſ-"chus."

Ver 8.

Poſt mediam noctem, cum ſomnia vera.
Hor. B. 1. Sat. 10.

——at dead of night,
When dreams are real—— *Duncombe.*

Ver. 51. The fable of Iö is told at large by Ovid in the firſt book of the Metamorphoſes, and finely tranſlated by Mr. Dryden; to whom I refer the curious reader, the ſtory being too long to inſert here.

Ver. 81. Ovid has told the ſtory of the Rape of Europa, in the ſecond book of the Metamorphoſes: which, to prevent the trouble of referring to the particular ſimilar paſſages, I ſhall give all together under this note, in the language of Mr. Addiſon. The Engliſh reader will ſee at one view, even through the medium of tranſlation, how cloſely the Roman has copied the Sicilian bard.

The dignity of empire laid aſide,
The ruler of the ſkies, the thundering god,
Who ſhakes the world's foundations with a nod,
Among a herd of lowing heifers ran,
Friſk'd in a bull, and bellow'd o'er the plain.
Large rolls of fat about his ſhoulder clung,
And from his neck the double dewlap hung.
His ſkin was whiter than the ſnow that lies
Unſullied by the breath of ſouthern ſkies;
Small ſhining horns on his curl'd forehead ſtand,
As turn'd and poliſh'd by the work an's hand;
His eye balls roll'd, not formidably bright,
But gaz'd, and languiſh'd with a gentle light.
His every look was peaceful, and expreſt
The ſoftneſs of the lover in the beaſt.
Agenor's royal daughter, as ſhe play'd
Among the fields, the milk-white bull ſurvey'd,
And view'd his ſpotleſs body with delight,
And at a diſtance kept him in her ſight:
At length ſhe pluck'd the riſing flowers, and fed
The gentle beaſt, and fondly ſtrok'd his head.
He ſtood well pleas'd to touch the charming fair,
But hardly could confine his pleaſure there.
And now he wantons on the neighb'ring ſtrand,
Now rolls his body on the yellow ſand;
And now, perceiving all her fears decay'd,
Comes toſſing forward to the royal maid;
Gives her his breaſt to ſtroke, and downward turns
His griſly brow, and gently ſtoops his horns.
In flowery wreaths the royal virgin dreſt
His bending horns, and kindly clapp'd his breaſt.
Till now grown wanton, and devoid of fear,
Not knowing that ſhe preſs'd the thunderer,
She plac'd herſelf upon his back, and rode
O'er fields and meadows, ſeated on the god.
He gently march'd along, and by degrees
Left the dry meadow, and approach'd the ſeas;
Where he now dips his hoofs, and wets his thighs,
Now plunges in, and carries off the prize.
The frighted nymph looks backward on the ſhore,
And hears the tumbling billows round her roar;
But ſtill ſhe holds him faſt: One hand is borne
Upon his back, the other graſps a horn;
Her train of ruffling garments flies behind,
Swells in the air, and hovers in the wind.
Through ſtorms and tempeſts he the virgin bore,
And lands her ſafe on the Dictæan ſhore;
Where now, in his divineſt form array'd,
In his true ſhape he captivates the maid.

Ver. 93. Horace imitates this paſſage, and deſcribes a young bullock in the ſame manner:

Fronte curvatos imitatos ignes
Tertium lunæ referenti ortum,
Quà notam duxit, niveus videri;
Cætera fulvus. *B. 4. Ode 2.*

—— on whoſe brows,
Full in the front a ſtar its luſtre ſhows;
A gloſs of fallow hue adorns
His ſkin; the creſcent of his horns,
So ſharply turn'd, ſalutes the ſight,
Like Cynthia's fires, the third revolving night.
J. Duncombe.

Ver. 129. See a ſimilar deſcription in Virgil's Æneid, B. 5. near the end.

A thouſand forms attend the glorious god,
Enormous whales, and monſters of the flood;
Here the long train of hoary Glaucus rides;
Here the ſwift Tritons ſhoot along the tides;
There rode Palæmon o'er the wat'ry plain,
With aged Phorcus, and his azure train;
And beauteous Thetis led the daughters of the main.
Pitt.

See alſo the latter end of the fifty-firſt ode of Anacreon.

Ver. 143. Thus Virgil, Æneid, Book 3. ver. 192.

Poſtquam altum tenuere rates, nec jam amplius ullæ [tus.
Apparent terræ, cœlum undique, et undique pon-

Now vaniſh'd from our eyes the leſſening ground;
And all the wide horizon ſtretching round,
Above was ſky, beneath was ſea profound.
Pitt.

Which he has borrowed from Homer, Odyſſ. Book 12. ver. 403.

Paſt ſight of ſhore, along the ſurge we bound,
And all above is ſky, and ocean all around.
Pope.

Horace has in a maſterly manner imitated this whole Idyllium, but particularly this paſſage, Book 3. Od. 27.

Sic et Europe niveum doloſo
Credidit tauro latus, et ſcatentem
Belluis pontum, mediaſque fraudes
Palluit audax.

Nuper in pratis ſtudioſa florum, et
Debitæ nymphis opifex coronæ,
Nocte ſubluſtri, nihil aſtra præter
Vidit et undas.

Europa thus the bull careſs'd,
And his broad back advent'rous preſs'd;
But when the monſters of the main
She ſaw, her heart was fill'd with throbbing pain.
She, who, along the flowery meads,
Wove wreaths for her companions heads,
Now in the gloom ſees nought around
But twinkling ſtars, and ocean's waves profound.
W. Duncombe.

IDYLLIUM III.

Some have been ſo abſurd as to aſcribe this beautiful Idyllium to Theocritus, becauſe it was originally inſerted in the collection that went under his name; but that he is not the author of it, is plain from a paſſage in this very Idyllium, which mentions Theocritus as bewailing the death of Bion.

Moſchus, in this Idyllium, ſo frequently alludes to Bion's on the death of Adonis, that it will be unneceſſary to point out all the reſembling places.

Ver. 11. The ſtory of the transformation of Hyacinthus is told by Ovid, in the tenth book of the Metamorphoſes:

Ipſe ſuos gemitus foliis inſcribit, et *ai, ai*,
Flos habet inſcriptum, funeſtaque litera ducta eſt.

——the god upon its leaves
The ſad expreſſion of his ſorrow weaves;
And to this hour the mournful purple wears
Ai, ai, inſcrib'd in funeral characters. *Ozell.*

Ver. 33. See a ſimilar paſſage in Virgil's fifth eclogue, as tranſlated by Dryden:

The ſwains forgot their ſheep, nor near the brink
Of running waters, brought their herds to drink.
The thirſty cattle, of themſelves, abſtain'd
From water, and their graſſy fare diſdain'd:
The death of Daphnis woods and hills deplore.

Ver. 41. Thus Ovid on the death of Orpheus, Metamorph B. 11.

——lacrymis quoque flumina dicunt
Increviſſe ſuis: obſcuraque carbaſa pullo
Naiades et dryades, paſſoſque habuere capillos.

Naiads and dryads with diſhevell'd hair
Promiſcuous weep, and ſcarfs of ſable wear;
Nor could the river gods conceal their moan,
But with new floods of tears augment their own.

Ver. 53. Dolphins are ſaid to utter a mournful cry, like a man in diſtreſs, and to be wonderfully fond of harmony; witneſs the fable of Arion. Longepierre thinks this paſſage alludes to the ſtory of Heſiod; who (as Plutarch relates) being aſſaſſinated, his body was thrown into the ſea, and received by a ſhoal of dolphins, and, on the very day when the feaſt of Neptune was celebrated, brought by them aſhore near the city of Molicria; by which means the murderers were diſcovered, and ſuffered the puniſhment due to their crime.

Ver 57. Alcyone is fabled to have been the wife of Ceyx, a king of Thrace. They were remarkable for their conjugal affection. On his being drowned, ſhe endeavoured to caſt herſelf into the ſea, but was immediately transformed into a king's-fiſher, as was likewiſe the body of her huſband. The ſtory is told by Ovid, in the eleventh book of the Metamorphoſes, and admirably tranſlated by Dryden.

Ver 59 For Memnon's birds, ſee Ovid's Metamorphoſes, Book 13.

Ver. 101. The river Meles waſhes the walls of Smyrna, a city of Aſia Minor, where Bion was born. It is alſo ſuppoſed to have been the birth-place of Homer, and therefore that river is ſaid to have been his father; whence he is called Meleſigenes.

Ver 123. Pindar.

Ver. 129. This and the ſix following lines are a tranſlation of ſix Greek verſes which were wanting in the ancient editions of our poets. They are ſuppoſed to be ſupplied by Marcus Muſurus of Crete, though Scaliger affirms that they were wrote by Moſchus.

Ver. 131. Sicelidas, Lycidas, and Philetas, are mentioned by Theocritus in his ſeventh Idyllium.

Ver. 145. This fine ſentiment has been embelliſhed by ſeveral authors. Thus Spenſer:

Whence is it that the flowret of the field doth fade,
And lieth buried long in winter's blade?
Yet ſoon as ſpring his mantle hath diſplay'd,
It flow'reth freſh, as it ſhould never fail.
But thing on earth that is of moſt avail,
As virtue's branch and beauty's bud,
Reliven not for any good.

And Catullus:

Soles occidere et redire poſſunt:
Nobis, cum ſemel occidit brevis lux,
Nox eſt perpetua una dormienda.

The ſun, that ſinks into the main,
Sets, with freſh light to riſe again:
But we, when once our breath is fled,
Die, and are number'd with the dead;
With endleſs night we cloſe our day,
And ſleep eternity away.

Admirable is that of Job, chap. 14. "Man cometh forth as a flower, and is cut down.—"There is hope of a tree, if it be cut down that "it will ſprout again, and that the tender branch "thereof will not ceaſe; but man dieth, and "waſteth away; yea, man giveth up the ghoſt, "and where is he? He lieth down, and riſeth "not, till the heavens be no more."

Ver. 178. Pluto carried away Proſerpine from the fields of Enna in Sicily. Thus Milton, Paradiſe Loſt, Book 4 ver. 209.

——not that fair field
Of Enna, where Proſerpine gathering flowers

Herſelf a fairer flower, by gloomy Dis
Was gather'd, which coſt Ceres all that pain
To ſeek her through the world———

See alſo Ovid's Metamorphoſes, Book 5.

IDYLLIUM IV.

This poem contains a dialogue between Megara, the wife of Hercules, and Alcmena his mother, wherein they recapitulate their mutual misfortunes. This famous hero gave great umbrage to Euryſtheus, king of Mycenæ; who, fearing he would in time diſpoſſeſs him of his crown, tried all methods to deſtroy him. Hercules, ſenſible of his dangerous ſituation, conſulted the Oracle: and being anſwered that it was the will of the gods that he ſhould ſerve Euryſtheus twelve years, was thrown into ſo deep a melancholy, that it turned at length into a furious frenzy; during which he put away his wife Megara, and murdered all the children he had by her, which are ſuppoſed to have been twelve, becauſe the king impoſed on him the ſame number of labours, as in expiation for their murder, after he had recovered his ſenſes. Hercules is ſuppoſed to have been abſent on one of theſe expeditions when this dialogue commences.

Ver. 21. Virgil has happily imitated this beautiful ſimile in his Georgics, Book 4. ver. 511.

Qualis populeâ mœrens Philomela ſub umbra
Amiſſos queritur fœtus; quos durus arator
Obſervans nido implumes detraxit: at illa
Flet noctem, ramoque ſedens miſerabile carmen
Integrat, et mœſtis late loca queſtibus implet.

Which is as happily tranſlated by Dryden.

So, cloſe in poplar ſhades, her children gone,
The mother nightingale laments alone:
Whoſe neſt ſome prying churl had found, and thence,
By ſtealth, convey'd the feather'd innocence.
But ſhe ſupplies the night with mournful ſtrains,
And melancholy muſic fills the plains.

Ver. 33. Megara was the daughter of Creon, king of Thebes, a city of Bœotia. It may not be improper to remark, that Moſchus, contrary to the common opinion, ſuppoſes the parents of Megara to have been living when Hercules ſlew his children, whereas Euripides and Seneca aſſure us, that Lycus, a Theban exile, murdered Creon and his ſons, to obtain the crown: and that Hercules did not kill his children, till he had puniſhed Lycus. *Longepierre*

Ver. 42. A city of Peloponneſus near Argos, where Hercules dwelt; and from thence was ſtyled 'the Tirynthian hero.'

Ver. 59. Iphiclus was the ſon of Amphitryon and Alcmena, and the twin-brother of Hercules.

Ver. 71. Thus St. Matthew, chap. vi. ver. 34. "Sufficient unto the day is the evil thereof."

Ver. 86. For the ſtory of Niobe, ſee Ovid's Metam. book 6. See alſo the notes on the twentieth Ode of Anacreon.

Ver. 88. That is, ten lunar months, St. Auguſtine explains it thus: "Quod dicunter decem "menſes pregnantis, novem ſunt pleni; ſed in- "tium decimi pro toto accipitur."

Ver 90. The birth of Hercules was attended with the moſt excruciating pains to Alcmena, owing to the jealouſy and hatred of Juno; from which ſhe was delivered by the addreſs of Galanthus. See *Ovid's Metam.* book 9.

Ver. 105. Theſe were probably intended to be emblems of thoſe flames in which this hero was afterwards conſumed on Mount Œta. See *Ovid's Metam.* book 9.

Ver. 108. This circumſtance of the flames purſuing Hercules is very ſimilar to a paſſage in the Iliad, book 21. where the rivers Simois and Scamander unite, purſue, and attack Achilles with all their waves:

Now here, now there, he turns on every ſide,
And winds his courſe before the following tide;
The waves flow after, whereſoe'er he wheels,
And gather faſt, and murmur at his heels. *Pope.*

IDYLLIUM V.

Ver. 4. Moſchus perhaps in this paſſage had Homer in his view, *Iliad*, Book 2.

As when the winds, aſcending by degrees,
Firſt move the whitening ſurface of the ſeas,
The billows float in order to the ſhore,
The wave behind rolls on the wave before;
Till, with the growing ſtorm the deeps ariſe,
Foam o'er the rocks, and thunder to the ſkies.
Pope.

Ver. 8. In the original it is, ἀ πιτυς ἀδει, the pine tree ſings. Thus Theocritus Idyll. I. ver. 1. —ᾳ πιτυς μελισδεται.

——that pine-tree's boughs, by yonder ſpring,
In pleaſing murmurs mix, and ſweetly ſing.
Creech.

IDYLLIUM VI.

The following modern ballad is cloſely copied from this Idyllium.

CROSS PURPOSES.

Tom loves Mary paſſing well,
But Mary ſhe loves Harry;
While Harry ſighs for bonny Bell,
And finds his love miſcarry.
For bonny Bell for Thomas burns,
While Thomas ſlights her paſſion:
So very freakiſh are the turns
Of human inclination!

As much as Mary Thomas grieves,
Proud Hal deſpiſes Mary,
And all the flouts that Bell receives
From Tom, ſhe vents on Harry.
Thus all by turns are woo'd and woo,
No turtles can be truer;
Each loves the object they purſue,
But hates the kind purſuer.

Mol gave Hal a wreath of flowers,
Which he, in amorous folly,
Conſign'd to Bell, and in few hours
It came again to Molly.

If one of all the four had frown'd
You ne'er ſaw people glummer,
But if one ſmiles, it catches round,
And all are in good humour.

Then, lovers, hence this leſſon learn,
Throughout the Britiſh nation,
How much 'tis every one's concern
To ſmile a reformation:
And ſtill through life this rule purſue,
Whatever objects ſtrike you,
" Be kind to them that fancy you,
" That thoſe you love may like you."

Ver. 10. Thus Theocritus, Idyllium 6.

——φευγει τον φιλεοντα, και φιλεοντα διωκει.

She, driven ſtill by an unlucky fate,
Flies thoſe that love, and follows thoſe that hate.
Creech.

And Horace, Book 1. Ode 33.

Inſignem tenui fronte Lycorida
Cyri torret amor: Cyrus in aſperam
Declinat Pholoen———

For Cyrus, ſee! Lycoris, grac'd
With ſlender forehead burns;
For Pholoe, he——— *Duncombe.*

Ver. 15. Thus Theocritus, Idyll. 23.

Lovers, farewell; revenge has reach'd my ſcorn;
Thus warn'd, be wiſe, and love for love return.
Dryden.

IDYLLIUM VII.

This Idyllium has given occaſion to the following ode to Cynthia, by a lady of Huntingdon; which muſt be allowed to have ſurpaſſed the original.

Siſter of Phœbus, gentle queen,
Of aſpect mild and ray ſerene,
Whoſe friendly beams by night appear,
The lonely traveller to cheer!
Attractive Power! whoſe mighty ſway
The ocean's ſwelling waves obey,
And, mounting upward, ſeem to raiſe
A liquid altar to thy praiſe:
The wither'd hags, at midnight hour,
Invoke to their infernal bower:
But I to no ſuch horrid rite,
Sweet queen, implore thy ſacred light;
Nor ſeek, while all but lovers ſleep,
To rob the miſer's treaſur'd heap;
Thy kindly beams alone impart,
To find the youth who ſtole my heart,
And guide me from thy ſilver throne,
To ſteal his heart, or find my own!

Ver. 3. Thus Homer, Iliad, Book 22, ſpeaking of the ſame ſtar:

Οιος δ' αστηρ, κ. τ. λ.

As radiant Heſper ſhines with keener light,
Far beaming o'er the ſilver hoſt of night. *Pope.*

IDYLLIUM VIII.

The ſtory of Alpheus and Arethuſa, is related at large by Ovid, in his Metamorp. Book 5. Virgil alſo mentions it in his Æneid, Book 3.

Sicanio prætenta ſinu jacet inſula contra
Plemmyrium undoſum; nomen dixere priores
Ortygiam. Alpheum fama eſt huc, Elidis amnem,
Occultas egiſſe vias ſubter mare; qui nunc
Ore, Arethuſa, tuo Siculus confunditur undis.

An iſle, once call'd Ortygia, fronts the ſides
Of rough Plemmyrium, and Sicanian tides.
Hither, 'tis ſaid, Alpheus, from his ſource
In Elis' realms, directs his wat'ry courſe;
Beneath the main, he takes his ſecret way,
And mounts with Arethuſa's ſtreams to day.
Pitt.

Ver. 3. Moſchus calls the duſt ſacred, becauſe the Olympic games, which conſtituted no ſmall part of the religion of the ancients, were celebrated at Elis, from whence Alpheus flowed.

IDYLLIUM IX.

This Idyllium, though uncommonly inſerted in the works of Theocritus, has, by Daniel Heinſius and other critics, been adjudged to Moſchus; and, therefore, is here tranſlated. There is another Idyllium, of which Moſchus is ſuppoſed to have been the author, containing a dialogue between Daphnis and a ſhepherdeſs; but that is thought too looſe to be here inſerted. The curious reader may ſee it tranſlated by Dryden.

THE WORKS OF MUSÆUS.

THE LOVES OF HERO AND LEANDER.

Oft, by the covert of night's ſhade,
Leander woo'd the Thracian maid;
Through foaming ſeas his paſſion bore,
Nor fear'd the ocean's thundering roar.
The conſcious virgin, from the ſea-girt tower,
Hung out the faithful torch, to guide him to her bower.

DODSLEY'S MISCELL. Vol. iv. p. 308.

ADVERTISEMENT.

THIS celebrated poem on the Loves of Hero and Leander has been admired by the politeſt ſcholars for many ages: And though Mr. Waller, and ſeveral other writers of the fineſt taſte, have conjectured it to be one of the ſtories

Which old Muſæus ſo divinely ſung,

yet many convincing arguments might be brought to prove it to have been the work of a later author, a grammarian of that name, who lived in the fifth century.

Nor let the Engliſh reader look upon the title of grammarian as a term of reproach, though now frequently uſed as ſuch. The profeſſion ſtyled by the ancients γραμματικη, was the ſame with the belles lettres among the moderns: And the appellation of grammarian was particularly applied to thoſe who excelled in every kind of polite writing.

The firſt Engliſh tranſlation of the following poem appeared in the year 1647, by Sir Robert Stapylton. It has ſince that time been frequently attempted; but with what ſucceſs, is left to the judgment of others.

SING, muſe! the conſcious torch, whoſe nightly ray
Led the bold lover through the wat'ry way,
To ſhare thoſe joys which mutual faith hath ſeal'd,
Joys to divine Aurora unreveal'd.
Abydos, Seſtos, ancient towns, proclaim,
Where gentleſt boſoms glow'd with pureſt flame.
I hear Leander daſh the foaming tide!
Fix'd high in air, I ſee the glimmering guide!
The genial flame, the love-enkindling light,
Signal of joy that burn'd ſerenely bright:
Whoſe beams, in fair effulgency diſplay'd,
Adorn'd the nuptials of the Seſtion maid:
Which Jove, its friendly office to repay,
Should plant, all-glorious, in the realms of day,
To blaze for ever 'midſt the ſtars above,
And ſtyle it gentle harbinger of love:
For ſure on earth it ſhone ſupremely kind,
To ſooth the anguiſh of the love-ſick mind,
Till cloth'd in terrors roſe the wint'ry blaſt,
Impetuous howling o'er the wat'ry waſte:
And, O! inſpire me, goddeſs, to reſound
The torch extinguiſh'd, and the lover drown'd.
Againſt Abydos ſea-beat Seſtos ſtood,
Two neighb'ring towns, divided by the flood:
Here Cupid prov'd his bow's unerring art,
And gain'd two conqueſts with a ſingle dart:
On two fond hearts the ſweet infection prey'd,
A youth engaging, and a beauteous maid:
Of Seſtos ſhe, fair Hero was her name;
The youth, Leander, from Abydos came.
Their forms divine a bright reſemblance bore,
Each was the radiant ſtar of either ſhore.
Thou, whom the fates commiſſion here to ſtray,
Awhile the turret's eminence ſurvey;
Thence Hero held the blazing torch, to guide
Her lover rolling on the boiſterous tide;

The roaring Hellespont, whose wave-worn strait
Still in loud murmurs mourns Leander's fate.
Say, heav'nly muse, had Hero charms to move,
And melt the Abydinian into love?
Say, with what wiles the amorous youth inspir'd,
Obtain'd the virgin whom his soul admir'd?
Fair Hero, priestess to th' idalian queen,
Of birth illustrious, as of graceful mien,
Dwelt on a high sequester'd tower, that stood
Firm on the ramparts, and o'erlook'd the flood:
Chaste, and unconscious of love's pleasing pain,
She seem'd a new-born Venus of the main;
But, nice of conduct, prudently withdrew
Far from the follies of the female crew:
Blest in retreat, she shunn'd the vain delight
Of daily visits, and the dance at night,
Content in sweet tranquillity to screen
Her blooming beauty from malignant spleen;
For where superior beauty shines confest,
It kindles envy in each female breast.
To soften Venus oft with prayer she strove,
Oft pour'd libations to the god of love;
Taught by th' example of the heavenly dame,
To dread those arrows that were tipt with flame.
Vain all her caution, fruitless prov'd her prayer;
Love gains an easy conquest o'er the fair.
For now the sacred festival appear'd,
By pious Sestians annually rever'd,
At Venus' fane to pay the rites divine,
And offer incense at Adonis' shrine.
Vast crowds from all the sea-girt isles repair,
The day to rev'rence, and the feast to share.
From flowery Cyprus, circled by the main,
And high Hœmenia, hastes the youthful train;
Not one remain'd of all the female race
Thy towns, Cythera, and thy groves to grace;
Afar from spicy Libanus advance
The throngs unnumber'd, skill'd to lead the dance;
From Phrygian plains they haste in shoals away,
And all Abydos celebrates the day.
To Sestos all the mirthful youths repair,
All that admire the gay, the young the fair;
For amorous swains, when rumour'd feasts invite,
Joy at the news, and follow with delight,
Not to the gods to pay the rites divine,
Or offer incense at some sacred shrine;
Few are their offerings, and concise their prayer,
Who give their whole devotion to the fair.
As through the temple pass'd the Sestian maid,
Her face a soften'd dignity display'd;
Thus silver Cynthia's milder glories rise,
To glad the pale dominion of the skies.
Her lovely cheeks a pure vermillion shed,
Like roses beautifully streak'd with red:
A flowery mead her well-turn'd limbs disclose,
Fraught with the blushing beauties of the rose:
But when she mov'd, in radiant mantle dress't,
Flowers half unveil'd adorn'd her flowing vest,
And numerous graces wanton'd on her breast.
The ancient sages made a false decree,
Who said, the graces were no more than three;
When Hero smiles, a thousand graces rise,
Sport on her cheek, and revel in her eyes.
Such various beauties sure conspir'd to prove
The priestess worthy of the queen of love.

Thus as she shone superior to the rest,
In the sweet bloom of youth and beauty dress't,
Such softness temper'd with majestic mien,
The earthly priestess match'd the heav'nly queen.
The wondering crowds the radiant nymph admire,
And every bosom kindles with desire;
Eager each longs, transported with her charms,
To clasp the lovely virgin in his arms;
Where'er she turns, their eyes, their thoughts pursue,
They sigh, and send their souls at every view.
Then thus some ardent youth bespoke the rest,
Cast a fond look, and open'd all his breast:
" I oft at Sparta wondering have beheld
" Young maids contending in the listed field,
" Sparta, that boasts the emulated prize
" Of fairest virgins, and of brightest eyes;
" Yet ne'er till now beheld a nymph so fair,
" Such beauty blended with such graceful air:
" Perhaps (for sure immortal is her race)
" Beneath the priestess Venus hides a grace.
" My dazzled eyes with constant gazing tire,
" But my fond fancy ever could admire.
" O! make me, Venus, partner of her bed,
" Though fate that instant strike the lover dead:
" Let but my love the heavenly Hero crown,
" I on the gods will look superior down.
" Should you this boon deny, O queen! decree,
" To bless my days, a nymph as fair as she!"
Thus spoke the general voice; the train apart
Conceal the wound deep rankling in the heart.
But when Leander saw the blooming fair,
Love seiz'd his soul instead of dumb despair;
Resolv'd the lucky moments to improve,
He sought occasion to reveal his love;
The glorious prize determin'd to obtain,
Or perish for those joys he could not gain.
Her sparkling eyes instilling fond desire,
Entranc'd his soul, and kindled amorous fire.
Such radiant beauty, like the pointed dart,
With piercing anguish stings th' unguarded heart:
For on the eye the wound is first impress't,
Till by degrees it rankles in the breast.
Now hope and confidence invade his soul;
Then fear and shame alternately controul:
For through his bosom thrill'd a conscious shame
Confess'd the passion which it seem'd to blame:
Her beauties fix'd him in a wild amaze;
Love made him bold, and not afraid to gaze.
With step ambiguous, and affected air,
The youth advancing sac'd the charming fair:
Each amorous glance he cast, though form'd by art,
Yet sometimes spoke the language of his heart;
With nods and becks he kept the nymph in play,
And tried all wiles to steal her soul away.
Soon as she saw the fraudful youth beguil'd,
Fair Hero, conscious of her beauty, smil'd;
Oft in her veil conceal'd her glowing face,
Sweetly vermillion'd with the rosy grace;
Yet all in vain to hide her passion tries,
She owns it with her love-consenting eyes.
Joy touch'd the bosom of the gentle swain,
To find his love was not indulg'd in vain.

Then, while he chid the tedious lingering day,
Down to the weſt declin'd the ſolar ray;
And dewy Heſper ſhone ſerenely bright,
In ſhadowy ſilence leading on the night.
Soon as he ſaw the dark involving ſhade,
Th' embolden'd youth approach'd the blooming maid,
Her lily hand he ſeiz'd, and gently preſt,
And ſoftly ſigh'd the paſſion of his breaſt:
Joy touch'd the damſel, though ſhe ſeem'd diſpleas'd,
And ſo n withdrew the lily hand he ſeiz'd.
The youth perceiv'd, through well diſſembled wiles,
A heart juſt yielding by conſenting ſmiles;
Then to the temple's laſt receſs convey'd
The unreluctant, unreſiſting maid:
Her lovely feet, that ſeem'd to lag behind,
But ill conceal'd her voluntary mind.
She feign'd reſentment with an angry look,
And, ſweetly chiding, thus indignant ſpoke:
" Stranger, what madneſs has poſſeſs'd thy
" brain,
" To drag me thus along the ſacred fane?
" Go—to your native habitation go——
" 'Tis quite unkind to pull my garments ſo.'
" Rich are my parents—urge not here your fate,
" Leſt their juſt vengeance you repent too late:
" If not of me, of Venus ſtand afraid,
" In her own fane ſoliciting a maid:
" Hence ſpeed your flight; and Venus' anger
" dread;
" 'Tis bold aſpiring to a virgin's bed."
Thus chid the maid, as maids are wont to do,
And ſhow'd her anger, and her fondneſs too:
The wily youth, as thus the fair complain'd,
Too well perceiv'd the victory was gain'd:
For nymphs enrag'd the more complying prove,
And chidings are the harbingers of love.
He kiſs'd her ſnowy neck, her fragrant breaſt:
And thus the tranſport of his ſoul expreſt:
" O lovely fair, in whom combin'd are ſeen
" The charms of Venus, and Minerva's mien!
" For ſure no virgin of terreſtrial race
" Can vie with Hero in the blooms of face:
" I deem your lineage from the gods above,
" And ſtyle you daughter of Saturnian Jove.
" Bleſt is the father from whoſe loins you ſprung,
" Bleſt is the mother at whoſe breaſt you hung,
" Bleſt, doubly bleſt, the fruitful womb that bore
" This heavenly form for mortals to adore.
" Yet, beauteous Hero, grant a lover's prayer,
" And to my wiſhes prove as kind as fair:
" As Venus' prieſteſs juſt to Venus prove,
" Nor ſhun the gentle offices of love.
" O let us, while the happy hour invites,
" Propitious, celebrate the nuptial rites.
" No maid can ſerve in Cytherea's fane;
" Her eyes delight not in the virgin train.
" But would fair Hero ſecret rites explore,
" The laws of Venus, and her pleaſing lore,
" Thoſe rites are practis'd in the bridal bed,
" And there muſt Hero, yet a maid, be led:
" Then as you fear the goddeſs to offend,
" In me behold your huſband and your friend,
" Ordain'd by Cupid, greateſt god above,
" To teach you all the myſteries of love:
" As winged Mercury, with golden wand,
" Made Hercules, with diſtaff in his hand,
" To every taſk of Omphale ſubmit;
" Thus love, more powerful than the god of wit,
" Sent me to you. 'Tis needleſs to relate
" The chaſte Arcadian Atalanta's fate;
" Who from th' embraces of Milanion fled,
" Her faithful lover, and the nuptial bed:
" But vengeful Venus caus'd the nymph to burn
" With equal flame, and languiſh in her turn.
" O let example warn you to revere
" The wrathful goddeſs, and your lover hear!"
Thus ſpoke the youth—his magic words controul
Her wavering breaſt, and ſoften all her ſoul.
Silent ſhe ſtood, and, rapt in thought profound,
Her modeſt eyes were fix'd upon the ground:
Her cheeks ſhe hid, in roſy bluſhes dreſt,
And veil'd her lily ſhoulders with her veſt:
On the rich floor, with Parian marble laid,
Her nimble foot involuntary play'd.
By ſecret ſigns a yielding mind is meant;
And ſilence ſpeaks the willing maid's conſent.
Now had the wily god's envenom'd dart
Diffus'd the pleaſing poiſon to her heart;
Leander's form, inſtilling ſoft deſire,
Woo'd her pleas'd eyes, and ſet her ſoul on fire.
While on the ground fair Hero fix'd her ſight,
Leander view'd, with exquiſite delight,
Her ſwelling breaſt, and neck as ivory white.
At length her face with lovely bluſhes ſpread
She rais'd, and thus in ſweet confuſion ſaid:
" Stranger, thy words ſuch magic ſounds con-
" vey
" With ſoft compaſſion rocks would melt away.
" Who form'd thy tongue with ſuch perſuaſive
" art
" To pour delightful ruin on the heart?
" Ah! tell me, who thus taught thee to explore
" My lone retirement on the Thracian ſhore?
" Thy ſpeech, though pleaſing, flow'd to me in
" vain:
" How can a ſtranger Hero's love obtain?
" Should I in public give to thee my hand,
" My parents would forbid the nuptial band;
" And ſhould'ſt thou here in cloſe concealment
" Our ſecret paſſion would itſelf betray: [ſtay
" For ſoon the voice of ſcandal-ſpreading fame
" The deed of ſilence would aloud proclaim
" But, gentle youth, thy name, thy country tell;
" For mine, alas! by thee are known too well.
" In yon high tower, which cloſe to Seſtos ſtands,
" And all the roaring Helleſpont commands,
" With one attending damſel I remain;
" For ſo my parents and the fates ordain!
" No nymphs coeval to ſweet muſic's ſound
" Lead the ſmooth dance, or lightly beat the
" ground;
" But ſtormy winds eternal diſcord keep,
" And bluſtering bellow through the boundleſs
" deep."
Thus ſpoke the prieſteſs; and with modeſt grace,
Conceal'd the new-born beauties of her face;

For on her cheeks the roſeate bluſh that hung
Seem'd to condemn the language of her tongue.
Meanwhile Leander feeds the hidden fire,
Glows in each vein, and burns with fierce deſire:
But anxious doubt his muſing breaſt alarms;
How ſhall he gain admittance to her charms?
Nor long he paus'd, for love in wiles abounds,
Well pleas'd to heal the boſoms which he wounds;
'Twas he, whoſe arrows men and gods controul,
That heal'd Leander's love-afflicted ſoul:
Who thus, while ſighs upheav'd his anxious breaſt,
The nymph with artful eloquence addreſt:
" For thee, dear object of my fond deſire,
" I'll croſs the ocean though it flame with fire:
" Nor would I fear the billow's loud alarms,
" While every billow bore me to thy arms;
" Uncheck'd, undaunted by the boiſterous main,
" Tempeſtuous winds ſhould round me roar in vain:
" But oft as night her ſable pinions ſpread,
" I through the ſtorm would ſwim to Hero's bed:
" For rich Abydos is the home I boaſt,
" Not far divided from the Thracian coaſt.
" Let but my fair a kindly torch diſplay,
" From the high turret to direct my way;
" Then ſhall thy daring ſwain ſecurely glide,
" The bark of Cupid o'er the yielding tide,
" Thyſelf my haven, and thy torch my guide:
" And while I view the genial blaze afar,
" I'll ſwim regardleſs of Boötes' car,
" Of fell Orion, and the Northern Wain
" That never bathes his brightneſs in the main:
" Thy ſtar, more eminently bright than they,
" Shall lead the lover to his bliſsful bay.
" But let the torth, O nymph divinely fair!
" My only ſafety be thy only care!
" Guard well its light when wint'ry tempeſts roar,
" And hoarſe waves break tumultuous on the ſhore,
" Leſt the dire ſtorms that blacken all the ſky,
" The flame extinguiſh, and the lover die.
" More would'ſt thou know? Leander is my name,
" The happieſt huſband of the faireſt dame."
Thus mutual vow'd the lovers to employ
The nights in raptures of myſterious joy;
Her taſk, ſecure th' extended torch to keep,
And his, to croſs th' unfathomable deep:
On promis'd bliſs their fruitful fancies fed,
Eceſtatic pleaſures of the nuptial bed;
Till the fond nymph, when decency requir'd,
Back to her tower unwillingly retir'd:
Leander ere he left his lovely bride,
Mark'd well the ſtation of the blazing guide,
Then fought Abydos croſs the founding tide.
What now but amorous ſcenes their thoughts employ,
Confus'd ideas of the genial joy?
Slow roſe on leaden wings the morning light,
Slow noon came on—the lovers wiſh'd it night.
At length dark gloom a duſky mantle ſpread;
Sleep o'er the world his balmy influence ſhed.
All but Leander lay diſſolv'd in reſt,
Love kept a ceaſeleſs vigil in his breaſt.
Silent he wander'd on the winding ſhore,
The deep reſounded with tremendnous roar:
Wide o'er the foaming waves his anxious ſight
Explor'd the torch's love-proclaiming light:
He little deem'd, alas! its flame would prove
The blaze of death, though meant the torch of love.
Soon as fair Hero from her tower ſurvey'd
Th' horizon darken'd in the ſable ſhade,
The torch on high ſhe fix'd: its flames inſpire
Leander's boſom with the kindred fire:
Quick through his frame the bright contagion ran,
And with the glowing ſignal glow'd th' enamour'd man.
But when he heard the hoarſe-reſounding roar
Of thundering billows breaking on the ſhore,
Aghaſt he ſtood, he ſhrunk, and thus addreſt
Theſe words of courage to his trembling breaſt:
" Ah cruel love! whoſe woe the waves conſpire!
" The waves are water, but I burn with fire;
" Be bold my heart, the foaming billows brave,
" Nor fear the threat'nings of the wint'ry wave.
" Fair Venus roſe propitious from the main;
" She calms the ocean's rage and ſooths the lover's pain."
He ſpoke, and ſtraight his lovely limbs undreſt,
And folded round his head the various veſt;
Then, dauntleſs, plunging in the foaming tide,
Daſh'd with his arms th' intruding waves aſide:
Full in his view he kept the ſhining mark,
Himſelf the pilot, paſſenger, and bark.
While faithful Hero, to her promiſe true,
Watch'd on the turret every wind that blew;
Oft with her robe ſhe ſcreen'd the torch's blaze
From dangerous bluſts that blew a thouſand ways:
Till the tir'd youth, on rolling ſurges toſt,
Securely landed on the Seſtian coaſt.
Soon as ſhe ſaw her lover ſafe on ſhore,
Eager ſhe ran, and led him to her tower,
Welcom'd with open arms her panting gueſt,
And, ſweetly ſmiling, to her boſom preſt:
Then dumb with joy the ſhivering youth ſhe led,
Still wet and weary to the genial bed,
Wip'd his fair limbs, and fragrant oils apply'd,
To cleanſe his body from the oozy tide;
Then claſp'd him cloſe, ſtill panting, to her breaſt,
And thus with fond endearing words addreſt:
" My life, my lover, thou haſt ſuffer'd more
" Than fondeſt bridegroom e'er endur'd before:
" Deſtin'd, alas! dread troubles to ſuſtain
" On the rough boſom of the briny main;
" Now let ſweet joy ſucceed in ſorrow's place,
" And lull thy labours in my warm embrace."
She ſpoke: He loos'd her virgin zone to prove
The ſacred rites and myſteries of love.
No youths with meaſur'd dance the nuptials crown'd,
Nor tuneful Hymen's congratulating ſound:
No bard invok'd the heavenly queen with prayer,
To ſmile propitious on the wedded pair:
No nuptial torch its golden luſtre ſhed,
Bright torch of love to grace the bridal bed!
No lö Pæans muſically rung;
No greeting parents Hymeneals ſung:
But all was gloom, and ſilence all around,
Inſtead of muſic's love-inſpiring ſound.
Beneath the covert of the night conceal'd,
They taſted pleaſures mutual faith had ſeal'd;

In close embraces all entranc'd they lay,
In raptures never usher'd to the day:
Till the fond youth reluctant left his bride,
Still breathing love, and cross'd the foaming tide.
Thus Hero liv'd unnotted, unbetray'd,
Each night a woman, and each day a maid.
Both wish'd the hours on swiftest wings would fly,
And hail'd the evening, not the morning sky.
Thus rapt in hidden joys, each blissful night
They past in ecstacies of full delight:
But soon, alas! those dear-bought pleasures fled,
And short the transports of that bridal bed!
For now relentless winter, that deforms
With frost the forest, and the sea with storms,
Bade the wild winds o'er all the ocean reign,
And raise the rapid whirlpools of the main;
The hoarse wild winds obey, and, with harsh sound,
Roar o'er the surface of the vast profound,
Rouze from their beds the scatter'd storms that sleep
In the dark caverns of the dreary deep:
The trembling sailor hears the dreadful roar,
Nor dares the wint'ry turbulence explore,
But drags his vessel to the safer shore.
But thee, bold youth, no wint'ry storms restrain,
Nor all the deathful dangers of the main.
For when thou saw'st the torch's blaze from far,
(Of nuptial bliss the bright prophetic star)
Thee not the furious tempest could controul,
Nor calm the glowing raptures of the soul.
Yet sure fair Hero, when the gloomy sky
With gathering clouds proclaim'd rough winter nigh,
Without her lover should have pass'd the night,
Nor from the tower, ill-omen'd, shown the light,
But she, ah hapless! burns with fond desire,
'Tis love inflames her while the fates conspire:
The torch of death now glimmer'd from above,
No more the gentle harbinger of love.
'Twas night, and angry Æolus had hurl'd
The winds tempestuous o'er the wat'ry world;
The bellowing winds with rage impetuous roar,
And dash the foaming billows on the shore:
Ev'n then the youth, with pleasing visions fed,
Glows with remembrance of the bridal bed;
And while fierce tempests howl on every side,
Float on the bosom of the briny tide.
Waves roll'd on waves, in hideous heaps are driven,
Swell'd into mountains, and upheav'd to heaven:
Bleak-blasts, loud roaring, the vex'd ocean sweep,
Foam the dash'd billows, and resounds the deep.
From every part the blustering terrors fly,
Rage o'er the main, and battle in the sky.
The growling thunder of the vast profound
The rocks rebellow, and the shores rebound.
Amidst the wat'ry war, with toils oppress'd
O'erwhelm'd with billows, and in gulfs distress'd,
Leander oft with suppliant prayer implor'd
The sea-sprung goddess, and old ocean's lord:
Thee, Boreas, too, he summon'd to his aid,
Nor was unmindful of th' Athenian maid;
But prayers are fruitless, and petitions vain;
Love must submit to what the fates ordain.
From wave to wave the hapless youth is toss't,
Now heav'd on high, and now in whirlpools lost;
His weary'd feet no more his will obey,
His arms hang useless, and forget to play.
Borne on the surge supine, and void of breath
He drinks the briny wave, and draws in death.
Thus while in fatal rage each wind conspires,
Extinct at once the flame, and lovers fires,
Fainting he sinks, and with the torch expires.
While on the turret Hero mourn'd his stay,
And fondly sighing, chid his long delay,
Perplexing anguish in her bosom rose,
Nor knew her eyes the blessings of repose.
Now rose the morn, in ruffet vest array'd,
Still from th' impatient fair the lover stay'd:
Watchful she stood, and cast her eyes around
O'er the wide beach, and o'er the depths profound,
Haply to spy her lover should he stray,
The light extinguish'd 'midst the wat'ry way:
But when she saw him breathless on the sand,
Stretch'd, ghastly pale, by death's relentless hand,
She shriek'd aloud; and from her throbbing breast
Rent the gay honours of her flowery vest;
Then from the tower her beauteous body cast,
And on her lover's bosom breath'd her last:
Nor could the fates this faithful pair divide
They liv'd united, and united died.

NOTES ON HERO AND LEANDER.

Ver. 23. Abydos was a city of Asia, situated on the Hellespont, over-against Sestos, a city in the Thracian Chersonnesus. Geographers are of opinion, that the castles of the Dardanelles were built on the ruins of these two places: But they are manifestly mistaken; for there are no remains of antiquity to be seen near those castles, but very remarkable ones three miles farther, where the channel is considerably narrower. Le Brun assures us, that the strait at these ruins is only half a mile over, and that one of them is still called Sestos, and the other Abydos or Avido. Pliny and Herodotus say, the narrowest part of the channel is about seven stadia, or furlongs.

Ver. 60. In the first Idyllium of Moschus, Venus complains of Cupid, that

His darts and arrows are all tipp'd with flame.

Ver. 144. Virgil finely describes the conflict of various passions in the breast of Turnus, Æneid, book 12. ver. 666.

——æstuat ingens
Imo in corde pudor, mixtoque insania luctu,
Et furiis agitatus amor, et conscia virtus.

A thouſand various thoughts confound the chief,
He ſtood, he gaz'd his boſom ſwell'd with grief;
Pride, conſcious valour, fury, love and ſhame,
At once ſet all the hero in a flame. *Pitt.*

Ver. 383. Thus in the third book of the Odyſſey, Polycaſte, the daughter of Neſtor, bathes and anoints Telemachus.

Sweet Polycaſte took the pleaſing toil
To bathe the prince, and pour the fragrant oil.

On which Dr. Broome remarks, that the practice of women bathing and anointing men frequently occurs in the Odyſſey: neither is this done by women of inferior quality; but we have here a young princeſs bathing, anointing, and clothing the naked Telemachus.

Ver. 494. "They were lovely and pleaſant in "their lives, and in their death they were not di-"vided."

2 Sam. chap. 1. ver. 23.

THE WORKS

OF

APOLLONIUS RHODIUS.

TRANSLATED FROM THE GREEK,

BY

FRANCIS FAWKES, M. A.

FAWKES'S APOLLONIUS RHODIUS.

PREFACE.

THE author of this poem was the ſon of Silleus and Illeus. He was born at Alexandria in Egypt, and educated under Callimachus: He received the name of Rhodius, or the Rhodian, either from his mother, whoſe name was Rhoda, or, more probably, from the city Rhodes. During his ſtay in this place, he finiſhed his Argonautic poem, and founded a ſchool of rhetoric. Ptolemy Euergetes, in whoſe reign our poet flouriſhed, two hundred and forty-four years before Chriſt, recalled him from his retirement at Rhodes, and appointed him ſucceſſor to Eratoſthenes in the care of the Alexandrian library. The favours which had been conferred on Callimachus in the court of Ptolemy Philadelphus, were continued to him by his ſucceſſor Ptolemy Euergetes. So that Callimachus, no leſs than his ſcholar, was protected and patronized by his prince. This circumſtance, among others, gave occaſion to thoſe jealouſies and diſſentions which ſubſiſted between theſe rival poets. Callimachus is ſuppoſed to have alluded, in the following lines, to that invidious ſpirit which prevailed in his ſcholar.

Ὁ φθόνος Ἀπόλλωνος ἐπ' ὄατα λάθριος εἶπεν,
Οὐκ ἄγαμαι τὸν ἀοιδὸν, ὅς οὐ, ὅσα Πόντος, ἀείδει.
Call. Hymn. ad Ap. v. 105.

For Apollonius, anxious to eſtabliſh his own reputation, and jealous of his maſter's, had depreciated thoſe more numerous, but lighter productions, in which the muſe of Callimachus excelled; epigrams, hymns, and elegies.

It will be no improper introduction to the following poem, to trace the ſubject of it to its ſource: nor can we expect to be guided through its intricacies by a ſafer clue, than that which the ancients have afforded us.

Ino was the wife of Athamas, king of Orchomenos: from whom he was ſoon after divorced, and married Nephele. But ſhe incurring his diſpleaſure, he reſtored the repudiated Ino to his bed. By her he had two children, Learchus and Melicerta; by Nephele he had Phrixus and Helle. Ino beheld the children of her rival with a jealous eye. For they, being the eldeſt, had a prior claim to their father's inheritance. Reſolved on their deſtruction, ſhe concerted the following plan, as moſt likely to effect it. A grievous famine laying waſte the country, it was judged expedient to conſult the oracle about the means of ſuppreſſing it. Ino having gained over the prieſts to her intereſt, prevailed on them to return this anſwer: that the ravages of famine could no otherwiſe be ſuppreſſed, than by the ſacrifice of Nephele's children. Phrixus, who was made acquainted with the cruel purpoſe of Ino, freighted his veſſel with his father's treaſures, and embarked with his ſiſter Helle for Colchis. The voyage proved fatal to her; and the ſea, into which ſhe fell, was named from her the Helleſpont. But Phrixus arrived ſafe at Colchis; and was protected from the cruelties of his ſtep-mother Ino, at the court of Æetes his kinſman, who beſtowed on him his daughter Chalciope in marriage. Upon his arrival, he conſecrated his ſhip to Mars: on whoſe prow was repreſented the figure of a ram. This embelliſhment, it is ſuppoſed by ſome of the hiſtorians, gave riſe to the fiction, of his having ſwam to Colchis on the back of that animal, of his having ſacrificed it to Mars, and hung up its fleece in the temple of that god. It is this imaginary fleece which is celebrated by the poets for having given birth to the expedition of the Argonauts. A variety of whimſical conjectures have been formed concerning it. Some are of opinion, that it was a book of ſheep-ſkins, containing the myſteries of the chemic art. Others have aſſured us, that it ſignified the riches of the country, with which their rivers, that abounded in gold, ſupplied its inhabitants: and that, from the ſheep-ſkins made uſe of in collecting the golden duſt, it was called the Golden Fleece.

For a further illuſtration of the ſubject of this poem, it will be neceſſary to inſert the following hiſtory.

Tyro, the daughter of Salmoneus, had two ſons by Neptune, Neleus and Pelias: by Cretheus ſhe had Æſon, Pheres and Amithaon. The city of Iolcos in Theſſaly, which Cretheus built, was the capital of his dominions. He left his

kingdom at his death to Æſon his eldeſt ſon; but made no proviſion for Pelias. Pelias, however, growing every day more powerful, at length dethroned Æſon. And hearing that his wife Alcimeda was delivered of a ſon, he was reſolutely bent on his deſtruction. For he had been forewarned by the oracle that he muſt be dethroned by a prince, deſcended from Æolus, and who ſhould appear before him with one foot bare. Æſon and Alcimeda being informed of the tyrant's intention, conveyed their ſon to mount Pelion, where he was educated by Chiron. Having attained to maturity, he conſulted the oracle; who encouraged him to repair to the court of Iolcos Pelias, hearing of the arrival of this ſtranger, and of the circumſtance of his appearance with only one ſandal, concluded that this muſt be the perſon, whom the oracle had foretold. Having made himſelf and his ſituation known to his uncle, Jaſon demanded of him the crown, which he had ſo unjuſtly uſurped. Pelias was greatly alarmed at this requiſition. But knowing that a thirſt for glory is the darling paſſion of youth, he contrived to appeaſe his nephew's reſentment by diſcloſing to him the means of gratifying his ambition. He aſſured him, that Phrixus, when he ſailed from Orchomenos, had carried with him a fleece of gold, the poſſeſſion of which would at the ſame time enrich and immortalize him. The propoſal had its deſired effect Jaſon ſignified his acceptance of it, and collected ſpeedily the moſt illuſtrious princes of Greece, who were eager to embark in a cauſe, that was at once advantageous and honourable. Who theſe heroes were, the route they took, the dangers with which they encountered, and the ſucceſs they met with, are particulars recorded by Apollonius, and on which he has laviſhed all the graces of poetry.

Such is the hiſtory of the Golden Fleece, as delivered down to us by the ancient poets and hiſtorians. This celebrated expedition is generally ſuppoſed to be the firſt era of true hiſtory. Sir Iſaac Newton places it about forty-three years after the death of Solomon, and nine hundred and thirty-ſeven years before the birth of Chriſt. He apprehends, that the Greeks, hearing of the diſtractions of Egypt, ſent the moſt renowned heroes of their country in the ſhip Argo, to perſuade the nations on the coaſt of the Euxine ſea to throw off the Egyptian yoke, as the Lybians, Ethiopians, and Jews had before done. But Mr. Bryant has given us a far different account of this matter in his very learned ſyſtem of mythology: whoſe ſentiments on this head I have endeavoured to collect, and have ventured to give them a place in this preface. For the novelty of his hypotheſis, and the learning and ingenuity with which it is ſupported, cannot fail to entertain and inſtruct us.

The main plot, ſays the learned and ingenious mythologiſt, as it is tranſmitted to us, is certainly a fable, and replete with inconſiſtencies and contradictions. Yet many writers, ancient and modern, have taken the account in groſs; and without heſitation, or exception to any particular part, have preſumed to fix the time of this tranſaction. And having ſatisfied themſelves in this point, they have preſumed to make uſe of it for a ſtated era. Mr. Bryant is of opinion, that this hiſtory, upon which Sir Iſaac Newton built ſo much, did certainly not relate to Greece; though adopted by the people of that country. He contends, that Sir Iſaac's calculation reſted upon a weak foundation. That it is doubtful, whether ſuch perſons as Chiron or Muſæus ever exiſted; and ſtill more doubtful, whether they formed a ſphere for the Argonauts. He produces many arguments to convince us, that the expedition itſelf was not a Grecian operation: and that this ſphere at any rate was not a Grecian work: and if not from Greece, it muſt certainly be the produce of Egypt. For the aſtronomy of Greece confeſſedly came from that country: conſequently the hiſtory to which it alludes, muſt have been from the ſame quarter. Many of the conſtellations, ſays our author, are of Egyptian original. The zodiac, which Sir Iſaac Newton ſuppoſed to relate to the Argonautic expedition, was, he aſſerts, an aſſemblage of Egyptian hieroglyphics.

After having enumerated all the particulars of their voyage, the different routes they are ſuppoſed to have taken, and the many inconſiſtencies with which the whole ſtory abounds, Mr. Bryant proceeds to obſerve, that the mythology, as well as the rites of Greece, was borrowed from Egypt, and that it was founded upon ancient hiſtories, which had been tranſmitted in hieroglyphical repreſentations. Theſe, by length of time, became obſcure; and the ſign was taken for the reality, and accordingly explained. Hence aroſe the fable about the bull of Europa, and the like. In a word theſe is the ſame hiſtory under a different allegory and emblem. In the wanderings of Rhea, Iſis, Aſtarte, Iona and Damater, is figured out the ſeparation of mankind by their families, and their journeying to their places of allotment. At the ſame time, the diſperſion of one particular race of men, and their flight over the face of the earth, is principally deſcribed. Of this family were the perſons, who preſerved the chief memorials of the ark in the Gentile world. They repreſented it under different emblems, and called it Demater, Pyrrha, Selene, Meen, Argo, Argus, Archas, and Archaius, or Architè. The Grecians, proceeds the learned writer, by taking this ſtory of the Argo to themſelves, have plunged into numberleſs difficulties. In the account of the Argo, we have undeniably the hiſtory of a ſacred ſhip, the firſt that was ever conſtructed. This truth the beſt writers among the Grecians confeſs, though the merit of the performance they would fain take to themſelves. Yet after all their prejudices, they continually betray the truth, and ſhow that the hiſtory was derived to them from Egypt. The cauſe of all the miſtakes in this curious piece of mythology aroſe from hence. The Arkites, who came into Greece, ſettled in many parts, but eſpecially in Argolis and Theſſalia; where they introduced their rites and worſhip. In the former of theſe re-

gions, they were commemorated under a notion of the arrival of Da-naus, or Danaus. It is ſuppoſed to have been a perſon, who fled from his brother Ægyptus, and came over in a ſacred ſhip given him by Minerva. This ſhip, like the Argo, is ſaid to have been the firſt ſhip conſtructed; and he was aſſiſted in the building of it by the ſame Deity, Divine Wiſdom. Both hiſtories relate to the ſame event. Danaus, upon his arrival, built a temple, called Argus, to Iona, or Juno; of which he made his daughters prieſteſſes. The people of the place had an obſcure tradition of a deluge, in which moſt periſhed, ſome few only eſcaping. The principal of theſe was Deucalion, who took refuge in the acropolis, or temple. Thoſe who ſettled in Theſſaly, carried with them the ſame memorials concerning Deucalion, and his deliverance; which they appropriated to their own country. They muſt have had traditions of this great event ſtrongly impreſſed upon their minds; as every place, to which they gave name, had ſome reference to that hiſtory. In proceſs of time, theſe impreſſions grew more and more faint, and their emblematical worſhip became very obſcure and unintelligible. Hence they confined the hiſtory of this event to their own country; and the Argo was ſuppoſed to have been built, where it was originally enſhrined. As it was reverenced under the ſymbol of the moon, called Man or Mon, the people from this circumſtance named their country Ai-mona, in after times rendered Aimonia.

This extract from the ingenious and learned mythologiſt, will enable the reader to form ſome idea of his ſentiments on this ſubject.

But whatever diſguſt the grave hiſtorian may have conceived at this unſightly mixture of the marvellous and the probable, the poet needs not be offended at it. Fiction is his province. He may be allowed to expatiate in the regions of fancy without controul, and to introduce his fiery bulls and ſleepleſs dragons without the dread of cenſure.

The Argonautic expedition has been the admired ſubject of the Greek and Roman poets from Orpheus, or rather from Onomacritus, who lived in the times of Piſiſtratus, to thoſe of our author's imitators, who lived in the decline of the Roman empire. To weigh the merits of theſe ancient poets in the juſt ſcale of criticiſm, and to appropriate to each his due ſhare of praiſe, is a taſk too arduous and aſſuming for an humble editor to engage in. Yet ſuch is the partiality of tranſlators and editors to their favourite poets, that they wiſh either to find them ſeated above their rivals and contemporaries, on the ſummits of Parnaſſus, or, if poſſible, to fix them there. But vain are theſe wiſhes, unleſs the teſtimonies of the firſt writers of antiquity concur to gratify them. The reputation of Apollonius can neither be impaired nor enhanced by the ſtrictures of Scaliger and Rapin: the judgment of Quintilian and Longinus may, indeed, more materially affect it. They have delivered their opinions on our author in the following words:

Ἐπίτοι γε καὶ ατ]ωτος ὁ Ἀπολλώνιος, ὁ τῶν Ἀργοναυτικῶν ποιητὴς οὐ' ὢν Ὁμηρος ἀν μαλλον. ἢ Ἀπολλώνιος ἰθαλοις γενίσθαι. *Sect. xxxiii. Longin. de Sublim.*

Non contemnendum edidit opus æquali quandam mediocritate.

Quinctil. Inſt. Orat. l. x c. 1.

Unfortunately, as it ſhould ſeem, for the Rhodian, theſe celebrated ſtrictures wear the double face of approbation and cenſure. The praiſe that is conveyed under the term ἀτ]ωτος. that he no where ſinks, is loſt in the implication, that he is no where elevated. The expreſſion *non contemnendum opus*, apparently a flattering meioſis, is limited to its loweſt ſenſe by the ſubſequent obſervation, *æquali quadam, mediocritate*. But we muſt not deſert our poet even in this extremity; for if imitation implies eſteem and admiration, Apollonius's nobleſt eulogy will be found in the writings of Virgil. Thoſe applauded paſſages in this poet, which are confeſſedly imitated from our author, may ſerve as a counterpoiſe to the ſentence of the critics. Apollonius was Virgil's favourite author. He has incorporated into his Æneid his ſimiles and his epiſodes; and has ſhown the ſuperiority of his judgment by his juſt application and arrangement of them.

But it is not the Mantuan poet only, who has fetched from this ſtorehouſe the moſt precious materials. Valerius Flaccus, who has made choice of the ſame ſubject with the Rhodian, has diſcovered through every part of his work a ſingular predilection for him. He is allowed to have imitated the ſtyle of Virgil with tolerable ſucceſs; but he is indebted for the conduct of his poem chiefly to Apollonius. It is remarkable, that Quintillian, who has objected mediocrity to our author, has mentioned this his cloſeſt imitator in terms of the higheſt reſpect. Yet muſt it be confeſſed that the genius of Flaccus ſeldom ſoars ſo high, as when it is invigorated and enlightened by the muſe of Apollonius.

But the admiration in which this writer has been held by the Roman poets, did not expire with them. The rage of imitation, far from ceaſing, has caught congenial ſpirits in every ſucceeding period; and the moſt approved paſſages in this elegant poem have been diffuſed through the works of the moſt admired moderns. It were needleſs to mention any other than Milton and Camoens. Milton's imitations of Apollonius are, many of them, ſpecified in the notes inſerted in Biſhop Newton's valuable edition of all that writer's poetical works. Camoens, who has hitherto been known to the Engliſh reader only through the obſcure and crude verſion of Fanſhaw, has appeared of late greatly to advantage in the very animated tranſlation of Mr. Mickle. That the refined taſte of Camoens was formed on the model of the Greek and Roman poets, is evident throughout the Luſiad; which abounds in alluſions to the pagan mythology, and is enriched with a profuſion of graces drawn from the ancient claſſics. In the number of theſe it can be no diſparagement to his poem to reckon Apollonius Rhodius; to the merit of whoſe work Camoens, if I miſjudge not,

was no ſtranger. The ſubject of the Portugueſe poem bears a ſtriking reſemblance to that which our author has choſen. For the heroes both of Portugal and Greece traverſed unknown ſeas, in purſuit of the wealth with which an unknown country was expected to ſupply them. Camoens not only alludes to Argo and her demigods, but ſeems particularly fond of drawing a compariſon betwixt the heroes of his country and thoſe of Theſſaly.

Here view thine Argonauts, in ſeas unknown, &c.
B. i. p. 9.

With ſuch bold rage the youth of Mynia glow'd,
When the firſt keel the Euxine ſurges plough'd;
When bravely venturous for the golden fleece,
Orac'lous Argo ſail'd from wond'ring Greece.
B. iv p. 172.

And ſoon after;

While each preſag'd that great as Argo's fame,
Our fleet ſhould give ſome ſtarry band a name.

"The ſolemnity of the night ſpent in devotion, the affecting grief their friends and fellow-citizens, whom they were never more to behold; and the angry exclamations of the venerable old man, give a dignity and intereſting pathos to the departure of the fleet of Gama, unborrowed from any of the claſſics. See the concluding note to B. iv

Apollonius has admitted into his firſt book, on a ſimilar occaſion, moſt of the abovementioned particulars, and many others equally intereſting. The prayer of Jaſon, and the ſacrifices previous to their embarkation, are circumſtantially related. The lamentations of Alcimeda at the loſs of her ſon, the ſilent grief of Æſon his father, and the tears of his friends, contribute to make this parting ſcene the moſt pathetic imaginable. Through the whole of this affecting interview, Camoens ſeems not to have loſt ſight of Apollonius. But, leſt it ſhould be ſaid that a ſimilarity of ſituations naturally produces a ſimilarity of ſentiments, and that we ought not to interpret a reſemblance like this, which might be caſual only, to be the effect of ſtudied imitation; another paſſage may be ſelected from the Luſiad, which is univerſally admired for its genuine ſublimity, and is affirmed to be the happieſt effort of unaſſiſted genius. "The apparition, which in night hovers athwart the Cape of Good Hope, is the grandeſt fiction in human compoſition; the invention his own!" See the Diſſertation prefixed to Mr. Mickle's Tranſlation of the Luſiad.

There is a paſſage in the third book of Apollonius, to which the deſcription of the apparition at the Cape bears a ſtriking reſemblance: I mean the appearance of the ghoſt of Sthenelus, ſtanding on his tomb, and ſurveying the Argonauts as they ſail beſide him. The deſcription of Camoens is indeed heightened by many additional circumſtances, and enriched with a profuſion of the boldeſt images. The colouring is his own; but the firſt deſign and outlines of the piece appear to be taken from our poet

But it is time to quit the imitators of Apollonius, and to give ſome account of his tranſlators.

Dr. Broome, well known in the literary world for the part he took in the tranſlation of the Odyſſey, and for his notes annexed to it, has given an elegant verſion of the Loves of Jaſon and Medea, and of the ſtory of Talaus; which are publiſhed with his original poems. Mr. Weſt, who has transfuſed into his verſion of the Odes of Pindar, much of the ſpirit of his ſublime original, has preſented us, in an Engliſh dreſs, with one or two detached pieces from our author. Mr. Ekins has tranſlated the third book, and about two hundred lines of the fourth. Had this gentleman undertaken a verſion of the whole poem, Mr. Fawkes, I am confident, would have deſiſted from the attempt. The public has long been in poſſeſſion of ſeveral tranſlations of this latter writer. Thoſe of Anacreon and Theocritus are acknowledged to have conſiderable merit. The work before us was undertaken at the requeſt of Mr. Fawkes's particular friends; and the increaſing number of his ſubſcribers encouraged him to perſevere in his deſign; but the completion of it was prevented by the premature ſtroke of fate. What part the editor has taken in this work, is a matter of too ſmall importance to need an explanation. But leſt his motive ſhould be miſtaken, and vanity ſhould be ſuppoſed to have inſtigated what friendſhip only ſuggeſted, he begs leave to add, as the beſt apology he can offer for engaging in this work; that with no other ambition than to aſſiſt his friend, did he comply with his ſolicitations to become his coadjutor; and with no other motive does he now appear as his editor, than to enable the widow to avail herſelf of thoſe generous ſubſcriptions, for which ſhe takes occaſion here to make her thankful acknowledgments.

March 27, 1780.

THE ARGONAUTICS.

IN FOUR BOOKS.

BOOK I.

THE ARGUMENT.

This book commences with the liſt and character of the Argonauts. Before they embark, two of the chiefs quarrel, but are pacified by the harmony of Orpheus. They ſet ſail, and land at Lemnos, an iſland inhabited by female warriors; who, though they had ſlain their huſbands, and turned Amazons, are ſo charmed with theſe heroes, that they admit them to their beds. Thence they ſail to the country of the Dolions, and are kindly received by their king Cyzicus. Looſing from thence in the night, and being driven back by contrary winds, they are miſtaken for Pelaſgians, with whom the Dolions were then at war. A battle enſues, in which Cyzicus and many of his men are ſlain. The morning diſcovers the unhappy miſtake. Thence they ſail to Myſia. Hercules breaks his oar; and while he is gone into a wood to make a new one, Hylas is ſtolen by a nymph, as he is ſtooping for water at a fountain. Hercules and Polyphemus go in ſearch of him. Meanwhile the Argonauts leave them behind, and ſail to Bithynia.

Inspir'd by thee, O Phœbus, I reſound
The glorious deeds of heroes long renown'd,
Whom Pelias urg'd the golden fleece to gain,
And well-built Argo wafted o'er the main,
Through the Cyanean rocks. The voice divine
Pronounc'd this ſentence from the ſacred ſhrine:
'Erelong and dreadful woes, foredoom'd by fate,
'Through that man's counſels ſhall on Pelias wait,
'Whom he, before the altar of his god,
'Shall view in public with one ſandal ſhod.'
And, lo! as by this oracle foretold,
What time adventurous Jaſon, brave and bold,
Anaurus paſt, high ſwoln with winter's flood,
He left one ſandal rooted in the mud.
To Pelias, thus, the haſty prince repair'd,
And the rich banquet at his altar ſhar'd.
The ſtately altar, with oblations ſtor'd,
Was to his ſire erected, ocean's lord,
And every power that in Olympus reigns,
Save Juno, regent of Theſſalia's plains.
Pelias, whoſe looks his latent fears expreſs'd,
Fir'd with a bold adventure Jaſon's breaſt;
That, ſunk in ocean, or on ſome rude ſhore
Proſtrate, he ne'er might view his country more.
Old bards affirm this warlike ſhip was made
By ſkilful Argus, with Minerva's aid.
'Tis mine to ſing the chiefs, their names and race,
Their tedious wanderings on the main to trace,
And all their great atchievements to rehearſe:
Deign, ye propitious nine, to aid my verſe.
Firſt in the liſt, to join the princely bands,
The tuneful bard, enchanting Orpheus, ſtands;
Whom fair Calliope, on Thracia's ſhore,
Near Pimpla's mount, to bold Œagrus bore.
Hard rocks he ſoften'd with perſuaſive ſong,
And ſooth'd the rivers as they roll'd along.
Yon beeches tall, that bloom near Zona, ſtill
Remain memorials of his vocal ſkill:
His lays Piera's liſtening trees admire,
And move in meaſures to his melting lyre.
Thus Orpheus charm'd, who o'er the Biſtons reign'd,
By Chiron's art to Jaſon's intereſt gain'd.
Aſterion next; whoſe ſire rejoic'd to till
Pireſian vallies by Phylleion's hill,
Born near Apidanus, who ſportive leads
His winding waters through the fertile meads;
There where, from far, Enipeus, ſtream divine,
And wide Apidanus their currents join.
The ſon of Elatus, of deathleſs fame,
From fair Lariſſa, Polyphemus came.
Long ſince, when in the vigour of his might,
He join'd the hardy Lapithæ in fight
Againſt the Centaurs; now his ſtrength reclin'd
Through age, yet young and martial was his mind.
Not long at Phylace Iphiclus ſtaid,
Great Jaſon's uncle; pleas'd he join'd his aid,

And march'd to meet th' adventurous band from far,
Urg'd by affinity and love of war.
Nor long Admetus, who at Pheræ reign'd,
Near high Chalcodon's bleating fields remain'd.
Echion, Erytus, for wiles renown'd,
Left Alope, with golden harvests crown'd;
The gainful sons of Mercury: with these
Their brother came, the bold Æthalides;
Whom fair Eupolema, the Phthian, bore
Where smooth Amphrysos rolls his watery store:
Those, Menetus, from thy fair daughter sprung,
Antianira, beautiful and young.
Coronus came, from Gyrton's wealthy town,
Great as his sire in valour and renown,
Cæneus his sire; who, as old bards relate,
Receiv'd from Centaurs his untimely fate.
Alone, unaided, with transcendent might,
Boldly he fac'd, and put his foes to flight.
But they, reviving soon, regain'd their ground;
Yet fail'd to vanquish, and they could not wound.
Unbroke, unmov'd, the chief his breath resigns,
O'erwhelm'd beneath a monument of pines.
From Titaresus Mopsus bent his way,
Inspir'd an augur by the god of day,
Eurydamas, to share fair honour's crown,
Forsook near Xynia's lake his native town,
Nam'd Ctimena: Menœtius join'd the band,
Dismiss'd from Opus by his sire's command.
Next came Eurytion, Irus' valiant son,
And Eribotes, seed of Teleon.
Oïleus join'd these heroes, fam'd afar
For stratagems and fortitude in war;
Well skill'd the hostile squadrons to subdue,
Bold in attack, and ardent to pursue.
Next by Canethus, son of Abans, sent,
Ambitious Canthus from Eubœa went;
Doom'd ne'er again to reach his native shore,
Nor view the towers of proud Cerinthus more.
For thus decreed the destinies severe,
That he and Mopsus, venerable seer,
After long toils and various wanderings past,
On Afric's dreary coast should breathe their last.
How short the term assign'd to human woe,
Cloth'd as it is by death's decisive blow!
On Afric's dreary coast their graves were made,
From Phasis distant far their bones were laid,
Far as the east and western limits run,
Far as the rising from the setting sun.
Clytius and Iphitus unite their aid,
Who all the country round Œchalia sway'd;
These were the sons of Eurytus the proud,
On whom his bow the god of day bestow'd;
But he, devoid of gratitude, defy'd,
And challeng'd Phœbus with a rival's pride.
The sons of Æacus, intrepid race!
Separate advanc'd, and from a different place.
For when their brother unawares they slew,
From fair Ægina diverse they withdrew.
Fair Salamis king Telamon obey'd,
And valiant Peleus Phthia's sceptre sway'd.
Next Butes came from fam'd Cecropia far,
Brave Teleon's son, a chief renown'd in war.
To wield the deadly lance Phalerus boasts,
Who, by his sire commission'd, joins the hosts.

No son, save this, e'er bless'd the hoary sage,
And this Heaven gave him in declining age:
Yet him he sent, disdaining abject fears,
To shine conspicuous 'midst his gallant peers.
Theseus, far more than all his race renown'd,
Fast in the cave of Tænarus was bound
With adamantine fetters, (dire abode)!
E'er since he trod th' irremeable road
With his belov'd Pirithoüs: had they sail'd,
Much had their might, their courag'd much availd.
Bœotian Tiphys came, experienc'd well
Old ocean's foaming surges to foretel,
Experienc'd well the stormy winds to shun,
And steer his vessel by the stars or sun.
Minerva urg'd him by her high command,
A welcome mate to join the princely band.
For she the ship had form'd with heav'nly skill,
Though Argus wrought the dictates of her will.
Thus plann'd, thus fashion'd, this fam'd ship excell'd
The noblest ships by oar or sail impell'd.
From Aræthyrea, that near Corinth lay,
Phlias, the son of Bacchus, bent his way;
Bless'd by his sire, his splendid mansion stood
Fast by the fountains of Asopus' flood.
From Argos next the sons of Bias came,
Areius, Talaus, candidates for fame,
With bold Leodocus, whom Pero bore,
Neleus' fair daughter, on the Argive shore;
For whom Melampus various woes sustain'd,
In a deep dungeon by Iphiclus chain'd.
Next Hercules, endued with dauntless mind,
At Jason's summons stay'd not long behind.
For warn'd of this adventurous band, when last
The chief to Argos from Arcadia past,
(What time in chains he brought the living boar,
The dread, the bane of Erymanthia's moor,
And at the gates of proud Mycenæ's town,
From his broad shoulders hurl'd the monster down):
Unask'd the stern Mycenian king's consent,
Instant to join the warlike host he went.
Young Hylas waited with obsequious care,
The hero's quiver and his bow to bear.
Next came the list of demigods to grace,
He who from Danaüs deriv'd his race,
Nauplius; of whom fam'd Prætus was the son
Of Prætus Lernus; thus the lineage run:
From Lernus Naubolus his being claim'd,
Whose valiant son was Clytoneüs nam'd.
In navigation's various arts confess'd
Shone Nauplius' skill, superior to the rest:
Him to the sea's dread lord, in days of yore,
Danaüs' fair daughter, Amymone bore.
Last of those chiefs who left the Grecian coast,
Prophetic Idmon join'd the gallant host;
(Full well he knew what cruel fate ordain'd;
But dreaded more than death his honour stain'd)
The son of Phœbus by some stol'n embrace,
And number'd too with Æolus's race.
He learn'd his art prophetic from his sire,
Omens from birds, and prodigies from fire.
Illustrious Pollux, fam'd for martial force,
And Castor, skill'd to guide the rapid horse,

Ætolian Leda sent from Sparta's shore:
Both at one birth in Tyndarus house she bore.
No boding fears her generous mind depress'd;
She thought like them whom Jove's embrace had blest'd.
Lynceus and Idas, from Arene's wall,
Heard fame's loud summons, and obey'd her call:
The sons of Aphareus, of matchless might,
But Lynceus stands renown'd for piercing sight:
So keen his beam that ancient fables tell,
He saw through earth the wondrous depths of hell.
With these bold Periclymenus appears,
The son of Neleus, most advanc'd in years
Of all his race; his sire's unconquer'd pride:
Him with vast strength old ocean's lord supply'd,
And gave the power when hard in battle press'd,
To take whatever form might suit him best.
From Tegea's towers where bore Aphidas sway,
Amphidamas and Cepheus took their way,
The sons of Aleus both; and with them went
Ancæus, by his sire Lycurgus sent.
Of those the brother, and by birth the first,
Was good Lycurgus; tenderly he nurs'd
His sire at home; but bade his gallant son
With the bold chiefs the race of glory run.
On his broad back a bear's rough spoils he wore,
And in his hand a two-edg'd pole-ax bore,
Which, that the youth might in no danger share,
Were safe secreted by his grandsire's care.
Augeas, too, lord of the Elean coast,
Sail'd, brave associate, with the warlike host.
Rich in possessions, of his riches proud,
Fame says his being to the sun he ow'd.
Ardent he wish'd to see the Colchian shore,
And old Æeta who the sceptre bore.
Asterius and Amphion, urg'd by fame,
The valiant sons of Hyperasius came
From fair Pellene, built in days of yore
By Pelle's grandsire on the lofty shore.
From Tænarus, that yawns with gulf profound,
Euphemus came, for rapid race renown'd.
By Neptune forc'd, Europa gave him birth,
Daughter to Tityus, hugest son of earth.
Whene'er he skimm'd along the watery plain,
With feet unbath'd he swept the surging main,
Scarce brush'd the surface of the briny dew,
And light along the liquid level flew.
Two other sons of Neptune join'd the host,
This from Miletus on th' Ionian coast,
Erginus nam'd, but that from Samos came,
Juno's lov'd isle, Ancæus was his name;
Illustrious chiefs, and both renown'd afar
For the joint arts of sailing and of war.
Young Meleager, Œneus' warlike son,
And sage Laocoon march'd from Calydon.
From the same father he and Œneus sprung;
But on the breasts of different mothers hung.
Him Œneus purpos'd with his son to send,
A wise companion, and a faithful friend.
Thus to the royal chiefs his name he gave,
And, green in years, was number'd with the brave.
Had he continu'd but one summer more
A martial pupil on th' Ætolian shore,
First on the lists of fame the youth had shone,
Or own'd superior Hercules alone.
His uncle too, well-skill'd the dart to throw,
And in th' embattled plain resist the foe,
Iphiclus, venerable Thestius' son,
Join'd the young chief and boldly led him on,
The son of Lernus, Palæmonius, came,
Olenian Lernus; but the voice of fame
Whispers that Vulcan was the hero's sire,
And, therefore, limps he like the god of fire.
Of nobler port or valour none could boast;
He added grace to Jason's godlike host.
From Phocis Ipithus with ardour press'd
To join the chiefs; great Jason was his guest,
When to the Delphic oracle he went,
Consulting fate, and anxious for th' event.
Zetes and Calais of royal race,
Whom Orithyïa bore in wint'ry Thrace,
To bluster Boreas in his airy hall,
Heard fame's loud summons, and obey'd the call.
Erectheus, who th' Athenian sceptre sway'd,
Was parent of the violated maid,
Whom dancing with her mates rude Boreas stole,
Where the fam'd waters of Iliffus roll;
And to his rock-fenc'd Sarpedonian cave
Convey'd her, where Erginus pours his wave:
There, circumfus'd in gloom and grateful shade,
The god of tempests woo'd the gentle maid.
They, when on tip-toe rais'd, in act to fly,
Like the light-pinion'd vagrants of the sky,
Wav'd their dark wings, and, wondrous to behold!
Display'd each plume distinct with drops of gold;
While down their backs, of bright cerulean hue,
Loose in the wind their wanton tresses flew.
Not long with Pelias young Acastus stay'd;
He left his sire to lend the Grecians aid.
Argus, whom Pallas with her gifts inspir'd,
Follow'd his friend, with equal glory fir'd.
Such the compeers of Jason highly fam'd;
And all these demigods were Minyans nam'd.
The most illustrious heroes of the host
Their lineage from the seed of Minyas boast:
For Minyas' daughter, Clymena the fair,
Alcmeda, great Jason's mother bare.
When all was furnish'd by the busy band
Which vessels destin'd for the main demand;
The heroes from Iölcos bent their way
To the fam'd port, the Pagasæan bay,
And deep-environ'd with thick gathering crowds,
They shone like stars resplendent through the clouds.
Then thus among the rout, with wondering look,
Some swain survey'd the bright-arm'd chiefs and spoke:
'Say, what can Pelias, mighty Jove, intend,
'Far, far from Greece so great a force to send!
'Sure, should Æeta spurn the sons of Greece,
'And to their claims refuse the golden fleece,
'That self-same day shall see his palace crown'd
'With glittering turrets levell'd to the ground.
'But endless toils pursue them as they go,
'And fate has mark'd their desperate steps with woe.'
Thus, when he saw the delegated bands,
Spoke the rude swain with heaven-uplifted hands:
The gentler females thus the gods implore,
"Safe may they reach again their native shore:"

And thus ſome matron mild her mind expreſs'd,
(Tears in her eye, and terrors at her breaſt)
' Unfortunate Alcimeda, thy fate
' Now frowns malignant, though it frowns ſo late;
' Nor wills the tenor of thy life to run
' Serene and peaceful, as it firſt begun.
' On Æſon too attend unnumber'd woes;
' Far, better far, a lingering life to cloſe,
' And bury all his ſorrows in the tomb,
' Unconſcious of calamities to come.
' Oh! had both Phrixus and the ram been drown'd
' When Helle periſh'd in the gulf profound:
' But the dire monſter was with voice endu'd,
' And human accents from his mouth enſu'd,
' To ſad Alcimeda denouncing ſtrife,
' And woes to cloud the evening of her life.'
Thus ſpoke ſome matron as the heroes went;
Around their lords the menial train lament:
Alcimeda embrac'd her ſon with tears,
Each breaſt was chill'd with ſad preſaging fears.
Age-drooping Æſon heard the general moan,
Wrapp'd in ſoft robes, and anſwer'd groan for groan.
But Jaſon ſooths their fears, their boſom warms,
And bids his ſervants bring the burniſh'd arms.
They, with a downcaſt look and lowly bow,
Obey their chief with ſilent ſteps and ſlow.
The penſive queen, while tears bedew her face,
Her ſon ſtill circles with a fond embrace.
Thus to her nurſe an infant orphan ſprings,
And weeps unceaſing as ſhe cloſely clings;
Experienc'd inſults make her loath to ſtay
Beneath a ſtepdame's proud, oppreſſive ſway.
Thus in her royal breaſt the ſorrows pent
Forc'd ſighs and tears, and ſtruggled for a vent.
Still in her arms ſhe held her favourite ſon,
And comfortleſs with faultering ſpeech begun:
' Oh had I died on that deteſted day,
' And with my ſorrows ſigh'd my ſoul away,
' When Pelias publiſh'd his ſevere decree,
' Severe and fatal to my ſon and me!
' Thyſelf had then my aged eyelids clos'd, [poſ'd;
' And thoſe dear hands my decent limbs com-
' This boon alone I wiſh'd thee to impart,
' This wiſh alone lay dormant at my heart.
' But now, alas! though firſt of Grecian names,
' Admir'd and envy'd by Theſſalian dames,
' I, like an handmaid, now am left behind,
' Bereav'd of all tranquillity of mind.
' By thee rever'd, in dignity I ſhone,
' And firſt and laſt for thee unloos'd my zone.
' For unrelenting hate Lucina bore,
' Thee, one lov'd ſon, ſhe gave, but gave no more.
' Alas! not ev'n the viſions of the night
' Foretold ſuch fatal woes from Phrixus' flight.'
Thus mourn'd Alcimeda; her handmaids hear,
Sigh back her ſighs, and anſwer tear with tear.
Then Jaſon theſe conſoling words addreſs'd,
To ſooth the riſing anguiſh of her breaſt:
" Ceaſe, mother, ceaſe exceſs of grief to ſhow,
" Oh! ceaſe this wild extravagance of woe.
" Tears cannot make one dire diſaſter leſs;
" They cheriſh grief, and aggravate diſtreſs.
" Wiſely and juſtly have the gods aſſign'd
" Unthought-of miſeries to all mankind.
" The lot they give you, though perchance ſevere,
" Confiding in Minerva, bravely bear.
" Minerva firſt this bold adventure mov'd,
" Apollo, and the oracles approv'd.
" Theſe calls of heaven our confidence command,
" Join'd with the valour of this princely band.
" Haſte, royal mother, to your native tow'rs,
" Paſs with your handmaids there the peaceful hours.
" Forbode not here calamities to come:
" Your female train will re-conduct you home."
He ſpoke; and from the palace bent his way,
Graceful of port; ſo moves the god of day
At Delos, from his odour-breathing ſanes,
Or Claros ſituate on Ionian plains,
Or Lycia's ample ſhores, where Xanthus leads
His winding waters through irriguous meads.
Thus Jaſon march'd majeſtic through the crowd,
And fame auſpicious rais'd her voice aloud:
When lo! the prieſteſs of Diana came,
Their guardian goddeſs, Iphias was her name,
Bending with age, and kiſs'd the chief's right hand;
In vain ſhe wiſh'd to ſpeak; the haſty band
With ſpeedy footſteps from the dame withdrew,
And Jaſon mingled with his valiant crew.
Then from the tower-fenc'd town he bent his way,
And reach'd ere long the Pagaſæan bay;
There join'd his comrades waiting on the coaſt,
And there ſaluted his confederate hoſt.
When from Iölcos, lo, the wondering train
Obſerve Acaſtus haſtening o'er the plain,
And with him Argus, his compeer and friend;
Unknown to Pelias, to the ſhip they tend.
Argus around his brawny ſhoulders ſlung
A bull's black ſpoils that to his ancles hung.
Acaſtus wore a mantle rich and gay,
Wrought by his ſiſter lovely Pelopa.
Thus rob'd, the chiefs approach'd the crowded ſhore:
Illuſtrious Jaſon ſtay'd not to explore
What cauſe ſo long detain'd them, but commands
To council all the delegated bands.
On ſhrouds and ſails that cover'd half the beach,
And the tall, tapering maſt, in order each,
The heroes ſat; then riſing o'er the reſt,
His bold aſſociates Jaſon thus addreſs'd:
' Since now the ſtores lie ready on the ſtrand,
' And ſince our chiefs and arms are all at hand,
' No longer let us waſte the golden day,
' But the firſt ſummons of the breeze obey.
' And, ſince we all with equal ardour burn
' For Colchian ſpoils, and hope a ſafe return,
' Impartial chooſe ſome hero fam'd afar
' To guide the veſſel, and conduct the war,
' Let him, your ſovereign chief, with foreign foes
' The terms of treaty, and of fight propoſe.'
He ſpoke; with earneſt eyes the youthful band
Mark bold Alcides for ſupreme command;
On him with voice unanimous they call,
Own him their leader, and the lord of all.
In the mid circle ſat the godlike man,
His broad right hand he wav'd, and thus began:
" Let none to me this arduous taſk aſſign,
" For I the glory with the charge decline.

" Jason alone shall lead this valiant band,
" The chief who rais'd it, let that chief com-
" mand."
Thus briefly spoke th' unconquerable man;
Loud approbation through the circle ran:
Then Jason rose (complacence fill'd his breast),
And thus the pleas'd attentive throng address'd:
' Friends and associates, since your wills decree
' This great, this honourable trust to me,
' No longer be our enterprise delay'd:
' To Phœbus first be due oblations paid;
' Let then a short repast our strength renew:
' And, till my herdsmen to our gallant crew
' With beeves return, the best my stalls contain,
' Strive we to launch our vessel in the main.
' And when close stow'd our military stores,
' Each take his post, and ply the nimble oars.
' To Phœbus first, Embasian Phœbus, raise,
' The smoking altar; let the victims blaze.
' He promis'd, if due rites to him I pay, [way.
' To point through ocean's paths our dubious
He said, and instant to the task he flew;
Example fir'd his emulative crew.
They heap'd their vestments on a rock, that stood
Far from the insults of the roaring flood,
But, in times past, when win'try storms prevail'd,
Th' encroaching waves its towering top assail'd.
As Argus counsel'd, with strong ropes they bound,
Compacting close, the vessel round and round:
Then with stout nails the sturdy planks they join'd,
To brave the fury of the waves or wind:
Next delv'd with spades a channel deep and wide,
Through which the ship might launch into the tide.
Near to the water deeper was the way,
Where wooden cylinders transversely lay;
On these they heav'd the vessel from the plain,
To roll her, smoothly-gliding, to the main.
Then to the benches, tapering oars they fix'd;
A cubit's measure was the space betwixt:
This was the station for the labouring bands,
To tug with bending breasts, and out-stretch'd hands.
First Tiphys mounted on th' aërial prow
To issue orders to the train below,
That at his word, their strength uniting, all
Might join together, and together haul.
With eager look th' attentive heroes stand,
And wait impatient till he gave command;
Then all at once, with full exerted sway,
They move her from the station where she lay,
And pushing instant, as the pilot guides,
On smooth round rollers Pelian Argo glides;
Glibly she glides: loud shouts the jovial band;
They haul, they pull, they push her from the strand.
Beneath the huge hulk groan the rollers strong;
Black smoke arises as she moves along;
With swift descent she rushes to the main:
Coercive ropes her rapid race restrain.
Then, next, their sails they hoisted, fix'd their oars,
The mast erected, and embark'd the stores.
By lots on benches were the heroes plac'd,
And with two heroes every bench was grac'd.
On great Alcides, formidable name,
And on Ancæus, who from Tegea came,
With voice unanimous, the martial host
Bestow'd the centre's honourable post.
To watchful Tiphys was the helm assign'd,
To stem the waves, and catch the favouring wind.
This done, with stones beside the shore which lay,
They rear'd an altar to the god of day,
Embasian Phœbus, and the surface round
With the dry branches of an olive crown'd.
Meanwhile the herdsmen drove two beeves well fed
From Jason's stalls; youths to the altar led
The victims; some brought water from the lake;
Some the due offering of the salted cake.
Jason, while these the sacrifice prepare,
Thus to his parent god prefers his pray'r:
' Patron of Pagasæ, thine ear we claim,
' Guard of the city grac'd with Æson's name:
' When to consult thine oracle I went,
' It promis'd to reveal this great event,
' The final issue of our bold emprise:
' On thee, chief author, all our hope relies.
' Conduct my comrades to the far-fam'd fleece,
' Then safe restore them to the realms of Greece.
' And here I vow, whatever chiefs return,
' So many bulls shall on thine altar burn;
' A sacrifice at Delphos is decreed,
' And in Ortygia shall the victims bleed.
' But now these humble offerings which we pay,
' Gracious accept, far-darting god of day.
' Be thou, O father, our auspicious guide,
' When hence we sail across the sounding tide.
' Smooth the rough billows, and let breezes bland
' Propitious waft us to the Colchian land.'
Thus pray'd he suppliant, and prepar'd to make
The sacred offering of the salted cake.
Alcides, fam'd for manly strength and sway,
And bold Ancæus rose the beeves to slay.
Alcides' club impress'd a deadly wound
On the steer's front, and fell'd him to the ground.
Thy axe, Ancæus, at one sturdy stroke,
The steer's skull fractur'd, and the neck-bone broke,
Down fell the victim, floundering with the blow,
Prone on his horns, and plough'd the sand below.
The ready train, that round in order stood,
Stab the fallen beeves, and shed the life-warm blood;
Then from the body strip the smoking hide,
The beasts they quarter, and the joints divide;
The thighs devoted to the gods they part,
On these the fat, involv'd in cawls, with art
They spread, and as the lambent flame devours,
The Grecian chief the pure libation pours.
Joy fill'd the breast of Idmon to behold,
How from the thighs the flame reluctant roll'd
In purple volumes, and propitious smoke;
And thus the seer, inspir'd by Phœbus spoke:
' Though various perils your attempt oppose,
' And toils unnumber'd bring unnumber'd woes;
' Yet shall ye safe return, ye sons of Greece,
' Adorn'd with conquest, and the golden fleece.
' Me cruel fate ordains on Asia's shore
' To die, nor ne'er behold my country more.

'And though my deſtiny long fix'd I knew,
'Yet, ſtill reſolv'd, I join'd the martial crew;
'Inflam'd with glory to the hoſt I came,
'Of life regardleſs, emulous of fame.'
Thus he, the hoſt the fate of Idmon mourn,
But joy tranſports them for their wiſh'd return.
The ſun, remitting now his fiercer ray,
Pours from the weſt the faint remains of day:
Low as he ſinks, the lofty rocks expand
Their lengthen'd ſhadows o'er the diſtant land.
On leafy couches now the warlike train
Repoſe along the beach that ſkirts the main.
Before the chiefs are ſavoury viands plac'd,
And generous wines, delicious to the taſte.
The hours in mutual converſe they employ,
In feſtive ſongs, and undiſſembled joy.
Thus at the banquet ſport the young and gay,
When mirth breaks in, and envy ſkulks away.
But not unmark'd was Jaſon's penſive look;
Idas beheld him, and licentious ſpoke:
'What doubts, what fears, do Æſon's ſon perplex?
'What dangers fright him, and what ſorrows vex?
'Proclaim thy thoughts: or is thy dubious mind
'Diſmay'd with terrors of the daſtard kind?
'Now by this ſtout, unconquer'd lance, I ſwear,
'On which in war victorious wreaths I bear,
'Scorning from Jove's aſſiſtance to receive
'Thoſe palms, which this reſiſtleſs lance can give)
'No foes ſhall brave, no wiles of war withſtand,
'Though Jove frown adverſe, this impetuous hand.
'Such Idas is, for proweſs fam'd afar,
'Arene's boaſt, the thunderbolt of war."
This ſaid, the boaſter ſeiz'd a goblet, fill'd
With racy wine, and to the bottom ſwill'd.
O'er his black beard and cheeks the liquor flow'd:
Th' aſſembled hoſt with indignation glow'd.
Then Idmon roſe, and boldly thus reply'd:
"Vain wretch! to brand our leader and our guide;
"And more irreverent ſtill, thus ſluſh'd with wine,
"To dare reproach ſuperior powers divine.
"Far different ſpeech muſt cheer the ſocial train;
"Thy words are brutiſh, and thy boaſts are vain.
"Thus, fame reports, the Aloïdæ ſtrove
"Long ſince to irritate the powers above
"By vile aſperſions, infamouſly free;
"Yet they in valour far exceeded thee.
"Slain by the ſhafts of Phœbus, down they fell,
"Though high aſpiring, to the depths of hell."
He ſaid; but Idas, with ſarcaſtic ſneer,
Laughing, provok'd the venerable ſeer:
'Declare, wiſe augur, if the gods decree,
'The ſame perdition ſhall be hurl'd on me,
'Which ſam'd Aloëus' impious ſons befel
'When ſlain by Phœbus, and condemn'd to hell.
'Meantime eſcape, or manfully withſtand,
'Vain ſeer, the fury of this vengeful hand.'
Thus Idas ſpoke, impatient of controul,
And riſing rage inflam'd his fiery ſoul;
Nor had they here ceas'd fiercely to conteſt,
But Jaſon and his friends their wrath repreſs'd.
'Twas then, the jarring heroes to compoſe,
Th' enchanting bard, Oeagrian Orpheus roſe,
And thus, attuning to the trembling ſtrings
His ſoothing voice, of harmony he ſings:
"How at the firſt, beneath chaotic ſway,
"Heaven, earth, and ſea, in wild diſorder lay;
"Till nature parted the conflicting foes,
"And beauteous order from confuſion roſe.
"How in yon bright ethereal fields above
"The lucid ſtars in conſtant orbits move;
"How the pale queen of night, and golden ſun,
"Through months and years their radiant journeys run:
"Whence roſe the mountains, clad with waving woods,
"The cryſtal founts; and hoarſe-reſounding floods,
"With all their nymphs; from what celeſtial ſeed
"Springs the vaſt ſpecies of the ſerpent breed:
"How o'er the new-created world below,
"On high Olympus' ſummits crown'd with ſnow,
"Ophion, and, from ocean ſprung of old,
"The fair Eurynome reign'd uncontroul'd:
"How haughty Saturn, with ſuperior ſway,
"Exil'd Ophion from the realms of day;
"Eurynome before proud Rhea fled,
"And how both ſunk in ocean's billowy bed.
"Long time they rul'd the bleſt Titanian gods,
"While infant Jove poſſeſs'd the dark abodes
"Of Dictè's cave; yet uninform'd his mind
"With heavenly wiſdom, and his hand confin'd.
"Forg'd by earth's giant ſons, with livid rays
"Flam'd not as yet the lightning's piercing blaze:
"Nor roar'd the thunder through the realms above,
"The ſtrength and glory of almighty Jove."
Here the ſweet bard his tuneful lyre unſtrung,
And ceas'd the heavenly muſic of his tongue;
But, with the ſound entranc'd, the liſtening ear
Still thought him ſinging, and ſtill ſeem'd to hear:
In ſilent rapture every chief remains,
And feels within his heart the thrilling ſtrains.
Forthwith the bowl they crown with roſy wine,
And pay due honours to the powers divine;
Then on the flaming tongues libations pour,
And wait ſalubrious ſleep's compoſing hour.
Soon as the bright-ey'd morning's ſplendid ray
On Pelion's ſummit pour'd the welcome day,
Light ſkimm'd the breezes o'er the liquid plain,
And gently ſwell'd the fluctuating main;
Then Tiphys roſe, and, ſummon'd by his care,
Embark the heroes, and their oars prepare.
Portentous now along the winding ſhores
Hoarſe ſounding Pagaſæan Neptune roars:
From Pelion Argo's keel loud murmurs broke,
Urgent to ſail; the keel of ſacred oak,
Endu'd with voice, and marvellouſly wrought,
Itonian Pallas from Dodona brought.
Now on their deſtin'd poſts, arrang'd along,
In ſeemly order ſat the princely throng;
Faſt by each chief his glittering armour flames:
The midmoſt ſtation bold Ancæus claims,
With great Alcides (whoſe enormous might
Arm'd with a maſſy club provokes the fight),
Cloſe plac'd beſide him: in the yielding flood
The keel deep-ſinking owns the demigod.
Their hauſers now they looſe, and on the brine
To Neptune pour the conſecrated wine:

Then from his native shore sad Jason turns
His oft-reverted eye, and silent mourns.
As in Ortygia, or the Delphic fane,
Or where Ismenus laves Bœotia's plain,
Apollo's altar round, the youthful choir,
The dance according with the sounding lyre,
The hallow'd ground with equal cadence beat,
And move in measure their alternate feet;
Together so Thessalia's princes sweep
With well trim'd oars the silver-curling deep:
While, raising high the Thracian harp, presides
Melodious Orpheus, and the movement guides.
Dash'd by their oars, the foaming billows broke,
And loud remurmur'd to each mighty stroke.
Swift sail'd the ship, the sun refulgent beam'd,
And bright as flame their glittering armour gleam'd,
While to their outstretch'd oars the heroes bow,
The parted ocean whitening foams below.
So shines the path, along some grassy plain,
Worn by the footsteps of the village swain.
Th' immortal powers that Jove's proud palace crown,
All on that memorable day look'd down,
The godlike chiefs and Argo to survey,
As through the deep they urg'd their daring way.
Then too on Pelion's cloud-capt summit stood
The nymphs that wander in that sacred wood;
Wondering they view'd below the sailing pine,
(Itonian Pallas fram'd the work divine)
And bold Thessalia's labouring heroes sweep
With stretching oars the navigable deep
Lo! from the mountain's topmost cliff descends
The Centaur Chiron; to the shore he bends
His hasty footsteps: on the beach he stood,
And dipp'd his fetlocks in the hoary flood.
He hail'd the heroes with his big broad hand,
And wish'd them safe to gain their native land.
With Chiron came Chariclo to the shore;
The young Achilles in her arms she bore.
Peleus, his sire, with secret pleasure smil'd,
As high in air she rais'd the royal child.
And now the winding bay's safe precincts past,
Thessalian Argo plough'd the watery waste;
On Tiphys' care the valiant chiefs rely'd,
To steer the vessel o'er the foaming tide,
The smooth well-modell'd rudder to command,
Obsequious to the movement of his hand.
And next inserting in the keel below
The mast tall-tapering, to the stern and prow,
With ropes that through the rolling pulleys glide,
They rear upright, and firm on every side.
Then high in air the swelling sails they raise,
While on their bosoms buxom Zephyr plays.
With favouring gales their steady course they keep
To where Tisæum frowns upon the deep.
Meanwhile sweet Orpheus, as they sail'd along,
Rais'd to Diana the melodious song,
Who sav'd them, where her guardian power pre-sides,
From treacherous rocks that lurk beneath the tides.
The fish in shoals, attentive to his lay,
Pursu'd the poet o'er the watery way;
And oft emerging from their liquid sphere,
Strove more distinct his heavenly notes to hear.
As sheep in flocks thick-pasturing on the plain
Attend the footsteps of the shepherd-swain,
His well-known call they hear, and fully fed,
Pace slowly on, their leader at their head;
Who pipes melodious, as he moves along,
On sprightly reeds his modulated song:
Thus charm'd with tuneful sounds the scaly train
Pursu'd the flying vessel o'er the main.
And now the winds with favouring breezes blew,
Corn crown'd Thessalia lessen'd to the view,
The Grecian heroes pass by Pelion's steep,
Whose rocky summit nodded o'er the deep.
Now Sepias' cliffs beneath the waves subside,
And sea-girt Sciathos surmounts the tide.
Next, but far distant, was Piresiæ seen,
(Built on Magnesia's continent serene)
And Dolops' tomb, for this pacific shore,
Blest with mild evening's soften'd gales, they bore.
To him with victims was an altar crown'd,
While night prevail'd, and ocean roar'd around.
Two days they tarried, till propitious gales
Rose with the third, and bellied all their sails.
Assiduous then, the well-known shore they fill,
The shore call'd Aphetæ of Argo still.
Next Melibœa, on Thessalia's shore,
They pass, where winds and thundering tempests roar.
At early dawn, incumbent o'er the deep,
They view high Omole's aspiring steep.
Next by the streams of Amyrus they steer,
And where thy vales, Eurymena, appear,
And Ossa and Olympus' shady brow,
Loud from deep caverns gush the waves below.
By night beside Pessene's heights they sail,
And rough Canastra frowing o'er the vale.
But when the morn display'd her orient light,
Tall Athos rose conspicuous to the sight;
Which though from Lemnos far remov'd it lay,
As far as ships can sail till noon of day,
Yet the proud mountain's high-exalted head,
A gloom umbrageous o'er Myrina spread.
All day till eve the soft indulgent gales
Their succour lent, and fill'd the swelling sails.
But when with eve the breezes ceas'd to blow,
The mariners to Sintian Lemnos row,
Ill-fated island! where the female train
Had all the males, the year preceding, slain.
For, deep-enamour'd with the nymphs of Thrace,
The men declin'd the conjugal embrace;
Their wives they slighted, and unwary led
War's pleasing spoils, fair captives, to their bed.
For angry Venus robb'd of love's delights
The Lemnian females, for neglected rites.
Ah miserable train! with envy curs'd,
And jealousy, of passions far the worst!
One fatal night this unrelenting crew
Their mates and all the lovely captives slew,
And every male, left in the course of time
Should rise some hero to revenge the crime.
Hypsipyla alone, illustrious maid,
Spar'd her sire Thoas, who the sceptre sway'd.
With pious care, in reverence to his age,
In a capacious ark she plac'd the sage,
Confiding in the mercy of the wave
The monarch from the massacre to save.

Some faithful fishers, to their mandate just,
Convey'd with care the delegated trust
Safe to a neighbouring sea-surrounded shore,
Œnœa nam'd, so nam'd in days of yore,
Now Sicinum, from Sicinus it takes
Its title, whom a Naiad of the lakes,
The nymph Œnœa, beautiful and fair,
Compress'd by Thoas, to the monarch bare.
The widow'd Lemnians, though by waves se-
cur'd,
Oft shone in arms, to martial toils inur'd.
To feed their cattle was their daily care,
Or cleave the furrow with the crooked share:
Expert at these, Minerva's arts they scorn'd,
Which once employ'd them, and which once
adorn'd.
Oft to the main, oppress'd with dire alarms,
They took'd; for much they fear'd the Thracian
arms.
And when Thessalian Argo caught their view,
Quick from Myrina to the shore they flew.
All clad in glittering arms they press'd the strand,
Impetuous; (like the Bacchanalian band,
When with raw flesh their horrid feasts they
close):
They deem'd the vessel stor'd with Thracian
Hypsipyla advanc'd among the rest,
In the bright armour of her father dress'd;
Anxious, astonish'd all the dames appear,
And by their silence testified their fear.
Meanwhile Æthalides the heroes send;
To him their peaceful mandates they commend.
Invested with the office of the god,
They grace their herald too with Hermes' rod,
Hermes his sire; who bless'd his favourite heir
With memory nor time, nor place impair.
In vain around him Acheron's waters roll;
They pour no dull oblivion o'er his soul.
To him the fates this privilege bestow,
By turns to wander with the shades below:
By turns with men to view the golden day,
And feel the sun's invigorating ray.
But why expatiate on such themes as these?
Why tell the fame of great Æthalides?
The herald to Hypsipyla address'd,
With mild benevolence, this joint request:
That now, at evening-close, the friendly land
Might hospitably treat this gallant band,
Who fear'd at morn to hoist their swelling sails,
For Eorcas blew with unpropitious gales.
The queen had summon'd to the council-hall
The Lemnian dames, the dames obey'd her call:
Who mildly, with persuasion in her look,
In order rang'd, the heroines bespoke:
'Let us, my mates, and ye my words attend,
'Commodious presents to these strangers send;
'Such as their friends to mariners consign,
'Salubrious viands, and delicious wine:
'So will they peaceful on our borders stay,
'Nor need compel them to the town to stray.
'Here will they learn the story of our guilt,
'The vows we broke, the kindred blood we
'spilt;
'And sure a tale, thus horrid, must appear
'Cruel and impious to a foreign ear.
'These are the counsels of your faithful friend,
'Prompt to advise, and steady to defend.
'She who can furnish counsel more discreet,
'Now let her offer—for this cause we meet.'
Thus spoke the queen, and press'd her father's
throne,
A royal seat, compos'd of solid stone.
Then rose Polyxo, venerable dame,
Once the queen's nurse, oppress'd with age, and
lame;
A staff sustain'd her (for her limbs were weak)
Tottering with age, yet vehement to speak.
Near her four damsels, blooming, fresh and fair,
Sat crown'd with ringlets of the whitest hair.
Full in the midst she stood, then rais'd her head,
Her back was bent with years, and thus she
said:
'The queen's advice I greatly must commend,
'Commodious presents to our guests to send.
'And what more saving counsel shall I give
'To those my friends who shall hereafter live;
'Whene'er the sons of Thrace, or hostile hosts
'From other kingdoms shall infest our coasts;
'Which well may happen, we must all allow,
'As this invasion that alarms us now?
'But should some god avert th' impending ill,
'Yet greater evils may befal, and will.
'For when the eldest die, as die they must,
'And our wife matrons be transform'd to dust,
'And you, now young, oppress'd at last with
'age,
'Shall unprolific tread life's irksome stage:
'What wretched mortals ye, who then survive!
'Who to their labour, then, the steers shall drive?
'Will oxen then their necks spontaneous bow
'Beneath the yoke, and drag the ponderous
'plough?
'Or will they reap the harvest on the plain,
'And every autumn house the golden grain?
'I, though preserv'd to this important day,
'(For death from me abhorrent turns away),
'Yet, ere the sun completes his annual round,
'If right I judge, shall mingle with the ground,
'Lodg'd in the lap of earth, at nature's call,
'And 'scape the ruin that involves you all.
'Hear then, young damsels, what my years ad-
'vise;
'Before you now the fair occasion lies:
'Commit your city to these strangers' care,
'Let them your mansions and possessions share.'
She spoke, pleas'd murmurs fill'd the spacious
hall:
Polyxo's counsel was approv'd by all.
From her sire's throne Hypsipyla arose,
Thus in few words the conference to close:
"My mates, since all this sage advice commend,
"An instant message to the ship I send."
She said, and to Iphinoa gave command;
"Haste, find the leader of yon martial band,
"Invite him (of our amity a proof
"To lodge beneath my hospitable roof:
"There time will furnish leisure to relate
"The genius and the manners of our state.
"But let his comrades rove, as pleasure leads,
"And pitch their tents along the fertile meads;

" Or to the tower-defended town repair,
" Assur'd of safety and our royal care."
Th' assembly rose, as thus the princess spoke,
Then to the regal dome her way she took.
Iphinoa, mindful of the queen's command,
Approach'd the Minyans scatter'd o'er the strand,
Who throng'd around her, eager to explore
Wherefore she came, and what commands she bore.
Then thus she said: 'Strangers, to you as friends
'Hypsipyla, the seed of Thoas, sends
'Her faithful herald with this strict command,
'To find the leader of your martial band;
'Him she invites (of amity a proof)
'To lodge beneath her hospitable roof:
'There time will furnish leisure to relate
'The genius and the manners of our state.
'But let his comrades rove, as pleasure leads,
'And pitch their tents along the fertile meads;
'Or to the tower-defended town repair,
'Assur'd of safety, and the royal care.'
These words were grateful to the warlike band;
From her they learn'd whose sceptre rul'd the land;
Instant they urg'd their chief's assent, and all
Prepar'd obsequious to accept the call.
A mantle doubly lin'd, of purple hue,
The son of Æson o'er his shoulders threw.
This Pallas gave him, when, with wond'rous art,
She plann'd his ship, and measur'd every part.
'Twere safer to survey the radiant globe
Of rising Phœbus, than this splendid robe.
Full in the middle beam'd a crimson blaze,
The verge surrounding darted purple rays.
In every part historic scenes were wrought;
The moving figures seem'd inform'd with thought.
Here, on their work intent, the Cyclops strove
Eager to forge a thunderbolt for Jove;
Half-rough, half-form'd the glowing engine lay,
And only wanted the fire-darting ray;
And this they hammer'd out on anvils dire;
At each collision flash'd the fatal fire.
Not distant far, in lively colours plann'd,
Two brothers, Zethus and Amphion stand,
Sons of Antiopa: no turrets crown'd
Thy city, Thebes, but walls were rising round.
A mountain's rocky summit Zethus bore
On his broad back, but seem'd to labour sore.
Behind, Amphion tun'd his golden shell,
Amphion, deem'd in music to excel:
Rocks still pursu'd him as he mov'd along,
Charm'd by the music of his magic song.
Crown'd with soft tresses, in a fairer field,
Gay Venus toy'd with Mars's splendid shield.
Down from her shoulder her expanded vest
Display'd the swelling beauties of her breast.
She in the brazen buckler, glittering bright,
Beheld her lovely image with delight.
On a rich plain appear, not distant far,
The Taphians, and Electryon's sons at war;
Fat steers the prize for which the swains contend,
Those strive to plunder, these their herds defend;
The meads were moist with blood and rosy dew:
The powerful many triumph'd o'er the few.
Two chariots next roll'd lightly o'er the plains,
This Pelops drove, and shook the sounding reins;
Hippodamia at his side he view'd:
In the next chariot, Myrtilus pursu'd,
And with him Oenomas; approaching near,
At Pelops' back he aim'd the vengeful spear;
The faithless axle, as the wheels whirl'd round,
Snapp'd short, and left him stretch'd along the ground.
Here young Apollo stood, in act to throw
The whirring arrow from the twanging bow,
At mighty Tityrus aim'd, who safely strove
To force his mother, erst belov'd by Jove:
He from fair Elara deriv'd his birth,
Though fed and nourish'd by prolific earth.
There Phryxus stoop'd to listen to the ram,
On whose broad back the Hellespont he swam.
The beast look'd speaking: earnest could you gaze,
The lively piece would charmingly amaze.
Long might you feast your eye, and lend an ear,
With pleasing hope the conference to hear.
Such was the present of the blue-ey'd maid—
In his right hand a missile lance he sway'd,
Which Atalanta, to reward the brave,
Sure pledge of friendship, to the hero gave,
When on the breezy Mænalus she rov'd,
And wish'd the company of him she lov'd;
But he, of suitors' amorous strife afraid,
Repress'd the fond intention of the maid.
Thus robb'd, thus arm'd, he to the city went,
Bright as a star that gilds the firmament,
Which maids assembled view with eager eyes
High o'er their roof in orient beauty rise.
On the bright signal, as it darts its rays,
Attentive they with silent transport gaze.
Each, with this omen charm'd, expects, though late,
Return'd from distant climes her destin'd mate.
Thus shone the chief, for high atchievements known,
Majestic as he mov'd to Lemnos' town.
The noble heroines his footsteps meet,
With courteous joy the Grecian guest to greet,
Whose downcast eye ne'er wander'd, till he came
To the proud palace of the royal dame;
Obsequious damsels at the portal wait,
And quick unbar the double-folding gate:
Then through the various courts extending wide,
And stately rooms, Iphinoa was his guide;
On a bright throne, with rich embroidery grac'd,
Fronting her sovereign she the hero plac'd.
Th' embarrass'd queen, her face with blushes spread,
In courteous terms address'd the prince, and said:
'Why, gentle stranger, should your warlike train
'At distance far, without the walls remain?
'The men who till'd these ample fields before,
'Now turn with furrows on the Thracian shore.
'But hear, while I our matchless woes relate;
'So shall you know the story of our fate.
'When o'er this realm my father Thoas reign'd,
'The Lemnian youth, to fraud and rapine train'd,

' On Thracian borders seiz'd the trembling prey,
' And brought those flocks, and lovely maids
' away.
' This Venus plann'd, with mischievous intent,
' And fierce among them fatal discord sent.
' Their wives they loath'd, and vainly impious
' led
' War's spoils, fair captives, to the lawless bed.
' Long we endur'd, forgiving insults past,
' And hop'd the faithless would reform at last.
' In vain; each day but doubled our disgrace,
' Our children yielded to a spurious race.
' The widow'd mother, the discarded maid,
' Forlorn, neglected through the city stray'd.
' No tender pity touch'd the parent's breast,
' To see his darling child abus'd, oppress'd
' Beneath a stepdame's proud, imperious sway:
' No sons would then maternal duty pay,
' Nor, as before, their mother's cause defend;
' No sister then to sister prov'd a friend:
' But the gay troops of Thracian captives fair
' Enthrall'd the men, and challeng'd all their
' care;
' At home, abroad, the first, at pleasure's call,
' To share the banquet, and conduct the ball.
' At length, but strange! some favouring power
' divine
' In female minds inspir'd this bold design,
' That, when return'd from Thracia's hateful
' shore,
' Our roofs these traitors might protect no more;
' That, thus constrain'd, they might forego their
' crimes,
' Or with their captives fly to distant climes.
' They sail, return, the few remaining males
' Demand, then quit us with auspicious gales;
' And now the frigid fields of Thrace they
' plough,
' And countries whiten'd with Sithonian snow,
' Haste then, conduct your comrades to the
' town:
' Here fix your seat, and Lemnos is your own.
' And if to high dominion you aspire,
' Reign here, and wield the sceptre of my sire.
' You must approve; for not so fair a coast,
' Or isle so fertile can the Ægean boast.
' Haste to your friends, and make my pleasures
' known,
' Nor let them longer lodge without the town.'
Artful she spoke, forbearing to relate
How in one night each woman slew her mate.
Then Jason thus: " Whate'er your bounty
" grants,
" Stores for our voyage, or our present wants,
" Pleas'd we accept: I to my valiant bands
" Will speed to signify your kind commands,
" Then soon conduct my comrades to the town:
" But still, O queen, still wear your father's
" crown.
" Not from disdain I shun imperial sway,
" But great atchievements call me hence away."
He spoke, and gently press'd her fair right hand,
Then sought his comrades scatter'd o'er the strand,
Unnumber'd damsels round the hero wait,
Gazing with joy, and follow to the gate;
Then grateful presents in swift cars convey
To the land's margin, where the warriors lay.
When Jason now to his adventurous bands
Had signified Hypsipyla's commands,
With eager joy the Minyans haste to share
Her friendly roofs, and hospitable fare.
The queen of love Thessalia's chiefs inspires,
For Vulcan's sake, with amorous desires;
That Lemnos, Vulcan's sacred isle, agen
May flourish, peopled with a race of men.
Great Jason hastens to the regal walls;
The rest proceed where chance or pleasure calls,
Save great Alcides: with a chosen train,
Ambitious he in Argo to remain.
Eager with joy the jolly crowds advance
To share the genial feast, or lead the dance;
To Venus' and to Vulcan's fane they throng,
And crown the day with victims and with song.
Sunk in soft ease th' enamour'd heroes lay,
(Their voyage still deferr'd from day to day)
And longer still, and longer had declin'd,
Full loth to leave the lovely place behind,
Had not Alcides, the fair dames apart,
Thus spoke incens'd the language of his heart:
' Mistaken comrades, does our kindred, say,
' From our own country drive us far away?
' Or are we fondly thus enamour'd grown
' Of foreign damsels, and despise our own?
' Here shall we stay to till the Lemnian fields?
' Small fame to heroes this base commerce yields.
' No god, propitious to the sons of Greece,
' Without our toil, will grant the golden fleece.
' Our course pursue we; for the breeze invites;
' And let him revel in love's soft delights,
' Who here but stays to propagate his kind,
' And leave a memorable name behind.'
Alcides thus: none dar'd to lift his eye,
To breathe a murmur, or to make reply;
But keenly stung with this sarcastic style,
They haste to leave the lov'd Vulcanian isle.
Soon as the damsels their fix'd purpose knew,
Around the chiefs in busy crowds they flew.
As bees from some deep-cavern'd rock proceed,
Buzz o'er the lilies of the laughing mead,
The sweets of all ambrosial herbs devour,
And suck the soul of every fragrant flow'r;
Thus they in swarms the parting Greeks address,
With hands salute, with soothing words caress;
Then to the pow'rs above with fervour pray,
Safe to their arms the heroes to convey.
Hypsipyla the hand of Jason press'd,
And thus with tears the parting chief address'd:
" Adieu!—and may you with the sons of Greece
" Return triumphant with the golden fleece.
" Here shall you then my father's sceptre sway,
" And his domains your sovereign will obey.
" The neighbouring states will furnish large sup-
" plies,
" And a vast empire by your wisdom rise.
" But if on nobler plans your thoughts are bent,
" And vainly I presage the wish'd event;
" Absent or present, to my memory kind,
" Still let Hypsipyla possess your mind.
" And if with offspring Heaven should bless me, say,
" How shall I then my Jason's will obey?"

The prince beheld the queen with rapturous look,
And thus with mild benevolence beſpoke:
'May theſe events, foredoom'd by heaven's decree,
'Succeſsful prove, Hypſipyla, to thee.
'But ſtill of Jaſon nobler thoughts retain:
'Enough for me o'er my own realms to reign;
'May but the powers of heaven (I aſk no more)
'Safe reconvey me to my native ſhore.
'If that's denied, and you, my ſource of joy,
'Bear, the ſoft token of our loves, a boy;
'Him, when mature, in kindneſs to your friend,
'My parents' ſolace, to Iölchos ſend;
'If then perchance the venerable pair
'Survive their woes, and breathe this vital air,
'There may he live, from Pelias far remov'd,
'By Grecians honour'd, who his father lov'd.'
He ſpoke his laſt farewell: then firſt aſcends
The ſhip, and with him his illuſtrious friends.
In their due ſtations plac'd, each ſeiz'd an oar,
While Argus loos'd the cable from the ſhore.
With active ſtrokes the vigorous heroes ſweep
The ſounding boſom of the billowy deep.
As Orpheus counſell'd, and mild evening near,
To Samothrace, Electra's iſle, they ſteer,
That there initiated in rites divine,
Safe might they ſail the navigable brine.
But, muſe, preſume not of theſe rites to tell:
Farewell, dread iſle! dire deities, farewell!
Let not my verſe theſe myſteries explain;
To name is impious, to reveal profane.
Thence the black main they laſh'd with all their might,
Thrace on their left, and Imbros on the right;
And ſafely, with the now-declining ſun,
To far-projecting Cherſoneſus run.
Then ſtemm'd they, aided by the ſouthern gales,
The ſtormy Helleſpont with ſwelling ſails,
Left the high-ſurging ſea with morning light,
And reach'd Sigæum with approaching night.
Dardania paſt, and high-exalted Ide,
They ſaw Abydos on the ſtormy tide.
Thence ſail'd they by Percote's paſture lands,
Pityëa's meadows, and Abarnis' ſands:
And nightly, favour'd by the friendly blaſt,
The purple-foaming Helleſpont they paſt.
An ancient iſland in Propontis lies,
That towering lifts its ſummit to the ſkies;
Near Phrygia's corn-abounding coaſt it ſtands,
And far-projecting all the main commands;
An iſland this, ſave where the iſthmus' chain
Connects both lands, and curbs the boiſterous main.
Round its rough ſides the thundering tempeſts roar,
And a ſafe bay is form'd on either ſhore.
Æſepus' waters near this iſthmus fall:
And bordering tribes the mountain Arcton call.
On this rough mountain, barbarous, fierce, and bold,
Dwell mighty giants, hideous to behold;
And, wonderful to tell! each monſter ſtands
With ſix huge arms, and ſix rapacious hands;
Two pendent on their ſhaggy ſhoulders grow,
And four deform their horrid ſides below.

The lowland iſthmus, verging to the main,
The Dolian's till'd, and all the fertile plain.
O'er theſe reign'd Cyzicus, the brave, the young,
Who from the gallant warrior, Æneus, ſprung.
The daughter of Euſorus, firſt in fame,
Bore Cyzicus, Æneta was her name.
Secure they liv'd, and free from war's alarms,
Though earth's huge ſons were terrible in arms.
Sprung from the monarch of the hoary tide,
On Neptune's aid the Dolian race rely'd.
To this fair port, with gentle-breathing gales,
This friendly ſhore, Theſſalian Argo ſails.
Here the rope-faſten'd ſtone they heave on ſhore,
Which ſerv'd as anchor to the ſhip before,
But now too light, ſo Typhis bids, they bring,
And leave it at the pure Artacian ſpring;
Then chooſe another on the rocky bay,
More ponderous far, the rolling ſhip to ſtay.
There the firſt ſtone unnumber'd years remain'd,
Till, as Apollo's oracle ordain'd,
Th' Ionians found, with rites myſterious grac'd,
And ſacred to Jaſonian Pallas plac'd.
Soon as the Dolians, near approaching, knew
Theſſalian Argo, and the godlike crew,
Led on by Cyzicus they haſte to meet
The princely band, and amicably greet;
Invite them down the winding bay to fall,
And fix their cable near the city-wall.
Thus friendly treated, the Pelaſgic train
Strive with their oars th' interior port to gain.
Then firſt Ecbaſian Phœbus they adore,
And rear an altar on the ſounding ſhore.
To them the king diſpatch'd, with heart benign,
Fat ſheep, and ſtrong exhilarating wine.
For thus the ſacred oracle foretold,
'When here arrives a band of heroes bold,
'With kind complacence treat the godlike crew,
'Meet not in arms, but pay them honours due!'
Scarce had the down the monarch's cheeks o'erſpread;
No children yet had bleſs'd the nuptial bed.
Clita, his lovely queen, the young, the fair,
Renown'd for beauty, and her golden hair,
Sprung from Percoſian Merops, ſtill remains
A ſtranger to Lucina's cruel pains.
Late from her father's court the king convey'd,
With ample dower enrich'd, the blameleſs maid;
Yet he neglects the genial bed, and feaſts,
All fears far baniſhing, with foreign gueſts.
Oft he inquires of Pelias' ſtern command,
And why the heroes left their native land.
As oft they aſk'd what cities neighbouring lay,
And in Propontis which the ſafeſt bay.
But ſcanty knowledge could the king beſtow,
Though it behov'd them much theſe truths to know.
When morning roſe, the Dindymean ſteep
Some mount, to view the navigable deep,
And all its winding bays; the road they came
They honour'd with illuſtrious Jaſon's name.
The chiefs, who chooſe aboard the ſhip to ſtay,
Remov'd her from the moorings where ſhe lay.
Meanwhile the ſons of earth, a numerous train,
From their bleak mountains ruſh into the plain,

Beſiege the pervious bay, and ſtrive to block
Its mouth with maſſy fragments from the rock;
Intending there Theſſalia's pine to keep
Hemm'd up, like ſome huge monſter of the deep.
But Hercules remain'd: his bow he drew,
And heaps of giants with his arrows ſlew.
The reſt enrag'd, rough, rocky fragments tore,
Hurl'd high in air, and thunder'd from the ſhore.
(This labour ſtill for Hercules remain'd,
By Juno, Jove's imperial queen, ordain'd)
And fiercely now the glowing battle burn'd,
When lo! the chiefs from Dindymus return'd,
Attack'd the deſperate giants in the rear,
And dealt deſtruction with the dart and ſpear;
Till earth's fierce ſons, defil'd with wounds and gore,
Dropp'd dead: their bodies cover'd half the ſhore.
As near the ſea's broad brink, with ſturdy ſtrokes,
Aſſiduous woodmen fell aſpiring oaks;
Then draw them in due order from the flood,
And thus well drench'd they cleave with eaſe the wood:
Thus at the entrance of the hoary bay,
The frequent corſe of many a giant lay;
Some, tumbled headlong, made the ſea their grave,
While their legs roſe above the briny wave;
Some o'er the ſands their horrid viſage ſhow,
Their feet deep-rooted in the mud below.
Thus their huge trunks afford abundant fare
To Neptune's fiſhes, and the birds of air.
Soon as concluded was the bloody fray,
And favouring breezes call'd the chiefs away,
They loos'd; o'er ſwelling ocean ſouthern gales
Breath'd all day long, and fill'd their bellying ſails.
Night roſe, the favouring gales no longer laſt,
The ſhip drives backward with the ſtormy blaſt.
Again they harbour on the friendly coaſt,
Where late the Dolians entertain'd the hoſt;
And round the rock the ſteady cable bind,
The rock ev'n now to ſacred fame conſign'd.
Here through the gloom of night again they came,
And knew not that the country was the ſame.
Nor knew the Dolians, ſo dark night prevail'd,
That back to Cyzicum the Greeks had ſail'd;
But deem'd the chiefs a band of Macrian foes:
To arms they call, and force to force oppoſe.
A gleamy luſtre glanc'd along the field,
While ſpear met ſpear, and ſhield encounter'd ſhield.
In ſun-ſcorch'd buſhes thus the bickering blaze
Flames forth, and crackling on the branches preys.
Dire was the conflict; on the fatal plain
Their prince, alas! was number'd with the ſlain,
His queen and bridal bed beheld he ne'er again.
For Jaſon ſpy'd the prince advancing near,
And through his boſom plung'd the furious ſpear;
The ribs it broke, and circumſcrib'd his date,
Wing'd with th' inevitable will of fate.
Fate, like a wall, devoted man ſurrounds,
And faſt confines him in its circling bounds.
Himſelf he deem'd, in that diſorder'd fight,
Vainly he deem'd: protected by the night;
The favouring night, alas! produc'd his bane,
And chiefs unnumber'd with their prince were ſlain.
For Hercules, with his all-conquering bow,
Diſpatch'd Telecles to the ſhades below,
And Megabrontes: by Acaſtus' hand
Pale Sphodris lay extended on the ſtrand.
Peleus to Pluto's dark dominions gave
Zelys the hardy, and Gephyrus brave.
Bold Telamon, well-ſkill'd the lance to wield,
Left Baſileus expiring on the field.
Next Idas vanquiſh'd Promeus by his ſide;
By warlike Clytius Hyacinthus dy'd.
Fair Leda's ſons, in bloody combat ſkill'd,
Fierce Megalaſſacus and Phlogius kill'd.
And Meleager added two to theſe,
Itymoneus and valiant Artaces.
Theſe all were chiefs in fighting fields approv'd,
Deplor'd as heroes, and as brothers lov'd.
The reſt for ſafety on their flight rely
(As trembling doves before the falcon fly);
Then to the city-gates tumultuous preſs,
And raiſe the piercing cry of deep diſtreſs:
The city mourn'd: they deem'd, return'd from far,
That hoſtile Macrians had renew'd the war.
But when the roſy morn began to wake,
All found their irretrievable miſtake.
Heart-rending grief oppreſs'd the Grecian train,
To ſee the hoſpitable monarch ſlain,
A clay-cold corſe, extended on the ſhore,
Deform'd with duſt, and all beſmear'd with gore.
The Greeks and Dolians, ſunk in deep deſpair,
Mourn three long days, and rend their graceful hair.
A tomb they rear upon the riſing ground,
And clad in brazen arms thrice march around;
Then for the monarch, on Limonia's plain,
Of rites obſervant, funeral-games ordain.
There ſtands the tomb, adorn'd with honours due,
Which diſtant ages will with ſorrow view.
When the ſad news at Clita's ear arriv'd,
Not long the queen her monarch's fate ſurviv'd;
But woe augmenting, round her neck ſhe tied
The nooſe diſhoneſt, and unſeemly died.
Her mournful dirge the weeping dryads ſung,
While Dindymus with lamentations rung;
And all the tears that from their eye-lids fell,
The gods transform'd in pity to a well;
In cryſtal ſtreams it murmurs ſtill, and weeps,
And ſtill the name of wretched Clita keeps.
A day ſo diſmal, ſo replete with woes,
Till this ſad day, to Dolians never roſe.
Deep, deep immers'd in ſorrow they remain'd,
And all from life-ſupporting food abſtain'd;
Save ſuch poor pittance as man's needs require,
Of corn unground, or unprepar'd by fire.
And annual, on this day, the Dolians ſtill
Sift coarſeſt meal, and at the public mill.
Thenceforth twelve days and nights dire ſtorms prevail,
Nor could the chiefs unfurl the ſwelling ſail.
The following night, by ſleep's ſoft power op-preſs'd,
Once more in Cyzicum the heroes reſt;
Mopſus alone and brave Acaſtus keep
The watch nocturnal, while their comrades ſleep,

When, lo! a Halcyon, of cerulean hue,
O'er the fair head of slumbering Jason flew,
In airy circles, wond'rous to behold,
And, screaming loud, the ceasing storm foretold.
The grateful sound attentive Mopsus heard, 1410
And mark'd the meaning of the sea-bred bird;
(Which gently rising from the deck below,
Perch'd on the summit of th' aërial prow)
Then rous'd he Jason from his fleecy bed,
Of sheeps' soft skins compos'd, and thus he said;
'O son of Æson hear! be this thy care,
'Haste, to the fane of Dindymus repair;
'There Cybele with sacrifice implore,
'So will the winds tempestuous cease to roar.
'For this proclaim'd the boding Halcyon true,
'As round thee sunk in deep repose she flew. 1421
'By Cybele's dread power the vast profound,
'And all the winds in harmony are bound.
'By her subsists prolific earth below,
'And high Olympus, ever crown'd with snow.
'Jove yields when she ascends the courts of day,
'And all the powers immortal own her sway.'
To Jason thus the venerable seer;
And welcome came the tidings to his ear.
Instant the chief, exulting with a bound, 1430
Sprung from the bed, and wak'd his comrades round.
Elate with joy his looks, his words unfold
The glad presage which Mopsus had foretold.
Then from the stalls the youths appointed drove
Selected oxen to the heights above.
Some from the rock unloos'd the corded stay,
And with fleet oars approach'd the Thracian bay.
From thence the top of Dindymus they gain'd;
Few were the heroes that aboard remain'd: 1439
By those the Macrian rocks, and Thracian land
Directly opposite, appear'd at hand;
The Thracian Bosphorus here, involv'd in shade,
And Mysia's rising mountains were survey'd;
There where his waters black Æsepus pours,
Nepea's plain, and Adrasteia's tow'rs,
A vine's vast trunk adorn'd with branches stood,
Though old, yet sound, and long had grac'd the wood:
This trunk they hew'd, and made by Argus' skill,
An image of the goddess of the hill;
Which on the rocky eminence they plac'd, 1450
With the thick boughs of circling beeches grac'd.
They rear an altar then on rising ground,
Of stones that readiest lay, and wide around
Dispose the branches of the sacred oak,
And Dindymus's deity invoke,
The guardian power of Phrygia's hills and woods,
The venerable mother of the gods.
On Tityas and Cyllenus too they call,
Of all her priests most lov'd, and honour'd most of all:
For skill prophetic they alone are fam'd; 1460
Idean Dactyli these priests are nam'd;
Both whom Anchiala in Dicte's cave
Brought forth, where chill Oaxis roll his wave.
While on the burning victims Jason pours
Libations due, the goddess he implores
To smile propitious on the Grecian train,
And still the tempests of the roaring main.
Then Orpheus call'd, and youthful chiefs advance,
All clad in arms, to lead the martial dance;
With flashing swords they clatter'd on their shields, 1470
And fill'd with festive sounds th' aërial fields.
Lost in these sounds was every doleful strain,
And their loud wailings for their monarch slain.
The Phrygians still their goddess' favour win,
By the revolving wheel and timbril's din.
Of these pure rites the mighty mother show'd
Her mind approving, by these signs bestow'd:
Boughs bend with fruit, each from her bosom pours
Herb's ever green, and voluntary flow'rs.
Fierce forest beasts forsake the lonely den, 1480
Approach with gentleness, and fawn on men.
A pleasing omen, and more wond'rous still
The goddess gave: the Dindymean hill,
That ne'er knew water on its airy brow,
Bursts into streams, and founts perennial flow.
This wonder still the Phrygian shepherds sing,
And give the name of Jason to the spring.
Then on the mount the chiefs the feast prolong,
And praise the venerable queen in song. 1489
But when the morning rose they plied their oars,
And the wind ceasing, left the Phrygian shores.
Then fair contention fir'd the princely train,
Who best the toil of rowing could sustain.
For now the howling storm was lull'd to sleep;
Ethereal mildness had compos'd the deep.
On the calm sea the labouring chiefs rely'd;
Fleet flew the ship along the yielding tide;
Not Neptune's steeds so swift, with loosen'd reins,
Skim the light level of the liquid plains.
But when with even-tide the blustering breeze
Brush'd the broad bosom of the swelling seas,
The wearied chiefs their toilsome course repress'd,
And all, save great Alcides, sunk to rest.
Swift through the waves his arm unaided drew
The ship, deep-laden with the drowsy crew.
Through all her planks the well-compacted pine
Shook, as his oars dispers'd the foamy brine.
But soon the heroes view'd the Mysian shore,
As by the mouth of Ryndacus they bore.
On Phrygia's fields a wishful look they cast, 1510
And huge Ægæon's promontory pass'd,
When great Alcides, at one luckless stroke,
His oar, hard straining, near the middle broke.
One part was swallow'd in the whelming main,
One, though he fell, his grasping hands retain;
Backward he fell, but soon his seat regain'd,
And lothing rest in mute amaze remain'd.
What time the weary labourer, wanting rest,
Hies to his cot with pining fast oppress'd;
Ev'n in the entrance of his rural door 1520
His tottering knees he bends, and moves no more;
His dusty limbs he views, and callous hands,
And curses hunger's insolent demands:
Then, not till then, the chiefs to Chius row,
Chius, whose streams around Arganthon flow.
The friendly Mysians on their peaceful coast
Receive with hospitality the host;
Abundant stores they send, with hearts benign,
Fat sheep, and strong exhilarating wine. 1529

Some bring dry wood, and some in order spread
Soft leaves and herbage for a spacious bed:
Some from the flint elicit living fire;
Some mix the wines that generous deeds inspire:
The feast they crown, and rites to Phœbus pay,
Ecbasian Phœbus at the close of day.
But Hercules the genial feast declin'd,
And sought the wood a fitting oar to find.
Nor long he sought before a fir he found;
Few leaves adorn'd it, and few branches crown'd;
Yet as the poplar's stem aspires on high,
This fir, so stout and tall, attracts his eye.
On the green grass his bow he laid aside,
His arrowy quiver, and the lion's hide.
First with his club the solid soil he shook,
Then in both arms, assur'd, the fir-tree took;
Firm on his feet he stood with bended knee;
His big broad shoulder lean'd against the tree;
Then heav'd it up, deep-rooted in the ground,
Clogg'd with the soil's impediments around.
As when beneath Orion's wint'ry reign,
The sudden tempest rushes from the main,
Some tall ship's mast it tears, and every stay,
And all the cordage, all the sails away:
Thus he the trunk; then took, in haste to go,
The hide, the club, his arrows, and his bow.
Meanwhile, preparing for his friend's return
A ready supper, with his brazen urn
Alone rov'd Hylas o'er the fields to bring
The purest water from the sacred spring.
For to such tasks Alcides train'd his squire,
Whom first he took an infant from his sire
Theodamas; but him with sword severe
He slew, who churlish had refus'd a steer.
For when Theodamas, oppress'd with care,
Turn'd the fresh furrow with his shining share,
He disobey'd, ah wretch! the chief's command,
Who claim'd the labouring ox that till'd the land.
But know, Alcides fought for cause to bring
War on Dryopia's kingdom and the king,
For barbarous acts, and rights neglected long.
But rove not, Muse, digressive from the song.
Soon faithful Hylas to the fountain came,
Which Mysian shepherds crystal Pegæ name;
It chanc'd the nymphs, in neighbouring streams that dwell,
Then kept a concert at the sacred well.
In Dian's praise they rais'd the nightly song,
All who to high, aërial hills belong;
All who in caverns hide, or devious rove
The mountain-forest, or the shady grove.
When from her spring, unsullied with a stain,
Rose Ephydaria, to attend the train,
The form of Hylas rush'd upon her sight,
In every grace of blushing beauty bright:
For the full moon a beamy lustre shed,
And heighten'd all the honours of his head.
Fir'd with love's sudden flame, by Venus rais'd,
The frantic naiad languish'd as she gaz'd:
And soon as, stooping to receive the tide,
He to the stream his brazen urn apply'd,
In gush'd the foaming waves; the nymph with joy
Sprung from the deep to kiss the charming boy.
Her left arm round his lovely neck she threw,
And with her right hand to the bottom drew.
First Polyphemus heard, as wandering nigh
This fatal fount, the youth's distressful cry,
(In search of Hercules he rov'd the wood)
And hied with hasty footsteps to the flood.
As when a lion from his cavern'd rock,
At distance hears the bleatings of the flock,
To seize his prey he springs, with hunger bold,
But faithful shepherds had secur'd the fold;
Defeated of his prize, he roars amain,
Rends his hoarse throat, and terrifies the swain:
Thus Polyphemus call'd with voice profound,
And vainly anxious rov'd the forest round.
At length retreating, he the path explor'd
Through which he came, and drew his trusty sword,
Lest savage beasts should seize him for their prey,
Or nightly robbers intercept his way.
And as he brandish'd the bright burnish'd blade,
He met Alcides in the gloomy shade,
Unknown at first, but as he nearer drew,
His friend returning to the ship he knew.
Though his breath falters, and his spirits fail,
He thus reveals the melancholy tale:
" Hard is my lot, and much averse my will,
" To be the first sad messenger of ill;
" Young Hylas went to fetch fresh water late,
" Not yet return'd; I tremble for his fate:
" By robbers seiz'd or beasts, 'tis hard to guess;
" I heard his cry, the signal of distress:"
Thus he: the sweat from great Alcides flow'd,
And the black blood through all his body glow'd;
Enrag'd, the fir-tree on the ground he threw,
And, where his feet, or frenzy hurried, flew.
As when a bull, whom galling gadflies wound,
Forsakes the meadows, and the marshy ground,
The flowery food, the herd and herdsmen shuns,
Now stands stock-still, and restless now he runs;
Stung by the breeze, he maddens with the pain,
Tosses aloft his head, and roars amain:
Thus ran the raging chief with matchless force,
Then sudden stopp'd he, wearied with the course.
Anxious in vain, he rov'd the forest round,
The distant hills and vales his voice rebound.
Now o'er the lofty mountains rose in view,
The morning star, and mildest breezes blew:
That instant Tiphys bade the heroes sail,
Ascend the vessel, and enjoy the gale.
The ready crew obey the pilot's word,
Their anchor weigh, and haul the cords aboard;
Then give the stretching canvas to the wind
And leave the Posidean rocks behind.
When from the rosy orient, beaming bright,
Aurora tipp'd the foot-worn paths with light;
And o'er moist meads the glittering dew-drops shin'd,
They miss'd those friends their folly left behind.
Then rose contention keen, and pungent grief,
For thus abandoning their bravest chief.
In silence Jason sat, and long suppress'd,
Though griev'd, the labouring anguish of his breast.
Brave Telamon, with anger kindling, spoke:
" Mute is thy tongue, and unconcern'd thy look:
" To leave unconquer'd Hercules behind
" Was a base project, and by thee design'd;

" Left, when to Greece we ſteer the ſailing pine,
" His brighter glories ſhould out-dazzle thine.
" But words avail not—I renounce the band,
" Whoſe ſelfiſh wiles this ſtratagem have plann'd."
Thus ſpoke Æacides, inflam'd with ire,
His eye-balls ſparkling like the burning fire;
On Tiphys then, by rage impell'd, he flew:
And once more Myſia had receiv'd the crew;
Again the heroes the ſame courſe had ſail'd,
Though roaring winds and raging waves prevail'd,
Had not bold Boreas' ſons the chief addreſs'd,
And, nobly daring, his rough rage repreſs'd.
(Ill fated youths! for that heroic deed
Doom'd by the hands of Hercules to bleed.
For when returning home their courſe they ſped,
From funeral games perform'd for Pelias dead,
In ſea-girt Tenos he the brothers ſlew,
And o'er their graves in heapy hillocks threw
The crumbling mould; then with two columns crown'd,
Erected high the death-devoted ground;
And one ſtill moves, how marvellous the tale!
With every motion of the northern gale—
But theſe are facts reſerv'd for future years)
Lo! ſudden, Glaucus to their ſight appears,
Prophet of Nereus, riſing from the main,
Moſt ſkill'd of all his fate-foretelling train.
High o'er the waves he rear'd his ſhaggy head,
With his ſtrong hand the rudder ſeiz'd, and ſaid:
" Why ſtrive ye thus, though Jove's high will withſtands,
" To bear Alcides to the Colchian lands?
" He muſt at Argos, ſo the fates ordain,
" And ſo Euryſtheus has decreed, ſuſtain
" Twelve mighty labours, thence be rais'd above,
" To high Olympus, and the court of Jove.
" Ceaſe for Amphytrion's ſon, your murmurs ceaſe,
" And lull the ſorrows of your ſouls to peace.
" In Myſia, where meandring Chius ſtrays,
" Muſt Polyphemus a proud city raiſe:
" Then, mid the Calybes, a deſperate clan,
" Expires on Scythian plains the gallant man.
" But ſtrange is Hylas' fate: his youthful charms
" Entic'd a nymph, who claſp'd him in her arms.
" Now the bleſt pair the bands of Hymen bind;
" In ſearch of him the chiefs are left behind."
This ſaid, he plung'd into the gulf profound,
The purple ocean foam'd in eddies round.
The god deſcending with reſiſtleſs ſway,
Impell'd the hollow veſſel on her way.
The chiefs rejoic'd this prodigy to view,
And inſtant Telamon to Jaſon flew
In friendly ſort, and in his right he took
The prince's hand, and thus embracing ſpoke:
" Illuſtrious chief, let not thine anger riſe
" At aught I ſaid impetuous and unwiſe.
" Grief for my friend has made me indiſcreet,
" And utter words for Jaſon's ear unmeet;
" Thoſe to the winds wide ſcattering let us give,
" And, as before, in friendly concord live."
Then Jaſon thus: " Thy cenſures wound my mind,
" Which ſay, I left the braveſt Greek behind.
" Yet though thy words reproachful guilt ſuggeſt,
" Rage dwells not long in Jaſon's generous breaſt;
" Since not for flocks or riches we contend,
" But a bold hero, and a faithful friend.
" And thou, I truſt, if reaſon calls, wilt be
" As firm and warm an advocate for me."
He ſpoke; and now, the hateful conteſt o'er,
The chiefs reſum'd the ſeats they held before.
But for thoſe heroes, whom they left behind,
By Jove's decree are various cares deſign'd.
Nam'd from its ſtream, the boaſt of future days,
Muſt one on Myſian plains a city raiſe:
One (great Alcides) other toils muſt ſhare,
And learn Euryſtheus' ſtern commands to bear.
Long time he threaten'd, for his Hylas loſt,
Inſtant deſtruction to the Myſian coaſt,
Unleſs the Myſians to his arms reſtor'd,
Alive or dead, the partner of his board.
Of all their bands the choiceſt youths they choſe,
And them as pledges of their faith propoſe;
Then ſwore they all, their ſearch would never end,
Till haply they had found the hero's friend.
Still to this day the fond Cianians ſeek
(All who at Trachin dwell) the lovely Greek.
For beauteous youths, to Trachin's walls convey'd,
Were there as pledges to Alcides paid.
Meanwhile all day and night briſk breezes blew,
Fleet o'er the foaming flood the veſſel flew;
But when the dawn gave promiſe of the day,
The winds expiring gently died away.
A land projecting o'er the bay below
The chiefs diſcover'd, and to this they row;
This peaceful port a while the Minyans choſe,
And, as they reach'd it, grateful morning roſe.

NOTES ON BOOK I.

Ver. 1. Thus begins Homer's Batrachomyachia, the 17th Id. of Theocritus, and Aratus's poem.

See alſo on theſe words the Gr. Schol. and Hoelzlinus's note.

Ver. 3. For Pelias, Æſon, &c. ſee the preface.

Colchos, now called Mengrelia, is bounded on the north by part of Sarmatia, on the weſt by ſo much of the Euxine ſea, as extends from the river

Corax to the mouth of the river Phaſis, on the ſouth by part of Cappadocia, and on the eaſt by Iberia.

Ver. 5.

——when Argo paſs'd
Through Boſphorus betwixt the juſtling rocks.
Milt. Par. Loſt. B. ii. 1017.

Two rocks at the entrance of the Euxine ſea, called *Symplegades* by the Grecians, by Juvenal *Concurrentia ſaxa*; becauſe they were ſo near, that, as a ſhip varied its courſe, they ſeemed to open and ſhut; or, as Milton expreſſes it, to *juſtle* one another. They were alſo called *Cyanean*, from their dark colour.

Ver. 13. A river in Theſſaly, according to Apollonius, Callimachus, and others. But ſome are of opinion, that Anaurus, as its etymology implies, is the general name of any torrent. Valerius Flaccus, relating the ſame ſtory, mentions the river Enipeus.

Ver. 33. The Pæonians of Thrace lived upon the Hebrus; and all the people of that region were at one time great in ſcience. The Grecians acknowledged they were greatly indebted to them; and the muſes are ſaid to have come from thoſe parts. The Pierians were as famed for poetry and muſic, as the Pæonians were for phyſic. Thamyras, Eumolpus, Linus, Thymætes and Muſæus, were ſuppoſed to have been of this country. Orpheus alſo is aſcribed to Thrace; who is ſaid to have ſoothed the ſavage rage, and to have animated the very rocks to harmony. *Bryant's Myth.*

Ver. 35.

Mulcentem tigres et agentem carmine quercus.
Virg. Georg. iv. 510.

Ver. 42. Orpheus, in the Argonautic poem aſcribed to him, gives the ſame account of himſelf.

Καί μ' ἔτικτεν κιθάρη πολυδαίδαλον ἐξύνουλα,
Ὄφρα κέ τοι μέλπων προχέω μειλιχίην ἀοιδήν,
Κληήσω δέ τε θῆρας ἰδ' ἑρπετὰ καὶ πετεηνά.
Orph. Arg. 71.

Ver. 71. It is fabled that this perſon was a Theſſalian virgin, the daughter of Elatus, one of the Lapithæ; who, having been violated by Neptune, obtained of him, as the reward of her proſtitution, that ſhe might be transformed into a man, and rendered invulnerable. Thus changing her ſex, ſhe changed her name into Cæneus, being before called Cœnis. See *Ovid's Metam.* and *Virg. Æn.* vi. 448.

Ver. 79. Mopſus was ſurnamed the Titareſian, from Titareſus, the name of a place and river in Theſſaly. Thus Heſiod in Scut. Herc. l. 181.

Μόψον' Ἀμπυκίδην Τιταρήσιον——

Ver. 125. Theſeus, by the help of his friend Pirithoüs, had ſtolen Helen from the Temple of Diana, and carried her off: in return for this ſervice, he aſſiſted Pirithoüs in the rape of Proſerpine. In order to accompliſh this deſign, they went down to the infernal regions together: but Pluto, having diſcovered their intentions, expoſed Pirithoüs to the dog Cerberus, who devoured him, and chained Theſeus to the mountain Tænarus.
Plutarch's Life of Theſeus.

Ver. 138. Apollonius calls him Ἄργος ἀρισοφίδης, the ſon of Araſtor. But Banier remarks that we ought to read (as Meziriac has recommended) ἀλεκτοφίδης, the ſon of Alector. For, Argus the ſon of Areſtor, preceded the time of the Argonauts eight or nine generations: but moſt of the ancients agree, that the ſhip Argo was built by Argus the ſon of Alector, who lived in the time of the Argonauts. *Banier's Myth.* Vol. iv.

Ver. 147. Iphiclus had ſeized upon the oxen of Tyro, the mother of Neleus. Theſe Neleus demands, but is denied by Iphiclus. Pero, the daughter of Neleus was promiſed in marriage to him who recovered theſe oxen from Iphiclus. Melampus undertakes the recovery; but being vanquiſhed, is thrown into priſon. See *Homer's Odyſſ.* B. xi. 290.

Ibid. He is menrioned in the ſame manner by Orpheus and Valerius Flaccus.

——Ἄβαντος παῖς νέος ἤλυθε κάρτερος Ἰδμων,
Τόν ῥ' ὑποκυσσαμένη τέκεν Ἀπόλλωνι ἄνακτι
Λυκορόσιον παρὰ χεῦμα φερηπιάς Ἀντιάνειρα,
Τῷ καὶ μαντοσύνην ἔπορε καὶ θέσφατον ὁρμὴν
Φοίβος.
Orph. Arg. 185.

——————Phœbus Idmon,
Curi genitor tribuit monita prænoſcere Divûm,
Omnia, ſeu flammas, ſeu lubrica cominus exta,
Seu plenum certis interroget aera pennis.
Val. Flac. B. i. 228.

Ver. 180. There were two grand diviſions of the religious ceremonies of the ancients, viz. into ἔμπυρα and ἄπυρα, i. e. thoſe where fire was heaped upon the altar, and thoſe which were not accompanied with fire. The σήματα ἔμπυρα were obſervations made from the victims at the time they were burning; which was the province of the Haruſpices: the σήματα ἄπυρα referred to the flight of birds, and ſuch obſervations as the augurs collected from them. Thus Euripides, in Bacchæ, ver. 257.

Σκοπεῖν τἱερωτὰς, καμπύρων μισθὸς φέρειν·

Thus Ovid:

——————cui poſſe figuras
Sumere quas vellet, rurſuſque reponere ſumptas,
Neptunus dederat, Nelei ſanguinis auctor.
Met. xii. 555.

And Seneca:

Sumere innumeras ſolitum figuras. *Med.* 635.

Ver. 222. The text has Polyphemus; which is undoubtedly a falſe reading, as Valerius Flaccus and Pauſanias ſeem to confirm. The annotator to Mr. Pope's Odyſſey, not ſuſpecting this, was led into a pleaſant miſtake. "If Polyphemy (ſays he, Od. ix. 569), had really this quality of running upon the waves, he might have deſtroyed Ulyſſes without throwing this mountain: but Apollonius is undoubtedly guilty of an abſurdity, and one

might rather believe that he would ſink the earth at every ſtep, than run upon the waters with ſuch lightneſs as not to wet his feet." As this deſcription of the ſwiftneſs of Euphenius is originally taken from Homer's account of the mares of Erichthonius, of Virgil's deſcription of Camillus's ſwiftneſs, ſeems copied from theſe beautiful lines of Apollonius. See *Pope's Il. B.* xx. 270.

Theſe lightly ſkimming, when they ſwept the plain,
Nor ply'd the graſs, nor bent the tender grain:
And when along the level ſeas they flew,
Scarce on the ſurface curl'd the briny dew.

Illa vel intactæ ſegetis per ſumma volaret
Gramina, nec teneres curſu læſiſſet ariſtas:
Vel mare per medium, fluctu ſuſpenſa tumenti,
Ferret iter, celeres nec tingeret æquore plantas.

Ver. 251. Our poet, in his account of this hero, follows Orpheus very cloſely. Valerius Flaccus makes no mention of him.

Ver. 273. Milton's deſcription of Raphael is ſimilar to this:

——————— like Maia's ſon he ſtood,
And ſhook his plumes, that heavenly fragrance fill'd
The circuit wide; &c. *Par. Loſt*, B. v. 285.

Apollonius in this beautiful deſcription, has far exceeded his venerable maſter; who ſays only,

——————ταρροῖσιν ἐπιστατίοις πεπόηνθο
Ζήτης καὶ Κάλαϊς, δέμας εἴκελοι ἀθανάτοισιν.
Orph. Arg. 219.

Ver. 287. The Argonauts were diſtinguiſhed by the appellation of Minyæ; a title which they took as being deſcended from the daughters of Minyas, a Bœotian prince, the ſon of Orchomenus, who built a city of that name in Bœotia.

Ver. 291. A city of Theſſaly, and the birthplace of Jaſon. It was alſo called Lariſſa (as Pomponius Mela aſſerts); hence Lariſſæus Achilles. *Virg.*

Ver. 292. Pagaſæ is a town and promontory of Theſſaly. Here Argo was built; and from that circumſtance, ἀπὸ τῆς ναυπηγίας, the bay is ſuppoſed to have derived its name.

Ver. 319. For an account of Phrixus ſee the preface.

Ver. 327. This affecting ſcene is extremely natural, and drawn by our poet in a manner the moſt maſterly. He is no where happier than in the execution of theſe pathetic pieces. This parting interview, the epiſode of Hypſipyla, and the loves of Medea and Jaſon, have been admired and imitated by the poets of ancient and modern times.

Ver. 379. Thus Telemachus addreſſes his mother in Homer, and Turnus in Virgil.

Tears and apprehenſions of danger were deemed bad preſages, when the people were going to war,

Ne, quæſo, ne me lacrymis, neve omine tanto
Proſequere, in duri certamina martis euntem.
Virg. Æn. xii. 72.

——————O royal mother, ceaſe your fears,
Nor ſend me to the fight with boding tears. *Pitt.*

Ver. 384. Virgil has manifeſtly borrowed this compariſon, and applied it to Æneas. B. iv. 143.

As when from Lycia, bound in wint'ry froſt,
Where Xanthus' ſtreams enrich the ſmiling coaſt,
The beauteous Phœbus in high pomp retires,
And hears in Delos, &c. *Pitt.*

Ver. 447. It was requiſite to reſerve the beſt of the flocks and herds for the altar: they muſt be found and perfect in all their limbs, or they would be deemed a very unfit offering for the gods. Thus Achilles in Homer, offers up to Apollo—ἀρνῶν καὶ σὴν αἰγῶντε τελείων· τοῖς θέοις ὡς τελείοις προσάγειν χρὴ τέλεια, ſays Euſtathius on this paſſage. It is the precept of Virgil, that the cattle which are deſigned for the plough, for breeding and ſacrifices, ſhould be diſtinguiſhed by particular marks, and ſeparated from the reſt.

Continuoque notas, et nomina gentis inurunt.
Georg. iii. 158.

Ver. 456. The poet through this whole deſcription is agreeably circumſtantial. He paints the buſy ſcene before us in the livelieſt colours. We are preſent to all the labours of his heroes. We ſee them conſtructing, launching and manning their ſhip, chooſing their ſeats, erecting their altar, and offering ſacrifice. We feel ourſelves already intereſted, and cannot help joining with Jaſon in his prayer, that ſucceſs may crown their enterpriſe.

Ver. 503. Embaſian and Ecbaſian are epithets which they applied to their tutelar god at the inſtant of their embarkation, and when they were about to land.

Ver. 551. This ſpeech of Idmon is calculated to excite our admiration and pity. We cannot but admire the courage and calmneſs of the hero, when he diſcloſes to his comrades the purpoſe of Apollo. He tells them, in a prophetic ſtrain, that they would be expoſed to dangers, but ſucceſsful at laſt; that, as to himſelf, he knew his doom, which was, that he muſt die in a diſtant country long before their return. Homer repreſents his hero weeping at his fate, Ὡς ἄρ' ἔφη δακρυχέων: our poet reſerves the tears of ſorrow for them, from whom they fall with a better grace:

——————the hoſt the fate, of Idmon mourn.

Ver. 581. This circumſtance ſeems to be borrowed from that noble one of Achilles ſwearing by his ſceptre, in Homer; which paſſage both Virgil and Valerius Flaccus have cloſely imitated.

Ver. 599. Iphimedia, the daughter of Triopas, and wife of Alœus, fell in love with Neptune, by whom ſhe had two ſons, Ephaltes and Otus. Preſuming on their gigantic ſtrength, they attempted to dethrone Jupiter; but were ſlain (as Homer and Pindar relate, and after them Apollonius) by Apollo at Naxus, and thrown into Tartarus by Pluto.

Ver. 617. The following lines, to v. 720. are taken from Mr. Weſt's tranſlation of the ſong of

Orpheus, and the ſetting out of the Argonauts; but many paſſages are much altered.

Ver. 621.

Namque canebat, uti magnum per inane coacta
Semina terrarumque animæque marisque fuiſſent,
&c. *Virg. Ec.*

For a full illuſtration of the propriety and beauty of this ſong, which Scaliger condemns, I beg leave to ſubjoin Mr. Wharton's judicious criticiſm, in his Obſervations on Spenſer's Faery Queene. "Scaliger finds great fault with the ſubject of this ſong, and prefers to it the ſubject of Orpheus's ſong in Valerius Flaccus. By this piece of criticiſm he has betrayed his ignorance of the nature of ancient poeſy, and of the character of Orpheus. But the propriety of the ſubject of this ſong is eaſily to be defended, without conſidering the character of Orpheus. The occaſion of it was a quarrel among the Argonauts, whom Orpheus endeavours to pacify with the united powers of muſic and verſe. To this it may be added, that a ſong, whoſe ſubject is religious, and which aſſerts the right of Jupiter to the poſſeſſion of Olympus, was even expedient, as one of the chiefs had but juſt before ſpoken blaſphemy againſt him. Nor were the auditors of ſo mean a rank as Scaliger would repreſent them: he terms them *viri militares*; but it ſhould be conſidered, that they were princes and demigods. There is one circumſtance belonging to the ſong of Orpheus in Apollonius, which gives it a manifeſt ſuperiority to that of Orpheus in Valerius Flaccus, I mean the deſign of it, which was to expreſs the vehemence of the paſſion, at once ſo agreeable to the well-known character of Orpheus, and ſo expreſſive of the irreſiſtible influence of muſic. In the Latin poet, Orpheus ſings upon no occaſion, and to no end, unleſs to make the night paſs away more pleaſantly."

Ver. 636. Milton has undoubtedly copied this paſſage, *Par. L. B.* x. 580.

—— how the ſerpent whom they call'd
Ophion with Eurynome, the wide
Encroaching Eve perhaps, had firſt the rule
Of high Olympus, &c.

Apollonius, as well as Milton, has hinted that Ophion was of the ſerpent race. —— the vaſt ſpecies of the ſerpent breed.

The upper part of Eurynome was a perfect figure of a woman; the lower part, from the thighs downward, terminated in the tail of a fiſh.

Lucian.

Ver. 649. The effect which the harp and voice of Orpheus had upon the Argonauts, is here elegantly deſcribed. When the poet had ended his ſong, they, intent and bending towards him, ſtill liſtened, and imagined him ſtill ſinging. Milton follows Apollonius very cloſe:

The angel ended, and in Adam's ear
So charming left his voice, that he a while
Thought him ſtill ſpeaking, ſtill ſtood fix'd to hear. *Par. Loſt, B.* viii. 1.

Ver. 657. It was the cuſtom of the ancients at their ſolemn feſtivals, before they went to reſt, to ſacrifice the tongues of the victims to Mercury, the god of eloquence, pouring on them a libation of wine. This was done, either with a deſign to make an expiation for any indecent language that had been ſpoken (as was the caſe about fifty lines above), or to ſignify, that what had been there ſpoken, ought not to be divulged or remembered afterward.

Ver. 669. The ancient writers, as well hiſtorians as poets, are full of theſe wonders. The ſpeech of Achilles's horſe to his maſter is well known. Among the many prodigies which are ſaid to have appeared at the death of Julius Cæſar, this, Virgil informs us, was one,—*pecudeſque locutæ*. Appian expreſsly ſays that an ox ſpoke with an human voice. Livy has given us the ſpeech of one of theſe animals on a certain occaſion:

Quod maximè terrebat Conſulem Cn. Domitium, bovem locutum, "Roma tibi cave." Lib. xxxv.

This ſhip was indeed built out of ſome ſacred timber from the grove of Dodona, which was ſacred to Jupiter Tomarias; and on this account it was ſaid to have been oracular, and to have given verbal reſponſes.

Ver. 670 Minerva was ſo called from Itonis, a city of Theſſaly, where ſhe was worſhipped.

Ver. 698. The poets are fond of expreſſing the activity of the rowers, and the velocity of the ſhip, by the effect which the ſtroke of their oars and the track of the keel produce on the waters.

——λεύκαινον ὑδὼρ ξεσσῆς ἐλάτῃσιν. Od. μ'. 172.

Totaque remigio ſpumis incanuit unda. *Catull.*

Et freta caneſcunt, fulcam ducente carinâ. *Manil.*

Ver. 701. Apollonius, anxious to impreſs on his readers a juſt idea of the importance of his ſubject, has, in the true ſpirit of Homer, repreſented all the gods looking down upon Argo, as if intereſted in the ſucceſs of her voyage.

Ver. 717. Achilles was educated under Chiron. The circumſtance of Chariclo's raiſing up young Achilles in her arms, to ſhow him his father Peleus, is exceedingly beautiful and ſtriking. From this action we may alſo fairly conjecture, that this famous expedition preceded the ſiege of Troy, probably about thirty years, viz. from the infancy of Achilles to his arrival at perfect manhood.

Ver. 752. On the epithet ἠερίη, which the poet here applies to Theſſaly, and which ſeems to have perplexed the commentators, Mr. Byrant makes the following ingenious remark: "The Pelaſgi ſettled very early in Theſſaly, to which they gave the name Aëria. This was the ancient name of Egypt, from whence this people came. They likewiſe called the ſame country Ai Monah, Regio Lunaris; which the poets changed to Hæmonia."

Ver. 759. The Scholiaſt tells us, this Dolops was the ſon of Hermes, and ſlain at Magneſia;

where they erected a monument near the shore to his memory.

Ver. 766. The place from which they set sail was named from that event Aphetæ. It is a town and port of Magnesia in Thessaly.

Ver. 788. Plutarch and Pliny assert that this mountain is so high as to project its shade, when the sun is in the summer solstice, on the market-place of the city Myrina. *Univ Hist.*

——— ingenti tellurem proximus umbrâ
Vestit Athos, nemorumque obscurat imagine pontum. *Stat. Theb.*

Ver. 793. "The description of Venus enraged against the men of Lemnos for neglecting her temple, represents her (says Mr. Spence in his Polymetis) rather as the goddess of jealousy than of love. There is no figure of her under this character, nor any description in any of the Roman poets before the third age." Had the learned author consulted Apollonius, he would have seen to whom Valerius was indebted for this description of Venus as the goddess of jealousy. The passage is indisputably borrowed from our poet. So true is it what Mr. Gray has observed of this writer, that had he consulted the Greek authors, they would have afforded him more instruction on the very heads he professes to treat, than all the other writers put together. See *Gray's 5th Letter to Mr. Walpole.*

Ver. 826. The Lemnian women are here represented as savage as the Thyades, who delighted in bloody banquets. Upon this the Scholiast observes, that the Mænades and Bacchæ used to devour the raw limbs of animals which they had cut or torn asunder. In the island of Chios it was a religious custom to tear a man limb from limb by way of sacrifice to Dionusus: the same in Tenedos Hence we may learn one sad truth, that there is scarce any thing so impious and unnatural, as not at times to have prevailed. *Bryant's Myth. vol. ii. p.* 13.

Ver. 852. There is a judicious note on this passage, inserted in an elegant edition of our poet, lately published at Oxford; which I shall venture to give the reader: "Licet Ventus Boreas Argonautis ad cursum continuandum secundus esset, non tamen solverunt." Mihi perspectum est nihil veri his inesse. Non enim ventus Aquilo secundus est tendentibus in Pontum sed adversum tenet. Hoc ergo Apollonius indicat. Minyas non solvisse illo mane, ex insulâ Lemno, quod Aquilo, qui ipsis in Pontum porrecturis adversus erat, flaret. *Wesseling. Observ. p.* 130.

This observation appears to be just. Yet is it no unusual thing with the poets to put one wind for another. The most judicious and accurate of the Roman poets is not exempt from errors of this kind. "The description of the departure of Æneas from Carthage is not only inconsistent with truth and probability in this respect, but contradictory to itself. He sails in the morning with a west wind, which is very improperly called favourable; but before he is out of sight of Carthage, we find him pursuing his course with a north wind, which is still more contrary to his intended course." *See an Essay on the original Genius and Writings of Homer.*

Ver. 913. Dido is the Hypsipyla of Virgil. The latter, as Hoelzlinus speaks, is the archetype of the former.

Ver. 949. This mantle, which Pallas gave to Jason, and the simile of the star, to which he is compared, are beautiful specimens of our poet's talent for description. We shall find him in the more descriptive parts of his poem, rising greatly above that equal mediocrity which some critics have ascribed to him.

Ver. 971. The fable of Thebes being built by the power of music is not in Homer, and therefore may be supposed to be of later invention. *See Pope's Od. B.* xi. 320.

Ver. 982. The Teleboans, or Taphians (so called from the island Taphos which they inhabited) coming to Argos, stole the oxen of Electryon, the father of Alcmena: a battle ensued, in which himself and sons were slain.

Ver. 988. Hippodamia was the daughter of Œnomaüs, king of Elis and Pisa. She was a princess of great beauty and had many admirers. Œnomaüs having been informed by the oracle, that he should be slain by his son-in-law, endeavoured to deter the suitors from paying their addresses to his daughter, by proposing a chariot-race. The terms were; that he who conquered him in the race should obtain his daughter, but that he who proved unsuccessful should be put to death. Pelops, whom Hippodamia was most attached to, accepted the dangerous conditions, and contended with Œnomaüs. The plan which his daughter had concerted with Myrtilus, the charioteer, of loosening the pin of the wheel, succeeded to her wish. The pin flew out, the chariot was overthrown, and victorious Pelops claimed the lady as his prize.

Ver. 997. Elara being pregnant by Jupiter, he, to avoid the jealousy of Juno, concealed her in a cavern of the earth, where Tityus was born: who, from his being immersed in worldly cares, and from his centering all his affections on the earth, as if he had sprung from it, is fabled to be the son of the earth.

Ver. 1132. This is an oblique, but very severe sarcasm on Jason.

Ver. 1161. That there was offspring appears from Homer's Il. B. vii.

And now the fleet arriv'd from Lemnos' sands,
With Bacchus' blessings cheer'd the generous bands.
Of fragrant wines the rich Eunæus sent
A thousand measures to the royal tent;
Eunæus, whom Hypsipyle of yore
To Jason, shepherd of his people bore.

These verses, says Mr. Pope, afford us the knowledge of some points of history and antiquity; as that Jason had a son by Hypsipyle; who succeeded his mother in the kingdom of Lemnos: that Samos was anciently famous for its wines: and that coined money was not in use at the time of

the Trojan war; but the trade of the countries carried on by exchange in brafs, oxen, flaves, &c. as appears by two lines farther:

Each, in exchange, proportion'd treafures gave,
Some brafs, or iron, fome an ox, or flave.

Ver. 1187. All that were initiated into the Cabaritic myfteries were thought effectually fecured from ftorms at fea, and all other dangers: and the influence of the Cabirian prieſts was particularly implored by mariners for fucceſs in their voyages. *Potter. Bryant.*

Ver. 1193. So named from a bay, which lies weſt of the Thracian Cherſoneſus; called Melas, from a river of that name.

Ver. 1207. Cyzicus, or Cyzicum, according to Strabo, is an iſland in the Propontis, joined by two bridges to the continent. The ſtrait, over which theſe bridges were thrown, being in a courſe of years filled up, an iſthmus was formed, and the iſland became a peninſula: to this iſthmus the poet alludes. *Strabo. Hoelz.*

Ver. 1235. It is obſervable that the name of an anchor does no where occur in Homer. The ſhips of which he ſpeaks had only a rudder and ballaſt. Neither was there any metal employed in the conſtruction of them; the timbers were faſtened together with pegs.

We muſt not therefore wonder at the rude expedients to which the Argonauts had recourſe, in theſe ſtill earlier times.

Ver. 1299.

Ac veluti magnâ juvenum cum denſa fecuri
Silva labat; cuneiſque gemit grave robur adactis;
Jamque abies, piccæque ſuunt; ſic dura ſub ictu
Oſſa virûm malæque ſonant, ſparſuſque cerebro
Albet ager. *Val. Flac.* L. iii. 163.

Ver. 1380. The moſt ancient tombs were very ſimple: they were nothing more than hillocks of earth heaped up over the grave. This the Romans called Tumulus. Sometimes we find an oar, or pillar erected over it in honour of the deceaſed. Thus we read in Homer:

Τύμβον χεύωμες, καὶ ἐπὶ σημα ἐρύσσομες,
Πήχεμεν ἀκροτάτω τύμβω εὐήρες ἐρετμόν.
Bp. Lowth's note on Iſaiah lii. 9.

Ver. 1384. Some nicer critics may be offended that Clita ſhould die in ſo vulgar a manner: but this objection is owing to a want of conſidering the notions and manners of different ages and countries. Amata, the mother of Turnus, in the 12th book of the Æneid, hangs herſelf. In the 11th book of the Odyſſey, Jocaſta dies in like manner, and likewiſe in the Œdipus of Sophocles.

Ver. 1399. It was cuſtomary for families to grind their own corn. For this purpoſe they made uſe of handmills. Wind and water mills were a later invention. They employed their ſlaves at this work; and ſometimes it was inflicted on them as the heavieſt puniſhment.

Molendum in piſtrind, vapulandum, habendæ compedes. *Ter. Phorm.*

See Biſhop Lowth's Iſaiah, p. 217.

Here we find not a ſingle family, but a whole people, annually, in token of mortification and ſorrow, labouring together at one common mill, and partaking of the bread of affliction, which is of the coarſer kind, and unbaked.

Ver. 1406. Ceyx, king of Thrace, married Alcoyne, the daughter of Æolus. On a voyage to conſult the Delphic oracle, he was ſhipwrecked. His corpſe was thrown aſhore in ſight of his wife, who, in the agonies of love and deſpair, threw herſelf into the ſea. The gods, in pity to her fidelity, changed her and her huſband into the birds which bear her name. The halcyons very ſeldom appear but in the fineſt weather: whence they are fabled to build their neſts on the waves. The female is no leſs remarkable than the turtle for her conjugal affection. When the halcyons are ſurpriſed by a tempeſt, they fly about as in the utmoſt terrors, and with the moſt lamentable cries.

Ver. 1418. The worſhip of Cybele was famous in Phrygia. Her prieſts, ſounding their tabrets, and ſtriking their bucklers with ſpears, danced and diſtorted their whole bodies. To theſe dances and diſtortions they add ſhrieks and howlings; whence they were called Corybantes. Thus it was that they deplored the loſs of their goddeſs's favourite Atys. Thus they drowned the cries of Jupiter, concealed among the Curetes in Crete; and thus they ſtifled the grief of theſe Dolians for their ſlaughtered monarch. *See Banier's Myth.*

Ver. 1422. Orpheus, in his hymn to this goddeſs, has aſcribed to her the fame unlimited dominion:

Μήτηρ μέντοι θεῶν ἠδὲ θνητῶν ἀνθρώπων,
Ἐκ σοῦ γὰρ καὶ γαῖα καὶ οὐρανὸς εὐρὺς ὑπερθεν,
Καὶ πόντος, πνοιαίτε. *Orph. Hymn* 13.

Ver. 1448. It ſometimes happens, that the roots and branches of aged trees bear a faint likeneſs to the human fabric. The ancients ſeem to have taken advantage of this fancied ſimilitude, which they improved by a little art; and their firſt efforts towards imagery were from theſe rude and rotten materials. *Bryant's Mythol.* vol. i.

Ver. 1461. The Dactyli were the prieſts of Cybele: they firſt inhabited mount Ida in Phrygia; hence they were ſtyled Idæi. They were originally five in number, as their name, derived from the fingers of the hand, imports.

Ver. 1463. There is a river of this name, not only in Meſopotamia, but in Crete.

Thus Virgil, Ecl. 1.

Et rapidem Cretæ veniemus Oaxem.

Ver. 1469. Called alſo the Pyrrhic dance, from fire with which it was accompanied. It was eſteemed a martial exerciſe, and was performed by perſons in armour, who gave it the name of Berarmus, from the temple of the deity, where it was probably firſt practiſed; or from the regularity of their movements in dancing. *Schol. Bryant.*

Ver. 1478. It was the general opinion of the ancients, that when they had appeaſed their deities by ſacrifice and prayer, the tokens of reconciliation would appear by an uncommon fertility of the ſoil.

The poets have not failed to avail themselves of this popular opinion. It is customary with them to represent fruits and flowers of every kind, as springing up and coming to perfection, in a manner that seemed to indicate the immediate agency of some propitious deity.

Besides, Cybele was taken for the earth; on which account she was called the mother of the gods; for the earth gives birth to all things. Hence her worship was blended with several circumstances which bore a relation to the earth. Its fertility, therefore, at the instant of the celebration of her festival, is something more than a poetical embellishment.

Ver. 1509. A river of Mysia, which empties itself into the Propontis. Near its banks, as some assert, stood the tomb of Ægæus or Briareus.

Ver. 1525. A mountain near Cios. Cios is the name of a river, and of a city in Mysia.

Ver. 1530. Thus Theocritus, speaking of the employments of the Argonauts, when they landed in the country of the Bebrycians, says,

Ἔυναζ τ' ἐστόρνυντο, κ. τ. λ. *Id.* 22.

On the dry beach they rais'd the leafy bed,
The fires they kindled, and the tables spread.

Ver. 1556. This story is told with great simplicity and elegance by our poet's rival and contemporary, Theocritus, Id. 13. Nor has his faithful imitator, Valerius Flaccus, neglected to embellish his poem with the same story. The learned editor of Theocritus published in 2 vols. at Oxford, portions out to each poet his share of merit in the following words: "Egregiè quidèm Valerius Flaccus Herculis vehementem & repentinam perturbationem depingit: qui, vesperi reversus, Hylam ad sociorum mensas, in littore constructas, non deprehendit. Nihil nisi dictionem Virgilianum castam, teretem, simplicem, pro turgidulâ illâ, & duriusculâ, desidero. Conferatur & Hercules Apollonii Rhodii: quem credibile est omnes intendisse nervos, ut in simili materiâ poetam coævum superaret. Pulchrum profectò illud Herculis, a manu abietem abjicientis. At fortassis, ad sunimum, simpliciora Theocriti & luculentiora fatebere, & minus frequentata circumstantiis & elaborata."

Not. ad V. lv. *Id.* 13.

Ver. 1568. Hercules arriving at the country of the Dryopians, a people of Epirus, applied to their prince Theodamas for refreshment. Upon his refusal, he unyoked one of the oxen with which he was ploughing, and sacrificed it. Theodamas attempting to redress this grievance by force of arms, was killed, and his son Hylas was carried off by the conqueror. Some attribute this exploit to the rapacity of Hercules, others to his desire of civilizing an inhospitable people. Callimachus, speaking of the rapacity of Hercules, says,

Οὐ γὰρ ὅγε Φρυγίη περ ὑπὸ δρυὶ γυῖα θοωθεὶς
Παύσατ' ἀδηφαγίης· ἐπὶ οἱ πάρα νηδὺς ἰκείνη
Τῇ ποτ' ἀροτριόωντι συνήντετο Θειοδάμαντι.

In Dian. 159.

Ver. 1576. Thus Callimachus, in his hymn to Diana, celebrates her as encircled with a choir of nymphs:

——αἱ νύμφαι σε χορῷ ἔνι κυκλώσονται
Ἀγχόθι πηγάων. *In Dian.* 170.

Ver. 1598. Virgil has closely imitated this simile in the following lines, where, speaking of the impetuosity of Turnus, he thus compares him;

Ac veluti pleno lupus insidiatus ovili,
Cum fremit ad caulas, ventos perpessus et imbres,
Nocte super mediâ: tuti sub matribus agni
Balatum exercent: ille asper et improbus irâ,
Sævit in absentes: collecta fatigat edendi
Ex longo rabies, et siccæ sanguine fauces.
Æn. B. ix. 59.

Ver. 1626. Apollonius, within the compass of a very few lines, makes use of two different words to express the same animal, μύωψ, οἶστρος. The former, he tells us, is the more general appellation: ὃν [οἶστρον] μύωπα βοων κλείουσι νομῆες. *B.* iii. 276.

The correspondent names in Latin are *asilus* and *tabanus: asilus vulgò tabanus vocatur*, says Servius.

——cui nomen asilo
Romanum est, æstron Græci vertere vocantes.
Arcebis gravido pecori. *Virg. Georg.* iii.

Homer also speaks of this fly as being very pernicious to cattle:

Οἱ δ' ἐφέβοντο κατὰ μέγαρον, βόες ὡς ἀγελαῖαι,
Τὰς μέντ' ἀϊόλος οἶστρος ἐφορμηθεὶς ἐδόνησεν. *Od.* xxii. 299.

Confus'd, distracted through the rooms they fling,
Like oxen madden'd by the breeze's sting.

This simile is common to the poets: Virgil, Coluthus, and Tryphiodorus have made use of it.

Ver. 1676. It was usual with the ancients to place one vast stone upon another for a religious memorial. The stones thus placed they poised so equally, that they were effected with the least external force! a breath or wind would sometimes make them vibrate. These were called rocking stones. Of such an one Apollonius is here speaking, as being moved by the wind, and the admiration of spectators. *Bryant.*

Ver. 1746. The coast of Bebrycia: the ancient name of Bithynia, a country of Asia Minor, near Troas, bounded on the north by the Euxine sea.

Orpheus has given us, at the beginning of his poem, a catalogue of the heroes that accompanied Jason to Colchis. Apollonius has followed his example. And he has shown himself a judicious imitator of Homer, by diversifying and enlivening his narration with an account of the family, character, and birth-place of his Argonauts. He constantly inserts some little history or anecdote, which may serve to impress their names on our memory, and to interest us in their future fortunes. He has contrived to throw the utmost variety into the voyage, by describing particularly the situation of the coasts, and the customs and manners of the inhabitants. The launching Argo, the episode of Hypsipyla, the night-adventure of the Dolians, the story of Hylas, the sacrifices and similes, are severally possessed of a distinguished merit, as cannot fail to give us a favourable idea of our poet's taste and

BOOK II.

THE ARGUMENT.

This book contains the combat between Amycus and Pollux; the former of whom is ſlain. A battle enſues between the Argonauts and Bebrycians, in which the Argonauts come off conquerors. They ſail to Salmydeſſus, a city of Thrace, where they conſult Phineus, a ſoothſayer, on the ſucceſs of their expedition. He promiſes, if they would deliver him from the Harpies, to direct them ſafely to Colchos. His requeſt is granted, and he gives them inſtructions. The ſtory of Parædius, Cyrene and Ariſtæus. They ſail through the Symplegades, and thence to the iſland Thynia, where they land. Apollo, who here appears to them, is rendered propitious by ſacrifice. The courſe of the river Acheron is deſcribed. They land on the coaſt of the Mariandyni, and are hoſpitably entertained by Lycus, the king of that country. Here Idmon is killed by a wild boar, and here Tiphys dies. Ancæus is appointed pilot in his ſtead. They ſail by the monument of Sthenelus, whoſe ghoſt is releaſed by Proſerpine, and gratified with the ſight of the Argonauts. At the iſland of Mars they meet the ſons of Phrixus, who had juſt before been ſhipwrecked. They are kindly received by the Argonauts, who take them on board. Sailing by Mount Caucaſus they come in ſight of the eagle that preys on the entrails of Prometheus. The end of their voyage.

TENTS o'er the beach Bebrycia's king had ſpread,
And ſtalls erected where fat oxen fed.
To genial Neptune a Bithynian dame
Bore the fierce tyrant, Amycus his name,
Proudeſt of men; who this hard law decreed,
That from his realm no ſtranger ſhould recede,
Till firſt with him compell'd in fight to wield
The dreadful gauntlet in the liſted field.
Unnumber'd gueſts his matchleſs proweſs ſlew:
Stern he accoſts ſwift Argo's valiant crew,
Curious the reaſon of their courſe to ſcan,
Who, whence they were; and ſcornful thus began:
"Learn what 'tis meet ye knew, ye vagrant hoſt;
"None that e'er touches on Bebrycia's coaſt,
"Is thence by law permitted to depart,
"Till match'd with me he prove the boxer's art.
"Chooſe then a chief who can the gauntlet wield,
"And let him try the fortune of the field:
"Should ye contemptuous ſcorn my fix'd decree,
"Know, your proud hearts ſhall yield to fate and
"me."
Thus ſpoke the chief with inſolent diſdain,
And rous'd reſentment in the martial train;
But Pollux moſt his vaunting words provoke,
Who thus a champion for his fellows, ſpoke:
"Threat not, whoe'er thou art, the bloody fray;
"Lo, we obſequious thy decrees obey!
"Unforc'd, this inſtant, to the liſts I go,
"Thy rival I, thy voluntary foe."
Stung to the heart with this ſevere reply,
On him he turn'd his fury-flaming eye:
As the grim lion, pierc'd by ſome keen wound,
Whom hunters on the mountain-top ſurround;
Though cloſe hemm'd in, his glaring eye-balls
glance
At him alone who threw the pointed lance.
Greek ſtript off his mantle richly wrought,
From the Lemnian territory brought,
Which ſome fair nymph, who had her flame avow'd,
The pledge of hoſpitable love beſtow'd:
His double cloak, with claſps of ſable hue,
Bebrycia's ruler on the greenſward threw,
And his rough ſheep-hook of wild olive ſhade,
Which lately flouriſh'd in the woodland ſpade.
Then fought the heroes for a place at hand
Commodious for the fight, and on the ſtrand
They plac'd their friends, who ſaw, with wondering eyes,
The chiefs how different, both in make and ſize;
For like Typhœus' race the tyrant ſtood
Enormous, or that miſcreated brood
Of mighty monſters, which parturient earth,
Incens'd at Jove, brought forth, a hideous birth.
But Pollux ſhone like that mild ſtar on high,
Whoſe riſing ray illumes fair evening's ſky.
Down ſpread his cheek, ripe manhood's early ſign,
And in his eye-balls beam'd the glance divine.
But like a lion, glorying in his might,
Stood Jove's puiſſant ſon, prepar'd for fight.
His arms he pois'd, advancing in the ring,
To try if ſtill they kept their priſtine ſpring;
If pliant ſtill, and vigorous as before,
Nor rigid grown with labouring at the oar.
Trial like this the haughty king diſdain'd:
Aloof and ſilent Amycus remain'd.
Full on his foe his vengeful eyes he turn'd,
For blood he thirſted, and for conqueſt burn'd.
With that his ſquire Lycoreus, full in view,
Two pair of gauntlets in the circle threw,
Of barbarous faſhion, harden'd, rough and dry'd.
Then thus the king with inſolence and pride:
"Lo, two ſtout pair; the choice I leave to thee;
"(No lot appoints them) chooſe, and blame not
"me.
"Bind them ſecure, and after trial tell,
"How greatly I in either art excel,

" Whether to form the ceſtus firm and good,
" Or ſtain the cheeks of mighty men with blood."
He ſpoke: brave Pollux nothing deign'd to ſay,
But ſmiling choſe the pair which neareſt lay,
To cheer their champion, Caſtor, honour'd name!
And Talaüs, the ſon of Bias, came;
Firm round his arms the gloves of death they bind,
And animate the vigour of his mind.
Aratus, and bold Ornytus his friend,
To Amycus their kind aſſiſtance lend:
Fools! for they knew not, this one conflict o'er,
Thoſe gauntlets never ſhould be buckled more.
Accoutred thus each ardent hero ſtands,
And raiſes high in air his iron hands;
With claſhing gauntlets fiercely now they cloſe,
And mutual meditate death-dealing blows.
Firſt Amycus a furious onſet gave
Like the rude inſult of the battering wave,
That heap'd on high by driving wind and tide,
Burſts thundering on ſome gallant veſſel's ſide;
The wary pilot by ſuperior ſkill,
Foreſees the ſtorm, and ſhuns the menac'd ill.
Thus threatening Amycus on Pollux preſs'd,
Nor ſuffer'd his antagoniſt to reſt:
But Jove's brave ſon obſerves each coming blow,
Quick leaps aſide, and diſappoints the foe;
And where a weak unguarded part he ſpies,
There all the thunder of his arms he plies.
As buſy ſhipwrights ſtoutly labouring ſtrive
Through ſturdy planks the piercing ſpikes to drive,
From head to ſtern repeated blows go round,
And ceaſeleſs hammers ſend a various ſound;
Thus from their batter'd cheeks loud echoes ſprung,
Their daſh'd teeth crackled, and their jaw-bones rung:
Nor ceas'd they from the ſtrokes that threaten'd death,
Till tir'd with toil they faintly gaſp'd for breath:
A while they then remit the bloody fray,
And panting wipe the copious ſweat away.
But adverſe ſoon they meet, with rage they glow,
Like bulls fierce fighting for ſome fav'rite cow.
Then Amycus, collecting all his might,
Roſe to the ſtroke, reſolv'd his foe to ſmite,
And by one blow the dubious war conclude:
The wary prince, his ruin to elude,
Bent back his head; defeated of its aim,
The blow impetuous on his ſhoulder came.
Then Pollux with firm ſteps approaching near,
Vindictive ſtruck his adverſary's ear;
Th' interior bones his ponderous gauntlet broke,
Flat fell the chief beneath his dreadful ſtroke;
The Grecians ſhouted, with wild rapture fir'd;
And, deeply groaning, Amycus expir'd.
The griev'd Bebrycians ſaw their monarch ſlain,
And big with vengeance ruſh'd into the plain;
With ſeaſon'd clubs and javelins arm'd they ran,
And aim'd their fury at the conquering man.
Their keen-edg'd ſwords the friends of Pollux drew,
And to the ſuccour of their comrade flew.
Firſt Caſtor ſlaughter'd with victorious hand,
A hero of the bold Bebrycian band,
The griding ſword at once his head divides,
And on his ſhoulders hang the parted ſides.
Mimans, Itymoneus of giant ſize,
Each by the arm of conquering Pollux dies.
On this his foot impreſs'd a deadly wound
Full on his ſide, and ſtretch'd him on the ground:
His right hand daſh'd with unreſiſted ſway,
Mimans' left eye, and tore the ball away.
Orcides, Amycus's proud compeer,
Then launch'd at Talaüs his brazen ſpear;
Juſt near his flank the point he lightly felt,
That ras'd the ſkin beneath his broider'd belt.
Aratus, with his club of harden'd oak,
Aim'd at brave Iphitus a deadly ſtroke:
Vain thought! too ſoon, alas! it is decreed,
The hero by his brother's ſword muſt bleed.
Then ruſh'd to ſuccour the Theſſalian band,
Ancæus, with his pole-ax in his hand;
O'er his broad back a bear's dark ſpoils he threw,
And boldly mingled with the hoſtile crew.
The ſons of Æacus, renown'd for might,
And Jaſon join'd them in the fields of fight.
As when, what time both dogs and ſhepherds keep
Cloſe in warm cots, neglected of their ſheep,
Wolves, pinch'd with hunger and bleak winter's cold,
Leap o'er the fence, and terrify the fold,
With ravening eyes the crowded ſheep ſurvey,
And doubt where firſt to rend the trembling prey;
Thus the bold Greeks, as near their foes they drew,
Intimidate the congregated crew.
As ſwains with ſmoke, of honey ſtudious, ſtrive
From ſome rocks cleft the ſwarming bees to drive,
Alarm'd and trembling, with a murmuring ſound;
They crowd to all their waxen rooms around;
But if the fumes prevail, their wings they ply,
And rove uncertain through the various ſky:
Diſperſing thus, the wild Bebrycians fled,
And loud proclaim'd that Amycus was dead.
Ah, hapleſs race of men! they little knew,
That ſoon far greater evils muſt enſue:
Soon muſt they ſee, their monarch now no more,
Their lands a drear depopulated ſhore;
Their vineyards ſpoil'd, and waſted all their coaſt
By Lycus, and the Mariandine hoſt:
For 'twas their fate, with ſpear and ſteely brand,
Hard lot! to battle for an iron land.
The Greeks then ſeiz'd their herds, an eaſy prey,
And from the ſheep-folds drove the flocks away;
The live proviſion to the ſhip they ſent:
Then thus ſome ſailor gave his boaſting vent;
'What had theſe miſcreants done, with fears diſmay'd,
'Had heaven indulg'd us with Alcides' aid?
'No fierce contention then, I judge had been,
'No bloody boxing on the lifted green:
'The chief's ſtout club had tam'd the tyrant's pride,
'And ſet his execrable laws aſide.
'But now impell'd by ſwelling waves and wind,
'We leave at land the matchleſs chief behind;
'Whoſe loſs diſtreſs to every Greek will prove.'
He ſaid;—but all things own the will of Jove.

All night the heroes on the coaſt remain,
To heal the bruiſes of the wounded train.
Firſt to the gods they give the honour due,
And next, a banquet to the princely crew.
Nor can night's ſhades the chiefs to ſleep incline,
Or o'er the ſacrifice, or o'er the wine;
Mirthful they ſit, their brows with laurel crown'd:
To a green laurel was the cable bound.
While Orpheus ſtrikes the lyre, the hymn they raiſe,
And Jove's fam'd offſpring, mighty Pollux, praiſe:
Soft breathes the breeze, the billows ceaſe to roar,
And feſtive joy exhilarates the ſhore.
But when the ſun illum'd the hills and plains,
Dank with the dew, and rous'd the ſhepherd-ſwains,
They ſent abundant flocks and herds aboard,
And from the laurel-ſtem unloos'd the cord;
And while the favourable winds prevail'd,
Through the rough rolling Boſphorus they ſail'd.
When, lo! a wave by gathering ſurges driven,
Swoln big for burſting, is up-heav'd to heaven,
Still riſes higher, and ſtill wider ſpreads,
And hangs a watery mountain o'er their heads;
Like a black cloud it frowns, prepar'd to fall,
And threatens quick deſtruction to them all.
Yet the train'd pilot, by ſuperior ſkill,
Well knows to 'ſcape, this laſt impending ill;
Safe through the ſtorm the veſſel Tiphys ſteer'd,
And ſav'd the heroes from the fate they fear'd.
Fronting Bithynia's coaſt, next morn, they reach
New land, and fix their halſers on the beach.
There on the margin of the beating flood,
The mournful manſions of ſad Phineus ſtood.
Agenor's ſon, whom heaven ordain'd to bear
The grievous burden of unequall'd care.
For, taught by wiſe Apollo to deſcry
Unborn events of dark futurity,
Vain of his ſcience, the preſumptous ſeer
Deign'd not Jove's awful ſecrets to revere;
But wantonly divulg'd to frail mankind
The ſacred purpoſe of th' omniſcient mind:
Hence Jove indignant gave him length of days,
But dimm'd in endleſs night his viſual rays,
Nor would the vengeful god indulge his taſte
With the ſweet bleſſings of a pure repaſt,
Though (for they learn'd his fate) the country round
Their prophet's board with every dainty crown'd.
For, lo! deſcending ſudden from the ſky,
Round the pil'd banquet ſhrieking harpies fly,
Whoſe beaks rapacious, and whoſe talons rear,
Quick from his famiſh'd lips th' untaſted fare.
Yet would ſome ſlender pittance oft remain,
Life to ſupport, and to perpetuate pain.
Such odours ſtill the nauſeous ſcraps exhal'd,
That with the ſtench the loathing ſtomach fail'd.
Aloof the gueſt amaz'd and hungry ſtood,
While their ſick hearts abhorr'd the putrid food.
But now the princely crew approaching near,
The welcome ſound invades the prophet's ear;
Taught by almighty Jove, that now was come
The long-wiſh'd period of heaven's vengeful doom;
When, by theſe heroes' deſtin'd aid reſtor'd,
Peace ſhould hereafter bleſs his feaſtful board.
Then heaves he from his couch his haggard head,
(Like ſome pale, lifeleſs, viſionary ſhade)
Prop'd on his ſtaff his way explores, and crawls
With lingering ſtep along the lonely walls,
Diſeas'd, enfeebled, and by age unbrac'd,
Through every limb he trembled as he paſs'd;
Shrunk was his form, with want aduſt and thin,
The pointed bones ſeem burſting through his ſkin;
But faint and breathleſs as he reach'd the gate,
Down on the threſhold, tir'd with toil he ſate.
In dizzy fumes involv'd, his brain runs round,
And ſwims beneath his feet the ſolid ground;
No more their functions the frail ſenſes keep,
But ſpeechleſs ſinks he in a deathlike ſleep.
This ſaw the chiefs amaz'd, and gather'd round;
When from his labouring lungs a hollow ſound
(His breath and utterance ſcarce recover'd) broke,
And thus th' enlighten'd ſeer prophetic ſpoke:
'Princes of Greece, attend, if ye be they
'Whom o'er the main Theſſalia's pines convey,
'And Jaſon leads to Colchos' magic land;
'Such is your cruel tyrant's ſtern command.
'Yes, ye are they, for yet my mental eye
'Undimm'd, paſt, preſent, future, can deſcry:
'Thanks to thy ſon, Latona, who beſtows
'This grace, this only ſolace of my woes.
'By Jove, to whom the ſuppliant's cauſe belongs,
'Who hates the cruel, and avenges wrongs,
'By Phœbus and by Juno, from on high
'Who marks your progreſs with compaſſion's eye,
'Aid me, and, oh! a ſufferer's pangs aſſuage,
'And bid corroſive famine ceaſe to rage;
'Leave me not thus, unpitied and unbleſs'd,
'But ere you fail, ah! pity the diſtreſs'd.
'For not theſe orbs alone depriv'd of ſight,
'Vindictive heaven hath veil'd in doleful night;
'But to extreme old age his cruel law
'Dooms me th' unwaſting thread of life to draw.
'Still weightier woes from ſorrows lengthen'd chain
'Depend, and pain is ever link'd to pain.
'From ſecret haunts, aërial, unexplor'd,
'Flights of devouring harpies vex my board;
'Swift, inſtantaneous, ſudden they deſcend,
'And from my mouth the taſteful morſel rend.
'Meanwhile, my troubled ſoul, with woe op-preſs'd,
'No means of aid, no comfort can ſuggeſt.
'For when the feaſt I purpoſe to prepare,
'They ſee that purpoſe, and prevent my care:
'But cloy'd, and glutted with the luſcious ſpoil,
'With noiſome ordure parting they defile
'Whate'er remains, if aught perchance remain,
'That none approaching may the ſtench ſuſtain,
'Though his ſtrong heart were wrapp'd in plat-ed mail,
'The filthy fragments ſuch dire ſteams exhale,
'Yet me fell hunger's all ſubduing pain
'Compels reluctant, lothing to remain;
'Compells the deadly odours to endure,
'And gorge my craving maw with food im-pure,

' From theſe invaders (ſo hath fate decreed)
' By Boreas' offſpring ſhall my board be freed.
' Nor on a ſtranger to your houſe and blood,
' O ſons of Boreas! is your aid beſtow'd.
' Phineus behold, Agenor's hapleſs ſon,
' Once for prophetic ſkill and riches known;
' Who, while I ſway'd the Thracian ſceptre, led
' Your portion'd ſiſter to my ſpouſal bed.'
Here Phineus ceas'd, and touch'd each pitying chief:
But Boreas' ſons were pierc'd with double grief;
Compaſſion kind was kindled in their breaſt:
Their tears abating, friendly Zetes preſs'd
His trembling hand, and thus the ſeer addreſs'd:
" O moſt diſaſtrous of all human kind,
" Whence ſpring theſe evils that o'erwhelm thy mind?
" Haſt thou, intruſted with the book of fate,
" By folly merited celeſtial hate?
" Hence falls this indignation on thy head?
" Fain would the ſons of Boreas grant thee aid;
" Fain would they execute what heaven ordains,
" But awful dread their willing hands reſtrains.
" To frighted mortals well thy ſufferings prove
" How fierce the vengeance of the gods above.
" Swear, or we dare not, as we wiſh, eſſay
" To drive theſe hateful harpies far away:
" Swear that the ſuccours, which our arms intend
" Shall no ſuperior deity offend."
He ſpoke; and ſtraight to heaven diſcloſing wide
His ſightleſs eye-balls, thus the ſeer reply'd;
' My ſon, th' injuſtice of thy tongue reſtrain,
' Nor let ſuch thoughts thy pious ſoul profane.
' By Phœbus, heavenly augur, who inſpires
' My conſcious boſom with prophetic fires;
' By every woe fate deſtines me to bear,
' And by theſe eyes, involv'd in night, I ſwear;
' By the fell demons of the realms below,
' (Whom ever unpropitious may I know,
' From their reſentment not in death ſecure,
' If falſely their dread godheads I adjure);
' That, ſhould a captive by your arms be freed,
' No god vindictive will avenge the deed.'
Then acquieſcing in the ſolemn pray'r,
To aid the prophet Boreas' ſons prepare.
The youthful train a banquet ſpread; the laſt
Which thoſe fell harpies were decreed to taſte.
Nigh ſtand the brothers, ardent to oppoſe
With glittering falchions their invading foes.
But ſcarce the firſt ſweet morſel Phineus took,
When from the clouds with ſwift pervention broke,
(Swift as the lightning's glance, or ſtormy blaſt,
Whoſe rapid fury lays the foreſt waſte)
Shrill-clamouring for their prey, the birds obſcene;
The watchful heroes ſhouting ruſh'd between;
But they with ſpeedieſt rage the cates devour'd,
And round intolerable odours pour'd;
Then o'er th' Ægean far away they flew;
The ſons of Boreas arm'd with ſwords purſue;
Cloſe they purſue; for Jove, that ſignal day,
Their ſtrength proportion'd to the deſperate fray;
The ſtrength he gave, had Jove, that day, deny'd,
In vain their pinions had the brothers plied.
For when to Phineus furious they repair,
Or quitting Phineus ſeek the fields of air,
The light-wing'd monſters, fleeter than the wind,
Leave the careering zephyrs far behind.
As when ſwift hounds, experienc'd in the chaſe,
Through ſome wide foreſt, o'er the ſcented graſs
The bounding hind, or horned goat purſue,
Near, and more near their panting prey they view;
And eager ſtretching, the ſhort ſpace to gain,
They ſnap, and grind their gnaſhing fangs in vain:
Thus ever near, the rapid chiefs purſu'd,
The harpies thus their graſping hands elude.
But now far off in the Sicilian main,
By the wing'd brothers, ſons of Boreas, ſlain,
The harpy-race, though every god withſtood,
Had ſtain'd the Plotian iſles with ſacred blood;
Their ſore diſtreſs had Iris not ſurvey'd,
And darting from the ſkies the heroes ſtaid:
' O ſons of Boreas, the dread laws above
' Permit you not to wound the dogs of Jove:
' And, lo! my oath I pledge, that never more
' Shall theſe fell dogs approach the Thracian ſhore.'
This ſaid, adjuring the tremendous floods,
Moſt fear'd, moſt honour'd by immortal gods;
By the flow-dripping urn of Styx ſhe ſwore;
The prophet's peaceful manſions on the ſhore
For ever from thoſe ſpoilers ſhould be free;
Such was the fatal ſiſters' ſix'd decree.
The goddeſs ſwore, the brothers ſtraight obey,
And back to Argo wing their airy way:
The Strophades from thence derive their name,
The Plotian iſlands ſtyl'd by ancient fame.
Diſparting then, to different regions flew
The maid celeſtial and the monſter-crew.
Thoſe to the grots retir'd, the dark retreat
Of Dicte's caverns in Minoian Crete;
While the gay goddeſs of the watery bow
Soar'd on fleet pinions to Olympus' brow.
Meanwhile the princes, with unwearied pains,
Waſh from their feet the harpies' filthy ſtains:
Next from the ſpoils, which on Bebrycia's ſhore
From vanquiſh'd Amycus brave Pollux bore,
The fleecy victims they ſelect with care;
And ſooth the gods with ſacrifice and pray'r.
Then in the palace each heroic gueſt
Partakes the pleaſures of the ſumptuous feaſt:
With them ſat Phineus, and refreſh'd his ſoul
With ſavoury viands, and the cheering bowl:
While yet he feaſts, inſatiate ſtill he ſeems,
And ſhares a bliſs beyond the bliſs of dreams.
Though now the rage of hunger was repreſs'd,
And generous wine had open'd every breaſt;
Yet ſtill the chiefs prolong the banquet late,
And for the feather'd ſons of Boreas wait.
Plac'd in the mideſt, before the cheerful fire,
Thus of their voyage ſpoke the ſacred ſire:
' Hear what the gods permit me to relate;
' For 'tis profane to publiſh all your fate.
' Unnumber'd woes I felt, and feel them ſtill,
' For erſt divulging Jove's almighty will:
' To man he gives fate's dark events to ſcan
' In part, but always leaves dependent man.
' When hence your deſtin'd voyage ye purſue,
' Two rocks will riſe, tremendous to the view.

' Juſt in the entrance of the watery waſte,
' Which never mortal yet in ſafety paſt:
' Not firmly fix'd for oft with hideous ſhock
' Adverſe they meet, and rock encounters rock:
' The boiling billows daſh their airy brow,
' Loud thundering round the ragged ſhore below.
' Safe if ye hope to paſs, my counſel hear,
' Be rul'd by prudence, and the gods revere;
' Nor on your unexperienc'd youth depend,
' The want of caution brings you to your end.
' Firſt from your ſhip a nimble dove let fly,
' And on the ſure prognoſtic bird rely;
' Safe through the rocks if ſhe purſue her way,
' No longer ye the deſtin'd courſe delay;
' Steer for the ſtrait, and let the rowers ſweep
' With ſtretching oars the cloſe-contracted deep:
' For not in prayers alone your ſafety ſtands;
' But nervous vigour, and the ſtrength of hands.
' Ply then your oars, and ſtrain at every ſtroke;
' But firſt with prayer the deities invoke.
' The dove's ſad fate ſhould you deſponding view,
' Cruſh'd by the cloſing fragments as ſhe flew,
' Steer back, leſt you againſt thoſe rocks be driv'n,
' Steer back; 'tis ſafeſt to ſubmit to Heav'n.
' 'Twere death through them to force the foam-
' ing keel,
' Though heav'n-built Argo were compos'd of
' O friends, be warn'd by me, nor raſhly dare
' To venture farther than my words declare;
' Me though ye deem the righteous gods purſue
' With direful vengeance, threefold more than
' due;
' Tempt not without the dove this dangerous
' For man muſt ſuffer what's ordain'd by fate.
' But if with active oars ye ſafely gain,
' Through theſe tremendous rocks, the diſtant
' main;
' Cloſe to Bithynia let your veſſel run,
' And on the left the dangerous ſhallows ſhun;
' Till Rhebas, rapid-rolling ſtream, ye reach,
' The gloomy ſhore, and Thynia's ſheltering
' beach.
' Thence o'er the billows fronting Thynia's
' Soon will ye gain the Mariandine land.
' Here lies the path to Pluto's dreary caves,
' Here Acheruſia frowns above the waves,
' Whoſe ſkirts the gulfy Acheron divides,
' And from deep whirlpools diſembogues his
' tides.
' Thence, not far diſtant, with the weſtern gale,
' Near Paphlagonia's towering heights ye ſail,
' The hardy ſons of which inclement coaſt
' Eneteian Pelops for their founder boaſt.
' Full to the north a promontory fam'd
' Lifts the high head in air, Carambis nam'd;
' The northern winds below its ſummit ſweep,
' So loftily it riſes o'er the deep.
' This point once doubled, a new coaſt expands
' Its ample plains, and on the limit ſtands
' A cape far-jutting, from whoſe rocky ſhores
' The rapid Halys in old ocean roars.
' Near him clear Iris draws his humbler train,
' In ſilver torrents foaming to the main.
' Beyond projects an headland tall and ſteep,
' And forms a peaceful harbour in the deep.

' Here o'er extenſive fields Thermodon pours,
' Near Themiſcyria's heights, his watery ſtores.
' Next lie the ſpacious Dœan plains, and near
' Three cities of the Amazons appear:
' And next the Chalybes, inur'd to toil,
' Work at the forge, and turn the ſtubborn ſoil.
' Near theſe the wealthy Tiberenians till,
' Sacred to Jove, the Genetæan hill.
' The Moſſynœcians, next, the country round
' Poſſeſs, with mountains and with foreſts crown'd.
' In towers they live of ſolid timber fram'd,
' Moſſynes call'd, and thence the nation nam'd.
' When theſe are paſt, an iſland bleak and bare
' Lies full in view, there guide your ſhip with
' care,
' And thence with care thoſe noxious birds expel,
' Which on the deſert ſhore unnumber'd dwell.
' Here form'd of ſolid ſtone, and ſeen from far,
' Stands the rough temple of the God of war.
' Two Amazonian queens, renown'd for arms,
' Had rais'd the fane, when ſtunn'd with war's
' alarms.
' Steer to this iſland through the ſtormy main,
' And, all that mariners can wiſh, ye gain.
' But why ſhould I each circumſtance diſcloſe,
' And make again the powers of heaven my foes?
' Beyond that iſle, but on the fronting ſhores,
' The Philyreans feed their fleecy ſtores:
' The brave Macronians till the neighbouring
' coaſt;
' Next theſe the numerous Bechirian hoſt:
' Near them Sapirians and Byzerians dwell,
' And next the Colchians, who in arms excel.
' But ye, your ſteady courſe in Argo keep,
' Shun the falſe ſhores, and plough ſecure the
' deep,
' Till that rich coaſt ye reach, where Phaſis leads
' From Amarantine hills o'er Colchian meads
' His liquid ſtores, and through ſam'd Circe's
' plain;
' Then rolls his widening current to the main.
' To this fam'd ſtream purſue your watery way,
' Soon will your eyes Æeta's towers ſurvey,
' And Mars's grove, where, wondrous to behold!
' Hangs on a ſpreading oak the fleecy gold.
' A hideous dragon of enormous ſize
' Turns all around his circumſpective eyes:
' O'er the bright ſpoil the ſtricteſt watch he
' keeps;
' He never ſlumbers, and he never ſleeps.'

He ſpoke, and terror curdled all their blood;
Deep fix'd in ſilence long the warriors ſtood.
At length thus Jaſon, though poſſeſs'd with fear:
" Tell us, O tell us, venerable ſeer,
" Th' event of all our toils; the ſign explain
" How ſafely we may paſs into the main
" Through thoſe dire rocks: and, O! indulgent,
" Shall we once more our native land ſurvey?
" Unſkill'd am I, unſkill'd our martial train;
" How ſhall I act, how meaſure back the main?
" For far as ever flying ſails were ſurl'd
" Lies Colchos, on the limits of the world."
Thus Jaſon ſpoke; and thus the prophet old:
' Thoſe dangerous rocks once paſs'd, my ſon, be
' bold.

' Some god from Æa ſhall through ſeas untry'd,
' Skirted by other coaſts, your veſſel guide,
' But you, to Æa ſailing, on your crew confide.
' But, friends, to Venus be due honours paid;
' Still in remembrance keep her ſecret aid.
' On all your toils ſhe kindly will beſtow
' A glorious end—expect no more to know."
Scarce had he ſpoke, when ſpeeding back repair
The ſons of Boreas through the fields of air;
At the ſeer's door with nimble feet they light:
Up roſe the chiefs, rejoicing at the ſight.
When Zetes trembling, and with toils oppreſs'd,
While thick ſhort ſobs inceſſant heav'd his cheſt,
Tells how they drove the harpies far away,
How Iris ſcreen'd them, and forbade to ſtay,
And pledg'd her ſolemn oath; while they retreat
To the huge caves of mountain-cover'd Crete.
Theſe joyful tidings cheer'd the hearts of all,
But moſt the prophet's, in the feaſtful hall;
Whom Jaſon thus: " Sure from his heavenly ſtate
" Some god look'd down, and wail'd thy woeful
" fate,
" And fore-decreed from far our bands to ſend,
" That Boreas' ſons might their aſſiſtance lend.
" Should the ſame god reſtore the long-loſt ſight,
" My gladden'd ſoul would feel as great delight,
" As even my native country could beſtow." 581
Then thus ſage Phineus, with dejected brow:
' My eyes, alas! ſhall ne'er behold the day;
' Shrunk are theſe balls, and quench'd the viſual ray:
' Heaven round me ſoon death's gloomy ſhade
' ſhall ſpread,
' And every honour will await me dead.'
With converſe thus the fleeting hours they cheer'd,
When roſy morning beaming bright appear'd.
The neighbouring peaſants round, with early day,
Flock to the ſeer, their due regards to pay: 590
This daily cuſtom love and reverence taught;
And ſome proviſion for the ſage they brought.
All came to learn by his prophetic lore:
He to the rich divin'd, and to the poor:
For numerous votaries he reliev'd from dread,
Who dearly lov'd him, and who daily fed.
With theſe his ſteady friend Parabius came,
Who ſaw with joy theſe gallant ſons of fame.
To him prophetic Phineus had foretold,
That a young band of Grecians, brave and bold,
Should, in their voyage to the Colchian ſhore, 601
In Thynia's bay their well-built veſſel moor,
And from theſe coaſts thoſe ravenous birds of prey
The harpies drive, though ſent by Jove away.
The ſeer, well pleas'd, diſmiſs'd his friendly train,
But bade Parabius with the Greeks remain,
And fetch him inſtant from his numerous ſtock
A ſheep, the beſt and faireſt of the flock.
The willing ſwain obey'd the ſeer's requeſt,
And Phineus thus the mariners addreſs'd: 610
' We are not all unciviliz'd and rude,
' My friends, nor guilty of ingratitude.
' That ſhepherd to my manſion came of late,
' To learn from me the colour of his fate;
' For the more labours and fatigues he bore,
' Pale, pining want oppreſs'd him ſtill the more;
' New woes ſucceeded to the woes that paſt,
' And every day was darker than the laſt:
' And yet no crime had poor Parabius wrought,
' Alas! he ſuffer'd for his father's fault: 620
' Who, when alone, and on the mountain's brow,
' With cruel axe he laid the foreſt low,
' Deaf to a doleful hamadryad's pray'r,
' The nymph neglected, and refus'd to ſpare,
' Though oft ſhe urg'd this lamentable plea;'
" Pity, ah, pity my coeval tree,
" Where I ſo many bliſsful ages dwelt!"
' But his hard heart no ſoft compaſſion felt: 628
' The tree he fell'd; and, for this foul diſgrace,
' The nymph ordain'd him woes, and all his race
' To me Parabius came, oppreſs'd with fear:
' The cauſe I found, and counſell'd him to rear
' An altar to the goddeſs of the ſhore,
' And pardon for his father's crimes implore.
' Thus was the guilt aton'd: e'er ſince, the man
' Pays all regards that grateful mortal can:
' For ever at my ſide he loves to ſtay,
' And always goes unwillingly away.' 638
Thus Phineus ſpoke, when from his fleecy ſtock
His friend brought two, the faireſt of the flock.
Then Jaſon roſe, and, urg'd by Phineus blind,
Roſe the bold offspring of the northern wind:
Their ſacred offerings on the flames they lay,
Invoking Phœbus at the dawn of day,
The choiceſt viands with aſſiduous care
The younger heroes for their friends prepare.
Thus feaſted, ſome their veſſel's cordage preſs'd,
Some in the prophet's manſion ſunk to reſt.
Eteſian breezes with the morning blow, 649
Which, ſent by Jove, o'er every region flow.
The nymph Cyrene, in old times, 'tis ſaid,
Her flocks beſide Theſſalian Peneus fed,
Pleas'd with the honours of her virgin name,
Till day's bright god ſeduc'd the rural dame.
Far from Hæmonia he convey'd the fair,
Brought to the nymphs, and truſted to their care,
The mountain-nymphs that in parch'd Libya keep
Their airy manſions on Myrtoſia's ſteep.
Cyrene there, along the winding ſhore,
Thee, Ariſtæus, to Apollo bore; 660
To whom rich ſwains, who in Theſſalia live,
The names of Agreus and of Nomius give.
With length of days the god her love repaid,
And fix'd her huntreſs of the woodland ſhade;
But the young boy to Chiron's care he gave,
To reap inſtruction in his learned cave.
To him, when blooming in the prime of life,
The muſes gave Autonoë to wife;
And taught their favourite pupil to excel
In arts of healing, and divining well. 670
To him they gave their numerous flocks to
feed,
Which Phthia's athamantine paſtures breed;
And thoſe that ſtray on Othrys' loftv brow,
Or where Apidanus' fam'd waters flow.
But when fierce Syrius ſcorch'd the Cyclades,
The realms of Minos, in th' Ægean ſeas,
Nought could the burning malady allay;
The iſlanders implor'd the god of day,
Who ſent young Ariſtæus to their aid,
By whom the fatal peſtilence was ſtaid. 680
At his ſire's call he left fair Phthia's land,
Attended by a bold Arcadian band,

Who from Lycaon their extraction boaſt,
And ſail'd to Ceos with his numerous hoſt.
He there an altar rais'd to ſhowery Jove,
And made oblation on the heights above
To the red ſtar that deſolates the land,
And to heaven's king; at whoſe ſupreme command
Th' Eteſian winds, while forty days they blow,
Refreſh with balmy gales the ſoil below.
Ev'n now the Cean prieſts pay rites divine
Before the burning ſtars begin to ſhine.
Thus fame reports; and by theſe winds detain'd,
With Phineus ſtill the Argonauts remain'd.
The grateful Thynians daily, while they ſtaid,
To their lov'd ſeer abundant ſtores convey'd.
Yet, ere they leave this hoſpitable land,
To the twelve gods erect they on the ſtrand
An altar, and with ſacrifice and pray'r
Appeaſe the powers of heaven, and to their ſhip repair,
Eager their long neglected oars to prove;
Yet not unmindful of the timorous dove,
Which ſafely faſten'd by a ſlender band
Euphemus carry'd trembling in his hand. [cord:
Quick from the ſtay they lopp'd the double
Minerva ſaw the heroes haſte aboard:
On a thin cloud ſhe lighted from above,
(The cloud upheld the mighty ſeed of Jove)
And ſped her voyage to the Euxine main,
For much ſhe lov'd the delegated train.
So when ſome ſhepherd quits his native home,
(As men adventurous much delight to roam)
No roads too diſtant or too long appear,
In thought he ſees, and thinks his manſion near;
O'er ſea, o'er land, with keen inquiring eyes
He views all ways, and in idea flies:
Thus to the Thynian ſhore, from heaven above,
Swift flew the daughter of imperial Jove.
When now the heroes through the vaſt profound [round,
Reach the dire ſtraits with rocks encompaſs'd
Though boiling gulfs the ſailing pine detain'd,
Still on their way the labouring Grecians gain'd,
When the loud-juſtling rocks increas'd their fears:
The ſhores reſounding thunder'd in their ears.
High on the prow Euphemus took his ſtand,
And held the dove that trembled in his hand.
The reſt with Typhus on their ſtrength rely'd,
To ſhun the rocks, and ſtem the roaring tide.
Soon, one ſharp angle paſt, the joyful train
Saw the cleft crags wide opening to the main.
Euphemus loos'd the dove, the heroes ſtood
Erect to ſee her ſkim the foaming flood.
She through the rocks a ready paſſage found:
The dire rocks met, and gave a dreadful ſound.
The ſalt ſea ſpray in clouds began to riſe;
Old ocean thunder'd; the cerulean ſkies
Rebellow'd loudly with the fearful din;
The caves below remurmur'd from within. [o'er
O'er wave-worn cliffs, the coaſt's high margin
Boil'd the light foam, and whiten'd all the ſhore.
Round whirl'd the ſhip; the rocks with rapid ſway
Lopp'd from the dove her ſteering tail away;
Yet ſtill ſecurely through the ſtraits ſhe flew:
Loud joy inſpir'd the circumſpective crew.
But Typhys urg'd the chiefs their oars to ply,
For the rocks yawn'd tremendous to the eye.
Then terror ſeiz'd them, when with ſudden ſhock
The refluent billows forc'd them on the rock:
With chilling fears was every nerve unſtrung,
While o'er their heads impending ruin hung.
Before, behind, they ſaw the ſpacious deep,
When inſtant, lo! a billow, vaſt and ſteep,
Still riſes higher, and ſtill wider ſpreads,
And hangs a wat'ry mountain o'er their heads.
The heroes ſtoop'd, expecting by its fall
That mighty billow would o'erwhelm them all;
But Typhys' art reliev'd the labouring oars:
On Argo's keel the impetuous torrent pours,
Which rais'd the ſhip above the rocks ſo high,
She ſeem'd ſublimely ſailing in the ſky.
Euphemus haſtening urg'd the valiant crew
Their courſe with all their vigour to purſue.
Shouting they ply'd their oars, but ply'd in vain;
For the rough billows beat them back again.
And as the heroes unremitting row,
Their labouring oars were bent into a bow.
Swift down the mountainous billows Argo glides,
Like a huge cylinder along the tides,
Entangled with thick, craggy rocks around,
Her ſeams all burſting, and her planks unbound.
In that nice moment the Tritonian maid
To ſacred Argo lent the timely aid.
Her left hand heav'd her from the craggy ſteep,
Her right diſmiſs'd her gently to the deep:
Then like an arrow from th' elaſtic yew,
Swift o'er the foaming waves the veſſel flew.
Yet had the claſhing rocks with adverſe ſway
Torn the tall prow's embelliſhments away.
When thus the Greeks had ſafely reach'd the main,
To heaven Minerva wing'd her flight again.
The parted rocks at once concurrent ſtood,
Fix'd on one firm foundation in the flood:
This had been long determin'd by the fates,
If mortal ever paſt thoſe dangerous ſtraits.
Now freed from fears, the Greeks with eager eyes
View the broad ocean and ſerener ſkies:
Their anxious doubts for Argo they diſpel,
And deem her reſcued from the jaws of hell.
Then Typhys thus: 'Sure to this ſhip we owe
'That fearleſs ſafety we experience now.
'For though wiſe Argus with ingenious art
'Form'd the fair ſhip compact in every part,
'Vigour divine propitious Pallas gave,
'And pow'r aſſign'd her o'er the wind and wave.
'All now is ſafe: fear not thy haughty lord,
'But mark, illuſtrious chief, the prophet's word;
"The rocks eſcap'd, no future fears remain,
"Your toils are eaſy, and your voyage plain."
Thus he; and ſteering through the ſpacious ſea,
Near fair Bithynia plow'd the liquid way.
Then Jaſon mild the pilot thus addreſs'd:
"Why, Typhys, this to me with grief oppreſs'd?
"Yes I have err'd—my faults afflict my ſoul:
"When Pelias gave command without controul,
"'Twas mine to've ſhunned this wild-projected plot,
"Though inſtant death had been my certain lot.
"Now fears and cares my tortur'd boſom rend;
"I dread thoſe ills that from the deep impend,

" I dread the ſavage coaſt, and every place
" Where dwells the bloody or the barbarous race.
" No peace by day, no ſleep at night I take,
" Since theſe brave chiefs aſſembled for my ſake.
" With cold indifference may'ſt thou now look down,
" For no man's ſafety anxious but thy own;
" But I, the leaſt ſolicitous for mine,
" Feel for this friend's, that comrade's, and for
" thine.
" Much ſhall I feel for all this martial band,
" Unleſs they ſafe regain their native land."
Thus ſpoke the prince, his gallant hoſt to try:
With animating ſounds they rend the ſky.
The loud acclaim was grateful to his ears,
And thus he boldly hails his brave compeers:
" Your valour, friends, encourages my ſoul:
" And ſince no fears your gallant hearts controul,
" Boldly will I each coward thought repel,
" Though doom'd to enter the abyſs of hell.
" For theſe rocks paſt, no dangers can diſmay,
" If we the counſel of the ſeer obey."
The Greeks applauding what their leader ſpoke,
Ply their ſtout oars, and bend to every ſtroke;
And firſt by Rhebas rapid ſtream they fly,
And where Colona's rocks invade the ſky,
And where the black-brow'd promontory low'rs,
And where lov'd Phillis his broad current pours.
There Dipſacus receiv'd, in days of yore,
Young Phryxus landing on his friendly ſhore,
When, exil'd from Orchomenos, he ſwam
On the broad ſhoulders of the gold-fleec'd ram.
For to that ſtream a nymph of rural race
Bore Dipſacus, who, fearful of diſgrace,
Dwelt with his mother, and along the mead
Choſe, near his father's ſtream, his fleecy flocks to feed.
The chiefs ſoon paſs'd his celebrated fane,
The river Calpis, and th' extended plain;
And all the night, along the tranquil tide,
And all the day their oars inceſſant ply'd.
As when laborious ſteers, inur'd to toil,
With the bright plough-ſhare turn the ſtubborn ſoil,
Sweat from their ſides diſtils in foamy ſmoke;
Their eyes obliquely roll beneath the yoke;
Their ſcorching breath heaves quick with panting ſound,
While all day long they tread the weary ground:
So toil'd the Greeks; nor yet the morning light
Had paſs'd the doubtful cónfines of the night,
But, faintly glimmering on this earthly ball,
Produc'd what mortals morning-twilight call.
To Thynia's neighbouring iſle their courſe they bore,
And ſafely landed on the deſert ſhore,
When bright Apollo ſhow'd his radiant face,
From Lycia haſtening to the Scythian race,
His golden locks, that flow'd with grace divine,
Hung cluſtering like the branches of the vine:
In his left hand his bow unbent he bore,
His quiver pendent at his back he wore:
The conſcious iſland trembled as he trod,
And the big rolling waves confeſs'd the god.
Nor dar'd the heroes, ſeiz'd with dire diſmay,
The ſplendours of his countenance ſurvey,
But on the ground their downward eyes they caſt:
Meanwhile Apollo o'er the watery waſte,
And through thin ether on his journey flew.
Then thus ſpoke Orpheus to the martial crew:
" Let us, my honour'd chiefs, with joint acclaim
" This iſland ſacred to bright Phœbus name,
" Who early here to all this hoſt appear'd;
" Here let an altar on the ſhore be rear'd,
" And paid the rites divine: and if he deign
" That ſafe we reach our native land again,
" Young horned goats ſhall on his altars bleed,
" And the choice thighs to Phœbus be decreed.
" Now, comrades, due libations let us pay:
" Be gracious, O be gracious, god of day!"
Thus he: and ſome the ſtony altar raiſe,
And ſome explore the foreſt's devious maze;
Haply within its lone retreats to find
A kid wild wandering, or a bounding hind:
Latona's ſon ſoon led them to the prey;
Then on the altar, blazing bright, they lay
The choiceſt parts involv'd in ſacred ſmoke,
And fair Apollo, early god, invoke.
Around the flame in ſprightly dance they ſpring,
And Iö Pæan, Iö Pæan ſing.
Then on the Thracian harp Oeager's ſon
In ſoothing ſtrains his tuneful tale begun:
How once beneath Parnaſſus' rocky brow
He launch'd an arrow from his deadly bow,
And the fell ſerpent ſlew; though young and fair,
And beardleſs yet, but grac'd with golden hair:
O prove propitious, thou whoſe radiant head
Is deck'd with curls unclip'd, that never ſhed,
Worthy thyſelf! (Latona only knows
With niceſt art thoſe ringlets to diſpoſe)
Corycian nymphs their joys in rapture ſhow'd,
And Iö, Iö Pæan call'd aloud:
Encomium grateful to the god of day.
Thus having prais'd him in the ſolemn lay,
They ſwear devoutly, due libations made,
To league for ever, and lend mutual aid;
Then touch the hallow'd altar with their hands
Concordant; and ev'n now a temple ſtands
Sacred to Concord, by the Grecians rais'd,
When here that mighty deity they prais'd.
Now the third morn began on earth to ſmile,
When with freſh gales they left the lofty iſle.
The foaming Sangar at a diſtance ſeen,
The Mariandine meads for ever green,
And Lycus' winding waters they forſake
All on the right, and Anthemoiſia's lake,
So faſt before the wind the veſſel went,
Crack'd was the cordage, and the canvaſs rent:
But the gale ceaſing with the dawning day,
Joyful they reach the Acheruſian bay,
Begirt with rocks ſo towering tall and ſteep,
The frown tremendous on Bithynia's deep;
And yet ſo firmly founded in the main,
The raging billows round them roar in vain:
Above, upon the promontory's brow,
Umbragcous planes in beauteous order grow.
Thence, downward, through a deep and dreary dell,
Deſcends the path-way to the cave of hell,

With woods and shaggy rocks obscure; from whence
Exhaling vapours, chilly, damp, and dense,
Scatter hoar frost along the whitening way,
Which melts before the sun's meridian ray.
On these rough cliffs, which many a storm molests,
The pleasing power of silence never rests.
From hollow caverns through the leafy boughs,
Above, the whistling wind for ever blows;
And while mad billows lash the sounding shores,
Below, the raging main for ever roars.
There, bursting from the promontory's sides,
Sad Acheron along the valley glides;
Deep-hollow'd beds his turbid streams convey,
As eastward to the main he winds his way.
This fable flood, in ancient story fam'd,
The Megarensians Soönautes nam'd
In after ages, when their course they bore
By ocean to the Mariandine shore:
For when the deep in deathful billows heav'd,
This peaceful port their shatter'd ships receiv'd.
To this the labouring Grecians bent their way,
Row'd round the cape, and anchor'd in the bay.
When Lycus and his Mariandine host,
Lycus, the mighty monarch of the coast,
Knew these brave Greeks who Amycus had slain,
They welcom'd Jason and his conquering train:
But most on Pollux fix'd their wondering eyes,
And view'd him as a hero from the skies:
For long the fierce Bebrycian's rude alarms
Had rous'd the Mariandyni to arms.
That day, the Grecian band with one consent
To the king's hospitable palace went:
Cheerful they there on choicest dainties din'd,
And there with converse sweet regal'd the mind.
Then Jason to the king recounts the name
And race of all these chosen sons of fame,
Who lent their aid at Pelias' dire command;
Their strange adventures on the Lemnian land;
What griefs, what woes at Cyzicus they bore;
And how they landed on the Mysian shore,
Where Hercules, distress'd his friend to find,
They left at land, unwillingly behind.
What Glaucus spoke prophetic from the main,
How with his subjects Amycus was slain,
The prince relates: what Phineus poor and old,
Worn out with sufferings to the chiefs foretold;
How through Cyanean rocks they safely steer'd,
And in what isle the god of day appear'd.
The king rejoic'd his guests so well had sped.
But griev'd that Hercules was left, and said:
'Think how, my friends, this hero's aid deny'd,
'Rashly ye tempt a length of seas untry'd.
'Full well I knew that valiant son of fame,
'When here on foot through Lydia's coast he came
'(For here my hospitable father dwelt)
'To fetch Hippolita's embroider'd belt.
'The hero found me then a beardless swain,
'Mourning my brother by the Mysians slain;
'(The nation dearly lov'd the blooming chief,
'And still lament in elegies of grief)
'Then at the funeral games he prov'd his might,
'And vanquish'd Titias in the gauntlet-fight
'Though young and stout, and eager for the fray,
'From his bruis'd jaws he dash'd the teeth away,
'The Mysian country, and the Phrygian plains,
'The conqueror added to my sire's domains;
'And the rude nations that Bithynia till,
'To foaming Rhebas and Colona's hill;
'And Paphlagonia to its utmost bounds,
'Which fable Billis with his waves surrounds.
'But now proud Amycus, and all his host,
'Since Hercules has left the neighbouring coast,
'Have spoil'd my realms, and spread their hostile bands
'Wide as where Hipias' streams enrich the lands.
'At length their lawless insolence they rue;
'And by your hands have suffer'd vengeance due.
'And sure some god afforded his relief
'When Pollux slew that proud Bebrycian chief.
'I for this deed my due regard will show;
''Tis what the meanest to the mighty owe.
'My son, your comrade, shall at my command
'Attend o'er distant seas your gallant band:
'O'er distant seas, with Dascylus your guide,
'You still with faithful friends shall be supply'd,
'Far as Thermodon rolls his foaming tide.
'Meanwhile on yon bold cape that mates the skies
'To Leda's sons a sacred fane shall rise,
'Admir'd by all that cross the boundless main,
'For all shall venerate the sacred fane:
'To them will I, as to the powers divine,
'Some fruitful acres near the town assign.'
Conversing thus, the genial feast they share,
And to the ship at early day repair:
With his brave son the friendly Lycus went,
Who store of viands to the ship had sent.
'Twas here the cruel destinies decreed
That Idmon, fam'd for augury, should bleed:
The fate of others he had oft foreshown,
But fail'd, unhappy! to prevent his own.
Here, in a covert near the reedy flood,
A fell wild boar lay deep immers'd in mud.
With horrid tusks so dreadful he appear'd,
The fountain-nymphs the savage monster fear'd:
No living wight in miry marsh or moor
E'er saw so fierce, so horrible a boar.
On the lake's verge as luckless Idmon stood,
From his close covert, in the reedy mud,
Up sprung the furious beast with might and main,
Tore the chief's thigh, and snapp'd the bone in twain;
He groans, he falls, and on the bank he lies,
His griev'd companions answer to his cries;
When Peleus instantly approaching near,
Launch'd at the boar his unavailing spear:
But Idas aim'd his pointed dart so well,
Low in the marsh the dying monster fell.
The chiefs with Idmon to the ship retir'd,
Who deeply groaning in their arms expir'd.
Immers'd in grief, they now neglect to sail;
For three whole days their comrade they bewail;
But on the fourth, with pensive sorrow, paid
The last sad honours due to Idmon's shade.
The king, the people join'd the mournful crew,
And, loud lamenting, numerous victims slew:

They dug the grave, and on the greenſward raiſe
A tomb on which poſterity will gaze:
For near the tomb a tall wild olive grows,
Beneath the cape, and beautifully blows.
Me would the nine commiſſion to unfold
This truth, which Phœbus had long ſince foretold,
This, this is he, the tutelary lord,
Henceforth to be by mighty ſtates ador'd:
For here Bœotians and Megarians join'd,
Near the wild olive wavering in the wind,
To build a city; though due honours they
To Agameſtor, not to Idmon, pay.
Who fell beſide? for, lo! the chiefs intend
Another tomb for ſome lamented friend.
Ev'n now two mournful monuments appear:
Tiphys, fame ſays, was ſtretch'd upon the bier.
Him cruel fate ordain'd no more to roam;
He died far diſtant from his native home.
For while to Idmon funeral rites they pay,
Untimely ſickneſs ſnatch'd the chief away.
Then heart-felt ſadneſs ſeiz'd the penſive train,
Who, proſtrate on the margin of the main,
Forgetful of their neceſſary food,
Mourn'd in ſad ſilence to the roaring flood.
For they, now ſkilful Tiphys is no more,
Deſpair'd returning to their native ſhore;
And here had ſtaid, with bitter grief oppreſs'd,
Had not Saturnia in Ancæus' breaſt
Breath'd courage: him Aſtypalæa bore,
Near winding Imbraſus on Samos' ſhore,
To ocean's god; a chief expert to guide
The flying veſſel o'er the foaming tide.
Then thus to Peleus, Neptune's valiant ſon,
By heaven inſpir'd, in cheering terms begun:
'Ill ſuits the brave in foreign climes to ſtay,
'And waſte, O Peleus, precious time away.
'I left not Samos leſs for ſailing ſkill'd
'Than fierce contention, in the fighting field.
'For Argo cheriſh not one abject fear,
'Since many ſkill'd, beſides myſelf, are here.
'And he, to whom the ſteerage we ordain,
'Will ſafely guide the veſſel o'er the main.
'Tis then to ſtimulate the fainting crew
'With ready oars their voyage to purſue.'
He ſpoke, and tranſport touch'd the Phthian's breaſt,
Inſtant he roſe, and thus the hoſt addreſs'd:
"Why are we here by fruitleſs grief detain'd?
"Two friends are dead, and this the fates ordain'd;
"Yet many pilots in this hoſt remain,
"To ſteer firm Argo o'er the watery plain,
"To ſorrows unavailing bid adieu!
"Let us, bold peers, our deſtin'd courſe purſue."
He ſaid, and Jaſon anxious thus reply'd;
'Where are thoſe pilots, ſay, our courſe to guide?
'For thoſe whom late we hoaſted as the beſt
'And ableſt chiefs, are moſt with grief oppreſs'd,
'I therefore deem a like ſad fate attends
'On us, as on our late departed friends,
'If neither in Æeta's ports we moor,
'Nor through thoſe rocks regain our native ſhore.
'But here inactive and inglorious ſtay,
'Years following years, and linger life away.'
He ſpoke; Ancæus ſeiz'd the ſteerage, driv'n
By power inſtinctive from the queen of heav'n.
Erginus next the glorious charge deſir'd;
Euphemus, Nauplius to the helm aſpir'd.
But theſe the congregated chiefs declin'd,
And bold Ancæus to the poſt aſſign'd.
With the twelfth riſing morn the heroes ſail;
Favonius breath'd a favourable gale;
And ſoon they leave ſad Acheron behind,
Then give the ſwelling canvaſs to the wind:
On the ſmooth ſea the ſhip ſerenely rides,
And light along the liquid level guides.
Ere long with ſtretching ſails the coaſt they gain,
Where broad Callichorus augments the main.
To Thebes returning from his Indian fights,
Here Bacchus ſolemniz'd myſterious rites,
The dance before the ſacred cave ordain'd,
And here full many a doleful night remain'd.
This name the country to the river gave,
Callichorus; and Aulion to the cave.
Still as their courſe the daring Greeks purſue,
The monument of Sthenelus they view.
With honours grac'd, obtain'd in realms afar,
Returning from the Amazonian war,
On the bleak ſhore (Alcides at his ſide)
Pierc'd by a fatal dart the hero died.
Slow ſail'd they on, for, eager to ſurvey
His kindred warriors on the watery way,
At his requeſt, from her infernal coaſt
Pluto's grim queen releas'd the penſive ghoſt.
The penſive ghoſt beheld with eager ken
From the tall monument the ſhip and men.
As arm'd for war the martial phantom ſeem'd;
Four creſts high-towering on his helmet beam'd,
With purple rays intolerably bright;
Then ſoon it ſunk beneath the ſhades of night.
In mute amazement ſtood the Grecian hoſt
But Mopſus counſel'd to appeaſe the ghoſt
With offerings due; the chiefs approach the ſtrand,
And round the tomb of Sthenelus they ſtand.
They pour libations, and the victims ſlay,
And on the fire the deſtin'd offerings lay.
Apart, to guardian Phœbus next they raiſe
An altar meet, and bid the victims blaze.
Here Orpheus plac'd his lyre for muſic fam'd;
Apollo's altar hence was Lyra nam'd.
And now, invited by the favouring gales,
They climb the ſhip and ſpread their ſwelling ſails;
Swift o'er the deep the winged veſſel flies,
Swift as the rapid hawk that cleaves the ſkies,
And lightly through the liquid ether ſprings,
Nor moves, ſelf-poiz'd, his wide expanded wings.
Thence by Parthenius ſail'd the ſocial train,
The gentleſt ſtream that mingles with the main.
Fatigued with traverſing the mazy grove,
Here, ere ſhe re-aſcends the courts of Jove,
The chaſte Diana, huntreſs of the wood,
Bathes her fair limbs, and gambols in the flood.
Then during night by Seſamus they ſail,
And Erythinus riſing o'er the vale;
By Cromna and Crobrialus, and where
Thy grove, Cytorus, ever green appear.

Thence with the rising sun they stoutly row
Near where Carambis lifts his rocky brow.
All day, all night with unremitted oar
They coast along Ægialus's shore.
Then to the Syrian clime the heroes sped,
Where Jove, by hasty promises misled
Sinope plac'd, and, all she wish'd to claim,
Gave her the honours of a virgin's name.
For, know, the god, by love's strong power oppress'd,
Promis'd to grant whate'er she might request:
And this request th' insidious damsel made,
That her virginity might never fade.
Hence Phœbus foil'd could no one wish obtain;
Hence winding Alys woo'd the maid in vain.
No mortal force such virtue could o'ercome,
Defeat Jove's promise, and impair her bloom.
Here dwelt Deïmachus's offspring fam'd,
Deileon Autolycus and Phlogius nam'd,
What time they ceas'd with Hercules to roam,
And at Sinope found a settled home.
They, when they saw the bold Thessalian band,
Met them on shore and welcom'd them to land;
And loathing longer in these climes to stay,
Join'd the brave crew, and with them sail'd away.
Bless'd with the zephyr's breeze that briskly blew.
Near Halys' stream and Isis' sail'd the crew;
Near Syria's coast, and, e'er night's shades abound,
Near th' Amazonian cape, for many a bay renown'd.
Where Hercules surpris'd in days of yore,
Bold Menalippe wandering on the shore:
A belt Hippolyta her sister paid,
And for this ransom he restor'd the maid.
Here in Thermodon's bay firm Argo moor'd:
For lash'd with tempests the vex'd ocean roar'd.
No river like the fam'd Thermodon leads
Such numerous currents o'er the fertile meads:
A hundred streams to him their waters owe;
Yet from one source, one only source they flow.
On Amazonian hills, that reach the skies,
The great Thermodon first begins to rise;
Hence soon emerging many a course he takes,
Sinks but to mount, and various channels makes.
The different streams from different founts distil,
In soft meanders wandering down the hill;
Some public notice and fair titles claim,
Some flow obscurely, and without a name;
But confluent soon, along the winding plain,
He rolls his waves, and foams o'er half the main.
Had the Greeks landed on the hostile coast,
War would have soon pursu'd the gallant host:
(For the fierce Amazons regard not right,
Strife is their sport, and battles their delight:
From Mars and harmony these warlike maids
Sprung where Acmonius spreads his bowery shades!
But favour'd with the soft Favonian wind,
The heroes left the crooked shore behind,
Where the bold Amazons, perceiv'd from far,
Stood sheath'd in arms, prepar'd for speedy war.
Not in one city dwelt this martial band,
But in three parties scatter'd o'er the land:
The first tribe at Themiscyra remain'd,
O'er this Hippolyta, their empress, reign'd;
There dwelt the fair Lycastian dames apart,
Here the Chalcesians, skill'd to lance the dart.
Th' ensuing day the delegated band
Approach'd with oars the rough Chalybian land;
Whose sons ne'er yoke their oxen to the plough,
Nor healing plants, nor fruits delicious know:
Nor aught delight they in th' irriguous mead,
Retir'd and still, their fleecy flocks to feed;
But they dig iron from the mountain's side,
And by this ore are nature's wants supply'd.
Devoid of toil ne'er beam'd Aurora's ray,
And dust and smoke obscur'd the dismal day.
From thence they pass where Tibarenians till,
Sacred to Jove, the Genetæan hill.
Here, when the teeming wives, are brought to bed,
Their groaning husbands hang the drooping head;
Equal attendance with their wives they claim;
The same their diet, and their baths the same.
Next by the sacred hill their oars impel,
Firm Argo, where the Mossynœcians dwell.
In towers they live, of solid timber fram'd,
Mossynes call'd, and thence the nation nam'd:
Of manners strange; for they with care conceal
Those deeds which others openly reveal;
And actions, that in secret should be done,
Perform in public and before the sun:
For like the monsters of the bristly drove,
In public they perform the feats of love.
Exalted in his tower that mates the sky,
The monarch here dispenses law from high:
But if his judgment err, this rigid stare
Condemns their chief, and starving is his fate.
These nations past, with unremitting oar
They reach, Aretias, thy sea-girt shore.
Then sunk the breezes with the closing day,
When down the sky descending they survey
A winged monster of enormous might
Which toward the ship precipitates her flight.
Her wings she shook, and from her pinions flung,
A dart-like quill, which on Oïleus hung;
Down his left shoulder swift it fell: no more,
Faint and enfeebled, could he hold his oar.
In silence long the Grecian heroes gaze,
And view the feathery javelin with amaze.
But Erybotes, soon approaching near,
Extracted from the chief the winged spear;
Then from his side his pendent belt unbound,
And wrapp'd that bandage o'er the gaping wound.
When, lo! a second bird appear'd in view,
But ready Clytius first had bent his yew;
By his keen shaft the feather'd monster slain
Fast by the ship fell headlong in the main.
Then thus Amphidamus: 'My friends, ye know,
'And these obscene voracious fiends foreshow
'Arctias near: then list to what I say,
'Fruitless are shafts to drive these pests away;
'But, would you here a fit reception find,
'Recal th' advice of Phineus to your mind.
'For when Alcides to Arcadia went
'Well arm'd with arrows, on his toils intent,
'From the Stymphæan lake he fail'd to
'fright
'These ravenous harpies (I beheld the sight)

' But when he rung a cymbal with his ſpear;
' The clanging cymbal hill'd the birds with fear:
' In wild confuſion far away they fly,
' And with ſhrill clamours pierce the diſtant ſky.
' 'Tis ours to practiſe this expulſive art;
' But hear ye firſt the counſel I impart:
' Let half our crew in glittering armour dreſs'd,
' Nod, as by turns they row the high-plum'd creſt;
' The reſt bright ſpears and ſwords and ſhields
' provide,
' And meet diſpoſe them round the veſſel's ſide.
' Then all at once your voices raiſe on high,
' And with loud pealing ſhouts aſſail the ſky;
' The deafening clamours, the protended ſpears,
' And nodding creſts will fill the birds with fears.
' And when Aretia's barren iſle ye gain,
' Ring your broad bucklers, and all ſhout amain.'
He ſpoke, the chiefs approv'd the wiſe deſign;
High on their heads the brazen helmets ſhine,
Whoſe purple creſts wav'd dreadful in the wind;
To theſe alternate were ſtout oars aſſign'd;
The reſt with care their veſſel's ſide conceal'd
With glittering ſpears, and many a ſhining ſhield.
As when induſtrious builders cover o'er
With tiles the walls their hands had rais'd before;
In chequer'd ſquares they decorate the roof,
And make it fair to view, and tempeſt proof:
Thus they with ſhields diſpos'd in order due,
Shelter'd their veſſel, and adorn'd it too.
As when embattled hoſts their foes aſſail,
Tumultuous ſhouts, and martial ſounds prevail;
So from the ſhip loud clamours pierc'd the ſky;
No more the Greeks their feather'd foes deſcry:
Rattling their bucklers, near the land they drew,
And far away the winged furies flew.
So when great Jove on cloſe-throng'd cities pours
From hyperborean clouds his haily ſhowers;
Within, the dwellers ſit in peace profound,
Nor heed the rattling ſtorms that rage around;
In vain the hail deſcends, the tempeſts roar,
Their roofs from harm were well ſecur'd before:
Thus on their ſhields the furies ſhot their quills,
Then clamouring vaniſh'd to far diſtant hills.

Say, Muſe, why Phineus counſel'd here to land,
On Mars's iſle, this delegated band?
And what advantage could the Grecians gain
From all the toils and perils of the main?

To ſam'd Orchomenos, with favourite gale,
From Æa's walls the ſons of Phrixus ſail,
Their grandſire's vaſt inheritance to ſhare,
Who dying left this voyage to their care.
Near Mar's iſland on this ſignal day
The ſons of Phrixus plow'd the liquid way.
But Jove ordain'd that Boreas blaſts ſhould blow,
While moiſt Arcturus ſoak'd the vales below.
Firſt on the mountains, riſing by degrees,
All day rough Boreas ſhook the trembling trees;
Then, night approaching, he with hideous ſound
Roll'd the big waves, and heav'd the vaſt profound.
No ſtars appear tranſlucent through the clouds,
But gloomy darkneſs every object ſhrouds.
The ſon of Phrixus, toſt by whelming waves,
With horror ſhudder'd at the watery graves;
For the fierce blaſt, impell'd with might and main,
Tore all their canvaſs, ſplit the ſhip in twain
And daſh'd to pieces; but by heaven's kind aid
On a large fragment of the wreck convey'd,
The winds and waves the trembling brothers bore
Aghaſt, and half expiring to the ſhore.
Inſtant in floods deſcended copious rain,
Drench'd the whole iſland, and increas'd the main;
(Theſe ſhores, the neighbouring coaſt, and ſacred
hill,
The rude, the barbarous Moſſynœcians till)
Borne on a broken plank, the forceful blaſt
The ſons of Phrixus on this iſland caſt,
Who met the Grecians with the riſing ſun;
Ceas'd was the rain, and Argus thus begun:
' Adjur'd by Jove, whoſe circumſpective ken
' Surveys the conduct and the cares of men,
' Whate'er your name or race, our tale attend,
' And to the wretched your aſſiſtance lend.
' The raging ſtorms that Neptune's empire ſweep,
' Have wreck'd our luckleſs veſſel in the deep;
' To you we pray, if pity touch your heart,
' Some ſcanty raiment for our wants impart;
' The ſons of miſery for mercy call;
' To one low level ſorrow ſinks us all.
' They who to proſtrate ſuppliants lend an ear,
' The laws of hoſpitable Jove revere.
' All-preſent he hath liſten'd to our pray'r,
' And ſinking ſav'd us with a parent's care.'
Then Æſus ſon (fulfilling Phineus' plan)
Thus queſtion'd mild the miſerable man;
" But firſt, of truth obſervant, frankly tell,
" In what far region of the world ye dwell;
" What buſineſs call'd you from your native
" coaſt,
" What race ye ſprung from, and what names ye
Then Argus thus: ' Ye, ſure, have heard the
" fame
' Of Phrixus, who from Greece to Æa came.
' To great Æeta's citadel he ſwam
' Supported on the ſhoulders of the ram,
' Whoſe fleece now high-ſuſpended ye behold,
' By Hermes metamorphos'd into gold.
' On the tall oak's high top it hangs in view,
' The ram to Jove, propitious, Phrixus ſlew.
' The generous king receiv'd him as his gueſt,
' And with undower'd Chalciope he bleſs'd.
' From theſe we ſprung; but Phrixus breathes no
' more,
' His bones lie buried on the Colchian ſhore.
' We now to ſam'd Orchomenos repair,
' The wide domains of Athamas to ſhare;
' Such were the laſt injunctions of our ſire:
' Our buſineſs this—if ye our names require,
' This Cytiſorus, that will Phrontis claim,
' He ſurnam'd Melas, Argus is my name.'
He ſpoke: the Argonauts with ſtill amaze,
And ſecret tranſport on the ſtrangers gaze.
Then Jaſon mark'd the much enduring man,
And thus with mild benevolence began:
" Friends as ye are, and near relations too,
" To us for ſuccour not in vain ye ſue.
" Cretheus and Athamas their ſire the ſame;
" And Cretheus was my honour'd grandſire's
" name:
" With theſe companions join'd, I ſail'd from
" To Colchos, famous for the golden fleece—
[boaſt."
[Greece

" Some distant day, at ease may we relate
" These strange events, and all our various fate.
" Now shall warm robes to clothe your limbs be
" giv'n,
" We meet conducted by the hand of heav'n."
He said, and from the ship rich vestments sent;
Then to the sacred fane of Mars they went.
From fleecy flocks they drain'd the life-warm
blood,
And all devoutly round the altar stood;
This, of small stones compos'd, was plac'd before
The lofty temple's double-folding door:
(Within the fane a stone of sable hue
Stood, where the Amazons their victims slew;
Who held it lawless, when they sojourn'd here,
To slay the sheep, or sacrifice the steer;
Instead of these the full-fed, pamper'd steed
Was doom'd a victim at this fane. to bleed.)
These rites dispatch'd, and hunger's rage repress'd,
Thus Æson's son the listening host address'd:
" Impartial Jove the race of man regards;
" The bad he punishes, the just rewards:
" As from a bloody stepdame's rage of yore
" He sav'd your sire, and blest with ample store,
" So he preserv'd you from the whelming deep,
" And in this vessel will securely keep;
" Whether for Æa in our ship ye sail,
" Or to far Phthia court the favouring gale.
" For this fam'd ship of Pelion's pines was made,
" And form'd by Argus, with Minerva's aid;
" But storms had lash'd her, ere, with hideous
" shock,
" She reach'd those straits, where rock encounters
" Then lend your aid to gain the golden fleece,
" And be our guides to bring it back to Greece.
" Jove seems incens'd, and we this voyage take,
" To sooth his anger, and for Phrixus' sake."
Ardent he spoke; but they despair'd to find,
Æeta of so tractable a mind,
To yield the fleece: then Argus thus replies,
Alarm'd and troubled at their bold emprise;
' Whate'er our powers can grant, or wishes
' gain,
' The sons of Greece shall never ask in vain.
' But proud Æeta, cruel and severe,
' I lothe the tyrant, and his power I fear;
' The son his sire, so fame relates, he boasts;
' Unnumber'd subjects guard his ample coasts;
' For mighty strength he stands renown'd afar,
' And voice terrific as the god of war.
' The golden prize a monstrous dragon keeps:
' Hard task to seize it, for he never sleeps.
' Earth on rough Caucasus a being gave
' To this fierce beast near Typhaonia's cave,
' Where huge Typhœus, as old stories prove,
' Was struck by lightning from almighty Jove,
' When fierce in arms against heaven's king he
' stood;
' From his head issu'd warm corrupted blood;
' To Nysa's hills, to Nysa's plains he flies,
' And now beneath Serbonian marshes lies.'
He said; distress'd so sad a tale to hear,
On every countenance sat pallid fear;
When Peleus thus with confidence reply'd,
And gave that courage which their fears deny'd:
" Despair not, friend; for we disdain to yield,
" Nor dread to meet Æeta in the field.
" We too are skill'd in war, and draw our line
" From godlike chiefs, and origin divine.
" Incens'd should he the fleecy gold detain,
" He'll ask, I trust, the Colchians aid in vain."
Converging thus the chiefs their thoughts ex-
press'd,
And, fated with repast, reclin'd to rest.
With rising morn the gently breathing gales
Play'd round the pine, and fill'd the swelling sails;
The swelling sails, expanded by the wind,
Soon left Aretias' barren shore behind;
And, swiftly skimming o'er the watery vast,
The Philyræan isle at eve they past;
Where Saturn first fair Philyra survey'd,
When on Olympus he the Titans sway'd,
(Nurs'd by the fierce Curetes, yet a child,
Young Jove was hid in Cretan caverns wild)
Unknown to Rhea he the maid compress'd;
But soon to Rhea was the crime confess'd;
Detected Saturn left his bed with speed,
And sprung all-vigorous as a mane-crown'd steed.
Swift fled fair Philyra, abash'd with shame,
And to the hills of Thessaly she came:
Fam'd Chiron sprung from this embrace so odd,
Ambiguous, half a horse, and half a god.
From thence they sail by long Macronian strands,
And where Bechira's ample coast expands;
Shores where Byzerians wander far and wide,
And fierce Sapirians, stigmatiz'd for pride;
And, favour'd by the soft impelling wind,
Leave numerous coasts and lands unnam'd be-
hind:
And, sailing swiftly o'er the waves, survey,
Far on the Pontic main, an opening bay;
Then, Caucasus, thy hills were seen on high,
That rear their rocky summits in the sky;
Fix'd to these rocks Prometheus still remains,
For ever bound in adamantine chains:
On the rude cliffs a ravenous eagle breeds,
That on the wretch's entrails ever feeds.
The Grecians saw him. ere th' approach of night,
Soar high in air, loud hissing in his flight:
Around the ship he flew in airy rings,
The sails all shivering as he shook his wings:
Not as a light aërial bird he soars,
But moves his pinions like well-polish'd oars.
The ravenous bird now rushing from the skies,
Sudden they heard Prometheus' piercing cries:
The heavens re-echoed to the doleful sound,
While the fell eagle gnaw'd the recent wound.
Till gorg'd with flesh the bird of Jove they spy'd
Again descending from the mountain's side.
Night now approaching, near the land they
drew,
And Argus well his native country knew;
For, Phasis, thy wide-spreading flood they gain,
And the last limits of the Pontic main.
At length arriv'd, so many dangers past,
They furl the mainsail, and they lower the mast:
Their bending oars the mighty stream divide;
The stream receives them on his foaming tide.
All on the left, in ancient rolls renown'd,
Rise Æa's walls, with glittering turrets crown'd;

And on the right the field, not distant far,
And grove, both sacred to the god of war;
Where on an oak the fleece, suspended high,
A dragon guards with ever-watchful eye.
Then Jason hastes, impatient to consign
To the pure stream the unpolluted wine,
And from a golden vase fulfils the rite divine,
Sacred to earth, to gods that guard the coasts,
And ancient heroes' long-departed ghosts:
For their protection he preferr'd his pray'r,
To keep the ship with tutelary care.

Then thus Ancæus: 'Numerous perils past,
'Colchos and Phasis we behold at last;
'Behoves you now your sage advice to lend,
'Whether to treat Æeta as a friend,
'With speech accordant, and compliance bland,
'Or in rough terms the golden prize demand.'
Thus he; but Jason urg'd, at Argus' call,
High up the sedgy stream the ship to haul;
Which, undisturb'd, might there at anchor ride,
In the calm bosom of the peaceful tide:
There sought the chiefs the blessings of repose,
And slept secure till grateful morning rose.

NOTES ON BOOK II.

Ver. 16. This encounter between Amycus and Pollux is described likewise by Theocritus, who, in the opinion of Casaubon, far surpasses Apollonius; but Scaliger gives the preference to our author, who has certainly furnished Virgil with many circumstances in his description of the contest between Dares and Entellus. See *Æn. B.* v.

Neither Apollonius nor Theocritus have lost sight of Homer's description of the combat of the cæstus, *Il.* xxiii. 683.

Mr. Warton, in his valuable edition of Theocritus, delivers his opinion of the description of this combat, by the three poets, Apollonius, Theocritus, and Valerius, in the following words: "Apollonio sane, auctore suo, Flaccum inferiorem censeo; quippe quod Flaccus minus simplex sit et omnia, sublimitatis affectato studio, magnificentius efferat et inflatius. Utroque præstantior Theocritus, quod utroque simplicior. Tantum illi cedit Apollonius, quantum Flaccus Apollonio."

Ver. 112. This simile is borrowed by Virgil, *Æn.* xii. 715.

With frowning front two mighty bulls engage,
A dreadful war the bellowing rivals wage, &c.
Pitt.

Ver. 163. Virgil has also taken this simile from Apollonius; a poet, as Catrou observes, very rich in beautiful comparisons. *See Pitt's Virg. Æn.* xii. 832.

So when the swain invades with stifling smoke
The bees, close-cluster'd in a cavern'd rock,
They rise; &c.

It was the custom of the ancients to force bees out of their hives by fumigation. To this practice the poets frequently allude. Thus Ovid de rem. amor. L. i. 185.

Quid, cum suppositos fugiunt examina fumos,
Ut relevent dempti vimina curva fagi?

——τῦφι πολλῷ τῷ καπνῷ. *Arist. in vesp.*

Ver. 178. The land of the Chalybes, which bordered upon that of the Mariandyni.

Ver. 199. Crowns and garlands were thought so necessary to the gods, and were so anciently used, that some have derived the custom of putting them on at feasts, from the primitive entertainments, at which the gods were thought to be present. *Potter.*

Ver. 221. The storm drove them to Salmydessus, a city on the coast of Thrace, opposite to Bithynia.

The Scholiast speaks of more than one Bithynia. There is a country of that name, he tells us, both on the coast of Europe and of Asia. The storm drove the Argonauts to Salmydessus, which is opposite to the Asiatic Bithynia.

Ver. 224. Phineus was a king of Thrace, or, as some say, of Arcadia. He ordered the eyes of his two sons to be torn out, to satisfy their mother-in-law. The gods punished his cruelty: they struck him with blindness, and sent the harpies to him, who took the meat from his mouth: so that he would have perished with hunger, if Zetes and Calaïs had not delivered him from them, and pursued them to the Strophades, where they gave over the chase. These harpies were called out of hell, and seem to be of the number of the furies. A permission was given them to dwell upon earth to punish the wicked: by which the poets would represent to us the remorse of a bad conscience. *Catrou.*

Ver. 237. Apollonius has furnished Virgil with many hints on this subject of the harpies. *Æn. B.* iii. 225.

At subitæ horrifo lapsu de montibus adsunt
Harpyiæ; &c.

When from the mountains, terrible to view,
On sounding wings the monster-harpies flew.
Pitt.

The harpies were a kind of birds which had the faces of women, and foul long claws. When the table was furnished for Phineus, they flew in, and either devoured or carried away the greater part of his repast, or polluted what they left. *Raleigh.*

Ver. 256. The person and distresses of this old man are represented to us in a manner the most striking and pathetic. Virgil had this description in view, when, speaking of Achemenides, he says,

Cum ſubitó e ſilvis, macie confecta ſuprema,
Ignoti nova forma viri, miſerandaque cultu
Procedit, ſupplexque manus ad litora tendit,
Reſpicimus: dira illuvies, immiſſque barba,
Conſertum tegmen ſpinis.—— *Æn.* iii. 590.

Ver. 346 347. Thus Telemachus ſwears, not only by Jupiter, but by the ſorrows of his father.

By great Ulyſſes, and his woes I ſwear.
See Pope's Odyſſ. xx. 406.

Adjurations of this ſort are frequently to be met with in the Greek tragedians.

Ver. 377. Virgil has cloſely copied the concluſion of this compariſon: the eager hound, ſays he,

Hærat hians, jamque tenet, ſimiliſque tenenti
Increpuit malis, morſuque eluſis inani eſt.
Æn. xii. 754.

They ſnap, and grind their gnaſhing teeth in vain.

Ver. 393. The ancient name of a prieſt was cahen, rendered miſtakenly, κυν and *canis*. Hence the harpies, who were prieſts of Ur, are ſtyled by Apollonius, the dogs of Jove. Iris, accoſting Calais and Zetes, tells them, it would be a profanation to offer any injury to thoſe perſonages. The ſirens and harpies were of the ſame vocation. *Bryant's Myth.* vol. ii.

Ver. 404. The word Strophades is derived from a Greek verb that ſignifies to turn. Theſe iſlands therefore were named Strophades, becauſe near them the ſons of Boreas left off purſuing the harpies, and turned back to the houſe of Phineus.

Ver. 437. This is very ſimilar to a paſſage in the Odyſſey, B. xii. v. 71.

High o'er the main two rocks exalt their brow,
The boiling billows thundering roll below;
Through the vaſt waves the dreadful wonders move,
Hence nam'd erratic by the gods above.——
Scarce the fam'd Argo paſs'd theſe rapid floods,
The ſacred Argo, fill'd with demigods!
Ev'n ſhe had ſunk, but Jove's imperial bride
Wing'd her fleet ſail, and puſh'd her o'er the tide.
Pope.

It is obſerved in the note on this paſſage, "that Homer, to render his poetry more marvellous, joins what has been related of the Symplegades to the deſcription of Scylla and Charybdis.—The ſtory of the dove being reported of the Symplegades might give him the hint of applying the cruſhing of the doves to Scylla and Charybdis." But we muſt remember that Argo paſſed, in her return, through Scylla and Charybdis, and that Apollonius, as well as Homer, has mentioned theſe rocks by the name πλαγκταί, erratic, which is ſuppoſed to be more ſtrictly applicable to the Symplegades. If the Cyanean rocks were called Symplegades from their juſtling together, and that appearance was occaſioned by the different views in which they were ſeen, ſometimes in a direct line, and ſometimes obliquely, why might not Scylla and Charybdis, for the ſame reaſon, be ſaid to juſtle together, and conſequently without impropriety be called πλαγκταί, or erratic? Minerva, according to Apollonius, guided Argo through the Symplegades; but her courſe through Scylla and Charybdis was directed by Thetis, at the interceſſion of Juno, agreeable to what Homer here mentions.

Ver. 448. The dove which returned to Noah with a leaf of olive, and brought the firſt tidings that the waters of the deep were aſſuaged, was held in many nations as particularly ſacred: it was looked upon as a peculiar meſſenger of the Deity, an emblem of peace and good fortune. Among mariners it was thought to be particularly auſpicious; who, as they ſailed, uſed to let a dove fly from their ſhips, to judge of the ſucceſs of their voyage. The moſt favourable ſeaſon for ſetting ſail was at the Heliacal riſing of the ſeven ſtars, near the head of Taurus; and they are, in conſequence of it, called Pleiades. It was at their appearance that the Argonautics ſet out upon their expedition. Ἀμφὶ δ' ἀντέλλονθι πελείαδες. —*Theoc. Id.* xiii. 25. When firſt the pleaſing Pleiades appear. And this was thought a fortunate time for navigation in general. The Argonauts, in a time of difficulty and danger, made the experiment of letting a dove fly, and formed from it a fortunate preſage. *Bryant's Myth. vol.* ii. 285.

It is indeed the opinion of many learned men, that the ſcience of augury, or of predicting future events by the flight of birds, aroſe from the diſmiſſion of the raven and the dove from Noah's ark at the time of the deluge. This ſpecies of divination is undoubtedly very ancient: it is mentioned in many places of the Old Teſtament, and made a conſiderable part of the religion of the heathen world.

Ver. 479. *Acheruſia.*] Is a cave, through which, according to the fable, is a paſſage to the regions below. Hercules is ſaid to have deſcended through it to bring up Cerberus. Tokens of which exploit they ſhow, ſays Xenophon, even to this day. Near this ſpot ſtands the principal city of the Mariandyni, named from Hercules, Heraclea. Here, as our poet informs us, runs the river Acheron, ſo called from the abovementioned lake.

Ver. 493. This river, which riſes in Cappadocia, and empties itſelf into the Euxine, took its name from the beds of ſalt through which it runs. *Strabo.* Tournefort ſays, this country is ſo full of foſſil ſalt, that it is to be found in the high roads and ploughed lands.

Ver. 498. This river, ſays Strabo, after having received many others, runs through Themiſcyra, formerly inhabited by the Amazons, and then falls into the Euxine ſea.

Ver. 502. It is commonly believed, that the ancient Chalybes were the deſcendents of Tubal; for they are celebrated by the ancients for their extraordinary ſkill in working of iron, and mak-

ing of ſteel armour; whence they are ſaid to have had their name. *Univ. Hiſt.*

Strabo is of opinion, that they are the ſame whom Homer mentions by the name of Ἀλυβες. For he joins them with the Paphlagonians, and characterizes them thus, ὅθεν ἀργύρου ἐξῆ γενέθλη.

Chalybes nudi ferrum——

Ver. 505. A promontory, ſo named from Genetes, a neighbouring river which ran through the country of the Chalybes. A temple was erected here to Jupiter the Hoſpitable.

Ver. 530. Pliny informs us, that the bird called the Pheaſant, derives its name from this river, whoſe banks they frequented in great abundance; and that they were firſt brought over into Greece by the Argonauts.

Argivâ primum ſunt tranſportata carinâ;
Ante mihi notum nil niſi nomen erat.
Mart.

Ver. 535. Tarchon, which, according to the learned and ingenious Mr. Bryant, ſignifies a hill with a tower, or temple on it, was in later times rendered Trachon; from whence the region Trachonitis received its name. This word, it ſeems, was ſtill further ſophiſticated by the Greeks, and expreſſed Δρακων, Dragon: from whence, in a great meaſure, aroſe the notion of treaſures being guarded by dragons. The gardens of the Heſperides, and the golden fleece at Colchis, were intruſted to a ſleepleſs ſerpent. The dragons are repreſented as ſleepleſs; becauſe in towers there were commonly lamps burning, and a watch maintained. The eyes of the dragon were windows in the uppermoſt part of the building, through which the fire appeared. *Bryant's Myth.*

Ver. 553. All the countries which lie on the north and north-eaſt parts of the Euxine, the region of the Colchis, and the country at the foot of Caucaſus, were of old eſteemed Scythia, and theſe the Greeks looked upon to be the boundaries, northward, of the habitable world.

Ver. 556. The region termed Αια, above Colchis, was a name peculiarly given by the Amonians to the places where they reſided. Among the Greeks the word grew general; and Αια was made to ſignify any land. But among the Egyptians, as well as among thoſe of Colchis Pontica, it was uſed for a proper name of their country.

It was owing to this, that the name given to the chief perſon of the country was Aïates. *Bryant's Myth.*

Ver. 646. It was the common opinion of the ancients, that the Hamadryads lived and died together with their trees, and therefore were extremely grateful to thoſe, who at any time preſerved them. The Scholiaſt tells a remarkable ſtory to this purpoſe: A perſon called Rhœcus, obſerving a beautiful oak ready to fall, ordered it to be ſet upright and ſupported. The nymph of the tree appeared to him, and bade him, in return, aſk whatever he pleaſed. She being exceedingly handſome, Rhœcus deſired he might be entertained as her lover: which ſhe promiſed, and accordingly ſent a bee to ſummon him. But the young man, happening to be playing at dice when the bee came, was ſo offended with its buzzing, that he drove it from him. The nymph, provoked at this uncivil treatment of her ambaſſador, in revenge deprived Rhœcus of the uſe of his limbs. He alſo ſpeaks of another nymph, who was grateful to the man that preſerved her oak.

——τότε δρυὸς ἡνίκα νύμφαι.
Call. Hymn. in Del. v. 83.

Ver. 662. Thus Callimachus:

Φοῖβον καὶ Νόμιον κικλήσκομεν, εἰ ἔτι κεῖνο
Ἐξόν' ἐπ' Ἀμφυρσῷ ζευγήτιδας ἔτρεφεν ἵππους,
Ἡΐθεϊ ὑπ' ἔρωτι κεκαυμένος Ἀδμήτοιο.
Hymn. ad Ap. 47.

Ἀγρεὺς and Νόμιος were undoubtedly the names of Apollo: but they are alſo beſtowed on his ſon Ariſtæus, on account of his fondneſs for a country life, and his many uſeful diſcoveries.

Ἀνδράσι χάρμα φίλοις,
Ἄγχιστον ὀπάονα μήλων,
Ἄγρεα καὶ Νόμιον
Τοῖς δ' Ἀρισταῖον καλεῖν. *Pynd. Pyth.* ix. 115.

Ver. 671. Almoſt all the principal perſons, whoſe names occur in the mythology of Greece and Italy, are repreſented as ſhepherds. It is reported of the muſes, that they were of ſhepherd-extraction, and tended flocks, which they intruſted to their favourite Ariſtæus; the ſame whom Virgil ſtyles Paſtor Ariſtæus. *Bryant.*

Ver. 685 Jupiter is frequently repreſented under the character of Pluvius, or the diſpenſer of rain, both by poets, painters, and ſtatuaries. For it was his province, as chief ruler of the air, to direct not only the thunders and lightnings, but the rain. Virgil has given us a noble deſcription of the Jupiter Pluvius in the following deſcription:

——cum Jupiter, horridus auſtris,
Torquet aquotam hiamem, et cœlo cava nubila rumpit. *Æn.* ix. 670.—*Spence's Polym.*

Ver. 693. For theſe Eteſian winds, the hiſtory of which the poet has juſt given us, blew north-eaſt, and conſequently in a direction the moſt unfavourable for them who were ſailing up the Euxine.

Ver. 735. This ſtorm ſeems to have been copied by Virgil. Æn. i. by Lucan, Ovid, and Valerius Flaccus.

Ver. 813. The great outlines of Jaſon's character are piety, humanity, and valour. The ſentiment before us is replete with philanthropy, and prejudices us highly in favour of the hero of the poem.

Ver. 861. Milton thus deſcribes Adam's hair:

——hyacinthine locks
Round from his parted forelock manly hung
Cluſt'ring. *B. iv.* 303.

The circumſtance of the hair hanging like bunches of grapes has been juſtly admired. But it is literally tranſlated from the deſcription of Apollo's hair in the Greek poet.

——————χρύσοοι δὲ παρειάων ἑκατέρθε
Πλοκαμοὶ ΒΟΤΡΤΟΕΝΤΕΣ ἐπερῤῥώοντο κιόνδε.

The word βοτρυόεντες could hardly be rendered into Engliſh by any other word than by cluſtering. *Warton's Obſerv.*

Ver. 857. Thus Heſiod in Scuto, ſpeaking of Hercules,

——————ὐδέ τις αὐτοῦ
Ἔστλη ἐς ὄψιν ἰδὼν χείρων ἐλθεῖν.

There was probably, in the old pictures of Apollo, a certain brightneſs beaming from his eyes, and perhaps diffuſed all over his face; in the ſame manner as the body of the principal figure is all luminous and reſplendent in the famous nativity of Correggio, of the transfiguration by Raphael. What made me then ſuſpect this, was the ancient poets ſpeaking ſo often of the brightneſs of Apollo's face, and the beaming ſplendours of his eyes. Virgil does not only compare his Æneas (under whom is generally ſuppoſed to be meant Auguſtus) to Apollo for beauty; but, in another place, he ſeems to call Auguſtus himſelf (who was really very beautiful) by the name of this god. *Spence's Polym.*

Ver. 771. Virgil has adopted this compariſon, where he repreſents Cloanthus's ſhip as moved forward by Portunus:

——Et pater ipſe manu Portunus euntem
Impulit: illa noto citius volucrique ſagittâ
Ad terram fugit, et portu ſe condidit alto.
Æn. v. 241.

Ver. 900. Nothing was deemed by the ancients more eſſential to the beauty of a young perſon (and Apollo was always repreſented a youth) than fine long hair. Hence the epithets *crinitus* and *incenſus* are ſo often given to Apollo.

——crinitus Apollo,
Nube ſedens. *Virg. Æn. ix.* 638.
——ſic tibi ſint intonſi, Phœbe, capilli. *Tibull.*

Ver. 946. They are called by our poet in this place, and by Theocritus, Id. xii 27. Νισαῖοι Μεγαρῆες; from Niſa, which, as the Scholiaſt informs us, was the name of their dock. It was ſo named from Niſus, ſon of Pandion, and king of this people.

The Megarenſians, going out to plant a colony in Heraclea, were driven by diſtreſs of weather into the river Acheron, which from the protection it afforded them, they called Soönautes.

Ver. 1028.
Sed non augurio potuit depellere peſtem.
Æn. ix. 328.
The fate of others he had oft foreſhown,
But fail'd, unhappy! to prevent his own. *Pitt.*

Ver. 1029. This deſcription of a boar hid among the ruſhes, and the terror of the neighbourhood, reminds us of the following beautiful lines of Ovid, who is deſcribing the Caledonian boar:

Concava vallis erat, quo ſe demittere rivi
Aſſuerant pluvialis aquæ: tenet ima lacunæ
Lenta ſalix, ulvæque leves, juncique paluſtres,
Viminaque, et longæ parvâ ſub arundine cannæ:
Hinc aper excitus, medios violentus in hoſtes
Featur, ut excuſſis eliſus nubibus ignis.
Ov. Met. L. viii.

Ver. 1167. This river riſes in Paphlagonia, and derives its name from the cheerful meadows through which it flows. *Strabo.*

Ver. 1176.
Thy groves of box, Cytorus, ever green.
Pope's Il. B. ii.

Hence things made of box were called Cytoriaca.

Sæpe Cytoriaco deducit pectine crines.

Ver. 1204. The Greeks, who would fain deduce every thing from their own language, imagined, that by the term Amazon was ſignified a perſon without a breaſt. From this wrong etymology proceed all the abſurdities with which the hiſtory of this extraordinary people abounds. They were in general Cuthite colonies from Egypt and Syria; and as they worſhipped the ſun, they were called Azones, Amazones, Alazones; which are names of the ſame import. The moſt noted were thoſe, who ſettled near the river Thermodon, in the region of Pontus.

Quales Theïciæ, cum flumina Thermodontis
Pulſant, et pictis bellantur Amazones armis.
Æn. xi. 658.

Ver. 1229. The Amazons worſhipped the deity from whom they received their name; viz. Azon and Amazon, the ſame as Ares, the ſun. They worſhipped alſo Harmon, the moon; which the Grecians changed to a feminine, Harmonia. So that by γυνὴ Ἄρεος καὶ Ἁρμονίης is meant the children of the ſun and moon. *Bryant's Myth.*

Ver. 1251. It is remarked of this people, that they are uncommonly addicted to laughter and buffoonery. Some have accounted for the abſurd cuſtom, here alluded to, from this cauſe. But it is difficult to aſſign a reaſon for the many abſurd cuſtoms which different nations have adopted. It has been recorded by grave hiſtorians, that the ancient Spaniards and the Americans follow the practice of the Tibareneans.

Ver. 1260. Xenophon gives us the moſt authentic accounts of this people in the fifth book of his Anabaſis. He tells us, that they do thoſe things in private, which others do in public: that they talk to themſelves, laugh by themſelves, and dance alone, as if they were ſhowing their ſkill in public. Savage and indecent as the cuſtom, alluded to by our poet, may ſeem, Strabo aſcribes the ſame barbarities to the Iriſh, and Cæſar makes the ſame obſervations on the ancient Britons.

Ver. 1269. Thus Pomponius Mela, l. i. c. 19. Reges ſuffrageo deligunt, vinculiſque et arctiſſimâ cuſtodia tenent; atque ubi culpam pravè quid imperando meruere, inediâ totius diei afficiunt.

Ver 1301. This cymbal, or crotalum, was made, the Scholiaſt tells us, by Vulcan; Hercules

received it from Pallas. The description of this instrument is differently given by different authors. Our poet tells us it was made of brass; others represent it as formed of a rod or reed cut in two; both parts of which, when struck together, emitted a sound after the manner of castanets. This latter description agrees with the opinion of Suidas, and the Scholiast of Aristophanes.

Ver. 1386. Thus Virgil, *Æn.* i. 784.

Jupiter (hospitibus nam te dare jura loquuntur).

Almighty Jove! who pleads the stranger's cause;
Great guardian god of hospitable laws. *Pitt.*

And Homer, in the words of Mr. Pope, *Od. B.* ix.

The poor and stranger are Jove's constant care;
To Jove their cause and their revenge belongs,
He wanders with them, and he feels their wrongs.

Ver. 1430. The tombs, of which frequent mention is made by the ancient writers, were in reality high altars or pillars, and not, as has been supposed, monuments erected in honour of the dead. Such an one the Argonauts are said to have found in the temple of Mars, when they landed upon the coast of Pontus. This was the express object to which the Amazonians paid their adoration; as they lived in an age when statues were not known. *Bryant's Myth.*

Ver. 1472. Apollonius mentions an ancient Typhonian Petra in the hollows of the mountain. It was an Ophite temple, where the deity was probably worshipped under the figure of a serpent. Hence the poet supposes the serpent, with which Jason engages, to have been produced in those parts. *Bryant's Myth.*

Ver. 1497. Saturn, to avoid being discovered by his wife Ops, while he was engaged with Philyra his mistress, turned himself into a beautiful horse.

Chiron, the famous centaur, was the son of this nymph Philyra.

Ver. 1547. The Greek here, and at v. 1399, is δρυὸς; but at v. 534 the word is φηγοῖο, *a beech*: both which trees bearing mast, they may perhaps be indiscriminately used.

BOOK III.

THE ARGUMENT.

Juno and Pallas intercede with Venus. They request that she would persuade Cupid to inspire Medea with love for Jason. Venus consents; and the shafts of Cupid, at her suit, have their desired effect. Jason, Augeas, and Telamon, proceed to the court of Æeta, where they are hospitably entertained. But having heard the occasion of their voyage, Æeta is incensed, and refuses to bestow the golden fleece on Jason, unless on such terms as he presumed he durst not comply with. The passion of Medea for Jason is described with great simplicity and delicacy. Medea early in the morning repairs to the temple of Hecate: thither Jason, at the suggestion of Mopsus, follows her. The poet dwells particularly on their interview and conference. Medea instructs him how to subdue the brazen bulls and armies of giants. With Jason's combat, and the success of it, the book concludes.

Come, heavenly maid, thy timely succour bring,
And teach thy poet, Erato, to sing,
How Jason, favour'd by the Colchian maid,
To Grecian realms the golden prize convey'd.
Thy songs the rites of Cyprian bliss proclaim,
And in young virgins raise the melting flame;
For the soft passion thy behests approve,
And Erato's the kindred name of love.
Conceal'd in sedges as the heroes lie,
Juno and Pallas mark'd them from the sky;
Apart from all the gods their seats they took
In heaven's high hall, and thus Saturnia spoke:
" Daughter of Jove, thy sage advice impart,
" By what nice fraud, what well-dissembled art,
" These venturous chiefs shall gain the golden
" fleece,
" And safe convey it to the realms of Greece.
" Say, shall they call entreaties to their aid?
" Will soft address the wayward king persuade,
" So sam'd for fierce barbarity and pride?
" No art, no effort, must be left untry'd."
She said; and Pallas thus: ' O queen, I find
' The same ideas rising in my mind:
' To lend assistance to the Grecian train
' My heart is willing, but my counsel vain.'
This said, their minds on various projects ran,
On earth their eyes were fix'd, when Juno thus
began:
" To Venus instant let us speed our way,
" (Her soft persuasions Cupid will obey)
" Entreat her that the wily god inspire
" Medea's soul with love's unconquer'd fire,
" Love for great Æson's son; applauding Greece
" Will by her aid regain the glorious fleece."
She said Minerva patronis'd the plan,
And thus with mild benevolence began:
' I, who arose from Jove's immortal brain,
' Stranger to love, his pleasure or his pain,

' Thy sage proposal from my soul approve ;
' Do thou explain it to the queen of love.'
This said, with speed the two immortals came,
To the grand mansion of the Cyprian dame.
Which crippled Vulcan rais'd when first he led
The Paphian goddess to his nuptial bed.
The gate they pass, and to the dome retire
Where Venus oft regales the god of fire :
(He to his forge had gone at early day,
A floating isle contain'd it on the bay,
Here wond'rous works by fire's fierce power he wrought,
And on his anvil to perfection brought).
Fronting the door, all lovely and alone,
Sat Cytherea on a polish'd throne.
Adown the shoulders of the heavenly fair,
In easy ringlets flow'd her flaxen hair ;
And with a golden comb, in matchless grace,
She taught each lock its most becoming place.
She saw the deities approach her dome,
And from her hand dismiss'd the golden comb ;
Then rose respectful, all with beauty grac'd,
And on rich thrones the great immortals plac'd ;
Resum'd her seat, and with a ready hand
Bound her loose ringlets, and thus question'd bland :
' What cause, ye visitants from heaven, relate,
' Has brought such guests to Cytherea's gate ?
' Ye who excel in high Olympus' sphere,
' Such mighty deities, and strangers here ?'
Then thus Saturnia : " Wantonly you jest,
" When pressing grief sits heavy on our breast.
" Now in the Phasis, with his warlike train,
" Great Jason moors, the golden fleece to gain :
" For that fam'd chief, and for his martial host,
" Dire fears alarm us, but for Jason most :
" This potent arm, whate'er our prowess can,
" Shall snatch from misery the gallant man,
" Though far as hell he, rash adventurer ! go,
" To free Ixion, link'd in chains of woe ;
" Lest Pelias proudly heaven's decrees deride,
" Who on my altars sacrifice deny'd.
" Nay more, young Jason claims my love and
" grace,
" Whom late I met returning from the chase,
" Returning met, as o'er the world I stray'd,
" And human kind, and human works survey'd :
" Hard by Aurarus I beheld the man,
" Wide o'er its banks whose rapid currents ran ;
" From snow clad hills, in torrents loud and
" strong, [mong).
" Roar'd the swoln streams the rugged rocks a-
" He on his back, though like a crone I stood,
" Securely brought me o'er the foaming flood ;
" This won my love, a love for ever true,
" Nor will the haughty-minded Pelias rue
" His flagrant crimes, till you propitious deign
" To speed my Jason to his Greece again."
She spoke, and Venus stood amaz'd to find
The queen of heaven to humble prayer inclin'd ;
Then thus familiar said : ' O wife of Jove,
' Basest of beings call the queen of love,
' Unless her every word and work conspire
' To give you all the succour you require :
' All that my hand, my feeble hand, can do,
' Shall unrewarded be perform'd for you.'
Then Juno thus : " Not difficult the task ;
" No mighty force, no strength of arm I ask.
" Bid gentle love the Colchian maid inspire,
" And for my Jason fan the rising fire ;
" If kind she prove, he gains the golden fleece,
" And by her subtle aid conducts it safe to
" Greece."
Love's queen replied : ' Cupid, ye powers divine,
' Will reverence your injunctions more than mine :
' Your looks will awe him, though, devoid of
' shame,
' Of me the urchin makes eternal game,
' Oft he provokes my spleen, and then I vow
' Enrag'd, I'll break his arrows and his bow :
" Restrain your ire," exclaims the sneering elf,
" Lest you find reason to upbraid yourself."
At this the powers with smiles each other view'd,
And Venus thus her woeful tale pursu'd :
' Others may ridicule the pains I feel,
' Nor boots it all my sufferings to reveal.
' But since ye jointly importune my aid,
' Cupid shall yield, and Venus be obey'd.'
She said ; and Juno press'd her hand and smil'd,
Then answer'd thus, benevolent and mild :
" O grant this boon ; do instant as you say ;
" Chide not the boy, and he will soon obey."
This said, both hasten'd to the realms above,
And left the mansions of the queen of love :
The Cyprian goddess o'er Olympus flies,
To find her son in every dale she pries,
Through heaven's gay meads the queen pursu'd her way,
And found him there with Ganymede at play.
Him Jove translated to the blest abodes,
And, fam'd for beauty, plac'd among the gods.
With golden dice, like boon compeers they play'd :
Love in his hollow hand some cubes convey'd,
Resolv'd to cheat young Ganymede with those,
While on his cheeks the conscious crimson rose.
The Phrygian boy was vanquish'd to his cost,
Two dice alone remain'd, and those he lost.
Silent he sat in dull dejected state,
Enrag'd that Cupid should deride his fate :
His loss increasing with protracted play,
He went a wretch with empty hands away,
Nor saw he Venus : she her Cupid took
Fast by the cheek, and thus upbraiding spoke :
' And can you laugh, you fly, deceitful elf ?
' Such tricks will bring a scandal on yourself,
' But haste, my Cupid, my commands obey,
' And a nice plaything shall your toils repay,
' What once to Jove dear Adrastæa gave,
' When Jove was nourish'd in the Cretan cave,
' A sweet round ball ; oh ! keep it for my sake,
' A finer ball not Vulcan's hands can make.
' Gold are the circles, beauteous to behold,
' And all the finish'd seams are wrought in
' gold ;
' But all so close, they scarcely can be found :
' And the pale ivy winds its wreaths around.
' If high in air you fling this ball afar,
' It shines and glimmers like a radiant star.
' This prize I'll give, if you propitious prove,
' And lure Medea to the toils of love ;

'Fire all her soul for Jason: haste, away;
'The favour is diminish'd by delay.'
She said, and Cupid listening long'd to hear,
For her sweet words are music to his ear.
He ceas'd his pastime, and with both his hands
Hangs on the goddess, and the ball demands.
She kiss'd her boy, and press'd him to her cheek,
And fondly smiling, thus she answer'd meek:
'By thee, my son, and by myself I swear,
'By all that's sacred, and by all that's dear,
'This ball I'll give thee, if thy fatal dart
'Thou fix unerring in Medea's heart.'
This said, he gather'd all his dice with haste,
And in his mother's splendid lap he plac'd.
Then snatch'd his bow and quiver from the ground,
And to his back with golden girdle bound.
From Jove's all-fertile plains he swift withdrew,
And through Olympus' golden portals flew.
Thence the descent is easy from the sky,
Where the two poles erect their heads on high,
Where the tall mountains their rough tops display,
And where the sun first gives the radiant day.
Hence you behold the fertile earth below,
The winding streams, the cliffs' aërial brow,
Cities extended on the distant plain,
And through the vast expanse the roaring main.
On the broad Phasis, in a sedgy bay,
Stretch'd on the deck the Grecian heroes lay;
Till call'd to council rose each godlike man,
And Jason thus the conference began:
"To you, my comrades, be my counsel known,
"'Tis yours that counsel with success to crown.
"One common cause our great emprise is made;
"The common cause demands the common aid.
"He who unutter'd can his counsel keep,
"Stays our resailing o'er the sounding deep.
"I to Æeta's court will speed my way,
"The rest well-arm'd shall in the vessel stay;
"With me shall go, the palace to explore,
"Phrixus' brave sons and two associates more.
"First will I prove the power of soft address
"To gain the fleece; complacence wins success.
"If in his arms he sternly should confide,
"And spurn our claims with insolence and pride,
"Consult we whether, when such powers oppress,
"By arms or arts to free us from distress.
"Be force the last alternative we take,
"For soothing speeches deep impressions make;
"And oft, where force and martial prowess fail,
"The milder powers of eloquence prevail.
"Once king Æeta kind reception gave
"To blameless Phrixus, when escap'd the wave
"He fled from Ino's unrelenting hate,
"And the dire altars that denounc'd his fate
"Savage or social all alike approve
"The sacred rites of hospitable Jove."
He said: the Greeks his sage advice rever'd;
No voice dissentient through the host was heard:
Augeas then, and Telamon attends,
And with them Phrixus' sons, his faithful friends;
Jason they follow: he thy peaceful wand,
All-sapient Hermes, brandish'd in his hand.
Soon from the ship they gain the rising ground,
Mount every steep, and o'er the marshes bound,
Till Circe's plain they reach; in many a row
Here humble shrubs and lonely willows grow;
On whose tall branches wavering o'er the fen,
Suspended hang the carcases of men.
At Colchos still this barbarous rite prevails:
They never burn the bodies of the males,
Nor deep in earth their decent limbs compose,
And with sepulchral dust the dead enclose;
But in raw hides they hang them high in air:
And yet, that earth may equal portions share,
Departed females to the grave they doom,
(Such are their rites) and close them in the tomb.
The chiefs advance; but friendly Juno shrouds
Her favourite heroes in a veil of clouds,
That none, too curious, might their steps delay,
While to the regal dome they bent their way:
But when unseen they pass'd the vulgar crowd,
The same kind deity dissolv'd the cloud.
Full in the court they stand with fix'd amaze,
On the proud gates, strong walls and columns gaze,
Which, rear'd in rows, erect their heads on high
And lift the brazen cornice to the sky.
The portal past, young branching vines appear,
And high in air their verdant honours rear:
Beneath whose boughs, by matchless Vulcan made,
Four copious fountains in four currents play'd;
The first with milk, with wine the second glow'd,
Ambrosial oil the third, the fourth with water flow'd;
This, as by turns the Pleiads set or rose,
Dissolv'd in summer, and in winter froze.
Such were the wonders which the chiefs admire,
All highly finish'd by the god of fire.
With these were brass-hoof'd bulls of curious frame,
From brazen nostrils breathing living flame.
And near a plough of burnish'd steel was laid,
Which for the god of day great Vulcan made,
When Phœbus brought him in his friendly car,
Sore harass'd in the fierce Phlegrean war.
The midmost court they reach; on either side
Large folding doors the various rooms divide.
Two painted porticoes salute their eyes,
And high in air transverse two turrets rise;
In this, which far in stately height excels,
Æeta with his royal consort dwells:
Absyrtus that contains, his royal heir,
Descended from Asterode the fair,
A Scythian nymph, ere yet Æeta led,
Idya Ocean's daughter to his bed.
Him Phaëton the youthful Colchians call,
For he in beauty far surpass'd them all.
The proud apartments that remain'd contain
Chalciope, Medea, and their train.
Ordain'd a priestess to the Stygian queen,
She at the palace now was seldom seen:
But artful Juno, on this signal day,
Within the regal court decreed her stay.
Here now, from room to room, the pensive maid,
To find Chalcione her sister, stray'd.
Soon as she spied them in the spacious hall,
Aloud she call'd, her sister heard her call,
And with her maidens sallied from the door;
Their growing webs were scatter'd on the floor.

Well-pleas'd her sons she sees, and raptur'd stands,
While high to heaven she rears her greeting hands;
With equal joy to her embrace they fly.
Then thus Chalciope with plaintive cry:
'Here though you left me, heedless of my cries,
'See! fate hath frown'd upon your bold emprise;
'Hath check'd your voyage o'er the distant main,
'And soon restor'd you to these arms again.
'Wretch that I was, when, by your sire's com-
'mand,
'Ye sought in evil hour the Grecian land!
'Sad was the task your dying sire enjoin'd,
'Sad and distressful to a mother's mind.
'Ah! whence the wish Orchomenos to see,
'His city visit, and abandon me?
'Yes, Athamas's fancied wealth to gain,
'Ye left me sorrowing, and ye sought the main.'
Rous'd by her cries, at length Æeta came,
And to the hall repair'd his royal dame.
With busy crowds the spacious hall is fill'd;
The steer is chosen, and the victim kill'd.
Some heat the bath, some cleave the knotty wood,
And all attentive round their monarch stood.
Cupid, meantime, through liquid air serene,
Speeds to the Colchian court, his flight unseen;
Like that large fly, which breeze the shepherds call,
That hastes to sting the heifers in the stall.
The nimble god unseen the porch ascends,
And there his bow behind a pillar bends;
A fatal arrow from his quiver took,
And, quick advancing with insidious look,
Behind great Æson's son, conceal'd from sight,
He fits the arrow, fatal in its flight;
Bends the tough bow with all his strength and art,
And deep he hides it in Medea's heart.
A sudden transport seiz'd the melting maid:
The god, exulting now, no longer staid.
The glowing shaft the virgin's heart inspires,
And in her bosom kindles amorous fires.
On Jason beam'd the splendour of her eyes;
Her swoln breast heav'd with unremitting sighs:
The frantic maid had all remembrance lost,
And the soft pain her sickening soul engross'd.
As some good house-wife, who, to labour born,
Fresh to her loom must rise with early morn;
Studious to gain what human wants require,
In embers heap'd preserves the seeds of fire;
Renew'd by these the brand rekindling burns,
And all the glowing heap to ashes turns:
Thus, kindling slow, love's secret flames invade,
And torture, as they rise, the troubled maid:
Her changeful cheeks the heart-felt anguish show,
Now pale they turn, now like the ruby glow.
The rich repast by seneschals prepar'd,
Fresh from their baths return'd, the strangers shar'd;
And when the rage of hunger was suppress'd,
His grandsons thus the Colchian king address'd:
'Sons of my child, and Phrixus, honour'd most
'Of all the guests that reach'd the Colchian coast,
'Say, why so soon return'd? what loss constrains
'This speedy visit to your native plains?
'In vain, with terrors for your safety fraught,
'I urg'd the distance of the climes ye sought;
'Warn'd, since of old my sire's bright chariot bore
'Me and fair Circe to Hesperia's shore,
'Where now o'er Tuscan realms my sister reigns,
'A long, long distance from the Colchian plains.
'But what of this? come now, the cause declare
'That brought you back, and who these heroes
'are.'
Then Argus, anxious for the Grecian band,
By birthright eldest, rose and answer'd bland:
"Our ship, O king, by nightly tempests tost,
"On Mars's isle, a dreary coast, was lost;
"We, on the wreck by furious surges driv'n,
"Were sav'd at last by kind protecting heav'n.
"Nor did those birds then desolate the shore,
"Dire harpies that infested it before;
"For these brave warriors the preceding day,
"Had driv'n the curst, infernal fiends away.
"Sure to our prayer some god inclin'd his ear;
"For when of Phrixus and your name they
"hear,
"Food for our wants, and raiment they convey,
"And to your city now they bend their way.
"But would you know, I'll tell their purpos'd
"plan:
"Lo! sprung from Æolus the godlike man,
"Whom a fierce tyrant's stern decree constrains
"To quit his country and his rich domains:
"Nor can he 'scape Jove's rage, unless the fleece,
"Base theft of Phrixus, be restor'd to Greece,
"Their ship was fashion'd by Minerva's aid;
"How different are the Colchian vessels made!
"Ours, far the worst that ever rear'd a mast,
"Split with the tempest's desolating blast;
"Theirs, firm-compacted, and of fittest wood,
"Defied each storm that heav'd the troubled
"flood:
"With equal speed their nimble vessel sails,
"Impell'd by oars alone, or favouring gales,
"In this their chief, with chosen Greeks explores
"Unnumber'd seas, and towns, and wide extend-
"ed shores.
"And now he sues the golden fleece to gain;
"But that as best your princely will ordain—
"Nor hostile comes he; as a friend he brings
"Large gifts proportion'd to the state of kings.
"Inform'd the fierce Sarmatians waste your lands,
"He vows destruction to their barbarous bands.
"Their names and lineage would you wish to
"hear,
"Lend to my narrative a listening ear,
"He, in whose cause the Grecian chiefs conspire
"Is valiant Jason, Æson is his sire,
"The son of Cretheus thus are we ally'd
"By blood, relations on the father's side:
"The sons of Æolus were Cretheus fam'd,
"And Athemas, whose heir was Phrixus nam'd.
"'Mid your brave chiefs, Angeus you survey,
"Illustrious offspring of the god of day,
"And Telamon, who high his birth can prove,
"His sire is Æacus, his grandsire Jove:
"The rest, that visit your august abodes,
"Are all the sons or grandsons of the gods."
This said, the king with indignation swell'd,
But chief enrag'd his grandsons he beheld;

Through them he deem'd the Greeks to Colchus came:
His eyeballs redden'd with avenging flame,
While thus he spoke: 'Hence from my sight away,
'Nor longer, traitors, in my kingdom stay:
'Back, back to Greece your speedy course pursue,
'Nor idly hope the golden fleece to view.
'Not for that fleece (vain pretext ye must own)
'But for my sceptre came ye, and my crown.
'Had ye not first my feast partook to-day,
'Your tongues and hands, torn out and lopp'd away,
'Should for your bold atrocious crimes atone:
'My just revenge had spar'd your feet alone,
'To bear you hastily to Greece again,
'Dreading to visit more my just domain,
'And with your perjuries the gods profane.'
He said: bold Telamon with fury burn'd,
And to the king stern answer had return'd,
But Jason check'd his warmth, and mild reply'd:
"Let not Æeta falsely thus decide.
"Nor crowns, nor empires, come we here to gain;
"Who for such wealth would measure half the main?
"But fate, and Pelias' more severe command,
"Have forc'd the suppliant on your friendly land.
"Aid us, and Greece your praises shall record,
"And thank you, sovereign, with their conquering sword;
"Whether the fierce Sarmatians to enthrall
"Or realms more barbarous for your vengeance call."
While Jason thus in gentlest terms reply'd,
The tyrant's breast distracting thoughts divide,
Whether with vengeance on the foe to fly,
Or in the field of Mars his courage try.
On this resolv'd, 'What need (he thus begun)
'With tedious tales my harass'd ears to stun?
'For whether from immortals ye descend,
'Or match'd in might ye dare with me contend,
'Soon will I prove; that proof must thou display;
'Then, if victorious, bear the fleece away;
'Nor shall my hand the golden prize withhold:
'Like your proud lord, I envy not the bold.
'This nervous arm shall now sustain the fight,
'Which calls to speedy proof thy boasted might,
'Two bulls in Mars's field your wonder claim,
'Their hoofs of brass, their nostrils breathing flame.
'These oft I seize, and to the yoke constrain
'To plough four acres of the stubborn plain.
'No seeds I sow, but scatter o'er the land
'A dragon's teeth; when, lo! an armed band
'Of chiefs spring up; but, soon as they appear,
'I slay th' embattled squadrons with my spear.
'Each morn I yoke the bulls, at eve resign:
'Perform this labour, and the fleece is thine.
'These are the terms; on these the prize I quit:
'The weaker to the stronger most submit.'
He said; and Jason, sunk in thought profound,
Sat mute, his eyes fast fix'd upon the ground;
Long time he ponder'd o'er the vast design,
Nor dar'd with confidence the battle join.
So hard the task, he stood embarrass'd long,
At last these words dropp'd cautious from his tongue:
"Cruel thy terms, but just: my strength I'll try
"In this dread conflict, though ordain'd to die.
"For, say, what law so rigorous can there be
"As the hard law of fix'd necessity?
"That law which forc'd me from my native home,
"And bade me thus in search of dangers roam?"
Perplex'd he spoke; then thus the king in rage:
'Rejoin thy comrades, since thou dar'st engage.
'But if the bulls constrain thy heart to yield,
'Or the dread dangers of the martial field,
'Be mine the toil; that hence the coward slave
'May dread to combat with the bold and brave.'
Imperious thus the haughty king replies:
And from their seats incens'd the heroes rise.
To warn his brothers here, at home, to wait,
Argus stopp'd short awhile; then rush'd they through the gate.
Far o'er the rest, in grace unmatch'd alone,
And charms superior, youthful Jason shone.
Him through her veil the love-distracted maid
With melting eyes and glance oblique survey'd:
Her mind, as in a dream, bewilder'd ran,
And trac'd the footsteps of the godlike man.
Sorrowing they went: to shun the monarch's ire,
With fond Chalciope her sons retire:
Medea follow'd, but with cares oppress'd;
Such cares as love had rais'd within her breast.
His graceful image in her mind she bore,
His gait, his manner, and the robe he wore,
His pointed words: through earth's remotest bound
No prince she deem'd with such perfections crown'd:
His tuneful voice, still still she seems to hear,
Still the sweet accents charm her listening ear.
The bulls and wrathful king excite her dread:
She mourns his fate, as if already dead.
From her bright eyes the shower of anguish breaks,
And thus, o'erwhelm'd with woe, Medea speaks:
"Why fall the tears of sorrow from my eyes,
"Though he the first or last of heroes dies?
"Perish the man!—no, safely let him sail;
"And may my prayer, kind Hecate, prevail!
"Safe sail he home; but, ah! if doom'd to bleed,
"Teach him, that I rejoice not in the deed."
Thus mourn'd the maid: meantime, to join their train,
The chiefs pursue their course along the plain;
Then Argus thus: 'Though, Jason you may blame,
'And spurn the counsel which I now proclaim;
'Yet sure for us, with threatening dangers press'd,
'To try some safe expedient must be best.
'A maid there is whose wond'rous art excels,
'Long taught by Hecate, in magic spells:
'If she propitious to our wishes yield,
'Thou com'st victorious from the martial field:
'But if Chalciope decline her aid,
'Be mine with tendrest motives to persuade.
'Instant I'll go, on her for succour call;
'For lo! one general ruin threatens all.

Humane he ſpoke, and Jaſon thus rejoin'd;
" Much I admire the purpoſe of thy mind.
" Go, friend, to thy Chalciope repair,
" Sue her with ſoft entreaty and with pray'r:
" But, ah! vain hopes our vacant minds muſt fill,
" Who truſt for conqueſt to a woman's ſkill."
He ſaid; and ſoon they join'd their ſocial train,
Rejoic'd to meet their princely peers again.
Then Jaſon thus began his mournful tale:
" With proud Æeta ſoft entreaties fail;
" Our purpos'd end unable to attain,
" Vain are my words, and your inquiries vain.
" Two monſtrous bulls the tyrant bid me tame;
" Their hoofs of braſs, their noſtrils breathing flame;
" Theſe muſt my proweſs to the yoke conſtrain,
" To plough four acres of the ſtubborn plain;
" My ſeed a dragon's teeth, to ſow the land;
" When lo! up ſprings a formidable band
" Of bright-arm'd giants; ſoon as they appear,
" Poiz'd by this arm, my well-directed ſpear
" Muſt pierce the foe: intrepid I accede
" To the hard terms, nor future dangers heed."
He ſaid: they deem'd it all a deſperate deed;
Silent they ſtood, with ſad dejected look
Each gaz'd on other, till bold Peleus ſpoke:
'Time calls for our reſolves; our ſafety ſtands
'No more in counſel, but in ſtrength of hands.
'If, Jaſon, eager of the honour, thou
'Wilt yoke theſe fiery monſters to the plough,
'Haſte to the charge; but if thy ſoul relent,
'Sunk in ſad bodings of the dire event,
'Nor dar'ſt thou go; then go not, nor look round,
'If haply here ſome fitter man be found:
'Myſelf will go, and riſk my deareſt breath;
'No greater evil can befal than death.'
He ſpoke; and Telamon with rage inſpir'd
Starts up, and Idas with like fury fir'd;
Next the twin race of Tyndarus ariſe;
Laſt Œneus' ſon, who with the braveſt vies;
Though o'er his cheeks ſcarce ſpreads the callow down,
His heart beats high for honour and renown.
And while the reſt in mute attention ſtand,
Argus beſpeaks the emulative band:
" Though hard the taſk, O chiefs, I ſtill portend
" My parent will aſſiſt, and prove a friend.
" Still in your ſhip a while with patience wait;
" For raſhneſs will accelerate your fate.
" Know, at Æeta's court a maiden dwells,
" Deep ſkill'd by Hecate in magic ſpells: [ſteep,
" All plants ſhe knows that grow on mountains
" On vales, on meads, or in the boundleſs deep:
" By theſe ſhe quells the fire's relentleſs force,
" Stops the mad torrent in its headlong courſe,
" Retards the planets as they roll on high,
" And draws the moon reluctant from the ſky.
" As from the palace o'er the plain we came
" We mention'd oft my mother's honour'd name;
" If ſhe perchance her ſiſter could perſuade,
" And fix our intereſt in the magic maid.
" Back, if you bid, my ready ſteps I bend;
" Fortune may ſmile, and fair ſucceſs attend."
He ſaid; when, lo! this ſignal of their love,
Was kindly given them by the powers above;
For, by the falcon chas'd, a trembling dove,
Far from his foe, to Jaſon's boſom flies;
Stunn'd on the deck the felon falcon lies.
Then Mopſus thus divin'd: 'The powers of heav'n,
'They, they alone this gracious ſign have giv'n,
'Be then the maid in mildeſt terms addreſs'd;
'She'll liſten friendly to our joint requeſt,
'I ween ſhe will; if Phineus could foreknow
'That we to Venus muſt our ſafety owe.
'For, lo! her bird eſcapes: oh! may we prove
'With ſafety crown'd, like her auſpicious dove.
'Entreat we now for Citherea's aid,
'And let th' advice of Argus be obey'd.'
Thus he; the chiefs approv'd, remembering well
What Phineus deign'd prophetic to foretel:
Idas alone with indignation burn'd,
And with loud voice thus inſolent return'd:
'Gods! what a crew hath Argo wafted o'er!
'Women, not heroes throng the hoſtile ſhore.
'Women, who ſtill to Venus' altars fly,
'Nor dare but only on her aid rely.
'No warlike deeds your daſtard ſouls inflame:
'To you is Mars an unregarded name.
'As doves or falcons but direct your flight,
'You flinch at danger, and you dread the fight.
'Go; and all manly martial toils forbear,
'Sue to weak women, and deceive the fair.'
Furious he ſpoke; a general murmur ran
Through the whole train; yet none oppos'd the man;
Indignant then he ſat. Of dauntleſs breaſt
Thus Æſon's ſon the liſtening train addreſs'd:
" This inſtant Argus to the town I ſend,
" For thus the general ſuffrages intend:
" Meanwhile approach we nearer to the land,
" And fix, in ſight, our halſers to the ſtrand:
" Ill ſuits us longer thus to lie conceal'd;
" We neither ſhun, nor dread the fighting field."
He ſaid, and Argus went without delay,
And to the city backward ſped his way;
At Jaſon's call they ply the labouring oar,
And land their beds and couches on the ſhore.
Meantime the king a council call'd, and ſat,
(So were they wont) without the palace-gate.
Aſſembled there, unceaſing toils they plann'd,
And wiles deſtructive to the Grecian band.
Thus he ordain'd, that when the bulls had ſlain
And ſtretch'd this dauntleſs hero on the plain,
Himſelf would lay the lofty foreſt low,
And for the funeral pile prepare the bough:
Their boaſted ſhip ſhould be conſum'd with fire,
And every traitor in the flames expire.
No hoſpitable rites had Phrixus ſhar'd,
Though much he wiſh'd and merited regard,
Had not Jove haſten'd Hermes from above
To win his favour and beſpeak his love.
Were theſe invaders of his native ſoil
To thrive unpuniſh'd by rapacious ſpoil,
Soon would they make his lowing herds a prey,
And drive the ſhepherds and their flocks away.
But Phrixus' ſons, who join'd the lawleſs crew,
He vow'd with double vengeance to purſue:
Baſe plunderers! come to ſpoil him of his crown.
So had the ſun, his ſapient ſire, foreſhown:

Who warn'd him to ſuſpect his faithleſs race,
And dread from them deſtruction and diſgrace.
Therefore diſmiſs'd he, by his ſire's command,
The youths far diſtant, ev'n to Grecian land.
His daughters gave him no perplexing care,
Nor young Abſyrtus, his adopted heir;
But from Chalciope's deteſted race
He look'd for injuries, and fear'd diſgrace.
Thus ſtern denouncing, as with rage he ſwells,
Death on each daring ſubject that rebels,
His guards he charg'd, and threaten'd vengeance due,
If either ſcap'd, the veſſel or the crew.
Swift to the palace Argus now repairs,
And to his pitying mother pours his pray'rs,
That ſhe might importune Medea's aid:
Nor had the queen her ſon's requeſt delay'd,
But boding fears her willing mind reſtrain,
Leſt all her fond entreaties ſhould be vain;
And ſhould the project be diſcloſ'd to view,
Her father's ire the magic maid muſt rue.
As on her couch reclin'd the virgin lay,
Soft ſlumbers chas'd her anxious cares away;
But frantic dreams, which love-ſick maids infeſt,
Preſent falſe terrors, and diſturb her reſt.
Her hero ſeem'd the taſk to undertake,
But not for honour or the fleece's ſake;
For her alone he riſk'd the glorious ſtrife,
To gain her love, and win her for his wife.
She then in dreams her utmoſt ſuccour lends,
And with the bulls herſelf in fight contends.
Her parents ſhe, in fancied rage, averr'd
Falſe and regardleſs of their promis'd word,
Who Jaſon doom'd the brazen bulls to foil,
But made her not a partner of the toil.
Then warm diſputes and fierce contentions reign
Between Æeta and the Grecian train:
On her deciſion both the parties wait,
And deem what ſhe determines to be fate.
In ſpite of parents, the fond maid expreſs'd
Her choice in favour of her godlike gueſt.
Rage wrung their ſouls, and grief, and dire diſmay,
Till the loud clamour chas'd her ſleep away,
Trembling ſhe ſtarts; pale fears confus'd her look;
Her ſoul reviv'd, and thus the virgin ſpoke:
'Alas! what fruitful dreams alarm my breaſt
'For theſe fam'd chiefs, but moſt the royal gueſt?
'I fear, ſome mighty miſchief will enſue
'From this bold leader and his gallant crew.
'Yes, let him wed far off ſome Grecian dame;
'Be mine my parents' houſe, my virgin's fame.
'If from my headſtrong purpoſe I refrain,
'My ſiſter's counſel might relieve my pain:
'Oh! for her ſons would ſhe my aid implore,
'My griefs would ceaſe, my ſorrows be no more!'
She ſaid, and roſe, nor longer deign'd to wait,
But paſt the threſhold of her ſiſter's gate,
Barefoot, undreſt; long time ſhe there remain'd,
(For modeſt fears her paſſing ſtep reſtrain'd);
Then back retreats; new courage ſoon acquires;
Again advances, and again retires:
Paſſions ſo various ſway'd the virgin's breaſt,
That when fierce love impell'd her, fear repreſs'd:
Thrice ſhe eſſay'd, and thrice retreating fled;
Then on the pillow ſunk her drooping head:
As ſome young damſel, whom her friend had join'd
In marriage to the darling of her mind,
Conceal'd in ſecret, mourns her blooming mate
Snatch'd from her arms by ſome untimely fate,
Ere yet kind heaven indulg'd them to employ
The golden moments in connubial joy:
In ſilence ſhe, though ſtung with torturing grief,
Seeks on the widow'd bed the wiſh'd relief;
Looks eager round, then ſheds the trembling tear,
Screen'd from the female eye, and tongue ſevere.
Thus mourn'd Medea, not unſeen; her pain
Was mark'd by one, the youngeſt of her train;
Who told Chalciope Medea's grief:
And the ſad tale exceeded her belief:
Her ſons conſulting, ſhe with them eſſay'd
To ſooth the ſorrows of the love-ſick maid.
Inſtant ſhe roſe, and trembling with diſmay
Came to the chamber where her ſiſter lay;
Torn were her cheeks, the tears her grief confeſs;
And thus Chalciope the maid addreſs'd:
'Say, why thoſe tears that thus inceſſant fall?
'What mighty ills your feeble mind appal;
'Say, does ſome heaven-ſent woe your grief inſpire?
'Or in your boſom dwells Æeta's ire,
'My ſons and I the cauſe? Oh! far from home,
'On the worlds utmoſt limits may I roam,
'Nor ſee my parents, nor my native ſhore.
'Nor hear the hated name of Colchos more.'
She ſaid: Medea's cheeks the crimſon ſtain'd;
She ſtrove to ſpeak, but ſhame her words reſtrain'd.
Now on her lips the ready accents hung,
Now ſtifled in her breaſt: her faultering tongue
Long time the purpoſe of her ſoul with-held,
Artful at length ſhe ſpoke, by love impell'd:
"Dire fears, Chalciope, my ſoul diſmay, [ſlay,
"Leſt with theſe gueſts my ſire thy children
"My frightful dreams ſuch horrid ſcenes preſent;
"May ſome kind deity theſe woes prevent!
"Leſt for thy ſons the tears eternal flow:"
Thus ſpoke the maid, inquiſitive in woe,
If haply for her children's fate afraid,
Chalciope might firſt ſolicit aid.
Mix'd grief and terror all the mother ſhook,
At laſt, impaſſion'd, thus ſhe trembling ſpoke:
''Tis for their ſakes I now before thee ſtand;
'Lend me, O lend thy ſalutary hand!
'But ſwear by earth and heaven what I unfold
'Reſts in thy boſom, never to be told:
'By the great gods, and all that's dear I call,
'Swear thou wilt never ſee my children fall,
'Leſt I too periſh, and in fell deſpight
'Riſe a dread fury from the ſhades of night.'
Earneſt ſhe ſpoke, and tears inceſſant ſhed,
Then on her ſiſter's breaſt reclin'd her head,
And mix'd their mutual ſighs; groan anſwer'd groan,
And the wide palace echo'd to their moan.
Medea thus in mournful terms replies:
"Alas! what ſuccour can my thoughts deviſe,

" Thus with thy cruel menaces oppreſs'd?
" Oh, ſtill uninjur'd may thine offspring reſt!
" By heaven above I ſwear, and earth below,
" Earth, the great mother of the gods, I vow,
" (If aught my power can do, or words perſuade)
" To give thee counſel, and to lend my aid."
Thus ſpoke the maid; and thus Chalciope;
' Perhaps, in favour of my ſons and me,
' Thy mind, to ſave the hero, might impart
' Some ſecret counſel, ſome myſterious art.
' From Jaſon Argus comes, imploring aid;
' They reſt their ſafety on the magic maid.'
Thus ſhe; with joy exults the virgin's heart,
And riſing bluſhes roſy charms impart;
But ſoon o'ercaſt with grief ſhe thus reply'd:
" To ſerve thee, ſiſter, be no art untry'd.
" Ne'er may I ſee with pleaſurable eyes
" In yon bright orient cheerful morning riſe,
" If aught on earth be half ſo dear to me
" As is the welfare of thy ſons and thee.
" As brethren, they my fond regard engage,
" By blood related, and the ſame our age.
" My ſiſter, moſt eſteem'd, and ever dear,
" Thee with a daughter's love I ſtill revere.
" For with thy children, nurs'd by thee, I ſhar'd
" (So fame reports) a mother's fond regard.
" Go then, and from my prying parents hide
" The means of ſuccour which I now provide.
" All-potent ſpells will I, at dawn of day,
" To Hecate's myſterious ſhrine convey."
Pleas'd with the tale, Chalciope departs,
And with the proffer'd aid tranſports her children's hearts.
Fear mix'd with ſhame now ſeiz'd the lonely maid,
Who dare, her ſire reluctant, lend her aid.
Now riſing ſhades a ſolemn ſcene diſplay
O'er the wide earth, and o'er th' ethereal way;
All night the ſailor marks the Northern Team,
And golden circlet of Orion's beam:
A deep repoſe the weary watchman ſhares,
And the faint wanderer ſleeps away his cares;
Ev'n the fond maid, while yet all breathleſs lies
Her child of love, in ſlumber ſeals her eyes:
No ſound of village-dog, no noiſe invades
The death-like ſilence of the midnight ſhades;
Alone Medea wakes: to love a prey,
Reſtleſs ſhe rolls, and groans the night away:
For lovely Jaſon cares on cares ſucceed,
Leſt vanquiſh'd by the bulls her hero bleed;
In ſad review dire ſcenes of horrors riſe,
Quick beats her heart, from thought to thought ſhe flies:
As from the ſtream-ſtor'd vaſe with dubious ray
The ſun-beams dancing from the ſurface play;
Now here, now there the trembling radiance falls,
Alternate flaſhing round th' illumin'd walls:
Thus fluttering bounds the trembling virgin's blood,
And from her eyes deſcends a pearly flood.
Now raving with reſiſtleſs flames ſhe glows,
Now ſick with love ſhe melts with ſofter woes:
The tyrant god, of every thought poſſeſs'd,
Beats in each pulſe, and ſtings and racks her breaſt:
Now ſhe reſolves the magic to betray—
To tame the bulls—now yield him up a prey.
Again the drugs diſdaining to ſupply,
She lothes the light, and meditates to die:
Anon, repelling with a brave diſdain
The coward thought, ſhe nouriſhes the pain.
Then pauſing this: " Ah wretched me! ſhe cries,
" Where'er I turn what varied ſorrows riſe!
" Toſt in a giddy whirl of ſtrong deſire,
" I glow, I burn, yet bleſs the pleaſing fire:
" Oh! had this ſpirit from its priſon fled,
" By Dian ſent to wander with the dead,
" Ere the proud Grecians view'd the Colchian ſkies,
" Ere Jaſon, lovely Jaſon, met theſe eyes!
" Hell gave the ſhining miſchief to our coaſt,
" Medea ſaw him, and Medea's loſt—
" But why theſe ſorrows? if the powers on high
" His death decree,—die, wretched Jaſon, die!
" Shall I elude my ſire? my art betray?
" Ah me! what words ſhall purge the guilt away!
" But could I yield——O whither muſt I run
" To find the chief—whom virtue bids me ſhun?
" Shall I, all loſt to ſhame, to Jaſon fly?
" And yet I muſt——if Jaſon bleeds I die!
" Honour farewell! adieu for ever ſhame!
" Hail black diſgrace! and branded be my fame!
" Live, Jaſon, live! enjoy the vital air!
" Live through my aid! and fly where winds can bear.
" But when he flies, cords, poiſons lend your pow'rs:
" That day Medea treads th' infernal ſhores!
" Yet what reproach will after death be caſt?
" The maids of Colchos will my honour blaſt—
" I hear them cry—the falſe Medea's dead,
" Through guilty paſſion for a ſtranger's bed;
" Medea, careleſs of her virgin fame,
" Preferr'd a ſtranger to a father's name!
" O may I rather yield this vital breath,
" Than bear that baſe diſhonour worſe than death!"
Thus wail'd the fair, and ſeiz'd, with horrid joy,
Drugs foes to life, and potent to deſtroy;
A magazine of death! again ſhe pours
From her ſwoln eye-lids tears in ſhining ſhow'rs.
With grief inſatiate, comfortleſs ſhe ſtands,
And opes the caſket, but with trembling hands.
A ſudden fear her labouring ſoul invades,
Struck with the horrors of th' infernal ſhades:
She ſtands deep-muſing with a faded brow,
Abſorb'd in thought, a monument of woe!
While all the comforts that on life attend,
The cheerful converſe, and the faithful friend,
By thought deep-imag'd in her boſom play,
Endearing life, and charm deſpair away.
Enlivening ſuns with ſweeter light ariſe,
And every object brightens to her eyes.
Then from her hand the baneful drugs ſhe throws,
Conſents to live, recover'd from her woes;
Reſolv'd the magic virtue to betray,
She waits the dawn, and calls the lazy day:
Time ſeems to ſtand, or backward drive his wheels;
The hours ſhe chides, and eyes the eaſtern hills:

At length the morn displays her rosy light,
And the whole town stands pictur'd to her sight.
Back to the ship (his brothers left behind
To mark the motions of Medea's mind)
Argus return'd; meanwhile her golden hair,
That flow'd diffusive in the wanton air,
The virgin binds, then wipes the tears away,
And from her eyes bids living lightning play;
On every limb refreshing unguents pours,
Unguents that breathe of heaven, in copious show'rs.
Her robe she next assumes, bright clasps of gold
Close to the lessening waist the robe infold:
Down from her swelling loins the rest unbound
Floats in rich waves redundant o'er the ground:
Then takes her veil, and stately treads the room
With graceful ease, regardless of her doom.
Thus forward moves the fairest of her kind,
Blind to the future, to the present blind.
Twelve maids, attendants on her virgin bow'r,
Alike unconscious of the bridal hour,
Join to the car her mules; dire rites to pay,
To Hecate's fair fane she bends her way.
A juice she bears, whose magic virtue tames
(Through fell Persephone) the rage of flames;
For one whole day it gives the hero might,
To stand secure of harms in mortal fight;
It mocks the sword; the sword without a wound
Leaps as from marble shiver'd to the ground.
This plant, which rough Caucasean mountains bore,
Sprung from the venom of Prometheus' gore,
(While on the wretch the savage eagle storm'd)
In colour like Corycian crocus form'd:
On two tall stems up-springs the flowery shoot,
A cubit high; like red raw flesh its root.
From this root's juice, as black as that distill'd
From mountain beeches, the fair maid had fill'd
A Caspian conch; but first, as best beseems,
Array'd in black seven times in living streams
She bath'd; and call'd seven times on Brimo's name;
At midnight hour, the ghost-compelling dame.
She pluck'd the root, earth murmur'd from below,
And sad Prometheus groan'd with agonizing woe.
This root the Colchian maid selecting plac'd
In the rich zone that bound her slender waist:
Then issuing mounts the car, but not alone,
On either side two lovely damsels shone:
Her hand with skill th' embroider'd rein controuls,
Back fly the streets as swift the chariot rolls.
Along the wheel-worn road they speed their way,
The domes retreat, the sinking towers decay:
Bare to the knee succinct a damsel-train
Close throng behind them, hastening to the plain.
As when her limbs divine Diana laves
In fair Parthenius, or th' Amnesian waves,
Sublime in royal state the bounding roes
Whirl her bright car along the mountain brows:
Swift to some sacred feast the goddess moves,
The nymphs attend that haunt the shady groves;
Th' Amnesian fount, or silver-streaming rills
Nymphs of the vales, or Oreads of the hills:
The fawning beasts before the goddess play,
Or, trembling, savage adoration pay:
Thus on her car sublime the nymph appears,
The crowd falls back, and, as she moves, reveres:
Swift to the fane aloft her course she bends,
The fane she reaches, and on earth descends:
Then to her train ——"Ah me! I fear we stray,
"Misled by folly to this lonely way!
"Alas! should Jason with his Greeks appear,
"Where should we fly? I fear, alas, I fear!
"No more the Colchian youths, and virgin train,
"Haunt the cool shade, or tread in dance the plain.
"But since alone—with sports beguile your hours,
"Collect sweet herbs, and pluck the fairest flow'rs:
"If due attention to my words ye pay,
"With richest spoils ye shall return to-day.
"For Argus and Chalciope require,
"(But sacred keep this secret from my sire)
"That for large presents, for my succour paid,
"To this rash stranger I should lend my aid.
"I pass'd my word, and soon without his train
"The Grecian will attend me at the fane:
"In equal portions we the spoil will share—
"For him a dose more fatal I prepare—
"But when he comes, ye nymphs, retire apart."
She spoke; the nymphs approv'd the virgin's art.
When Argus heard the maid with early day
To Hecate's fair fane would speed her way,
He beckon'd Jason from his bold compeers
Apart, and Mopsus most renown'd of seers;
For prescient Mopsus every omen knew
Of birds that parting or approaching flew.
No mortal ever of the first-born race
Display'd like Jason such superior grace,
Whether from demigods he trac'd his line,
Or Jove himself immortal and divine,
As grac'd by Juno, Jove's imperial queen,
With soft address, and dignity of mien.
His comrades gaz'd with wonder as he went;
Mopsus foresaw, and hail'd the blest event.
Hard by the path, and near the temple, stands
A poplar tall, that wide its arms expands;
Here frequent rooks their airy pastime take,
And on the boughs their spray-form'd mansions make:
One shook its pinions (louder than the rest),
And croaking, thus Saturnia's mind express'd:
'Vain seer! whose divinations fail to tell
'Those plain events which children know so well;
'That maids will not, with comrades in the train,
'Tell the soft love-tale to their favour'd swain.
'False prophet, hence! for thee nor love inspires,
'Nor Venus gratifies with soft desires."
Then Mopsus laugh'd, as scoffing thus she spoke,
To hear the bird her dark predictions croak;
And thus: "Hence, Jason, to the fane and find
"The maiden to thy warmest wishes kind;
"Venus approves, and fortune will ensue,
"If what prophetic Phineus said prove true.
"Myself and Argus here will wait apart,
"Go and unfold the secrets of thy heart;
Be every mode of soft persuasion try'd."
He counsel'd wisely, and the chief comply'd.

Meanwhile the maid her ſecret thoughts enjoy'd,
And one dear object all her ſoul employ'd:
Her train's gay ſports no pleaſure can reſtore,
Vain was the dance, and muſic charm'd no more;
She hates each object, every face offends,
In every wiſh her ſoul to Jaſon ſends;
With ſharpen'd eyes the diſtant lawn explores,
To find the hero whom her ſoul adores;
At every whiſper of the paſſing air,
She ſtarts, ſhe turns, and hopes her Jaſon there:
Again ſhe fondly looks, nor looks in vain,
He comes, her Jaſon ſhines along the plain.
As when, emerging from the watery way,
Refulgent Sirius lifts his golden ray,
He ſhines terrific, for his burning breath,
Taints the red air with fevers, plagues, and death;
Such to the nymph approaching Jaſon ſhows,
Bright author of unutterable woes;
Before her eyes a ſwimming darkneſs ſpread,
Her fluſh'd cheeks glow'd, her very heart was dead:
No more her knees their wonted office knew,
Fix'd, without motion, as to earth they grew.
Her train recedes—the meeting lovers gaze
In ſilent wonder, and in ſtill amaze.
As two fair cedars on the mountain's brow,
Pride of the groves, with roots adjoining grow;
Erect and motionleſs the ſtately trees
Short time remain, while ſleeps each fanning breeze,
Till from th' Æolian caves a blaſt unbound
Bend their proud tops, and bids their boughs reſound:
Thus gazing they; till by the breath of love,
Strongly at laſt inſpir'd, they ſpeak, they move;
With ſmiles the love-ſick virgin he ſurvey'd,
And fondly thus addreſs'd the blooming maid:
'Diſmiſs, my fair, my love, thy virgin fear;
'Tis Jaſon ſpeaks, no enemy is here!
Dread not in me a haughty heart to find,
In Greece I bore no proud inhuman mind.
Whom wouldſt thou fly? ſtay, lovely virgin, ſtay!
Speak every thought! far hence be fears away!
Speak! and be truth in every accent ſound!
Scorn to deceive! we tread on hallow'd ground.
By the ſtern power who guards this ſacred place,
By the ſam'd authors of thy royal race;
By Jove, to whom the ſtranger's cauſe belongs,
To whom the ſuppliant, and who feels their wrongs:
O guard me, ſave me, in the needful hour!
Without thy aid thy Jaſon is no more.
To thee a ſuppliant in diſtreſs I bend,
To thee a ſtranger, one who wants a friend!
Then, when between us ſeas and mountains riſe,
Medea's name ſhall ſound in diſtant ſkies;
All Greece to thee ſhall owe her hero's fates,
And bleſs Medea through her hundred ſtates.
The mother and the wife who now in vain
Roll their ſad eyes faſt ſtreaming o'er the main
Shall ſtay their tears: the mother and the wife,
Shall bleſs thee for a ſon's or huſband's life!
Fair Ariadne, ſprung from Minos' bed,
Sav'd valiant Theſeus, and with Theſeus fled.
Forſook her father, and her native plain,
And ſtemm'd the tumults of the ſurging main;
Yet the ſtern ſire relented, and forgave
The maid, whoſe only crime it was to ſave;
Ev'n the juſt gods forgave: and now on high
A ſtar ſhe ſhines, and beautifies the ſky:
What bleſſings then ſhall righteous heaven decree
For all our heroes ſav'd, and ſav'd by thee?
Heaven gave thee not to kill, ſo ſoft an air;
And cruelty ſure never look'd ſo fair!"
He ceas'd, but left ſo charming on her ear
His voice, that liſtening ſtill ſhe ſeem'd to hear;
Her eyes to earth ſhe bends with modeſt grace,
And heaven in ſmiles is open'd on her face.
A look ſhe ſteals; but roſy bluſhes ſpread
O'er her fair cheek, and then ſhe hangs her head.
A thouſand words at once to ſpeak ſhe tries;
In vain—but ſpeaks a thouſand with her eyes;
Trembling the ſhining caſket ſhe expands,
Then gives the magic virtue to his hands;
And had the power been granted to convey
Her heart—had given her very heart away.
For Jaſon beam'd in beauty's charms ſo bright,
The maid admiring, languiſh'd with delight.
Thus, when the riſing ſun appears in view,
On the fair roſe diſſolves the radiant dew.
Now on the ground both caſt their baſhful eyes,
Both view each other now with mild ſurpriſe.
The roſy ſmiles now dimpling on their cheeks,
The fair at length in faultering accents ſpeaks:
"Obſervant thou to my advice attend,
And here what ſuccour I propoſe to lend.
Soon as my ſire Æeta ſhall beſtow
The dragon's teeth in Mars's field to ſow,
The following night in equal ſhares divide;
Bathe well thy limbs in ſome perennial tide;
Then all retir'd, thyſelf in black array,
Dig the round foſs, and there a victim ſlay,
A female lamb; the carcaſe place entire
Above the foſs, then light the ſacred pyre,
And Perſeus daughter, Hecate, appeaſe
With honey, ſweeteſt labour of the bees;
This done, retreat, nor while the relics burn,
Let howling dogs provoke thee to return.
Nor human footſteps; leſt thou render vain
The charm, and with diſhonour join thy train.
Next morn, the whole enchantment to fulfil,
This magic unguent on thy limbs diſtil:
Then thou with eaſe wilt ſtrong and graceful move,
Not like a mortal, but the gods above.
Forget not with this unguent to beſmear
Thy ſword, thy buckler, and tremendous ſpear:
No giant's faulchions then can harm thy frame,
Nor the fell rage of bulls expiring flame.
One day, nor longer, wilt thou keep the field;
Nor thou to perils, nor to labour yield.
But mark my words; when thou with ceaſeleſs toil,
Haſt yok'd the bulls and plough'd the ſtubborn ſoil;
And ſeeſt up-ſpringing on the teeth-ſown land
Of giant foes a formidable band,

" Hurl ſlily midſt their ranks a rough hard ſtone,
" And they, like dogs contending for a bone,
" Will ſlay each other: thou with ſpeed renew
" The glowing fight, and conqueſt will enſue.
" Thus ſhalt thou bear from Æa's realms to
" Greece,
" If ſuch thy fix'd reſolve, the golden fleece."
This ſaid, her eyes were fix'd upon the ground,
And her fair cheeks with ſtreaming ſorrows drown'd;
Deſponding anguiſh ſeiz'd her gentle mind,
Leſt he ſhould leave her comfortleſs behind.
Emboldened thus, him by the hand ſhe preſs'd,
And in the language of her ſoul addreſs'd:
" If ſafely hence thou ſail'ſt, O, think of me!
" As I for ever ſhall remember thee!
" And freely tell me, to relieve my pain,
" Where lies thy home beyond the boundleſs main?
" Say, is Orchomenos thy native ſoil?
" Or dwell'ſt thou nearer on th' Ææan iſle?
" Let me that far-fam'd virgin's name inquire,
" Who boaſts the ſame high lineage with my ſire."
She ſaid; her tears his ſoft compaſſion won,
And thus the chief, by love inſpir'd, begun:
' While on my fancy bright ideas play,
' Thy image never from my ſoul ſhall ſtray,
' If ſafe I ſail, preſerv'd by thee, to Greece,
' Nor heavier labours interrupt my peace.
' But if the diſtant country where I dwell
' Thy will demands, my ready tongue ſhall tell.
' A land there is which lofty hills ſurround,
' For fertile paſtures and rich herds renown'd,
' Where from Prometheus good Deucalion came,
' His royal heir, Hæmonia is the name.
' Deucalion here the firſt foundations laid
' Of towns, built fanes, and men by empire ſway'd;
' There my Iolcos ſtands, and many more
' Fair ample cities, that adorn the ſhore.
' What time, as rumour'd by the voice of fame,
' Æolian Minyas to that country came,
' He built, cloſe bordering on the Theban ground,
' Orchomenos, a city far renown'd.
' But why your wonder ſhould I vainly raiſe?
' My birth-place tell, and Ariadne's praiſe?
' For this the virgin's name you now inquire,
' A lovely maid, and Minos is her ſire.
' Oh! may, like her's, your ſire propitious prove;
' Who honour'd Theſeus with his daughter's love!"
Complacent thus he ſooth'd her ſorrowing ſoul;
Yet anxious cares within her boſom roll.
" Perchance in Greece" (the penſive maid rejoin'd)
" Oaths are rever'd, and ſolemn compacts bind.
" But Minos greatly differs from my ſire,
" Nor I to Ariadne's charms aſpire.
" Then mention hoſpitality no more;
" But, ſafe conducted to thy native ſhore,
" Grant this, 'tis all I aſk, Oh! think of me,
" As I for ever ſhall remember thee,
" In my great ſire, the Colchian king's deſpite:
" But if thy pride my ardent paſſion ſlight,
" Fame, or ſome bird the hateful news will bring;
" Then will I chaſe thee on the tempeſt's wing,
" Brand thy falſe heart, thy curs'd familiar be,
" And prove thou ow'ſt thy life, thy all to me."
Medea thus, and tears abundant ſhed;
And mildly thus the ſon of Æſon ſaid:
' In vain, dear nymph, thy miſſive bird ſhall ſoar
' Through air ſublime, in vain the tempeſt roar.
' But if towards Greece thou deign'ſt thy courſe to bear,
' Immortal honours ſhall attend thee there;
' There huſbands, brothers, ſons, ſo long deplor'd,
' Safe to their native land by thee reſtor'd,
' Shall as a goddeſs reverence thy name,
' And pay thee rites which only gods can claim.
' But would'ſt thou grace my bed with bridal ſtate,
' Our love can only be diſſolv'd by fate.'
His words with raptures all her ſoul ſubdue;
Yet gloomy objects riſe before her view,
Ordain'd, ere long, Theſſalia's realms to ſee;
For ſuch was Juno's abſolute decree,
That ſoon to Greece the Colchian maid ſhould go,
To Pelias ſource of unremitting woe.
Meanwhile apart her anxious handmaids ſtay,
In ſilence waiting till the cloſe of day:
Such pleaſing tranſports in her boſom roll,
His form, his words ſo captivate her ſoul,
On feather'd feet the hours unheeded fled,
Which warn'd her home: ' Hence (cautious Jaſon ſaid),
' Hence let us haſten unperceiv'd away,
' And here enraptur'd paſs ſome future day.'
Thus the bleſt hours in converſe ſweet they ſpent,
And both unwilling from the temple went;
He to his comrades bordering on the main,
The fair Medea to her virgin train.
Her train approach'd, but ſtood unnotic'd by:
Her ſoul ſublime expatiates in the ſky.
Her rapid car ſhe mounts; this hand ſuſtains
The poliſh'd thong, and that the flowing reins.
Fleet o'er the plain the nimble mules convey'd
To Æa's walls the love-tranſported maid.
Meanwhile Chalciope aſtoniſh'd ſtands,
And inſtant tidings of her ſons demands;
In vain: ſad cares had clos'd Medea's ears,
No anſwers gives ſhe, and no queſtions hears;
But on a footſtool low, beſide her bed,
All bath'd in tears ſhe ſits; her hand ſuſtains her head.
There ſits ſhe pondering, in a penſive ſtate,
What dire diſtreſſes on her counſels wait.
But Jaſon, eager to return, withdrew
With his two friends, and join'd his ſocial crew,
Who throng'd impatient round, while he diſplay'd
The ſecret counſels of the Colchian maid,
And ſhow'd the potent herbs: Idas apart
Conceal'd the choler rankling in his heart.
Meanwhile the reſt, when glimmering day-light clos'd,
Wrapp'd in the mantle of the night repos'd.
Next morn they ſent Æthalides the ſon
Of Mercury, and valiant Telamon,
(For thus in council had the Greeks decreed)
Of fierce Æeta to demand the ſeed,

The ſerpent's teeth, whoſe ever-wakeful ſight
Watch'd o'er the fountain of the god of fight.
This baneful monſter was by Cadmus ſlain,
Seeking Europa o'er the Theban plain;
An heifer to his ſeat of regal ſway,
So will'd prophetic Phœbus, led the way.
Theſe teeth Minerva from the monſter rent,
And part to Cadmus and Æeta ſent:
Sow'd on Bœotia's ample plains, from thoſe
A hardy race of earth-born giants roſe.
To Jaſon theſe he gave, a precious ſpoil;
Nor, though his matchleſs arm the bulls might foil,
Deem'd he, that victory would crown his toil.
The ſun now ſinking with a feeble ray
To diſtant Ethiopians ſlop'd his way;
Night yok'd her ſteeds; the Grecian heroes ſpread
Around the halſers and the ſails their bed.
The northern Bear was ſunk beneath the hills,
And all the air a ſolemn ſilence fills:
Jaſon to lonely haunts purſu'd his way;
(All rites adjuſted the preceding day):
'Twas Argus' care a lambkin to provide,
And milk, the reſt the ready ſhip ſupply'd.
A ſweet ſequeſter'd ſpot the hero found,
Where ſilence reigns, and ſwelling ſtreams abound;
And here, obſervant of due rites, he laves
His limbs immerging in the cleanſing waves:
Then o'er his ſhoulders, pledge of favours paſt,
The gift of fair Hypſipyla he caſt,
A ſable robe: a deep round foſs he made,
And on the kindling wood the victim laid:
The mix'd libation pouring o'er the flame,
Loud he invok'd infernal Brimo's name;
Then back retires: his call her ears invades,
And up ſhe riſes from the land of ſhades:
Snakes, wreath'd in oaken boughs, curl'd round her hair,
And gleaming torches caſt a diſmal glare.
To guard their queen the hideous dogs of hell
Rend the dark welken with inceſſant yell;
The heaving ground beneath her footſteps ſhakes;
Loud ſhriek the Naiads of the neighbouring lakes,
And all the fountain-nymphs aſtoniſh'd ſtood
Where Amaranthine Phaſis rolls his flood.
Fear ſeiz'd the chief, yet backward he withdrew,
Nor till he join'd his comrades, turn'd his view.
And now on Caucaſus with ſnow o'erſpread,
The riſing morn her ſilver radiance ſhed,
When proud Æeta, earlier than the reſt,
The fencing corſlet buckled to his breaſt,
The ſpoils of Mimas of gigantic race,
Whom Mars had vanquiſh'd on the plains of Thrace:
His golden helmet to his head he bound,
With four fair creſts of glittering plumage crown'd,
Bright as the ſun new-riſing from the main;
His nervous arm a mighty ſpear ſuſtain:
From his broad ſhoulder beams his ſevenfold ſhield,
Which not a chief of all the Greeks could wield,
Since great Alcides, of his friend bereſt,
Was (ſad miſchance! on Myſa's borders left.
His ſon hard by with ready chariot ſtands;
The king aſcends; the reins adorn his hands;
Fierce to the field he haſtes in regal ſtate,
And crowds of Colchians round their monarch wait.
As ocean's god, when drawn by rapid ſteeds,
To Iſthmian games, or Calaureia ſpeeds,
To Tænarus, or rocky Petra roves,
Or where Geræſtus boaſts her oaken groves,
Oncheſtus' woods, or Lerna's limpid ſpring;
So to the combat drives the Colchian king.
Meanwhile, inſtructed by the magic maid,
The chief his ſhield, his ſpear and trenchant blade
With unguents ſmear'd: the Greeks approaching nigh
In vain their efforts on his armour try;
But chief the ſpear ſuch magic charms attend,
No force can break it, and no onſet bend.
Idas enrag'd deals many a furious wound,
But, as hard hammers from an anvil bound,
So from the ſpear his ſword recoiling ſprung:
The diſtant vales with loud applauſes rung.
Next, with the potent charm the chief anoints
His well-turn'd limbs, and ſupples all his joints.
And, lo! new powers invigorate his hands,
And arm'd with ſtrength intrepidly he ſtands.
As the proud ſteed, exulting in his might,
Erects his ears, impatient for the fight,
And pawing ſnuffs the battle from afar;
So pants the hero for the promis'd war.
Firmly he moves, incapable of fear;
One hand his ſhield ſuſtains, and one the ſpear.
Thus, when black clouds obſcure the darkening day,
And rains deſcend, the living lightnings play.
And now the fight draws near; the Grecian train
Sail up the Phaſis to the martial plain;
Which from as far the towers of Æa ſtand,
As when the chieftans, who the games command
For ſome dead king, the bounding barriers place
For ſteeds or men contending in the race.
Æeta there they found, of mind elate;
On Phaſis' banks his chariot rolls in ſtate.
On the Caucaſian ſummits, that command
The field of Mars, the crowded Colchians ſtand.
Now Argo moor'd, the prince invades the field,
Arm'd with his magic ſpear, and ample ſhield;
With ſerpents' teeth his brazen helm was ſtor'd,
And croſs his ſhoulder gleam'd his glittering ſword:
Like Mars the chief enormous power diſplay'd,
Or Phœbus brandiſhing his golden blade.
O'er the rough tilth he caſt his eyes around,
And ſoon the plough of adamant he found,
And yokes of braſs: his helm (approaching near)
He plac'd on earth and upright fix'd his ſpear.
To find the bulls he farther went afield,
And trac'd their ſteps, arm'd only with his ſhield.
In a dark cave which ſmoky miſts ſurround,
Horrid and huge their ſafe retreat he found.
With rage impetuous forth the monſters came,
And from their noſtrils iſſued ſtreams of flame.
Fear ſeiz'd the Greeks, but he their fury braves;
Firm as a rock, defies the roaring waves;
Screen'd by his ſhield, intrepidly he ſcorns
The bulls loud-bellowing, and their butting horns;

Collected firm he wards each threatening blow.
As at the forge where melting metals glow,
While now the bellows heave, now sink by turns,
The flame subsides, or with fresh fury burns;
Stirr'd to the bottom roars the raging fire:
So roar the bulls and living flame respire,
That fierce as lightning round the hero play'd,
In vain, now shelter'd by the magic maid.
One bull he seiz'd, that aim'd a deadly stroke,
Seiz'd by the horns, and dragg'd him to the yoke;
Then hurl'd the roaring monster on the ground;
An equal fate his fellow-captive found.
Loos'd from his arm he flung his shield aside,
And the two monsters manfully he ply'd,
Dragg'd on their knees his fiery foes o'ercame,
And shifting artfully escap'd the flame.
Æeta view'd him with astonish'd eyes;
When lo! the sons of Tyndarus arise,
As erst it was decreed, and from the land
Heav'd the strong yokes and gave them to his hand:
These o'er the bulls' low-bended necks he flung;
The brazen beams by rings suspended hung.
The youths retreating from the burning field,
The chief resum'd his loaded helm, his shield
Behind him thrown; then grasp'd his massy spear,
(Thus arm'd the hinds of Thessaly appear,
With long sharp goads to prick their bullocks' sides)
And the firm plough of adamant he guides.
The restiff bulls with indignation fir'd,
From their broad nostrils living flames expir'd,
Loud as the blasts when wint'ry winds prevail,
And trembling sailors furl the folding sail.
Urg'd by his spear the bulls their task fulfil,
Prove their own prowess, and the ploughman's skill.
As the sharp coulter cleft the clodded ground,
The roughen'd ridges sent a rattling sound.
Firm o'er the field undaunted Jason treads,
And scattering wide the serpent's teeth he spread:
Yet oft looks back, suspecting he should find
A legion rising up in arms behind:
Unwearied still the bulls their toil pursue;
Their brazen hoofs the stubborn soil subdue.
When now three portions of the day were spent,
And weary hinds at evening homeward went,
The chief had till'd four acres of the soil;
He then releas'd the monsters from their toil,
Away they scamper'd wildly o'er the plain;
Himself rejoin'd his delegated train,
Till on the field his earth-born foes appear:
The Greeks their animated hero cheer.
He in his helm, replenish'd at the springs,
To slake his burning thirst fresh water brings.
His limbs renew'd with forceful vigour play,
His heart beats boldly and demands the fray.
Thus the fell boar disdains the hunter-bands,
Foams, whets his tusks, and in defiance stands.
Now rose th' embattled squadron in the field,
In glittering helms array'd, with spear and shield,
Bright o'er the martial train the splendors rise,
And dart in streams of radiance to the skies.
Thus, when thick snow the face of nature shrouds,
And nightly winds dispel the wint'ry clouds,
The stars again their splendid beams display;
So shone the warriors in the face of day.
But Jason, mindful of the maid's command,
Seiz'd a vast rock, and rais'd it from the land:
Not four stout youths, for strength of limbs renown'd,
Could lift a weight so ponderous from the ground:
This 'midst his foes, embattled on the field,
He hurl'd, and safe retir'd behind his shield.
The Colchians shout, as when the raging main
Roars round tremendous rocks, but roars in vain.
In silence fix'd, Æeta stands aghast
To see the fragment with such fury cast.
The host, like dogs contending o'er their prey,
With curs'd ferocity their comrades slay,
Then leave on earth their mangled trunks behind,
Like pines of oaks uprooted by the wind.
As shoots star from heaven's ethereal brow,
Portending vengeance to the world below,
Who through dark clouds descry its radiant light:
Thus Jason rush'd, in glittering armour bright.
His brandish'd falchion fell'd the rising foes:
Succinct in arms, some half their lengths disclose,
Some scarce their shoulders; others feebly stand,
While others, treading firm, the fight demand.
As on the bounds which separates hostile states,
Eternal source of battle and debates,
The cautious hind the cruel spoiler fears,
And reaps his wheat with yet unripen'd ears;
Ere yet the spikes their wonted growth attain,
Ere yet the sun-beams have matur'd the grain:
So Jason's arms the rising squadrons mow'd;
Their blood profusely in the furrows flow'd.
Some sidelong fall on earth, and some supine,
Some prone lie grovelling and their lives resign,
Like whales incumbent on the buoyant main;
Some wounded perish ere they tread the plain;
As late in air they held their heads on high,
So lowly humbled in the dust they lie.
Thus tender plants, by copious torrents drown'd,
Strew their fresh leaves uprooted from the ground;
The tiller views with heart-corroding pain
His fostering care, and all his labours vain.
Æeta thus with wild vexation burn'd,
And with his Colchians to the town return'd,
Some weightier task revolving in his mind:
Thus clos'd the combat, and the day declin'd.

NOTES ON BOOK III.

Ver. 2. Apollonius, with great propriety, invokes Erato, the muse who presided over love affairs. For this book contains the loves of Medea and Jason, and abounds with the most beautiful

ſentiments deſcriptive of the tender paſſion. Virgil's invocation of Erato, *Nunc age, qui reges, Erato, &c.* is a tranſcript of Apollonius, Εἰ δ' ἄνε νῦν Ἔρατὼ, &c. Virgil ſeems to have copied our poet in this inſtance, at the expence of his judgment; for it is difficult to aſſign a reaſon for his invocation of this muſe, when he was about to ſing, as he informs us, *reges et tempora rerum.*

The fourth book of Virgil, Servius tells us, is borrowed from this of Apollonius Rhodius. Virgil's Æneid, ſays Hoelzlinus, would not have been enriched with the epiſode of Dido, had not the amours of Hypſipyla and Medea been worked up ready to his hand by Apollonius.

Ver. 10. Having conducted his heroes to the banks of the Phaſis, our poet ſhifts the ſcene, and takes occaſion to introduce the two goddeſſes, Juno and Pallas, conſulting for the ſafety of Jaſon. There is a neceſſity for ſuch machinery, in order to preſerve the dignity of epic poetry. And the propriety of its introduction in this place will be acknowledged, if we recollect, that on the ſucceſsful application of theſe goddeſſes to Venus, the future fortunes of Jaſon depend. There needs no greater proof of the beauty of this paſſage, than that it has been imitated by Virgil in that part of his firſt book, where Cupid is commiſſioned by his mother to kindle in Dido's breaſt a paſſion for Æneas.

Ver. 46. The Greek is Νήσοιο πλαγκτῆς. Homer has a ſimilar expreſſion, Πλωτῇ ἐνὶ νήσῳ. Odyſſ. x. 3.

A floating iſle, high rais'd by toil divine. *Pope.*

Ver. 50. This whole paſſage is imitated by Claudian, who, ſpeaking of Venus, ſays,

Cæſariem tunc forte Venus ſubnixa coruſco
Fingebat ſolis: dextrâ lævâque ſorores
Stabant Idaliæ: largos hæc nectaris imbres
Irrigat; hæc morſu numeroſi dentis eburno
Multifidum diſcrimen arat: ſed tertia retro
Dat varios nexus, et juſto dividit orbes
Ordine, neglectam partem ſtudioſa relinquens.

Ver. 74. He, for making love to Juno, and boaſting afterwards that he had diſhonoured Jupiter, was hurled headlong by him into Tartarus, and bound to a wheel, which he was doomed to turn without intermiſſion.

Ver. 79. It was the opinion of the ancients, that the gods frequently aſſumed the human ſhape. Thus Homer, *Odyſſ.* xvii. *v.* 485.

They (curious oft of mortal actions) deign
In forms like theſe to round the earth and main,
Juſt and unjuſt recording in their mind,
And with ſure eyes inſpecting all mankind.
Pope.

——————ſummo delabor Olympo,
Et Deus humanâ luſtro ſub imagine terras.
Ov. Met. l. 1.

Ver. 131. The Greek is, ὡς ῥαάγλοισι. Homer has the ſame expreſſion, Il. xxiii. 88. but it is omitted in Pope's tranſlation.

Ver. 141. She was nurſe to Jove when an infant. Thus Callimachus:

——————σὲ δὲ κοῦρισεν Ἀδρήστεια
Αἰκνῷ ἐνὶ χρυσείῳ. *Hym. ad Jov. v.* 47.

Ver. 149. It is partly from the wanton and playful character of theſe little Cupids, that they are almoſt always given us under the figure of children.

Thus Ovid:

Et puer es, nec te quicquam niſi ludere oportet:
Lude, decent annos mollia regna tuos.
Ov. Rem. Am.

In conformity to this puerile character, Venus promiſes to reward her favourite boy with playthings.

Ver. 210. See the preface.

Ver. 227. Theſe extraordinary rites of the Colchians are mentioned by Ælian, in his fourth book. The earth and air are ſaid to be the principal objects of their worſhip. *Hoelz. and Schol.*

Ver. 237. Thus Pallas ſpreads a veil of air around Ulyſſes, and renders him inviſible:

Propitious Pallas, to ſecure her care,
Around him threw a veil of thicken'd air.
Homer's Odyſſ. B. vii.

Thus Venus conceals Æneas and his companions:

At Venus obſcuro gradientes ære ſepſit.
Virg. Æn. l. i.

Ver. 251. The Pleiades are ſaid to be daughters of Atlas by the nymph Pleione. They were ſeven in number. Their name is derived, either from their mother, or from their number; or, more probably, from the Greek word, which ſignifies *to ſail.* They are called in Latin *Vergiliæ*, from the vernal ſeaſon when they riſe. They riſe about the vernal equinox, and ſet in autumn. See a further account of them in the note on ver. 448. B. ii.

Ver. 260. The battle between the gods and giants is ſuppoſed to have been fought at Phlegra, near Pallene, in Theſſaly.

Ver. 299. Theſe ſons of Phrixus and Chalciope had ſailed from Colchis to Orchomenos, a city of Bœotia, to receive the inheritance of their grandfather Athamus.

Ver. 327. Virgil ſeems to have copied this ſimile from Apollonius. *Æn.* viii. 408.

What time the poor, laborious, frugal dame,
Who plies her diſtaff, ſtirs the dying flame:
Employs her handmaids by the winking light,
And lengthens out their taſks with half the night;
Thus to her children ſhe divides the bread,
And guards the honours of her homely bed. *Pitt.*

Ver. 356. One of thoſe iſlands called the Strophades, in the Ionian ſea.

Ver. 387. The Sarmatians, or Sauramatæ, were Scythians, who dwelt in the country that lies between the river Tanais and the Boryſthenes.

Ver. 413. The table was looked upon by the ancients as a ſacred thing; and a violation of the laws of hoſpitality was eſteemed the higheſt profanation imaginable.

Ver. 562. Virgil's deſcription of the Maſſylian prieſteſs is taken from this paſſage:

Hæc ſe carminibus promittit——
Siſtere aquam fluviis, et vertere ſidere retro!
Nocturnoſque ciet manes: mugire videbis
Sub pedibus terram, et deſcendere montibus oros.
Æn. L. iv. 487.

Ver. 705. The chief power of diſpoſing of their daughters in marriage, even among the heathens, was in their parents, without whoſe conſent it was not held lawful. This Hermione in Euripides

Ναμφιυμάπων δὲ τῶν ἐμῶν πατὴρ ἐμὸς
Μυρμιδῶν ἔξει κ' ὐκ ἐμὸν κρινεῖν τοὐδ'.

Ver. 797. Here Dr. Broome's tranſlation begins, and continues to ver. 1087; but not without conſiderable omiſſions which are ſupplied. Virgil has copied this exquiſite deſcription from our author. Both the poets deſcribe minutely the profound calm and ſtillneſs of the night, in order to render the agonies of the reſtleſs heroines more affecting by ſuch a contraſt. It is impoſſible to give us a more lively idea of their reſtleſs ſituation, than by repreſenting it in oppoſition to that general tranquillity which prevails through the whole creation. The ſilence of the night, which diſpoſes others to reſt, ſerves to increaſe but their anguiſh, and to ſwell the tumult of their paſſion.

'Twas night; and weary with the toils of day,
In ſoft repoſe the whole creation lay,
The murmurs of the groves and ſurges die,
The ſtars roll ſolemn, through the glowing ſky;
Wide o'er the fields a brooding ſilence reigns,
The flocks lie ſtretch'd along the flowery plains:
The furious ſavages that haunt the woods,
The painted birds, the fiſhes of the floods;
All, all, beneath the general darkneſs ſhare
In ſleep a ſweet forgetfulneſs of care;
All but the hapleſs queen. *Pitt.*

That ſudden and beautiful tranſition at the cloſe of the deſcription, *At non infelix animi Phœniſſa*, is copied with the utmoſt exactneſs from the correſpondent line in our poet,

Ἀλλὰ μάλ' ἀ Μήδειαν ἐπὶ γλυκερὸς λάβεν ὕπνος.

Ver. 813. Virgil has imitated this ſimile, *Æn.* viii. 22.

Sicut aquæ tremulum, &c.

So from a brazen vaſe the trembling ſtream
Reflects the lunar, or the ſolar beam:
Swift and eluſive of the dazzled eyes,
From wall to wall the dancing glory flies:
Thence to the cieling ſhoot the dancing rays,
And o'er the roof the quivering ſplendor plays.
Pitt.

Ver. 911. Caucaſus is called by Propertius, B. i. El. 12. the Promethean mountain; becauſe the magic herbs, for which it was famous, were ſaid to have ſprung out of the blood of Prometheus.

——————An quæ
Lecta Prometheis dividet herba jugis. *Potter.*

Ver. 935. We meet with this ſimile in the ſixth book of Homer's Odyſſey, who applies it to Nauſicaa ſporting with her fair attendants in the meads. Virgil applies the ſame ſimile to Dido, walking in the midſt of the city, with the Tyrian princes. See Pope's note on Od. 6. ver. 117. Some of the critics have thought that no paſſage has been more unhappily copied by Virgil from Homer, than this compariſon. But, it ſhould ſeem from ſome circumſtances in his ſimile, that the Roman poet rather imitated this paſſage of Appollonius, than that of Homer.

Ver. 936. Or rather Amniſian, according to Callimachus:

——————Ἀμνίσιδας εἴκοσι νύμφας.

They were ſo named from] Amniſus, a city and river of Crete.

Ver. 988. Some birds were of uſe in divination by the manner and direction of their flight; others by the ſounds they uttered; theſe were called *oſcines*, of which kind were crows.

Oſcinem corvum prece ſuſcitabo
Solis ab ortu. *Hor.* Od. xxvii. l. 3.

Ver. 1005. No poet has ſucceeded better in any deſcription than Apollonius has in the following. The anxiety with which Medea expects the arrival of Jaſon, expreſſed by her inattention and averſion to every other object, by her directing her eyes every way in ſearch of him, and by her trembling at every breeze, are admirable ſtrokes of nature. The appearance of Jaſon, ſuſhed with all the bloom of youth, advancing haſtily towards her, like the ſtar, to which he is compared, riſing from the ocean; the embarraſſment which his preſence occaſions, the ſilent admiration in which they ſtand gazing at each other, like two tall trees in a calm, are particulars which none but the imagination of a real poet could have put together, and can never be ſufficiently admired.

Ver. 1099. We have here a curious account of the ceremonies made uſe of in their ſacrifices to the infernal deities. Hecate the ſame with the moon or Diana, was ſo called, either from her being appeaſed by hecatombs, or from the power ſhe poſſeſſed of obliging thoſe who were unburied to wander an hundred years. Virgil applies to her the epithet of *ter geminam*, and Horace that of *triformis*. She was called in heaven Luna, or the Moon, on earth Diana, and in hell Proſerpina. Hecate, and Brimo, from her terrifying appearance.

It ſeems extraordinary that Diana, who is the goddeſs of chaſtity, ſhould be repreſented as diſpenſing her favourable influence in illicit amours. But the mythologiſts inform us, that Diana and Venus are but one and the ſame divinity. The Scholiaſt on Theocritus, Id. ii. ſays, that it was cuſtomary, among the ancients, for the men to

implore the sun, and women the moon in their amours. Cicero, speaking of three Dianas, observes, that the first was thought to be the mother of winged Cupid. *De Nat. Deor. l.* 3.

Ver. 1095. Honey was a favourite ingredient with the ancients, in their oblations to the gods, whether of heaven or hell. Homer, in his hymn to Mercury, calls it

———θεῶν ἡδείαν ἐδωδήν.

Bees and honey are subjects which the Greek poets are particularly fond of introducing; and their country was plentifully supplied with these commodities.

Ver. 1115. Apollonius Rhodius, according to the common opinion, supposes Deucalion to have been a native of Greece, the son of Prometheus, the son of Japetus: but in these ancient mythological accounts, all genealogy must be entirely disregarded. He represents him as the first of men, through whom religious rites were renewed, cities built, and civil polity established in the world; none of which circumstances are applicable to any king of Greece. We are assured by Philo, that Deucalion was Noah. *Bryant.*

Ver. 1245. Upon the report of the rape of Europa, her father, Agenor, sent every where in search of her, and ordered his son Cadmus not to return home till he had found her. Cadmus having traversed a part of Greece without gaining any information of her, settled in Bœotia, where he built the city Thebes. Having sent his associates into a grove, consecrated to Mars, to fetch water, a serpent, which guarded the place, devoured them. Cadmus, to revenge their death, slew the monster; from whose teeth, which he had sown, a body of armed men sprung up. This is the fabulous account to which Apollonius alludes.

No colony, says Mr. Bryant, could settle any where, and build an orphite or serpent temple, but there was supposed to have been a contention betwixt a hero and a dragon. Cadmus was described in conflict with such an one at Thebes.

Ver. 1247. Πομπαῖος relates properly to divine influence, and πομπὴ is an oracle. An ox or cow was by the Amonians esteemed very sacred and oracular. Cadmus was accordingly said to be directed πομπῇ βοός. *Bryant.*

Ver. 1285. This river is supposed to have derived its source from a nation of that name. The poet, in describing the effects of this infernal evocation, has heaped together with great judgment, and in the true spirit of poetry, every circumstance that is capable of exciting terror and astonishment.

Ver. 1288. Apollonius introduces his heroes on the plains of Mars with the utmost pomp and magnificence, thus artfully preparing us for the solemnities of the ensuing combat, on which the fate of Jason depends.

BOOK IV.

THE ARGUMENT.

Jason obtains the Golden Fleece by the assistance of Medea. She embarks with the Argonauts for Greece. Æta pursues them. Having crossed the Euxine sea, they sail up the Ister; and by an arm of that river enter the Adriatic. Absyrtus is treacherously murdered by Jason. They sail into the Sardinian sea by the way of Eridanus and the Rhone. The murder of Absyrtus is expiated by Circe, at whose island they land. Thetis and her nymphs conduct the heroes through the straits of Scylla and Charybdis. They sail by the island infested with the Syrens, from whose enchantments Orpheus delivers them. At Corcyra, once called Drepane, they meet with the Colchians that pursued them through the Symplegades; who request Alcinous, king of the island, to deliver up Medea. He agrees to send her back to her father, if unmarried; but if married to Jason he refuses to separate them. Upon this determination, her nuptials are immediately celebrated. They again put to sea, and are driven upon the quicksands of Africa. The tutelary deities of the country extricate them from their distresses. They bear Argo on their shoulders as far as the lake Tritonis. The Hesperides, who were bewailing the death of the serpent, slain the preceding day by Hercules, give some account of that hero. The death of Canthus and Mopsus, two of their comrades, is related. Triton, whose figure is particularly described, gives them directions about their voyage. They sail near Crete. The story of Talus. At Hippuris they sacrifice to Phœbus, who, standing on the top of an hill, enlightens their way. The clod of earth, given by Triton to Euphemus, becomes an island, called Callistè. They anchor at Ægina; and loosing from thence, arrive without further interruption at Thessaly.

O GODDESS, daughter of th' eternal King,
Medea's various cares and counsels sing:
Far from my mind the sad suspense remove,
Whether to celebrate her lawless love,
Or whether her base flight from Colchis' bay,
Best claims the tribute of my tuneful lay.
In solemn council to his faithful chiefs
The vengeful king disclos'd his bosom griefs:

Some diſconcerted at the recent fight,
He ſpent in long debate the doleful night;
Miſtruſting ſtill, theſe ſchemes, ſo deeply laid,
Were all conducted by his daughter's aid.
Meanwhile the imperial queen of heaven had ſhed
O'er the fair virgin's breaſt deſpondent dread.
She ſtarts, ſhe trembles, as, purſu'd by hounds,
The fawn light ſkipping o'er the meadow bounds.
She fears the ſecrets of her ſoul betray'd,
And her ſire's vengeance for her proffer'd aid.
Her handmaids, conſcious of her crimes, ſhe fears;
Her eyes fierce flames emit, loud murmurs fill her ears.
Her death ſhe meditates in wild deſpair,
And, ſadly ſighing, tears her golden hair.
Now fate imbibing from the poiſon'd bowl,
Soon had ſhe freed her voluntary ſoul,
And Juno's projects all been render'd vain,
But, kindly pitying a lover's pain,
The goddeſs urg'd with Phrixus' ſons her flight,
And eas'd her boſom of its ſorrow's weight.
Forth from her caſket every drug ſhe pours,
And to her lap conſigns the magic ſtores.
Then with a parting kiſs her bed ſhe preſs'd,
Clung round each door, and ev'n the walls careſs'd.
A lock ſhe tore of looſely-flowing hair,
And faſe conſign'd it to her mother's care,
The ſacred relic of her virgin-fame;
And, wailing thus, invok'd Idya's name:
'This lock, O mother, at my hand receive,
'Which I, far-diſtant roaming, with thee leave.
'Farewell, Chalciope; far hence I roam!
'And thou farewell, my firſt, my deareſt home!
'Oh! hadſt thou ſtranger, in deep ocean drown'd,
'Periſh'd, and never trod on Colchian ground!"
She ſpoke, and tears her heartfelt woe betray'd;
Then fled ſhe inſtant. Thus the captive maid,
When, from her friends and country baniſh'd far,
She ſhares the miſerable fate of war,
Diſus'd to toil beneath a tyrant's ſway,
Flies from oppreſſion's rod with ſpeed away.
With ſpeed like her's the weeping fair withdrew:
The doors ſpontaneous open'd as ſhe flew,
Shook by her magic ſong; barefoot ſhe ſtrays
Through winding paths and unfrequented ways.
Before her face one hand her veſture holds,
And one confines its border's flowing folds.
Beyond the city walls with trembling haſte,
Unſeen of all the centinels, ſhe paſs'd,
Then by accuſtom'd paths explor'd the fane,
Where ſpectres riſe, and plants diffuſe their bane;
(Thus practiſe magic maids their myſtic art)
Fears ill portending flutter round her heart.
Her frenzy Cynthia, riſing bright, ſurvey'd,
And this ſoliloquy in triumph made:
'Yes, with Endymion's heavenly charms o'er-come,
'I to the cave at Latmos once could roam,
'Of love regardful, when your potent lay
'Had from the ſtarry ſpheres ſeduc'd my ray,
'That you, protected by the gloom of night,
'Might celebrate unſeen the myſtic rite,
'Your lov'd employ: now Cupid's ſhafts ſubdue,
'Not Cynthia only, but, fair ſorcereſs you.
'For you his toils the wily god hath wove,
'And all your heart inflam'd with Jaſon's love.
'Come then, thoſe pangs which love ordains endure,
'And bear with courage what you cannot cure.'
She ſaid: impetuous haſtening to the flood,
Soon on its lofty banks Medea ſtood.
A fire, which midnight's deadly gloom diſpell'd,
Signal of conqueſt gain'd, ſhe here beheld.
Involv'd in ſhade, the ſolitary dame
Rais'd her ſhrill voice, and call'd on Phrontis' name.
Known was her voice to Phrixus' ſons, who bear
The grateful tidings to their leader's ear.
The truth diſcover'd, the confederate hoſt
All ſilent ſtood, in wild amazement loſt.
Loud call'd ſhe thrice; and with reſponſive cries
His friends requeſting, Phrontis thrice replies.
Quick at her call they ply the bending oar;
Nor were their halſers faſten'd to the ſhore,
When Æſon's ſon at one declſive bound
Leaps from the lofty deck upon the ground;
Phrontis and Argus haſten to her aid,
Whoſe knees embracing, thus Medea pray'd:
'Oh! ſave me, friends, from my offended ſire,
'Oh! ſave yourſelves from dread Æeta's ire.
'Known are our projects: fail we hence afar,
'Ere Æa's monarch mounts his rapid car.
'My magic charms ſhall cloſe the dragon's eyes,
'And ſoon reward you with the golden prize.
'But thou, lov'd gueſt, continue faithful ſtill,
'And ſwear whate'er thou promis'd to fulfil:
'Ah! leave me not to infamy a ſcorn,
'By all my friends abandon'd and forlorn.'
Plaintive ſhe ſpoke: his arms around her waiſt
Rapturous he threw, then rais'd her and embrac'd,
And ſolac'd thus in terms of tendereſt love:
"By heaven's high king I ſwear, Olympian Jove,
"By Juno goddeſs of the nuptial rite,
"Soon as my native land tranſports my ſight,
"Thou, lovely virgin, ſhalt be duly led,
"Adorn'd with honours to my bridal bed."
This ſaid, in her's he cloſ'd his plighted hand:
To Mars's grove Medea gave command,
Spite of her fire, the veſſel to convey,
And bear by night the golden fleece away.
Swift at the word they ſprung; the Colchian maid
Embark'd, and inſtant was their anchor weigh'd,
Their craſhing oars reſound: ſhe oft to land
Reverts her eye, and waves her trembling hand:
But Æſon's ſon his ready aid affords,
And ſoothes her ſorrows with conſoling words.
Wak'd by their hounds, what time the huntſmen riſe,
And ſhake the balm of ſlumber from their eyes,
At twilight, ere Aurora's dreaded ray
Efface the tracks, and waft the ſcent away:
Jaſon then landing with the fair, attains,
With flowers diverſified, the verdant plains,
Where firſt the ram, with Phrixus' weight oppreſs'd,
His wearied knee inclin'd, and ſunk to reſt.

Hard by, an altar's ſtately ſtructure ſtands,
To favouring George firſt rais'd by Phrixus' hands,
Where he the golden monſter doom'd to bleed;
So his conductor Hermes had decreed.
Here, as by Argus taught, the chiefs withdrew,
While their lone courſe the regal pair purſue
Through the thick grove, impatient to behold
The ſpreading beech that bears the fleecy gold.
Suſpended here, it darts a beamy blaze,
Like a cloud tipp'd with Phœbus' orient rays.
With high arch'd neck, in front the dragon lies,
And towards the ſtrangers turns his ſleepleſs eyes;
Aloud he hiſſes, the wide woods around.
And Phaſis' banks return the doleful ſound.
Colchians far diſtant from Titanus' ſhore,
Heard ev'n to Lycus' ſtreams the hideous roar;
Lycus, who, ſever'd from Araxis' tides,
A boiſterous flood with gentle Phaſis glides:
One common courſe their ſtreams united keep,
And roll united to the Caſpian deep.
The mother, ſtarting from her bed of reſt,
Fears for her babe reclining on her breaſt,
And cloſely claſping to her fondling arms,
Protects her trembling infant from alarms.
As from ſome wood, involv'd in raging fires,
Clouds following clouds aſcend in curling ſpires:
The ſmoky wreaths in long ſucceſſion climb,
And from the bottom riſe in air ſublime;
The dragon thus his ſcaly volumes roll'd,
Wreath'd his huge length, and gather'd fold in fold.
Him, winding ſlow, beheld the magic dame,
And ſleep invok'd the monſter's rage to tame
With potent ſong the drowſy god ſhe ſway'd
To ſummon all his ſuccour to her aid;
And Hecate from Pluto's coaſts ſhe drew,
To lull the dauntleſs monſter, and ſubdue.
Jaſon advanc'd with awe, with awe beheld
The dreaded dragon by her magic quell'd.
Lifeleſs he lay, each languid fold unbound,
And his vaſt ſpine extended on the ground.
Thus when the boiſterous wave forbears to roar,
It ſinks recumbent on the peaceful ſhore.
Still ſtrove the monſter his huge head to heave,
And in his deadly jaws his foe receive.
A branch of juniper the maid applies,
Steep'd in a baneful potion to his eyes:
Its odours ſtrong the branch diffus'd around,
And ſunk th' enormous beaſt in ſleep profound.
Supine he ſunk! his jaws forgot to move,
And his unnumber'd folds are ſpread o'er half the grove.
Then Jaſon to the beech his hand applies,
And graſps, at her command, the golden prize.
Still ſhe perſiſts to ply the potent ſpell,
And the laſt vigour of the monſter quell,
Till he adviſ'd her to rejoin the crew;
Then from the grove of Mars the maid withdrew.
As ſome fair dame, when Cynthia riſes bright,
Beholds the beamy ſplendours with delight,
Which from her veſtment ſtrong-reflected riſe;
Thus gloried Jaſon in the gliſtering prize.
The flaming rays that from its ſurface flow'd,
Beam'd on his cheeks, and on his forehead glow'd.
Large as the heifer's hide, or as the hind's,
Which in Achaia's plains the hunter finds,
Shone the thick, ponderous fleece, whoſe golden rays
Far o'er the land diffus'd a beamy blaze.
He on his ſhoulders now the ſpoil ſuſpends,
Low at his feet the flowing train deſcends;
Collecting now within its ponderous folds,
His graſping hand the coſtly capture holds.
Fearful he moves, with circumſpect ſurvey,
Leſt men or gods ſhould ſnatch the prize away.
Now as returning morn illumes the land,
The royal pair rejoin the gallant band.
The gallant band beheld with wondering eyes,
Fierce as Jove's fiery bolt, the radiant prize.
Their hands extending as they flock around,
All wiſh to heave the trophy from the ground.
But Jaſon, interdicting, ſingly threw
O'er the broad fleece a covering rich and new;
Then in the ſhip he plac'd the virgin-gueſt,
And thus the liſtening demigods addreſs'd:
'No longer doubt ye, comrades, to regain
'Far o'er a length of ſeas your lov'd domain.
'For ſee, the end of all our glorious toil,
'Won by Medea's aid, this precious ſpoil!
'Her, not reluctant, I to Greece will bear,
'And with connubial honours crown her there.
'Guard your fair patroneſs, ye gallant crew,
'Who ſav'd your country when ſhe ſuccour'd you.
'Soon will Æeta with his Colchian train
'Preclude, I ween, our paſſage to the main.
'Some with your oars reſume your deſtin'd feat;
'Some with your ſhields ſecure your wiſh'd re-
'treat;
'This rampire forming, we their darts deſy,
'Nor home returning unreveng'd will die.
'Lo! on our proweſs all we love depends,
'Our children, parents, country, and our friends.
'Greece, as we ſpeed, through future times ſhall
'boaſt
'Her empire fix'd, or wail her glory loſt.'
He ſaid, and arm'd; the heroes ſhout applauſe:
Then from its pendent ſheath his ſword he draws,
Severs the halſer, and, in arms array'd,
His ſtation fixes near the magic maid,
And where Ancæus' hand the pilot's art diſplay'd.
Keen emulation fir'd the labouring crew,
As down the ſtream of Phaſis Argo flew.
Medea's flight now reach'd Æeta's ear,
And all her crimes in all their guilt appear.
To council call'd, in arms the Colchian train
Ruſh thick as billows on the roaring main,
Thick as the leaves that flutter from above,
When blaſting autumn ſtrips the faded grove;
So thick the ſhouting Colchians ruſh to war,
Led by Æeta in his ſplendid car,
Glorying in Phœbus' gifts, his rapid ſteeds,
Whoſe ſwiftneſs far the ſpeed of winds exceeds.
His left a buckler's wide circumference rais'd;
In his extended right a flambeau blaz'd;
His girded belt a mighty ſpear ſuſtains;
His ſon Abſyrtus graſps the flowing reins.
Now by tough oars impell'd and proſperous tides,
The veſſel glibly down the river glides.
Th' indignant king invok'd the powers above,
His parent Phœbus, and almighty Jove,
His wrongs to witneſs: and to ſudden fate
Doom'd in his fury the devoted ſtate.

Who dar'd delay the guilty maid to bring,
From land or ocean to their injur'd king,
On their rebellious heads his wrath should fall,
And vengeance merited o'ertake them all.
Thus menac'd he; and, lo! the Colchian train
Launch'd on that day their vessels in the main;
Swift, on that day, unfurl'd their bellying sails,
And all embarking caught the balmy gales.
Nor deem ye this a well-train'd naval host;
Like flocks of birds they scream around the coast.
Juno, propitious to her favourite crew,
Inspir'd the breezes that serenely blew,
That soon on Grecian land the fair might tread,
And pour destruction down on Pelia's head.
With the third morn, on Paphlagonia's shore,
Where Halys rolls his stream, the heroes moor,
Medea here ordain'd a solemn rite
To Hecate, the magic queen of night.
But what, or how she form'd the potent spell
Let none inquire, nor shall my numbers tell:
Fear holds me silent. Here the pious band
Erect a sacred temple on the strand,
Sacred to Hecate, night's awful queen!
And still beside the beech the holy fane is seen.
And now the words of Phineus, old and blind,
Recurr'd to Jason, and each hero's mind,
From Æa he advis'd them to pursue
A different course, a course no pilot knew,
Which Argus thus delineates to the crew:
'When towards Orchomenos our course we bent,
'We took that route th' instructive prophet meant.
'For in times past a different road was known,
'And this thy priests Egyptian Thebes have shown.
'Before the stars adorn'd the sapphire sphere,
'Or Danus' race had reach'd th' inquirer's ear:
'In Greece the bold Arcadians reign'd alone,
'And ere bright Cynthia deck'd her silver throne,
'On acorns liv'd, the food of savage man;
'Before Deucalion's sons their reign began;
'With harvests then was fertile Egypt crown'd,
'Mother of mighty chiefs, of old renown'd;
'Then the broad Triton, beauteous to behold,
'His streams prolific o'er the country roll'd.
'For Jove descends not there in beauteous rains,
'But inundations fertilize the plains.
'Hence rose the matchless chief (if fame says true),
'Who conquer'd Europe's realms and Asia's too;
'His hardy troops embattled at his side,
'He on his valour and those troops rely'd.
'He built and peopled with superior skill
'Unnumber'd cities, some remaining still.
'Though many ages now have pass'd away,
'Yet Æa stands, nor hastens to decay;
'Peopled at first by his adventurous train,
'Whose long-continued race ev'n now remain.
'With care they still recording tablets keep
'Of all the limits of the land and deep,
'Wherever rivers flow, or storms prevail,
'Wherever men can march, or ships can sail.
'A river, stately-winding, deep and wide,
'From far far distant mountains rolls its tide;
'Where ships of burden sure protection claim:
'Long is its course, and Ister is its name.
'Far o'er Riphæan hills where Boreas reigns,
'He undivided flows through various plains;
'But when through Thrace and Scythian clime
'he glides,
'In two broad streams his rapid flood divides:
'This to th' Ionian sea its circuit sweeps,
'That wider stretches to Trinacria's deeps,
'Whose lofty shores your Grecian coast command,
'If Achelöus flow through Grecian land.'
He said; a favouring sign the goddess gave,
Which with new courage animates the brave.
Celestial fires emit a living ray,
And beams of glory point the certain way.
Here, leaving Lycus' valiant son behind,
They spread with joy their canvas to the wind.
Afar the Paphlagonian hills appear;
And from Carambis' cape remote they steer;
Led by the heavenly light and kindly gales,
Till in broad Ister's flood the vessel sails.
Where the Cyanean rocks o'erlook the main,
Part of the Colchians steer their course in vain;
While they, whose counsels sage, Absyrtus guides,
Cut through the mouth call'd Calon Ister's tides.
Outsailing thus yon tardy ships, they sweep
With skilful oars the wide Ionian deep.
An isle, which Ister's branching streams comprise,
Peuce, triangular, before them lies:
Wide o'er the beach its ample base extends,
And in the flood its pointed angle ends.
The two broad streams, that round the island flow,
They by Arecos' name and Calon know,
Below this isle Absyrtus and his crew
Through the wide Calon their swift course pursue:
Above it sailing Jason's comrades stray,
And through Arecos wind their distant way.
Such naval force dismay'd the neighbouring swains;
They left their fleecy flocks and verdant plains:
The ships in view, with terror struck they stood,
And deem'd them monsters rising from the flood:
Never beheld they from their native shore
Ships proudly sailing on the seas before.
For the fierce Scythians and Sigynnian race
Maintain'd no commerce with the sons of Thrace:
Nor Sindians e'er, who roam the desert plain,
Nor e'er Graucenians cross'd the seas for gain.
When Argo's crew the mount Angurus pass'd,
And reach'd the rock Cauliacus at last,
(Ister, near which his stately stream divides
And mingles with the deep his sever'd tides):
And distant left the wide Talaurian plain,
Then had the Colchians plough'd the Chronian main.
Here, left the vessel 'scape, they cautious stay,
And strive to intercept her in her way,
At length appears to their expecting view
On Ister's flood the enterprising crew.
Two lovely sea girt isles their notice claim'd,
Dear to Diana, and the Burgi nam'd.
Superb in one a sacred temple rose,
And one secur'd them from their Colchian foes.
Her power revering whom these isles obey,
The foe had quitted them without delay.

Each isle beside was throng'd with Colchian hosts,
Who, guarding every pass, protect the coasts.
For troops of enemies embattled stood,
Far ev'n as Nestis and Salango's flood.
Their numbers few, the Mynian chiefs forbear
To wage with numerous foes unequal war,
Preventive of debate, this truce was seal'd;
That, since the king propos'd the fleece to yield,
Whether by open force, or arts unknown,
Conquest the daring combatant might crown,
He, though reluctant, must resign his right,
And the contested prize the victor's toil requite.
That, from the crowd with secrecy convey'd,
Diana's fane should guard the magic maid,
Till mid' the sceptred princes one arose
To fix their vague opinions, and propose,
Or to restore her to her sire's embrace,
Or in Orchomenos's city place,
Or freely grant her to embark in peace,
And with the Grecian heroes visit Greece.
When now long pondering, the suspicious maid
Had learn'd, and all their secret counsels weigh'd,
Tormenting cares disturb her mind's repose,
And keen reflection added woes to woes.
Aside she then, from all th' assembled crew,
With cautious secrecy her Jason drew:
Him, thus withdrawn, th' impassion'd maid address'd,
And told the secret sorrows of her breast:
'Say, what the cause that hostile hosts are join'd,
'And leagues, destructive of my peace combin'd?
'Say, have these charms, with rapture once explor'd,
'Lull'd to forgetfulness my faithless lord?
'Hath time effac'd the promises he made,
'When in the needful hour he ask'd mine aid?
'Where now thine oaths, preferr'd to mighty Jove?
'Where now thy tenders of unalter'd love?
'Curs'd oaths! which bade me all I love disclaim, [name!
'Friends, parents, country, every honour'd
'Forlorn and vex'd lest thou should'st toil in vain,
'I with the plaintive halcyon fought the main,
'I follow'd but to shield thee from alarms,
'When bulls breath'd fire, and giants rose in arms.
'Now is the fleece, for which ye sail'd, possess'd,
'And by my foolish fondness thou art bless'd.
'Bless'd thou; but me what secret sorrows vex,
'Whose deeds reflect dishonour on my sex!
'Me as thy daughter, sister, wife they brand,
'Who dare attend thee to a distant land.
'But stay, protect me, ease my weight of woe,
'Nor to my royal sire without me go.
'Oh! think on justice, and revere thine oath,
'Which both consented to, which bound us both:
'Or instant, should'st thou every tie evade,
'In this frail bosom plunge the pointed blade.
'Thus frantic love its due deserts shall see,
'And death come grateful to a wretch like me.
'Think, should the king exert his sovereign sway
'And with my brother destine me to stay,
'(That king with whom ye both with treacherous aim
'Have form'd a league, subversive of my fame);
'Oh! how shall I behold my father's face?
'With courage I! not shrinking at disgrace?
'No; stung by conscience, I forestall my fate,
'And feel the horrors which my crimes create.
'Back o'er the seas, mid' raging tempests borne,
'Long may'st thou wander joyless and forlorn.
'Ne'er may thy boasted patroness and friend,
'Juno, to thee her wonted aid extend.
'Stern fate may still severer toils ordain,
'And thou, false wretch, remember me in vain.
'Oh! may the fleece deceive thy ravish'd sight,
'And, like a vision, vanish into night.
'Rise may my furies, vengeance to demand,
'And distant drive thee from thy native land.
'From thee, their guilty source, my sorrows flow:
'Share now thy part, and suffer woe for woe.
'Thine oaths no more a slighted maid shall wrong,
'Nor this perfidious truce protect thee long.'
Stung with despair, she utter'd thus her grief,
Thus to her angry spirit gave relief.
To burn the ship forth rush'd th' impetuous dame,
And wrap its heaven-built sides in sudden flame;
Resolv'd in thought, as now the vessel blaz'd,
To perish dauntless in the flame she rais'd:
But Jason thus, with boding fears impress'd,
Sooth'd the mad tumults of Medea's breast: [ear
"Cease, heavenly maid, nor wound a lover's
"With words unwelcome, and unfit to hear.
"The common safety bids us all unite
"To gain a timely respite from the fight.
"See, fair protectress, to restore thee lost,
"What clouds of enemies furround the coast.
"The country arms thy brother's cause to aid,
"And bear thee to thy sire a captive maid.
"Against such force should we our arms oppose,
"Perish might all our host, o'erpower'd by foes:
"Then, sad to think! if, every hero slain,
"In long captivity must thou remain.
"Our arts perfidious will this truce conceal,
"Whose baneful influence must thy brother feel.
"Berav'd of him, the Colchians' cause to aid,
"And to recover thee, a captive maid,
"No more the neighbouring forces will unite:
"Instant will I renew the desperate fight,
"Secure my wish'd return, and vindicate my right."
Thus spoke he mild: the mischief-brooding maid
Told her dark purpose, and, 'O think,' she said,
'Think, Jason, now: oppose we, as beseems,
'To their destructive deeds destructive schemes.
'Urg'd first by love, in error's maze I stray'd,
'And through that god is every lust obey'd.
'Decline the fight, till I the youth betray,
'And to your hands consign, an easy prey.
'With presents be the heedless stripling lur'd:
'Heralds, of faith approv'd, by me procur'd,

Ere long a secret audience shall obtain,
And to my purposes Absyrtus gain.
My plan (I reck not) if it please, pursue:
'Go, slay my brother, and the fight renew.'
Such were the snares the treacherous lovers laid;
And by large presents was the prince betray'd.
The heralds with these specious presents bore
The veil Hypsipyle so lately wore.
Each grace in Naxos isle, with art divine,
Wrought the rich raiment for the god of wine;
He gave it Thoas, his illustrious heir,
And Thoas to Hypsipyle the fair;
She gave it Jason; wondering you behold
And with new transport trace th' embroider'd gold.
What time with large nectareous draughts oppress'd,
On the soft vesture Bacchus sunk to rest,
Close by his side the Cretan maid reclin'd,
At Naxos isle whom Theseus left behind;
From that bless'd hour the robe, with odours fill'd,
Ambrosial fragrance wide around distill'd.
Her guileful purposes the magic maid
In order thus before the heralds laid:
That soon as night her sable shade had spread,
And to the temple was Medea led,
Thither Absyrtus should repair and hear
A project pleasing to a brother's ear:
How she, the golden fleece in triumph borne,
Would to Æeta speed her wish'd return;
How Phrixus' treacherous sons prolong'd her stay,
And her to cruel foes consign'd a prey.
Then far she flung her potent spells in air,
Which lur'd the distant savage from his lair.
Curse of mankind! from thee contentions flow,
Disastrous love! and every heart-felt woe:
Thy darts the children of thy foes infest,
As now they rankle in Medea's breast.
How vanquish'd by her wiles, Absyrtus fell,
In seemly order now my muse must tell.
Medea now secur'd in Dian's fane,
The Colchians hasten to their ships again.
Jason meanwhile lies in close ambush bent,
Absyrtus and his friends to circumvent.
Him, yet unpractis'd in his sister's guile,
His ready ship had wafted to the isle:
Conceal'd in night they tugg'd their toilsome oars,
Till in the bay secure the vessel moors.
Alone, in confidence, the stripling came;
And at Diana's porch approach'd the dame,
(She like a torrent look'd, when swoln with rain,
Which foaming terrifies the village-swain);
To learn what snare her wily art could lay,
To drive these bold adventurers away.
And all was plann'd; when from his ambuscade
Sprung Æson's son, and shook his lifted blade.
The conscious sister, stung with secret dread,
Lest her own eyes should view Absyrtus dead,
Turn'd from the murderous scene aside distress'd,
And veil'd her guilty face beneath her vest.
As falls an ox beneath the striker's blow,
So was Absyrtus laid by Jason low.
Near that bright fane the neighbouring Brygi built,
He eyes his victim, and completes his guilt.
Here sunk he low; and to his bleeding side,
Compressing both his hands the hero died.
Medea's veil receiv'd the purple flood,
And her fair vesture blush'd with brother's blood.
Hell's blackest fury the dire scene survey'd,
And mark'd with sidelong eye the reeking blade.
The pious rite for blood in secret spilt,
Jason fulfils, and expiates his guilt.
The skin he rases from the body slain,
Thrice licks the blood, thrice spits it out again.
Then with collected earth the corse he press'd;
And still his bones with Absyrteans rest.
When in full prospect the bright flamheau blaz'd,
Which to conduct the chiefs Medea rais'd,
Elate with hope the radiant guide they view,
And near the Colchian vessel Argo drew.
As lions fierce the timorous flocks dismay,
Leap o'er the folds, and drive them far away;
As trembling doves before the kite retreat,
So before Argo flies the Colchian fleet,
Furious as flame, on all the host they prey'd,
And low in death was each assailant laid.
Jason at length, to aid his valiant crew,
Who little need his aid, appear'd in view.
For not a fear their gallant hearts oppress'd,
Save what their Jason's safety might suggest.
The chiefs assembled with Medea sat,
And on their future voyage thus debate;
Peleus began: 'Now, ere Aurora rise,
'A speedy embarkation I advise:
'A different course with caution let us choose;
'From that far different which the foe pursues.
'For (such my sanguine hope) when morning-light
'Yon slaughter'd heaps discloses to their sight,
'No words will win them to pursue us far,
'No tongue entice them to renew the war.
'Sedition soon, their prince Absyrtus dead,
'Will, like a pest, o'er all the navy spread:
'Secure and free shall we recross the main,
'Their forces scatter'd, and their sovereign slain.'
He said: the chiefs consented, and with haste
Re-enter'd Argo, and their oars embrac'd.
Hard by Electris, last of isles, they row,
Near which, Eridanus, thy waters flow.
Soon as their leader's fate the Colchians knew,
They vow'd destruction to the Grecian crew;
And eager to o'ertake the Mynian train,
Had travers'd in their wrath the boundless main,
But Juno, as her thunder awful roll'd,
Presag'd her vengeance, and their pride control'd.
Dreading Æeta's ire, the vanquish'd host
Far distant voyag'd from the Colchian coast.
Unnumber'd ports the scatter'd fleet explor'd:
Some to those isles repair'd where Jason moor'd;
Nam'd from Absyrtus: some where stately flows
The flood Illyricum, expect repose;
Beside whose bank a lofty tower they rear'd,
Where Cadmus' and Harmonia's tomb appear'd:

Here with the natives dwell they. Others roam
Till midſt Ceraunian rocks they find a home;
Ceraunian nam'd, ſince Jove's red thunder rore
Their ſhips that anchor'd on the neighbouring ſhore.
But towards the Hyllean port the heroes bear,
And fortune ſmiling, fix their halſers there.
For many an iſle projected o'er the tide,
Near which no veſſel could with ſafety ride.
No hoſtile arts the Hylleans now deviſe:
They teach the Mynians where their voyage lies;
And for their friendly intercourſe obtain
The largeſt tripod from Apollo's fane.
For, doubtful of the fleece, when Jaſon came
To hear reſponſes from the Pythian dame,
Enrich'd and honour'd from the ſhrine he trod
With two bright tripods given by Delphi's god.
'Twas doom'd no power ſhould lay the country waſte,
Within whoſe confines were theſe tripods plac'd.
Hid, for this cauſe, in earth the ſumptuous prize
Hard by the fair Hyllean city lies;
Deep, deep it lies, with ponderous earth oppreſs'd,
That there unſeen it might for ever reſt.
King Hyllus, whom in fam'd Phœacia's ſhore
Fair Melite to great Alcides bore,
To mortal view as manifeſt no more.
Nauſithoüs, to youthful Hyllus kind,
The heedleſs ſtripling in his courts confin'd;
(For, when to Macris' iſle Alcides fled,
That far-fam'd iſle, which infant Bacchus fed,
To expiate his guilt, and waſh the ſtain
Of blood yet ſtreaming from his children ſlain,
Here as beſide his favourite beach he rov'd,
The naiad Melite he ſaw and lov'd,
The daughter of Ægëus fair and young,
From whoſe careſſes hopeful Hyllus ſprung.)
But he, to manhood ripening, wiſh'd to roam
Far from his ſovereign's eye and regal home:
The native iſlanders augment his train,
And with their leader tempt the Chronian main.
Nauſithoüs complied with each demand,
And Hyllus ſettled on th' Illyric ſtrand:
But as he ſtrove his ſcatter'd herd to ſhield,
A boor's rude weapon ſtretch'd him on the field.
How croſs theſe ſeas, how round th' Auſonian ſhores,
And the Ligurian iſles they plied their oars,
Ye muſes tell: what tokens ſtill remain
Of Argo's voyage, what her feats explain:
Say, to what end, by what impelling gales
She o'er remoteſt ſeas unfurl'd her ſails.
All-ſeeing Jove their perfidy diſcern'd,
And for Abſyrtus ſlain with anger burn'd.
By Circe's myſtic rites heaven's fire decreed
The guilt to expiate of ſo baſe a deed.
To ſufferings dire, but what no mortal knew,
He, ere they ſafe return'd, foredoom'd the crew.
Beyond the Hyllean land their courſe they ſteer'd:
Remote the vaſt Liburnian iſles appear'd,
Late fill'd with Colchians; Pitya fair,
And rocky Iſſa, are the names they bear.
Theſe iſlands paſt, Cercyra's cliffs they greet,
Where dwelt (for here had Neptune choſe her ſeat)
Cercyra; he, by tender paſſions ſway'd.
From diſtant Phliuns fetch'd the black-ey'd maid;
Melaine her admiring ſailor's name,
As through dark groves they view the ſwarthy dame.
Fleet as the veſſel ſails before the wind,
Ceroſſus, Melite they leave behind.
Soon on Nymphæa, though remote, ſhe gains,
Where Atlas daughter, queen Calypſo, reigns.
The crew conjectur'd, through far diſtant ſkies
They ſaw the tall Ceraunian mountains riſe.
And now Jove's purpoſes and vengeful rage
Propitious Juno's anxious thoughts engage.
That every toil with glory might be crown'd,
And no diſaſtrous rocks their ſhip ſurround,
She wak'd the briſker gales in Argo's aid,
Till in Electris' iſle ſhe rode embay'd.
Sudden, the veſſel, as ſhe ſail'd along,
Spoke, wondrous portent! as with human tongue:
Her ſturdy keel of Dodonean oak,
By Pallas vocal made, prophetic ſpoke.
This ſolemn voice ſhook every heart with fear:
They deem'd the thunderer's threaten'd vengeance near.
'Expect,' ſays Argo, 'ſtorms and wint'ry ſeas,'
'Till Circe's rites the wrath of Jove appeaſe.
'Ye guardian twins, who aid our great deſign,
'By humble pray'r the heavenly powers incline
'To ſteer me ſafe to each Auſonian bay,
'And to the haunts of Circe point my way.'
Thus Argo ſpoke, as night her ſhades diſplay'd:
The ſons of Leda liſten'd and obey'd.
Before th' immortal powers their hands they ſpread;
All, ſave theſe chiefs, were ſtruck with ſilent dread.
The canvaſs, wide-diſtended by the gales,
Swift down Eridanus the galley ſails.
Here Jove's dread bolt transfix'd the ſtripling's ſide,
Who greatly dar'd the car of Phœbus guide.
This flood receiv'd him; and the flaming wound
Still ſteams, and ſpreads offenſive vapours round.
The feathery race, as o'er the flood they fly,
Wrapp'd in ſulphureous exhalations die.
The poplar's winding bark around them ſpread,
Apollo's daughters wail their brother dead.
Down their fair cheeks bright tears of amber run,
Sink in the ſand, and harden by the ſun.
When boiſterous winds the troubled waters urge,
And o'er its bank aſcends the ſwelling ſurge,
Theſe amber gems, ſwept by the tide away,
Their pearly tribute to the river pay.
But, down the ſtream, as Celtic legends tell,
The tears of Phœbus floated as they fell
In amber drops, what time from angry Jove
The god withdrew, and left the realms above:
To the fair Hyperborean race he fled,
Griev'd for his favourite, Æſculapius dead.
From fair Coronis ſprung this godlike ſon,
Where Amyros' ſtreams near Lacera run.
Strangers to mirth, the penſive Mynians muſe
On their hard lot, and ſtrengthening food refuſe.
Loathing the ſtench theſe putrid ſtreams emit,
Sickening and ſpiritleſs whole days they ſit;

Whole nights they hear the ſorrowing ſiſters tell,
How by the bolts of Jove their brother fell.
Their mingled tears, as o'er the ſtream they weep,
Like drops of oil float down the rapid deep.
The Rhone's broad channel Argo's keel divides,
Which mingles with Eridanus its tides:
There, where the confluent floods unite their force,
Boiſterous they foam. The Rhone derives its source
From caverns deep, which, far from mortal ſight,
Lead to the portals and the realms of night.
One ſtream its tribute to th' Ionian pays,
One to the wide Sardinian ocean ſtrays;
Through ſeven wide mouths it diſembogues its tides,
Where foaming to the ſea its ſtreams divides.
This winding ſtream tranſmits th' adventurous train
To lakes that delug'd all the Celtic plain.
Diſaſtrous fate had here their labour foil'd,
And of her boaſted proweſs Argo ſpoil'd,
(For through a creek to ocean's depths convey'd,
To ſure deſtruction had the heroes ſtray'd);
But Juno haſten'd from on high, and ſtood
On a tall rock, and ſhouted o'er the flood.
All heard, and all with ſudden terror ſhook:
For loud around them burſts of thunder broke.
Admoniſh'd thus, ſubmiſſive they return,
And ſteering back their better courſe diſcern.
Mid' Celtæ and Lugurians long they ſtray'd,
But reach'd the ſea-beat ſhore by Juno's aid:
O'er them each day her cloudy veil ſhe drew,
And thus from human ſight conceal'd the crew;
Whoſe ſhip had now the broad mid channel paſs'd,
And rode amid the Stœchades at laſt:
For Jove's twin ſons had pray'd, nor pray'd in vain.
Hence rear they altars, and due rites ordain
To theſe kind powers, whoſe influential aid
Not only Argo's bold adventurers ſway'd;
But later voyagers, by Jove's decree,
Have own'd their happy influence o'er the ſea.
The Stœchades now leſſening from their view,
Swift to Æthalia's iſle the veſſel flew,
With chalks, that, as they cover'd, ting'd the ſhore,
The heroes rubb'd their wearied bodies o'er.
Here are their quoits and wond'rous armour fram'd,
Here is their port diſplay'd, Argoüs nam'd.
Hence ſailing, they the Tyrrhene ſhore ſurvey,
As through Auſonia's deeps they cleave their liquid way.
Æeas' celebrated port they reach,
And faſten here their halſers to the beach.
Here ſaw they Circe, as in ocean's bed,
Diſmay'd with nightly dreams, ſhe plung'd her head.
For thus the ſorcereſs dream'd; that blood and gore
Had ſmear'd her walls, and flow'd around her floor:
That all her treaſur'd ſtores were wrapp'd in flame,
With which ſhe lur'd each paſſenger that came.
That copious ſtreams of blood her hand apply'd,
And her fears vaniſh'd as the flames ſubſide.
For this the magic dame, as morning roſe,
Waſh'd in the cleanſing wave her locks and clothes,
Monſters, unlike the ſavage, beſtial race,
Unlike to humankind in gait or face,
Limbs not their own ſupport whoſe hideous frame
As ſheep their ſhepherd follow, theſe their dame.
Such monſters once the pregnant earth diſclos'd,
Of heterogeneous ſhape and limbs compos'd:
No drying winds had then the ſoil condens'd,
No ſolar rays their genial warmth diſpens'd;
But time perfection to each creature gave:
Monſters like theſe were ſeen in Circe's cave,
All, ſtedfaſt gazing on her form and face,
Pronounc'd the ſorcereſs of Æeta's race.
Thoſe terrors vaniſh'd, which her dream inſpir'd,
Back to her gloomy cell the dame retir'd.
Cloſe in her guileful hand ſhe graſp'd each gueſt,
And bade them follow where her footſteps preſs'd.
The crowd aloof at Jaſon's mandate ſtay'd,
While he accompanied the Colchian maid.
Together thus they Circe's ſteps purſue,
Till her enchanting cave aroſe in view.
Their viſit's cauſe her troubled mind diſtreſs'd;
On downy ſeats ſhe plac'd each princely gueſt.
They round her hearth ſat motionleſs and mute:
(With plaintive ſuppliants ſuch manners ſuit)
Her folded hands her bluſhing face conceal;
Deep in the ground he fix'd the murderous ſteel;
Nor dare they once, in equal ſorrow drown'd,
Lift their dejected eyelids from the ground.
Circe beheld their guilt: ſhe ſaw they fled
From vengeance hanging o'er the murderer's head.
The holy rites, approv'd of Jove, ſhe pays:
(Jove, thus appeas'd, his haſty vengeance ſtays)
Theſe rites from guilty ſtains the culprits clear,
Who lowly ſuppliant at her cell appear.
To expiate their crime in order due,
Firſt to her ſhrine a ſucking pig ſhe drew,
Whoſe nipples from its birth diſtended ſtood:
Its neck ſhe ſtruck, and bath'd her hands in blood.
Next with libations meet and prayer ſhe ply'd
Jove, who acquits the ſuppliant homicide
Without her door a train of naiads ſtand,
Adminiſtring whate'er her rites demand;
Within, the flames, that round the hearth ariſe,
Waſte, as ſhe prays, the kneaded ſacrifice:
That thus the furies' vengeful wrath might ceaſe,
And Jove appeas'd, diſmiſs' them both in peace,
Whether they came to expiate the guilt
Of friends or ſtrangers blood by treachery ſpilt.
Circe aroſe, her myſtic rites complete,
And plac'd the princes on a ſplendid ſeat.
Near them ſhe ſat and urg'd them to explain
Their plan and progreſs o'er the dangerous main:
Whence roſe the wiſh to viſit Circe's iſle,
And thus beneath her roof converſe a while.
For ſtill on every thought the viſion preſs'd,
And its remembrance ſtill diſturb'd her reſt.
Soon as the ſorcereſs ſaw Medea raiſe
From earth thoſe eyes which ſhot a beamy blaze,
Anxious ſhe wiſh'd to hear her native tongue,
Conjecturing from her features whence ſhe ſprung,
For all Sol's race are beauteous as their ſire;
Their radiant eyes emit celeſtial fire.
The willing maid complied with each demand,
And in the language of her native land

Her ſtory told; each ſtrange event declar'd,
What countries they had ſeen, what dangers ſhar'd;
Her ſiſter's counſels, how they ſway'd her breaſt,
How with the ſons of Phrixus ſhe tranſgreſs'd,
How from her father fled, his threats diſdain'd:
But ſtill untold her brother's fate remain'd.
His fate th' enchantreſs knew; no arts could hide
The murderous deed: ſhe pitied and reply'd:
'Ah! wretch, dire miſchiefs thy return await.
'Hope not to ſhun thy father's vengeful hate;
'Reſolv'd on right, he to the realms of Greece
'Will cloſe purſue thee, nor his fury ceaſe,
'Till he avenge the murder of his ſon:
'For deeds of blackeſt darkneſs haſt thou done.
'But go, at once my kin and ſuppliant free,
'Nor fear additional diſtreſs from me.
'Thy lover hence, far hence thyſelf remove,
'Who ſcorn'dſt a father's for a vagrant's love.
'Here ſupplicate no more: my heart diſclaims
'Thy guilty wanderings and ſiniſter aims.'
She ſpoke: the maid lamented; o'er her head
Her veil ſhe caſt, and many a tear ſhe ſhed.
Her trembling hand the hero rais'd with ſpeed,
And from the cave of Circe both recede.
By watchful Iris taught, Saturnia knew
What time from Circe's cave they both withdrew.
To mark their ſteps commiſſion'd Iris ſtaid,
On whom theſe freſh injunctions Juno laid:
'Haſte, Iris, now; thy pinions now expand,
'And bear once more Saturnia's dread command,
'Go, Thetis rouſe from ocean's dark retreat;
'Her potent aid my projects will complete.
'Spread then towards Vulcan's ſhores thy ſpeedy wing,
'Where round his anvils ceaſeleſs hammers ring.
'Bid him no more his boiſterous bellows ply,
'Till heaven-built Argo ſail ſecurely by.
'Then to the deity, whoſe ſovereign ſway
'Controuls the winds, whom raging ſtorms obey,
'Haſte; and requeſt that every riſing gale
'Be huſh'd, and ſilence o'er the ſeas prevail:
'That round the waves ſereneſt zephyrs play,
'Till Argo anchors in Phæacia's bay.'
She ſaid: and Iris, pois'd on airy wings,
From the bright ſummit of Olympus ſprings:
Deſcends impetuous down the Ægean deeps,
Where in his watery caverns Nereus ſleeps.
To Thetis firſt repairs the winged maid;
Solicits and obtains her potent aid.
Vulcan ſhe next in humble prayer addreſs'd;
The god of fire complied with her requeſt:
His bellows heave their windy ſides no more,
Nor his ſhrill anvils ſhake the diſtant ſhore.
Her wants to Æolus ſhe next diſclos'd:
And while her wearied limbs ſhe here repos'd,
Thetis from all her naiad train withdrew,
And from her Nereus to Olympus flew.
Juno with tranſport hail'd her ſea-born gueſt,
Whom near her throne ſhe ſeated, and addreſs'd:
'O, hear my tale, bright goddeſs of the main:
'Thou know'ſt my care for Jaſon and his train;
'Thou know'ſt how Juno's arm alone upheld,
'And through the jutting rocks their ſhip impell'd:
'Around whoſe ſides fierce, fiery tempeſts rave,
'And the huge crag is whiten'd by the wave.
'Now muſt they ſail near Scylla's awful height,
'And where the rock Charbydis forms a ſtreight.
'Thee yet an infant in my arms I preſs'd,
'And more than all thy ſiſter-nymphs careſs'd.
'Revering me, the wife of ſovereign Jove,
'Thou ſcorn'dſt the tenders of his lawleſs love.
'(For him a mortal beauty now inflames,
'And now he revels with celeſtial dames),
'And Jove, in vengeance for his ſlighted bed,
'Swore not a deity ſhould Thetis wed.
'Nor could the fervour of his love abate,
'Till Themis thus diſclos'd the will of fate;
'That from thy womb in future times ſhould ſpring,
'Superior to his ſire, an infant king.
'Dreading th' event, leſt in ſome future day
'This infant king ſhould claim celeſtial ſway,
'Thee Jove abandon'd to ſecure his throne,
'And reign unrivall'd ever and alone.
'But, lo! I gave, thy bridal bed to grace,
'A mortal huſband worthy thy embrace;
'I made thee mother of a happy line,
'And to thy nuptials call'd the powers divine.
'Myſelf, in honour to the godlike pair,
'Deign'd on that day the bridal torch to bear.
'Soon as thy ſon (believe the truths you hear)
'Shall in Elyſium's bliſsful plains appear,
'Whom kindly now the foſtering naiads guard
'In Chiron's manſion, of thy milk debarr'd,
'In Hymen's ſilken chains the hero led,
'Muſt ſhare the honours of Medea's bed.
'Oh! be a mother's tendereſt care diſplay'd,
'Succour thy Peleus, and thy daughter aid,
'Hath he tranſgreſs'd? thy riſing wrath ſubdue;
'For Ate's dire effects th' immortals rue.
'Vulcan, I ween obſequious to my will
'His fires will ſtifle, and his bellows ſtill;
'His boiſterous wave will Æolus reſtrain,
'And zephyrs only fan the curling main,
'Till Argo anchors in Phæacia's bay.
'But ſhelves and ſtormy ſeas obſtruct her way;
'Theſe, theſe I dread; but with my train expert,
'Be thine the care theſe miſchiefs to avert.
'Safe from Charybdis' gulf the veſſel guide,
'Safe from loud Scylla's all-abſorbing tide;
'Scylla, the terror of Auſonia's ſhore,
'Whom Phorcuns to infernal Hecat bore,
'Cratæis nam'd. Oh! ſummon all thy pow'r,
'Leſt her voracious jaws my chiefs devour.
'Hope's cheerly dawn if haply thou diſcern,
'Snatch from the watery grave the ſinking ſtern.
"If 'tis reſolv'd," replies th' aſſenting queen,
"Tempeſts to curb, and oceans to ſerene,
"Fear not; but in my proffer'd aid confide:
"This arm ſhall convoy Argo o'er the tide.
"The ſurge ſubſiding ſhall confeſs my ſway,
"While harmleſs zephyrs round the canvaſs play.
"Now muſt I traverſe the wide fields of air,
"And to my ſiſter's cryſtal grots repair;
"Requeſt their aid, and haſten to the ſhores,
"Where anchor'd Argo unmoleſted moors:
"That each brave comrade, at the dawn of day,
"With heart elate may cleave the liquid way."

She ſpoke; and through th' aërial regions ſped,
Then in the pools of ocean plung'd her head.
At Thetis' call the ſiſter nereids came,
And ſtock'd obedient round their oozy dame.
Juno's commands ſhe bade the ſiſters heed,
And to th' Auſonian deep deſcend with ſpeed.
Swifter than lightning, or than Phœbus' beams,
The goddeſs darted through the yielding ſtreams;
Till, gliding ſmooth beſide the Tyrrhene ſtrand,
Her ſpeedy footſteps preſs'd th' Ææn land.
Along the winding beach the Mynians ſtray,
And while with quoits and darts their hours away.
Here Thetis ſingled from the gallant band
Peleus her ſpouſe, and preſs'd the hero's hand:
Unſeen by all the hoſt, his hand ſhe preſs'd;
By all, ſave Peleus, whom ſhe thus addreſs'd:
'Loiter not here; but with returning light
'Unfurl your ſails, nor Juno's counſels ſlight.
'Safe through th' Erratic rocks your ſhip to guide,
'Which frown tremendous o'er the toſſing tide.
'For this the ſea-green ſiſters join their force,
'And ſmooth through dangerous ſeas your deſ-
'tin'd courſe.
'My form, what time we urge the foaming keel,
'By you not unobſerv'd, to none reveal;
'Leſt, as before, your folly I chaſtiſe, [riſe.'
'And to more deſperate heights my vengeance
She ſaid, and vaniſh'd to the deeps below.
The wondering chief was pierc'd with keeneſt woe.
For ſince the dame, with indignation fir'd,
Had from her Peleus' hated bed retir'd,
Unſeen till now ſhe lurk'd: the ſtrife begun
From this unweeting cauſe, her infant ſon.
For, ſoon as night diffus'd its darkeſt ſhade,
Her young Achilles o'er the flame ſhe laid,
And, at return of day, with ceaſeleſs toil
Apply'd to all his limbs ambroſial oil,
That youth might triumph o'er th' attacks of time,
Nor creeping age impair his vigorous prime.
The father ſaw, as from his bed he roſe,
Fierce, ambient flames his infant's limbs encloſe;
And, as he gaz'd, his rueful cries confeſs'd
The boding ſorrows of a parent's breaſt.
Fool! for his queen, who heard her lord deplore,
Daſh'd in a rage her infant on the floor.
Then fleet as air, or like a dream of night,
She vaniſh'd ſudden from his odious ſight,
Plung'd in her fury down the whelming main,
Nor e'er emerg'd ſhe from the waves again.
For this he ſorrow'd: but each ſage command
Which Thetis gave, he told his gallant band.
They heard, and from their ſports retir'd in haſte;
Then ſhar'd recumbent, in a ſhort repaſt.
Sated, they catch the comforts of repoſe,
Till, every toil renewing, morn aroſe.
Soon as her radiant light illumin'd heav'n,
And to their wiſh were breezy zephyrs giv'n,
Quitting the land, they climb with nimble feet
The lofty decks, and reaſſume their ſeat.
Each to his toil returns alert and bold:
They tear the griping anchor from its hold;
They hoiſt the yard, their bracing ropes unbind,
And give the flapping canvaſs to the wind.
Swift ſails the ſhip: ſoon to th' expecting crew
Anthemoeſſa's iſle aroſe in view.
The ſyrens here, from Acheloüs ſprung,
Allure the loitering ſailors with their tongue,
Who, faſtening to the beach the corded ſtay,
Neglect their voyage, and attend the lay.
What time to Acheloüs' longing arms
The muſe Terpſichore reſign'd her charms,
Their mutual love theſe wily ſongſters crown'd;
Who lur'd, in times remote, with tempting ſound,
Ceres' fair daughter, and fallacious ſhow
A virgin-face, while wing'd like fowls they flew.
On a bright eminence the charmers ſtand,
And watch the veſſels as they tug to land.
Full many a mariner their ſongs betray,
Who liſts and lingers till he pines away.
As Argo ſail'd they rais'd their tuneful tongue;
And here their halſers had the heroes hung,
But Thracian Orpheus wak'd his wonted fire,
And ſung reſponſive to his heavenly lyre,
That each reſounding chord might pierce their ear,
And none the muſic of the ſyrens hear.
Yet ſtill they ſung: ſtill briſkly, with the breeze,
The veſſel tilted o'er the curling ſeas.
Butes alone became an eaſy prey,
Who all enraptur'd liſten'd to their lay.
Erect, above the rowing chiefs, he ſtood,
And frantic ſprung into the faithleſs flood.
His helpleſs hands he rais'd, the ſhip to gain,
And, but for Venus' aid, had rais'd in vain:
She Eryx' honour'd queen, the wretch deſcry'd,
And ſnatch'd him floundering from the foaming tide,
His kind protectreſs, as her courſe ſhe bends
Where Lilybœum's ample cape extends.
This dire miſhap diſhearten'd all the band,
Who row with vigour from the traiterous ſtrand.
But other peſts, more fatal to their freight,
Threaten their progreſs to that dangerous ſtreight,
Where Scylla's rock projects its wave-worn ſide,
And where Charybdis' gulf abſorbs the tide.
Daſh'd by the driven waves the Planctæ roar'd,
From whoſe cleft ſummits flames ſulphureous pour'd.
Thick duſky clouds involve the darken'd ſkies,
And hid are Phœbus' ſplendours from their eyes.
Though Vulcan ceas'd from his aſſiduous toils,
The fires flaſh thick, and fervid ocean boils.
Here o'er the ſailing pine the nymphs preſide,
While Thetis' forceful hands the rudder guide.
As oft in ſhoals the ſportive dolphins throng,
Circling the veſſel as ſhe ſails along,
Whoſe playful gambols round the prow and ſtern
The much delighted mariners diſcern;
Round Argo thus the toiling nymphs attend,
And, led by Thetis, their aſſiſtance lend.
O'erhanging black the rock's bleak brow they ſee,
And gird their azure veſtures to their knee.
Now here, now there, as danger warns, they glide,
And ſtem mid' cruſhing crags the troubled tide.
Pendent on mountain waves the veſſel hung,
That pierc'd her ſolid planks, and foam'd the rocks among.
Above theſe rocks, here now the nereids riſe,
And float on billows hid amidſt the ſkies:

Deſcending now to ocean's ſecret bed,
They in his gulfy deeps conceal their head.
As when along the beech, ſuccinct for play,
To toſs the flying ball the nereids ſtray,
From hand to hand the ſphere unerring flies,
Nor ever on the ground inglorious lies;
The ſiſters thus, with coadjutant force,
High o'er the ſurge impel the veſſel's courſe:
From ſecret ſhelves her wave-daſh'd ſides they ſhove,
Though ſturdy billows ſtrong againſt them ſtrove.
On a tall fragment that o'erlook'd the flood,
His ſhoulder reſting on his hammer, ſtood
The ſooty god: and from her ſtarry ſkies
Juno beheld the ſcene with ſtedfaſt eyes.
Her hand around Minerva's neck ſhe threw;
For much Saturnia trembled at the view.
Long as the vernal ſuns protract the light,
So long in Argo's cauſe the nymphs unite.
Propitious to their labours ſprung the breeze,
And the free veſſel ſhot acroſs the ſeas.
Trinacria's verdant meads they ſoon ſurvey,
Where graze thy herds, illuſtrious god of day.
Juno's commands obey'd, the watery train,
Like diving mews, explore the deeps again.
Coaſting along, the bleating flocks they hear,
And herds loud bellowing ſtrike their liſtening ear.
Sol's youngeſt daughter, Phaëthuſa, leads
The bleating flocks along the dewy meads;
Propp'd on her ſilver crook the maid reclin'd;
A ſtouter ſtaff, with brazen ringlets join'd,
Lampetie takes; whoſe herds the heroes ſee
Slunk to the brook, or browſing on the lea.
Of ſable hue no cattle you behold;
Milkwhite are all, and tipp'd their horns with gold.
They paſs'd theſe meads by day; at day's decline
They bruſh'd with pliant oars the yielding brine.
At length Aurora's all-reviving ray
Redden'd the waves, and ſhow their certain way.
A fertile iſle towers o'er the Ionian tide,
Ceraunia nam'd; the land two bays divide.
Fame ſays, (forgive me, muſe, while I unveil,
Reluctant too, a legendary tale),
A ſickle lies conceal'd within this land,
With which raſh Saturn's mutilating hand
His father caſtrated: for Ceres' aid
Others aſſert this rural ſickle made,
For Ceres once, with love of Macris fir'd,
To this fam'd iſle, her favourite ſeat, retir'd.
The Titans here ſhe taught her arms to wield,
And crop the bearded harveſt of the field.
This iſland hence, nurſe of Phæacian ſwains,
Th' expreſſive name of Drepane obtains.
From mangled Uranus's blood they trace
The ſource inglorious of Phæacia's race.
Trinacria left, and numerous perils paſt,
Her heaven-protected Argo moors at laſt.
The heroes diſembark'd Alcinoüs hails,
And at their feſtive ſacrifice regales.
Mirth unremitted through the city runs,
As though they welcom'd home their darling ſons.
The godlike gueſts their ſocial part ſuſtain,
Joyous as though they preſs'd Hæmonia's plain:
But ere that diſtant plain delights their view,
The chiefs muſt buckle on their arms anew.
For, lo! thoſe Colchians who adventurous ſtray'd
Through deeps unknown, had enter'd undiſmay'd
The dire Cyanean rocks, here throng the coaſt,
And wait th' arrival of the Grecian hoſt.
The forfeit maid ſhould Argo's crew refuſe,
War in each ſad diſaſtrous ſhape enſues.
Arm'd and reſolv'd they threaten inſtant fight,
And future fleets t' aſſert their monarch's right.
But king Alcinoüs interpos'd his aid,
And, ere they ruſh'd to fight, their wrath allay'd.
Arete's knee the ſuppliant virgin preſs'd,
And thus th' aſſociate band and queen addreſs'd:
'O queen,' exclaim'd ſhe, 'lend thy timely aid
'To ſave from Colchian hands a ſuffering maid.
'With ruffian rage to bear me hence they come,
'And to my wrathful ſire conduct me home.
'Thou know'ſt, if one, like me, of human kind,
'How prone to err is man's unſtable mind.
'Deem me no ſlave to luſt's uſurping pow'r;
'Prudence forſook me in the needful hour.
'Be witneſs ſun, and thou, whoſe every rite
'Is wrapp'd, dire Hecate, in ſable night,
'How I reluctant left my native home,
'And with rude foreigners abhorr'd to roam.
'Fear wing'd my flight; and, having once tranſ-
'greſs'd,
'To flee I judg'd my laſt reſource and beſt.
'Still have I liv'd, as with my father, chaſte,
'My ſpotleſs zone faſt girded to my waiſt.
'Oh! may my tale, fair princeſs, claim thy tears;
'Oh! teach thy lord compaſſion as he hears.
'On thee may all th' immortal gods beſtow
'Beauty and life, exempt from age and woe;
'Cities, that need no bold invaders dread,
'And a fair progeny to crown thy bed.'
In tears ſhe ſpoke: then to each gallant chief
Told in theſe plaintive ſtrains her tale of grief:
'Low at your feet, ye warriors, ſuppliant view
'A princeſs doom'd to wretchedneſs for you.
'Yok'd were the bulls, and, deſperate as they
'roſe,
'Cruſh'd by my aid were hoſts of giant-foes.
'Yes, ſoon Hæmonia the rich prize will ſee,
'And boaſt of conqueſts which ſhe owes to me.
'My country I, my parents, palace left,
'To pine through life, of all its joys bereft;
'But gave to you, a baſe ungrateful train,
'To ſee your country and your friends again.
'Spoil'd of my beauty's bloom by fate ſevere,
'In endleſs exile muſt I languiſh here.
'Revere your oaths; Erynnis' vengeance dread,
'Who heaps her curſes on the perjur'd head:
'Dread heaven's ſure wrath, if, to my ſire re-
'ſtor'd,
'My ſhame or ruin wait his deſperate word.
'No ſheltering ſhrine, no fortreſs near, I fly
'To you alone, on your defence rely.
'Yet why on you? who, mercileſs and mute,
'Have heard my cries, nor ſeconded my ſuit;
'Unmov'd have ſeen me lift my ſuppliant hand
'To the kind princeſs of this foreign land.
'Elate with hope the golden fleece to gain,
'Colchos oppos'd you, and her king in vain:

' But fearful now the battle to renew,
' Ye dread detachments, nor will fight with few.'
She said; and all who heard her suppliant moan,
Cheer'd her sad heart, and check'd the rising groan.
Each gallant man his brandish'd spear display'd,
And vow'd assistance to the suffering maid,
Shook his drawn sword, a prelude to the fight,
Resolv'd on vengeance, and resolv'd on right.
Night now dispers'd the faint remains of day,
And all the slumbering world confess'd its sway:
Grateful its gloom to men with toils oppress'd;
Grateful to all but her, with sleep unbless'd.
She, hapless fair, her painful vigils kept;
Revolving still her griefs, she watch'd and wept.
As at the distaff toils th' industrious dame,
Whose frequent tears her orphan children claim.
All night she toils, while clinging round they stand,
Wail their lost fire, and his return demand.
Swift down her cheek descends the silent tear:
So hard the lot fate destines her to bear!
Like her's Medea's copious tears descend,
Such agonizing griefs her tortur'd bosom rend.
The royal pair retire with wonted state
From the throng'd city to their palace-gate.
On their soft couch reclin'd, at evening's close,
Long conference held they on Medea's woes.
Thus to Alcinöus the queen express'd
The kind suggestions of her pitying breast:
' Oh! may the Minyans, prince, thy favours
' share:
' Oh! shield from Colchian foes an injur'd fair.
' Not distant far Hæmonia's plains extend,
' And near our island Argo's frontiers end.
' But far remote Æeta reigns; his name
' Unknown to us, or faintly known by fame.
' She, in whose sorrows now I bear a part,
' Hath to redress them, open'd all my heart.
' Let no rude Colchian bear her hence away,
' To her sire's vengeance a devoted prey.
' Her error this: the fiery bulls to quell,
' Fond and officious she prepar'd the spell.
' Augmenting then (as oft offenders will)
' Her first with future errors, ill with ill,
' Far from her native home, impress'd with dread,
' Far from her angry sire the damsel fled.
' But bound is Jason by strong ties, says fame,
' To wed the wanderer, and retrieve from shame.
' Urge him not then, with many an added threat,
' His faith to violate, his oaths forget;
' Nor stimulate Æeta's wrath to rise:
' Their daughters parents rigorously chastise.
' Thus Pycteus, with parental zeal o'ercome,
' Compell'd his child Antiope to roam.
' Thus Danaë, by her wrathful sire secur'd,
' Toss'd in the troubled deep distress endur'd.
' Nor long since Echetus, a wretch accurs'd,
' With brazen pins his daughter's eye-balls
' pierc'd:
' Pent in a dungeon's awful gloom she pin'd,
' Doom'd by her savage sire obdurate brass to
' grind.'
She said: soft pity touch'd the sovereign's breast,
Who thus his supplicating queen address'd:

" In me, O queen, these heroes should desery,
" For the fair sufferer's sake, a firm ally;
" Soon should my arms the Colchian foes remove,
" But I revere the just decrees of Jove.
" Unsafe I deem Æeta to deride,
" Who sways the sceptre with a monarch's pride;
" Able, though distant, if averse from peace,
" To scatter discord through the realms of Greece.
" Hear my proposal then; which you, I trust,
" And all who hear it, will applaud as just:
" If still a virgin's spotless name she bear,
" Safe to her sire's domains conduct the fair:
" But if one bed the wedded pair contain,
" I will not sever Hymen's silken chain.
" Forbid it, Heaven! that I in wrath expose
" Her sinless offspring to insulting foes."
He said, and sunk to rest: his sage resolves
Anxious and oft the wakeful queen revolves.
She rose: their princess' footstep heard, arise
Her female train, and each her wants supplies.
' Go,' to her page apart Arete said,
' Bid Æson's valiant son the virgin wed.
' Bid him no more Alcinöus' ears assail
' With long entreaties, and a well-known tale.
' Himself, unask'd, his advocate will go,
' And tender these conditions to the foe:
' If still the fair a spotless maid remain,
' Soon shall she view her father's courts again:
' But, if a matron's honour'd name she bear,
' He will not separate the wedded pair.'
She said: her herald, eager to convey
The royal message, sped without delay;
To Æson's son he told Arete's word,
And the kind counsels of her sovereign lord.
Hard by their ship, in glistering arms array'd,
Deep in the port of Hyllicus embay'd,
He spies the chiefs, his embassy repeats,
And every gallant heart with transport beats.
They crown the goblets to the powers divine,
And drag th' accustom'd victims to the shrine:
Then for the pensive fair officious spread
In a sequester'd grot the bridal bed.
Hither, in days of yore, fair Macris came,
Daughter of Aristæus, honour'd name!
He taught mankind the virtues and the use
Of the bee's labours, and the olive's juice.
For, know, when Hermes infant Bacchus bore,
Snatch'd from the flames, to fair Eubœa's shore,
Macris embrac'd him with a mother's love,
And there, awhile, she nurs'd the seed of Jove,
And there with honey fed; till Juno's spite
Far from Eubœa's isle compell'd her flight.
At length, of this Phæacian grot possess'd,
She with vast opulence the natives bless'd.
To deck with honours due the bridal bed,
Around it wide the golden fleece was spread.
With sweetest flowers, that deck or dale or hill,
Th' assiduous nymphs their snowy bosoms fill.
The golden fleece emits so bright a ray,
They shone all radiant as the star of day,
Inspiring love: the prize though strong desire,
Prompts them to touch, with reverence they retire.
These are the daughters of the Ægeän flood,
Those, Meletæum, haunt thy lofty wood.

From groves, from ſtreams, at Juno's call they
To grace the nuptials of this godlike man. [ran,
The ſacred grot, recorded ſtill by fame,
Bears to this day Medea's honour'd name.
For here the nymphs, their veils around them
ſpread,
To nuptial joys the happy lovers led:
And every chief, to guard the bliſsful ſpot,
Clad in bright armour, ſtood before the grot,
Leſt hoſtile troops, with rude tumultuous noiſe,
Should force an entrance, and diſtract their joys.
Thus ſtation'd, they protect the hallow'd ground,
Their feſtive brows with leafy chaplets crown'd.
As Orpheus ſtruck his tuneful lyre, they ſung,
And Hymeneals round the grotto rung.
But in Alcinoüs' court the fair to wed,
O'er Jaſon's anxious mind diſquiet ſpread:
Full oft he wiſh'd Iolcos' coaſt to gain,
And wed the virgin in his ſire's domain;
Such too Medea's wiſh: but fate ſevere
Forc'd him to celebrate his nuptials here.
For pleaſure unalloy'd we look in vain;
Pleaſure to ſuffering man is mix'd with pain.
Whether the Colchian foe had ſcorn'd or clos'd
With the juſt terms Phæacia's prince propos'd,
Of this they doubted: mid' the mirthful ſcene
Fears, which theſe doubts ſuggeſted, intervene.
Aurora now her orient beams diſplay'd,
And pierc'd the ſullen night's ſurrounding
ſhade.
The circling ſhores and new beſpangled ground
Reflect her rays: the ſtreets with noiſe reſound.
The citizens and Colchians, who poſſeſs'd
The diſtant coaſt, awake from balmy reſt.
Impatient now his purpoſe to diſcloſe,
To plead Medea's cauſe the monarch roſe.
His hand ſuſtain'd a ſceptre's maſſy gold,
Which kings deciding right were wont to hold.
Around their prince, in gliſtering arms array'd,
Phæacia's peers a ſeemly pomp diſplay'd.
Eager on each adventurous chief to gaze,
A female troop beyond the city ſtrays.
In feſtive bands the diſtant ſwains unite:
(For Juno had divulg'd the nuptial rite)
One from his fold a ram ſelected brought,
An heifer one, to feel the yoke untaught;
Flagons of wine ſome for libation bear:
The ſmoke of victims blacken'd all the air.
As women wont, the female train ſelect
Their coſtly veils, with gay embroidery deck'd:
Such golden toys, ſuch trinkets they provide,
As on a nuptial day adorn the bride.
The comely chiefs their admiration won;
But more than all Æager's tuneful ſon,
As lightly to the lyre's melodious ſound
Tripp'd the briſk dancer o'er the meaſur'd ground.
In concert full the virgin-choir prolong
The happy day with Hymeneal ſong.
Here a fair band, collected in a ring,
Praiſes to thee, auſpicious Juno, ſing.
By thee inſpir'd, diſclos'd the royal dame
The friendly terms her prince was pleas'd to name.
Nor are the terms Alcinoüs nam'd diſown'd:
(For now their faithful loves hath Hymen
crown'd)
True to his oath, he heard with fix'd diſdain
And deem'd Æeta's vengeful fury vain.
Soon as the Colchians ſaw their purpoſe croſs'd,
Defeated all their ſchemes, their labour loſt;
That to the ſovereign's terms they muſt accede,
Or quit his ports, and ſail away with ſpeed;
Dreading the monarch's wrath, ſubmiſs they try
To win his friendſhip, and commence ally.
Settling at laſt, long time the Colchian hoſt
Dwelt with the natives on Phæacia's coaſt:
Till Bacchus' hated race from Corinth fled,
Exil'd theſe Colchians, and the iſle o'erſpread.
They ſought the neighbouring ſhores: in times
to come
Their ſons emigrating explor'd a home,
Where far and wide extends th' Illyric coaſt,
And the Ceraunian hills in clouds are loſt.
But theſe events, which now my muſe engage,
Were late fulfill'd in ſome ſucceeding age.
Yet ſtill, in Phœbus' fane, uninjur'd ſtand
The altars rais'd by fair Medea's hand:
Some to the fates are pil'd with victims due,
Some to the nymphs their annual rites renew.
Towards the parting train the royal pair
Their generous love by coſtly gifts declare.
Twelve fair Phæacians, at the queen's command,
Conduct Medea to the ſea-beat ſtrand.
On the ſeventh morn with gently breathing
gales
Propitious Jove expanded Argo's ſails;
Argo decreed freſh dangers to ſuſtain,
Ere Greece beholds her gallant ſons again.
Ambracia's bay had open'd to their view,
Beſides Curetes' land the galley flew,
The cluſtering iſles, Echidanes, they paſs'd,
And Pelops' diſtant realm beheld at laſt.
Nine tedious nights and days the veſſel ſweeps
The troubled ſurface of the Libyan deeps;
Till, driven by rapid tides and ſtorms aſtray,
She near the Syrtes' quickſands plow'd her way:
Whirl'd in whoſe gulfy pools, their deſtin'd grave,
Nor ſails nor oars the ſinking galleys ſave.
Burſt from its black abyſs, the boiling flood
Up-heaves its ſhaggy weeds, involv'd in ſhelves
of mud.
With the far-ſpreading ſpray the ſands ariſe;
But nought diſcern they here that creeps or flies.
The tide (which now retreats into the main,
And now returns upon the beach again);
Far o'er the ſhore, impell'd with fury, ſhow
All Argo's ſlimy keel expos'd to view.
They diſembark, and gaze with aching eyes
On ridgy mountains loſt amid the ſkies.
No grateful ſtreams, no beaten paths appear,
No rural cot diſcern they far or near;
A death-like ſilence reign'd: around diſmay'd
His comrade each interrogating ſaid:
'What country this? on what bleak clime at
laſt
'Have the rude tempeſts heaven-built Argo caſt?
'Oh! had we dar'd, devoid of vulgar fear,
'Our courſe undaunted through thoſe fragments
ſteer,
'Like heroes then (though Jove ſucceſs deny'd)
'We in the bold attempt had bravely died.

'What can our skill devise? the least delay
'Is fatal here; the winds forbid our stay.
'How bleak and barren is the coast we tread!
'And what a desert waste is wide around us
'spread!'
He said; and, joining in the loud lament,
Ancæus thus forboded the event:
'What dire mishaps our gallant host befall!
'Thus by stern fate's decree we perish all!
'What woes await us on this desert cast,
'If from the land awakes the furious blast!
'For slimy seas my sight far off commands,
'And whitening billows bursting o'er the sands.
'And dreadfully had Argo's yawning sides,
'Remote from shore, receiv'd the gushing tides,
'Had not the surge which lifted her to heav'n,
'Full on the pebbly beach the vessel driv'n.
'But now the tide retiring quits the strand,
'And waves unfaithful skim the levell'd sand.
'Our projects baffled, and hope's cheerly dawn
'From our expecting sight thus soon withdrawn,
'Let other hands the pilot's art display,
'And they who fear not danger steer the way.
'But our joint labours Jove decrees to foil,
'Nor will our native home reward our toil.'
He said; and all renown'd for naval skill,
Close with his words, and wait th' impending ill.
From every heart the vital motion fled,
O'er every face a deadly paleness spread.
As when from street to street, in wild dismay,
Affrighted mortals like pale spectres stray;
Expecting wars, or plagues, or bursting rains,
That deluge all the harvest of the plains:
Or, as when statues drops of blood distil,
And fancied bellowings the temples fill;
The noon-day sun eclips'd involves in night
Th' astonish'd world, and stars emit their light:
Thus on the beach they stalk'd, a heartless clan!
Like sweating statues, or like spectres wan.
His feeble arm each round his comrade cast,
Then sunk into the sand to breathe his last,
Resolv'd, as now the star of Hesper rose,
To share the solace of united woes.
Some here, some there select their clay-cold bed,
And round their shivering limbs their garments
spread:
Resign'd to death, in midnight's sullen shade
And at mid-day, here languishing they laid.
Remote, Medea's fair attendants moan,
Cling round their queen, and groan return for
groan.
As when a nest, surcharg'd with callow young,
Falls from the lofty cliff to which it clung,
Th' unfeather'd brood by shrillest cries attest
Their far-flown mother, and their ruin'd nest:
As on the banks Pactolus' streams bedew,
Melodious swans their dying notes renew;
The rivers gliding the rich vales among,
Bear on their silver streams the soothing song:
Thus they, their golden locks besmear'd with
gore,
All night in plaintive elegies deplore.
Their toils yet incomplete the godlike band
Had now ignobly perish'd on the sand,
But the bold heroines, who guard the coast,
Beheld with pitying eye the drooping host:
Those nymphs, who, when in glistering arms ar-
ray'd,
Rush'd from the thunderer's brain the martial
maid,
In needful hour their kind assistance gave,
And cleans'd her infant-limbs in Triton's wave.
'Twas noon: o'er Libya's sands the god of day
Darted the splendours of his fiercest ray.
Full before Jason stood the nymphs confess'd,
And gently from his head withdrew the vest.
Sudden he starts, impress'd with silent dread,
And from his fair protectors turns his head.
They in compassion's mild address began
To free from terrors vain the hopeless man:
'Why griev'st thou thus? Oh! bid thy sorrows
cease:
'We know thy coming's cause, the Golden Fleece.
'We know the various toils by land you bore;
'How tost'd on ocean, how distress'd on shore.
'Terrestrial powers, for acts of friendship known,
'We make the shepherd's rural cares our own.
'We, Libya's daughters and avengers, boast
'Our sway extended o'er the Libyan coast.
'Arise, nor sink beneath thy sorrow's weight;
'But rouse thy fellows from their drooping state.
'When Amphitrite with officious speed
'Unreins from Neptune's car the fiery steed,
'Thy mother then with duteous care repay.
'Whose womb hath borne thee many a toilsome
day.'
'Discharge this duty, and resail to Greece,
'Safe and triumphant with the Golden Fleece.'
They spoke, and vanish'd: from his sandy bed
Jason arose, and looking round he said;
'Ye godlike powers, the desert plains who rove,
'Ye fair, who tend the flocks, propitious prove.
'Those dark mysterious truths your tongues fore-
told,
'I go, if haply can my friends unfold.
'Conven'd, may they some prudent scheme devise,
'For in th' advice of numbers safety lies.'
He said: and, wading through the driven sand,
Rous'd with loud voice the sad desponding band.
Thus while the lion his lost mate explores,
The forests ring, earth trembles as he roars:
Herdsmen and herds, o'erwhelm'd with equal fear,
All mute and trembling deem destruction near.
But grateful to the host was Jason's call;
No fears it cherish'd, but gave hope to all.
Yet with dejected looks the heroes meet.
Beside the female train to each his seat
He near the shore assign'd; in order due
His wondrous tale relates, and cheers the pensive
crew:
'Attend, my friends: three virgin forms, who
came.
'From heaven their race, to sooth my sorrows
'Their shoulders round were shaggy goat-skins
cast;
'Which, low descending, girt their slender waist.
'High o'er my head they stood; with gentle hand
'My vesture rais'd, and gave this dread command:
'That I with speed my piteous bed forsake,
'And, risen, haste my comrades to awake.
'That mindful we our mother's cares repay,
'Whose womb sustain'd us many a toilsome day,

'When Amphitrite with officious speed
'Unreins from Neptune's car the fiery steed.
'Long have I sought this wonder to explain,
'And still revolving I revolve in vain.
'In the bold name of heroines they boast,
'Daughters and guardians they of Lybia's coast.
'Known to these nymphs are all the toils we bore
'On the rough ocean and the faithless shore.
'Nor staid they long; but, sudden from my view
'Their radiant forms an ambient cloud withdrew.'
He said: on every face sat boding fears;
When, lo! a portent greater far appears.
Fierce from the foamy deep, of wond'rous size,
Springs an huge horse; his mane expanded flies.
From his strong sides he shakes th' adherent spray,
Then towards the coast directs his rapid way.
Skill'd in whate'er this prodigy portends,
With pleasure Peleus thus consoles his friends:
'Now by his consort's hand releas'd I see
'The car of Neptune, and his horses free.
'A mother's name (or I predict in vain)
'Argo may boast; she feels a mother's pain.
'Her pregnant womb a troop of heroes bears,
'And endless perils for their safety shares.
'Come, let us now our boasted strength display,
'And on our shoulders bear our ship away.
'Steer we through depths of sand our dangerous course,
'Led by the steps of this portentous horse.
'His steps reluctant press the dusty plain,
'But rapid bear him to his kindred main;
'Thither attend his flight.' Thus spoke the seer:
His pleasing counsels gratify'd their ear.
This wondrous tale the tuneful nine recite,
And as the muses dictate I must write.
This have I heard, and this as truth proclaim,
That you, O princely peers, of deathless fame,
By the joint efforts of united hands,
Twelve days and nights through Lybia's burning sands,
High on your shoulders rais'd the vessel's weight,
All that its womb contain'd, a mighty freight.
What woes o'ertook them, and what toils befell,
No verse can celebrate, no tongue can tell.
Such brave exploits proclaim'd their godlike line,
For, as their lineage, were their deeds divine.
But when Tritonis' lake the chiefs attain,
They eas'd their shoulders, and embark'd again.
Doom'd to acuter griefs they now are curs'd
With all the miseries of burning thirst;
Like dogs they run its fury to assuage,
And at a fountain's head suppress its rage.
Nor wander'd they in vain; but soon explor'd
The sacred spot with golden apples stor'd,
In Atlas' realm: the serpent's wakeful eyes
Watch'd till but yesterday the golden prize.
The fair Hesperides with kind survey
Tended the serpent as they tun'd their lay.
But, lo! the monster by Alcides slain,
Beneath a branching pear-tree press'd the plain.
His tail still vibrates, though his ghastly head
And spine immense lie motionless and dead,
Flies in thick swarms his gory sides surround,
Drink his black blood, and dry the dripping wound,
Made by the darts, whose poison'd tips detain
The deadly venom of the Hydra slain.
As Ladon's fate the pensive maids deplore,
Their hands they wrung, their golden locks they tore;
But, sudden as the heroes hasten'd near,
They to the dust descend and disappear.
Struck with the prodigy his eyes survey'd,
Thus to the nymphs observant Orpheus pray'd:
'Ye goddesses, with blooming beauty bless'd,
'Look with benevolence on men distress'd.
'Whether ye grace the splendid courts of Jove,
'Or on this humble earth auspicious move;
'Whether to flowery pastures ye repair,
'And the lov'd name of shepherdesses bear;
'Illustrious nymphs, from ocean sprung, arise,
'Bless with a recent view our longing eyes.
'Bid from the thirsty soil a torrent burst,
'Or open some hard rock to slake our thirst.
'Should we again our tatter'd sails expand,
'And greet at last the dear Achaian land,
'Grateful we then these favours will repay,
'And choicest offerings on your altars lay:
'No goddess who frequents the court of Jove,
'Shall greater honour share, or greater love.'
Thus Orpheus pray'd, with feeble voice and low:
The listening nymphs commiserate their woe.
First tender grass they bade the soil disclose;
Then high above it verdant branches rose,
Erect and strong, the spreading boughs display'd
Wide o'er the barren soil an ample shade.
A poplar's trunk fair Hespera receives,
And in a weeping willow Ægle grieves.
But Erytheïs in an elm remains:
Each in her tree her proper shape retains;
Stupendous sight! first Ægle silence broke,
And kindly thus the suppliant band bespoke:
'Hither some lawless plunderer came of late,
'Who will reverse the colour of your fate.
'Yon beast he slew for whom we sorrow now,
'And tore the golden apples from their bough.
'But yesterday the desperate giant came;
'From his black eye-brows flash'd the livid flame:
'A lion's shaggy skin, besmear'd with gore,
'Wide o'er his shoulders spread the monster wore.
'On his stout staff his fearless step rely'd,
'And by his deadly dart the serpent died.
'He like a sturdy traveller stalk'd along,
'Seeking some fount to cool his fiery tongue.
'With eager haste he trod the dusty plain,
'And still for water look'd, but look'd in vain.
'To this tall rock, hard by Titonis' lake,
'Some god conducted him his thirst to slake.
'Struck by his heel its deep foundation shook,
'And from the yawning clefts a torrent broke.
'Prone on the ground the limpid streams he swills,
'And, groveling like a beast, his belly fills.'
Elated with the tale, they speed their course,
To find as Ægle told, the fountain's source.
As when assembled ants with joint essay
Strive in some chink their lifted grain to lay:
Or as when flies some liquid sweet explore,
They hang in clusters round the honied store;
Like them the Mynians: such their numbers seem,
And such their haste to gather round the stream.

Conjecturing thus some grateful hero said,
As from the rill refresh'd he rais'd his head:
'Ye gods! though absent, great Alcides gives
'These limpid streams; by him each hero lives.
'Come, haste we now the country to explore,
'And the lost wanderer to our host restore.'
Instant to council rose th' associate band,
Selecting heroes to explore the land.
For nightly winds dispersing o'er the plains
The light loose sands no step impress'd remains.
Boreas' fleet sons, who wing their airy flight,
Sagacious Lynceus bless'd with keenest sight,
Euphemus swift of foot, and Cantheus speed:
Him his brave spirit urg'd, and heaven decreed
To ask Alcides, on what fatal coast
He left his comrade, Polyphemus lost.
When this bold chief had rear'd on Mysian ground,
And senc'd with circling walls a city round,
Wide o'er the country Argo's fate to learn,
He roam'd, with Argo anxious to return.
Scarce had his feet Calybian frontiers press'd,
Ere fate consign'd him to eternal rest.
Along the beech with stately poplars spread,
They rear'd a tomb in honour of the dead.
But Lynceus deems, that, o'er the distant lands
His sight the long-lost Hercules commands.
Thus sees the clown, or thinks he can descry
The new moon breaking through a cloudy sky.
Back to his comrades hastes the joyous chief,
Precludes their further search, and gives their mind relief.
Euphemus soon, and Boreas' sons his friends,
Whose search in empty expectation ends,
Rejoin'd the host: but thee, brave Canthus, slain
Stern fate foredoom'd to press the Libyan plain.
To feast his comrades with the grateful prey,
He forc'd through scatter'd flocks his desperate way.
Sudden his flock to guard the shepherd flew,
And with a rock's huge fragment Canthus slew.
This sturdy villager, Capharus nam'd,
His lofty lineage from Apollo claim'd,
And Acacallis: conscious of his might,
He fear'd no rival, nor declin'd the fight.
Minos her sire, to Libya's coast remov'd
Fair Acacallis, by the god belov'd.
To Phœbus here a hopeful son she gave,
Amphithemis or Garamans the brave.
Thy love, Amphithemis, Tritonis crown'd,
And grac'd thy bed with Nasamon renown'd,
And bold Caphaurus; whose decisive blow
Transmitted Canthus to the shades below.
The bloody deed divulg'd to all the host,
Not long his conquest could Caphaurus boast.
They to its sepulchre the corse convey,
Weeping; and make the shepherd's flocks their prey.
To Pluto's realms prophetic Mopsus fled,
And join'd on that sad day the mighty dead.
With fate's decrees must mortal man comply,
And the wise seer in spite of prescience die.
For, shelter'd from the fierce meridian ray,
Beneath a sandy bank a serpent lay.
Innoxious till incens'd, he ne'er annoy'd
But strove th' affrighted traveller to avoid.
But all whome'er the foodful earth contains,
Who feel his darted venom in their veins,
Nor long, nor distant deem the dreary road,
That leads direct to Pluto's dark abode.
His fangs infix'd when once the wretches feel,
In vain would medicine's god attempt to heal.
For when brave Perseus (this her godlike son
His mother oftener nam'd Eurymedon)
O'er Libya flew, the Gorgon's head to bring,
Fresh slain and dripping, to th' expecting king,
From every drop that dyed the soil with blood,
A serpent sprung, and thus increas'd the brood.
The monster's spiry tail rash Mopsus press'd
With his unheeding foot: his tortur'd breast
Upward he turn'd, and writh'd his spires around,
Then with his venom'd fang infix'd a deadly wound.
Medea trembled and her female train:
Fearless he bathes the wound, nor heeds the pain.
But now, lost wretch! each sense is clos'd and dead,
And o'er his sinking eyes death's gloomy shade is spread.
Prone to the dust he falls: his cold remains
Press with unwieldy weight the desert plains.
His faithful friends, and Jason with the rest,
Weep o'er the corse, with heart-felt grief impress'd.
His flesh all putrid from the taint within,
And hanging round him loose his flabby skin,
The burning sun unable long to bear,
His busy comrades, with officious care,
Deep in the soil conceal their delving spade,
And soon a decent sepulchre was made.
Men, matrons, all, as round the grave they flock,
Lamenting loud select the sacred lock:
His corse the bright-arm'd heroes thrice surround,
And raise in seemly form the hallow'd mound,
Then hasten to their ship: the southern breeze
Curl'd, as it blew, the surface of the seas.
In sad suspense, still wishing to forsake,
And cross with favouring gales Tritonis' lake,
They loiter long, and waste the useful day
In idle contest, and in vain delay.
A serpent thus, long scorch'd with summer's heat,
Winds to some secret chink, his cool retreat.
Enrag'd he hisses, rears his crest on high,
And furious darts his fire-emitting eye,
Till haply he the wish'd-for chink pervade,
And in its cool recess secure a shade.
Uncertain thus, the ship explor'd in vain
The lake's wide mouth that open'd to the main.
With pious care, as Orpheus gives command,
They place Apollo's tripod on the strand;
That those auspicious powers the coast who guard,
Pleas'd with th' oblation, may their toils reward.
Clad like a youth, before them stood confess'd
The mighty Triton: in his hands he press'd
The gather'd soil; this amicable sign
He to the heroes held, and spoke benign:
'The hospitable pledge my hand extends,
'The best I now can give, accept, my friends.
'Would you o'er ocean's paths your course discern,
'And learn the tracks which strangers wish to learn,

'Hear! from my sire, the monarch of the main,
'I boast my science; o'er these seas I reign.
'Perchance ev'n you, though distant far you
came,
'May recognise Eurypylus's name,
'In Libya born.' He said: Euphemus took
The proffer'd foil, and thus responsive spoke:
"If such thy knowledge, friendly chief, explain
"Where Atthis lies, where rolls the Cretan main.
"Reluctant sail'd we towards the Libyan coast,
"By angry heaven and adverse tempests tost:
"By land, with Argo o'er our shoulders cast,
"We toil'd, and launch'd her in this lake at last.
"Nor can we yet our certain course devise,
"Where full in prospect Pelops' realms will rise."
He said: his hand out-stretching, Triton show
The lake's wide mouth, and sea expos'd to view.
'Where the lake blackens, and its waters sleep,
'Expect,' he cries, 'a passage to the deep.
'Observe the cliffs high towering on each side,
'And through the straight they form your vessel
'guide.
'There, above Crete, where, mingling with the skies,
'Yon ocean spreads, the land of Pelops' lies.
'When to the right th' expanded lake ye leave,
'And the safe seas your mighty freight receive,
'Still cautious coast along the winding strand,
'Till you the cape's projecting sides command:
'Your course, that cape once doubled, safe pur-
'sue,
'Your ship uninjur'd, and undaunted you.
'Thus gladden'd, go; nor let your vigorous arms
'Droop with fatigue, and shake with vain alarms.'
Heartening he spoke: the decks they reascend,
And, rowing brisk, to cross the lake contend.
The proffer'd tripod friendly Triton takes,
And hides his head beneath the dimpling lakes.
Thus with the costly prize the god withdrew,
Instant invisible to mortal view.
Inspir'd with joy, that some superior guest
Had comfort given them, and with counsel bless'd,
The choicest sheep they bade their leader slay,
And to the power benign due honours pay.
He to the galley's poop with speed convey'd
The choicest sheep, and, as he offer'd, pray'd:
'Dread deity, who late conspicuous stood
'On the clear margin of this rolling flood,
'Whether great Triton's name delight thine ear,
'Triton, whom all the watery gods revere:
'Or ocean's daughters, as they sound thy fame,
'Thee mighty Nereus, or thee Phorcuns name,
'Be bounteous still: bid all our labours cease,
'And reinstate us in our native Greece.'
Thus pray'd the chief, as on the poop he stood,
And sunk the slaughter'd victim in the flood.
His head above the billows Triton rear'd,
And in his proper shape the god appear'd.
As when, intent his fiery steed to train,
The horseman leads him to the dusty plain,
His floating mane firm twisted in his hand,
He runs, yet holds him subject to command:
Superb he paces, by his master led,
Curvetting still, and tossing high his head.
His bits, all white with gather'd foam around,
Craunch'd by his restless jaw, aloud resound:
Thus Triton's hands the vessel's head sustain,
And safely guide her to the seas again.
His every limb, down to his swelling loin,
Proclaims his likeness to the powers divine.
Below his loin his tapering tail extends;
Arch'd like a whale's, on either side it bends.
Two pointed fins, projecting from his side,
Cleave, as he scuds along th' opposing tide.
Acute and tapering, these indented thorns
A semblance bear to Phœbe's budding horns.
His arm conducts her, till, from danger free,
She rides embosom'd in the open sea.
This prodigy the shouting warriors saw,
Impress'd at once with gratitude and awe.
Here shatter'd ships Argous' port receives,
Here tokens of her voyage Argo leaves:
To Triton here, high-towering o'er the strand,
And here to Neptune stately altars stand.
For here they linger'd out one useless day;
But with fresh breezes sail'd at morn away.
Far to the right they leave the desert land,
And the stretch'd canvass to the winds expand.
Gaining mid ocean with returning light,
The doubled cape diminish'd from their sight.
The zephyr's ceasing, rose the southern gale,
And cheer'd the shouting heroes as they sail.
‡ The evening star now lifts, as daylight fades,
‡ His golden circlet in the deepening shades;
‡ Stretch'd at his ease the weary labourer shares
‡ A sweet forgetfulness of human cares:
‡ At once in silence sleep the sinking gales.
‡ The mast they drop, and furl the flagging
sails;
‡ All night, all day, they ply their bending oars
‡ Towards Carpathus, and reach the rocky shores;
‡ Thence Crete they view, emerging from the
main,
‡ The queen of isles; but Crete they view in vain.
‡ There Tagus mountains hurls with all their
woods;
‡ Whole seas roll back, and tossing swell in floods.
‡ Amaz'd at his towering monster they survey,
‡ And trembling view the interdicted bay.
‡ His birth he drew from giants sprung from oak,
‡ Or the hard entrails of the stubborn rock:
‡ Fierce guard of Crete! who thrice each year
explores
‡ The trembling isle, and strides from shores to
‡ A form of living brass: one part beneath
‡ Alone he bears, a part to let in death.
‡ Where o'er the ankle swells the turgid vein,
‡ Soft to the stroke, and sensible of pain.‡
Pining with want, and sunk in deep dismay,
From Crete far distant had they sail'd away,
But the fair sorceress their speed repress'd,
And thus the crew disconsolate address'd:
'Attend. This monster, ribb'd with brass a-
'round,
'My art, I ween, will level to the ground.
'Whate'er his name, his strength however great,
'Still, not immortal, must he yield to fate.

☞ *The lines thus marked ‡ are Broome's, who has translated the story of Talus; not without several omissions, which are here supplied.*

'But from the far-thrown fragments safe retreat,
'Till prostrate fall the giant at my feet.'
She said: retiring at her sage command,
They wait the movement of her magic hand.
Wide o'er her face her purple veil she spread,
And climb'd the lofty decks, by Jason led.
‡ And now her magic arts Medea tries;
‡ Bids the red furies, dogs of Orcus, rise,
‡ That, starting dreadful from th' infernal shade,
‡ Ride heaven in storms, and all that breathes invade.
‡ Thrice she applies the power of magic pray'r,
‡ Thrice, hellward bending, mutters charms in air;
‡ Then, turning towards the foe, bids mischief fly,
‡ And looks destruction, as she points her eye.
‡ Then spectres, rising from Tartarean bow'rs,
‡ Howl round in air, or grin along the shores. ‡
Father Supreme! what fears my breast annoy,
Since not disease alone can life destroy,
Or wounds inflicted fate's decrees fulfil,
But magic's secret arts have pow'r to kill!
For, by Medea's incantations plied,
Enfeebled soon the brazen monster died.
‡ While rending up the earth in wrath he throws
‡ Rock after rock against th' aërial foes,
‡ Lo! frantic as he strides, a sudden wound
‡ Bursts the life-vein, and blood o'erspreads the ground.
‡ As from a furnace, in a burning flood
‡ Pours melting lead, so pours in streams his blood:
‡ And now he staggers, as the spirit flies,
‡ He faints, he sinks, he tumbles, and he dies.
‡ As some huge cedar on a mountain's brow,
‡ Pierc'd by the steel, expects a final blow,
‡ Awhile it totters with alternate sway,
‡ Till freshening breezes through the branches play;
‡ Then tumbling downward with a thundering sound,
‡ Headlong it falls, and spreads a length of ground:
‡ So, as the giant falls, the ocean roars,
‡ Outstretch'd he lies, and covers half the shores. ‡
Crete thus deliver'd from this baneful pest,
The Minyans unmolested sunk to rest.
Soon as Aurora's orient beams appear,
A temple they to Cretan Pallas rear.
With water stor'd, once more the busy train
Embark, and lash the foamy brine again.
Assiduous all with equal ardour glow
Distant to leave Salmonis' lofty brow.
As o'er the Cretan deep the galley flew,
Around them night her sable mantle threw;
Pernicious night, whose all-investing shade
Nor stars nor Phœbe's brighter rays pervade.
Thick darkness, or from heaven or hell profound,
Spread, as it rose, its rueful shades around.
Uncertain whether, on huge billows toss't,
Sublime they sail, or sink to Pluto's coast,
Uncertain where the bursting wave may throw,
They to the sea commit their weal or woe.
Jason aloud, with lifted hands, address'd
The god of day to succour the distress'd.
The tears fast trickling down his sorrowing face,
He vow'd with gifts the Delphic shrine to grace,
He vow'd with choicest gifts, an ample store,
To load Amyclæ and Ortygia's shore.
Attentive to his tears and meek request,
Phœbus from heaven descends, and stands confess'd,
Where, frowning hideous o'er the deeps below,
The rocks of Melans lift their shaggy brow.
Awhile on one of these he takes his stand,
His golden bow high lifting in his hand;
Assisted by whose far-reflected light,
An isle of small extent attracts their sight,
Amid the Sporades; against it stood
Hippuris, circled by the rolling flood.
Their anchors here they drop. Aurora's ray
Glimmer'd, and sunk before the light of day.
A temple here o'er-arch'd with woods, they raise,
And bid an altar to Apollo blaze,
On whom the name Æglete they bestow;
For here the god display'd his beamy bow.
Here, since on Argo's crew all bright he shone,
By the name Anaphe the isle is known.
The scanty produce of this barren isle
To Phœbus they on humble altars pile.
Each fair Phæacian in Medea's train,
Who oft had seen the fatted oxen slain
In king Alcinoüs' court, in laughter joins
At sight of waters pour'd on burning pines.
With well-dissembled wrath the chiefs reprove
The laughing damsels, and the mirth they love.
A wordy altercation soon began,
And pleasant raillery through the circle ran.
Hence, to Æglete, on this festive day,
All who in Anaphe due honours pay,
Maidens and men, a mix'd assembly, join
In friendly contests and debates benign.
The halsers now were loosen'd from their hold,
And unrestrain'd in ocean Argo roll'd,
When thus the dream of night, yet uneffac'd,
Revering Maia's son, Euphemus trac'd.
How, with close grasp the sacred clod compress'd,
Stream'd with a milky current at his breast.
And from this clod, though small, his wondering eyes
Beheld a lovely female form arise.
Charm'd with the beauteous fair, he soon resign'd
To nuptial joys his love-devoted mind,
Lamenting still that he the maid should wed,
Whom at his fostering breast with milk he fed.
"Thy children's nurse am I," (the fair began,
Accosting mild the disconcerted man);
"But not thy daughter: I from Triton came;
"(Triton and Libya my parents' name)
"He fix'd near Anaphe my watery cell, [dwell.
"And bade me here with Nereus' daughters
"But now I hasten towards the sun's bright ray,
"And to thy race the choicest boon convey."
This dream recurring to his mind again,
He told the leader of the gallant train,
Who, long revolving, thus at length reveal'd
Those mystic truths the Pythic shrine conceal'd:
'Ye gods! what glory waits thy valorous deeds,
'What fame, Euphemus, to thy toil succeeds!

'For, when in ocean's bed this earth you fling,
'Thence (ſo the gods ordain) an iſle ſhall ſpring;
'Here ſhall thy children's children late repoſe.
'Triton this hoſpitable gift beſtows:
'He tore from Afric's coaſt the treaſur'd ſoil;
'To him, of all the gods, aſcribe the iſle.'
Thus ſpoke he preſcient, nor in vain divin'd:
Euphemus heard him with attentive mind:
Tranſported with the preſage, forth he ſprung,
And the myſterious clod in ocean flung.
Inſtant emerging from the refluent tides,
Calliſte's iſle diſplay'd its wave-waſh'd ſides,
Nurſe of Euphemus' race: in days of yore,
They dwelt on Sintian Lemnos' footy ſhore.
Exil'd from Lemnos by Etrurian force,
To Sparta's friendly walls they bent their courſe:
Ejected thence, Theras, Auteſion's heir,
Bade him to fam'd Calliſte's iſle repair;
His name it took: th' events we now diſplay
Were unaccuſtom'd in Euphemius' day.
Vaſt tracts of ocean paſs'd, the joyous hoſt
Steer'd towards, and anchor'd on Ægina's coaſt.
They here propoſe a trial of their ſkill;
What chief can firſt the weighty bucket fill,
And, ere his fellows intercept his way,
Firſt to the ſhip the watery ſtore convey.
For parching thirſt, and winds that briſkly blew,
To the fleet courſe inclin'd the gallant crew.
His bucket now, repleniſh'd at the ſprings,
Each ſtout Theſſalian on his ſhoulder brings;
Intent the palm of conqueſt to obtain,
He ſcours with ſpeedy foot acroſs the plain.
Hail, happy race of heroes, and repay
With tributary praiſe my tuneful lay!
With pleaſure ſtill may diſtant times rehearſe
And added years on years exalt my verſe!
For here I fix the period of your woes,
And with your glorious toils my numbers cloſe.
Your galley looſen'd from Ægina's ſhore,
Waves diſcompos'd, and winds detain'd no more.
Serene he ſail'd beſide th' Achaian ſtrand,
Where Cecrops' towers the ſubject main command,
Where oppoſite Eubœa Aulis lies,
And where the Locrian cities lofty riſe,
Till Pagaſæ her friendly port diſplay'd,
Where rode triumphant Argo ſafe embay'd.

NOTES ON BOOK IV.

Ver. 1. The firſt and ſecond books contain, as we have ſeen, the voyage of the Argonauts to Colchis. In the book we are now entering upon, the poet has given us an account of the route they took on their return. And, in order to throw the utmoſt variety into his poem, he has conducted them to Greece by a way altogether new and unknown. He makes them ſail up the Iſter, and by an arm of that river, to the Eridanus, and from thence to the Rhone. Apollonius's geography is, in many inſtances, very exceptionable. The licence which poets are allowed, *quidlibet audendi*, is his beſt excuſe for inaccuracies of this kind. Scaliger, who ſeldom ſpares our author, does not ſcruple to aſſert, that, "quod attinet ad "ſitum orbis terrarum, ſanè imperitus regionum "fuit Apollonius. De Iſtro, dii boni! quas nu-"gas." But let it be remembered, that not only poets have trifled in their deſcriptions of this river, but that hiſtorians and geographers, who have attempted to explain its courſe, have given very different and inconſiſtent accounts of it. Many curious traditions, and entertaining pieces of ancient Greek hiſtory are interſperſed throughout this book. The ſpeeches of Medea can never be enough admired. Her ſentiments are admirably ſuited to her condition; they are ſimple, unaffected, and calculated to raiſe our pity. Our poet has diſplayed a luxuriant fancy in his deſcription of the nuptials of Jaſon and Medea; and he has painted the diſtreſſes of his Argonauts, on the coaſt of Africa, in the moſt glowing colours. This book appears, indeed, in every view of it, equal, if not ſuperior, to any of the foregoing. We meet with ſome obſcurities. The tranſlator confeſſes his inability to aſcertain the true ſenſe of every intricate paſſage. Let it, however, be ſome alleviation of his errors, that his guides have been but few, and they not always the moſt intelligent; and that no part of this book, except only the ſtory of Talus, has appeared in an Engliſh dreſs, before the preſent verſion was publiſhed.

Ver. 32. The cuſtom of kiſſing beds, columns, and doors, before they were obliged to quit them, occurs frequently in the Greek tragedians.

Ver. 33. It was cuſtomary for young women, before the nuptial ceremony was performed, to preſent their hair to ſome deity, to whom they had particular obligations. Medea, therefore, previous to her departure and marriage with Jaſon, preſents a lock of hair to her mother, to be depoſited by her in the temple of ſome deity to whom it was conſecrated.

Ver. 64. Latmos was a mountain in Caria, in whoſe cave the moon was ſaid by the poets to viſit Endymion. Thus, in Valerius Flaccus, who ſeems to have had this paſſage in his eye, we read;

Latmius æſtivâ reſidet venator in umbrâ,
Dignus amore deæ; velatis cornibus et jam
Luna venit. Lib. viii. 29.

Ver. 92. Several parts of the body were conſidered by the ancients as the ſeats of virtues and vices, of good and bad qualities. Modeſty was aſſigned to the eyes, ſagacity and deriſion to the noſe, pride and diſdain to the eye-brows, and pity to the knees; which, it was cuſtomary for ſuppliants, when they made their requeſts, to touch and embrace with reverence.

Ver. 123. Xenophon, de Venatione, makes the ſame obſervation, ἐξιέναι πρωΐ, *exire diluculo*. The ſame remark is made by Oppian and others.

Ver. 143. This noble hyperbole was copied by Virgil, B. vii. v. 515. where, ſpeaking of Alecto, he ſays,

With her full force a mighty horn ſhe winds;
Th' infernal ſtrain alarms the gathering hinds,
The dreadful ſummons the deep foreſt took;
The woods all thunder'd, and the mountains ſhook.
The lake of Trivia heard the note profound;
The Veline fountains trembled at the ſound;
The thick ſulphureous floods of hoary Nar
Shook at the blaſt that blew the flames of war:
Pale at the piercing call, the mothers preſt
With ſhrieks their ſtarting infants to the breaſt.
Pitt.

This circumſtance of the mothers claſping their infants to their breaſts, is a very tender and affecting one. The poets ſeem particularly fond of it. We meet with it in the Troades of Euripides; and Camoens, in his imitation of theſe ſtriking paſſages in Apollonius and Virgil, was too ſenſible of its beauty to omit it.

Such was the tempeſt of the dread alarms,
The babes that prattled in their nurſes' arms
Shrick'd at the ſounds: with ſudden cold impreſt,
The mothers ſtrain'd the infants to the breaſt,
And ſhook with horror.—
The Luſiad, B. iv. p. 124.

Ver. 203. Mr. Warton is of opinion, that Virgil had this beautiful paſſage in his eye in the following lines:

Expleri nequit, atque oculis per ſingula voluit,
Miraturque, interque manus et brachia verſat.
Æn. viii. v. 618.

And thus Spenſer, in his Faery Queene:

But Triſtram then deſpoiling that dead knight
Of all thoſe goodly ornaments of praiſe,
Long fed his greedy eyes with the fair light
Of the bright metal, ſhining like ſun-rays;
Handling and turning them a thouſand ways.
B. vi. c. 2. ſt. 39.

Ver. 292. By Selene, and Selenia, is meant the ark, of which the moon was only an emblem; and from thence the Arcades, or Arkites, had the appellation of Selenitæ. When, therefore, it is ſaid that the Arcades were prior to the moon, it means only, that they were conſtituted into a nation before the worſhip of the ark prevailed, and before the firſt war upon earth commenced. *Bryant.* This boaſt of the Arcadians, that they were a nation before the moon gave light to the world, is alſo thus accounted for by ſome ingenious writers: the Greeks generally ordered their affairs according to the appearance of the moon, eſpecially thoſe two of the new and full moon. The Spartans held it criminal to begin any great deſign till after they had conſidered the moon, as ſhe appeared when new and at the full. The Arcadians, contrary to this general cuſtom of the Greeks, tranſacted all their buſineſs of importance before the appearance of the new moon, or that of the full; and were, therefore, called in deriſion, προσέληνοι, for their neglect of this religious ceremony. Which term of reproach the Arcadians applied to their commendation, and ſhrewdly affirmed, that they were entitled to this epithet, becauſe their nation was more ancient than the moon.

Ver. 301. Seſoſtris not only overran the countries which Alexander afterwards invaded; but croſſed both the Indus and the Ganges; and thence penetrated into the eaſtern ocean. He then turned to the north, and attacked the nations of Scythia; till he at laſt arrived at the Tanais, which divides Europe and Aſia. Here he founded a colony; leaving behind him ſome of his people, as he had juſt before done at Colchis. He ſubdued Aſia Minor, and all the regions of Europe; where he erected pillars with hieroglyphical inſcriptions, denoting, that theſe parts of the world had been ſubdued by the great Seſoſtris or Seſooſis. *Diodorus. Sic.* L. i. p. 49. Apollonius Rhodius, who is thought to have been a native of Egypt, ſpeaks of the exploits of this prince, but mentions no name; not knowing, perhaps, by which properly to diſtinguiſh him, as he was repreſented under ſo many. He repreſents him as conquering all Aſia and Europe; and this in times ſo remote, that many of the cities which he built, were in ruins before the era of the Argonauts. *Bryant.*

Ver. 311. The Colchians, ſays the Scholiaſt, ſtill retain the laws and cuſtoms of their forefathers; and they have pillars of ſtone, upon which are engraved maps of the continent and of the ocean. The poet calls theſe pillars κύρβεις; which, we are told, were of a ſquare figure, like obeliſks. Theſe delineations had been made of old, and tranſmitted to the Colchians by their forefathers; which forefathers were from Egypt. The Egyptians were very famous for geometrical knowledge. All the flat part of this country being overflowed, it is reaſonable to ſuppoſe, that they made uſe of this ſcience to determine their lands, and to make out their ſeveral claims at the retreat of the waters. *Bryant.*

Ver. 451. Thus Dido, in a fit of deſpondency and rage, threatens Æneas:

Et cum frigida mors anima ſeduxerit artus,
Omnibus umbra locis adero. *Æn.* iv. 385.

Ver. 526. Our poet, whenever he introduces moral ſentences, which is but ſeldom, takes care to do it with the utmoſt propriety; at a time when the occaſion warrants the uſe of them, and gives additional force and luſtre to the truths which they convey. Virgil has adopted this ſentiment of Apollonius on a ſimilar occaſion:

Improbe amor, quid non mortalia pectora cogis!
Æn. iv. 412.

Ver. 412. From the Greek word Ερως, in the original, Mr. Bryant has taken occaſion to give us the following curious account of Cupid and his emblems: Iris, the rainbow, ſeems to have been expreſſed Eiras, by the Egyptians. Out of Eiras the Greeks formed Eros, a god of love; whom they annexed to Venus, and made her ſon. And finding that the bow was his ſymbol, inſtead of the Iris, they gave him a material bow, with the addition of a quiver and arrows. Being furniſhed with theſe implements of miſchief, he was ſuppoſed to be the bane of the world.

Ver. 350. The remorſe and concern of Medea are very ſtrongly expreſſed by this ſimple action, of turning aſide and concealing her face from the ſcene of barbarity. Signs are ſometimes more ſignificant than words, however eloquent and pathetic; and ſilence is often the ſureſt indication of heart-felt ſorrow.

Ver. 613. Cadmus ſettling in Bœotia, married Harmonia, or Hermione, the daughter of Venus by Mars. A conſpiracy being formed againſt him, he was obliged to quit Bœotia, and retire with his wife into Illyricum. They are ſaid by the poets to have been transformed into ſerpents. Of this transformation, and of the tomb, which the people of Illyricum erected to their memory, Dionyſius thus ſpeaks:

——————Ἴδοις περικυδέα τύμβον,
Τύμβον, ὃν Ἁρμονίης Καδμοιό τε φῆμις ἐνίσπει.
Κεῖθι γὰρ εἰς ὄφιων σκολιὸν γένος ἠλλάξαντο,
Ὄπποτ' ἀπ' Ἰσμηνοῦ λιπαρὸν μετὰ γῆρας ἵκοντο

Ver. 649. By Megara, the daughter of Creon king of Thebes, Hercules had ſeveral ſons, whom he ſlew in a fit of madneſs. Soon after this ſlaughter he left Thebes, and received expiation for the murder at Athens, according to ſome; but according to our poet, at Macris.

Ver. 689. In the original,

Μηδομένη δ' ἄνυσιν τοῖο πλόου, ὥρσεν ἀέλλας
Ἀντικρύ.

Juno, anxious for the ſafety of her crew, and knowing they muſt viſit Circe's iſle, raiſed a ſtorm for that purpoſe; which drove them back, up the Chronian ſea, as far as the iſland Electris. By thus changing their direction, ſhe ſhortened their voyage, and haſtened their approach to the iſland of Circe.

Ver. 727. There are ſo many inconſiſtent fables among the ancients, reſpecting the country and ſituation of the Hyperboreans, that modern geographers have not been able to reconcile them. *See Geſner de Navigationibus extra columnas Herculis, Præl.* 2.

Callimachus, in his hymn to Delos, ſpeaks of them as a people of high antiquity, Pindar places them near the Iſles of the Bleſt, which were ſuppoſed to have been oppoſite to Mauritania, and celebrates their rites. *See Olymp. Od.* iii. and *Pyth.* x.

Ver. 728. Jupiter, incenſed that Æſculapius had reſtored Hippolitus to life, deſtroyed him with his thunder. Apollo, willing to revenge the death of his ſon, directed his darts againſt the Cyclops, by whoſe hands the thunder of Jupiter was formed. The god, for this offence, baniſhed him from heaven. *See Virg. Æn.* vii. *v.* 764.

Ver. 775. In the original,

——————ἵνα ψηφῖσιν ἀπωμόρξαντο καμόντες
Ἱδρῶ ἅλις· χροιῇ δὲ κατ' ἀιγιαλοῖο κέχυνται
Ἐκπελοι.

The firſt line is obſcure; for it may either mean, that they made uſe of the ψήφοι as ſtrigmenta, or *ſtrigiles*, for rubbing; or that, in rubbing, the ſweat dropped on the ſtones, ψεφῖσιν, and diſcoloured them. If this ſenſe be the true one, the following lines may, perhaps, be ſomewhat leſs exceptionable than thoſe already given:

To cleanſe their ſides from copious ſweet they toil,
Which, trickling down, diſtain'd the chalky ſoil.

This paſſage will receive ſome illuſtration from Ariſtotle, περὶ θαυμασίων ἀκουσμάτων; who aſſerts, that among other monuments of the Argonautic expedition this was one, τὸ ἐπὶ τῶν ψήφων λεγόμενον, παρὰ τὸν αἰγιαλὸν ψήφους φασὶν εἶναι ποικίλας. ταύτας δὲ οἱ Ἕλληνες, οἱ τὴν νῆσον οἰκοῦντες, λέγουσι, τὴν χροιὰν λαβεῖν ἀπὸ τῶν στλεγγισμάτων, ὧν ἐποιοῦντο ἀλειφόμενοι.

Ver. 783. We have the fulleſt deſcription of Circe and her habitation in the 10th Odyſſ. of Homer: from which book ſucceeding poets have been ſupplied with ample materials, to aſſiſt them in dreſſing out this entertaining fiction.

It is entertaining to obſerve, how different poets have written on the ſame or ſimilar ſubjects. And according as they have acquitted themſelves in working them up, we may form a judgment of their taſte and genius.

Ver. 932. Others aſcribe this diſcovery to Prometheus, for which Jupiter promiſed to releaſe him from his chains.

Ver. 946. The ſtory here alluded to, is mentioned by ſeveral of the ancient mythologiſts. Medea, when in Elyſium, or the Fortunate Iſlands, gained the affections of Achilles, who then dwelt in thoſe regions and married her. The ancients are by no means conſiſtent in their accounts of theſe Elyſian fields. Some affirm them to be in the moon, others in the milky way. But it is more generally ſuppoſed, that they are ſituated in ſome fertile and pleaſant region on earth. *See Homer's Odyſſ. B.* iv *and the note to v.* 765 *of Pope's Tranſ. and Geſner de Inſulis Beat. Præl.* 2

Ver. 1016. Thus Ceres, when ſhe undertook to bring up Triptolemus, in order to render him immortal, fed him all day with celeſtial food, and covered him all night with burning embers. His father Eluſinus, obſerving this, expreſſed his fears for his child. Ceres, diſpleaſed with the behaviour, ſtruck him dead, but conferred immortality on his ſon.

Ver. 1047. The Syrens were Cuthite and Canaanitiſh prieſts, who had founded temples, which were rendered more than ordinary famous on account of the women, who officiated. With their muſic they enticed ſtrangers into the purlieus of their temples, and then put them to death. The female part of their choirs were maintained for a twofold purpoſe; both on account of their voices and their beauty. They were ſaid to be the children of the muſe Terpſichore; by which is meant only, that they were the daughters of harmony. *Bryant.*

Orpheus, in the Argonautics aſcribed to him, has not only mentioned theſe ſyrens, but given us the ſong, alluded to by Apollonius, which was ſo efficacious as to prevent the ill effects of the ſyrens' muſic. We have the moſt particular deſcription of theſe enchantreſſes in the 12th book of Homer's Odyſſey.

Ver. 1054. Among others, whom Ceres ſent in ſearch of her daughter Proſerpine, were the ſyrens. She is ſaid to have given them wings, to enable them to explore the country with greater eaſe and expedition.

Ver. 1086. Theſe flaming billows, muſt have been very alarming to the ſailors, who were ignorant of the cauſe of them. The poet has therefore, in his deſcription of Scylla and Charybdis, with great judgment ſelected theſe remarkable appearances, which could not fail to excite terror and aſtoniſhment.

Ver. 1691. Virgil, in his 1ſt Æneid, has made uſe of the aſſiſtance of the ſea-nymphs on a ſimilar occaſion.

Cymothoe ſimul et Triton adnixus, acuto
Detrudunt naves ſcopulo.

And Camoens, who ſeems to have been particularly pleaſed with this deſcription, has, in imitation of it, ſummoned together a vaſt number of ſea-nymphs to reſcue the navy from deſtruction. See B. ii. p. 48.

Ver. 1151. One would not expect to find in ſo grave a writer as Heſiod any thing like that low kind of wit, which the double ſenſe of words gives riſe to. The taſte of the ancients, it has been ſaid, was too good for theſe fooleries. Yet his learned annotator is of opinion, that Heſiod has availed himſelf of the ambiguity of the word μῆδος. He thus diſcuſſes this curious ſubject in a note on ver. 180 in Theog.

Omninò exiſtimo Heſiodum, et qui eum hac in re anteceſſerunt, aut ſequuti ſunt, luſiſſe in ambiguo. Vox μῆδος duo ſignificabat, pudenda et conſilium, cumque audiſſent Saturnum patri ἀποτεμεῖν μῆδος, datâ operâ in rem acceperunt, quaſi narraretur ei pudenda reſecuiſſe, ut τερατολογίαις, quas hac de re habent, locus daretur, quamvis probè ſcirent conſilium ſeu conſiliarios intelligi, quorum ſuaſu Theſſaliâ excedere coactus fuerat Saturnus. Hoſce conſiliarios fugavit, et navibus in Aſiam redire coegit.

Ver. 1281. *Thus Pyctæus.*] (*Note*, it ought to be *Nyctæus*). Antiope, the daughter of Nyctæus, was deflowered by Jupiter in the form of a ſatyr. To avoid the anger of her father, ſhe fled to Sicyon, a city in Peloponneſus: where ſhe was protected by Epops. Nyctæus at his death requeſted his brother Lycus to lay ſiege to Sicyon, but to ſhow no compaſſion to Antiope. He, willing to comply with the requeſt of Nyctæus, beſieged the city, killed Epops, and took Antiope priſoner.

Ver. 1283. Danaë was the daughter of Acriſius. Having been informed by the oracle, that his grandſon ſhould bereave him of his life and crown, he ſhut her up in a tower of braſs. But Jupiter, according to the fable, made his way through the roof in a ſhower of gold. The meaning of which fable is; Pretus, who was ſurnamed Jupiter, bribed the keepers, and having thus gained acceſs to the priſoner, made her the mother of Perſeus. Acriſius being apprized of this illicit commerce, and the fruits of it, ordered the mother and her ſon to be locked up in a cheſt, and thrown into the ſea.

Ver. 1338. Jupiter being in love with Semele, Juno concerted the following ſcheme for the deſtruction of her rival. She appeared to Semele in the ſhape of Beroë, a nurſe, and inſinuated to her, that if her lover were really Jupiter, he would not diſguiſe himſelf like a mortal: and that the certainty of his divinity could no otherwiſe be aſcertained, than by his appearing before her with the ſame majeſty, which he aſſumed when he viſited Juno. Semele followed her advice; and Jupiter having ſworn by Styx to grant her whatever ſhe might aſk, approached her in the full blaze of his glory, and Semele was conſumed by his lightning. Jupiter being deſirous to preſerve the infant Bacchus, of whom Semele had been for ſome time pregnant, commiſſioned Mercury to deliver him from the flames, by taking him out of her womb, and conveying him to Eubœa. Here he was committed to the care of Macris. But Juno's reſentment being not yet ſuſided, ſhe forbade her favourite iſland Eubœa to give protection to the nurſe of Bacchus; who now fled for refuge to Phæacia.

Ver. 1505. "The principal image, (ſays Pope, Il. xiv. in a note on v. 457.) is more ſtrongly impreſſed on the mind by a multitude of ſimiles, which are the natural product of an imagination labouring to expreſs ſomething very faſt: but finding no ſingle idea ſufficient to anſwer its conception, it endeavours, by redoubling the compariſons, to ſupply this defect" Since then the heaping together of ſimiles, when occaſion requires, is conſidered as a proof of true poetical enthuſiaſm, it muſt be allowed that our poet, in this inſtance, as well as in many others, has ſhown himſelf capable of riſing above that uniform mediocrity, which has, perhaps too haſtily, been aſcribed to him. For we have here an accumulation of compariſons the moſt elegant and appoſite. The deſpondent heroes are likened to ſpectres and ſtatues diſtilling drops of blood. Medea's fair attendants, lamenting their misfortunes, are compared to ſwallows bereaved of their neſts, and ſcreaming for their mother; and, immediately after, to the plaintive notes of dying ſwans.

This ſimile of the ſwallow is copied by Virgil, Æn. xii. 473.

Ver. 1649. In Africa, where, according to Virgil, Atlas reigns:

Ultimus Æthiopum locus eſt, ubi maximus Atlas—

Ver. 1651. They were the daughters of Heſperus, the brother of Atlas, and ſhepherdeſſes. Hercules carried off their ſheep (which, for their exquiſite beauty, were called golden), and ſlew the ſhepherd, whoſe name was Draco. The Greek word μῆλα which ſignifies apples as well as ſheep, is ſuppoſed to have given riſe to the fiction.

Some are of opinion, that the fable of the ſerpent who guarded the golden apples, and was ſaid to have been ſlain by Hercules, derives its origin from the Moſaic account of the fall.

Ver. 1749. Tranſlated by Virgil, Æn. vi. 453.

——qualem primo qui ſurgere menſe
Aut videt aut vidiſſe putat per nubila lunam.

Ver. 1791. It has been already remarked, that Danaë was encloſed in a cheſt by the command of her father Acriſius, and thrown into the ſea. This cheſt was caſt upon the iſland Seripus, one of the Cyclades in the Ægæan ſea. It was found by a fiſherman, who brought it to Polydectes, king of the iſland. He received the mother and child with great tenderneſs but falling in love with Danaë, and fearing the reſentment of Perſeus, now grown to manhood, he planned the following ſcheme for his deſtruction. Having invited the neighbouring princes to an entertainment, he deſired each of them to bring with him ſome rarities for the feaſt. Perſeus was required to bring on this occaſion the head of Meduſa, one of the Gorgons: an enterpriſe which the king imagined would prove fatal to him; but by the aſſiſtance of Minerva, he cut off the Gorgon's head; which, when he carried it to the iſland, turned its inhabitants into ſtone, and among the reſt, their king, Polydectes, who had ſent him out on the expedition. *See Pindar's Pyth. Od.* xii.

Ver. 1817. Virgil takes occaſion to mention the ſame cuſtom in the following words:

Ter circum accenſos cincti fulgentibus armis
Decurrere rogos: ter mœſtum funeris ignem
Luſtravare in equis, ululatuque ore dederunt.
Æn. xi.

Ver. 1870. It would contribute towards clearing this obſcure paſſage, if, inſtead of ἴδυς, we read ὑπὲρ. This conjecture may the more readily be admitted, as we meet with the ſame expreſſion, ἀγκῶνες ὑπὲρ ποδὸχοντος, at v. 1626.

Ver. 1943. The following is Broome's note, prefixed to his tranſlation of the ſtory of Talus.

The following verſes from Apollonius will appear very extravagant, unleſs we have recourſe to their allegorical meaning. Plato in his Minos writes thus:

Talus and Rhadamanthus were the aſſiſtants of Minos in the execution of his laws. It was the office of Talus to viſit all parts of Crete thrice every year, to enforce them with the utmoſt ſeverity. The poet alludes to this cuſtom in theſe words:

Fierce guard of Crete! who thrice each year explores
The trembling iſle, and ſtrides from ſhores to ſhores.

Talus is fabled to be formed of braſs, becauſe the laws, which he carried with him in his circuit, were engraven upon brazen tables. It is not improbable but the fable of the burſting the vein above the ankle of Talus, by which he died, aroſe from the manner of puniſhment practiſed by him; which was, by the opening of a vein above the ankles of criminals, by which they bled to death.

Ver. 2093. See on this ſubject Pindar's Pyth. Od. iv towards the beginning.

Ver. 2096 The Sintians were originally Thracians; but ſettled afterwards at Lemnos.

Ver. 2118 It was cuſtomary with the Greeks, not only to ſing hymns, but to recite heroic poems in honour of the gods and heroes at their feſtive meetings.

THE WORKS

OF

COLUTHUS LYCOPOLITES.

TRANSLATED FROM THE GREEK,

BY

MR. C————.

C--------'S COLUTHUS LYCOPOLITES.

THE RAPE OF HELEN, &c.

Ye nymphs of Troy, for beauty fam'd, who trace
From Xanthus' fertile ſtreams your ancient race,
Oft on whoſe ſandy banks your tires are laid,
And many a trinket which your hands have made,
What time to Ida's hallow'd mount ye throng,
To join the feſtive choir in dance and ſong;
No longer on your favourite banks repoſe,
But come, the judgment of the ſwain diſcloſe.
Say from what hills, to trackleſs deeps unknown,
Ruſh'd with impetuous zeal the daring clown;
Say to what end, with future ills replete,
O'er diſtant oceans ſail'd a mighty fleet;
What ſeas could this adventurous youth embroil,
Sow diſcord's ſeeds, o'er what diſaſtrous ſoil?
Say from what ſource aroſe the dire debate,
Which ſwains could end and goddeſſes create.
What his deciſion? Of the Grecian dame
Who to the ſhepherd's ear convey'd the name?
Speak, for ye ſaw, on Ida's ſtill retreat,
Judicial Paris fill his ſhepherd's ſeat;
Venus ye ſaw, the graces' darling queen,
As on her judge approv'd ſhe ſmil'd ſerene.
What time Hæmonia's lofty mountains rung
With hymeneal ſongs for Peleus ſung,
Officious Ganymede, at Jove's requeſt,
Supplied with ſparkling wine each welcome gueſt;
And all the gods to Thetis' nuptials came,
Siſter of Amphitrite, honour'd dame.
Earth-ſhaking Neptune left his azure main,
And Jove ſupreme forſook his ſtarry plain:
From Helicon, with odorous ſhrubs o'erſpread,
The muſes' tuneful choir Apollo led.
Him Juno follow'd, wife of ſovereign Jove:
With harmony the ſmiling queen of love
Haſten'd to join the gods of Chiron's feſtive grove.
Cupid's full quiver o'er her ſhoulder thrown,
Perſuaſion follow'd with a bridal crown.
Minerva, though to nuptial rites a foe,
Came; but no helmet nodded o'er her brow.
Diana to the Centaur's grove reſorts,
And for one day forgets her rural ſports.
His looſe locks ſhaking as the zephyrs play'd,
Not long behind convivial Bacchus ſtay'd.
War's god, as when to Vulcan's dome he ſped,
No ſpear his hand ſuſtain'd, no caſque his head,
Such now, without his helmet or his lance,
Smiling he look'd, and led the bridal dance.
But from theſe blifsful ſcenes was diſcord warn'd;
Peleus rejected her, and Chiron ſcorn'd.
And by the gadfly ſtung, the heifer ſtrays
Far from its fields, through every devious maze;
Thus, ſtung with envy, diſcord roam'd, nor ceas'd
Her baneful arts to interrupt the feaſt.
Oft from her flinty bed ſhe ruſh'd amain,
Then ſtood, then ſunk into her ſeat again:
With deſperate hand ſhe tore her ſnaky head,
And with a ſerpent-ſcourge ſhe laſh'd her flinty bed.
To dart the forky lightning, and command
From hell's abyſs the Titans' impious band,
Jove from his throne with rebel-arms to wreſt,
Were projects form'd within the fury's breaſt.
But, though incens'd ſhe dreaded Vulcan's ire,
Who forms Jove's bolt, and checks the raging fire,
Her purpoſe changing, ſhe with rattling arms
Diſſention meditates and dire alarms;
If haply clattering ſhields can ſtrike diſmay,
And from the nuptials drive the gods away.
But Mars ſhe dreaded, oft in arms array'd,
And this new project with complacence weigh'd.
The burniſh'd apples, rich with golden rind,
Growth of Heſperian gardens ſtruck her mind.
Reſolv'd contention's baneful ſeeds to ſow,
She tore the bluſhing apple from its bough,
Graſp'd the dire ſource whence future battles ſprung,
And midſt the gods the golden miſchief flung.
The ſtately wife of Jove with wondering eyes
Beheld and wiſh'd to graſp the golden prize.
Beauty's fair queen to catch the apple ſtrove;
For 'tis the prize of beauty and of love.
Jove mark'd the conteſt, and, to cruſh debate,
Thus counſel'd Hermes, who beſide him ſat:
'Paris, perchance, from Priam ſprung, you know:
'His herds he grazes on mount Ida's brow,
'And oft conducts them to the dewy meads,
'Through which his ſtreams the Phrygian Xanthus leads:
'Show him yon prize, and urge him to declare
'Which of theſe goddeſſes he deems moſt fair:

'In whom, of all his matchleſs ſkill can trace
'The cloſe arch'd eyebrow and the roundeſt face,
'On ſuch a face, where bends the circling bow,
'The golden apple, beauty's prize, beſtow.'
Thus ſpoke the ſire: the willing ſon obey'd,
And to their judge the deities convey'd.
Each anxious fair her charms to heighten tries,
And dart new luſtre from her ſparkling eyes.
Her veil aſide inſidious Venus flung;
Looſe from the claſp her fragrant ringlets hung;
She then in golden cauls each curl compreſs'd,
Summon'd her little loves, and thus addreſs'd:
'Behold, my ſons, the hour of trial near!
'Embrace, my loves, and bid me baniſh fear.
'This days deciſion will enhance my fame,
'Crown beauty's queen, or ſink in endleſs ſhame.
'Doubting I ſtand, to whom the ſwain may ſay,
'Bear thou, moſt fair, the golden prize away.
'Nurs'd was each grace by Juno's foſtering hand;
'And crowns and ſceptres ſhift at her command.
'Minerva dictates in th' embattled field;
'And heroes tremble when ſhe ſhakes her ſhield.
'Of all the goddeſſes that rule above,
'Far moſt defenceleſs is the queen of love.
'Without or ſpear or ſhield muſt Venus live;
'And crowns and ſceptres ſhe has none to give.
'Yet why deſpair? Though with no faulchion grac'd,
'Love's ſilken chain ſurrounds my ſlender waiſt.
'My bow this ceſtus, this the dart I fling,
'And with this ceſtus I infix my ſting.
'My ſting infix'd renews the lover's pain,
'And virgins languiſh but revive again.'
Thus to her loves the roſy-finger'd queen
Told all her fears, and vented all her ſpleen:
To every word they lent a willing ear,
Round their fond mother clung, and ſtrove to cheer.

And now they reach mount Ida's graſſy ſteep,
Where youthful Paris feeds his father's ſheep:
What time he tends them in the plains below,
Through which the waters of Anaurus flow,
Apart he counts his cattle's numerous ſtock,
Apart he numbers all his fleecy flock.
A wild goat's ſkin, around his ſhoulders caſt,
Looſe fell and flow'd below his girded waiſt.
A paſtoral ſtaff, which ſwains delight to hold,
His roving herds protected and controll'd.
Accoutred thus, and warbling o'er his ſong,
He to his pipe melodious pac'd along.
Unnotted oft, while he renews his lay,
His flocks deſert him, and his oxen ſtray.
Swift to his bower retires the tuneful man,
To pipe the praiſe of Hermes and of Pan.
Sunk is each animal in dead repoſe;
No dog around him barks, no heifer lows:
Echo alone rebounds through Ida's hills,
And all the air with ſounds imperfect fills.
The cattle, ſlunk upon their verdant bed,
Cloſe by their piping lord repoſe their head.
Beneath the ſhades which ſheltering thickets blend,
When Paris' eye approaching Hermes ken'd,
Back he retires, with ſudden fear impreſs'd,
And ſhuns the preſence of the heavenly gueſt;
To the thick ſhrubs his tuneful reed conveys,
And all unfiniſh'd leaves his warbled lays.
Thus winged Hermes to the ſhepherd ſaid,
Who mark'd the gods approach with ſilent dread:
'Diſmiſs thy fears, nor with thy flocks adide;
'A mighty conteſt Paris muſt decide.
'Haſte, judge announc'd; for whoſe deciſion wait
'Three lovely females, of celeſtial ſtate.
'Haſte, and the triumph of that face declare,
'Which ſweeteſt looks, and faireſt midſt the fair:
'Let her, whoſe form thy critic eye prefers,
'Claim beauty's prize, and be this apple hers.
Thus Hermes ſpoke; the ready ſwain obey'd,
And to decide the mighty cauſe eſſay'd.
With keeneſt look he mark'd the heavenly dames;
Their eyes, quick flaſhing as the lightning's flames,
Their ſnowy necks, their garments fring'd with gold,
And rich embroidery wrought in every fold;
Their gait he mark'd, as gracefully they mov'd,
And round their feet his eye ſagacious rov'd.
But, ere the ſmiling ſwain his thoughts expreſs'd,
Graſping his hand him Pallas thus addreſs'd;
'Regard not Phrygian youth, the wife of Jove,
'Nor Venus heed the queen of wedded love:
'But martial proweſs if thy wiſdom prize,
'Know, I poſſeſs it; praiſe me to the ſkies.
'Thee, fame reports, puiſſant ſtates obey,
'And Troy's proud city owns thy ſovereign ſway;
'Her ſuffering ſons thy conquering arm ſhall ſhield,
'And ſtern Bellona ſhall to Paris yield.
'Comply; her ſuccour will Minerva lend,
'Teach thee war's ſcience, and in fight defend.'
Thus Pallas ſtrove to influence the ſwain,
Whoſe favour Juno thus attempts to gain:
'Should'ſt thou with beauty's prize my charms reward,
'All Aſia's realms ſhall own thee for their lord.
'Say, what from battles but contention ſprings?
'Such conteſts ſhun; for what are wars to kings?
'But him, whoſe hands the rod of empire ſway,
'Cowards revere, and conquerors obey.
'Minerva's friends are oft Bellona's ſlaves,
'And the fiend ſlaughters whom the goddeſs ſaves.'
Proffers of boundleſs ſway thus Juno made;
And Venus thus, contemptuous ſmiling, ſaid:
But firſt her floating veil aloft ſhe threw,
And all her graces to the ſhepherd ſhew;
Looſen'd her little loves' attractive chain,
And tried each art to captivate the ſwain.
'Accept my boon' (thus ſpoke the ſmiling dame),
'Battles forget, and dread Bellona's name.
'Beauty's rich meed at Venus' hand receive,
'And Aſia's wide domain to tyrants leave.
'The deathful fight, the din of arms I fear;
'Can Venus' hand direct the martial ſpear?
'Women with beauty ſtouteſt hearts aſſail,
'Beauty, their beſt defence, their ſtrongeſt mail.
'Prefer domeſtic eaſe to martial ſtrife,
'And to exploits of war a pleaſing wife.
'To realms extenſive Helen's bed prefer,
'And ſcoff at kingdoms, when oppos'd to her,

'Thy prize with envy Sparta shall survey,
'And Troy to Paris tune the bridal lay.'
The shepherd, who astonish'd stood and mute,
Consign'd to Venus the Hesperian fruit,
The claim of beauty, and the source of woes;
For dire debates from this decision rose.
Uplifting in her hand the glowing prize,
She rallied thus the vanquish'd deities:
'To me, ye martial dames, the prize resign;
'Beauty I court, and beauty's prize is mine.
'Mother of mighty Mars and Vulcan too,
'Fame says the choir of graces sprung from
'you;
'Yet distant far, this day, your daughters stray'd,
'And no one grace appear'd to lend you aid.
'Mars too declin'd t' assert his mother's right,
'Though oft his brandish'd sword decides the
'fight.
'His boasted flames why could not Vulcan cast,
'And at one blaze his mother's rivals blast?
'Vain are thy triumphs, Pallas, vain thy scorn;
'Thou, not in wedlock, nor of woman born.
'Jove's teeming head the monstrous birth con-
'tains,
'And the barb'd iron ripp'd thee from his brains.
'Brac'd with th' unyielding plaits of ruthless
'mail,
'She curses Cupid and the silken veil.
'Connubial bliss and concord she abhors,
'In discord glories, and delights in wars.
'Yet know, virago, not in feats of arms
'Triumph weak women, but in beauty's charms.
'Nor men nor women are those mungrels base,
'Like you, equivocal in form and face.'
In terms like these the laughter-loving queen
Rallied her rivals, and increas'd their spleen,
As, lifting high, she view'd with secret joy
Her beauty's triumphs, and the bane of Troy.
Inspir'd with love for her, the fair unknown,
By beauty's conquering queen pronounc'd his
own,
Ill-fated Paris to the forest's maze
Men vers'd in Pallas' various arts conveys.
At Pericles' command they give the blow,
And lay the glories of the forest low.
He, artist fam'd, his frantic prince obey'd,
And burden'd ocean with the ships he made.
From Ida's summits rush'd the daring swain,
And to its bowery shades preferr'd the boisterous
main.
Th' extended beach with choice oblations stor'd,
And his protectress Venus oft implor'd,
The billowy deep his furrowing keel divides,
And in the Hellespont his vessel rides.
But prodigies announce approaching ill,
And with presages sad each bosom fill,
Up-heaving waves heaven's starry concave shroud,
And round each Bear is cast a circling cloud.
Clouds and big waves discharge their watery
stores;
Full on the deck the bursting torrent pours.
Their sturdy oars with unabating sweep
Far whitening agitate the angry deep.
Dardanus pass'd, and Ilion's fertile plains,
The mouth of Ismarus' lake th' adventurer gains.
Now, far remote, they view Pangræa's height:
Now Phillis' rising tomb attracts their sight,
And the dull round she nine times trod in vain,
To view the faithless wanderer again.
Hæmonia's meads remote, the Trojan spies
Th' Achaian cities unexpected rise:
Phthia, with heroes far renown'd replete;
Mycenæ, fam'd for many a spacious street.
Beside the meads, where Erymanthus glides,
Sparta aspires, that boasts her beauteous brides;
Sparta with joy th' expecting swain survey'd,
Lav'd by Eurotas, by Atrides sway'd.
Nor distant far, o'ershaded by a wood
Beneath a mountain's brow Therapnæ stood
Short was their voyage now: the bending oar
Was heard to lash the foamy surge no more.
The sailors, safe embosom'd in the bay,
Firm to the beach confine the corded stay.
In purifying waters plung'd the swain,
And, rising thence, pac'd slowly o'er the plain;
For much he fear'd, lest his incautious tread
O'er his wash'd feet the spatter'd mire should
spread:
Or lest his hair, beneath his casque confin'd,
Should, if he ran, be ruffled with the wind.
The city's splendour Paris' eye detains,
The citizen's abodes, and glittering fanes.
Here Pallas' form, in mimic gold pourtray'd,
Here Hyacinthus' image he survey'd.
Him with delight the Amiclæans view'd,
Pursuing Phœbus, and by him pursu'd;
But, sore displeas'd at jealous Zephyr's spite,
They urg'd the stripling to unequal fight;
For Phœbus' efforts ineffectual prov'd,
To save from Zephyr's rage the youth he lov'd.
Earth with compassion heard Apollo's cries,
And from her bosom bade a flower arise,
His favourite's name, impress'd upon whose
leaf,
Still, as the god contemplates, sooths his grief.
Now Priam's son before Atrides' dome
Exulting stood in beauty's purple bloom.
Not Semele, by Jove's caresses won,
On Jove bestow'd so beautiful a son:
(Forgive me, Bacchus, seed of Jove supreme)
Such peerless graces round his person beam.
Touch'd by fair Helen's hand, the bolts recede;
She to the spacious hall repair'd with speed:
Her form distinct th' unfolded portals show;
She look'd, she ponder'd, and again withdrew.
Then on a radiant seat she bade him rest,
And, still insatiate, gaz'd upon her guest.
Awhile she likens him in graceful mien
To love, attendant on the Cyprian queen.
But 'tis not love, she recollects again;
Nor bow nor quiver deck this gallant swain.
'Tis Bacchus sure, the god of wine, she said;
For o'er his cheeks a rosy bloom is spread.
Daring at length her faultering voice to raise,
She thus express'd her wonder and her praise:
'Whence art thou, stranger? whence thy
'comely race?
'Thy country tell me, and thy natal place.
'In thee I mark the majesty of kings:
But not from Greece thy lofty lineage springs;

'Not sandy Pyle thine origin can show;
'I know not thee, though Nestor's son I know.
'Phthia, the nurse of heroes, train'd not thee;
'For known are all th' Æacidæ to me,
'Peleus, and Telamon renown'd in fight,
'Patroclus' courtesy, Achilles' might.'
Inspir'd by love, thus spoke the gentle dame;
And he thus answering, fann'd the rising flame:
"If e'er recording fame, illustrious maid,
"Hath to thine ear great Ilion's name convey'd,
"Ilion, whose walls on Phrygian frontiers stand,
"Rear'd by Apollo's and by Neptune's hand;
"Him if thou know'st, most opulent of kings,
"Who reigns o'er Ilion, and from Saturn springs;
"I to hereditary worth aspire;
"The wealthy Priam is my honour'd sire.
"My high descent from Dardanus I prove;
"And ancient Dardanus descends from Jove.
"Th' immortals thus forsake the realms of light,
"And mix with mortals in the social rite.
"Neptune and Phœbus thus forsook the sphere,
"Firm on its base my native Troy to rear.
"But know, on three fair goddesses, of late,
"Sentence I pass'd, and clos'd the long debate.
"On Venus, who with charms superior shone,
"I lavish'd praises, and conferr'd my boon.
"The Cyprian goddess, pleas'd with my decree,
"Reserv'd this recompence, O queen, for me;
"Some faithful fair, possess'd of heavenly charms,
"Should, she protested, bless my longing arms;
"Helen her name, to beauty's queen ally'd;
"Helen, for thee I stemm'd the troubled tide.
"Unite we now in Hymen's mystic bands:
"Thus love inspires, and Venus thus commands.
"Scorn not my suit, nor beauty's queen despise:
"More need I add to influence the wise?
"For well thou know'st, how dastardly or base
"Is Menelaus's degenerate race.
"And well I know, that Græcia's ample coast
"No fair like thee, for beauty fam'd, can boast."
He said: on earth her sparkling eyes she cast,
Embarrass'd paus'd awhile, and spoke at last:
'To visit Ilion, and her towers survey,
'Rear'd by the god of ocean and of day,
'(Stupendous labours by celestials wrought)
'Hath oft, illustrious guest, employ'd my thought,
'Oft have I wish'd to saunter o'er the vales,
'Whose flowery pasture Phœbus' flocks regales;
'Where, beneath Ilion's walls, along the meads,
'The shepherd-god his lowing oxen feeds.
'To Ilion I'll attend thee: haste, away;
'For beauty's queen forbids our long delay.
'No husband's threats, no husband's search I dread,
'Though he to Troy suspect his Helen fled.'
The Spartan dame, of matchless charms possess'd,
Proffer'd these terms to her consenting guest.
Night, which relieves our toils, when the bright sun,
In ocean sunk, his daily course has run,
Now gives her softest slumbers, ere the ray
Of rising morn proclaims th' approach of day.
Two gates of airy dreams she opens wide;
Of polish'd horn is this, where truths abide:
Voices divine through this mysterious gate
Proclaim th' unalterable will of fate.
But through the ivory-gate incessant troop
Of vain, delusive dreams, a faithless group.
Helen, seduc'd from Menelaus' bed,
Th' adventurous shepherd to his navy led:
To Troy with speed he bears the fatal freight;
For Venus' proffers confidence create.
At morning's dawn Hermione appears,
With tresses discompos'd and bath'd in tears;
She rous'd her menial train, and thus express'd
The boding sorrows of her troubled breast:
'Where, fair attendants, is my mother fled,
'Who left me sleeping in her lonely bed?
'For yesternight she took her trusty key,
'Turn'd the strong bolt, and slept secure with me.'
Her hapless fate the pensive train deplore,
And in thick circles gather round the door;
Here all contend to moderate her grief,
And by their kind condolence give relief:
'Unhappy princess, check the rising tear;
'Thy mother, absent now, will soon appear.
'Soon as thy sorrow's bitter source she knows,
'Her speedy presence will dispel thy woes.'
'The virgin-cheek, with sorrow's weight o'er-
'come,
'Sinks languid down, and loses half its bloom.
'Deep in the head the tearful eye retires,
'There sullen sits, nor darts its wonted fires.
'Eager, perchance, the band of nymphs to meet,
'She saunters devious from her favourite seat,
'And, of some flowery mead at length possess'd,
'Sinks on the dew-bespangled lawn to rest.
'Or to some kindred stream perchance she strays,
'Bathes in Eurotas' streams, and round its mar-
'gin plays'
'Why talk ye thus?' (the pensive maid replies,
The tears of anguish trickling from her eyes)
'She knows each roseate bower, each vale and
'hill,
'She knows the course of every winding rill.
'The stars are set; on rugged rocks she lies:
'The stars are up; nor does my mother rise.
'What hills, what dales thy devious steps detain?
'Hath some relentless beast my mother slain?
'But beasts, which lawless round the forest rove,
'Revere the sacred progeny of Jove.
'Or art thou fall'n from some steep mountain's brow,
'Thy corse conceal'd in dreary dells below?
'But through the groves, with thickest foliage
'crown'd,
'Beneath each shrivell'd leaf that strews the ground,
'Assiduous have I sought thy corse in vain:
'Why should we then the guiltless grove arraign?
'But have Eurotas' streams, which rapid flow,
'O'erwhelmed thee bathing in its deeps below?
'Yet in the deeps below the Naiads live,
'And they to womankind protection give.'
Thus spoke she sorrowing, and reclin'd her head,
And sleeping seem'd to mingle with the dead;
For sleep his elder brother's aspect wears,
Lies mute like him, and undisturb'd by cares.
Hence the swoln eyes of females, deep distress'd,
Oft, when the tear is trickling, sink to rest.

In this deluſive dream the ſleeping maid
Her mother ſaw, or thought ſhe ſaw, portray'd.
Aloud ſhe ſhriek'd, diſtracted and amaz'd,
And utter'd thus her anguiſh as ſhe gaz'd:
'Laſt night far diſtant from your daughter fled.
'You left me ſlumbering in my father's bed.
'What dangerous ſteeps have not I ſtrove to gain?
'And ſtroll'd o'er hills and dales for thee in vain?'
"Condemn me not (replied the wandering dame):
"Pity my ſufferings, nor augment my ſhame.
"Me yeſterday, a lawleſs gueſt beguil'd,
"And diſtant tore me from my darling child.
"At Cytherea's high command I rove;
"And once more revel in the walks of love."
She ſaid: her voice the ſleeping maid alarms;
She ſprings to claſp her mother in her arms.
In vain: no mother meets her wiſtful eyes;
And now her tears redouble and her cries:
'Ye feathery race, inhabitants of light,
'To Crete's fam'd iſle direct your rapid flight.
'There to my ſire th' unwelcome truth proclaim,
'How yeſterday a deſperate vagrant came,
'Tore all he dotes on from his bridal bed,
'And with his beauteous queen abruptly fled.'
The reſtleſs fair, her mother to regain,
Thus to the winds bewail'd and wept in vain.
The Thracian town diminiſh'd from their view,
And fleet o'er Helle's ſtrait the veſſel flew.
The bridegroom now his natal coaſt deſcry'd,
And to the Trojan port conducts his bride.
Caſſandra from her tower beheld them ſail,
And tore her locks, and rent her golden veil.
But hoſpitable Troy unbars her gate,
Receives her citizen and ſeals her fate.

NOTES ON THE RAPE OF HELEN.

COLUTHUS LYCOPOLITES, a Theban poet, flouriſhed in the reign of the emperor Anaſtaſius, about five hundred years after Chriſt. He is ſaid to have been the author of ſeveral poems; none of which have come down to us except this, which in many paſſages is corrupt and mutilated. There is an excellent edition of this poem by Lennep. There is alſo an old tranſlation of it by Sir Edward Sherburne; to whom I acknowledge myſelf indebted for ſome of his uſeful annotations.

Did the inſertion of this little poem ſtand in need of an apology, it might be made by obſerving, that the ſubjects of the two poems are not wholly diſſimilar. In the one is celebrated the rape of Medea, in the other the rape of Helen; two events of equal celebrity in ancient ſtory.

On the title of this poem Sir Edward Sherburne makes the following not unpleaſant remark: "The word *rape* muſt not be taken in the common acceptation of the expreſſion. For Paris was more courtly than to offer, and Helen more kind-hearted than to ſuffer ſuch a violence. It muſt be taken rather for a tranſporting of her with her conſent from her own country to Troy: which Virgil ſeems to inſinuate in the firſt book of his Æneid, where, ſpeaking of Helen, he ſays,

"Pergama cum peteret.———"

The word *peteret* implies that the quitting of her country, and going along with Paris, was an act ſhe deſired, as well as conſented to; and thus much the enſuing poem makes good.

Ver. 2. The moſt celebrated river in Troas: it derived its ſource from mount Ida.

Ver. 10. The ancients eſteemed the art of huſbandry to be of all others the moſt honourable. The hands of princes ſuſtained at the ſame time the crook and the ſceptre. Paris the ſon of Priam, king of Troy, is repreſented in this poem under the character of a ſhepherd. In our times the care of flocks and herds is committed to the loweſt orders of the people. Shepherd and clown are terms with us nearly ſynonymous. But we muſt endeavour to ſeparate from them the ideas of churliſhneſs and ill-breeding, when applied, as the ancients applied them, to heroes and kings.

Ver. 24. It was a fiction of the poets, that Peleus, the ſon of Æacus, and pupil of Chiron, married Thetis the daughter of Nereus; and that all the gods attended at their nuptials on mount Pelion, except Eris or Diſcord, in whoſe preſence agreement and harmony could not long ſubſiſt. See on this ſubject, *Catullus de Nupt. Pel. & Thet.* and *Valerius Flaccus*, L. i. v. 129.

Ver. 42. The correſpondent lines in the original ought to be placed after v. 33. as Lennep rightly obſerves: to that place (immediately after the poet's mention of Diana) the tranſlator has reſtored them.

Ver. 56. The conjectural reading of Voſſius is here preferred; as it ſeems to contain more ſenſe and more poetry than any other. He reads,

——————χειρὶ δὲ λαιῇ
Ὃν δὲ τε κάλλοσι ἔρυξε καὶ ἣν ἐφυφάσσατο πέτρην.

Ver. 79. Apples were eſteemed the ſymbol of love, and dedicated to Venus. They were alſo conſidered as allurements of love, and were diſtributed among lovers. Hence the expreſſions *μηλοβολεῖν* and *malo petere*, in Theocritus and Virgil.

Ver. 89. The ancients looked upon ſuch eyebrows, which our poet calls *βλεφάρων συνοχὴν* as eſſential to form a beautiful face. See Anacreon's deſcription of his miſtreſs, and *Theocr. Id.* viii. 72.

Ver. 99. They were ſuppoſed to be very numerous.

——volucrumque exercitus omnis amorum.
Val. Flacc. vi. 457.

Ver. 116. The ceſtus of Venus, of which Homer makes particular mention, Il. xiv. 216. derives its name ἀπὸ τῆ κεντεῖν. To which ſtimulating quality our poet alludes in the following line.

And with this ceſtus I infix my *ſting*.

Ver. 205.

——κάλλος,
Ἀντ' ἀσπίδων ἀτασθῶν
Ἀντ' ἰγχέων ἀπάνευθεν. *Anacr. Ode* xi.

Ver. 267, 268. *Iſmarus, Pangræa.*] Mountains in Thrace. The former is alſo the name of a lake.

Ver. 269. Demophoon, ſon of Theſeus, on his return from Troy, paſſed through Thrace, where he was hoſpitably received by Phillis, its queen, who fell in love with and married him. He having expreſſed his deſire to viſit Athens, his native country, Phillis conſented to his departure, upon condition that he would return on a certain day which he ſhould appoint. Demophoon promiſed to be with her on the appointed day. When the day came, Phillis, tortured with the pangs of an impatient lover, ran nine times to the ſhore, which from this circumſtance was called in Greek *Enneados:* but unable any longer to ſupport his abſence, ſhe, in a fit of deſpair, hanged herſelf. *See Ovid's Epiſt.* ii. *Phillis to Demoph.*

Ver. 274. A province and city of Theſſaly; the birth-place of Achilles. But, for a more particular account of Coluthus's geography, the reader may conſult Lennep's note on ver. 215, where he ſhows (to make uſe of his own words), "quam "fuerit in geographicis hoſpes Coluthus."

Ver. 296 Hyacinthus was a young prince of the city Amyclæ in Laconia. He had made ſo extraordinary a progreſs in literature, that he was conſidered as a favourite of Apollo. As he was playing with his fellows, he was unfortunately ſtruck on the head by a quoit, and died of the blow. The poets have enlarged on this ſimple ſtory in the following manner:

The wind which blew the quoit aſide, and gave it the fatal direction, they have called Zephyrus; whom they have repreſented as the rival of Apollo. Zephyrus having received for his kindneſſes to Hyacinthus, the moſt ungrateful returns, was reſolved to puniſh him for his inſolence; and having challenged him one day to a game of quoits, he ſtruck the unfortunate youth a blow on the temples.

The inhabitants of Amyclæ, ſays the poet,

——δηΐῳ ἀήτου
Σκυζόμενος, καὶ τοῦτον ἀνήγαγεν.——

were diſpleaſed with the conteſt propoſed by Zephyrus, and withdrew Hyacinthus from the fight; or, perhaps (ſtill better to connect this with the following ſentence), they brought him out, and ſpirited him on to the fight, preſuming that his favourite god would enable him to come off victorious—ἀντὰρ Ἀπόλλων. &c.

This is Lennep's conjectural reading; which, whether the true one or not, muſt be allowed to affix a tolerable meaning to a paſſage that was before very unintelligible.

Ver. 302. From the blood that was ſpilt on the ground, Apollo produced a flower, called after the name of his favourite youth. *See Ovid Metam. l* x.

Ver. 331. Antilochus, mentioned frequently in Hom. Il.

Ver. 333. The deſcendants of Æacus. He was the ſon of Jupiter and Ægina: his offſpring were Phocus, Peleus, Teucer, and Telamon.

Ver. 390 The fiction to which our author in this place, and Virgil, in Æneid vi. allude, is borrowed from B. xix. of Hom. Odyſſ. It is imagined, that this ſtory of the gates of ſleep may have had a real foundation, and have been built upon the cuſtoms of the Egyptians. *See the note on ver. 656. book* xix. *of Pope's Odyſſ.* Our poet has repreſented theſe fanciful gates as opened by Night; and with great propriety.

"The ancients," ſays Sir Edward Sherburne, "painted Sleep like a man heavy with ſlumber; his under-garment white, his upper black; thereby expreſſing day and night; holding in his hand a horn; ſometimes really ſuch, ſometimes of ivory, in the likeneſs of one; through which, they feigned, that he conveyed dreams; true, when the ſame was of horn, falſe when of ivory." Some have aſſigned, as a reaſon why true dreams paſs through the gate of horn, and falſe ones through the gate of ivory—that horn is a fit emblem of truth, as being tranſparent, and ivory of falſehood, as being impenetrable.

Ver. 448. Virgil, Æn. vi. 278. calls ſleep *conſanguineus lethi.*

Ver. 450. Hence, i. e. by reaſon of the likeneſs there is betwixt theſe two affections.

Ver. 464. The line in the original is obſcure, and uſually miſplaced. It is given to Hermione, but without the leaſt reaſon. It is here reſtored to its proper place: and is an obſervation which comes naturally enough from the mouth of Helen. See Lennep's note on the paſſage.

Ver. 482 Caſſandra was the daughter of Priam, and prieſteſs of Apollo. Apollo gave her the gift of prophecy; but on her refuſing to comply with the conditions on which it was given her, he rendered it ineffectual, by ordaining that her predictions ſhould never be believed Hence it was, that, when Paris ſet ſail for Greece in purſuit of Helen, her prophecy, that he ſhould bring home a flame, which ſhould conſume his country, was not regarded. Her appearance, therefore, on the preſent occaſion is quite in character; and our poet has ſhown his judgment by the repreſentation he has given of her.

THE WORKS

OF

T. LUCRETIUS CARUS.

TRANSLATED FROM THE GREEK,

BY

THOMAS CREECH, M. A.

CREECH'S LUCRETIUS.

PREFACE.

The poems of the ancients, tranſlated into modern languages, are juſtly compared to flowers, of the growth of warmer regions, tranſplanted thence into our colder climates: They often die in the raiſing; but, if with difficulty they are brought to bear, the flowers they produce, wanting the indulgent warmth of their native ſun, degenerate from their ancient ſtock; they impair in livelineſs of colour, and loſe their fragrancy of ſmell, or retain at beſt but a faint odour. Verſe, in like manner, when tranſplanted from the language of one country into that of another, participates of all the defects of the air and ſoil; and when ancient wit comes to be taught and confined in modern numbers, the noble ſpirit, for want of the warmth with which the original was written, evaporates in transfuſing, and often becomes little better than a dead and ſenſeleſs image. Hence we ſee, that though compoſing be indeed the nobler part of poetry, yet to tranſlate well is ſcarce a leſs difficult taſk. The materials, I grant, are found to the tranſlator's hands; but then his fancy is bound up and confined; for he muſt build according to his model: and though his invention toil the leſs, his judgment muſt labour the more; otherwiſe he will never copy his original, nor do juſtice to his author.

I will not preſume to give my opinion, either in praiſe or diſpraiſe, of the following tranſlation in general; the many teſtimonies, given in behalf of it, by the tranſlator's learned and ingenious friends, in their commendatory verſes, which, as they were to all the former editions of this work, are likewiſe prefixed to this, render all that can be ſaid in praiſe of it ſuperfluous, and in blame of it ineffectual; for who will dare to cenſure a work, that has deſervedly found ſo favourable a reception, and gained ſuch a general approbation and applauſe? What Mr. Waller writes to Mr. Evelyn on his tranſlation of the firſt book of Lucretius only, may with greater juſtice be applied to our tranſlator:

For here Lucretius whole we find,
His words, his muſic, and his mind:
Thy art has to our country brought
All that he writ, and all he thought. *Waller.*

Now all tranſlated books, whatever ſubjects they treat of, are, or ought to be, intended for the benefit and inſtruction of ſuch as underſtand not the languages in which the originals are written, and if they fail of that end, they are always, and at beſt, but uſeleſs amuſements: But if they aſſert principles, and advance maxims and propoſitions, that are repugnant to the doctrine of the Chriſtian faith, or to the precepts of morality and good manners, they may prove of ill conſequence to ſome, particularly to the unwary or leſs intelligent readers. It were better that books of that nature (and moſt of the writings of the ancient Heathens are ſuch, in a leſs or greater degree) were never tranſlated at all, than that, by being rendered into modern languages, they ſhould fall into the hands of all ſorts of readers; many of whom, not being capable to judge of the ſtrength or weakneſs of the arguments they find in them, are often ſeduced into errors. Such books are a ſort of edged tools, that either ought to be kept from the weak, and the illiterate; or, when they are put into their hands, they ought to be inſtructed how to uſe them without danger. This being granted in general, is ſufficient to juſtify my undertaking, and to prove the uſefulneſs of it, in writing the following notes and animadverſions on this Engliſh Lucretius.

I foreſee, nevertheleſs, that ſome will blame, and perhaps cenſure me ſeverely, for having beſtowed ſo much time and labour on an impious poet: For this, will they ſay, is that very Lucretius, who believes, and endeavours all he can to prove, the human ſoul to be corporeal and mortal; and who, by ſo doing, denies a future ſtate, either of happineſs or miſery, and takes away all hopes of our ſalvation in a bleſſed and eternal futurity: This is he, who flatly denies the Providence of God, which is the chief baſis and ſupport of the Chriſtian religion: And, laſtly, this is he who teaches, and aſſerts to be true, that Atheiſtical hypotheſis of Democritus and Epicurus, concerning the indiviſible principles, and the nature of all things. This, I confeſs, ſeems at firſt ſight to be a grievous accuſation; but yet, if duly conſidered, it will appear to be of little moment: For not to mention that, for the ſame reaſon that we ought not, as ſome pretend, to read Lucretius, we ought likewiſe to abſtain from reading all, at leaſt moſt of the authors of antiquity, ſince in their writings are contained many impious, profane,

falſe, ridiculous, and fabulous aſſertions; inſomuch, that all our poets, orators, hiſtorians, and philoſophers muſt be rejected and thrown away, as debauchers of youth, and corrupters of good manners, if their writings were once to be tried by the ſtandard of our faith, and by the doctrine of Chriſtianity; not to mention, I ſay, all this, I dare boldly affirm, that whatever propoſitions Lucretius advances, contrary to the Chriſtian religion, are ſo viſibly and notoriouſly falſe, and conſequently ſo eaſily anſwered, that they cannot in the leaſt ſtartle any one, who profeſſes our holy belief: For inſtance, Lucretius, in his third book, after having, as he thinks, fully demonſtrated the corporality of the human ſoul, brings no leſs than twenty-ſix arguments to prove its mortality likewiſe: But all of them, when they come to be maturely conſidered, are of ſo little validity, and ſo obvious to be confuted, that, far from being able to ſtagger in the leaſt the faith of a Chriſtian, no man, I think, though but of mean capacity, can, on ſuch ſlender and unconvincing proofs, believe, even if he would, that the ſoul dies with the body. Nor are his arguments, by which he labours to overthrow all belief of a divine Providence, and to wreſt the power of creation out of the hands, even of Omnipotence itſelf, more cogent or perſuaſive, as will, I hope, be made appear in the following notes and animadverſions; in which I have made it my chief ſtudy to ſhow the weakneſs, and to expoſe to my readers the inſufficiency of them. How well I have ſucceeded in my attempt muſt be left to the judgment of the public; the deſign, I am ſure, was well-meaning and honeſt; and if the performance be anſwerable, it may juſtly challenge a favourable reception: For what Chriſtian will not be pleaſed to ſee, that not even the moſt penetrating wit of Lucretius has been able to advance any thing ſolid againſt the power of that infinite God whom he adores; eſpecially conſidering, that if any ſuch impieties could have been defended, he certainly was capable of defending them:

————Si pergama dextrâ
Defendi poſſent, certè hâc defenſa fuiſſent. *Virg.*

Moreover, what danger can ariſe to any man, though but of common underſtanding, while he reads that ridiculous doctrine of the Epicurean philoſophers concerning their atoms, or minute indiviſible corpuſcles, which they held to be the firſt principles of all things? An opinion ſo abſurd, that even the bare mentioning of it confutes it. So far, therefore, from being of dangerous conſequence to us is the reading thoſe abſurdities of the ancients concerning the nature of things, that, on the contrary, we may gain from thence the great advantage of acquiring a more perfect knowledge of nature, and of the wonderful works of God: For nature has imprinted on all men an innate deſire of truth; and to know the falſe opinions of others, will excite and fit them up to be the more diligent in the inquiry and ſearch of it, will render them the more capable to judge and determine concerning it, and to retain in their minds the more firmly the convictions it imprints upon them. As light is then moſt beautiful when it firſt riſes out of darkneſs, ſo truth is then moſt delightful when it firſt emerges out of errors. For as my lord Roſcommon finely expreſſes it,

Truth ſtamps conviction on your raviſh'd breaſt,
And peace and joy attend the glorious gueſt.
Eſſay on Tranſlated Verſe.

Nor is all that Lucretius has written, impious, falſe, or ridiculous: on the contrary, many excellent things are contained in his poem; many that well deſerve to be read and remembered even by Chriſtians. How excellently does he declaim againſt ambition, and all manner of injuſtice and cruelty; againſt ſuperſtition, and the fear of death; againſt avarice, luxury, and luſt; againſt all the other paſſions of the mind, and diſhoneſt pleaſures of the body. Is he not continually exhorting his Memmius to ſobriety, temperance, chaſtity, magnanimity, and all the reſt of the moral virtues? Inſomuch that what Diogenes writes of Epicurus ſeems to be true; that he was falſely accuſed by ſome perſons of indulging himſelf too much in pleaſure, and that it was a mere calumny in them to wreſt, as they did, to a wrong ſenſe, the meaning of that philoſopher, and to interpret what he ſaid of the tranquillity of the mind, as if it had been ſpoken of the ſenſual delights of the body. To the ſame purpoſe Caſſius, that great general of the Romans, after he had embraced the Epicurean philoſophy, writing to Cicero, explains this matter in the following words: They, ſays he, whom we call lovers of pleaſure, are indeed lovers of goodneſs and of juſtice; and men who practiſe and cultivate all manner of virtues: for there is no true pleaſure without a good and virtuous life: "ii, qui à nobis φιλήδονοι vocantur, ſunt φιλόκαλοι καὶ φιλοδικαίοι, omneſque virtutes et colunt et retinent: ἡ γαρ ἡσυχὴ ἄνευ τῦ καλῶς καὶ δικαίως ζῆν." as the ſame Caſſius there cites the very words of Epicurus, who himſelf takes notice of this calumny, and complains of the malice and diſingenuouſneſs of his accuſers, who, not underſtanding it aright, had miſrepreſented his doctrine concerning pleaſure: When we aſſert, ſays he, that pleaſure is the chief good and greateſt felicity of man, we mean not the pleaſures of the luxurious and libidinous; not the pleaſures of the taſte, the touch, or any other ſenſual enjoyments, as ſome ignorant perſons, or ſuch as diſſent from our opinions, or as take them in a wrong ſenſe, maliciouſly give out: but what we call pleaſure is, to be exempt from pain of body, and to have a mind ſerene and void of all cares and perturbations; for not the company of laſcivious boys and women, not luxurious eating and drinking; not to feed on fiſh, and other delicious meats that load the tables of the wealthy, nor any other ſenſual delights can procure a happy life; but a right and ſound reaſon, that ſearches into, and diſcerns the cauſes why ſome things are to be deſired, others to be avoided; and that chaſes and expels thoſe opinions, by means of which the mind is diſquieted, and vexed with paſſions and anxieties. Thus we

ſee there is nothing ſo prudent, nothing ſo true, nothing ſo virtuous, but what, by being miſrepreſented, may be made to appear its contrary. Nor indeed is it probable, that ſo many excellent and wiſe men, who were ſuch great ornaments and ſupports of the Roman commonwealth, would ſo aſſiduouſly have frequented the gardens of Epicurus, or have engaged themſelves to one another in the ties of friendſhip, as even their deſamers allow they did, had they not been fully convinced of the good morals and innocence of life of that philoſopher who firſt founded their ſect: Galen, in Art. Med. witneſſes of him, that he conſtantly exclaimed aloud againſt the uſe of all venereal actions, that he neglected the advantages of life, that he contemned all daintineſs and exceſs in eating, drinking, and apparel; and that he would often ſay, that bread and water, when taken by thoſe that wanted them, afforded the greateſt pleaſure. And in his epiſtles, which Diogenes Laërtius had the good fortune to ſee, he teſtifies of himſelf, that he was content to live on brown bread and water only; but ſend me, ſays he, a little of your Cyprian cheeſe, that I may feaſt myſelf deliciouſly, if I ſhould have a mind to do ſo. Diocles reports of his diſciples too, that they were ſatisfied with the meaneſt and the pooreſt fare: They ſcarce, ſays he, ever taſted of wine, and water was their chief beverage. To confirm this, it is obſerved, that this abſtemiouſneſs of theirs was the reaſon that they were the better able to undergo hardſhips, when Demetrius beſieged Athens, during which ſiege, ſays Plutarch in the life of that prince, the philoſopher Epicurus ſupported thoſe of his ſect, ſharing with them daily a certain ſmall number of beans. Cicero himſelf, though he was a profeſſed enemy to this ſect, yet ſays in many places, that the Epicureans were generally good men, and that none of the philoſophers were leſs addicted to vice: And Seneca too witneſſes of Epicurus, that he was a man eminently remarkable for his temperance and continence.

Thus lived Epicurus, whoſe very name nevertheleſs has for many ages been uſed as a proverb, to denote an atheiſtical voluptuous wretch, addicted to all manner of ſenſualities. Thus too lived his followers, who nevertheleſs are generally deemed to have been impious libertines, and repreſented as a herd of ſwine, indulging themſelves in pleaſure, and wallowing in all manner of impurities. How groundleſs this cenſure, how unmerited this reproach, the reader is left to judge, from the foregoing teſtimonies of the ancients, which among many others that might have been produced, I have given in defence of the morals and innocence of life, both of Epicurus and his followers.

I wiſh there were as much to be ſaid in behalf of their theology: Let me not, however, be thought to endeavour to patronize and defend their impieties; if in a few words I give the opinion of Epicurus concerning the Deity: againſt whom, I own, I [illegible] concluded, in abſolutely denying a [illegible] and in dethroning the Almighty from the government of the world: But this impiety of his proceeded from an exceſs of ſuperſtition: For he apprehended that the eternal happineſs, which the divine eſſence enjoys, muſt be perplexed and diſturbed with the affairs of the lower world; nor could he comprehend how the moſt perfect and happy Being, that ſtands not in need of any thing in the power of man, could be pleaſed at their good, or offended at their wicked deeds. For he imagined and taught, that buſineſs and cares, and anger, and joy, and gratitude, were inconſiſtent with perfect happineſs, and proceeded from infirmity and weakneſs, and from fear and indigence. But what juſt ſentiments he had of the Deity we find in his epiſtle to Menœceus: God, ſays he, is an immortal and ever bleſſed being; and even common reaſon teaches, that nothing can be aſcribed to the Deity, that is repugnant either to immortality or beatitude: That there are gods we know for certain; but yet they are not ſuch as many believe them to be: He therefore is not impious who denies the gods of the multitude; but who aſcribes to the gods the opinions of the multitude: For thoſe opinions are not principles known by the light of nature; but merely falſe notions, that many conceive of the gods. Nor will I omit what Epicurus immediately ſubjoins: The gods, ſays he, puniſh the wicked, and reward the good: For being, as they are, all virtue and goodneſs, they take delight in whatever is virtuous and like themſelves. And in the compendium of his philoſophy, which he writ to Herodotus, ſpeaking of the meteors, we find the following paſſage: You ought not, ſays he, to believe, that the motion and converſion of the heavens, the riſing and ſetting of the planets, their eclipſes, and the like, are the labour and work of any one, or effected by any other cauſe, but only by his will and command, who enjoys at once all immortality and beatitude.

Thus, whatever impious notions Epicurus might once have entertained of the Deity, it is not unreaſonable to believe, that he was at length convinced of his error in that particular, and became, from an impious, a very pious philoſopher. He perſiſted indeed to the laſt in his erroneous doctrine concerning the human ſoul; which he held to be corporeal, to conſiſt of minute corpuſcles, and alike with the body, to be obnoxious to mortality. In this, I own, he grievouſly erred: but yet, methinks, his cenſurers might animadvert with leſs ſeverity againſt a poor ſhipwrecked heathen; ſince the Sadducees themſelves, though they were brought up in the boſom of the law, ſtruck on the ſame rock; conſidering beſides, that by the conſent, even of the beſt Chriſtians, the immortality of the ſoul is an ocean that cannot be ſounded, nor the danger avoided, without the immeaſurable plummet of faith.

Let none be offended that I have ventured thus far in defence of Epicurus, contrary to the commonly received opinion of that philoſopher. It matters not much to our preſent purpoſe, whether he recanted his impieties or not; ſince it

cannot be denied but that Lucretius ſtrenuouſly aſſerts them, and labours with all his force to inculcate his errors. Aſſertions of ſuch a nature ought not to paſs uncontrouled in ſo corrupt an age as ours; when even the very arguments, by which Lucretius endeavours to make good his impieties, are revived afreſh; and alleged to juſtify new-broached opinions, that viſibly tend to the eſtabliſhment of deiſm, and conſequently to the ſubverſion of all revealed religion: for which reaſon I have chiefly laboured in the following notes, to demonſtrate the weakneſs and invalidity of thoſe arguments, that are brought in confirmation of propoſitions, that are repugnant to our holy Chriſtian faith.

Beſides, books that treat of ſubjects that are naturally ſo crabbed and obſcure, as are many of thoſe of which Lucretius argues, cannot be turned into our language in ſuch a manner, as, by a bare tranſlation only, to make them intelligible to a reader merely Engliſh, and that has no knowledge of the languages, in which the originals were compoſed; for the terms, though dark and difficult, muſt of neceſſity be retained; and yet they will not be underſtood by a great number of Engliſh readers. For example, the definition of the void, which we find in the firſt book of Lucretius, v. 334. is tranſlated as follows:

A void is ſpace intangible.——

Now I would fain know if thoſe words do not as much require to be explained to a reader, who underſtands only the Engliſh language, as to one who knows the Latin, the following paſſage of Lucretius, of which they are the tranſlation?

——Locus eſt intactus, inane, vacanſque.

And yet how many ſheets have been filled, and what labour has been beſtowed, to explain the meaning of them, by the commentators on the Epicurean philoſophy, is notorious to all the learned world. The leaſts of Epicurus, both mathematical and phyſical, the homœomery of Anaxagoras, the harmony of Ariſtoxenus, are, till they are explained, no leſs difficult to underſtand; and ten thouſand other inſtances of the like nature, that the reader will find in the following tranſlation, are abundantly ſufficient to evince the uſefulneſs, and even the neceſſity of theſe notes. For, not to underſtand what we read, is at beſt but loſs of time; and to take things in a wrong ſenſe, or to gain an imperfect notice of them, as they muſt neceſſarily do, who underſtand by halves what they read, is always alike dangerous, and often proves of bad conſequence, eſpecially when the weak and unwary amuſe themſelves in the lectures of ſuch authors as treat of ſubjects like thoſe of which our poet diſputes. Such readers, like men who ſail in unknown ſeas, ought to be ſhown the rocks and ſhelvings, otherwiſe they are in great danger of being loſt; for they are ever the moſt ſubject to take the ſtrongeſt impreſſions; and it is no eaſy taſk to eradicate from the minds of the leſs intelligent part of mankind, and diſpoſſeſs them of thoſe opinions which they have ſwallowed with greedy delight, and been long accuſtomed to believe. Such an inveterate credulity, like a diſeaſe of long ſtanding, and that has gained a head, is not eaſy to cure; and, what is yet worſe, we often find that the ſtiffeſt obſtinacy attends the moſt erroneous belief.

To apply what I have been ſaying to the matter in hand, there is reaſon to ſuſpect that ſome have not been wanting, and, I fear, are ſtill to be found, who, not being capable of themſelves to form a true judgment of theſe arguments of Lucretius, and for want of a right diſcernment, have imbibed ſome of his falſe notions, and yielded too eaſy an aſſent to them: they have taken the ſhadow for the ſubſtance of reaſon, and thus have been wretchedly ſeduced into error. The following notes are chiefly intended, not only to undeceive ſuch perſons, but alſo to prevent others from falling into the like miſtakes; and, if they compaſs that effect, I ſhall have no reaſon to think my labour miſemployed, nor to fear the cenſure of the public.

Having given this ſhort account of the reaſons that induced me to compoſe theſe annotations, it remains only to acquaint the reader with the helps I have had, and with the method I have obſerved in this undertaking.

As to the firſt of thoſe points, the alphabetical catalogue of the names of the authors cited in the notes and animadverſions, is a ſufficient indication that I have ſpared no pains, nor wanted any aſſiſtance that could be required to render this work as perfect in its kind, as any thing of this nature can be expected to be, and that whatever defects ſhall be found in it, muſt be imputed to my want of judgment and capacity, ſince I was abundantly ſupplied with all the materials that were requiſite to accompliſh my undertaking. And throughout the whole work, I ſeldom advance any thing of my own, but have collected only the opinions of others, and left the reader to judge and determine concerning them.

In the text itſelf I have taken care to ſupply all the verſes which Mr. Creech had not tranſlated; and that were never before in any of the former editions of this Engliſh Lucretius. Thoſe that were omitted towards the end of the fourth Book, where the poet treats of the nature of love, are taken from Mr. Dryden's tranſlation of that part of our author. Of all the other verſes that are now firſt inſerted, I have given an account in their due places, in the notes upon them: Meanwhile, I have included all the verſes that are thus ſupplied between crotchets, as a mark of diſtinction, to let the reader know that they were not in any of the former editions. Beſides, I have prefixed to every book a ſeveral Argument, in which may be ſeen, at one view, not only the ſeveral ſubjects treated of in each of the ſix books; but likewiſe the manner in which they are handled, the method of the poet's diſputation, and the connection of the following book to that which precedes

it. And each book concludes with an animadverſion, briefly recapitulating the contents of it, and condemning or approving the maxims and arguments contained and aſſerted in it. This method our tranſlator himſelf has obſerved in his Latin edition of Lucretius; from whence the animadverſion, which the reader will find at the end of each book, is chiefly taken. Moreover, to make this edition more perfect than any of the former, where, in many places, ſeveral of the poet's arguments and propoſitions are joined together, without any diſtinction where one ends or the other begins, I have been careful to diſtinguiſh them from one another, by beginning each argument and propoſition with a break; ſo that the reader will readily diſcern where it begins and where it ends: and that too the more eaſily, becauſe each note begins by expreſſing the number of the verſes that each argument or propoſition contains.

As for the tranſlator's own excellent and learned notes on Lucretius, which have hitherto been printed at the end of all the former editions, and all together by themſelves, I have now diſpoſed them into the ſeveral places to which he had directed them, and they properly belong: inſomuch that the reader will now find them, not as before, in a body by themſelves, but intermixed with my annotations, without the leaſt alteration, and in their proper place *.

Each note has a number prefixed before it, which directs to the number in the margin of the text; which laſt number, for the greater eaſe of the reader, marks every tenth verſe of the tranſlation, and ſhows how many verſes are contained in each book.

It will be obſerved, that in the notes that are merely explanatory, I often differ from the ſenſe of my author, I mean Mr. Creech; for I exactly follow the ſenſe of Lucretius; whoſe meaning that interpreter has miſtaken in many places of this tranſlation. This I the more confidently affirm, becauſe I have his own authority to ſtrengthen my aſſertion: for, in his Latin edition of Lucretius, he often gives his author an interpretation far different from, nay, ſometimes quite contrary to what he makes him ſay in this tranſlation. One manifeſt inſtance of this, among many others, may be ſeen in the note on the 547th verſe of the 5th book, to which I refer the reader: and will here only obſerve, that our tranſlator's miſtakes of this nature have often forced me to the neceſſity of giving the original text of Lucretius; to the end, that ſuch as underſtand the Latin may be convinced, that I have not taken upon me to blame and correct him without reaſon. And to exempt myſelf from all manner of imputation upon that account, I have ſcarce through the whole courſe of theſe annotations, ever accuſed this tranſlator of error, except only in paſſages to which Mr. Creech himſelf in his Latin edition of our author, has given a different interpretation from what we find in this tranſlation; inſomuch, that, by pointing out thoſe miſtakes to the reader, I have not only done juſtice to Lucretius, but in ſome meaſure even to his tranſlator likewiſe: of whom I may ſay, without any derogation to his fame, that he had not ſo thoroughly digeſted his author when he tranſlated him, as he had done afterwards when he came to publiſh his Latin notes upon him. And here, by the way, I cannot but wiſh that he had not been ſo ſevere on Du Fay, the editor of the Lucretius in Uſum Delphini, in laſhing him at the unmerciful rate he does in many places: in thoſe notes, for errors of which himſelf had once been guilty, and into which they had both been alike led by Lambine; eſpecially, too, ſince it is moſt evident that he is often indebted to that interpreter, I mean Du Fay, for the true underſtanding of the ſenſe of his author. This will manifeſtly appear to any one, who will compare the notes of thoſe two interpreters together, and reflect on the difference of time in which they were publiſhed.

But I have not taken upon me to correct our tranſlator, only where he has palpably miſtaken the ſenſe of his author, but in thoſe places likewiſe that he has rendered obſcurely or imperfectly. One inſtance of this, among too many others, the reader may obſerve in the note on the 986th verſe of the ſecond book, where Lucretius, enumerating all the conjuncts and events, or properties and accidents of the Epicurean atoms, has included them all in the following verſes:

Sic ipſis in rebus item jam materiāi
Intervalla, viæ, connexus, pondere, plagæ,
Concurſus, motus, ordo, poſitūra, figuræ,
Cum permutantur, mutari res quoque debent.
Lib. ii. v. 1. 1021.

To tranſlate all which, Mr. Creech employs only theſe two verſes and a half;

——In bodies ſo
As their ſeeds, order, figure, motion do,
The things themſelves muſt change and vary too.

Now, how lamely and imperfectly the full ſenſe and meaning of the above paſſage of Lucretius is expreſſed in this tranſlation of it, appears, at firſt ſight, to all that are acquainted with the Epicurean philoſophy, and is fully made appear in the note on theſe verſes, to which I refer the reader: and, in this place will only take notice, that I might juſtly have been blamed for diſcharging but ill the province I had undertaken, to explain Lucretius's ſyſtem of the Epicurean philoſophy, had I not ſupplied what I found wanting in this place, in order to attain the perfect underſtanding of the ſenſe of the original, which I found thus wretchedly mangled in the tranſlation. I have obſerved the like method throughout this whole work, having uſed my utmoſt diligence in comparing the tranſlation with the original, and ſhowing all along in what it differs, from it; inſomuch that the following annotations, in which is contained a complete ſyſtem of the Epicurean philoſophy, are rather notes on the original poem of Lucretius, than on Mr. Creech's tranſlation of it.

To conclude: Though I have ſwelled this work to a great length, yet I have made my notes and

* *This arrangement is altered in the preſent edition.* TRANS. ll.

animadverſions as ſhort as I could without omitting any thing that I thought might conduce to the explication of the ſenſe and meaning of the poet, to the right underſtanding of the hiſtorical and fabulous paſſages contained of him, to the explaining of the ſeveral terms and expreſſions that are not known to the generality of readers; to the intelligence of any thing that ſeemed difficult to underſtand, or, in a word, to the illuſtration of the whole.

THE LIFE OF LUCRETIUS.

The preſent deſign does not require an exact ſearch into the riſe of philoſophy, nor a nice inquiry, whether it began amongſt the Brachmans; and from them, as Lucian, in *Fugitivis*, ranks the countries, viſited Ethiopia, Egypt Scythia, Thrace, and Greece, or whether curioſity or neceſſity was the parent of it. The Chaldeans were invited to aſtronomy by the advantageouſneſs of their wide-extended plains; and the overflowing of the Nile forced the Egyptians to be curious in the properties of figures; but I ſhall take it for granted, that philoſophy came from the eaſt. The truth of this, not to mention the weak oppoſitions of Laërtius, in his preface, the travels of Thales and Pythagoras, of Democritus, Plato, and others, ſufficiently evince; and the Egyptians affirm, that the ſeveral methods of philoſophy of the abovementioned ancients, are only their notions diſguiſed, dreſſed after a Greek faſhion, and in that garb propoſed to their admirers. Thus, it is probable, that Democritus received his notions from Moſchus, the Phœnician, or from the prieſts of Egypt, whoſe ambition for antiquity made them embrace ſome of thoſe their abſurd opinions: or, if he travelled farther, he perhaps learned the whole ſyſtem of his philoſophy, the fortuitous beginning of the world, and the origin of man, from the Indians, that being now the opinion of the principal philoſophers in China, whither the learning of all India long ago retired.

This hypotheſis, though commended to men as the ſtrongeſt expedient againſt cares, and as the exacteſt method to obtain tranquillity, found not, nevertheleſs, many admirers, till Epicurus by an almoſt infinite number of volumes which he writ on that ſubject, endeavoured to illuſtrate and recommend it to the world. Yet, notwithſtanding he was ſo voluminous a writer, he, as Plutarch aſſures, added only one improvement to the hypotheſis of Democritus, which is the declination, or inclining motion of an atom.

What Epicurus was in his morals, is not eaſy to determine; for, ſometimes he ſeems to have been temperate and modeſt, otherwiſe Seneca would not have ſo often uſed his ſentences as ornaments, in his moſt ſerious epiſtles: at other times, he ſeems to have been a moſt looſe and diſſolute voluptuary, for ſuch his books declare him, if we may credit Tully, who, De. Fin. lib. 2. ſect. 7. makes a very confident appeal to mankind for the ſincerity of his quotations; ſo that, upon the whole matter, we cannot but be amazed at the unſettled humour of the man.

After his death, though in his will he had made great proviſion for the perpetuity of his ſect, his opinions were but coldly received, and the ſchool decayed, till C. Memnius, a man of ancient nobility, reſtored the garden, and, as Cicero acquaints us, deſigned to raiſe a public building for the advancement of Epicuriſm. His fame and authority drew many after him; and we find regiſtered, at once as famous, Velleius, Patro, and our author Lucretius, of whoſe life antiquity has tranſmitted to us but few particulars, perhaps for the ſame reaſon that Ælian with reluctance mentions Diagoras, becauſe he was an enemy to the gods; Θεοῖς γὰρ ἐχθρός Διαγόρας, καὶ ἐμοὶ ἥδιον ἐπιτελεῖσον μεμνῆσθαι ὑστέρῳ, ſays that author, lib. 2. cap. 23. What we know of him is as follows:

His name was Titus Lucretius Carus, and no other: for what Lambinus pretends, that beſides his firſt name Titus, by the Latins called Prænomen, and which anſwers to what we call our Chriſtian name, beſides the name of his family, Lucretius, and his ſurname, Carus, he may have been called either T. Lucretius Veſpillo Carus, or thus, T. Lucretius Offella Carus, is mere conjecture, and grounded on no authority whatſoever. Carus was a Roman ſurname, of which Ovid and many others make mention; but we no where find how it came to be given to Lucretius. However, it is not improbable but that it was conferred upon him, either on account of his excellent and ſprightly wit, his affability and ſweetneſs of temper and manners, or for ſome other the like endearing qualities, that rendered him agreeable to thoſe with whom he converſed.

That he was a Roman, and born at Rome, is agreed on all hands, and even his own teſtimony aſſures us of it: therefore, what Cornelius Nepos writes of T. Pomponius Atticus, that it was the gift of fortune, that, preferable to all other places, he was born in that city where the ſeat of the empire of the whole earth was eſtabliſhed, that he might have the ſame country and ſovereign, may well be applied to Lucretius, of whom we may ſay, that the ſame city which was his country was miſtreſs of the world.

His very name directs us to the noble and ancient family of the Lucretii, which, being divided into many branches, comprehended under it the Tricipitini, the Cinnæ, the Veſpillones, the Tri-

pes, the Offellæ, and the Galli, and gave to Rome many conſuls, tribunes, and prætors, who were great ſupports and ornaments of the commonwealth.

From which of the above branches our Lucretius ſprung is not known, there being nothing any where recorded of his parentage. There lived, indeed, in thoſe days, one Quintus Lucretius, but whether he was brother of our poet Lucretius, or in what degree of relation they were to one another, is altogether uncertain.

It has been obſerved by ſome, and the truth of it is unconteſted, that the parentage of the beſt poets of antiquity is almoſt unknown, as if it had been induſtriouſly concealed; and in this they are thought to have affected ſomething of divinity.

The time of his birth is almoſt as doubtful, ſome placing it in one year, ſome in another, in which, as in moſt things elſe, the authors who have delivered it down to us, make good that inverted taunt of Seneca, who, in his treatiſe, De Morte Claudii, ſays, "Citius inter horologia quam authores conveniet." Clocks will be found to agree ſooner than authors.

Euſebius, the ſon of Pamphilus, brings him forth in the 171ſt Olympiad, when Cn. Domitius Ahenobarbus, and C. Caſſius Longinus were conſuls, which was in the 657th year after the building of Rome. But Lydiat leaves it doubtful, whether theſe were conſuls in the firſt year of the 171ſt, or the fourth of the 170th Olympiad. Voſſius makes him born in the ſecond year of the 171ſt, whilſt others place his birth in the 172d Olympiad, when L. Lucinius Craſſus, and Q. Mucius Scævola were conſuls, that is to ſay, in the 658th year of Rome; ſo that the difference between them is not great, and the age in which he lived is certain.

About this time, the Romans began to apply themſelves to the ſtudy of the philoſophy of the Greeks. Suppoſing, therefore, Lucretius to be nobly deſcended, and a man of ſprightly wit, it is an eaſy inference, that he received a ſuitable education, and, by his parents or other relations, was ſent in his youth to ſtudy at Athens. This is the more probable to be true, becauſe it was then the cuſtom of the Romans to ſend their youths thither to be inſtructed in the learning of the Greeks. Thus, ſome years after, Virgil too ſtudied there, as we learn from himſelf, when, writing to Meſſala, he ſays:

Etſi mi vario jactatum laudis amore,
Irritaque expertum fallacis præmia vulgi,
Cecropius ſuaves expirans hortulus auras,
Florentis viridi ſophiæ complectitur umbra.

And the learned Propertius too earneſtly deſired

Illic vel ſtudiis animum emendare Platonis;
—— aut hortis, docte Epicure, tuis.

Zeno, together with the courteous good-natured Phædrus, as Tully calls him, was then maſter of the gardens; and theſe were the preceptors of our Lucretius, as they were likewiſe of Pomponius Aticus, Memmius, Velleius, Pœtus, Caſſius and many others, who in that age rendered themſelves very illuſtrious in the republic of Rome.

How Lucretius ſpent his time, how ſtudiouſly he improved it, let this poem be witneſs. That he fitted himſelf for the beſt company, is evident by what Cornelius Nepos tells us of the great intimacy between him, Pomponius Aticus, and Memmius; and, no doubt but he was intimate likewiſe with Tully and his brother, who make ſuch honourable mention of him.

If we look into his morals, we may diſcover him to be a man ſuitable to the Epicurean principles, diſſolved in eaſe and pleaſure, flying public employment, as a derogation to wiſdom, and a diſturber of peace and quietneſs, and avoiding thoſe diſtractive cares which he imagined would make heaven itſelf uneaſy.

As moſt of the other poets, he too ſeems to have had his ſhare in ſenſual pleaſures; and if the account which Euſebius gives of his death be true, it will ſtrengthen this opinion; but it is hard to ſay for certain what ſort of death Lucretius died; nor is it much eaſier to determine in what year of his life his death happened. Some make him die on the very day when Virgil was born, in the forty-third year of his age, when Pompey the Great was the third time conſul, and Cæcilius Metellus Pius was his colleague, in the year of the city 701, at which time there were great commotions in the republic; for Clodius was then killed by Milo; Memmius and many others being convicted of bribery, were baniſhed from Rome into Greece; and Cæſar, who was then forty-four years of age, was laying waſte the provinces of Gaul. According to Euſebius, he died by his own hands, in the forty-fourth year of his age, being dementated by a philtre, which either his miſtreſs, or his wife Lucilia, for ſo ſome call her, though without authority, in a fit of jealouſy, had given him; not with deſign to deprive him of his ſenſes, or to take away his life, but only to make him love her. Donatus, or whoever was the author of the life of Virgil that goes under his name, writes, that he died three years before, when Pompey the Great and M. Licinius Craſſus were both of them the ſecond time conſuls. Others who allow that, having loſt his ſenſes, he laid violent hands on his own life, yet place his death in the twenty-ſixth year of his age, and believe that his madneſs proceeded from the cares and melancholy that oppreſſed him on account of the baniſhment of his beloved Memmius: to which others again add likewiſe another cauſe, the fatal calamities under which his country then laboured. And indeed it is certain, that a few years before his death, Lucretius was an eye witneſs of the wild adminiſtration of affairs in the days of Clodius and Cataline, who gave ſuch a blow to the republic of Rome, as not long after occaſioned its total ſubverſion. Of theſe commotions he himſelf complains, in the beginning of his firſt book, where, addreſſing himſelf to Venus, he

implores her to intercede with the god of war, to reſtore peace and quiet to his native country.

Hunc tu diva, tua recubantem corpore ſancto
Circumfuſa ſuper, ſuaves ex ore loquelas
Funde, petens placidam Romanis inclyta pacem.
Nam neque nos agere hoc patriai tempore iniquo
Poſſumus æquo animo; neque Memmi clara propago
Tallibus in rebus communi dêſſe ſaluti.
Lucr. lib. i. *v.* 39.

There are yet ſome other accounts given of the time and manner of his death; but ſince in ſo great a variety of opinions we can fix on no certainty, nor determine which of them is true, it would be loſs of time to dwell any longer upon them.

The only remains this great wit has left us, are his ſix books of the Nature of Things, which contain an exact ſyſtem of the Epicurean philoſophy. They were read and admired by the ancients; and if Ovid could preſage,

Carmina ſublimis tunc ſunt peritura Lucreti,
Exitio terras cum dabit una dies.

Lucretius' lofty ſong ſhall live in deathleſs fame,
Till fate diſſolves at once this univerſal frame.

But becauſe ſome are in doubt concerning the number of books written by Lucretius, and believe that he writ more than ſix, it will not be improper to convince them of their error. They ground their opinion chiefly on a paſſage in Varro, which, ſay they, make it evident that Lucretius left one and twenty books, and that this is not the beginning of his poem which is commonly taken to be ſo, ſince Varro cites a quite different verſe as the beginning of it.

The paſſage of Varro, which they allege in favour of their opinion, is in his fourth book, De lingua Latina, where we find theſe words: "Loca ſecundum antiquam diviſionem prima duo, cœlum et terra: à qua bipartita diviſione Lucretius ſuorum unius et viginti librorum initium fecit hoc:

Ætheris et terræ genitabile quærere tempus."

Theſe words, indeed, are very plain and poſitive; nevertheleſs, I inſiſt, that unleſs there were another poet Lucretius among the ancients, who was author of the one and twenty books, ſpoken of in that paſſage of Varro: and that there was I own, no mention is made in any of the records of antiquity, I inſiſt, I ſay, that there muſt be a fault in the above paſſage of that author, and believe, that inſtead of Lucretius, it was formerly written Lucilius. Whoever reflects on the following reaſons, will, if I miſtake not, be of my opinion.

In the firſt place, it is believed upon good grounds, that Varro writ that treatiſe of the Latin tongue, about the time that Cæſar was dictator, or rather a little before: if ſo, it is highly probable that copies of Lucretius could not ſo ſoon be got abroad, for he died but in the fourth year before the dictatorſhip of Cæſar; and after his death, his poem of the Nature of Things, was firſt begun to be corrected by his intimate friend Tully, a taſk which may ſeem to require ſome time; and, it may be, even a longer than that which paſſed from the death of Lucretius to the writing of the treatiſe by Terentius Varro.

Moreover, faults of the like nature were very frequent in the writings of the ancients, where Lucilius, Lucretius, and Lucullus, in like manner as Cælius and Cecilius, and the like, were often put by miſtake one for another. Thus, for example. Priſcian, lib. xviii. obſerves, that in Salluſt, Hiſt. lib. v. there was a miſtake of this nature: "At Lucilius audito Marium regem proconſulem per Lycaoniam cum tribus legionibus in Ciliciam tendere," &c. which that grammarian thus corrects: "At Lucullus audito Marium regem proconſulem," &c.; for Salluſt there treated of the war that Lucullus was carrying on againſt Mithridates. In like manner, Macrobius, lib. iii. Saturnal. cap. xv. "M. Varro in lib. de agriculturâ refert M. Catonem, qui Uticæ periit, cum hæres teſtamento Lucilii eſſet relictus," &c. I read, ſays he, "Teſtamento Luculli," &c. Macrobius, nevertheleſs is there miſtaken in one thing, for, as Plutarch witneſſes, Lucullus left not Cato his heir, but only appointed him to be guardian of his ſon, as being his uncle. And many the like inſtances might eaſily be produced.

But to remove all manner of objections concerning the beginning of this poem, and to evince beyond reply the firſt book now extant to be the firſt book Lucretius writ, beſides the invocation, with which, according to the cuſtom of all poets, he begins his poem, I will, in oppoſition to the above paſſage of Varro, produce the authority of old Priſcian, who, after having ſaid that words of the firſt declenſion form the genitive plural in *arum*, and by contraction in *ûm*, by way of example, adds *amphorûm* for *amphorarum æneadûm* for *æneadarum*. For ſo, ſays he, Lucretius has it in his firſt verſe:" "Ita enim Lucretius in primo verſu."

Æneadûm genitrix, hominum divûmq voluptas.

Beſides, is there the leaſt ground of probability that Lucretius ever writ above ſix books, ſince not one of the ancient grammarians, or other writers, neither Feſtus, Nonius, Diomedes, Priſcian, Probus, Cariſius, Donatus, Servius, Tertullian, Arnobius, nor Lactantius, who ſo frequently bring quotations from the fifth, ſixth, and all the foregoing books of this poet, ever cite ſo much as one ſingle verſe from the ſeventh, eighth, &c. This, morally ſpeaking, would be impoſſible, had Lucretius written fifteen books, of the Nature of Things, more than are now extant. This makes me the rather wonder at the poſitiveneſs with which ſome aſſert, that the ſeventh book of Lucretius is praiſed in Priſcian, who, nevertheleſs, does not ſo much as mention any ſuch book.

Moreover, in my opinion, Lucretius himſelf ſufficiently determines this controverſy, for, in his ſixth book, reminding his reader of what he had been treating of in the firſt, he ſays,

Nunc omnes repetam quàm claro corpore ſint res
Commemorare, quod in primo quoque carmine claret. *Lucret. lib.* vi. *v.* 936.

This ſufficiently proves the firſt of the books now extant to be the firſt he writ, ſince in that he has endeavoured to evince, "omnes——quam claro corpore ſint res," that no bodies are ſo ſolid as not to contain ſome void; "quod in primo quoque carmine claret." See Book I. ver. 402. And he ſeems expreſsly to call the ſixth book his laſt, in theſe excellent verſes,

Tu mihi ſuprema præſcripta ad candida calcis
Currenti ſpatium præmonſtra, callida muſa,
Calliope, requies hominum, divûmque voluptas,
Te duce ut inſigni capiam cum laude coronam.
Lucret. lib. vi. *v.* 91.

From whence we may eaſily infer, that he never ſo much as propoſed to himſelf to write above ſix books, ſince he tells us he is now haſtening, "ad præſcripta candida ſupræme calcis," to the end of the race he had determined with himſelf to run; and therefore he invokes his muſe,

To lead him on, and ſhow the path to gain
The race and glory too, and crown his pain.
Creech.

Laſtly, To ſtrengthen all the foregoing arguments, we may obſerve, that in theſe ſix books only is contained the whole doctrine, and all the philoſophy of Epicurus, in as much as it relates to the explication of nature, or natural cauſes and effects; and there is nothing left for any one to ſay farther upon that ſubject.

Add to this the manifeſt and pertinent connection of one book to another, the judicious method he has obſerved in handling the ſeveral ſubjects of which he treats, and his artfulneſs in the diſpoſition of them. They ſeem naturally to follow one another. In the firſt book, he treats of the principles of things; in the laſt, of meteors and of the heavens. Has not this method been conſtantly practiſed by all who have treated of the knowledge of nature? Even Epicurus himſelf obſerved the very ſame diſpoſition, as appears by the few ſurviving remains of that philoſopher, his three epiſtles to Herodotus, Mœnecœus, and Pythocles.

But as, for the reaſons above alleged, I am verily perſuaded that Lucretius never writ more than theſe ſix books of the Nature of Things; ſo, on the other hand, I am readily inclined to believe, that ſome of his verſes are, perhaps, wanting; for, as with almoſt all the ancient authors, ſo more eſpecially with this poet, ſome have aſſumed to themſelves too great a liberty, and altered, added, or taken away many things, as we have made it appear in ſeveral places in our notes. Servius cites this fragment from Lucretius:

——Superi ſpoliatus luminis aër.

which may perhaps have been his, though it be no where found in any of his books; nor can it eaſily be diſcovered where it has been left out. To reſtore it to its due place, would require an accurateneſs of judgment as great, if poſſible, as was their diſingenuity who firſt left it out.

I now return to Lucretius, who, as Euſebius declares, wrote theſe ſix books of Epicurean philoſophy, in his lucid intervals, when the ſtrength of nature had thrown off all the diſturbing particles, and his mind, as it is obſerved of madmen, was ſprightly and vigorous. Then, in a poetical rapture, he could fly with his Epicurus beyond the flaming limits of this world; frame and diſſolve ſeas and heavens in an inſtant; and, by ſome unuſual ſallies, be the ſtrongeſt argument of his own opinion; for it ſeems impoſſible that ſome things which he delivers ſhould proceed from reaſon and judgment, or from any other cauſe but chance, and unthinking fortune.

After his death, as I hinted before, Cicero, as Euſebius witneſſes, reviſed and corrected his writings. Lambinus contradicts this; but the arguments he brings againſt the aſſertion of Euſebius are but weak, and of little validity.

Virgil, who was eager and aſſiduous in the ſtudy of them, has borrowed from him in many places: as both Macrobius and Gellius teſtify: the laſt of whom calls him "Poëtam ingenio et facundiâ "præcellentem;" and Cornelius Nepos has placed him "inter elegantiſſimos poëtas." So that if ſome great divines have given him the ill name of Canis, it was not for any rudeneſs in his verſe, but due rather to his Grecian maſter; the eternity of matter, and the like abſurd aſſertions, having corrupted moſt of the philoſophies of Athens.

As a corollary to theſe few remaining memoirs of the life of Lucretius, I will here give the opinions of ſeveral learned men, concerning him and his writings.

TESTIMONIES OF ANCIENT AND MODERN LEARNED MEN,

CONCERNING LUCRETIUS AND HIS WRITINGS.

M. Cicero to his Brother Q. Cicero, book ii. *epist.* 11.

The poems of Lucretius, as you obſerve, are not written with much brightneſs of wit, but with a great deal of art.

Upon which paſſage of Cicero, the learned P. Victorius, in his Caſtigations on Tully's Epiſtles, makes the following remark:

If any one, ſays he, thinks it ſtrange that ſome have been of opinion, that the poems of the moſt elegant and excellent poet Lucretius, are written with no great brightneſs of wit, let him blame the judgment of Quinctus; for we may reaſonably miſtruſt, that, ſince M. Cicero defends and commends him in the manner he does, he was not altogether of his brother's opinion, though he ſeems indeed, to confirm it; but that he would not thwart a teſty man, who, perhaps, becauſe he writ verſes himſelf, was blinded with envy, and did not perceive the truth: Beſides, he might be of that opinion, becauſe Lucretius compoſed not his poem to boaſt his ſhining wit, but to explain, with his utmoſt art and induſtry, the whole philoſophy of Epicurus.

The ſame Victorius Var. Lect. lib. xvii. *cap.* 16.

The copiouſneſs and purity of the Latin tongue, appear chiefly in Lucretius.

M. Vitruvius, in his Treatiſe of Architecture, book ix. *chap.* 3.

Thoſe, whoſe minds are inſtructed with the delights of learning, cannot, but with veneration, carry in their breaſts, as they do the images of the gods, ſo too, that of the poet Ennius. Thoſe, who are pleaſingly diverted with the poems of Attius, ſeem to have preſent with them, not only his virtues, but his figure and reſemblance likewiſe. In like manner, many will, in after ages, ſeem to diſpute, as it were, face to face with Lucretius, concerning the Nature of Things, as they will with Cicero, of the Art of Rhetoric.

Quintilian, book x.

For Macer and Lucretius are, indeed, worth the reading: but not as if they contained the whole body of eloquence. Each of them is elegant in the ſubject he treats of; but the one is low, the other crabbed and obſcure.

Upon which paſſage of Quintilian, Giſanius thus:

This opinion of Quintilian is, the greateſt part of it, unanimouſly condemned by the ancients and moderns.

Barthius.

There are many things in Lucretius, that are not to be found elſewhere.

The ſame Author.

So great is the beauty of the pure and ſimple, that is to ſay, of the ancient, and almoſt only Latinity, that it eaſily prevails with intelligent readers, and ſuch as are not ſuperſtitious, to contemn, in compariſon of it, the borrowed charms of a gaudy and painted diction. This comes into my mind, chiefly when I read the poems of Catullus and Lucretius; for, of all the Latin poets, who have ſurvived to our days, theſe two deſerve the preference; and, therefore, no diligence can be miſemployed, no pain nor ſtudy ſuperfluous, that may tend to the right underſtanding of them, or to prevent their being corrupted.

Lactantius.

All the errors that Lucretius advances, were long before aſſerted by Epicurus.

Petrus Crinitus.

T. Lucretius Carus is believed to be deſcended of the family of the Lucretii, which, at Rome, was held to be very ancient and noble. He was a little older than Terentius Varro, and Marcus Cicero, as ſome have written: this is the rather to be taken notice of, becauſe in the annals which we have from the Greeks, there are many things erroneouſly related, and perverſely ſet down, contrary to the truth of chronology. He is repreſented to have been a man of a vaſt and ſoaring wit, in writing of verſes. He was wont to apply himſelf to the muſes at ſeveral intervals of time; not without a certain fury and rupture of mind, as the authors of antiquity deliver. Quintilian witneſſes, that Æmilius Macer, and Titus Lucretius, excel in elegance of ſtyle; but that the poem of Lucretius is very difficult and obſcure: this was occaſioned not only by the ſubject itſelf, but by reaſon of the poorneſs of the tongue, and the newneſs of the doctrine he taught, as he himſelf teſtifies. He writ ſix books of the Nature of Things; in which he has followed the doctrine of Epicurus, and the example of the poet Empedocles, whoſe wit and poetry he praiſes with admiration. There are ſome who write, that the poem of Lucretius was corrected by Tully: it is not, therefore, improbable, that, by reaſon of his ſudden death, he left it incorrect and imperfect. Quinctus, the brother of Cicero, held in high eſteem the

poetry of Lucretius; and allows his work to have a great deal of artfulneſs and wit: beſides, that it ought not to be wondered at, that ſome of his verſes ſeem rough, and almoſt like proſe. This was peculiar to the age in which he writ, as Furius Albinus fully witneſſes in Macrobius, whoſe words are as follows: No man ought to have the worſe eſteem for the ancient poets upon this account, becauſe their verſes ſeem to be ſcabrous; for that ſtyle was then in greateſt vogue; and the following age had much ado to bring themſelves at length to reliſh this ſmoother diction. Therefore, even in the days of the emperors the Veſpaſians, there were not wanting ſome, who choſe to read Lucretius rather than Virgil, and Lucilius than Horace.

Franciſcus Floridus Sabinus.

T. Lucretius was an excellent philoſopher, and often gives very ſatisfactory reaſons of the things that ſeem to happen contrary to nature.

Hieronymus Mercurialis.

Lucretius was the firſt who explained the Nature of Things in the Roman tongue; and he borrowed many things from Democritus, Epicurus, and Hippocrates.

Julius Scaliger.

Lucretius was a divine man, and an incomparable poet.

Caſaubon.

Lucretius is the beſt author of the Latin tongue.

Juſtus Lipſius.

There are ſome antiquated, and almoſt obſolete words to be found in Lucretius, Ennius, and other ancients; but, though they are now out of uſe, and baniſhed from our preſent way of ſpeaking, yet, out of the reſpect due to antiquity, they ought to be carefully retained, and religiouſly preſerved in the writings of the ancients.

Melchior Junius.

The diction of Lucretius is pure, plain, and elegant, though he defends the opinions of Epicurus.

Aldus Pius.

Lucretius, even in the judgment of the ancients, is both a very great poet and philoſopher, but full of lies; for, having followed the Epicurean ſect, his opinions concerning God, and of the creation of things, are quite different from the doctrine of Plato, and of the other academics; for which reaſon, ſome believe that he ought not to be read by Chriſtians, who adore and worſhip the true God. But ſince truth, the more it is inquired into, ſhines the more bright, and appears the more venerable, Lucretius, and all that are like Lucretius, even though they be liars, as they certainly are, ought, in my opinion, to be read.

Adrianus Turnebus.

Lucretius, in his pleaſing poem, has ſeaſoned his verſes with a certain delightful reliſh of antiquity.

Dionyſius Lambinus, in his Epiſtle Dedicatory to Charles IX. the Moſt Chriſtian King.

If among the few remains of the writings of the ancients, which have eſcaped as from a ſhipwreck, there be any ſort of learning, from whence many and great advantages have accrued to us, it is from their poems, &c. But you will ſay, that Lucretius argues againſt the immortality of the ſoul, denies the providence of the gods, overthrows all religion, and places the chief good in pleaſure. This is not the fault of Lucretius, but of Epicurus, whoſe doctrines Lucretius followed. His poem, though he advances in it ſome opinions that are repugnant to our religion, is, nevertheleſs, a poem; nay, and a beautiful noble poem too, diſtinguiſhed, illuſtrated, and adorned with all the brightneſs of wit, &c.—What though Epicurus and Lucretius were impious; are we, who read them, therefore impious too? How many aſſertions are there in this poem, that are conſentaneous to the opinions and maxims of the other philoſophers! How many probable! How many excellent and almoſt divine! Theſe let us lay hold on; theſe let us ſeize; theſe let us approve of.—Beſides, are we ſo credulous and eaſy of faith as to believe, that what aſſertions ſoever all manner of writers have left recorded in their works, are as true as if they had been pronounced from the oracle of Apollo? And ſince we daily read many things that are fabulous, incredible, and falſe, either to give ſome reſpite to our minds, or to make us the more willingly acquieſce in, and the moſt conſtantly adhere to ſuch as are uncontrovertibly true; what reaſon is there, that we ſhould contemn or neglect Lucretius, a moſt elegant and beautiful poet? &c.—I return to our great and excellent poet Lucretius, the moſt polite, moſt ancient, and moſt elegant of all the Latin writers; from whom Virgil and Horace have in many places borrowed not half, but whole verſes. He, when he diſputes of the indiviſible corpuſcles, or firſt principles of things; of their motion, and of their various figuration; of the void; of the images, or tenuitous membranes that fly off from the ſurface of all bodies; of the nature of the mind and ſoul; of the riſing and ſetting of the planets; of the eclipſe of the ſun and moon; of the nature of lightning; of the rainbow; of the Averni; of the cauſes of diſeaſes, and of many other things, is learned, witty, judicious, and elegant. In the introductions to his books; in his compariſons; in his examples; in his diſputations againſt the fear of death; concerning the inconveniences and harms of love; of ſleep and of dreams, he is copious, diſcreet, eloquent, knowing, and ſublime.—We not only read Homer, but even get him by heart, becauſe, under the veils of fables, partly obſcene, and partly abſurd, he is deemed to have included the knowledge of all natural and human things. Shall we not then hear Lucretius, who, without the diſguiſe of fables, and ſuch trifles, not truly indeed, nor pioufly, but plainly and openly, and as an Epicurean, ingenioufly, wittily, and learnedly, and in the moſt correct and pureſt of ſtyles, diſputes of the prin-

ciples and causes of things; of the universe; of the parts of the world; of a happy life; and of things celestial and terrestrial. And, though in many places he dissent from Plato, though he advance many assertions that are repugnant to our religion, we ought not therefore to despise and set at nought those opinions of his, in which not only the ancient philosophers, but we who profess Christianity agree with him. How admirably does he dispute of the restraining of pleasures, of the bridling the passions, and of the attaining tranquillity of mind! how wittily does he rebuke and confute those who affirm, that nothing can be perceived and nothing known; and who say that the senses are fallacious! How fully he defends the senses! &c.—How beautiful are his descriptions! How graceful, as the Greeks call them, his episodes! How fine are his disputations of colours, of mirrors, of the loadstone, and of the Averni! How serious and awful are his exhortations to live continently, justly, temperately, and innocently! What shall we say of his diction; than which nothing can be said or imagined to be more pure, more correct, more clear, or more elegant? I make not the least scruple to affirm, that in all the Latin tongue, no author speaks Latin better than Lucretius; and that the diction neither of Cicero nor of Cæsar is more pure.

Obertus Giffanius in the Life of Lucretius.

I have retained the common title, of the Nature of Things: for, besides that the ancient copies have it so, and that Sosipather in the second book of his Gram. mentions the third book of Lucretius, of Natural Things; our poet himself confirms it in book v. verse 381, where he says,

These truths, this rise of things we lately know:
Great Epicurus liv'd not long ago:
By my assistance young Philosophy
In Latin words now first begins to cry.

Creech.

Lucretius is in the right to say this of himself: for he was the first, who in the Latin tongue, writ of the Nature of Things; though afterwards many others followed his example; as C. Amafinius, Catius, M. Cicero Varro, and Ignatius: of the last of whom Aur. Macrobius cites the third book. But the same subject had, many ages before, been treated of in Greek by Empedocles, whom Lucretius held in great veneration, as appears by the following elegy, which he gives of him in his first book, where, speaking of Sicily, he says, that that island,

Though rich with men and fruit, has rarely shown
A thing more glorious than this single one:
His verse, compos'd of nature's works, declare
His wit was strong, and his invention rare;
His judgment deep and sound; whence some began,
And justly too, to think him more than man.

Creech, B. i. *v.* 748.

Him, therefore, our poet carefully imitated: For, what Aristotle says of Empedocles, that he writ in the same style as Homer, and was a great master of his own language, as being full of metaphors, and making use of all other advantages that might conduce to the beauty of his poetry; all these perfections, I say, though they are scarce to be found in any other of the Latin poets, manifestly discover themselves in Lucretius: for he excels all the rest in purity of diction; and, if I may use the expression, in sublimity of eloquence: besides, he has adorned his whole poem with an infinite number of excellent metaphors, as with so many badges of distinction and honour. Tully, who was well able to judge, calls him a very artful poet: and, would I had leisure enough to show, not only what he has borrowed from Homer and others, but chiefly from Ennius, whom of all the Latin poets he most admired, and studied to imitate, but what Virgil likewise has taken from Lucretius: for that would make manifest what I have often said, that Ennius is the grandfather, Lucretius the father, and Virgil the son, they being the most illustrious triumvirate of the epic Latin poets.

The same Giffanius in his Preface to Sambucus.

Some there are, who will chiefly blame me for bestowing so much labour on an impious poet; for this, will they say, is the very Lucretius, who endeavours to evince that the soul is mortal; and thus takes away all hope of our salvation, and of a happy futurity; who denies the providence of God! which is the main basis and support of the Christian religion: and, lastly, who asserts in his poem that most absurd doctrine of Democritus and Epicurus, concerning the indivisible corpuscles or principles of all things. This being a grievous accusation, did indeed at first very much startle me; but having maturely weighed this objection, I was persuaded that it was not of such moment as to make us neglect the labours of this most excellent poet, or suffer them to be totally lost: For, by the same reason, we ought to condemn many of the writings of Cicero; since in them as well as in this poem, the same doctrine of the providence of God, of the nature of the soul; but above all of the atoms, is proposed, and often strenuously defended; nay, we must in that case be obliged to neglect almost all the writers of antiquity.—And, to say all in a word, almost all the authors of the preceding ages, the poets, the historians, the orators, and the philosophers, must all be laid aside, if their writings were once to be tried by the standard of our religion, and by the precepts of Christianity.—The assertions we find in Lucretius that are contrary to the Christian faith, are indeed of the greatest moment: but then they are so evidently false, that they can by no means lead a Christian into error.—What danger can accrue to us from the ridiculous doctrine of his atoms, since it is so easy to be refuted? On the contrary, we may from thence reap this great advantage, that, having discovered the falsity of his assertions concerning the Nature of Things, we shall be the more diligent to find out the truth; and, having found it, to retain

ſt the more ſtrongly in our memory. It cannot be denied but that Lucretius is a ſage and diſcreet writer; nor is there in all his poem any token or footſtep of intemperance: nay, there are many excellent things contained in it, and many that well deſerve to be read and remembered: for, in the firſt place, he teaches that they only are fit to be truſted with the adminiſtration of the government, who excel others in prudence, wiſdom, and moderation. How diſcreetly and ſtrongly too does he argue for the reſtraint of ambition, and for avoiding the miſeries of inteſtine diviſions and civil wars; the calamities that in his days afflicted the republic of Rome! He extols philoſophy, and the ſtudies of the wiſe in a ſtyle incredibly ſublime. How beautiful is his poetry when he treats of ſerenity of mind, and of the contempt of death! In how many places, and in how excellent and almoſt divine a diction, does he confute the ſuperſtition of the vulgar, and their fabulous belief of the torments of hell! How elegantly does he detect the frauds, and deride the vanity of aſtrologers! Not to mention with how great ſeverity he diſſuades from avarice, and ſhows the many ills that ariſe from the greedineſs of riches; nor how wholeſome are his inſtructions concerning temperance, frugality of living, and modeſty of apparel. As to what relates to the reſtraints of the other cupidities of the mind, and ſordid pleaſures of the fleſh, ſo excellent indeed are the inſtructions he gives us, that what Diogenes writes of Epicurus ſeems to be true, that he was falſely accuſed by ſome for indulging himſelf too much in pleaſure and voluptuouſneſs; and that it was a downright calumny in them to wreſt his meaning, and interpret what he meant of the tranquillity of the mind, as if it had been ſpoken of the pleaſures of the body; of which likewiſe our poet moſt excellently ſings in the beginning of the fifth book.——Concerning ſome of the phenomenons of the heavens, he advances indeed ſeveral opinions that are falſe, or rather ridiculous; but yet they are conſonant to the Epicurean doctrine: and, on the other hand, how true are many of his aſſertions concerning thunder, the nature, force, and ſwiftneſs of lightning; the magnitude of the ſea; the winds, and many other things of the like nature! With how wonderful a ſweetneſs does he ſing the firſt riſe of the world, of the earth, of the heavens, and of all the ſeveral kinds of animals. As likewiſe the origin of ſpeech, of government, of laws, and of all the arts. How full and ſatisfactory are his diſputations of the flames of mount Ætna, of the Averni, and of the cauſes of diſeaſes. How excellently has he deſcribed, as it were in a picture, that memorable and dreadful plague, which deſolated Athens, and the whole country of Attica.

Thomas Scauranus.

Carus alone, of all the Auſonian bards, in ſearch of truth employed his painful muſe, greedy to view the ſecret holds of nature, and towering, ſoar even to the immortal gods: but oft, alas! he ſwerves, by thee miſled, O Epicurus, from the paths of truth.

Quintus Serenus in his Poem of Phyſic.

If, after many years of kind endeavours, no tender off-ſpring bleſs the nuptial joys; whether the female or the male be curſed with barrenneſs, ſhall be unſung by me: The fourth of great Lucretius ſolves the doubt.

Michael Du Foy in his Epiſtle Dedicatory to the Dauphin of France, only Son to the Moſt Chriſtian King Lewis XIV.

Though in the writings of Lucretius there are ſome opinions that diſagree with the doctrine of the Chriſtian religion; yet, of all the Latin authors, he is eſteemed to be the moſt judicious and elegant. For, laying aſide the veil of fables, he diſputes, plainly, accurately, and with great ſtrength of wit, concerning the whole Nature of Things: his language is entirely correct and pure, his diction exceeding elegant, his ſtyle plain and eaſy, though at the ſame time domeſtic and ſublime: his poem abounds with a wonderful plenty of moral ſentences; and the admirable connection obſerved through the whole, is indeed ſurpriſing: By the lecture of it, not to mention the other advantages, we may acquire a nobler magnanimity againſt the blows of fortune, a greater fortitude againſt the fear of death, a ſtronger conſtancy againſt ſuperſtition, and a more conſtant temperance againſt the burning rage of luſt. Add to this, that, excepting a few fooliſh aſſertions and impieties, he delivers many things that are conſonant to truth and reaſon; more, to good manners; and that ſome of his diſputations are almoſt divine. As bees, therefore, gather from each flower only what is uſeful and proper to make honey; ſo too, moſt judicious prince, do you accurately and diligently collect from this author, only what ſeems to conduce to the knowledge of things, and to the acquiring an elegance of ſtyle.

Mr. Dryden in his Preface to the ſecond Volume of Poetical Miſcellanies.

I have, in the next place, to conſider the genius of Lucretius.——If he was not of the beſt age of Roman poetry, he was at leaſt of that which preceded it; and he himſelf refined it to that degree of perfection, both in the language and the thoughts, that he left an eaſy taſk to Virgil, who, as he ſucceeded him in time, ſo he copied his excellencies: for the method of the Georgics is plainly derived from him.

Lucretius had choſen a ſubject naturally crabbed; he therefore adorned it with poetical deſcriptions, and precepts of morality in the beginning and ending of his books; which you ſee Virgil has imitated with great ſucceſs in thoſe four books, which, in my opinion, are more perfect in their kind than even his divine Æneids. The turn of his verſes he has likewiſe followed in thoſe places which Lucretius has moſt laboured, and ſome of his very lines he has tranſplanted into his own works, without much variation.

If I am not miſtaken, the diſtinguiſhing character of Lucretius, I mean his ſoul and genius, is a certain kind of noble pride and poſitive aſſertion of his own opinions. He is every where confident of his own reaſon, and aſſuming an abſolute command, not only over his vulgar readers, but even his patron Memmius. For he is always bidding him attend, as if he had the rod over him, and uſing a magiſterial authority, while he inſtructs him. From his time to ours, I know none ſo like him, as our poet and philoſopher of Malmſbury. This is that perpetual dictatorſhip, which is exerciſed by Lucretius; who, though often in the wrong, yet ſeems to deal *bona fide* with his reader, and tells him nothing but what he thinks; in which plain ſincerity, I believe he differs from our Hobbes; who could not but be convinced, or at leaſt doubt of ſome eternal truths which he has oppoſed: but for Lucretius, he ſeems to diſdain all manner of replies, and is ſo confident of his cauſe, that he is beforehand with his antagoniſts; urging for them whatever he imagined they could ſay; and leaving them, as he ſuppoſes, without an objection for the future. All this too with ſo much ſcorn and indignation, as if he were aſſured of the triumph, before he entered into the liſts.

From this ſublime and daring genius of his, it muſt of neceſſity come to paſs, that his thoughts muſt be maſculine, full of argumentation, and that ſufficiently warm: from the ſame fiery temper proceeds the loftineſs of his expreſſions, and the perpetual torrent of his verſe, where the barrenneſs of his ſubjects does not too much conſtrain the quickneſs of his fancy; for there is no doubt to be made, but that he could have been every where as poetical as he is in his deſcriptions, and in the moral part of his philoſophy, if he had not aimed more to inſtruct in his ſyſtem of nature than to delight. But he was bent upon making Memmius a materialiſt, and teaching him to deſy an inviſible power; in ſhort, he was ſo much an Atheiſt, that he forgot ſometimes to be a poet.

Theſe are the conſiderations which I had of that author before I attempted to tranſlate ſome parts of him, and, accordingly, I laid by my natural diffidence and ſcepticiſm for a while, to take up that dogmatical way of his, which, as I ſaid, is ſo much his character, as to make him that individual poet.

As for his opinions concerning the mortality of the ſoul, they are ſo abſurd, that I cannot, if I would, believe them. I think a future ſtate demonſtrable even by natural arguments; at leaſt, to take away rewards and puniſhments, is only a pleaſing proſpect to a man who reſolves beforehand not to live morally; but, on the other ſide, the thought of being nothing after death, is a burden inſupportable to a virtuous man, even though a heathen. We naturally aim at happineſs, and cannot bear to have it confined to the ſhortneſs of our preſent being, eſpecially when we conſider that virtue is generally unhappy in this world, and vice fortunate: ſo that it is hope of futurity alone that makes this life tolerable in expectation of a better. Who would not commit all the exceſſes to which he is prompted by his natural inclinations, if he may do them with ſecurity while he is alive, and be uncapable of puniſhment after he is dead? If he be cunning and ſecret enough to avoid the laws, there is no band of morality to reſtrain him; for fame and reputation are weak ties: Many men have not the leaſt ſenſe of them; powerful men are only awed by them, as they conduce to their intereſt, and that not always when a paſſion is predominant; and no man will be contained within the bounds of duty when he may ſafely tranſgreſs them. Theſe are my thoughts abſtractedly, and without entering into the notions of our common faith, which is the proper buſineſs of divines.

But there are other arguments in this poem which I have turned into Engliſh, not belonging to the mortality of the ſoul, which are ſtrong enough to a reaſonable man, to make him leſs in love with life, and conſequently in leſs apprehenſions of death. Such are the natural ſatiety proceeding from a perpetual enjoyment of the ſame things, the inconveniencies of old age, which make him incapable of corporeal pleaſures, the decay of underſtanding and memory, which render him contemptible and uſeleſs to others. Theſe, and many other reaſons, ſo pathetically urged, ſo beautifully expreſſed, ſo adorned with examples, and ſo admirably raiſed by the proſopopeia of Nature, who is brought in ſpeaking to her children, with ſo much authority and vigour, deſerve the pains I have taken with them.

It is true there is ſomething, and that of ſome moment, to be objected againſt my Engliſhing the nature of love, from the fourth book of Lucretius; and I can leſs eaſily anſwer why I tranſlated it, than why I thus tranſlated it. The objection ariſes from the obſcenity of the ſubject, which is aggravated by the too lively and alluring delicacy of the verſes. In the firſt place, without the leaſt formality of an excuſe, I own it pleaſed me; and let my enemies make the worſt they can of this confeſſion. I am not yet ſo ſecure from that paſſion but that I want my author's antidote againſt it. He has given the trueſt and moſt philoſophical account both of the diſeaſe and remedy which I ever found in any author, for which reaſons I tranſlated him. But it will be aſked why I turned him into this luſcious Engliſh, for I will not give it a worſe word? Inſtead of an anſwer, I could aſk again of my ſupercilious adverſaries, whether I am not bound, when I tranſlate an author, to do him all the right I can, and to tranſlate him to the beſt advantage? If to mince his meaning, which I am ſatisfied was honeſt and inſtructive, I had either omitted ſome part of what he ſaid, or taken from the ſtrength of his expreſſion, I certainly had wronged him; and that freeneſs of thought and words being thus caſhiered in my hands, he had no longer been Lucretius. If nothing of this kind be to be read, phyſicians muſt not ſtudy nature, anatomies muſt not be ſeen, and ſomewhat I could ſay of particular paſſages in books, which, to avoid profaneneſs, I do not name; but the intention qua-

lifies the act; and both mine and my author's were to inſtruct as well as pleaſe. It is moſt certain, that bare-faced bawdery is the pooreſt pretence to wit imaginable. But neither Lucretius nor I have uſed the groſſeſt words, but the cleanlieſt metaphors we could find, to palliate the broadneſs of the meaning; and, to conclude, have carried the poetical part no farther than the philoſophical exacted.

Mr. Dryden's opinion of the following Tranſlation of Lucretius, by Mr. Creech, taken from his Preface to the ſecond Volume of Poetical Miſcellanies.

I now call to mind what I owe to the ingenious and learned tranſlator of Lucretius. I have not here deſigned to rob him of any part of that commendation which he has ſo juſtly acquired by the whole author, whoſe fragments only fall to my portion. The ways of our tranſlation are very different; he follows him more cloſely than I have done, which became an interpreter of the whole poem. I take more liberty, becauſe it beſt ſuited with my deſign, which was to make him as pleaſing as I could. He had been too voluminous had he uſed my method in ſo long a work, and I had certainly taken his, had I made it my buſineſs to tranſlate the whole. The preference then is juſtly his; and I join with Mr. Evelyn in the confeſſion of it, with this additional advantage to him, that his reputation is already eſtabliſhed in this poet, mine is to make its fortune in the world. If I have been any where obſcure in following our common author, or if Lucretius himſelf is to be condemned, I refer myſelf to his excellent annotations, which I have often read, and always with ſome new pleaſure.

T. LUCRETIUS CARUS.

OF THE NATURE OF THINGS.

BOOK I.

THE ARGUMENT.

I. THE poet invokes Venus. II Then, from ver. 64. to ver. 191, he dedicates to Memmius his books of the Nature of Things, praiſes Epicurus, whoſe philoſophy he follows, endeavours to clear his doctrine from the charge of impiety: and briefly propoſes the arguments of this and the following books. III. He enters upon his ſubject, and, from ver. 192. to ver. 315, teaches, that nothing can be made of nothing, and that nothing can be reduced into nothing. IV. From ver. 315. to ver 380, that there are ſome little bodies, which though imperceptible to the eye, may be conceived by the mind, and of which all things are made. V. To theſe corpuſcles from ver. 380 to ver. 479, he ſubjoins a void or an empty ſpace. And, VI. From ver. 479. to ver. 526, he proves that there is nothing but body and void: and that all the other things which ſeem to be, as weight, heat, poverty, war, &c. are only conjuncts or events, properties or accidents, of body and void. VII From ver. 526. to ver. 573, he teaches, that the firſt little bodies or principles of things, are perfect ſolids, and conſequently, from ver. 573. to ver. 667, that they are indiviſible leaſts (for body cannot be divided into infinite), and eternal. VIII. In the next place, from ver. 667. to ver. 729, he confutes the opinion of Heraclitus, who held that fire is the principle of all things; and of others who believed the like of air, water, or earth. IX. Then, from ver. 729. to ver. 840, he proves againſt Empedocles, that things are not compoſed of the four elements. X. From ver. 840. to ver. 926, he refutes Anaxagoras. XI. Laſtly, From ver. 926. to ver. 1049. he teaches, that the univerſe is infinite on all ſides: that the corpuſcles are infinite in number, and that the void cannot be included in any bounds. XII. And from ver. 1049. to the end of this book, he laughs at thoſe who believe there is a centre in the univerſe, down to which all heavy things are continually ſtriving, while the light work upwards of their own accord.

KIND Venus, glory of the bleſt abodes.
Parent of Rome, chief joy of men and gods;
Delight of all, comfort of ſea and earth, [birth:
To whoſe kind pow'rs all creatures owe their
At thy approach, great goddeſs, ſtrait remove,
Whatever things are rough, and foes to love.
The clouds diſperſe, the winds moſt ſwiftly waſte,
And rev'rently in murmurs breathe their laſt:
The earth, with various art (for thy warm pow'rs
That dull maſs feels), puts forth her gaudy flow'rs:
(For thee does ſubtle luxury prepare
The choiceſt ſtores of earth, of ſea, and air:
To welcome thee, ſhe comes profuſely dreſt
With all the ſpices of the wanton eaſt:
To pleaſure thee, ev'n lazy luxury toils):
The rougheſt ſea puts on ſmooth looks, and ſmiles;
The well-pleas'd heav'n aſſumes a brighter ray
At thy approach, and makes a double day.
When firſt the gentle ſpring begins t' inſpire
Soft wiſhes, melting thoughts, and gay deſire,
And warm Favonius fans the amorous fire:
Firſt through the birds thy active flame does move,
Who, with their mates, ſit down, and ſing, and love;
They greedily their tuneful voice employ
At thy approach, the author of their joy.
Each beaſt forgets his rage, and entertains
A ſofter fury, through the flow'ry plains:
Then rapid ſtreams, through woods, and ſilent groves,
With wanton play, all run to meet their loves:
Whole nature yields to thy ſoft charms; the ways
Thou lead'ſt, ſhe foll'wing eagerly obeys:
Acted by the kind principles thou doſt infuſe,
Each bird and beaſt endeavours to produce
His kind; and the decaying world renews.

Thee, nature's pow'rful ruler, without whom
Nothing that's lovely, nothing gay can come
From darkſome Chaos, deep and ugly womb.
Thee, now I ſing of nature, I muſt chooſe
A patron to my verſe; be thou my muſe;
Poliſh my lines, while I to Memmius write,
Thy choice, thy moſt deſerving favourite:
Inſpire my breaſt with an unuſual flame,
Sprightly as is his wit, immortal as his fame:
Let war's tumultuous noiſe and labours ceaſe,
Let earth and ſea enjoy a ſolid peace:
Peace is thy gift alone; for furious Mars,
The only governor and god of wars,
When tir'd with heat and toil, does oft reſort
To taſte the pleaſures of the Paphian court;
Where on thy boſom he ſupinely lies,
And greedily drinks love at both his eyes;
Till quite o'ercome, ſnatching an eager kiſs,
He haſtily goes on to greater bliſs.
Then midſt his ſtrict embraces claſp thy arms
About his neck, and call forth all thy charms;
Careſs with all thy ſubtle arts, become
A flatterer, and beg a peace for Rome.
For midſt rough wars how can verſe ſmoothly flow?
Or in ſuch ſtorms the learned laurel grow?
How can my Memmius have time to read,
Who by his anceſtors fam'd glory led
To noble actions, muſt eſpouſe the cauſe
Of his dear country's liberties and laws?
And you, my Memmius, free from other cares,
Receive right reaſon's voice with well-purg'd ears;
Leſt what I write, and ſend you for your good,
Be ſcorn'd, and damn'd, before well underſtood.
Entreat of things abſtruſe, the Deity,
The vaſt and ſteady motions of the ſky;
The riſe of things: how curious nature joins
The various ſeeds, and in one maſs combines
The jarring principles: what new ſupplies
Bring nouriſhment and ſtrength: how ſhe unties
The Gordian knot, and the poor compound dies:
Of ſeeds or principles (for either name
We uſe promiſcuouſly; the thing's the ſame),
Of which ſhe makes, to which ſhe breaks the frame.
For whatſoe'er's divine muſt live in peace,
In undiſturb'd and everlaſting eaſe:
Not care for us; from fears and dangers free,
Sufficient to its own felicity:
Nought here below, nought in our pow'r it needs;
Ne'er ſmiles at good, ne'er frowns at wicked deeds.
Long time men lay oppreſs'd with ſlaviſh fear;
Religion's tyranny did domineer,
And being plac'd in heav'n look'd proudly down,
And frighted abject ſpirits with her frown.
At length a mighty man of Greece began
T' aſſert the nat'ral liberty of man,
By ſenſeleſs terrors, and vain fancies led
To ſlav'ry: ſtraight the conquer'd phantom fled!
Not the fam'd ſtories of the Deity,
Not all the thunder of the threat'ning ſky,
Could ſtop his riſing ſoul; through all the paſt
The ſtrongeſt bounds that pow'rful nature caſt:
His vigorous and active mind was hurl'd
Beyond the flaming limits of this world,
Into the mighty ſpace, and there did ſee
How things begin, what can, what cannot be:
How all muſt die, all yield to fatal force;
What ſteady limits bound their nat'ral courſe.
He ſaw all this, which others fought in vain.
Thus by his conqueſt we our right regain;
Religion he ſubdu'd, and we now reign.
Leſt you ſhould ſtart at theſe bold truths, and fly
Theſe lines, as maxims of impiety:
Conſider that religion did, and will
Contrive, promote, and act the greateſt ill.
By that Diana's cruel altar flow'd
With innocent and royal virgin's blood:
Unhappy maid! with ſacred ribbands bound,
Religion's pride! and holy garlands crown'd;
To meet an undeſerv'd, untimely fate,
Led by the Grecian chiefs in pomp and ſtate:
She ſaw her father by, whoſe tears did flow
In ſtreams; the only pity he could ſhow.
She ſaw the crafty prieſt conceal the knife
From him, bleſs'd and prepar'd againſt her life!
She ſaw her citizens with weeping eyes
Unwillingly attend the ſacrifice.
Then, dumb with grief, her tears did pity crave;
But 'twas beyond her father's power to ſave.
In vain did inn'cence, youth, and beauty plead;
In vain the firſt pledge of his nuptial bed:
She fell; ev'n now grown ripe for bridal joy,
To bribe the gods, and buy a wind for Troy.
So died this innocent, this royal maid:
Such dev'liſh acts religion could perſuade!
But ſtill! ſome frightful tales, ſome furious threats,
By poets form'd, thoſe grave and holy cheats.
May bias thee. Ev'n I could eaſily find
A thouſand ſtories to diſtract thy mind.
Invent new fears, whoſe horrid looks ſhould fright,
And damp thy thoughts when eager on delight:
And reaſon good ———
But if it once appear,
That after death there's neither hope nor fear;
Then men might freely triumph, then diſdain
The poet's tales, and ſcorn their fancy'd pain;
But now we muſt ſubmit, ſince pain we fear
Eternal after death, we know not where.
We know not yet the ſoul; how 'tis produc'd;
Whether with body born, or elſe infus'd:
Whether in death breath'd out into the air,
She mix confus'dly with't, and periſh there;
Or through vaſt ſhades and horrid ſilence go
To viſit brimſtone caves, and pools below;
Or into beaſts retires.
As our fam'd Ennius ſings, upon whoſe brow
The firſt, and freſheſt crowns of laurel grow,
That ever learned Italy could ſhow:
Though he in laſting numbers does expreſs
The ſtately Acheruſian palaces,
Which neither ſoul nor body e'er invades;
But certain pale and melancholy ſhades,
From whence he ſaw old Homer's ghoſt ariſe,
An auguſt ſhade! down from whoſe rev'rend eyes

While his learn'd tongue nature's great ſecrets told,
Whole ſtreams of tears in mighty numbers roll'd.
Therefore I'll ſing to cure theſe wanton fears,
Why ſun and moon mete out the circling years:
How bodies firſt began: But chiefly this,
Whence comes the ſoul, and what her nature is:
What frights her waking thoughts, what cheats her eyes,
When ſleeping, or diſeas'd, ſhe thinks ſhe ſpies
Thin ghoſts in various ſhapes about her bed:
And ſeems to hear the voices of the dead.
I'm ſenſible the Latin is too poor
To equal the vaſt riches of the Grecian ſtore:
New matter various nature ſtill affords,
And new conceptions ſtill require new words.
Yet, in reſpect to you, with great delight
I meet theſe dangers; and I wake all night,
Lab'ring fit numbers, and fit words to find,
To make things plain, and to inſtruct your mind,
And teach her to direct her curious eye
Into coy nature's greateſt privacy.
Theſe fears, that darkneſs, which o'erſpreads our ſouls,
Day can't diſperſe; but thoſe eternal rules,
Which from firm premiſes true reaſon draws,
And a deep inſight into nature's laws.
And now let this as the firſt rule be laid:
Nothing was by the gods of nothing made.
From hence proceeds all our diſtruſt and fear;
That many things in heaven and earth appear,
Whoſe cauſes far remote and hidden lie,
Beyond the ken of vulgar reaſon's eye;
And therefore men aſcribe them to the Deity.
But this once prov'd, it gives an open way
To nature's ſecrets, and we walk in day.
How things are made, and how preſerv'd we'll prove,
Without the trouble of the powers above.
If nothing can be fertile, what law binds
All beings ſtill to generate their own kinds?
Why do not all things variouſly proceed
From ev'ry thing? What uſe of ſimilar ſeed?
Why do not birds, why fiſh not riſe from earth,
And men and trees from water take their birth?
Why do not herds and flocks drop down from air?
Wild creatures and untam'd ſpring ev'ry where.
The ſame tree would not riſe from the ſame root,
The cherry would not bluſh in the ſame fruit:
Nought fix'd and conſtant be; but ev'ry year
Whole nature change, and all things all things bear.
For did not proper ſeeds on all things wait,
How then could this thing ſtill proceed from that?
But now ſince conſtant nature all things breeds,
From matter, fitly join'd with proper ſeeds;
Their various ſhapes, their diff'rent properties,
Is the plain cauſe why all from all can't riſe.
Beſides, why is ripe corn in ſummer found?
Why not bald winter with freſh roſes crown'd?
Why not his cups o'erflow with new preſs'd wine?
Why ſweaty autumn only treads the vine?
But becauſe ſeeds to vital union caſt,
Spring and appear, but while the ſeaſons laſt;
While mother earth has warmth and ſtrength to bear,
And can with ſafety truſt her infant buds to the mild air.
Things made of nothing would at once appear
At any time, and quarter of the year;
Since there's no ſeed, whoſe nature might remit,
And check their growth until the ſeaſon's fit.
Beſides, no need of time for things to grow:
For time would be a meaſure e'en too ſlow:
But in one inſtant, if from nought began,
A ſhrub might be a tree, a boy a man.
But this is falſe: Each mean obſerver ſees,
Things grow from certain ſeeds by juſt degrees;
And growing keep their kind: And hence we know,
That things from proper matter riſe and grow;
By proper matter fed and nouriſh'd too.
Again, the earth puts forth no gaudy flow'rs,
Unleſs impregnated with timely ſhow'rs!
And living creatures too, that ſcarce receive
Supplies of food; nor can beget, nor live.
Wherefore, 'tis better to conclude there are
Many firſt common bodies every where,
Which join'd, as letters words, do things compoſe,
Than that from nothing any thing aroſe.
Beſides, why does weak nature make ſuch ſmall,
Such puny things for men? Why not ſo tall,
That while they wade through ſeas and ſwelling tides,
Th' aſpiring waves ſhould hardly touch their ſides?
Why not ſo ſtrong, that they with eaſe might tear
The hardeſt rocks, and throw them through the air?
Why cannot ſhe preſerve them in their prime,
Above the pow'r of all-devouring time?
Why wanton childhood ends in youthful rage,
And youth falls ſwiftly into doating age?
But becauſe things on certain ſeeds depend,
For their firſt riſe, continuance, and end.
Therefore unfruitful nothing nothing breeds;
Since all things owe their life to proper ſeeds.
Laſtly, experience tells us that wild roots,
Better'd by art and toil, bear noble fruits.
Whence we conclude, that ſeeds of bodies lie,
In earth's cold womb, which, ſet at liberty,
By breaking of the clods, in which they lurk,
Spring briſkly up, and do their proper work.
For, were there none, though we no help afford,
Things would be better'd of their own accord.
Beſides, as nothing nature's pow'r creates:
So death diſſolves, but not annihilates.
For could the ſubſtances of bodies die,
They preſently would vaniſh from our eye;
And, without force, diſſolving, periſh all;
And ſilently into their nothing fall.
But now ſince things from ſeeds eternal riſe;
Their parts well join'd and fitted, nothing dies,
Unleſs ſome force break off the nat'ral ties.
If all things, over which long years prevail,
Did wholly periſh, and their matter fail;
How could the pow'rs of all-kind Venus breed
A conſtant race of an'mal to ſucceed?
Or how the earth eternally ſupply,
With conſtant food, each his neceſſity?

How could the ſprings and rivers flow ſo far,
And fill a ſea? How could th' air feed each ſtar?
For whatſoe'er could into nothing waſte,
That infinite ſpace of time already paſs'd,
Had quite conſum'd.——
But if thoſe bodies, which compoſe this all,
Could for ſo many ages paſt endure:
They are immortal, and from death ſecure;
And therefore cannot into nothing fall.
Again, the ſame force ev'ry thing would break,
Were not the union made more ſtrong or weak
By their immortal ſeeds: Nay, more than that,
One ſingle touch would be the ſtroke of fate.
For things, where no eternal ſeeds are found,
Would ſtrait diſſolve, and die with any wound.
But ſince the ſeed's eternal, and the frame
Of bodies, and their union not the ſame;
Things may ſecure, and free from danger ſtand,
Until ſome force, driv'n by an envious hand,
Proportion'd to the texture, break the band.
Thus death diſſolves alone; death breaks the chain,
And ſcatters things to their firſt ſeeds again.
Laſtly, when father ether kindly pours
On fertile mother earth his ſeminal ſhow'rs,
They ſeem to periſh there: But ſtrait new juice
Ferment, and various herbs and trees produce,
Whoſe trunks grow ſtrong, and ſpreading branches ſhoot,
Look freſh, and green, and bend beneath their fruit.
Theſe nouriſhment to man and beaſt do prove:
Hence our towns fill with youth; with birds each grove,
Who ſit and ſing; and in a num'rous throng,
With new-fledg'd wings clap, and applaud the ſong.
Theſe fat our cattle, that diſtended lie
On fertile banks, their ſpightful young ones by,
Rev'ling on milk, which their ſwoln udders yield,
Grow gay, and briſk, and wanton o'er the field.
And therefore bodies cannot fall to nought,
Since one thing ſtill is from another bought
By prov'dent nature, who lets nothing riſe,
Nor be, except from ſomething elſe that dies.
Now ſince we have by various reaſons taught,
That nothing riſes from, or falls to nought;
Leſt you diſſent, becauſe theſe ſeeds muſt lie
Beyond the ken, ev'n of the ſharpeſt eye:
Know there are bodies, which no eyes can ſee,
Yet them, from their effects, we grant to be.
For firſt the winds diſturb the ſeas, and tear
The ſtouteſt ſhips, and chaſe the clouds through air:
Sometimes through humble plains their vi'lent courſe
They bend, and beat down trees with mighty force;
Sometimes they riſe ſo high, their ſtrength ſo great,
With furious ſtorms they lofty mountains beat,
And tear the woods.——
Theſe muſt be bodies, though unſeen they be,
Which thus diſturb heav'n, earth, and air, and ſea.
Which hardeſt rocks, and oaks, and all things tear;
And ſnatch them up in whirlings through the air:
They all ruſh on as headlong rivers flow,
Swoln big with falling ſhow'rs, or melting ſnow;
And rocks and trees o'erturn, and weighty beams;
And whirl their conquer'd prey in rapid ſtreams,
No bridge can check, no force the ſtream controul;
It grows more wild, and fierce, and beats the mole.
Ruin and noiſe attend where'er it flows,
It rolls great ſtones, and breaks what dares oppoſe.
So ruſh the blaſts of wind, which, like a flood,
Which way ſoe'er they tend, drive rocks and wood,
And all before them: Sometimes upward bear
In rapid turns, and whirl them in the air.
'Tis certain then, theſe winds, that rudely fight,
Are bodies, though too ſubtle for our ſight;
Since they do work as ſtrong, as furious grow,
As rapid ſtreams, which all grant bodies do.
The num'rous odours too, whoſe ſmells delight,
And pleaſe the noſe, are all too thin for ſight.
We view not heat, nor ſharpeſt colds, which wound
The tender nerves: Nor can we ſee a ſound.
Yet theſe are bodies, for they move the ſenſe;
And ſtrait ſweet pleaſure, or quick pains commence;
They ſhake the nerves. Now whatſoe'er does touch,
Or can be touch'd, is body, muſt be granted ſuch.
Beſides, freſh clothes, expanded near the main,
Grow wet; but by the ſun are dry'd again:
Yet what eye ſaw when firſt the moiſture ſate?
Or when it roſe, and fled before the heat?
Therefore we muſt conclude, the drops t' have been
Diſſolv'd to parts, too ſubtle to be ſeen.
Nay more, 'tis certain, ev'ry circling year,
The rings, which grace the hands, diminiſh there:
Drops hollow ſtones; and while we plough, the ſhare
Grows leſs: The ſtreets, by often treading, wear.
The brazen ſtatues, that our gates adorn,
Show their right hands diminiſh'd much, and worn.
By touch of thoſe that viſit or paſs by.
'Tis certain from all theſe ſome parts muſt fly;
But when thoſe bodies part, or what they be,
Malicious nature grants not pow'r to ſee.
Laſtly, not ev'n the ſharpeſt eye e'er ſees
What parts, to make things grow by juſt degrees,
Nature does add; nor what ſhe takes away,
When age ſteals ſoftly on, and things decay.
Nor what the ſalt, to ſet the waters free,
Frets from the rocks, and beats into the ſea:
'Tis certain then, that much which nature does,
She works by bodies, undiſcern'd by us.
Yet bodies do not fill up every place;
For beſide thoſe, there is an empty ſpace,
A void. This known, this notion form'd aright,
Will bring to my diſcourſe new ſtrength and light;
And teach you plaineſt methods to deſcry
The greateſt ſecrets of philoſophy.
A void is ſpace intangible: Thus prov'd,
For were there none, no body could be mov'd.

Becauſe where'er the preſſing motion goes,
It ſtill muſt meet with ſtops, ſtill meet with foes:
'Tis natural to bodies to oppoſe.
So that to move would be in vain to try;
But all would fix'd, ſtubborn and moveleſs lie;
Becauſe no yielding body could be found,
Which firſt ſhould move, and give the other ground.
But ev'ry one now ſees that things do move
With various turns, in earth, and heav'n above:
Which, were no void, not only we've not ſeen,
But bodies too themſelves had never been,
Ne'er generated; for matter, all ſides preſt
With other matter, would forever reſt.
Though free from pores, though ſolid things appear,
Yet many reaſons prove them to be rare.
For drops diſtil, and ſubtle moiſture creeps
Through hardeſt rocks, and ev'ry marble weeps.
Juice, drawn from food, ev'n to the head does climb,
Falls to the feet, and viſits ev'ry limb.
Trees grow, and at due ſeaſons yield their fruit:
Becauſe the juice, drawn by the lab'ring root,
Does riſe into the trunk, and through the branches ſhoot.
Sounds paſs through well-clos'd rooms, and hardeſt ſtones;
And rig'rous winter's froſts affect our bones.
This could not be, were there no empty ſpace,
Through which theſe moveables might freely paſs.
Beſides, why have not bodies equal weight
With thoſe whoſe figure is but juſt as great?
For, did as many equal bodies frame
Both wool and lead, their weight would be the ſame.
For ev'ry part of matter downwards tends,
By nature heavy; but no void deſcends.
Wherefore thoſe lighter things, of equal ſize,
Do leſs of matter, more of void compriſe.
But by the heavier more of ſeed's enjoy'd;
And theſe convincing reaſons prove a void.
But ſome object: The floods to fiſh give way,
Who cut their paſſage through the yielding ſea;
Becauſe they leave a ſpace where'er they go,
To which the yielding waters circling flow;
And hence by an analogy they prove,
That, though the world were full, yet things may move.
But this is weak.——
For, how could fiſh e'er ply their nat'ral oars,
How cut the ſea, and viſit diſtant ſhores,
Unleſs the waves gave way? How theſe divide,
Except the fiſh firſt part the yielding tide?
Therefore fight ſenſe, deny what that will prove,
Diſcard all motion, and the pow'r to ſhove,
Or grant a void, whence things begin to move.
Let two broad bodies meet, and part again,
The air muſt fill the ſpace that's left between.
And ev'n ſuppoſe it flies as ſwift as thought,
Yet common ſenſe denies it can be brought
O'er all at once: the neareſt firſt poſſeſs'd,
And thence 'tis hurry'd on, and fills the reſt.
But now, ſhould ſome ſuppoſe theſe marbles part,
Made firm by nature, and polite by art,
Becauſe the air's condens'd, they err: 'tis plain
That a wide void is made and fill'd again:
Nor can the air condens'd be thus employ'd;
Or, if it could, yet not without a void,
Could all the parts contract to ſhorter ſpace,
And be combin'd with a more cloſe embrace.
Thus though you cavil, yet at laſt o'ercome,
You muſt ignobly grant a vacuum.
Nor are theſe all; ten thouſand reaſons more,
Clear, firm, convincing, yet ne'er heard before,
Might be produc'd; but theſe, my curious youth,
Will guide thy ſearching mind to farther truth.
For as hounds, once in trace, ſtill bear about,
Purſue the ſcent, and find the quarry out;
So you, my Memmius, may from one thing known
To hidden truths ſucceſsfully go on.
Purſue coy truth with an unerring ſenſe,
Into her cloſe receſs, and force her thence.
Go bravely on; and, in ſuch things as theſe,
Ne'er doubt; I'll promiſe thee deſerv'd ſucceſs:
And my full ſoul is eager to declare
So many ſecrets, that I juſtly fear,
Ere I ſhall prove but one particular,
The reaſons flow in ſuch a num'rous throng,
That age or haſty death will break the ſong.
But to go on:——
This all conſiſts of body and of ſpace:
That moves, and this affords the motion place.
That bodies are, we all from ſenſe receive;
Whoſe notice, if in this we diſbelieve,
On what can reaſon fix, on what rely?
What rule the truth of her deductions try
In greater ſecrets of philoſophy?
Suppoſe no void, as former reaſons prove,
No body could enjoy a place, or move:
Beſides theſe two, there is no third degree
Diſtinct from both; nought that has pow'r to be.
For if 'tis tangible, and has a place,
'Tis body; if intangible, 'tis ſpace.
Beſides, whatever is, a power muſt own,
Or fit to act, or to be acted on,
Or be a place in which ſuch things are done.
Now, bodies only ſuffer and act; and place
Is the peculiar gift of empty ſpace:
And thus a diff'rent third in vain is ſought;
And ne'er can be found out by ſenſe or thought.
For, whatſoe'er may ſeem of more degrees,
Are but th' events or properties of theſe.
Which to explain; we call thoſe properties,
Which never part, except the ſubject dies:
So weight to ſtones, ſo moiſture to the ſea,
So touch to body is, and to be free
From touching is to void; but peace and wealth,
War, concord, ſlav'ry, liberty, and health,
Whoſe preſence or whoſe abſence nor prevents
Nor brings the ſubject's ruin, are events.
Time of itſelf is nothing, but from thought
Receives its riſe; by lab'ring fancy wrought
From things conſider'd, while we think on ſome
As preſent, ſome as paſt, and ſome to come.
No thought can think on time; that ſtill confeſt;
But thinks on things in motion or at reſt.
Yet while the ſons of fame their ſongs employ
On Helen's rape, or mourn the fall of Troy,

Take heed, nor fancy from ſuch tales as theſe
That actions are, that they ſubſiſt confeſs.
Since all, of whom they were events, war's rage
Long ſince deſtroy'd, or more devouring age.
For action, or whate'er from action ſprings,
Is call'd th' event of countries or of things.
Laſtly; ſuppoſe no frame, no ſeeds had been,
To act theſe things, nor ſpace to act them in;
No gentle fire had warm'd kind Paris' breaſt,
No flames from beauteous Helen's eyes increas'd,
And kindled dreadful war, no teeming horſe
Brought forth in one ſhort night ſo great a force
As ruin'd ſtately Troy; which plainly ſhow
That actions not ſubſiſt as bodies do;
Neither as void, but as events alone [done.
Of places where, and things by which they're
But farther; bodies are of diff'rent kinds,
Or principles, or made of thoſe combin'd.
The principles of things no force can break;
They are too ſolid, and all ſtrokes too weak:
Though ſuch can hardly be believ'd: for voice,
Or thunder's ſound, or ev'ry louder noiſe,
Breaks through our walls, which yet remain entire:
So iron glows, and rocks diſſolve in fire,
Strong flames divide the ſtubborn gold and braſs,
And to a liquid ſubſtance break the maſs:
Through ſilver, heat and cold: and each diſdains,
And ſcorns a priſon, though in precious chains.
This ſenſe perceives; for, hold a ſilver cup,
And pour ſome water gently in at top,
Th' impriſon'd heat or cold ſtrait break their bands, [hands.
Grow fierce, fly through, and warm or chill the
Theſe inſtances are ſtrong; theſe ſeem t' explain
That beings, in their vaſt extent, contain
No perfect ſolids; creatures of the brain!
But yet attend my muſe; ſhe ſweetly ſings,
(Becauſe right reaſon and the frame of things
Such ſeeds require) attend, ſhe briefly ſhows,
And proves that things from perfect ſolids roſe.
Two ſorts of beings reaſon's eye deſcry'd,
And prov'd before: their diff'rence vaſtly wide:
Body and void, which never could agree
In any one eſſential property.
For body, as 'tis matter, is from place
Diſtinct; and void from body, as 'tis ſpace.
Both theſe diſtinct ſubſiſt: and thus 'tis prov'd,
That ſeeds are ſolid, and from ſpace remov'd.
But farther on: ſince things of ſeeds compos'd
Hold void, that thing by which that void's enclos'd
Is perfect ſolid; for what elſe employ'd
Can hold a ſpace, or what contain a void?
Now what can ſenſe, what ſearching reaſon find
To hold this void, but ſolid ſeeds combin'd?
This ſolid matter muſt for ever laſt,
Eternally endure, while compounds waſte.
So grant no void, no ſpaces unpoſſeſs'd,
Then all would ſolid be, and all at reſt.
And grant no ſolids, which fill up the place
That they poſſeſs, all would be empty ſpace.
And thus ſeeds mix'd with void compoſe the whole;
Nor all is empty ſpace, nor all is full.

But ſolid ſeeds exiſt, which fill their place,
And make a diff'rence betwixt full and ſpace.
Theſe, as I prov'd before, no active flame,
No ſubtle cold can pierce, and break their frame,
Though ev'ry compound yields: no pow'rful blow,
No ſubtle wedge divide, or break in two.
For nothing can be ſtruck, no part deſtroy'd
By pow'rful blows, or cleft without a void,
And things that hold moſt void, when ſtrokes do preſs,
Or ſubtle wedges enter, yield with eaſe.
If ſeeds then ſolid are, they muſt endure
Eternally, from force, from ſtroke ſecure.
Beſides, were ſeeds not eternal ——
All things would riſe from nought, and all return
To nought: nothing would be both womb and urn.
But ſince my former reaſons clearly taught
That nothing riſes from or ſinks to nought;
Thoſe various things eternal ſeeds compoſe,
And death again diſſolves them into thoſe;
And thence new things were fram'd, new creatures roſe.
Then ſeeds are ſolid, elſe how could they laſt?
How things repair, ſo many ages paſt?
When nature things divides, did ſhe go on
Dividing ſtill, and never would have done;
The ſeeds had been ſo ſmall, ſo much refin'd,
That nothing could have grown mature, no maſs combin'd;
For things are eaſier far diſſolv'd than join'd.
Then nature, who, through all theſe ages paſt,
Has broke the ſeeds, and ſtill goes on to waſte,
Could ſcarce contrive, though num'rous years remain,
To fit, unite, and join them cloſe again.
But now 'tis plain, by ſtricteſt reaſon try'd,
Nature does not to infinite divide,
Since things are made, and certain years endure,
In which they ſpring, grow, and become mature.
But more; though ſeeds are hard through all their frame,
A compound may be ſoft, as water, flame,
Whate'er it is, or whenceſoe'er it ſprings,
Becauſe we grant a void, commix'd with things;
But were they ſoft, no reaſon could be ſhown
How harden'd iron's fram'd, or harder ſtone;
For nature then would want fit ſeeds to work upon.
Then ſolid ſeeds exiſt, whoſe num'rous throng,
Cloſely combin'd, makes compounds firm and ſtrong.
Beſides; ſince things have time for life and growth
Prefix'd, and certain terms are ſet for both;
Since bounds are plac'd, o'er which they cannot go,
And laws ſpeak what they can and cannot do;
Since things not change; for all the kinds that fly
Are cloth'd with plumes of the ſame curious dye;
The matter muſt be firm, the ſeeds muſt be
Unchangeable, from alteration free:
For, grant the ſeeds may change, we could not know
What things would be produc'd, or when, or how;

How great their pow'r would riſe, how far extend,
How long they'd live, or when their actions end:
Nor ſhould we find the ſame delights purſu'd,
Nor parents natures in their young renew'd.
Farther: thoſe parts of things that utmoſt lie
Are ſomething, though too ſubtle for our eye.
And theſe are leaſts: they never break the chain,
And by themſelves ſubſiſt, nor ever can;
For they are parts, whoſe both extremes the ſame;
And ſuch like, plac'd in order, bodies frame.
Since theſe ſubſiſt not in a ſep'rate ſtate,
Their union muſt be ſtrong, too firm for fate:
And ſtroke and wedge may try their ſtrength in vain;
No force can looſe the tie, or break the chain.
Then ſeeds are ſimple ſolids, and their parts combin'd
By ſtrongeſt bands, but not of others join'd.
Theſe nature keeps entire: theſe ſeeds ſupply
For future things, repairing thoſe that die.
Beſides; ſuppoſe no leaſt, then ſeeds refin'd,
Too ſmall for ſenſe, nay, ſcarce perceiv'd by mind,
Would ſtill be full, ſtill num'rous parts contain
No end, no bound, but infinite the train;
And thus the greateſt and the ſmalleſt frame
Would both be equal, and their bounds the ſame;
For though the all be infinite, each ſingle grain
And ſmalleſt ſeeds as num'rous parts contain:
But that's abſurd, by reaſon's laws confeſs'd,
And therefore nature muſt admit a leaſt;
Not fram'd of others, which no parts can ſhow,
And which is ſolid and eternal too.
Beſides; did nature not reſolve to leaſt,
Her pow'r quite ſpent, her works had long ſince ceas'd:
Her force all gone; no beings rais'd anew,
Nor things repair'd: for no compoſures ſhow
What ſeeds muſt have thoſe cath'lic qualities,
Nature's great inſtruments, weight, motion, ſize.
Laſtly; great nature infinitely divides,
And never ceaſes: you muſt grant beſides
That ſtill ſome ſeeds exiſt, which, never broke,
Remain ſecure, free from the pow'r of ſtroke:
But 'tis abſurd frail ſeeds ſhould bear the rage
Of ſtrokes unhurt, nor yield to pow'rful age.
They groſsly err who teach all riſe from fire;
As Heraclitus, whom vain Greeks admire
For dark expreſſion; but the ſober few,
Who ſeek for, and delight in what is true,
Scorn and contemn; for only fools regard
What ſeems obſcure, and intricate, and hard:
Take that for truth, whoſe phraſes ſmooth appear,
And dancing periods charm the wanton ear.
For how could bodies, of ſo diff'rent frame,
So various riſe from pure and real flame.
Nor can you clear the doubt by fond pretence
That fire is made more rare, or elſe more denſe:
This changes not the fire, 'tis ſtill the ſame;
If denſe, a ſtrong; if rare, a weaker flame.
Yet this is all that can be ſaid.——
Who can believe that nature's various pride
Can ſpring from flame, condens'd or rarify'd?
'Tis true, did they admit an empty ſpace,
Then flame, made rare, might fill a larger place,
Or denſe, combine with a more ſtrict embrace.
But ſince they think that hard, and void oppoſe,
Fearing the difficult, the right they loſe;
Nor yet perceive, that baniſh void alone,
All bodies would be denſe, and all be one;
From which no ſeeds could fly, no parts retire,
As ſmoke, and heat, and vig'rous light from fire:
This proves a void commix'd.——
But if by any means, however, ſtrange,
The flame could periſh, and its parts could change;
If this could once be done, then all its heat,
And its whole nature would to nought retreat,
And therefore bodies would from nothing riſe;
For what is chang'd from what it was, that dies.
But after change ſome ſeeds muſt ſtill remain,
Leſt all ſhould ſink to nought, and thence return again.
Now, ſince our former reaſons clearly ſhow
Some ſeeds, and thoſe of conſtant nature too,
Whoſe preſence, abſence, or whoſe diff'rent range
Of order makes the things themſelves to change;
We certainly conclude they are not flame;
For then 'twould nought import, what newly came,
What chang'd its order, or what did retire,
Since all would be of the ſame nature, fire.
But this is my opinion.——
Some ſeeds exiſt, from whoſe ſite, figure, ſize,
Concuſſion, order, motion, flames ariſe:
And when the order's chang'd, the parts of fire
Their nature loſe, and ſilently expire.
The diſunited bodies fly from thence,
Not flame, nor any object of the ſenſe.
But now to think, as Heraclitus tells,
That all that is is fire, and nothing elſe;
'Tis fond; and certainty of ſenſe o'erthrows,
By which alone that flame exiſts he knows.
In this he credit gives: but fears t' afford
The like in things as plain; and that's abſurd:
For what can judge, and what our ſearch ſecure
Like ſenſe, truth's great criterion? What ſo ſure?
Beſides; why ſhould we rather all diſclaim,
Reject all elſe, and fancy only flame,
Than fire deny, and all things elſe receive?
Both which 'tis equal madneſs to believe.
Therefore all thoſe who teach things took their birth
From ſimple fire, or water, air, or earth,
Lie under palpable miſtakes.
And thoſe
That teach from doubled elements they roſe,
As air and fire, as earth and water join'd,
Or all four, earth, air, water, fire, combin'd.
Thus ſung Empedocles——
In fruitful Sicily, whoſe crooked ſides
Th' Ionian waſhes with impetuous tides,
And a ſmall frith from Italy divides.
Here Scylla raves, and fierce Charybdis roars,
Beating with boiſt'rous waves the trembling ſhores.
Here preſs'd Enceladus with mighty loads
Vomits revenge in flames againſt the gods:
Through Ætna's jaws he impudently threats,
And thund'ring heav'n with equal thunder beats
This iſle; though with ſuch wond'rous ſights as theſe
She call forth trav'llers, and the curious pleaſe;

Though ch with men and fruit, has rarely ſhown
A thing more glorious than this ſingle one:
His verſe, compos'd of nature's works, declare
His wit was ſtrong, and his invention rare;
His judgment deep and ſound, whence ſome began,
And juſtly too, to think him more than man.
Yet he, with all the meaner others nam'd,
Though for ſome rare inventions juſtly fam'd,
Which they have left as oracles, more ſure
Than from the tripod ſpoke, and leſs obſcure
Than thoſe, th' ancients from the Pythia heard
In the firſt ſeeds of things has greatly err'd.
That things may move, or may be ſoft, or rare,
Without a void, as water, flame, or air,
They all affirm;
That nature never reſts
In breaking bodies, and admits no leaſts:
When yet we ſee the part that topmoſt lies
Is leaſt, that is preſented to our eyes:
From whence we that a leaſt may well conclude,
Which utmoſt is, too little to be view'd.
Beſides, their ſeeds are ſoft, and can be born
And die; then all would riſe, and all return
To nought: nothing would be both womb and urn.
Nay, farther: ſince they're contraries, at jars
Among themſelves, engag'd in civil wars,
They periſh when they meet; or, ſcatter'd, waſte,
Like wind and ſhow'rs, croſs'd by an adverſe blaſt.
If all things from four elements aroſe,
And are again by death diſſolv'd to thoſe;
What reaſon we ſhould rather fondly deem
Them principles of things, than things of them?
For they alternately are chang'd, and ſhow
Each others figure, and their nature too:
And if you think that earth is join'd with fire,
With water, air, their nature ſtill entire,
Nothing could firſt be made; or, made, increas'd;
Nor tree, nor man, nor tender fruit, nor beaſt:
For each component in the various maſs
Would keep its nature, and be what it was;
And we ſhould view, confus'dly join'd and fix'd,
Thin air with earth, and fire with water mix'd.
But principles of things muſt be unknown,
Of nature undiſcern'd, leſt any one
Riſing above the other ſhould appear.
And ſhow that things not truly compounds are.
Beſides, they all theſe four from heav'n derive;
And firſt, that flame is turn'd to air, believe;
Thence water, and thence earth; and ſo retire
From earth to water, thence to air and fire:
Their change ne'er ceaſes, but about they're driv'n
From heav'n to earth, from earth again to heav'n.
But ſeeds can never change their nat'ral ſtate;
They muſt endure, free from the pow'r of fate,
Leſt all ſhould ſink to nought, and thence ariſe;
For what is chang'd from what it was, that dies.
Now, ſince theſe four can die, ſince thoſe can fail,
Of other ſeeds, o'er which no ſtrokes prevail,
They muſt be fram'd; leſt all ſhould riſe, and all return
To nought; and nothing be both womb and urn:
Then rather grant ſeeds ſuch, that they did frame
A ſingle body; as, for inſtance, flame;
Yet take away, or add ſome new to thoſe;
Their ſite and motion chang'd, would air compoſe;
And ſo of other things.———
But you'll object, and ſay, 'tis manifeſt
From earth riſe trees, are nouriſh'd and increas'd;
And if the ſeaſons prove not kind and good,
Moiſture and ſoaking ſhow'rs corrupt the wood;
And did not Phœbus ſhed enlivening heat,
No fruit or beaſts could grow, look fair and great;
And we, unleſs upheld by means, ſhould die,
Swallow'd by treacherous mortality;
Life loos'd from nerves and bones, long ſince had fled,
And left the waſted carcaſe pale and dead.
For we from certain things our ſtrength receive;
And other things from certain others live;
For various common principles are fix'd
In every thing, and all confus'd and mix'd.
And therefore nature knows no gen'ral good;
But diff'rent things muſt have their diff'rent food:
And thus it matters to the grand deſign,
How, or with what, the various ſeeds combine:
What ſite, and what poſition they maintain;
What motion give, and what receive again.
For the ſame ſeeds compoſe both earth and ſeas,
The ſun, the moon, all th' animals and trees;
But their contexture, or their motion, diſagrees.
So in my verſe are letters common found
To many words, unlike in ſenſe and ſound:
Such great variety bare change affords
Of order, in few elements of words.
Now, ſince the ſeeds of things are more, from them may riſe
More diff'rent ſhapes, and more varieties.
Next let's examine, with a curious eye,
Anaxagoras' philoſophy;
By copious Greece term'd homœomery.
For which our Latin language, poor in words,
Not one expreſſive ſingle voice affords:
Yet by an eaſy ſhort periphraſis,
We plainly can diſcover what it is:
For this it means: That bones of minute bones;
That fleſh of fleſh, and ſtones of little ſtones;
That nerves take other little nerves for food;
That blood is made of little drops of blood;
That gold from parts of the ſame nature roſe;
That earths do earth, fires fire, airs air compoſe;
And ſo in all things elſe alike to thoſe.
But he admits no void, he grants no leaſt;
And therefore errs in this with all the reſt.
Beſides, too weak, too feeble ſeeds he choſe,
If they are like the bodies they compoſe,
And liable to death as well as thoſe;
For which of all theſe beings could endure
The vi'lent jaws of death, from death ſecure?
Could fire, could air, could water, blood, or bone?
Which of all theſe? In my opinion, none.
Since all would be as liable to die,
Subject to powerful mortality,
As thoſe, which force deſtroys before our eye;
But I by former arguments have taught,
That things nor periſh to, nor riſe from nought.
Beſides, ſince by our meat our bodies grow,
Are nouriſh'd and increas'd, we plainly know

That bones, and blood, and veins, and nerves are made
Of parts diſſimilar, in order laid.
But if the meat in perfect form contains
Small parts of nerves, of blood, of bones, and veins;
Then meat and drink would in themſelves preſerve
Diſſimilar parts, as blood, bone, vein, and nerve.
Yet more: if all thoſe things, that ſpring from earth,
Before they roſe, before they ſhow'd their birth,
Lay hid within; the clods muſt needs compriſe,
As proper parts, thoſe various things that riſe:
Now change the ſubject, keep the terms the ſame;
In wood, if ſmoke lies hid, and ſparks and flame,
It muſt conſiſt of parts of diff'rent frame.
But there's a little ſhift, a ſlight excuſe,
Which Anaxagoras' ſcholars uſe.
Though ſuch lie mix'd in all, that part alone
Appears, which only to the ſenſe is ſhown;
Which in the compoſition does compriſe
The greateſt part, and on the ſurface lies.
But this is falſe; or through the weighty mill,
From broken corn would bloody drops diſtil;
Or ſome ſuch parts as in our bodies grow;
From herbs and flow'rs a milky juice would flow;
In broken clods each ſearching eye might ſee
Some lurking, ſcatter'd herb, or leaf, or tree;
And in cleft wood, and broken ſticks, admire
Smoke, aſhes, flame, and little ſparks of fire.
But ſince, on ſtricteſt ſearch, no parts appear,
We muſt not fondly fancy they are there;
That bodies are compos'd of ſuch combin'd;
But common ſeeds in various order join'd.
But you will anſwer thus: 'Tis often known,
That ſtately trees, on lofty mountains grown,
When beaten by a furious ſouthern blaſt,
Grow warm and hot, and ſo take fire at laſt.
All this we grant:——
Yet there's no actual fire, but ſeeds of heat,
Which, daſh'd together, all this flame beget.
For if in wood ſuch actual flame were held,
How could it for one moment be conceal'd?
It ſtraight would ſhow its mighty force, and burn;
And ſhrubs, and trees, and all to aſhes turn.
And hence, as we diſcours'd before, we find
It matters much with what firſt ſeeds are join'd;
Or how, or what poſition they maintain,
What motion give, and what receive again;
And that the ſeeds remaining ſtill the ſame,
Their order chang'd, of wood are turn'd to flame.
Juſt as the letters little change affords,
Ignis and Ligna, two quite different words.
Beſides, if you ſuppoſe no frame could ſpring,
Unleſs the principles were like the thing,
The ſame in nature ſeeds are loſt; for then
Some ſeeds would laugh, and weep, and laugh again;
With vi'lent grin diſtort their little face,
And preſently drop briny tears apace.
Now what remains obſerve; diſtinctly mark;
I know 'tis hard; 'tis intricate, and dark:
But pow'rful hope of praiſe ſtill ſpurs me on;
I'm eager; and 'tis time that I were gone.

I feel, I riſing feel poetic heats,
And, now inſpir'd, trace o'er the muſes' ſeats,
Untrodden yet: 'tis ſweet to viſit firſt
Untouch'd and virgin ſtreams, and quench my thirſt;
'Tis ſweet to crop freſh flow'rs, and get a crown
For new and rare inventions of my own;
So noble, great, and gen'rous the deſign,
That none of all the mighty tuneful nine
Shall grace a head with laurels like to mine.
For, firſt, I teach great things in lofty ſtrains,
And looſe men from religion's grievous chains;
Next, though my ſubject's dark, my verſe is clear
And ſweet, with fancy flowing ev'ry where;
And this deſign'd: for as phyſicians uſe,
In giving children draughts of bitter juice,
To make them take it, tinge the cup with ſweet,
To cheat the lip: this firſt they eager meet,
And then drink on, and take the bitter draught;
And ſo are harmleſsly deceiv'd, not caught:
For, by this means, they get their health, their eaſe,
Their vigour, ſtrength, and baffle the diſeaſe.
So, ſince our methods of philoſophy
Seem harſh to ſome; ſince moſt our maxims fly,
I thought it was the fitteſt way to dreſs,
In pleaſing verſe, theſe rigid principles,
With fancy ſweet'ning them; to bribe thy mind
To read my books, and lead it on to find
The nature of the world, the riſe of things,
And what vaſt profit too, that knowledge brings.
Now, ſince my former various reaſons ſhow,
That ſeeds are ſolid, and eternal too;
Let's next inquire, if infinite or no?
Likewiſe, if void and ſpace do ſomewhere end?
Or, without bound, t'immenſity extend?
The all is ev'ry way immenſely wide,
Or elſe it would have bounds on ev'ry ſide.
Now, what can be a bound, but that which lies
Beyond the body, whoſe extreme it is?
That nought's beyond the all, ev'n common ſenſe
Declares; therefore the all muſt be immenſe.
Thus ſtand on any quarter of the ſpace,
That's nothing; 'tis immenſe from ev'ry place.
But grant it finite.——
Suppoſe a man on the extremeſt part;
Suppoſe him ſtand and ſtrive to throw a dart;
The dart would forward fly, or, hinder'd, ſtay:
Chooſe which you will, the reaſon's good each way,
And firm. For if ſome farther ſpace admit,
Or ſome reſiſtance ſtop its haſty flight,
That's not the end: ſo place the utmoſt part
Where'er you will, I'll follow with the dart;
And by this ſingle argument deface
(For ſtill the void will give a farther place),
Thoſe feign'd extremes and bounds you ſet to ſpace.
But to proceed.——
Suppoſe the all had bounds, ſuppoſe an end;
Then bodies, which by nature muſt deſcend,
And from eternity purſu'd the race,
Had long ere this time reach'd the loweſt place,
Whence nothing could in decent order riſe;
There could not be a glittering ſun or ſkies;

For all the ſeeds muſt lie confus'dly mix'd
In a vaſt chaos, immoveable and fix'd.
But now the ſeeds ſtill move, becauſe the ſpace
Is boundleſs, and admits no loweſt place;
No end, which heavy ſeeds, by nature preſt,
Might ſeek below, and ſettle there and reſt.
Now all, from parts of matter mov'd, ariſe,
Which the vaſt maſs eternally ſupplies.
But laſtly; things to things ſtill bounds appear;
So air to lofty hills, and hills to air;
So earth the ſeas, and ſeas the earth controul;
But there is nothing that can bound the whole.
Wherefore 'tis ſuch, that did ſwift light'ning fly
Through the vaſt ſpace to all eternity,
No utmoſt part, no end would e'er be found,
So vaſtly wide it is, and without bound.
Again; nature's eternal laws provide,
That the vaſt all ſhould be immenſely wide,
Boundleſs and infinite, becauſe they place
Body as bound to void, to body ſpace;
By mutual bounding making both immenſe:
For did they not each other bound, but one
Were infinite; for inſtance, ſpace alone;
Nor man, nor earth, nor heav'n, nor could the ſea,
Nor bodies of the gods one moment be;
For ſeeds of things, their union all deſtroy'd,
Would fly diſſolv'd and ſcatter'd through the void;
Or rather into things had ne'er combin'd,
Becauſe, once parted, they had never join'd
For ſure unthinking ſeeds did ne'er diſpoſe
Themſelves by counſel, nor their order chooſe;
Nor any compacts made how each ſhould move,
But from eternal through the vacuum ſtrove,
Variouſly mov'd and turn'd, until, at laſt,
Moſt ſorts of motion and of union paſt,
By chance to that convenient order hurl'd,
Which frame the beings that compoſe the world.
And theſe ſame ſeeds, now orderly maintain'd,
In the convenient motions they have gain'd,
Is a ſufficient cauſe why fertile earth,
By ſun-beams quicken'd, gives new fruits their birth;
Why rivers ſtill the greedy deep ſupply;
Why beaſts increaſe, why ſun and moon ne'er die.
Which could not be, unleſs ſupplies ſtill came
From the vaſt maſs, and propp'd the ſinking frame.
As beaſts, depriv'd of food, ſo things muſt die,
As ſoon as matter fails of juſt ſupply.
Nor can external ſtrokes preſerve the whole;
Sometimes they may the haſty flight controul
Of ſome ſmall part, till others come and join,
And, taking hold, into one maſs combine;
But very oft they muſt rebound, and then
The principles of things may break the chain,
And get their former liberty again.
Nay, that theſe ſtrokes might be, this laſting fight,
The maſs of matter muſt be infinite.
'Tis certain then, that there muſt come ſupply
From the vaſt maſs, repairing things that die.
But ſcorn their dreams, who fondly can believe,
And teach, that all things to the middle ſtrive;
And by that nat'ral preſſure this whole frame
Might be maintain'd, its order ſtill the ſame,
Without external impulſe; high and low
Would always be as firmly join'd as now;
And their own ſite their diff'rent place poſſeſs,
Since all unto one common centre preſs.
They farther teach, that pond'rous weights below
Unto their reſting places upwards go:
And as our ſhadows in ſmooth ſtreams appear,
So feet to feet ſome animals walk there;
Yet can no ſooner fall into thoſe ſkies
That lie beneath, than we to heav'n can riſe.
When Phœbus climbs their eaſt, the feeble light
Of ſtars peeps forth, and beautifies our night.
But this ridic'lous dream, this fancy ſprings
From ign'rance, blind in principles of things.
For ſince the void is infinite, the ſpace
Immenſe; how can there be a middle place?
Or grant there were———
Why may not bodies end their tedious race,
And ſtop as well in any other place,
As there? For ev'ry part of empty ſpace,
Or midſt or not, muſt equally allow
To pond'rous movents eaſy paſſage through:
For there's no place, to which by nature preſt,
Seeds loſe their force of weight and freely reſt;
Nor empty ſpace can prop the ſeeds, nor ſtay
Their motion: 'tis its nature to give way:
In bodies then there lies no fond deſire
To ſeek the midſt which keeps this frame entire.
Beſides, they grant not all, but only thoſe
Which heavy water and dull earth compoſe,
Strive to the centre: but that two retire,
Endeav'ring from it as light air and fire;
Whence ſtars, thoſe feeble ornaments of night,
Are nouriſh'd, and gay Phœbus' fiercer light:
Becauſe the flame which from the midſt retires,
When got on high combines its ſcatter'd fires.
But how could an'mals live, how leaves on branches bud,
If earthly parts roſe not, and gave them food?
Then they contend, the higheſt heav'n, around
All things enclofing, is of all the bound;
Elſe the world's walls, like ſwifteſt flames would fly
Through the vaſt ſpace; the fabric of the ſky
Confus'dly falling, lowеſt buildings meet;
Elſe faithleſs earth forſake our trembling feet;
And all things both in heav'n and earth deſtroy'd,
Confus'dly ſcatter through the boundleſs void;
And in one moment ev'ry thing deface,
But unſeen atoms, and vaſt empty ſpace:
For wherefoe'er the fabric does begin
To fail, there greedy death will enter in,
And through the ruinous breach, the violent courſe,
Of rapid matter ruſh with mighty force.
This learnt, 'tis no uneaſy taſk to know
The reſt: I'll lead thee on, and clearly ſhow
The pride of nature, and philoſophy
Her greateſt works, and pleaſe thy curious eye.
The walk is pleaſant, 'tis an eaſy way,
All bright and clear, for things will things betray
By mutual light, and we, from one thing known,
To hidden truths ſucceſsfully go on.

NOTES ON BOOK I.

Lucretius begins his poem with an invocation of Venus, a gay and beautiful goddeſs, a friend of Mars, and, as the fables ſay, ſometimes too immodeſtly familiar with him: but by whoſe power all animals are generated; by whoſe charms all nature is governed; and who alone can give all beauty and gracefulneſs. He, therefore, makes choice of her as the fitteſt patron for a man, who is going to treat of the Nature of Things: he aſks of her to beſtow ſmoothneſs on his verſe, and to procure a peace for Rome, which ſhe may eaſily obtain from her dreadful ſervant the god of war. For, while the republic was engaged in arms, neither himſelf nor his Memmius, to whom he inſcribes this poem, could find leiſure to attend to the ſtudies of philoſophy. Now, whatever may be the opinion of others, he, by this invocation, excellently well performs the part of a poet, who intends to treat of nature and of an Epicurean philoſopher likewiſe: for he derides while he invokes; and, as we ſeldom find a more beautiful, ſo we never can a more reproachful image of Venus and of Mars. But they ſeem too wittily pious, who believed that the poet, a profeſſed enemy to Providence, was compelled by the Deity, as it were in ſport and deriſion, to implore the aid of a moſt notorious goddeſs: nor are others leſs trifling, who obſerve, that Venus took care of gardens; and, therefore, was the moſt proper patroneſs for the Epicureans, who chiefly dwelt, or at leaſt ſpent moſt of their time in gardens. Nor they neither, who diſcover, I know not what myſteries, that lie concealed under the names of Venus, Mars, Cœlus, &c. Such trifles are beneath the diſdainful and ſoaring wit of Lucretius; for, as Cicero tells us in the firſt book of the Nature of the Gods, ſect. 59. the Epicureans deſpiſed the myſteries of the ancients no leſs than they did their religion. Hence, too, the grammarians, with their Venus Genetrix, unleſs they will allow Lucretius to have been inſpired with ſo divine and prophetic a fury, as to have foreſeen that Venus would one day be honoured with that title by Julius Cæſar. We need not then look any farther for a reaſon for the invocation. Lucretius was a poet, and therefore neglected not the rules of his art; an Epicurean, and therefore craftily conformed with the ſuperſtition of his country: beſides, the practice of the poets is not more obvious, than the wantonneſs of the Epicureans is notorious: and, therefore, both like a poet, and according to the principles of his philoſophy too, he might very well apply himſelf to Venus, that is, to the common natural appetite to procreation, which nevertheleſs he treats as a goddeſs, and gives her all her titles, as if he really expected ſome aſſiſtance from her; yet, even here he ſhows his ſpite to religion, and ſcatters bitter reflections on the then faſhionable devotion.

Ver. 1. We learn from Cicero, in book iii. of the Nature of the Gods, that there were four of this name. The two chief of them were ſhe who was born of the froth of the ſea, and another who was daughter of Jupiter and Dione. They are often confounded one for the other, both in regard to their actions and their name: for the Greeks called either of them Aphrodite, from ἀφρὸς, froth: but the Latins, Venus, becauſe, as the ſame Cicero ſays, "ad omnes veniat," ſhe comes to all; for ſhe was the goddeſs of pleaſure; "& trahit ſua quemque voluptas."

Ver. 2. Becauſe the Romans deduced their origin from Æneas, who was the ſon of Venus by Anchiſes.

Ver. 9. Becauſe the earth produces flowers and fruits of all kinds and colours.

Ver. 10. This and the four following verſes are an improvement of our tranſlator upon his author, who only ſays,

——tibi ſuaveis dædala Tellus
Submittit Flores——

Which thought is fully expreſſed in the two immediately preceding verſes.

Ver. 14. He means Arabia Felix, a country that produces ſo great an abundance of aromatic ſpices, that when they are in bloom, their fragrancy may be perceived at a great diſtance off at ſea. Thus Milton, in his Paradiſe Loſt,

——As when to them, who ſail
Beyond the Cape of Hope, and now have paſt
Mozambic, off at ſea, north-eaſt winds bear
Sabæan odours from the ſpicy ſhore
Of Araby the bleſt, with ſuch delay
Well-pleas'd they ſlack their courſe, and many a league
Pleas'd with the grateful ſmell old ocean ſmiles.

And Waller in like manner:

So we th' Arabian coaſt do know
At diſtance, when the ſpices blow:
By the rich odour taught to ſteer,
Though neither day nor ſtars appear.

Pliny ſays, that the inhabitants of this country uſe no wood but what is ſweet-ſcented; and that they even dreſs their meat with that of the trees from which they diſtil the frankincenſe and myrrh. "Nec alia ligni genera in uſu ſunt, quam odorata; ciboſq. coquunt Turis ligno, & myrrhæ," lib. 12. cap. 17.

Ver. 19. From this paſſage of our poet, Virgil has borrowed part of his excellent deſcription of the ſpring, which we find in Georg. 2. ver. 328.

Avia tum resonant avibus virgulta canoris,
Et venerem certis repetunt armenta diebus.
Parturit almus ager: Zephyriq. tepentibus auris
Laxant arva sinus: superat tener omnibus humor:
Inque novos soles audent se gramina tuto
Credere; nec metuit surgentes pampinus Austros,
Aut actum cœlo magnis Aquilonibus imbrem;
Sed trudit gemmas, & frondes explicat omnes.

Then joyous birds frequent the lonely grove,
And beasts, by nature stung, renew their love;
Then fields the blades of bury'd corn disclose,
And while the balmy western spirit blows,
Earth to the breath her bosom dares expose.
With kindly moisture then the plants abound,
The grass securely springs above the ground.
The tender twig shoots upward to the skies,
And on the faith of the new sun relies.
The swerving vines on the tall elm prevail,
Unhurt by southern show'rs, or northern hail
They spread their gemsthe genial warmth to share,
And boldly trust their buds in open air. *Dryden.*

Ver. 21. The west wind, so called "à favore, quia favet genituræ," because it favours and helps forward the generation and production of things.

Ver. 37. The confused and unordered heap of matter, of which the poets supposed all things were made in the beginning. Hence Milton calls it,

The womb of nature, and perhaps her grave.

And Ovid, Metamorph. 1. ver. 7.

——dixere chaos; rudis indigestaque moles,
Nec quicquam nisi pondus iners; congestaque eodem
Non bene junctarum discordia semina rerum.

——Rude undigested mass;
A lifeless lump, unfashion'd and unfram'd,
Of jarring seeds, and justly Chaos nam'd. *Dryden.*

Chaos was likewise the first of the gods, according to Hesiod, in Theogon. ver. 116, where he sets up Chaos, Tellus, and Amor, for the progenitors of the gods.

Ver. 40. C. Memmius Gemellus, with whom Lucretius had travelled to Athens, where they studied philosophy together; and they were ever afterwards very intimate. He was descended of the noble family of the Memmii, who derived their extraction from the Trojans, as Virgil witnesses, *Æn.* 5. ver. 116.

Mox Italus Mnestheus, genus à quo nomine Memmi.

Then Mnestheus, from whom the Memmian race.

This C. Memmius, to whom Lucretius inscribes his poem, arrived to the dignity of Prætor, and obtained Bithynia for his province; but was soon recalled, being accused by Cæsar of mal-gesture in his office. However, not many years after his return to Rome, he came to be tribune of the people; and, in a little time, stood candidate for the consulship: of which he not only failed, but being accused of bribery, was, even though Cicero pleaded in his defence, convicted of it, and banished into Greece, where he died in exile. Whoever desires to know more of him, may consult Gisanius, in his Dissertation de Genti Memmia.

Ver. 46. The son of Jupiter and Juno, or of Juno only without a father; as Minerva was of Jupiter only without a mother. She is said to have conceived him by touching a certain flower, which Flora showed her for that purpose.

Ver. 49. The court of Venus, who herself was called Paphia, from Paphos a city of Cyprus, where she had a stately temple. It is now called Baffo.

Ver. 58. Lucretius, a few years before his death, was an eye-witness of the mad administration of affairs in the time of Clodius and Catiline, who gave such a blow to the republic of Rome, as occasioned its total subversion, which happened not long after. And this is what he speaks of in these six verses

Ver. 59. Because that tree was sacred to Apollo, the god of learning. See the note on ver. 152 of the sixth book.

Ver. 60. For as Cicero says, "Nemo bene potest inter Belli strepitus, ac plebis seditiones, æquo animo philosophari," Tuscul. 1. No man can well apply his mind to philosophy, amidst the noise of war and the seditions of the people.

Ver. 64. In these fourteen verses, he unfolds to his Memmius, whose attention he bespeaks, and wishes him free from all cares and anxieties, the argument of his future disputation: and tells him, he is going to treat of the nature of the heavens, and of the gods; as likewise concerning the first principles, of which all things are made, and into which they are again resolved. For, as to the gods, says he, they enjoy a blissful ease and idleness, and are exempt from all cares and business; nor did they, as most philosophers believe, either make the world, or do they take care of it. "De Deorum immortalitate nemo dubitavit: quod autem æternum beatumq. est, id non habere ipsum negotii quicquam, nec exhibere alteri; itaque neque ira neque gratia teneri, quod, quæ talia essent, imbecilla essent omnia." No man doubts of the immortality of the gods: but whatever is happy and eternal, must have nothing to do itself, nor find out employment for others. thus it will exempt itself from anger and gratitude, to either of which, whatever is subject, must be frail and imperfect, says Epicurus in Cicero, lib. 1. de Nat. Deor.

Ver. 76. He means the atoms. And let it suffice to give notice once for all, that he calls them by several other names likewise: as corpuscles, elements, first matter, first causes, first bodies, little bodies, &c.

Ver. 78. Here Lucretius begins his impiety. Had he contented himself with deriding only the superstitious devotion of the age he lived in; had he stopped there, and not proposed principles of irreligion drawn from the happiness of the Deity, which, therefore, must be universal, and against all religion under whatsoever denomination: he might have been read with much profit and satisfaction as an excellent satirist against the heathen worship; for

he severely scourges the mad zeal of men-sacrificers; and though perchance he has not proposed a true instance in Iphigenia, yet histories, both sacred and profane, of former and present ages, give us too many sad relations of such cruelties. But, since he openly declares, that the design of his writing is to free men from the fears of that heavenly tyrant, Providence, and to induce perfect serenity, that boasted Ἀταραξία of Epicurus; and in pursuit of this, endeavours to maintain the great dictate of his master. "Nihil beautum, nisi quod quietum;" Nothing is happy but what is supinely idle and at ease. I shall examine his vain pretensions; and, in order to it, present you with a summary of the Epicurean religion.

If any man considers the inconsistencies that are in the Epicurean notion of a Deity, how the attributes disagree, and how the very being thwarts all their other philosophy, he will easily agree with Tully, and admit his censure to be true. "Verbis ponunt, Re tollunt Deos." In words they assert, but in effect deny a God: which is seconded by Dionysius in Eusebius, ἀλλὰ τοῦτο μὲν περιδηλον ὅτι κατὰ τὸν Σωκράτης θάνατον κολασιστηχὼς Ἀθηναίους ὡς μὴ δοκοίη τοῦθ' ὅπερ ην Ἄθεος εἶναι, κενάς αὐτοῖς ἀνυποστάτων θεῶν τεραϊσυσάμενος ἐξωσρέφησε σκιάς. *Eusebius. lib.* 15. It is evident, that after Socrates was put to death, being afraid of the Athenians, that he might not seem what really he was, an Atheist, he fashioned some empty shadows of fantastical deities: but since antiquitiy hath but three Atheists on record, why should we increase the catalogue? he therefore asserts a divine nature, and proves it from the common consent of mankind; which does not arise from any innate ideas as Gassendus phrases it, those being altogether strangers to his hypothesis: for every idea is a mode of thinking, and no thought can arise, according to the Epicurean principles, but from a previous image; and therefore Lucretius makes the cause of this general consent to be the constant deflux of divine images, which strike the mind. Plutarch de Placit. Phil. lib. 1. cap. 7. And Atticus, the Platonist asserts it to be the common doctrine of the garden, τὰς βελτίονας ἀποῤῥοίας τῶν θείων τοῖς μεταχέσι μεταγωγὰς ἀγαθῶν Παραλίας γινέσθαι, Eusebius. Præp. lib. 25. That the good emanations from the gods bring great advantages to those that receive them: to this the prayer of Democritus, ἀγαθῶν εἰδώλων μετίσχειν, that he might receive good images; and Cicero, de Natura, Deor. lib. 1. sect. 107. agrees, and I hope Gassendus's bare denial cannot stand in competition with all these. This divine nature is branched out into many, his gods are numerous, and even exceed the catalogue of Apollodorus; and this he gathers from that ἰσονομίαν, or equability which must be in the universe, "Si enim "mortalium tanta multitudo, immortalium non "minor, et si quæ interimant item quæ conser-"vent, infinita," For since there is so great a multitude of mortal things, there is no less of immortal; and if the things that die are infinite, so likewise are those that remain to all eternity. Their substance is not immaterial, and Velleius reprehends Plato for his ἀσωμαίαν, or incorporeality, as inconsistent with sense, prudence, and pleasure, and yet he cannot allow it to be a coalition of atoms, for that would destroy their necessity of being, and infer discerpibility; but they have *quasi corpus*, and *quasi sanguinem*, as it were a body, and as it were blood: a fancy perchance received from Homer.

Οὐ γὰρ σῖτον ἔδουσ', ἀ πίνουσ' αἴθοπα οἶνον,
Τ' ἔνεκ' ἀναίμονες εἰσι καὶ Ἀθάνατοι καλέονται.

They drink no wine, they eat no common food,
And therefore nam'd immortal, void of blood.

They are of the figure of a man, that seeming the most beautiful, and the only receptacle of reason, without which the gods cannot be virtuous, nor happy: their knowledge infinite, and boundless; for Velleius in Tully, to confute Pythagoras, boldly inquires, 'Cur quidquam ignoraret ani-"mus hominis, si esset Deus?" why the mind of man should be ignorant of any thing, if it were a god? easy and quiet is their life; and therefore unconcerned with the affairs of the world; for being full of themselves, why should they look on others, or trouble their minds with the consideration of less perfection, when they can expect no advantage nor addition to their happiness: yet these glorious beings are to be reverenced for the excellence of their nature. Our piety and religion must be heroical, not forced by fear, or raised by hope: interest must not bribe, nor terror affright us to our duty; but our devotion must be free, and unbiassed by the solicitations of the one, or the impulse of the other. These, in short, are the deities of Epicurus; and this is the sum of his religion: a sufficient instance, that men may dream when they are awake, and that absurd fancies are not only the consequents of sleep. Let us look on the favourers of these opinions, and what are they but exact images of Timon's philosophers?

Ἄνθρωποι κενεῆς οἰήσιος ἔμπλεοι ἀσκός.

Men, casks of vain opinion full.

For, as Tully long ago observed, it is their usual custom to avoid difficulties by proposing absurdities; that the less may not be discerned, whilst all mens eyes are on the greater. For, first, not to require an explication of their unintelligible *quasi corpus*, and *quasi sanguis*, it is very easy to be proved, and a direct consequence from their established principles, that the matter of the deities is perfectly like that of our bodies, and so discerpible; nor can they find any secure retreat for their gods beyond the reach and power of troublesome atoms, which scattering every where must disturb their ease, destroy their quiet, and threaten a dissolution. For since the images that flow from them, move the mind, which they assert material, those must be body:

Tangere enim et tangi sine corpore nulla potest res. *Lucret.*

For nought but body can be touch'd, or touch.

And since it is the nature of body to resist, the greater and heavier the atoms are, the stronger and the more forcible will be the stroke on the divine substance; and consequently in this dissolution of worlds, in these mad whirls of matter, their deities, unless they remove them beyond the infinite space, must be endangered: for they are not perfect solids, and above the power and force of impulse, such combinations being unfit for sense, or animal motion. And thus the Epicureans must necessarily fall into that absurdity, for which Velleius lashes Anaximander, "Nativos esse Deos, "et longis intervallis orientes et occidentes," That the gods are born, and that there is a long interval of time between their birth and their death. But since they offer as a reason, that immateriality is inconsistent with sense and prudence, I shall consider that in its proper place, and now examine how omniscience can agree to their gods. Lucretius, in his fifth book, asks the question, how the gods could have those ideas of man, sun, moon, and stars, before they were formed? from whence it is easily concluded, that they imagine the divine perception arises from the same causes that man's does, viz. from some subtile images that flow from the surfaces of things, and enter at the senses. Now it had been an attempt worthy the soaring wit of our poet, to have described the passages of these images; how they reach the happy seats entire, how these light airy things are undisturbed by the rapid whirls of matter, and how at last they should all conveniently turn round, and enter at the eyes of the deity. For if ours can ascend thither, why not the forms of these things that lie scattered through the infinite worlds reach us? no, their gods must be as senseless as they are careless; no intruding images must disturb their thoughts, or turn them from the contemplation of their happy selves; no doubt their ease will scarce agree with such troublesome agitations, and like the soft Syharite, should the image of a man digging encroach upon them, they must necessarily undergo a ῥῆγμα.

As for the figure they please to allow them, we must needs acknowledge it a wonderful chance, that man (for that is the most proper opinion) should so much resemble the divine nature; but I had rather believe all the adulteries in the poets, than that man was made after the image of the Deity without his direction. Besides, what need of all these members? why must they have eyes, unless they have a looking-glass in their hands? why mouth and teeth which will never be employed? and why does not that fancied *ἰσονομία*, or equability in the universe, require immortal men, and immortal beasts! for that would make it more perfect. These are absurdities fit for the credulity of an Epicurean, beyond imagination, had not these men abetted them, and made good to the utmost, that severe reflection of Tully, "Ni- "hil est tam absurdum quod non aliquis è philo- "sophis afferat;" There is nothing so absurd, but one or other of the philosophers has asserted it.

Now I come to consider, whether Providence is inconsistent with the happiness of the Deity. And here the Epicureans are prest with the consent of mankind, there being no nation but has some shadow of piety, which must be founded on the belief of Providence, that being the basis of all natural religion. The Stoics took the notion of their Πνεύματος νοεροῦ καὶ πυρώδους, their intelligent and fiery spirit, from the excellent order and disposition of the universe. The Νοῦς, mind, of Anaxagoras is sufficiently known. Nor was Aristotle an enemy to Providence, though, as it was generally thought, and as Atticus the Platonist words it, μεχρὶ Σηλήνης ἔῆσας τὸ Θεῖον τὰ λοιπὰ τὰ κόσμια μέρη περιγράφει τῆς τοῦ Θεοῦ δικαιήσεως, confining Providence within the moon's orb, he leaves nothing below to his direction, and compares him to Epicurus, τί καὶ διαφέρει πρὸς ἡμᾶς ἢ τοῦ κόσμου τὸ Θεῖον ἐξοικίσασθαι, καὶ μηδεμίαν πρὸς αὐτὸ κοινωνίαν ἀπολιπεῖν. For it is the same thing to us to have no Deity at all, as to have such a one with whom we can have no communication. And Athenagoras delivers it as the doctrine of the Peripatum, ἀπρονόητα πάντα εἶνα κατωτέρω τοῦ ὑρανοῦ, that Providence takes care of nothing below the sky; and Origen, ὁ Πλάτων Ἐπικούρου εἰς τὴν πρόνοιαν ἀσεβῶν Ἀριστοτέλης. Aristotle's opinions concerning Providence were somewhat less impious than those of Epicurus; but authority will prevail little with a proud Epicurean, whose talent it is to scoff at all beside his own sect, and undervalue every man that is not delighted with the weeds of his garden.

And here it must be observed, that as Epicurus circumscribed the Deity with the finite figure of a man, so he measured all his actions by the same model, and thought an intermeddling with the affairs of the world would bring cares, trouble, and distraction; because he sometimes observed a necessary connection betwixt these two, in those little intervals of business that disturbed his ease and quiet. A fond opinion, directly contrary to the consent of the world, and to his own principles and practice. For what trouble can it be for that Being, whom a bare intuition (for he grants him Omniscient) acquaints with all the springs and wheels of nature; who perfectly knows the frame, and with a nod can direct and rule the automaton; for self-existence necessarily infers Omnipotence. For what can determine the mode of existence in that Being? what confine its power? what circumscribe it? since it depends on nothing but itself. And since the Deity is the most excellent of beings, how can it want that amiable attribute, benevolence? will not an Epicurean commend it in the master of the garden? will he not be prodigal in his praises, and call the Athenian a god for his philosophy, and make his numerous books (Laertius calls him πολυβιβλιώτατον, the most voluminous writer) an argument for his Ἀποθέωσις, deification? And are all these commendations bestowed on him, because he made himself unhappy? Or must the Deity be deprived of that perfection, which is so lovely in man, and which all desire he should enjoy; because when dangers press, they seek for relief to heaven, and passionately expect descending succour; which sufficiently declares

that the belief of the Providence is as univerſal as that of the happineſs of the Deity, and founded on the ſame reaſon? for, as Tully argues, "fac. "imagines eſſe quibus pulſentur animi, ſpecies "quædam duntaxat objicitur, num etiam cur "beata ſit? cur æterna?" Grant they are images that ſtrike the mind, a certain ſpecies only offers itſelf: why then muſt it be happy? why eternal? And, conſequently, the ſame reaſon dictating that Providence is an attribute, requires as ſtrong an aſſent as when it declares happineſs to be one, ſince neither can be inferred from the bare impulſe of the images. For ſuppoſe the ſtroke conſtant. yet what is this (as Lucretius would have it) to eternity. And why may not any thing we think upon be eſteemed immortal on the ſame account? Suppoſe the impulſe continual, yet what connection between that and happineſs; ſo that the Epicurean's argument recoils againſt himſelf, and he is foiled at his own weapons.

And now who can imagine ſuch abſurd principles proper to lead any rational inquirer to ſerenity. Will it be a comfort to a good man, to tell him, as Ariſtophanes ſpeaks in his Clouds, ἀντὶ Ζήνος ὁ Δῖνος βασιλεύει, inſtead of Jupiter a whirlwind rules, when it is his greateſt intereſt, that there ſhould be a merciful diſpoſer, who takes notice of, and will reward his piety. It will be an admirable ſecurity no doubt for his honeſty, to aſſure his malicious enemies, that nothing is to be feared but their own diſcovery. And unleſs their dreams prove treacherous or their minds rave, they are ſecure in their villanies, and may be wicked as often as they can fortunately be ſo, as often as occaſion invites, or intereſt perſuades. When commonwealths may be preſerved by breaking the very band of ſociety, τὸ σαλεύσιμα τῆς πολιτείας, as Polybius in his hiſtory, book vi. ch. 54. calls religion; when treaſons may be ſtifled by taking off from ſubjects all obligations to duty, but their own weakneſs; and when a Democles can ſit quietly under his hanging ſword; then the denial of Providence, then the belief of a world made and uphold by chance, will be a remedy againſt all cares, and a neceſſary cauſe of that deſired Ἀταραξία, ſerenity of mind.

Ver. 84. In theſe four verſes he deſcribes the tyranny, as he calls it, of religion; whom he places in heaven, looking ſternly down on mankind, and frighting them into a vain and empty fear of the gods. And here let all, who, with Cicero, find a want of wit in Lucretius, contemplate this image, and ſhow me one more beautiful if they can: In what a deplorable ſtate lie thoſe abject wretches, oppreſſed under the tyranny of religion, and how dreadful are the gruff and haughty looks with which that heavenly tyrant threatens them from above;—the devil himſelf ſeems to be laſhing his whips over them.

Ver. 88. Here the poet attempts the praiſe of Epicurus of Athens, the ſon of Neocles; and who firſt, ſays he, oppoſed himſelf to all theſe terrors, with an undaunted ſoul, and being by the ſtrength of his mind carried beyond the limits of this world, into the infinite ALL, got a thorough inſight into the power of all nature; deſcried her in her inmoſt and moſt hidden receſſes; and by teaching mankind that things are made without the care and workmanſhip of the gods, totally overthrew all religion, as Cicero obſerves, lib. i. de Natur. Deor. "Quid eſt enim cur ab hominibus colendos dicas, cum Dii, non modo homines "non colant, ſed omnino nihil curent, nihil a-"gant?" For what reaſon is there why men ſhould worſhip the gods, ſince not only they take no care of them, but are entirely void of all care for any thing, and do nothing? But Gaſſendus, Faber, and ſome others, waſte their time to no purpoſe, while they endeavour to perſuade that the book which Epicurus writ, περὶ ὁσιότητος of ſanctity or holineſs, and the piety of the Epicureans towards the gods, are a ſufficient evidence, that the word religion is uſed in this place by the poet, to ſignify only ſuperſtition, and an idle and vain fear of the gods. As if Lucretius did not abſolutely renounce all belief of Providence; or had been that ſuperſtitious man to believe that God did any thing, or concerned himſelf with the care of mankind.

Ver. 93. No natural effects whatever give ſuch impreſſion of divine fear as thunder. This is evident by the example of ſome wicked emperors; who, though they were Atheiſts, and made themſelves gods, yet by their trembling and hiding themſelves when they heard it, confeſſed a greater divine power than their own. "Cælo tonantem "credidimus Jovem," Horat. And, therefore, Lucretius in this place ſays of Epicurus, as if it were a thing extraordinary and peculiar to him, that even the ſound of thunder made not him ſuperſtitious.

Ver. 98. τὸ πᾶν The ALL, whatever is in the nature of things, Epicurus and Lucretius after him, diſtinguiſh between the ALL, and what they call *mundus*, the world. The ALL is the whole, or the univerſe; the world only a part of it. The Epicureans held the ALL to be infinite and eternal, never to have had a beginning, and that it will never have an end, and to be incapable of increaſe or decreaſe; but the world to be finite, to have had a beginning, and to be liable to have an end. Epicurus called the ALL, τῶν ὅλων φύσιν, the nature of the whole; and in Plutarch τῶν ὄντων φύσιν, the nature of beings. This is what Lucretius calls in this place, *omne immenſum*, the immenſe All; and our tranſlator, the mighty ſpace.

Ver. 103. This is that conqueſt which Virgil celebrates, Georg. ii. ver. 490. where he ſings a pæan to the victor Epicurus.

Fœlix qui potuit rerum cognoſcere cauſas;
Atq. omnes metus, et inexorabile fatum
Subjecit pedibus, ſtrepitumq. Acherontis avari.

Happy the man, alone, thrice happy he,
Who could through groſs effects their cauſes ſee;
Whoſe courage from the deeps of knowledge ſprings,
Nor vainly fear'd inevitable things:

But did his walk of virtue calmly go,
Through all th' alarms of death and hell below.

Cowl.

Ver. 105. In thoſe twenty-four verſes, he ſeems to ſuſpect that Memmius will be ſtartled at this impious doctrine that tends to the ſubverſion of religion and denies the Divine Providence; he therefore endeavours to buoy up his mind, by telling him that the religion which acknowledges Providence, did often formerly perſuade men to commit the moſt horrid crimes. To prove this, he brings the example of Iphigenia, who, upon the account of religion, and even by command of the oracle, was ſacrificed to Diana upon her altar at Aulis, a port of Bœotia on the river Euripus, even her own father aſſiſting at the ſacrifice; and this was done, ſays he,

To bribe the gods, and buy a wind for Troy.

For the ſtory goes, that Agamemnon, king of Mycenæ and Argos, whom the Greeks made choice of to command in their expedition againſt Troy, had killed a favourite ſtag, belonging to Diana, who, enraged at it, ſent a tempeſt among their ſhips, which forced them into the port of Aulis; where being detained for ſome time by contrary winds, they at length ſent to conſult the oracle, who told them Diana would not be appeaſed till Iphigenia the daughter of Agamemnon, was ſacrificed to that incenſed goddeſs; and this was accordingly done, ſays the fable, which, as well as what is related of Idomeneus, who, under pretence of a vow, would have ſacrificed his eldeſt ſon, took riſe, no doubt, from the ſtory of Jephtha. which happened not a great many years before the ſiege of Troy.

Ver. 109. She was daughter of Jupiter and Latona, and born at the ſame birth with Apollo. A virgin goddeſs, whoſe chief delight was hunting of wild beaſts; for which reaſon ſhe was called the goddeſs of the woods. She was Luna in heaven, Diana upon earth, and Proſerpina in hell. Hence Dryden, or rather Chaucer, in the Knight's Tale:

O goddeſs, haunter of the woodland green,
To whom both heav'n, and earth, and ſeas are ſeen;
Queen of the nether ſkies, where half the year,
Thy ſilver beams deſcend, and light the gloomy ſphere;
Thou, goddeſs, by thy triple ſhape art ſeen,
In heav'n, earth, hell, and ev'ry where a queen.

Ver. 111. It was the cuſtom to deck and trim up the victims with ribbands of ſeveral colours, and other gauderies, as if they were to be led to their nuptials, not their death.

Ver. 114. For ſhe was led to the altar by her own father Agamemnon, and his brother Menelaus, who commanded the Greeks in the war againſt the Trojans.

Ver. 124. Becauſe ſhe was the eldeſt of all Agamemnon's children. Thus ſhe ſays to her father in Euripides:

Πρώτη σ' ἐκάλεσα πατέρα, καὶ σὺ παῖδ' ἐμὲ.
Iphig. in Aul. ver. 1220.

I was the firſt that called you father, and firſt that you called child.

Ver. 129. Lucretius once more diſtruſts, leſt Memmius giving credit to the fables of the poets of Acheron, Cerberus, the puniſhments after death, &c. to which he had been long accuſtomed, ſhould ſtill be averſe to his opinions; he therefore obviates theſe ſcruples by ſuggeſting to him, that all thoſe and the like fables are only the mere inventions of poets; and that he himſelf could invent others altogether as dreadful.

Ver. 135. In theſe twenty-four verſes he inſinuates, that ſince the dread of puniſhments after death proceeds from the belief of the immortality of the ſoul, if it be once proved that the ſoul is mortal, all that vain fear will vaniſh; but ſince the philoſophers have differed in opinion concerning the ſoul, ſome believing it to be born with the body, and to die with it; others, that it exiſts before, and is infuſed into bodies at the moment of their birth, and that being ſeparated from the body by death, it goes down into hell; or tranſmigrates into the bodies of beaſts, certainly men would be much in the wrong to contemn Providence, ſeeing eternal torments are reſerved for all that deſpiſe it.

Ver. 141. The opinions concerning the ſoul were very different in the age of Lucretius. Some of the ancients believed it to exiſt from all eternity, and that it is incorporeal and immortal; others, that it is born with the body, and corporeal and mortal Plato held it to be created from all eternity, and that it was placed among the ſtars; till grown weary of celeſtial, and falling in love with earthly things, it infuſed itſelf into bodies, at the moment of their birth. Ariſtotle, that it was not created from all eternity, but at the ſame time with the body; that is to ſay, that it begins to exiſt in heaven, at the time when the body is born, and is the ſame moment infuſed into the body, and continues in it, till it is ſeparated from it by death, and then returns back to heaven; but he held it to be incorporeal and immortal. Hence others fabled, that after death ſouls return into heaven from whence they came; others, that they deſcend into hell, but not all into the ſame place; for they imagined that the ſouls of men who had lived wicked lives, were thrown down into Tartarus, which they held to be the loweſt deep of the infernal abodes; but that the ſouls of thoſe who had lived well, were received into Elyſium. Others, as Ennius, held that the body returned into earth, and that the ſoul flew away into heaven; but that the ſhadows or ghoſts, which they held to be certain images of ſouls, go into hell. Pythagoras believed the ſoul to exiſt from all eternity, and to be immortal and incorporeal, but that after death it goes from body into body, as well of man as of beaſt; and this is what

they call *metempſychoſis*, tranſmigration of ſouls. But Heraclitus, Democritus, Epicurus, Hipparchus, Hippo, Thales, Hippocrates, Zenophanes, Parmenides, Empedocles, Lucretius, and others of the like gang, held the ſoul to be born with the body, and corporeal and mortal; but with this difference, that Hippo and Thales believed it to conſiſt of water; Heraclitus, Democritus, and Hipparchus, of fire; ſome of the diſciples of Thales, of air; Hippocrates, of fire and water; Xenophanes, of water and earth; Parmenides, of earth and fire; Empedocles, of all the four elements, fire, air, earth, and water: Critias, of blood, &c.

Ver. 148. He was a Latin poet, who lived about a hundred years before Lucretius; who calls him the firſt of the Latin poets, not that he lived before any of the others; for Livius Andronicus writ poems before Ennius; but becauſe he was the firſt of the Latin poets, that writ an epic and heroic poem after the example of Homer. He was a Pythagorean, as indeed were moſt of the writers of that age.

Ver. 150. A country of Europe, very well known, it lies extended in the ſhape of a boot, between the Adriatic or Gulph of Venice, from the north and eaſt; and the Tyrrhene or Tuſcan Sea from the ſouth; to the north and weſt the Alps divide it from Germany and France.

Ver. 152. So called from Acheron, one of the rivers of hell, that was feigned to receive the ſouls of the dead. What our tranſlator calls Acheruſian palaces, his author calls *Acheruſia Templa*, the vaſt and ſpacious places of hell; for ſo the word *Templa* ſignifies; *Templa Cæli* in Terence is uſed to ſignify the immenſe tract of the air; and thus too in Lucretius we find "Ætheris Templa, tronitra-" lia Templa," in the ſame ſenſe.

Ver. 153. Ennius, as we obſerved before, held the Pythagorean doctrine of the tranſmigration of ſouls; and he affirmed that the ſoul of Homer was in his body. But that he might not injure Pluto, he bequeathed to the infernal manſions, not the ſouls nor the bodies, but the ghoſts, ſpectres, images, or ſhadows of the dead, which appearing to us, or ſeeming to do ſo, when we are aſleep, awake, or in our ſickneſs, ſtrike a terror into our minds. This was the opinion of Ennius; which Lucretius hints at in this place, and by the way takes occaſion to deride.

Ver. 154. He means ghoſts or ſpectres, which the ancients held to be a third nature, of which, together with ſoul and body, the whole man conſiſts.

Ver. 155. Homer, the Greek poet, is too well known to need any thing that we can ſay in his commendation. But Cicero in Lucullus mentions this dream of Ennius, "Viſus Homerus adeſſe Poetæ," Homer ſeemed to appear to the poet; and in the dream of Scipio, he ſays, "Fit enim ferè ut cogitationes ſermoneſque noſtri pariant aliquid in Somno, tale, quale de Homero ſcribit Ennius, de quo videlicet ſæpiſſimè vigilans ſolebat cogitare et loqui." For it often happens that our thoughts and words produce in our ſleep, ſomething like that which Ennius writes of Homer, of whom he waking was wont frequently to think and ſpeak.

Ver. 158. For Ennius uſed to ſay, that the ghoſt of Homer came to him from hell, and bitterly weeping diſcovered to him the nature of things: a folly for which Cicero ſufficiently laughs at him in his ſecond book of Academic Queſtions.

Ver. 159. Therefore to deliver his Memmius from all his fears, he tells him in ver. 8. that he will diſpute, not only of the heavens, of the gods, and of the generation of things; all which he had before promiſed to do; but that he will explain beſides the nature of the ſoul, and what thoſe things are which affect us to that degree, ſometimes when we are awake, ſometimes when aſleep, that we think we ſee perſons long ſince dead, and hear them talking to us; from whence we believe that the ſoul exiſts after her ſeparation from the body.

Ver. 167. Having propoſed the argument of the following work, the poet, in theſe ten verſes, weighs the difficulty of it; and declares how hard a taſk it is to write in Latin verſe the philoſophy of the Greeks, that is to ſay, of Epicurus and his followers; as well becauſe of the poorneſs of the Latin tongue, as of the newneſs of the ſubject: he profeſſes, however, that he is willing to undergo any labour for the ſake of his beloved Memmius, whom he has undertaken to inſtruct.

Ver. 177. In theſe four verſes the poet declares, that thoſe cauſeleſs and empty fears, and that inward darkneſs which religion and ignorance have produced in the minds of men, cannot be diſpelled and chaſed away by any beams of outward ſunſhine; but by that philoſophy, that inſtructs us aright in the nature of things, and teaches the true cauſes of them.

Ver. 181. At length in theſe eleven verſes he enters upon his ſubject, and totally to overthrow all belief of Providence, he endeavours to prove, that things were originally made without the help of the gods; and therefore are not governed and adminiſtered by them: And that he may go on the more ſucceſsfully in his argumentation, he firſt of all lays down this principle: That nothing is made of nothing, which he is going to prove at large; for he had taken notice, that the belief of Providence ſprung from hence: That men had obſerved many things upon earth, and in the heavens, and not being able to diſcover the cauſes of them, immediately concluded that the gods had made them out of nothing; the falſity of which he undertakes to demonſtrate.

Thus we ſee, that Lucretius begins his philoſophy with the denial of the creation; and we ſhall find him very copious in his arguments to juſtify this abſurd opinion, but not one of them reaches his deſign: For though all things now riſe from proper ſeeds, and grow by juſt degrees; though they ſpring only at convenient ſeaſons of the year, yet how does this evince that theſe ſeeds were not the production of the Almighty word? But to confute his impious opinion, and demonſtrate that it is impoſſible matter ſhould be ſelf-exiſtent; that it cannot be ἀδιάφθορον τῷ Θεῷ, ſiſter to the Deity, as

Hierocles, " de Fato et Providentia," p. 10. ſays, the Platoniſts imagine, it is ſufficient to look abroad into the world, and ſee that ſtones and mud are not beings of infinite perfection; for whatſoever is αὐταύσε, ſelf-exiſtent, as Scaliger calls the Deity, can have no bounds ſet to its excellency: For what can hinder the utmoſt perfection in that being which depends only on itſelf? Now if he could have proved, that nothing is made of nothing, Providence had at once been overthrown; but the reader will eaſily diſcern, that after all his great labour, and the mighty buſtle he makes, he in effect proves no more than what no man denies; that is to ſay, that nothing within the compaſs and circumference of nature is produced from nothing. And, therefore, Lactantius, 2. Inſt. 10. ſpeaking of this argument of the Epicureans, had reaſon to ſay, " Sin autem intra naturæ vires contineri voluerit Epicurus, non eſſet cur à nobis non laudaretur. Conſtat enim ex nihilo nihil fieri poſſe naturæ viribus." If Epicurus would be content, that this propoſition ſhould be interpreted to extend no farther than to things within the ſtrength of nature, we ſhould have no reaſon not to approve it: For it is moſt certain, that nothing is made of nothing by the ſtrength and power of nature. There is not, therefore, any reaſon to fear whatever arguments can be brought againſt the power of God, ſince thoſe which the moſt penetrating wit of Lucretius has been able to advance, are ſo weak; for if his impious doctrine could have been defended, he certainly was capable of defending it:

——————Si pergama dextra
Defendi poſſent, certe hac defenſa fuiſſent.

Ver. 192. Epicurus, in the epiſtle to Herodotus, has comprehended in a few words this firſt argument, which Lucretius brings to prove, that nothing is made of nothing, οὐδὲν γίνεσθαι ἐκ τοῦ μὴ ὄντος, πᾶν γαρ ἐκ πάντος ἐγίνεσθαι ἄν, ασπερμάτων δὶ οὐδὲν προσδεόμενον· which is exactly what Lucretius ſays more at large in theſe eighteen verſes. If things were produced from nothing, then every thing would proceed from every thing: there would be no need of ſeed, but men would ſtart up out of the earth, beaſts and fiſh would drop out of the ſky, &c. Now ſince all things do not proceed from all things: but certain proper ſeeds are neceſſary, he rightly concludes, that nothing is produced from nothing. Nor indeed can any thing be objected againſt this argument, inaſmuch as it extends only to things within the power of nature; for ſo far it holds good, but no farther.

Ver. 210. The preceding argument, to prove that nothing is made of nothing, was brought from the firſt riſe and beginning of things. He now in twelve verſes proves the ſame propoſition by another argument, drawn from the conſtant and never changing effects of the ſeaſons in which the things are brought forth. For why ſhould roſes be produced only in the ſpring, why fruits in ſummer, and grapes in autumn, and not any or all of them in winter, if matter contributed nothing to their production, ſince there is not a greater diſpoſition in one ſeaſon of the year than in another, to produce any thing out of nothing? This argument likewiſe holds good, taking it to extend no farther than to things within the ſtrength of nature.

Ver. 216. He means in the ſpring; the ſeaſon

When firſt the tender blades of graſs appear,
And buds, that yet the blaſts of Eurus fear,
Stand at the door of life, and doubt to clothe the year. *Dryden.*

Ver. 222. His third argument, contained in theſe nine verſes, is brought from the natural growth of things. For if things were made of nothing, what hinders them from growing bigger out of nothing likewiſe? And thus there would be no need of time for them to attain to the height of their perfection, and fullneſs of growth; at leaſt, in a moment of time, a new-born babe might ſtart up into a ſturdy youth, &c. For things grow ſlowly and by degrees, becauſe they are increaſed by a certain matter, and by certain principles, which in one inſtant of time can neither be aſſembled, diſpoſed in due order, nor joined together. Since, therefore, all things are nouriſhed, and grow by the help of proper ſeed, they muſt of neceſſity be produced from proper ſeeds likewiſe. This argument too is valid, provided ſtill it be not extended to things above the power of nature.

Ver. 231. Theſe eight verſes contain his fourth argument, which he has taken from the neceſſity of food and nouriſhment, and is no leſs cogent than the others. For ſince the earth can bring forth nothing without rain; and ſince animals, when deprived of food and nouriſhment, can neither propagate their kinds, nor even ſupport their own lives; who can be ſo weak as to believe, that either animals, or the fruits of the earth, are produced out of nothing, it being moſt evident, that matter is eſſentially neceſſary for the production and nouriſhment of all things? Nay, we ought rather to conclude, that there are certain ſeeds, of which things are compoſed, as words are of letters.

Ver. 239. His fifth argument, in theſe fourteen verſes, is taken from the fixed and determinate ſize and duration of things: For if men, for example, were produced of nothing, whence comes it to paſs, that they are conſtantly ſo weak and little? Whence proceeds this ſhortneſs of life, and the other inconveniences and imperfections of mankind: But admit, that men proceed from certain ſeeds, and of a certain matter, and all thoſe things will be eaſily accounted for, and even appear neceſſary and unavoidable.

This argument holds good with the ſame reſtriction as the former; but not without ſome diſtinction: For nature ſeems to have preſcribed no bounds to the ſize of ſome inanamate things. Fire, for example, if you continue to ſupply it with ſtill more and more fuel, it ſtill grows bigger and bigger: But to all things that have life, to plants as well as animals, nature has fixed certain bounds of growth and magnitude: For things

grow by the ſtrength of natural heat only; which leſſens by degrees, when either through failure of ſtrength, or the oppoſition of contraries, it can diffuſe and ſpread itſelf no farther; beſides it decays and grows weak with age.

Ver. 240. Lucretius ſeems to allude to the fable of Polyphemus, of whom Virgil, Æn. 3. ver. 364.

———graditurque per æquor
Jam medium, necdum fluctus latera ardua tinxit.

———Through ſeas he ſtrides,
And ſcarce the topmoſt billows touch'd his ſides.
Dryden.

Ver. 243. As the giants were feigned to be; of whom, Virgil, Georg. i. ver. 288.

Ter ſunt conati imponere Pelio Oſſam
Scilicet et Oſſæ frondoſum involvere Olympum.

Oſſa on Pelion they thrice ſtrove to call,
And on them would have heap'd Olympus too at laſt.

But this fable of the giants fight with the gods was not invented by the Greeks, but came from the eaſtern nations, and aroſe from the true ſtory of the building of the Tower of Babel.

Ver. 253. The poet had obſerved, that corn, trees, flowers, &c. are improved and bettered by human induſtry; from whence he brings his ſixth and laſt argument, to prove that nothing is made of nothing, and reaſons thus in theſe eight verſes. All this is occaſioned by certain hidden ſeeds For what would induſtry and labour avail, if thoſe things were produced from nothing?- It would indeed be vain and uſeleſs: And whoſoever ſhould undertake to cultivate nothing, would do nothing. Nay, what can hinder plants, that are produced from nothing, from improving and growing every year more fair and fruitful of their own accord?

Ver. 261. Hitherto Lucretius has been proving, that nothing is made of nothing. But now, in theſe two verſes, he propoſes another principle which is a conſequent of the former, viz. that nothing is annihilated, or reduced into nothing.

Ver. 263. In theſe ſeven verſes, he brings his firſt argument againſt the annihilation of things, and reaſons to this purpoſe, from the common reſolution of compound bodies. For, ſays he, if things reſolved into nothing, or were mortal in all their parts, there would be no need of force or violence to diſſolve any of them: But as every thing would be produced, and appear on a ſudden, without the endeavour or force of any other thing; ſo without the force or violence of any other thing likewiſe, every thing would periſh, not by a diſſolution of its parts; but withdrawn from our eyes, would vaniſh away in a moment of time, and thus reſolve into nothing. For the reaſon why force is requiſite to diſſolve each thing is, becauſe it conſiſts of ſeeds that remain after its diſſolution.

Ver. 270. His ſecond argument, to prove that nothing is reduced into nothing, is contained in theſe fifteen verſes. Animals, ſays he, which, as I have already proved, are not made out of nothing, are born daily, and die daily. The fountains perpetually ſupply waters, of which rivers and the ſea conſiſt, &c. Now whence could all theſe things proceed, if there were not ſome immortal ſeeds, that remain after the diſſolution of the bodies? For who is ſo void of ſenſe, as not to grant that the firſt matter of things, if it were ſometimes ſubject to periſh, muſt have been totally conſumed in the infinite ſucceſſion of years, that has paſſed away ſince the beginning of things; inſomuch, that nothing of it would be now left to repair and renew the things that are daily dying?

Ver. 277. For the Epicureans held, that the ſun and ſtars were fires, that required nouriſhment to feed and keep alive their flames; and that they were nouriſhed by the vapours and exhalations that riſe from the earth and ſea. Nor was this the opinion of Epicurus only, but of the Stoics likewiſe. Nay, we may trace this belief even to before the age of Zeno.

But to anſwer this queſtion of Lucretius, and give a probable reaſon of the perpetual ſupply of waters to fountains and rivers, we may have recourſe to the invention that Cowley found out to juſtify his

———Eternal fountain of all waves,
Where there vaſt court the mother waters keep,
And undiſturb'd by moons in ſilence ſleep;

And ſtabliſh an abyſs, or deep gulf of waters, into which the ſea diſcharges itſelf, as rivers do into the ſea; and thus there is a perpetual circulation of water, like that of the blood in human bodies; and this Lucretius himſelf owns in ſome meaſure, Book vi. ver. 627. For to refer the original of fountains to condenſation, and afterwards to a diſſolution of vapours under the earth, is one of the moſt unphiloſophical opinions in all Ariſtotle. Beſides, ſuch an abyſs of waters is very agreeable to the ſcriptures; for Jacob bleſſes Joſeph with the bleſſings of the heavens above, and with the bleſſings of the depth beneath; that is, with the dew and rain of heaven, and with the fountains and rivers that ariſe from the deep; and conformably to this, Eſdras aſks, What habitations are in the heart of the ſea, and what veins in the root of the abyſs? Thus too at the end of the deluge, Moſes ſays, "That God ſtopped the windows of heaven, and the fountains of the abyſs."

Ver. 285. In theſe thirteen verſes, he urges his third argument, and ſays, that it is evident, that nothing is annihilated, becauſe the ſame force is not ſufficient to diſſolve all things; for it is in vain for any man to object, that the ſame force cannot diſſolve all things, becauſe the principles of bodies are joined together by different textures. For what would that diſparity of texture avail, what even the principles themſelves, if they can be reduced into nothing, are not able to reſiſt, or hold good even againſt the ſlighteſt touch? But admitting there are certain principles, which are eternal, then indeed a reaſon may be given from the diſſimilitude of their contexture with one ano-

ther, why the same force is not alike sufficient to dissolve all things.

Ver. 291. For the eternity of the seeds alone would signify nothing, unless there were a dissimilitude of them likewise, without which there can be no union or connection of things; and, therefore, though the first bodies were eternal, yet the compounds would not, for that reason only, remain entire one moment of time.

Ver. 298. But because there are many things which, as they dissolve, vanish both from our sight and touch, to that degree, that they seem totally to perish, he, in these eighteen verses, obviates that objection, and shows, that even the rain, which, when it falls upon the earth, dries away, and chiefly may seem to vanish, does not, nevertheless, perish, but supplies matter for the growth of all manner of plants and trees, and to enable them to bring forth their several fruits in great abundance, for the nourishment and support of men, birds, and beasts. We cannot, therefore, believe, that the least particle of the showers entirely perishes, since so many excellent things are renewed and repaired by them. Lastly, He concludes, that nothing returns to nothing, since nature produces one thing out of another, and never any thing new; but makes use of the matter of another thing that had been dissolved before. See the note on v. 957. B. ii.

Ver. 314. This agrees with the maxim of Aristotle, lib. i. "de generat et corrupt." Ἡ τοῦδε φθορὰ, ἄλλου γένεσις, ἡ τοῦδε γένεσις ἄλλου φθορά. The corruption of one thing is the generation of another, and the generation of one thing is the corruption of another.

Ver. 316. But that he may not dispute to no purpose, while his Memmius will perhaps distrust the validity of all the arguments he has hitherto brought to establish his atoms, because those eternal principles and seeds of things, in themselves, and apart from the bodies which they compose, are imperceptible to the sense, and, by reason of their exility, too small and subtle not to escape the sight, even of the sharpest and most piercing eye, he brings several instances of corporeal substances, to which no man denies an existence, though they are invisible to the eye. First, of the wind, in thirty-three verses, whose force and violence, says he, whoever thoroughly considers how it tosses and disturbs the sea, with what fury it drives the ships, &c. will acknowledge it to be corporeal, though no eye could ever discover its particles; and this too the more readily, if he reflects, that winds rush on in the same manner as rapid rivers do, when their waters are swoln with rain, and bear before them whatever opposes their course; and that rivers are bodies, the senses themselves most plainly demonstrate. Virgil seems to have imitated this description of a stormy wind, in the first *Æneid*, v. 86. and *Lucan*, lib. v.

Ver. 322. Virgil, Georg. i. ver. 318. describes the force of the wind in the like manner:

Omnia ventorum concurrere prælia vidi;
Quæ gravidam late segetem a radicibus imis
Sublime expulsam eruerent: ita turbine nigro
Ferret hyems culmumque levem, stipulasque volantes.

Oft have I seen a sudden storm arise
From all the warring winds that sweep the skies;
The heavy harvest from the root is torn,
And whirl'd aloft, the lighter stubble borne:
With such a force the flying rack is driv'n;
And such a winter wears the face of heav'n.

Dryd.

And Georg. III. *ver.* 196.

Qualis, Hyperboreas aquilo cum densus ab oris
Incubuit; scythiæque hyemes atque arida differt
Nubila: tum segetes altæ campiq. nutantes
Lenibus horrescunt flabris, summæque sonorem
Dant sylvæ, longiq. urgent ad littora fluctus:
Ille volat, simul arva fuga, simul æquora verrens.

Like Boreas in his race, when rushing forth,
He sweeps the skies, and clears the cloudy north;
The waving harvest bends beneath his blast,
The forest shakes, the groves their honours cast:
He flies aloft, and with impetuous roar,
Pursues the foaming surges to the shore.

Dryd.

Ver. 333. Thus too Virgil describes the rapidity of the Po, *Georg.* i. *v.* 481.

Proluit insano contorquens vortice sylvas
Fluviorum rex eridanus, camposque per omnes
Cum stabulis armenta trahit—

Then rising in his might the king of floods
Rush'd through the forests, tore the lofty woods,
And rolling onward with a sweepy sway,
Bore houses, herds, and lab'ring hinds away.

Dryd.

And the violence of a Torrent, Æn. II. *ver.* 305.

——Ceu rapidus montano flumine torrens
Sternit argos, sternit sata læta, boumque labores,
Præcipitesque trahit sylvas: stupet insscius alto
Accipiens sonitum saxi de vertice pastor.

Thus, deluges descending on the plains,
Sweep o'er the yellow ear, destroy the pains
Of lab'ring oxen and the peasant's gains;
Unroot the forest oaks, and bear away
Flocks, folds, and trees, an undistinguish'd prey.
The shepherd climbs the cliff, and sees from far
The wasteful ravage of the watery war.

Dryd.

Ver. 349. In these eight verses, he farther teaches, that it is but reasonable to allow that there may be in nature certain corporeal principles imperceptible to the sight, since all men confess that there are such things as odours, sounds, heat, and cold, though no man ever saw any of them; and yet who doubts but that all of them are bodies, since they affect and move the senses, and consequently touch them? for the Epicureans held, that whatever could touch, or be touched, that, and that only, was truly a body.

Thus Ariſtotle, lib. iv. Phyſ. auſc. σῶμα οἴονται εἶναι πᾶν ἅπτον. They believe whatever can be touched to be a body. Hence Epicurus in Laertius, lib. x. calls the void which is oppoſed to body, a nature free from touch, which opinion, Lucretius follows in this verſe:

Tangere enim et tangi niſi corpus nulla poteſt res.

Nought but a body can be touch'd, or touch.

Ver. 357. He brings another example of an inviſible body, in theſe ſix verſes: Water, ſays he, is a body, and yet experience teaches, that it is ſometimes divided into particles too ſmall to be ſeen. Linen or woollen clothes, ſpread abroad near the ſea, will grow damp, and the heat of the ſun will dry them again; yet no man ever ſaw thoſe particles of water, either riſing from the ſea, and fixing themſelves in the clothes, or retiring from them.

Ver. 363. In theſe ten verſes, he gives ſeveral other inſtances to the ſame effect: Rings grow thin with long wearing; drops of rain, by often falling on ſtones, will make them hollow; the pavement of the ſtreets wear with treading on them; nay, we ſee that even braſs ſtatues will wear with frequent touching. Now, from all theſe things thus worn and diminiſhed, certain corporeal particles muſt fly away, though, whoever ſees them muſt be ſharper ſighted than "aut aquila, aut ſerpens epidaurius:" either an eagle or a ſerpent.

Ver. 364. Ovid ſays this admirably well in lib. iv. de Pon. Epiſt. x.

Gutta cavat lapidem, conſumitur annulus uſu,
Et teritur preſſa vomer aduncus humo.

Which he moſt certainly took from our author.

Ver. 367. He ſpeaks of the images of the tutelar or guardian gods, whoſe right hand whoever came into the city or went out of it, was wont to kiſs, "boni ominis cauſa," for good luck's ſake. Yet I know not one ſingle paſſage in any of the ancient authors that mentions or confirms this cuſtom; but it is ſo plainly deſcribed here that we have no room left to doubt of it. Why the ancients uſed to kiſs the right hand rather than the left, Varro teaches, in Excerpt. ex Servio in I. Æneid.

Ver. 373. In the laſt place, he teaches, in the eighth verſe, that certain corporeal particles are added to things that grow and increaſe, and taken from thoſe that decreaſe and diminiſh; but that thoſe particles too are inviſible even to the ſharpeſt eye. Epicurus has expreſſed all this very briefly in the epiſtle to Herodotus: πᾶν τε μέγεθος μὴ εἶναι ὡς ἄτομος: the atoms have no magnitude; and, διὸ ποτε γᾶν Ἄτομος ἔφθη αἴσθησιν· for an atom is not viſible to the ſenſe. But Democritus believed that ſome atoms may be very big.

Ver. 381. Having thus proved that there are certain corporeal principles of things, he is now going to enter upon another ſubject, and in the ſixth verſe he teaches, that, in the univerſe, there is another thing beſides body, that is, a void, which void he thus defines; a place untouched and empty, that is to ſay, a ſpace that neither touches, nor is touched, that can neither act nor ſuffer. Thus in Book iii. ver. 781, he ſays:

Or elſe becauſe, like empty ſpace, 'tis ſuch
As is ſecure from ſtroke, or free from touch.

Laertius, lib. x. ſays, that Epicurus called the void an intangible nature, and a region. Empiricus, lib. ii. adv. Phyſ. ſays, that it is called an intangible nature, becauſe of its being exempt from all impulſe by touch; or, to uſe the words of Arnobius, lib. vii. adv. Gent. "quod omni tactu ſit incontigua," that is to ſay, becauſe it makes no reſiſtance to touch. Thus Epicurus and Lucretius call that only a void which is incorporeal in its nature, that is, which can act nothing, nor ſuffer nothing, but only yields a free paſſage through itſelf to all bodies. Now, Empiricus ſays, that they called this intangible nature a void, becauſe it is deſtitute of body; a ſpace, becauſe it contains bodies; and a region, becauſe bodies are moved in it. Thus Ariſtotle, 3 Phyſ. vii. defines the void, a place in which nothing is; that is to ſay, as he himſelf explains it, a place in which nothing corporeal, no body is. He goes yet farther, and ſays, that it is a property of the void to be full and empty; full when it is; filled with body, empty when it is void of all body, almoſt in the ſame ſenſe as we commonly ſay a veſſel is full when it is filled with any liquor, but empty when there is no liquor in it, unleſs in the empty veſſel, the air, which is a body, ſupplies the place of the liquor, by which means the veſſel is not entirely empty, but would be empty if neither the air nor any other body came into it. This being premiſed, will help us to underſtand the following arguments of Lucretius, by which he ſtrives to prove, that there is a void in the univerſe.

Ver. 387. The firſt argument to prove a void, is contained in theſe fifteen verſes, and, the better to comprehend the force of it, imagine the univerſe, if there be no void or empty ſpace interſperſed in it, to be a vaſt heap of matter, thronged, crowded, conſtipated, and wedged in on all parts to ſuch a degree, as not to be capable of receiving into its bulk the leaſt corpuſcle whatever; for, if there be nothing that is not full, then no place remains to be filled; therefore, either a new body will not be admitted, or it will be placed in the very place that is already taken up by ſome other body: and thus the ſame place will contain two different bodies, that muſt be penetrating into each other on all ſides, which no man will pretend is poſſible to be done by the force of nature. By this we ſee too, whether it be poſſible for any one of the bodies that are ſeated in that immenſe maſs of matter to be moved out of its place, and to take the place of another. Certainly, if it find a place already full, it muſt of neceſſity drive away the body that poſſeſſes and fills that place. And if all things are full, whither ſhall that body be driven? Shall that again thruſt away another? The ſame difficulty will re-

turn upon us, and be continued for ever; therefore, unless there were a void interspersed in all things, all things would be crowded to such a degree, that not only nothing in the whole universe could be moved from its place, but it would be even impossible to give a reason, and explain how any thing can be generated because a local motion is absolutely necessary for the generation of all things: and without a void there can be no motion whatever: nothing could move any more than do those flints and shells, that are sometimes found in the very heart of huge stones, and in the entrails of the hardest rocks. Aristotle, in 4 Phys. 6. offers almost the same argument, which he had collected from Democritus and Leucippus, whose opinions Epicurus followed. Δοκεῖ αὐτῷ, says Laertius in Democritus, speaking of that philosopher, τὰς ἀρχὰς εἶναι τοῦτ' ὄλων ἄτομος καὶ κενὸν. He believed atoms and void to be the principles of all things; but Epicurus more truly held, that the void affords nothing besides place and discrimination; and, indeed, though it be mixed with all bodies, yet it is in no wise to be admitted as any constituent part of them; and, therefore, Plutarch wittily expresses body by τὸ ὄν, and void by τὸ μηδὲν, as if he had said, body is something, void nothing, which sense we must be sure to bear in mind, and carry about with us, in order to comprehend a right and true meaning of our poet.

Ver. 412. In these thirteen verses is contained his second argument, by which he proves, that there is a void, because some bodies penetrate into, and distil through the things that seem to be most solid. Thus water soaks through stones; nourishment conveys itself into all the members of animals; the sap rises into the trunks and branches of trees; sounds pierce through walls; and cold penetrates the flesh and nerves, nay, even into the very bones; none of which could ever be, were there not between the particles of those solid things, some small void spaces, through which those bodies work their way.

Ver. 415. The third argument to prove a void takes up these ten verses, and is brought from the different weight of things that are of the same bulk and figure. And, indeed, why of two bodies of a like size and shape should one weigh more than the other, except because in one of them there is more of body to which weight is natural, and the other more of void, which has no weight at all.

Ver. 425. But because some, and among them Aristotle, lib. 4. Phys. 7. Cic. lib. 4. Academ, et Seneca, lib. 2. Nat. Quæst. 7. endeavour to elude the force of these arguments, by objecting, that there is no need of a void for the motion of bodies, since in a full, bodies may officiously give way to one another; because whatever body is moved, leaves a space to be possessed by that body, which it thrusts out of its place as water gives way to the fish that swim forward, and strait flows into the place they left. But Lucretius answers, that unless the water gave way, the fish could not move forward, nor open themselves a passage, or leave a space behind them; but the water could not give way, unless there were an empty place for it to retire to. And therefore we must allow a void mixed with bodies, or deny the possibility of all motion whatever.

Ver. 439. These six verses contain his fourth argument; which indeed is strong and valid. For if two smooth broad bodies meet, and are parted on a sudden, a void will be caused by their dissilition. For all manner of matter must have been compressed and driven away by the meeting of those two bodies, and therefore the space that opens between them, as they part, will be void of all body: for what can fill it up? Shall the air, or any subtle matter? Impossible: for how subtle soever you imagine the matter to be, you nevertheless leave a void, because that air or subtle matter, whatever it be, cannot be imagined to possess and fill up in one instant of time all the space that two such broad and flat bodies will disclose, and lay open at parting.

Ver. 445. Our translator has rendered this passage of his author a little obscurely: but the meaning of Lucretius is this. It may, says he, be objected against my last argument, that when these two flat bodies meet, the air that is intercepted between the surfaces of them is condensed, or at least lies hid in the cavities of the surfaces of those bodies; for no bodies are perfectly smooth. Now when those bodies separate, the intercepted air is rarified, and possesses and fills up all the space that is disclosed and laid open by the separation of those parting bodies. But Lucretius answers this objection thus, urging still his former assertion: When these two bodies are separated, a void must of necessity be made, (for this cannot be denied, since they did, at least in some places, touch one another), and that void must be filled up again with air; and thus the foregoing argument holds good, and proves what it advances. However, he insists yet farther; at least says he, that intercepted air is not totally condensed, or even grant that it be so, yet it follows from that condensation that there is a void: because it is absurd to pretend, that one same heap of matter can take up more room at one time than it does at another, unless there were a void. Besides, from such a contraction and condensation of the air, this absurdity will follow, that what was before granted to be full, must now be empty; and, *vice versa*, what was empty, full: And even let it be granted, that such a compression of the disjoined and loosened parts of the air could be effected; yet even that would even be extremely distressed without an interspersion of void; for otherwise all things would be full, solid, and mere bodies, whose properties no ways admitting of penetration, could not possibly suffer the least condensation. This is the sense of the text of Lucretius, which the English does not fully express.

Ver. 455. The poet here tells Memmius, that he could allege many other arguments to prove a void: but he leaves it to him to gather the rest out of those he has mentioned: For, says he, it is with philosophers as with hounds; and when they

have once fallen upon the ſure trial of truth, they eaſily find her out in her moſt ſecret receſſes.

Theſe are the arguments Lucretius has brought to prove the two principles of Epicurus, body and void: that the former is ſenſe ſufficiently declares; and the latter is here evidently proved by two arguments (for the other are eaſily eluded): the firſt is drawn from motion; the ſecond, from the parting of two flat ſmooth bodies.

Plutarch, in his ſecond book, de Placitis Philoſophorum, roundly tells us, οἱ ἀπὸ Θάλεω φυσικοὶ πάντες μεχρὶ Πλάτωνος τὸ κενὸν ὑπέλαβον. All the natural philoſophers from Thales to Plato denied a vacuum. But Laertius, in the life of Diogenes Apolloniates, who lived in the time of Xerxes, declares that he pronounced τὸ κενὸν ἄπειρον. Void ſpace is infinite. For the antiquity of that opinion I ſhall not be ſolicitous, though the reaſons are ſtrong, and obvious enough to make it ancient; for what is more obvious than motion? And how neceſſarily this infers a vacuum, is very eaſily diſcovered. Motion is change of place, which change is impoſſible in a plenum; for whatever endeavours to change its place muſt thruſt out other bodies; and ſo if the full be infinite, the proturſion muſt be ſo; if finite, the endeavour is in vain, and therefore all muſt be fixed in eternal reſt, and Archimedes himſelf with his engine would not be able to move the leaſt particle of matter. Cartes, in the ſecond part of his Principles, propoſes a ſolution, much applauded by his admirers; but a little attention will find it vain, and weak, and contradictory to his own ſettled principles. For when a body moves in a ſtraight line, it muſt give the body that lies before it the ſame determination with itſelf; and how this determination ſhould alter, and the motion prove circular, neither Cartes nor his followers have condeſcended to explain. But grant (though the former reaſon has proved it impoſſible), that there may be ſuch an attending circle of ambient air, yet unleſs it be perfectly mathematical (a thing very hardly ſuppoſed), each particle will acquire another attending circle, and ſo not the leaſt fly ſtir her wing, unleſs the whole univerſe is troubled. To this may be added, that it is inconceivable how the moſt ſolid matter (for ſuch is his firſt element) can ſo ſoon altar its figure, or be ſo eaſily diſſolved, and fitted to the different ſpaces that lie between the little globules. We ſee gold and adamant reſiſt the roughest ſtroke; it is pains and conſtant labour that muſt diſſolve them; how then can we imagine this element will yield? But indeed Cartes propoſes his ambient attending circle, as the only way to ſolve the phenomenon of motion in a full, which he thought he had ſufficiently before evinced: but his arguments are weak and ſophiſtical. For, in the firſt of his Meditations, he never takes notice of impenetrability, in which the very eſſence of matter conſiſts: and in the ſecond part of his Principles, he miſtakes the notion of a void, and confounds ſubſtance and body. Take his own words: "Vacuum acem philoſophico more ſumptum, h. e. in quo nulla planè ſit ſubſtantia, dari non poſſe manifeſtum eſt ex eo quod extenſio ſpatii non differt ab extenſione corporis: nam cùm ex eo ſolo quòd corpus ſit extenſum in longum, latum, et profundum, rectè concludamus illud eſſe ſubſtantiam, quia omnino repugnat ut nihil ſit aliqua extenſio: idem etiam de ſpatio, quod vacuum ſupponitur, concludendum eſt; quod nempe cum in eo ſit extenſio, neceſſario etiam in ipſo ſit ſubſtantio:" It is manifeſt, that a void, taken after the manner of philoſophers, that is to ſay, in which there is evidently no ſubſtance, cannot be granted: becauſe an extenſion of ſpace, does not differ from an extenſion of body; for ſince we rightly conclude body to be a ſubſtance, for this reaſon only, becauſe it is extended into length, breadth, and depth, it being abſolutely contradictory to ſenſe and reaſon that there ſhould be an extenſion of nothing. We muſt likewiſe conclude the ſame of ſpace, which is ſuppoſed a void; that is to ſay, that ſince there is an extenſion in it, there muſt be a ſubſtance in it likewiſe. For void doth not exclude all ſubſtance, but only body; and ſubſtance and body, are not convertible in the full latitude of an univerſal propoſition.

Secondly, It is evident, that when two ſmooth flat bodies are ſeparated by a perpendicular force, the ambient air cannot fill all the ſpace at once; and therefore there muſt neceſſarily be a void, and this Mr. Hobbes, a great pleniſt, in the ſecond of his Ten Dialogues, freely confeſſes would follow, if the bodies were infinitely hard; but ſince nature knows no ſuch, any bodies, though perfectly ſmooth, may be ſeparated by a force that overcomes their ſolidity, and yet no vacuum enſue. A pretty invention, but extremely diſagreeable to the phenomenon: for in the exhauſted receiver, where there is no prop of under air left to ſuſtain it, the lower marble falls by its own weight. Mr. Hobbes adds another argument, which is of no force againſt the vacuiſt, but overthrows his own notion of a material deity: theſe are the words. He that created natural bodies, is not a fancy, but the moſt real ſubſtance that is; who being infinite there can be no empty place were he is, nor full where he is not.

Now the other reaſon of Lucretius are inſufficient; for that drawn from the different weight of bodies, would infer immenſe vacuities in the air, which is two thouſand times lighter than gold (ſee Gliſſon. de Subſtantia, c. 26.) and that from rarefaction and condenſation is not cogent, though it is the moſt rational opinion, and more agreeable to the mind of Ariſtotle, than that which is commonly propoſed as his, in Categoria Qualitatum, Πυκνὸν μὲν καὶ τῷ τὰ μόρια συνεγγὺς εἶναι ἀλλήλοις, μανὸν δὲ τῷ διεστάναι ἀπ' ἀλλήλων. That is denſe, between whoſe parts there is a cloſer; that rare between whoſe particles there is a looſer connection.

Ver. 472. In theſe ſeven verſes he briefly recapitulates what he has been proving in the former arguments: and, to confirm them, adds, that ſenſe itſelf evinces the truth of them; and that nothing exiſts of itſelf beſides body and void. Thus, too, Epicurus in the epiſtle to Herodotus, τὸ πᾶν ἐστι τὴ μὲν σῶμα, τῇδε κένον· the ALL is partly body partly void. And Cicero, in 2. de Nat. Deor.

"Omnia quæ ſecundum Naturam Corpus & Inane docet Epicurus." Epicurus teaches that all things in nature are body and void. And this doctrine of his, though particularly deſigned againſt thoſe who take accidents into the number of real beings, yet has a farther reach, and endeavours to overthrow the belief of immaterial ſubſtances; for an Epicurean perception being nothing elſe but imagination, as ariſing from the ſtroke of a piece of matter, he had no way left to get a notice of any ſuch being, but by ſome deduction from thoſe appearances, of which his ſenſes had aſſured him: thus, from motion he infers that there is ſpace; and that being once ſettled, he proceeds to the ſolidity of atoms. Now, though the very ſame method, with leſs attention, had forced him to acknowledge ſubſtances immaterial, and to have made the univerſe more complete by another kind of beings; yet it was hard to thwart the genius of his maſter, to ſtart new fears that might diſturb his ſoft hours, and amaze himſelf with melancholy thoughts of a future ſtate. And therefore, to ſilence the clamours of his reaſon (for he could not but ſee ſuch plain conſequences), he ſecures motion as a property of matter neceſſarily reſulting from weight; and this I take to be the baſis of the Epicurean atheiſm, which once removed that tower of Babel, which now riſes ſo proudly as to brave Heaven, muſt be ruined and overthrown. For, if matter as ſuch, is deſtitute of that power, the inference is eaſy, that there muſt be ſome other being to beſtow it. This cannot be ſpace: and, therefore, another kind of ſubſtance is required; and hence follows all that train of conſequences, of which the Epicureans are ſo afraid. For he that firſt moves the matter, has no reaſon to ceaſe from his operation; and ſo muſt ſtill govern and direct it. And Providence is nothing elſe but an orderly preſervation of that frame which it firſt raiſed: and, if there is ſuch a director, how eaſily it follows, that he would diſcover his pleaſure to man, and preſcribe rules how he may be happy? And this makes a fair way for revealed religion; and that neceſſarily infers a future ſtate. This, methinks, is a conſiderable advantage of natural philoſophy, that it can proceed from ſuch ſenſible things, and plainly ſhows us the τὸ ἀόρατον τοῦ Θεοῦ, the inviſible things of God, in theſe his viſible operations. Now, that weight is not a property of atoms, will be afterwards demonſtrated; and ſo another ſort of beings proved againſt the Epicureans.

Ver. 480. In theſe ſix verſes, he proves, that nothing exiſts of itſelf beſides body and void: becauſe, whatever is, is endowed with ſome quantity, great or ſmall. Now, if it can be touched, and hinders motion, it muſt be body; if it cannot be touched, and does not obſtruct motion, it muſt be void. Therefore, there is no third nature; and whatever is, is body or void

Ver. 486. In theſe ſeven verſes, he again proves, that nothing exiſts of itſelf but body and void: for, whatever is, either has a power of acting on another; or may ſuffer from another, that is to ſay, it muſt be ſubject either to action or to paſſion. And that muſt be a body (for whatever acts or is acted on, touches, or is touched), or elſe it muſt be that in which things are contained, and in which they are made and moved; and that is the void. Therefore, there is no third kind of things that can be perceived by the ſenſe, which teaches that body is, or comprehended by reaſon, which demonſtrates that void is.

Ver. 493. But, foraſmuch as many things are ſaid to be, beſides body and void; as war is, peace is, heat is, &c. Leſt errors ſhould ſpring and get footing from this common way of ſpeaking, he obſerves, in theſe ten verſes, that all ſuch things are either conjuncts, or events of body and void. Conjunct (σύμπτωμα, or proper accident), is what cannot be abſent without the deſtruction of the ſubject: ſuch is heat in fire, moiſture in water, &c. But event (συμβεβηκὸς, or common accident) is what may be abſent or preſent, without the ruin or deſtruction of the ſubject; as war, poverty, concord, &c.

Ver. 503. Some, who were not offended that poverty, war, peace, &c. ſhould be ranked among the number of events, had a nobler idea of time. Pythagoras, Heraclitus, and others, taught that it is a body; but the Stoics believed it to be incorporeal. To all theſe Lucretius oppoſes the opinion of Epicurus, in theſe ſix verſes, which Gaſſendus thus explains: Time is an event attributed to things by the mind or thought only, according as they are conceived to perſevere in the ſtate in which they are, or to ceaſe from it, and to preſerve a longer or ſhorter exiſtence, and to have it, to have had it, or to be to have it. Now, Epicurus, becauſe he ſaw that time is ſomething beſides body and void, aſſerted, that it does not exiſt of itſelf; nor as a conjunct or event, but as the chief event of events; as Laertius poſitively ſays, lib. 10. He taught, therefore, that time exiſts not in reality, but only in the mind; and, therefore is, as I may call it, a being of the underſtanding. Hence Ariſtotle, 7. Metaphyſ. 1. defines time, "Numerus, qui abſque ratione numerante, nullus eſt," which is as much as to ſay, that it has no exiſtence but in the underſtanding. Now, the reaſon why Epicurus held time to be an event of events, or an accident of accidents, was, becauſe it depends upon days, nights, hours, paſſions, exemption from paſſions, motions and reſt: for, as Empiricus ſays, adv. Phyſ. lib. 22. a day, a night, an hour, paſſions, exemption from paſſions, motions and reſt, are accidents to which time is adventitious only: for, day and night are accidents of the ambient air; and day happens from the illumination of the ſun; but night from the privation or abſence of the ſolar light. An hour, ſince it is a part either of the day or of the night, is likewiſe an accident of the air, as day and night are. But time is coextended with each day, each night, and each hour. Paſſions too, and impatibility or exemption from paſſions, that is to ſay, pains or pleaſures, happen to us: and, therefore, are not ſubſtances, but accidents of thoſe perſons who are affected with a ſenſe of them, that is to ſay, either with pleaſure or pain. Now, even

theſe accidents happen not without time. Moreover, motion and reſt are accidents of bodies, and nor without time neither: for we meaſure by time the ſwiftneſs and ſlowneſs of motion, and the length and ſhortneſs of reſt. Therefore, ſince in common acceptation, time is divided into three parts, the paſt, the preſent, and the future; the ſenſe, that is to ſay, the reaſon or underſtanding of the mind, comprehends all thoſe parts of time from the things themſelves: that is, we know the paſt time by things that are paſt, the preſent by the preſent, and the future by things to come. And without the motion or reſt of things, we can have no notice of time, ſince it is ſomething that is perpetually flowing. For the paſt time has already flowed away, the preſent is flowing, and the future is not yet flowed to us. Therefore, time exiſts not of itſelf. Thus Empiricus, whoſe text, for brevity's ſake, I have omitted And hence we ſee why, as Cicero 1. de Invent. ſays, "Difficile eſt Tempus dennire," it is difficult to give a definition of time: and St. Auſtin, 2. Confeſ. 24. "Si nemo ex me quærat, quid ſit Tempus, ſcio; "ſi quærenti explicare velim, neſcio." I know what time is if no man aſk me: but when I would explain it to any man that aſks me, I know not what it is. In a word, time does but meaſure other things, and neither works in them any real effects, nor is itſelf ever capable of any. And, therefore, what is commonly ſaid, that time is the wiſeſt thing in the world, becauſe it produces all knowledge; and that nothing is more fooliſh than time, which never retains any thing long, whatever is learnt to-day is often forgot to-morrow. And again, that ſome men ſee proſperous and happy days, while the days of others are miſerable. In all theſe and the like expreſſions, what is ſaid of time is not verified of time itſelf, but agrees properly to the things that happen in time; and which, by reaſon of ſo near a conjunction, either lay their burden on the back, or place their crown on the head of time: nay, the very opportunities which we aſcribe to time, do in reality adhere to the things themſelves with which time is joined. And, as for time itſelf, it neither cauſes things, nor opportunities of things, though it compriſe and contain them both.

Ver. 504. By fancy he means memory; for by memory we comprehend things paſt, and reaſon of things to come. Take away memory, the time paſt is nothing, and the future is not yet. And the preſent too, unleſs we remember and think of it, neither is, nor has any more a being, than either of the other two.

Ver. 509. I know not whether I ſhall be able to expreſs my meaning, ſo as to make myſelf, or this paſſage of Lucretius be plainly underſtood; but I will do the beſt I can. The poorneſs of the Latin tongue, obliges to uſe the verb, "Sum, es, eſt," &c. I am, thou art, he is, &c. in relating of things that happened in time paſt; when we would tell any thing that was done. Thus if any one ſhould ſay, "Victum eſt Ilium," Troy is conquered: ſome quibbler might preſently anſwer, Is conquered? therefore it is. In my opinion, this paſſage of our author, muſt, of neceſſity, be underſtood in this manner. Lucretius, therefore, in theſe eight verſes, ſolves this captious ſophiſm, occaſioned by the common way of ſpeaking, when we ſay that things paſt are done. For example, ſays he, The rape of Helen, and the deſtruction of Troy, are not at this time, nor do exiſt in themſelves as body and void do, but are, as it were, the events of things, of perſons, or of places, for the time paſt has ſwept away thoſe men, of whom theſe actions are events; whence it follows, that the time paſt is not any thing in itſelf, abſolutely and independent from things or countries, nor properly an event, but an event of events, as Epicurus himſelf expreſsly ſays, in the tenth book of Laertius. But whoever is of opinion, that theſe are dialectic trifles, is certainly much in the right: nor would Lucretius have condeſcended to amuſe himſelf with them, had not the Stoics, a moſt impertinent race of men, between whom and the Epicureans there was a mortal enmity, compelled him to it.

Ver. 510. Helena was daughter of Tyndarus, the huſband of Leda, who brought forth two eggs at a time: out of one of them, which ſhe had conceived by Jupiter, in the ſhape of a ſwan, were taken Pollux and Helena; out of the other, which ſhe had conceived by Tyndarus, Caſtor and Clytemneſtra But Horace, though contrary to the common opinion, ſays, that Caſtor and Pollux came out of the ſame egg.

Caſtor gaudet Equis: ovo prognatus eodem
Pugnis——— *Sat. 1. l. 2. v. 26.*

Helena was very beautiful, and married to Menelaus king of Sparta. See the note on v. 519.

Ver. 517. He once more falls foul upon the ſophiſm: and in theſe ten verſes makes it appear, that things done in times paſt do not exiſt of themſelves, but are only events of body and void. For, if there had formerly been neither body nor void, thoſe things had never been done.

Ver. 519 *Pous.*] He was the ſon of Priamus king of the Trojans, and Hecuba; who, while ſhe was with child of him, dreamed that ſhe was delivered of a flaming torch: and the interpreters of dreams, being conſulted upon this occaſion, anſwered, that the burden ſhe carried in her womb, would be the cauſe of the deſtruction of Troy: upon which Priam gave orders, that the child as ſoon as born, ſhould be expoſed in the woods: but his mother took care to have him brought up privately in Mount Ida. At length, it being diſcovered who he was, by his brother Hector and his relations, he was ſent into Greece, where he was received at the court of Menelaus king of the Spartans, whoſe wife Helena he took away by the favour of Venus, and brought her to Troy. This was the cauſe of the Trojan war, and conſequently of the fall of that city. He was likewiſe called Alexander, by which name Lucretius here mentions him. He killed Achilles in the temple of Apollo the Thymbræan; and was himſelf ſlain not long after by Philoctetes.

Ver. 520. *Helen.*] Of whom ſee the note on v. 510.

Ver. 521. This ſtory is too well known to need any explication; but it was in the night-time that the Greeks went out of the belly of that wooden horſe, and ſet fire to Troy, when the city was buried in ſleep and wine, as Virgil expreſſes it, Æn. 2. v. 265.

Invadunt Urbem Somno Venoq. ſepultam.

Ver. 527. Having demonſtrated the two principles of nature, body and void; and having explained likewiſe the nature of the void, he comes now to diſpute more at large concerning bodies, which he divides into ſimple and compound: and in theſe twenty-three verſes, farther teaches, that the ſimple bodies, or the principles of the compounds are moſt ſolid, perfectly full, and contain no void whatever: for which reaſon they can never be broken, nor divided by any force or violence how great ſoever it be. At the ſame time he owns there is need of very ſtrong and convincing arguments to perſuade men to believe that any bodies whatever are perfectly ſolid and full; ſince we know for certain, that gold, braſs, ſtones, and all the other things that are thought to be moſt of all ſolid, are porous, and pervious to other bodies.

Ver. 529 Sextus Empiricus declares, that Epicurus hated the mathematics, and we may believe Lucretius follows his maſter, ſince, in his diſputes concerning the indiviſibility of atoms, he propoſes the popular argument againſt the known and demonſtrated property of quantity, infinite diviſibility. for as long as mathematics can boaſt any certainty, that muſt be acknowledged to be ſuch.

I ſhall not engage in this unneceſſary controverſy, though I believe thoſe common arguments againſt infinite diviſibility are empty ſophiſms, and a little attention (as whoever conſiders the method in which they are propoſed, muſt obſerve) will find them full of contradictions, and founded on abſurdities; for the indiviſibility of an atom proceeds not from the littleneſs, but the ſolidity: for ſince the atoms are of different figures, ſome triangular, ſome ſquare, &c. it is abſurd to imagine, that the mind, by which only atoms are perceived, cannot fancy a diagonal in the ſquare, or a perpendicular erected to the baſis of the triangle: yet from this mental to the phyſical diviſibility of an atom (as Cartes proceeds) is extremely weak and deficient. That there are ſome ſolid particles Lucretius has evidently proved: Theſe Democritus called πρῶτα μέγεθη. firſt magnitudes, Epicurus, Ἀτόμους. διὰ τὴν ἄλυτον στερρότητα. Atoms from their indiſſoluble ſolidity, but as Dionyſius in Euſebius Præp. lib 14. cap. 7. obſerves, ποσῶτον διεφόνησαν ὅσον ὁ μὲν, ἐλαχίστας πάσας, καὶ διὰ τοῦτο ἀνεπαισθήτους ὁ δὲ Δημόκριτος, καὶ μεγίστας εἶναί τινας ἀτόμους ὑπέλαβεν, they ſo widely diſagreed, that Epicurus made all his atoms to be leaſts, and therefore inſenſible, but Democritus ſuppoſed ſome of his to be very great: Heraclides, Ὄγκους, tumid or maſſy But none of all his reaſons prove them unchangeable For, if ſolidity, i. e. immediate contact were a neceſſary cauſe of indiviſibility, it would follow, that no piece of matter could be divided, becauſe the parts that are to be ſeparated enjoy an immediate contact, and that contact muſt be between ſurfaces as large as atoms, or, at leaſt, ſome of their fancied parts. Beſides, let two hard bodies perfectly ſmooth be joined together in a common ſuperficies, parallel to the horizontal plain, and certain experience will aſſure us, that any force that is able to overcome the reſiſtance of the ſupporting air, will eaſily divide them. His other arguments are all unconcluding: for ſuppoſe the ſeeds not eternal, i. e. diviſible, it is a ſtrange inference, therefore beings riſe from nothing, ſince any body, and therefore one of theſe ſolid particles is not reduced into nothing by diviſion, but only into ſmaller parts: and the weakneſs of the reſt is ſo obvious, that I ſhall not ſpend time in declaring it.

Ver. 550. He has proved before that there are two principles of things, body and void, and that they are of very different natures. Now, who can deny, ſays he, but that theſe entirely different things ſubſiſt of themſelves. wholly diſtinct and apart from one another. For it is abſurd to ſay, that where void is, there body is likewiſe, and ſo on the contrary: from whence he infers, in theſe eight verſes, that the firſt bodies are perfectly ſolid and full; becauſe they ſubſiſt where there is no void.

Ver. 558. In theſe ſix verſes he aſſerts, that in all compound bodies, which he here calls *genita*, begot or engendered, there are little void ſpaces intermixed: and then he adds, that the firſt, or ſimple bodies, muſt be perfect ſolids, becauſe the maſs of thoſe ſimple bodies contains thoſe voids: and what can contain a void but a ſolid, unleſs any one will imagine that a void can contain a void?

Ver. 564. In theſe two verſes he teaches, that theſe ſolids cannot be broken by any force or violence, and therefore are indiſſoluble and eternal.

Ver. 566 Here he confirms the ſolidity of his atoms by another argument, contained in theſe eight verſes. For as the whole univerſe would be a full, if there was no void, which he has already proved to be abſurd ſo, on the other hand, if nothing were full, and conſequently perfectly ſolid, the ſame univerſe, immenſe as it is, would be all an empty ſpace; which would be no leſs incongruous and abſurd. Epicurus ſpeaks to the ſame effect in Plutarch de Plac Philoſoph lib. 1. cap 3 Ὅλη δέ ἐστιν ἄτομος στερρά, τε γὰρ ἰσχεῖα αἰεὶ ὄντα. καὶ ἀπὸ τοῦ κενοῦ διορίζόμενα.

Ver 574. Having demonſtrated the ſolidity of atoms, he, in theſe ten verſes, aſſerts their eternity: for ſolids are perfectly full, contain no void, and, therefore, are not ſubject to diſſolution; becauſe every diviſible and diſſoluble body is ſuch, by reaſon of the void that is intermixed in the maſs of it, and that intercepts and breaks off the communication between its parts, and thus gives an entrance to ſome external power and force to ſeparate and disjoin them: but whatever is indiſſoluble and indiviſible is ſuch, becauſe it is perfectly full and ſolid, and becauſe it has no void, which might ſubject it to a ſeparation and diviſibility.

its parts. Epicurus to Herodotus, defines an atom, Πλήρη τίνα φύσιν, τὰ ἐκ ἔχοντα ὅπη, ἢ ὅπως διαλυέσθαι.

Ver. 564. To prove the eternity of his ſeeds yet more fully, he brings another argument from that common principle of the Epicureans, that nothing is made of nothing, and that nothing is reduced into nothing. This argument, contained in ten verſes, is to this effect. If the firſt ſeeds of things were diſſolved and periſhed, they would fall into nothing; for there are no principles prior to the firſt, into which they can be reſolved and thus the things that are daily born would ariſe from nothing. It muſt, therefore, of neceſſity be granted, either that the ſeeds are eternal, or that things proceed from nothing: and this the philoſophers held to be the greateſt abſurdity that any man could advance.

Ver. 592. In theſe two verſes, he concludes to this purpoſe: The firſt ſeeds of things are eternal, becauſe they are ſolid, and are ſolid, becauſe they are ſimple; for, unleſs they were ſimple, they would not be ſolid, becauſe all compound bodies have a mixture of void: unleſs they were ſolid, they would not be eternal, becauſe they might be diſſolved; and unleſs they were eternal, all things muſt have been produced from nothing, and would return into nothing. The impoſſibility whereof he has already demonſtrated.

Ver. 594. He proceeds, in theſe thirteen verſes, to ſhow that there is a certain and definite time appointed for the growth of all things; and, therefore, that the ſeeds, by which things are increaſed, are of a certain fixed magnitude, and indiſſoluble, nor can be broken to pieces: for, otherwiſe, having been broken and waſted for ſo vaſt a tract of time as is already paſt, they would have been reduced into parts ſo extremely minute, that they could never in any length of years, and therefore not in a few, be reunited and made again into one maſs. And this any man will acknowledge, who reflects, that it is a much eaſier taſk to divide and diſſolve things, than to renew and rejoin them together.

Ver. 607. He confirms the ſolidity of his atoms in theſe nine verſes. Now, becauſe it is manifeſt, that there are in nature hard and ſoft bodies, he declares, that if the principles are allowed to be ſolid, not only hard things may be made of them, as it is moſt evident they may, but ſoft things likewiſe; becauſe whatever is compounded of ſuch ſeeds, may become ſoft by the intermixion of void: but if the principles themſelves are allowed to be ſoft, then, indeed, ſoft things may be made of them; but no reaſon can be given, how any thing ſhould be hard, becauſe there would be no ſolidity in their compoſition: and ſolidity alone is the foundation of all hardneſs.

Ver. 616. In theſe fourteen verſes, Lucretius confirms the ſolidity of his atoms by another reaſon, taken from the manifold and never-failing conſtancy of nature; as well in always carrying on of animals to certain bounds of ſtrength, as in imprinting likewiſe always upon them the ſame diſtinguiſhing characters and marks of their reſpective kinds: which, indeed, ſhe could not do; but that ſhe makes uſe of principles, that are firm and conſtant, and therefore not obnoxious to diſſolution or change; for whence can proceed this ſo obſtinate conſtancy in ſeeds that are daily changed? And were they ſo indeed, neither men, nor any other animals, would retain the ſame uſual ſhapes; and ſome would enjoy a vaſt ſtrength and length of days, while others of the ſame kind, would be puny and ſhort-lived; we ſhould frequently ſee white crows, and ſometimes black ſwans.

Ver. 630. In theſe fourteen verſes, he employs another argument; which is, indeed, ſomething refined, and not underſtood by many. Seeds or atoms, according to Epicurus, are endowed with quantity; but all quantity has an extreme: now that extreme is the leaſt thing that can be conceived; nor does it ever ſubſiſt ſeparated, and diſjoined from the other parts; and of theſe leaſts the whole maſs of each atom is compoſed: but ſince the conſtituent parts cannot ſubſiſt when they are ſeparated from one another, they cannot be divided from one another; for whatever body can be disjoined from another, muſt be able to preſerve its being without the help and aſſiſtance of the body, from which it is parted: every ſeed, therefore, is of neceſſity ſimple and indiſſoluble; becauſe it conſiſts of parts, even the leaſt that can be conceived; and which no art or ſtrength can diſjoin, becauſe no art or ſtrength can reduce into nothing. For nothing goes into nothing.

To make this yet more eaſy to be underſtood, we muſt know, that the Peripatetics and Epicureans differed in many things, but chiefly in their opinions concerning theſe leaſts. For the Peripatetics held, that every compound body may be divided into infinite parts; and that no part can be made ſo ſmall, but that it may ſtill be made ſmaller. But the Epicureans believed, that no compound body can be divided into ſuch minute parts as may always be made leſs; but may, indeed, be divided into parts ſo ſmall, as cannot be divided any more; and conſequently no leſs parts can be made of them; ſo that they fix an end, and preſcribe bounds to the diviſibility. Thus we ſee, that the Epicureans held that every body may be leſſened to a point that can neither be ſeen, nor divided any more; but that is inviſible and void of parts: and this is what they call a leaſt, which is the firſt and the laſt part in all things; that is to ſay, is the firſt principle that nature reſerves for the creating and renewing of things, and likewiſe a ſomething laſt, into which they are reſolved: Now, becauſe the firſt principles are theſe leaſts, Lucretius argues, that the firſt principles are eternal, ſolid, and moſt ſimple.

Ver. 640. This muſt not be underſtood, that the atoms are compoſed of leaſts, as of parts, as if they were bodies compounded of an aggregation and connection of things, in like manner as all the other things of nature conſiſt of a coalition of atoms; but only in ſuch a wiſe, that they cannot by any means whatever be broken or diſſolved. We muſt, therefore, take care not to miſtake our

poet's leaſt for ſuch a mathematical point, as is repreſented without magnitude; which his principles enjoy, and figure likewiſe; and that, too, as infinitely variable, as the Peripatetics is diviſible. And theſe apices, or leaſts of things, may, perhaps, upon ſerious and ſpeculative diſquiſition, prove a notion to be hardly denied, whether phyſically or mathematically taken, as Gaſſendus demonſtrates at large; where he ſpeaks, "de non eſſe Epicuro magnitudinem infinitè dividuam," to which I refer the reader.

Ver. 644. He ſaid, in the laſt place, that ſeeds are compoſed of parts ſo ſmall, that they can ſcarce be conceived. But that ſuch leaſts are, he confirms in theſe twelve verſes, by that moſt known argument which all the philoſophers make uſe of. And here we may obſerve by the way, that Gaſſendus, in his explication of theſe verſes, performs the part of a maſter, rather than of an interpreter, and takes upon him to blame and correct the opinion of Lucretius, rather than to explain it: for if there be any force in this argument, if the words themſelves have any meaning, Lucretius evidently meant that theſe leaſts, of which he compoſes his principles, are mathematical. For that the atoms of Epicurus are endowed with magnitude, and, therefore, have parts, none can oppoſe, but they who are ſtrangers to his philoſophy, and do not know that Epicurus ever writ περὶ τῆς ἐν τῷ ἀτόμῳ γωνίας. This, then, is the meaning of Lucretius. The firſt ſeeds are indiſſoluble and eternal, not becauſe they are void of parts, but becauſe they are endowed with ſolidity; and, therefore, cannot be broken to pieces nor torn aſunder, or divided by any force whatever. If any one deſires to know what theſe parts are, the anſwer is, that theſe parts have no parts, and that they are mathematical. For unleſs ſuch leaſts be granted, there would be no inequality between the greateſt and the ſmalleſt thing; becauſe either of them would contain infinite parts alike, and thus both of them would be infinite: than which what can be more abſurd? For this reaſon Arceſilas laughed at the Stoics in their ſchools, about the leg of a man that was cut off, putrified, and thrown into the ſea, which, they aſſerted, might be ſo reſolved, and mixed with the waters of the ſea, that not only the fleet of Antigonus might ſail through that leg, but that even the twelve hundred ſhips of Xerxes, and the three hundred galleys of the Greeks might maintain an engagement in it. This, too, makes Plutarch deride Chryſippus, for believing that one drop of wine may be mingled with all the water of the ſea; and that a wing of the leaſt fly may be coextended throughout the whole ſpace of the ſky.

Ver. 656. The poet having explained the meaning of a mathematical leaſt, returns to his phyſical leaſt, which he imagines to be indiſſoluble and eternal; not becauſe of its exility, but by reaſon of its ſolidity. For if nature did not attain, ſays he, to the extremeſt reſolution; if ſhe did not divide and leſſen even to the minuteſt mites; the matter, of which things are compoſed, would be improper, and unfit to undergo all thoſe mutations, and to receive all thoſe figures, to which it muſt be ſubject and expoſed: for thoſe minute bodies, if they were connected of ſeveral parts, and contained any void within themſelves, could not, in the opinion of Epicurus, have an equal weight, nor an uniform motion: they would awkwardly, and, as it were with an ill will, obey any foreign and exterior ſtrokes; and, therefore, could in no wiſe be connected together.

Ver. 662. In theſe ſix verſes, he concludes for the ſolidity of his atoms, from what he has proved already. For he has demonſtrated, either that there muſt be ſome ſeeds from all eternity undiſſolved and unbroken, or that no thing whatever could have been produced, or at leaſt muſt have been produced of nothing. That things are produced, the ſenſes themſelves evince; and all men allow, that nothing comes from nothing: therefore, if there be no ſolids, which cannot be broken nor diſſolved, where can we find thoſe bodies, that have from all eternity remained undiſſolved and unbroken? For frail atoms, which are obnoxious to ſuch an infinity of ſtrokes and blows, in ſo long a ſpace of time, muſt of neceſſity have been diſſolved.

Ver. 668. Having hitherto laid down and eſtabliſhed the principles of Epicurus, he now attacks the opinions of other philoſophers; and, diſtributing all his arguments into two heads, he firſt falls upon thoſe, who believe and teach that but one of the elements only is the principle of all things: and, in the next place, argues againſt thoſe who aſſert more. Among the firſt he has ſingled out Heraclitus, who held fire to be the principle of all things, and beſtows ſixty-two verſes to confute his opinion: for he takes it for granted, that whatever arguments he brings againſt him, will hold good againſt the others likewiſe; ſince nothing can be oppoſed againſt his doctrine of fire, but with what equal reaſon will be concluſive, as to the air, or any other of the elements. And, indeed, ſays Gaſſendus, whoever weighs this matter fully, will believe this variety of opinions to be a mere game; for though the authors of them aſſert different poſitions, yet they only beat about the buſh, uſe a great circumſtance of words, and, at length, fall all of them into the ſame thing: for let any man make choice of which of the elements he thinks fit; he will get neither more nor leſs, nor be able to make good his opinion any otherwiſe than any other who has pitched upon any other of the elements; becauſe, whoever has but one of them, has nothing to do, but to condenſe and rarefy that; and he will preſently have all the reſt; ſo that it ſignifies nothing, whether this or that be firſt made uſe of.

Ver. 669. *Heraclitus.*] He was ſon of Blython or Heracion, and born at Epheſus in Ionia, 504 years before the birth of Jeſus Chriſt. He flouriſhed about the 69th Olympiad, in the reign of the laſt Darius. "Εδοξεν αὐτῷ πάντα ἐκ πυρὸς συνεστάναι, καὶ εἰς τοῦτο ἀναλυέσθαι. *Laert.* He taught that all things are made of fire, and reſolved again into fire. This was that philoſopher, who is reported to have wept ſo often at the vanities of other men; which, never-

theleſs, ſome ſay he did but diſſemble, out of an exceſs of pride and diſdain, being ſelf-conceited, and believing himſelf the only perſon in the world for profoundneſs of learning and wiſdom.

Ver. 669. *Vain Greeks.*] For Heraclitus had many interpreters, and a world of followers, who were called Ἡρακλειτείους, Heraclitians. *Laert. in Vit Herac.*

Ver 670. He writ many things in Greek verſe, and is often cited by Ariſtotle: but in all his writings he affected obſcurity. "De induſtria et conſulto occultè dixit Heraclitus." ſays Cicero, De Fin lib 2 Heraclitus ſtudied and affected to ſpeak obſcurely. And, in the third book of the Nature of the Gods, he ſays, that he would not be underſtood: "intelligi noluit." Hence he was ſurnamed Σκοτεινὸς, obſcure And in this ſays Menagius, and Laert Vit Heracliti, he imitated nature: Φύσις γὰρ κατ' Ἡράκλειτον κρυπτόσθαι φιλεῖ. For nature, according to Heraclitus, takes delight in being hid. *Themiſt. Orat.* 12.

Ver. 675. D'Avenant, ſpeaking of the ſchoolmen, ſays, that

With terms they charm the weak, and poſe the wiſe.

Ver. 676. In theſe ſeven verſes, he propoſes his firſt argument againſt Heraclitus: it cannot, ſays he, be conceived, how ſo great a variety of things, nay, how one thing only, that is endowed with different parts, ſhould be made and conſiſt of one ſimple and uniform principle: ſuppoſe it fire; yet, unleſs you mix ſome other things with it, you can make nothing of it but fire, for in what manner ſoever its parts are tranſpoſed and blended together, it will be always the very ſame thing, by reaſon of the ſameneſs of the nature of all its parts. And that none may eſcape by the ſubterfuge of condenſation and rarefaction, he confeſſes that it may be underſtood, how a thing may become more warm by the condenſation of the hot parts of fire, and leſs warm by their rarefaction; and that the reaſon of this is obvious: but that any thing ſhould become cold, nay, and moſt cold too, as we find many things in nature to be, from fire only, how can that be underſtood?

Ver. 679 Heraclitus, as we find in Laertius, to make good his hypotheſis, pretended that fire, by being condenſed, grows moiſt, and thus becomes air; that the air, by compreſſion, becomes water; that the water, by condenſation, is turned into earth, &c. But all this, ſays Lucretius, ſignifies nothing; for the more the fire is condenſed, the more it is fire. And the rarefaction will avail nothing; for rarefy fire as much as you will, it will ſtill be fire.

Ver. 683. In theſe twelve verſes he inſiſts, that they who favour the opinion of Heraclitus, cannot fly to condenſation and rarefaction, to juſtify their belief, becauſe they admit not a void, without which nothing can be made rare or denſe; as he has proved above, in ver. 450.

Ver. 695. But leſt there ſhould ſtill remain ſome means to eſcape and elude this argument, by pretending that the fire is extinguiſhed, and changed into another body, he urges, in theſe eight verſes, that that cannot be, unleſs it be granted that the fire retreats into nothing; becauſe a ſimple and uncompounded thing, as that element ought to be, if it is indeed the firſt and only matter of which all things are made, cannot be changed, except it totally periſh. For a compound body may be changed in ſuch a manner, that, ceaſing to be what it was, it may leave its remaining part; which having loſt its former ſtate, may take up and put on a new one; but a ſimple, or uncompounded body, cannot utterly loſe its nature; but it entirely dies: nor is it capable of any alteration, without a total perdition.

Ver. 703. He concludes in theſe fifteen verſes, that if any thing were to be generated out of the extinguiſhed fire, there muſt of neceſſity remain ſomething of it, which, having loſt and laid aſide the form of fire, may take up, and put on the form of that generated thing. But it is moſt evident, that it is the common matter, which Lucretius ſuppoſes to be uncorruptible corpuſcles, that by the various addition, detraction, and tranſpoſition of themſelves, can take up, and appear now in the form of fire, and now of any thing elſe. But to prove, that theſe corpuſcles are not fiery in their own nature, he gives this convincing reaſon: becauſe if they were, neither the addition, detractions or tranſpoſition would produce any effect: For if that nature of fire remain ſafe and untouched, nothing but fire can be made of it. Then he explains the opinion of Epicurus, that certain corpuſcles, which have no form perceptible to the ſenſe, are the principles of things; and that, from them meeting and conjoining in various manners, fire and all other things proceed.

Ver. 718. In theſe eight verſes, he appeals to the certainty of ſenſe, to confirm that all things do not conſiſt of fire. Heraclitus confeſſes, that he knows fire by the help of his ſenſes; and Lucretius urges that the ſenſes do as plainly perceive many other things of a quite different nature from fire, as they do fire itſelf; and that we ought to give always the ſame, or never any credit at all to the ſenſes. Then he briefly explains the opinion of Epicurus concerning a criterion. Of Heraclitus, ſee ver. 669.

Ver. 711. Heraclitus never denied, but that ſome things beſides fire appear, but he never granted them to be. This opinion Lucretius oppoſes, and therefore urges, that other things beſides fire truly are, and that even the ſenſes diſcover, and certainly know them to be.

Ver. 720. For Heraclitus allowed the certainty of the ſenſes, and yet deſtroyed that certainty in teaching that all things are fire: For if that were true, our ſenſes would perceive fire in all things; and yet they perceive no ſuch thing in an apple, in wood, in marble, &c.

Ver. 726. He adds in theſe four verſes, that if we look upon water, and many other things, and handle them, we ſhall evidently diſcover in them another, and that too a quite different nature from fire; from whence he infers, that there is no more reaſon to aſſert all things to be fire, than there is to reject fire, and ſay they are any thing elſe.

Ver. 730. In these three verses, he concludes concerning fire, or any other single element, against any of which the same objections will proportionably hold good; that they are horribly mistaken, who hold that fire, as Heraclitus, that air, as Anaximenes Milesius, that water, as Thales Milesius, or that earth, as Pherecydes, is the principle of all things.

Ver. 732. Among the philosophers, who held more than one of the elements to be the principles of all things, he has singled out Empedocles, and employs 108 verses to confute his opinion. Now whatever he objects against his doctrine, in asserting the four elements to be the principles of things, will be conclusive likewise against those other philosophers, who taught that all things are produced from two or three of them only. For if four cannot be thought sufficient, much less will a fewer number suffice. But that four, nay nor a much greater number of bodies, are not sufficient to produce so vast a variety of things, as are contained in the universe, will more evidently appear by what shall be said hereafter. In the mean while, it may be considered, that as from one letter you can have but one figure, as A; from two but two, as Am, Ma; from three, but six, as Amo, Aom, Mao, Moa, Oam, Oma; from four, but 24, as Amor, Amro, Mora, &c. from five 120, from six 720, from seven 5040, from eight 40320, from nine 362,880, from ten, 3,628,800, and so on, till you have completed the number of the twenty-four letters, as shall be said more at large in the note on book ii. ver. 643. So of one simple body, turn it ever so much, you can make but one body; of two bended together, but two; that is, to say, one compound; which, the more rare or dense it is, or the more it has of the one, or of the other, the nearer it will approach the nature of one, than of the other: And for the like reason, of three, but six: of four, but twenty-four, &c.; and change their positions, turn them and turn them again, and shift their places as often as you please, they will still be the same figures: and lastly, he concludes, that to produce such an innumerable variety of things, as are contained in the universe, an innumerable variety of elements or principles is likewise necessary.

Ver. 734. *Water.*] Thales, the Milesian, held water to be the first principle of all natural bodies; of which they consist, and into which they resolve. He endeavoured to establish this opinion by arguments drawn from the origin and continuation of most things. First, Because the seminal and generating principles of all animals is humid. Secondly, Because all kinds of plants are nourished by mere water; and when they want moisture, wither and decay. Thirdly, Because fire itself cannot live without air, which is only water rarefied; and the Sun and stars draw up vapours for their own nourishment and support. These were the considerations upon which he grounded his opinion: and hence it is easy to guess, that he kept up the credit of his school, rather by the riches he gained by his lucky conjecture of the scarcity of olives, than by the strength of reason and argument. Some, however, have not been wanting to father this philosophy on Moses; and Hippo and Theophrastus were of the same faith. Nay, Hippocrates himself lays great stress upon it: and of later days the great Sendivogius, and generally the most learned of the Spagirists; who own that water is really a very *παναυσρμία*, or universal principle.

Ver. 734. *Air and Fire.*] As Oenopides of Chios. Earth and water, as Xenophanes; but Armenides joined fire and earth; and Hippo of Rhegium, fire and water; and Onomacritus held that fire, water, and earth, all three together, are the principles of all things.

Ver. 736. *Empedocles.*] He was son of Meton, or, as others will, of Archinomus, and some say, of Exinetus; but all agree, that he was born, and lived at Agrigentum in Sicily. He was contemporary with Euripedes and Armenides. He flourished in the 84th Olympiad, about 404 years before J. C. He taught, that all things are made of the four elements, fire, water, air, and earth, and are resolved into the same again. To which he added two powers, amity and discord; the one unitive, the other discretive. Ἐμπεδοκλῆς Μέτωνος Ἀκραγαντῖνος τέτταρα μὲν λέγει στοιχεῖα, πῦρ, ἀέρα, ὕδωρ γῆν, δύο δὲ ἀρχικὰς δυνάμεις, φιλίαν τε καὶ νεῖκος, ὧν ἡ μὲν ἔστιν ἑνωτική, τὸ δὲ διαιρετικόν. Plutarch de Placit. Phil. l. 1. c. 3. See likewise Laertius, in Vita Emped. Achilles Tatius, in Arat. Phænomen. et Lactantius, lib. 2. Which last says, he derived this opinion from Hermes Trismegistus. These elements he called after this manner, fire he termed Jupiter, the air Juno, or as Laertius says, but not with so good reason, Pluto. The water Nestis, from *νασῖν*, to sow. The earth Pluto, or according to Laertius, Juno, i. e. Vesta. Consonant to this opinion of Empedocles, Ovid sings:

Quatuor æternus genitalia corpora mundus
Continet.——— *Metam.* xv. *ver.* 259.

For this eternal world is said of old,
But four prolific principles to hold. *Dryd.*

And again, ver. 244.

———Omnia fiunt
Ex ipsis, et in ipsa cadunt———

All things are mix'd of these, which all contain,
And into these are all resolved again.

Ver. 737. In these seventeen verses, he describes Sicily, the country of Empedocles, and praises that philosopher. Sicily is the largest of all the islands of the Mediterranean sea; it has been called by several names, and has had several different inhabitants. First, The Cyclops, who, as Cluverius says, de Sicil. lib. i. cap. 2. were the first who inhabited this island, which was then called Trinacria; and they dwelt chiefly about Mount Ætna, and in the Leontinian territory. Secondly, The Sicanians, a people of Spain, who dwelt on the banks of the river Sicanus, which, according to some, is the Segro, according to others, the Cinca; from them it was called Sicania. Thirdly, The Italians, who, under the command of Siculus,

drove the Sicanians into the weſt part of the iſland, and gave it the name of Sicilia; though ſome are of another opinion. Fourthly, Greeks and barbarians of ſeveral countries, who brought colonies into the iſland, and ſettled themſelves in it. Laſtly, It was ſubject to the Carthaginians, Romans, &c.

For the iſland of Sicily has three promontories or forelands. Pelorus towards the north, now called Capo di Faro, from Pharus, a watch-tower, or light-houſe, that is built upon it, to direct ſhips in their courſe: Pachynus, Capo di Paſſaro towards the eaſt, and Lilybœum, Capo di Marſalia, towards the ſouth and weſt, which made it triangular, almoſt in the form of a Δ Delta.

Ver. 738. That part of the Mediterranean, which lies above the Streights of the Adriatic, and extends itſelf between Crete and Sicily. Whence the Greeks divide the Ionian Sea into the Cretan and Sicilian, Plin. c. 11. l. 4. It ſurrounds a great part of Sicily, and received its name from Ionius, the ſon of Dyrribachius, whom Hercules killed unawares, and threw him into that ſea to perpetuate his memory: But Solinus will have it named from Ionia, a little country on the fartheſt ſide of Calabria: Lycophron, from Io the daughter of Inachus; and others from the Ionians, who often ſuffered ſhipwreck in that ſea.

Ver. 739. The ſea that divides Sicily from Italy is not above half a league over. Thoſe two countries were formerly contiguous, till about the days of Joſhua, as Faber has ſhown in his epiſtles, the force of the ſea divided Sicily from the reſt of Italy.

Ver. 740. Lucretius mentions only Charybdis, not Scylla; which is a rock in the ſea, between Italy and Sicily, on the Italian coaſt, off the promontory of Cœnys. It continually makes a roaring noiſe, by reaſon of the rough and tempeſtuous waves of that ſea, which are always beating into its hollows and daſhing againſt it. It is now called Sciglia, and took its name from σκύλλω, I vex or diſturb. Charybdis, now called Calcfaro, is a gulf or whirlpool, almoſt oppoſite to Scylla, on the coaſt of Sicily: from χάσχω, I gape, and σιφῶ, I ſwallow: it ſucks in the waters, and belches them out again with violence. Scylla is ſaid to be the daughter of Phorcus, and changed by Circe into a monſter, whoſe upper parts retained the form of a woman, and whoſe lower parts were transformed into dogs, by whoſe barking the poets expreſſed the roaring of the waves, and fabled that the monſter lay hid in the rock, and allured ſhips thither, which by that means were caſt away. Charybdis, they ſay, was a notorious harlot and thief together, who having ſtolen ſome oxen from Hercules, Jupiter ſtruck her with a bolt of his thunder, and threw her into the ſea, where ſhe was changed into a whirlpool. Virgil, Æn. iii. v. 420. deſcribes them thus:

Dextrum Scylla latus lævum implicata Charybdis
Obſidet; atque imo barathri ter gurgite vaſtos
Sorbet in abruptum fluctus, rurſuſq. ſub auras
Erigit alternos, et ſydera verberat unda.
At Scyllam cæcis cohibet ſpelunca latebris,
Ora exſertantem, et naves in ſaxa trahentem:
Prima hominis facies, et pulchro pectore virgo
Pube tenus: poſtrema immani corpore priſtis,
Delphinum caudas utero commiſſa luporum.

——————In the ſtreights
Where proud Pelorus opes a wider way,
Far on the right her dogs foul Scylla hides;
Charybdis, roaring on the left preſides;
And in her greedy wirlpool ſucks the tides:
Then ſpouts them from below; with fury driv'n
The waves mount up, and waſh the face of heav'n.
But Scylla from her den, with open jaws
The ſinking veſſels in her eddy draws,
Then daſhes on the rocks: a human face,
And virgin's boſom hide her tail's diſgrace:
Her parts obſcene below the waves deſcend,
With dogs enclos'd, and in a dolphin end.
Dryden.

Thus the fables; but Cluverius, who went on purpoſe to Meſſina to be ſatisfied, and learn the nature of this whirlpool, ſays and proves, lib. 1. c. 5. "de Sicilia antiqua," that though it be ſhown near Meſſina, and called Califaro and la Rema, yet the whole ſea is tempeſtuous and full of whirlpools: and he commends Thucydides, for giving the name of Charybdis to all that ſea, lib. 4. where he ſays, that the ſtreight between Rhegium, now called Rezzo, and Meſſina, where Sicily is leaſt diſtant from the continent, is the ſea that is called Charybdis, through which Ulyſſes is ſaid to have ſailed, καὶ ἔστιν ἡ χαρύβδις ἀληθέσα, τοῦτο, &c. And this is the reaſon why ſome place Charybdis near the Cape of Pelorus, and others near Meſſina. Homer deſcribes it under a rock ſhaded with wild fig-trees, and as a gaping gulf of whirling waters; but, in truth, it is only the impetuous current of the ſea, that flows in with greater violence from the north than from the ſouth; and whoſe billows, when adverſe winds ſtruggle with one another, eſpecially when the ſouth ſea rages, are driven into the ſtreights; and being there compreſſed in a narrow ſpace, and daſhing with violence againſt one another, and againſt the rocks and ſhores, are by that conflict twiſted into whirls, and cauſe that noiſe and roaring.

Ver. 742. *Enceladus.*] He is ſaid to be the hugeſt of the giants that fought againſt the gods. He was the ſon of Titan and Terra; Jupiter killed him with thunder, and threw Mount Ætna upon him: Thus Virg. Æn. iii. ver. 578.

Fama eſt, Enceladi femuſtum fulmine corpus
Urgeri mole hac, ingentemq. inſuper Ætnam
Impoſitam, ruptis flammam exſpirare caminis:
Et ſeſſum quoties mutat latus, intremere omnem
Murmure trinacriam, et cœlum ſubtexere fumo.

Enceladus, they ſay, transfix'd by Jove,
With blaſted wings came tumbling from above:
And where he fell, th' avenging father drew
This flaming hill, and on his body threw:
As often as he turns his weary ſides,
He ſhakes the ſolid iſle, and ſmoke the heavens hides,

Which may ſerve to explain this paſſage of our tranſlator; for Lucretius makes no mention of Enceladus.

Ver. 744. *Ætna.*] A mountain in Sicily, of which Lucretius diſputes at large in book vi. ver. 675. See that place and the notes upon it.

Ver. 750. The ancients were in doubt whether they ought to rank Empedocles among the philoſophers, or among the poets; ſo elegant was the poem which he writ of the Nature of Things. Ὁμηρικὸς Ἐμπεδοκλῆς, καὶ δεινὸς περὶ φράσιν γέγονε, μεταφορικός τε ὤν, καὶ τοῖς ἄλλοις τοῖς περὶ ποιητικῶν ἐπιτάγμασι χρώμενος. Ariſtot. ἐν τῷ περὶ ποιητικῶν. Laert. Ariſtotle likewiſe aſcribes to him the invention of rhetoric.

Ver. 754. In theſe ſix verſes, he owns Empedocles to have been an excellent philoſopher, even greater than Heraclitus, and the others, whom he has already refuted, and whom we may more ſafely believe than the oracles of the gods; yet he is going to ſhow, by ſeveral arguments, that even Empedocles himſelf is miſtaken in the principles of things; and thus Lucretius includes him in the number of thoſe philoſophers of whom the Stagyrite ſomewhere pronounces, ζητοῦντες γὰρ εἰ καὶ φιλοσοφίαν πρῶτοι τὴν ἀλήθειαν καὶ τὴν φύσιν τῶν ὄντων ἐξεπράπησαν, which our poet interprets,

Principiis tamen in rerum fecere ruinam,
Et graviter magni magno cecidere ibi caſu.

Ver. 757. *Tripod.*] A table, or ſtool that was ſupported by three feet, and upon which the prieſteſſes of Apollo were wont to ſtand or ſit, when they pronounced the oracles, Plin. l. 34. c. 3. This tripod, and the prieſteſſes themſelves were decked and crowned with laurel, a tree ſacred to Apollo, and therefore they were ſaid to ſpeak from the tripod and laurel, "ex tripode et lauro."

Ver. 758. *Pythia.*] Was the prieſteſs of Apollo at Delphos, who anſwered from the tripod thoſe that came to conſult the oracle. She was called Pythia, from the Greek word πυνθανέσθαι, to conſult or aſk.

Ver. 760. His firſt objection againſt them is contained in theſe three verſes: That as well Empedocles, as the other aſſerters of ſeveral elements, deny a void, no leſs than the philoſophers mentioned above, and yet they admit motion, rareneſs, and ſoftneſs, none of which can be without a void.

Ver. 762. His ſecond objection, contained in theſe ſix verſes, is to this purpoſe: That they held all bodies to be infinitely diviſible, contrary to what Lucretius has ſhown before, ver. 630. and what he now proves by the ſame argument he then made uſe of.

Ver. 678. Thirdly, He objects againſt them in theſe three verſes, that their elements are ſoft, and conſequently ſubject to change, and therefore muſt fall into nothing; for, if the firſt bodies could change, they would be annihilated. But he has proved already, that nothing proceeds from or returns into nothing.

Ver. 771. Fourthly, He objects in theſe four verſes, that the elements which they ſet up are contrary to one another, and therefore will mutually deſtroy each other; at leaſt they can never combine, and grow into one body; for the ſticklers for theſe elements, like maſters of families, give to each its proper qualities: heat and dryneſs to one, humidity and cold to another, humidity and heat to the third, and dryneſs and cold to the fourth: thus they arm theſe elements to deſtroy one another, and yet expect nothing from them but peace, concord, and alliances.

Ver. 775. In theſe eighteen verſes, he objects, in the fifth place, that they ought to ſay, either that the elements, having firſt loſt their nature, are changed into things, which things are again changed into them: in which caſe the elements are not more properly the principles of things, than things are the principles of the elements; or that, retaining their nature, certain heaps only are made of them; and in this caſe, nothing of one ſpecies and of one name could be produced, but only a certain rude and undigeſted maſs of fire, air, water, and earth: in like manner, as of the filings and duſt of gold, ſilver, tin, and braſs, you can never make any thing but a heap of gold, ſilver, tin, and braſs. Laſtly, He concludes, that principles endowed with any ſenſible quality are altogether unfit and improper for the generation of things.

Ver. 784. The meaning of this is, that in caſe the elements preſerve their nature entire, they are capable of making only ſome confuſed or rude heaps of matter, without producing any thing perfectly diſtinct;

Non animans; non exanimo cum corpore, ut arbos,

ſays Lucretius; and though our tranſlator takes no notice of "exanimo cum corpore," yet thoſe words allude to a particular doctrine of Epicurus, who did not admit of any ſoul to reſide in plants, but held that they are produced and grow by virtue of a certain nature not vegetable, but proper to them alone; yet he affirmed that they live, that is, enjoy a peculiar motion; as the water of ſprings, the fire which we excite to a flame, is called living water, and living fire; ſomething analogical to that which I think is more difficult to expreſs than comprehend; for ſuch is fire without light, &c. But concerning this, ſee the treatiſe written on this ſubject by the learned T. Campanella, in his book, De Senſu Rerum et Magia.

Ver. 793. Sixthly, He objects farther in theſe nineteen verſes, that they who admit a mutual tranſmutation of the elements, ought to admit likewiſe a common or general and prior matter, that may ſucceſſively put on their various forms: for Empedocles and his followers taught, that the elements are continually preying upon one another; that now fire takes away ſome parts of the air, and now the air robs the fire of ſome of its particles; and that the other elements are continually doing the like. But Lucretius inſiſts: Let the principles be changed, and they will fall into nothing; and, therefore, ſince they all allow that the elements are changed, they are not the prin-

ciples of things; for nothing comes from nothing. There is, therefore, an immutable matter, which, being variously moved and disposed, produces now air, now water, now fire, now earth.

Ver. 794. Hesychius says, ἀγίνητα στοιχεῖα παρὰ Ἐμπεδοκλεῖ. If then the grammarian be not mistaken, Lucretius disputes to no purpose; and Plutarch will not suffer him to be mistaken, who so often affirms that Empedocles acknowledged στοιχεῖα των στοιχείων, the principles of the elements, and Hesychius must be understood of these first principles. Empedocles, therefore, and Epicurus agree very well, except that the opinion of the first of them is more abstruse and intricate, and that of the latter more plain and simple; for Empedocles composes his elements of the first principles, and of those elements constitutes all things; but Epicurus will have all things proved immediately from the first principles.

Ver. 797 Laertius says of Heraclitus and the like may be affirmed of Empedocles, that he held that fire, when it is condensed, humectates and becomes air; that air, when compressed, becomes water; that water, contracting and growing concrete, becomes earth and that this is the way down: On the contrary, that earth, being diffused, is changed into water; and of water the rest in like manner: that this is the way up. Πυκνούμενον τὸ πῦρ ὑγρανεσθαι καὶ ὑγρὸν γίνεσθαι; συνιζάνον ὑδωρ γινεσθαι ὕδωρ πυκνούμενον τὸ ὕδωρ εἰς γῆν τρέπεσθαι, καὶ ταύτην ὁδὸν εἰσὶ τὸ κάτω εἶναι· Πάλιν δὲ αὖτην την γῆν κένεσθαι, ἐξ ἧς τὸ ὕδωρ γινεσθαι, ἐκ δὲ τούτου τὰ λοιπὰ ὁμοίως αὖθην δὲ εἶναι την ἄνω ὁδόν. What Ovid fully explains in these verses: Metam. xv. 245.

——Resolutaq tellus
In liquidas rorescit aquas: tenuatus in auras
Aeraque humor abit: demto quoque pondere rursus
In superos aer tenuissimus emicat ignes:
Inde retro redeunt idemq. retexitur ordo:
Ignis enim densum spissatus in aera transit;
Hic in aquas; tellus glomerata cogitur unda.

Which Dryden renders thus:

Earth rarefies to dew; expanded more
The subtle dew in air begins to soar:
Spreads as she flies, and, weary of her name,
Extenuates still, and changes into flame.
Thus having by degrees perfection won,
Restless, they soon untwist the web they spun;
And fire begins to lose her radiant hue,
Mix'd with gross air, and air descends to dew;
And dew condensing does her form forego,
And sinks a heavy lump of earth below.

Ver. 812. In these twenty-three verses, he starts an objection, and solves it. Plants and all animals owe their nourishment and growth to the four elements; for no man denies that all things grow out of the earth; but yet, without the assistance of the kindly warmth of the air, of the heat of the sun, and of seasonable showers, the earth will produce nothing of herself; therefore it must be allowed, that water, fire, &c. are the principles of all things. To which Lucretius answers, that they are no more the principles than wine, wheat, and the other things with which we support our life; for the things that nourish are not therefore principles, but those from which they receive such a contexture as makes them fit nourishment for things.

Ver. 816. *Phœbus.*] As it were φῶς τῦ βίε, "the light of life;" the same with Apollo and Sol, the sun. He was son of Jupiter and Latona, born at the same birth with Diana. He invented physic, and was the god of divination, music, and poetry. Ovid. Metam. i. v. 517.

Jupiter est genitor: per me, quod eritque, fuitque,
Estque, patet: per me concordant carmina nervis:
Certa quidem nostra est; nostra tamen una sagitta
Certior, in vacuo quæ vulnera pectore fecit.
Inventum medicina meum est, opiferque per orbem
Dicor; et herbarum subjecta potentia nobis.

Which Dryden thus translates:

The king of gods begot me: what shall be,
Or is, or ever was in fate, I see.
Mine is th' invention of the charming lyre;
Sweet notes and heav'nly numbers I inspire:
Sure is my bow, unerring is my dart;
But, ah! more deadly his who pierc'd my heart.
Med'cine is mine, what herbs and simples grow
In fields or forests; all their pow'rs I know;
And am the great physician call'd below.

Ver. 836. In these six verses, he illustrates his opinion with the similitude he so often uses. The same letters, by the various changes of their order, only compose innumerable words that are very different both in sense and sound. Why then do we doubt but that the same seeds, which far exceed the letters in number, and which have different figures, are able to produce fire, water, and, in short, all the immense variety of things? For so it fares with them as with the different disposition and various location of these Miranda Naturæ, as Vossius, lib. 1 de Arte Grammat. calls the few letters the distinction of words; as with the position of six or seven notes in music the change of tunes, and, as with the wonderful variety of sums by figures, the amazing diversity of numbers. And, if it be really so in these familiar instances, what stupendous variety cannot then the charges and sundry sorts, orders, and positions of atoms, the ἀρχαὶ and principles of our poet produce? And, indeed, the comparisons are exceedingly just and apposite: since in all confused and tumultuous commixion of any of them, neither articulate words nor harmonious concerts; nor proportionable numbers, can possibly result from them. So, neither in these natural things, all atoms are not in general to be thought fit and capable to produce and constitute all sorts of concrete bodies; but only such as are endued with a particular and prone disposition so to do.

Ver. 838. Letters; so called by way of similitude; for, as the elements are called the first principles of things; so the letters are commonly called elements, because of them are first formed syllables and words.

Ver. 841. Having refuted the opinions of Heraclitus, Empedocles, and other philoſophers, concerning the principles of things, he now, in 86 verſes, attacks Anaxagoras, who held the matter of which all things are produced, to be infinite, and that it conſiſts of very minute particles, exactly like one another; and at firſt confuſed, but afterwards brought into order by the Divine Mind. Cicero, Acad. Quæſt. lib. 4. he aſſerted, that all things are made of ſimilar parts; as bones of little bones, blood of ſmall drops of blood, &c.

Ver. 842. *Anaxagoras.*] He was the ſon of Hegeſibulus, or of Eubulus, and born at Clazomenæ in Ionia, twenty years before the traject of Xerxes, as Laertius witneſſes. He applied himſelf to the ſtudy of the Nature of Things, and left his country for the ſake of philoſophy. He lived ſixty-two years, and died 286 years after the building of Rome; 368 before the birth of Jeſus Chriſt. He was diſciple of Anaximenes of Miletum, and of Pherecydes the Syrian. This opinion of his, which Lucretius here mentions, is thought to have been taken out of a book which he compoſed, of phyſiology, and which is much commended by Socrates in Plato.

Ver. 843. Likeneſs of parts, from the Greek words ὁμοῖος, like, and μέρος, part. We call homœomeries thoſe things whoſe minuteſt parts have the name of the whole; as ſtones, gold, blood, &c. It may be called in Latin *ſimilaritas*, ſays Faber; but Lucretius complains in the next verſe, that his language had no word to expreſs it by.

Ver. 855. The opinion of Anaxagoras not pleaſing Epicurus, Lucretius gives him no quarter, and begins to fall upon him in theſe two verſes, in which he makes uſe of two arguments which he had alleged before againſt Heraclitus, Empedocles, and others. The firſt, that there is a void; the ſecond, that no continuous body is infinitely diviſible.

Ver. 877. Thirdly, He argues, in theſe twelve verſes, that ſeeing Anaxagoras was of opinion, that like things conſiſted of like; and that the principles are exactly of the ſame nature with the compounds, it follows, that they are both of them equally liable to periſh. And certainly no reaſon can be given, why a ſmall portion of fleſh ſhould not be obnoxious to corruption as well as a greater; nor does it appear, even though it do conſiſt but of a leaſt; yet, ſince it is fleſh, why it ſhould not ſuffer from exterior violence, and be at length deſtroyed. But, if the principles are corruptible, they will fall into nothing, which he has ſufficiently proved already to be abſurd and impoſſible.

Ver. 869 His fourth argument, contained in theſe eight verſes, is very cogent. Our bodies are nouriſhed with ſeveral ſorts of wood, which moſt evidently conſiſts of diſſimilar parts, whence it follows, that the parts of our body conſiſt of diſſimilar likewiſe: for the ſeveral parts of it, the bones, the veins, the nerves, &c. are nouriſhed with different and diſſimiiar aliments. But, if it be pretended that thoſe aliments contain ſome particles of bones, nerves, &c. it muſt of neceſſity be granted, that there is not in theſe bodies that homœomery, which Anaxagoras imagined. Lucretius calls the different and diſſimilar parts, alienigenas of another kind; but retaining the Greek word, we commonly call them heterogeneous, as we do the ſimilar homogeneous.

Ver. 877. In theſe ſeven verſes he propoſes his fifth argument againſt Anaxagoras. If every thing that the earth produces, lay hid in the earth, then even the earth muſt of neceſſity conſiſt of diſſimilar things. He argues yet farther: if flame, ſmoke, and aſhes, that are things very unlike one another, be in the wood, then wood is compoſed of diſſimilar things, and therefore there is no homœomery.

Ver. 844. In theſe eighteen verſes, he propoſes and anſwers an opinion of Anaxagoras, which Ariſtotle expreſſes in this manner: "Res et apparere, et denominare, invicem differentes ajunt, ab eo, quod in infinitorum miſtura maximè abundat: Non enim eſſe totum pure aut album, aut nigrum, aut dulce, aut carnem, aut os: Cujus autem amplius unumquodque habet, eam talis rei naturam videri." Which Gaſſendus thus interprets: Under the name of fleſh, for example, is not to be underſtood a nature that is ſimple and of one ſort; but an united heap of many, nay, innumerable and different particles, which then make this ſpecies of the body which we call fleſh, when there is a certain greater plenty of thoſe particles which are fit and proper to exhibit that ſpecies, and to appear in it, than of all the reſt whatſoever, which lurking among them might give them a form and name. But if thoſe particles be reſolved, and tranſlated into any other maſs or body, then the fleſhy particles that are lurking with the others, will yield, and give likewiſe a name and form to thoſe of which there happens to be a greater plenty, and whoſe ſpecies is the moſt viſible. To this Lucretius anſwers, that, if this opinion were true, then in the detrition, bruiſing and crumbling to pieces of corn, herbs, or any the like things, there muſt of neceſſity appear at ſome time or other, the ſpecies or likeneſs of blood, milk, or other things of the like nature, &c.

Ver. 885. *Anaxagoras.*] Of him, ſee ver. 842.

Ver. 902 The poet, in eleven verſes, propoſes and ſolves what Anaxagoras urged to prove, that all things are in all things; and conſequently that all things are made of all things. For inſtance, fire muſt lie hid in the trees that take fire by a vehement colliſion, which Thucydides, lib. 2. witneſſes has ſometimes happened. See Book v. ver. 168. Lucretius anſwers, that there is not indeed any fire in the tree itſelf, but that the ſeeds of fire, or the moleculæ of the atoms being diſpoſed in a certain and new order, and daſhing with violence againſt one another, exhibit and produce the ſpecies of fire: for otherwiſe, and if there were actually and indeed any fire in woods and foreſts of trees, it would, without doubt, ſhow its ſtrength, and make a wide deſtruction.

Ver. 911. Virg. Æn. x. ver. 405. has an excellent deſcription of a wood ſet afire:

Ac velut optatò, ventis æſtate coortis,
Diſperſa immittit ſylvis incendia paſtor:
Correptis ſubito mediis, extenditur una

Horrida per latos acies Vulcania campos:
Ille ſedens victor flammas deſpectat ovantes.

As when in ſummer welcome winds ariſe,
The watchful ſhepherd to the foreſt flies,
And fires the midmoſt plants; contagion ſpreads,
And catching flames infeſt the neighb'ring heads;
Around the foreſt flies the furious blaſt,
And all the leafy nation ſinks at laſt,
And Vulcan rides in triumph o'er the waſte:
The paſtor pleas'd with his dire victory,
Beholds the fatiate flames in ſheets aſcend the ſky.
Dryden.

Ver. 913. He aſſerted above, that many ſeeds of fire lie concealed in wood; but that they do not conſume that wood, becauſe, being hindered by other ſeeds of a different figure, they cannot put on the ſpecies and form of fire: and from hence, in theſe eight verſes, he takes occaſion to confirm the above-mentioned opinion of Epicurus, viz. That the common ſeeds or principles of many things are in many things; and that the ſame principles made the heavens, the earth, the ſea, in a word, all things: but that the things themſelves are different, becauſe ſeeds of a different figure are joined to others of a different figure, and in a different order, even as in the words, *ligna*, wood, and *ignis*, fire; the letters are common, and almoſt the ſame, but the words very different in ſenſe and ſound. In like manner, wood is compounded of a vaſt variety of corpuſcles, which being diſpoſed in a certain order, conſtitute the forms as well of wood as of divers other things that are leſs concrete; inſomuch that ſome more ſubtle and moveable bodies that are contained in the wood, may ſpecify and produce fire, flame, ſmoke, &c. according to its compoſition, denſity, coherence, laxity, reſolution, &c. So that in truth only, this ſimple connection, diſpoſition, and fabric of the parts, is at any time deſtroyed when the matter is fired, and to all appearance conſumed, viz. its external form, ſpecies, and accidents which denominate it wood; the reſt being reſolved into flame, fire, ſmoke, aſhes, phlegm, ſpirits, ſalts, &c. all of which are only thoſe minute particles that lurk in it, though ever ſo imperceptible to our ſenſes.

Ver. 921. His laſt argument againſt Anaxagoras is contained in theſe ſix verſes, and drawn from the abſurdity of the opinion. For, to evince that all things proceed from ſimilar things, it would be abſolutely neceſſary, that laughing, weeping, &c. Homœomeries ſhould ſometimes be ſeen in the world: if becauſe men laugh, weep, &c. they had thoſe faculties from laughing, weeping, &c. principles; to imagine which is altogether ridiculous and abſurd. To aſſert that the principles of things are joyful or lugubrous, is, indeed, very ridiculous philoſophy: and yet ſome of the later philoſophers ſeem at leaſt to favour this opinion of Anaxagoras, when they aſſert that theſe affections do indeed "præeſſe in Elementis," though not altogether after the ſame manner as in man. St. Auguſtin himſelf may be a little ſuſpected, ſince he affirms, "Omnium rerum ſemina occulta extare ab initio."

Ver. 925. Cowley in the third book of his Davideis:

Sometimes a violent laughter ſcrew'd his face,
And ſometimes briny tears dropp'd down apace.

Whether he took this from Lucretius, or whether our tranſlator has copied him rather than his author, may be ſeen by comparing the originals.

Ver. 927. In theſe thirty-three verſes, he firſt beſpeaks the attention of his Memmius, whom he ſuppoſes wearied with this long diſputation concerning the principles of things; and tells him, he is now going to enter upon a more noble and ſublime ſubject. He ſpeaks haughtily of his own poem; he confeſſes that the doctrine of Epicurus is dark, intricate, and not adapted to the vulgar taſte: however, he promiſes to adorn and ſprinkle it with his ſmooth and flowing verſes. And this at leaſt he will do like phyſicians, who, when they are to give an ill-taſted potion to ſick children, tinge the brims of the cup with ſweets, by whoſe flavour and taſte deceived, they ſwallow down the nauſeous draught. The taſk is indeed great; but the hopes of future praiſe ſpurs him on, and to explain to his Memmius the nature of things, he undertakes a difficult and painful work, unattempted hitherto by any man in Latin verſe.

Ver. 932. *Muſes.*] They were daughters of Jupiter and Mnemoſyne, born in Pieria, a country of Macedonia, and dwelt upon Helicon in Bœotia, and Parnaſſus in Phocis, two hills that were near one another: the goddeſſes of poetry, learning, and muſic, and nine in number: I. Calliope, ſo called from καλὸς, good, and ὄψ, voice; ſhe was the mother of Orpheus, and preſided over heroic verſe. II. Clio, from κλέω, I celebrate; ſhe was believed to have invented hiſtory. III. Erato, from ἐράω, I love; ſhe ruled over lovers. IV. Thalia, from θάλλω, I live, or flouriſh; becauſe the fame of poets never dies. V. Melpomene, from μέλπω, I ſing or celebrate in verſe; ſhe was the firſt that writ tragedies. VI. Terpſichore, from τέρπω, I delight, and χορὸς, dancing, in which ſhe took delight; the invention of the harp is aſcribed to her. VII. Euterpe, from εὖ, well, or pleaſantly, and τέρπω, I delight: ſhe invented the flute and mathematics. VIII. Polyhymnia, from πολὺς, many, and ὕμνος, a hymn; ſhe preſided over panegyrics. IX. Urania, from τὰ ἄνω ὁρῶσα, contemplating the things above; ſhe is ſaid to have invented aſtrology.

Ver. 933. This is a kind of boaſt which may not be charged with immodeſty, ſince almoſt all the poets, as well the ancient as the modern, make uſe of the ſame allegory. Virgil exactly imitates this paſſage of Lucretius, Georg iii. ver. 289.

Nec ſum animi dubius, verbis ea vincere magnum
Quam ſit, et auguſtis hunc addere rebus honorem:
Se me Parnaſſi deſerta per ardua dulcis
Raptat amor: juvat ire jugis qua nulla priorum
Caſtaliam molli divertitur orbita clivo:

Becauſe none of the Latins had written on the ſubject of agriculture before him; ſo Horace, Epiſt. i. lib. i.

Libera per vacuum poſui veſtigia princeps,
Non alieno meo preſſi pede.——

Thus too Manilius, lib. i. ver. 4.

Aggredior primuſque novis Helicona more
Cantibus.——
Hoſpita ſacra ferens nulli memorata priorum.

And in his ſecond book, v. 59. he uſes the ſame alluſion. And Nemeſianus:

——Ducitque per avia, quà ſola nunquam
Trita Rotis.

Though in this he does wrong to Grotius, who treated of the ſame argument before him. And we may obſerve the like in our own poets too: particularly in Milton and Cowley. The firſt of whom ſays his ſubject was

Unattempted yet in verſe or proſe.

And the other:

Guide my bold ſteps——
In theſe untrodden paths to ſacred fame.

The very expreſſion Creech uſes; and indeed he has taken occaſion, in this tranſlation, to rifle that poet.

Ver. 939. Lucretius makes no mention of laurel; and indeed garlands or wreaths of ivy ſeem to have been the firſt ornaments of poets and other learned men, and laurels of conquerors: Thus Horace:

Me doctarum hederæ præmia frontium
Diis miſcent ſuperis——

And Virgil:

——Atqua hanc ſine tempora circum
Inter victrices hederam tibi ſerpere lauros.

However, that poets did wear wreathes of laurel is moſt certain; though ivy ſeems to have been more proper for them, becauſe it requires the ſupport of ſome ſtronger tree, as learning does of princes and great men.

Ver. 944. This paſſage of Lucretius the incomparable Taſſo has rather tranſlated than barely imitated; and if we may give credit to his countryman Nardius, has ſurpaſſed his author: *Dum æmulatur*, ſays he, *palmam auctori eripuit;* the verſes are in his Goffredo, and well deſerve to be tranſcribed:

Sai che là corre il mondo, ove più verſi
Di ſue dulcezze il luſinghier Parnaſo,
E che'l vero condito in molli verſi
I più ſchivi allettando hà perſuaſo:
Coſi al 'egro fanciul' porgiamo aſperſi
Di ſoavi licor gli orli del vaſo
Succhi amari, ingannato, in tanto ei beve,
E dal inganno ſuo vita riceve.

Cant. i. St. 3.

Of which I will give likewiſe Fairfax's interpretation, which perhaps equals, if not excels this of our tranſlator:

Thither thou know'ſt the world is beſt inclin'd,
Where luring Parnaſs moſt his beams imparts;
And truth, convey'd in verſe of gentleſt kind,
To read ſometimes will move the dulleſt hearts:
So we, if children young diſeas'd we find,
Anoint with ſweets the veſſel's foremoſt parts,
To make them taſte the potions ſharp we give,
They drink deceiv'd, and ſo deceiv'd they live.

Ver. 960. Lucretius has proved by many arguments, that bodies are, and that they are perfectly ſolid and indiſſoluble; and likewiſe that there is a void. He has farther taught, that the univerſe conſiſts of theſe two, body and void, and that there is no third kind of things. Now, in theſe four verſes he ſtarts a noble queſtion, whether the univerſe be infinite, or included and circumſcribed in bounds? And he will now endeavour to evince by ſeveral arguments, that the univerſe is terminated on no ſide, but is altogether infinite, as well in the multitude of bodies, as in the extent and magnitude of the void.

Ver. 965. The firſt argument, by which, in theſe eight verſes he endeavours to prove the infiniteneſs of the univerſe, is explained by Cicero, lib. ii. de Divinit. ſect. 154. Whatever is finite has an extreme; but whatever has an extreme, may be ſeen by what is without or beyond it. Now the univerſe, or the ALL, is not ſeen by any thing that is beyond it; therefore the univerſe has no extreme. Empiricus adv. Phyſ. Stobæus, Eclog. Phyſ. and Plutarch, i. de Placit. 3. confirm this to be the doctrine of Epicurus, who himſelf writes thus to Herodotus: Ἀλλὰ μὲν τὸ πᾶν ἄπειρον ἐστὶ, τὸ γὰρ πεπερασμένον ἄκρον ἔχει, τὰ δὲ ἄκρον τῶν ἑτέρου τι θεωρεῖσθαι, ὥστε τὸ μὴ ἔχειν ἄκρον πέρας μὴ ἔχει, πέρας δὲ μὴ ἔχειν ἄπειρον ἂν εἴη, καὶ ἐ πεπερασμένον.

Ver. 973. In theſe twelve verſes, Lucretius ſtruggles bravely with his dart for the immenſity of the univerſe. Grant the univerſe to be finite, and let any man be placed on the extremeſt verge of it, and ſtrive to throw a dart, either that dart will fly forward, or ſomething will ſtop it; if it flies forward, there is a ſpace beyond the extremeſt brink; if it be ſtopt by any thing, there muſt be ſomething without the utmoſt part. Thus wherever you fix the extremeſt bound of the univerſe, there Lucretius will preſs on, and brandiſh his dart againſt you.

This convincing inſtance is likewiſe uſed by the learned and judicious Bruno, who has written an excellent treatiſe on purpoſe to prove not only the infinity of ſpace, but even that of worlds alſo: and in his firſt dialogue we find theſe words, which exactly agree with, and may ſerve to explain this argument of our poet: "Mi pare coſa "ridicola," &c. In my opinion, ſays he, it is extremely ridiculous to affirm, that there is nothing without, or exterior to the heavens, and that the heaven itſelf is a thing placed, as it were, *per accidens*, or by its own parts; for be their meaning by theſe notions what they pleaſe themſelves, it is impoſſible, nor can they any ways elude it, but they muſt make two of one, ſince there will eter-

nally remain one and another; that is to say, the thing that contains, and the thing that is contained; and in like manner so another and another; so that the container must be incorporeal, the contained corporeal; the one immoveable, the other moveable; the one mathematical, the other physical. But whatever this surface be, I demand eternally what there is beyond it? If it be answered that there is nothing, then it is void; and such an inanity as has no extreme; bounded, indeed, on this part towards us, which is yet more difficult to imagine, than that the universe should be immense and infinite, because we can then no way avoid a vacuum, if we will admit the whole to be finite. Thus far Bruno: and, indeed, our metaphysical eyes discern, as they conceive, the bounds of two worlds, of which some imagine the supremest heaven to be the term of this, and the convexity of that to the boundary of the other; but how that should then be habitable, as they likewise assert, where there is neither place, full, nor void, time nor motion, nor any thing else: ὅτε σῶμα, ὅτε τόπος, ὅτε κενὸν, ὅτε χρόνος, Arist. lib. i. de Cœlo, cap. 9. for so they also affirm, is infinitely strange, and deserves second thoughts. But our author concludes, that as there is a space, in which this material world of ours actually is; so neither can it be denied, but that another and another, even to infinite, perpetually equivalent to what this machine employs, may likewise subsist in that vast and unlimited space.

Ver. 985. The poet insists yet farther; and in fifteen verses mentions the mischief that would unavoidably ensue, if the universe were finite, and circumscribed within bounds. For in that finite space there would be some lowest place to which matter, that by its natural heaviness has been subsiding from all eternity, would have sunk down and rested. And thus it would long ago have happened, that the universal matter, having reached the lowest place, would from that time have generated nothing: for nothing can proceed from seeds that lie quiet and at rest: But there being no lowest place, the seeds are in perpetual motion, and thus things are produced on all sides, and the infinite universe continually supplies the respective worlds with new principles of things.

Ver. 993. *Chaos.*] See the note on ver. 37. To which we add, that in this place it signifies a vast receptacle, capable to receive all things: in which sense Plutarch likewise takes it, in his Treatise of Isis and Osiris, where he calls it, χώραν τινα καὶ τόπον τῶ παντος, the place and region of universal matter, to which its name answers; chaos signifying only "Hiatus, seu vastitas quædam." But of the several acceptations of this word, according to the different notions of the poets, philosophers, and divines, see *Ricciolus on that subject, in Almagest. nov. Tom.* 2. *lib.* 9.

Ver. 1000. In these eight verses, he brings another argument, and says, That whatever is bounded by any thing that is exterior to it, has an end: thus the air bounds the mountains, and the mountains the air; the sea the earth, and the earth the sea: but who can pretend that there is any thing without, or exterior to the universe, that can be its bound, since the very thing that is exterior to it is a part of it: for the universe contains all that is. He therefore concludes, that the universe is immense, and describes that immensity by so excellent a periphrasis, that I cannot forbear giving it in Lucretius's own words:

Usque adeo passim patet ingens copia rebus,
Finibus exemptis in cunctas undique partes.

This argument, which is taken from the evidence of our own senses, the above-cited Bruno thus illustrates: Our very eyes, says he, acknowledge as much, because we still see, that one thing ever comprehends another; "et mai sentiamo ne con esterno, ne con interno senso, cosa non compresa da altra o simile:" And there is nothing which terminates itself: In short, after no less than eight arguments, he concludes, "Che non si puo negare il spacio infinito, se non con la voce, come fanno gli pertinaci," &c. That space is infinite, cannot be denied, except by the noisy tongues of some obstinate impertinents; to confute whom, he brings twenty very close and convincing arguments, but to repeat them would be too prolix in this place. In a word, thus: there is nothing which contains, or can indeed be said to embrace and bound the universe. But what is immensely profound, and in a manner infinite, so that the most rapid rivers, and most exuberant streams in the world can never arrive to the limits of it, were they to glide incessantly, and to all eternity; nor would they ever have a less way to go. Out of this vast space new and never-failing supplies are brought to every thing by a perpetual succession of a like number of atoms to a like number: "Et medesime parti di materia con le medesime sempre si convertono" as the same Bruno expresses it, which is exactly the opinion of Epicurus, and proves the universe to be infinite not only from its number of atoms, or the indefiniteness of the void; but by both together (and so too the following verses declare): Yet not as if this universe were continuous, but that there are some empty interstices distant from the body of it.

Ver. 1004. The words in Lucretius are:

Est igitur natura loci, spatiumque profundi,
Quod neque clara suo percurrere flumina cursu,
Perpetuo possint ævi labentia tractu:
Nec prorsum facere. ut restet minus ire meando.

The translator has changed the word *flumina* into *fulmina*, contrary to the authority of all the editions of our author, and to the opinion of, I think, all the annotators, except Faber, who, in his note upon this place, says that *fulmina* would be better; though he retains *flumina* in the text: And indeed the reasons he gives for *fulmina* appear weak and little persuasive; because, says he, lightning is frequently brought as an instance of swiftness, "Et fulminis ocior alis;" and because the word *clara* suits better to the nature of that than of a river. The first is certainly true; but, on the

other hand, a river is frequently used as an instance of perpetual motion :

Rusticus expectat dum defluat amnis; at ille
Labitur, et labetur in omne volubilis ævum. *Horat.*

And the words *labentia*, *ire*, *meando*, seem to agree better with the gliding of a river, than with the impetuous swiftness of lightning. And our translator himself, in his Latin edition of this author, reads *flumina*, and gives this passage the same interpretation that I have given it in the immediately preceding note.

Ver. 1008. In these thirteen verses, he proves the universe to be infinite, by an argument which seems to be levelled against the Stoics: who, as Plutarch witnesses held indeed the void to be infinite, but bodies finite : but Lucretius, following the doctrine of Epicurus, teaches that body and void mutually bound each other; and that an immensity must of necessity proceed from that mutual termination, because neither of them, that is, neither body nor void, can be the last; but whatever has no part, that can be the last or extremest, that indeed is infinite : For, if one of the two (body for example), did not bound the other, (void) yet the void would be infinite, as he has proved it to be : but all finite bodies would be dissolved; for the finite seeds, their contexture being all at once broken, would be scattered through the immense void, nay, would never have joined : for the finite seeds being once dispersed in the infinite void, would have continually wandered up and down in it. Epicurus writes all this to Herodotus : Εἴτε γὰρ ἦν τὸ κενὸν ἄπειρον, τὰ δὲ σώματα ὡρισμένα, ὐδαμοῦ, ἂν ἔμενε τὰ σώματα, ἀλλ' ἐφέρετο καὶ τὸ ἄπειρον κενὸν διεσπαρμένα, ὰκ ἔχοντα τὰ ὑπερείδοντα, τέ ἐλλοῦντα κατὰ τὰς ἀνλικοτάς.

Ver. 1013. The obscurity of these four verses have made some of the commentators on Lucretius give them over as inexplicable ; and even our translator is a little dark in the interpretation he has given them : but the sense of them evidently is this : If there were either an infinite space, without as infinite a number of atoms or bodies, to give bounds and limits to it; or an infinity of bodies, and not an infinite space for them to act in). for " corpus terminatur inani, et inane corpore)," it would follow, that nothing could enjoy the least permanency : For it does not appear that Lucretius any where positively asserts, that the corruption of one thing is the product of another, according to the vulgar sense of the schools, and perhaps too he had considered those creatures that are nourished so long by sleep and other solitary ways; as bears, tortoises, dormice, some sorts of summer birds, flies, and other insects : and this made Nardius upon this place thus wittily exclaim : " Edaciores proinde atque infirmiores sunt Lucretiani divi gliribus abstinentibus." The gods of Lucretius are more hungry, voracious, and weak than even dormice, and such abstemious and inconsiderable animals. His opinion was, that the portion of matter, which is necessary for the daily supply of decaying compounds, would else have been lost and utterly dispersed in so vast, bottomless, and indeterminate an abyss, and that nothing could ever meet again and produce, or create, if the supplies were not equally as infinite. And to speak the truth, it is not so extremely difficult to comprehend a space in a manner indeterminate, if not infinite : since the infinite God is able to affect things infinitely exceeding our slender and bounded speculations. Heraclitus says, τῶν Θείων τὰ πολλὰ διὰ ἀπιστίαν μὴ γινώσκεσθαι, that many of the great and wonderful works of God are not known to some men, because of their incredulity. And Chrysippus adds, " Si quid est quod efficiat ea, quæ homo, licet ratione sit præditus facere non possit : id profecto est majus, et fortius, et sapientius homine," Lactant. de Ira Dei. If there be any created thing, which exceeds the utmost skill and comprehension of the wisest man upon earth, that was certainly made by one who is infinitely greater, more powerful, and more wise than man.

Ver. 1016. In this verse Lucretius seems to overthrow his own opinion concerning the nature of the Deity, and makes it subject to the same dissolution with compounded bodies.

Ver. 1021. To understand the true meaning of Lucretius in this passage, we must call to mind that the Stoics held the world to be a rational creature, and to consist of heaven and earth, as of soul and body : The heavens, according to them, being the same to the whole as reason is to man. Hence Arnobius, lib. 3. " Advers. gentes: in philosophiæ memorabiles studio, arq. adistius nominis columen, vobis laudatoribus elevati, universam istam molem mundi, cujus omnibus amplexibus ambimur, tegimur, ac sustinemur, animans esse unum, sapiens, rationale, consultum, probabili asseveratione definiunt :" with whom agrees Hilarius in Genes.

Hæc tamen æthereo que machina volvitur axe,
Non tantum pictura poli est, sed celsa voluntas,
Mens ratioque subest. ——

Upon which verses Barthius, lib. 31. Adversar. cap. 12. observes, that, " mens et ratio cœli est astrorum, ut vocant, influentia, quæ genus gubernat humanum." The mind and understanding of the heaven is the influence, as they call it, of the stars, which governs mankind. The Stoics likewise, as Plutarch, " de facie in Orbe Lunæ," tells us, held the stars to be the eyes of the world, their corporeal deity. Pythagoras, Plato, Trismegistus, and many other of the ancient philosophers, believed the world to be endued with a rational soul, being persuaded to that belief by the admirable order and connection of its parts, which they conceived could not be sustained, but by a soul intrinsically informing, ordering, disposing and connecting them. Hence Virgil, *Æn.* 6. *v.* 724.

Principio cœlum, ac terras, camposque liquentes,
Lucentemque globum lunæ, Titaniaque astra
Spiritus intus alit, totamque infusa per artus
Mens agitat molem, et magno se corpore miscet.

Which Dryden thus interprets.

Know firſt, that heav'n and earth's compacted frame,
And flowing waters, and the ſtarry flame,
And both the radiant lights one common ſoul
Inſpires, and feeds, and animates the whole.
This active mind, infus'd through all the ſpace,
Unites, and mingles with the mighty maſs.

And this ſoul of the world Thales imagined to be God himſelf. But the Platoniſts and Stoics, though they held the world to be a god, allowed it to be but a ſecondary one; for that power which they primarily called God, is by them termed Ratio and Mens, by whom they affirmed the world to be created. Thus Cicero in Timæus: "Deus ille æternus (ſcilicet mens) hunc perfectè beatum deum (ſcilicet mundum), procreavit:" the world being, in their opinion, the univerſal fuſion of the firſt Divine Mind. For ſo Chryſippus in Cicero, lib. i. de Natura Deor. deſcribes it: "Vim divinam in ratione eſſe poſitam, et univerſæ naturæ animo atque mente: ipſumque mundum deum dici et ejus animæ fuſionem univerſam;" the Divine power is ſeated in reaſon, and in the mind of univerſal nature: and this world is ſaid to be a god, and the univerſal fuſion or extenſion of that mind. But Lucretius, in theſe ſixteen verſes, pleaſantly rallies theſe philoſophers, and purſues his argument. For finite ſeeds, ſays he, diſperſed in the infinite ſpace, had never combined together, unleſs, as the Stoics held, the world were a huge animal, and evidently a god, and its ſeeds diſpoſed and ordered with the greateſt art and prudence, by a ſpirit that is infuſed through all the members and parts of it. He derides theſe prudent and thinking principles of the Stoics, and teaches, from the maxims of Epicurus, that after a length of time, all things were produced by a fortuitous concourſe of the infinite bodies, that had been ſluttering up and down in the infinite void, and that they are daily renewed and repaired by the ſeeds which the infinite abundance of the firſt bodies continually ſupplies.

Ver. 1027 This infinite magazine or chaos of atoms, being of ſo many different figures, ſhapes, and dimenſions, and indefatigably and reſtleſsly moving to and fro, and up and down, in the boundleſs ſpace and infinite inanity, "in quo," ſays Cicero, lib. i. de finibus, "nec ſummum, nec infimum, nec medium, nec ultimum, nec extremum ſit." Theſe indiviſible bodies, I ſay, juſtling, ſtriking, urging, and crowding one another by ſo inceſſant an inquietude and eſtuation upon all encounters imaginable, and perhaps for many myriads of ages, having thus eſſayed, as it were, all poſſible conſigurations, changes, poſtures, ſucceſſions, and mutual agitations, chanced at laſt to meet, conſent, and fall into this goodly fabric, this wonderous architecture of the univerſe, which we daily contemplate with ſo much ecſtaſy and amazement: and in this inſtant it was that the groſs precipitated downwards, compelling and driving upwards the more light and eaſy, which convening in the circumference of the immenſe poles, wedged each other into the form of that canopy which we call the heaven or firmament; while, from the more cloſely compacted, reſulted the maſs of earth, and thoſe of a more middle nature, upon the concourſe of the condenſed particles, ran into the humid ſubſtance, part whereof being afterwards fitly prepared, was exalted into thoſe glorious luminaries which adorn the celeſtial concave, the reſidue being reſerved for the compoſition of other bodies. Thus we have, in a few words, the belief of Epicurus concerning the firſt beginning of all things, upon which we may juſtly exclaim with Lactantius, de ira Dei and ſay, "implevit numerum perfectæ inſaniæ, ut nihil ulterius adjici poſſet," while he denies God to have had any hand in the creation of the world. For, indeed, what greater madneſs can there be than to imagine that a ſword or a book was made "propter finem," for ſome end, and that the whole univerſe, the great code of nature, our eyes, and other members, plants, and a thouſand natural and wonderful curioſities, which infinitely ſurpaſs all things of art, ſhould reſult from chance only? But yet how new ſoever and very ridiculous this ſyſtem may ſeem, the hypotheſis is methodical, and not of ſo vaſt difficulty for a rational, pious, and practical philoſopher to believe and rely on, as perhaps appears at the firſt diſcovery. It is the opinion of the learned Des Cartes, that though God had given no other form to the world than that of the chaos, and only eſtabliſhing laws to nature, had ſo far afforded his concurrence, that ſhe ſhould have been obliged to act in the manner ſhe uſually does, we might ſafely believe, without violating the miracle of the creation, that by her alone all things which are purely material, might in time have rendered themſelves ſuch as we now behold them to be. Beſides, the difficulty of reſolving how this maſs of matter on which we inhabit, and of which we are indeed a part, ſhould be compoſed of ſuch principles as are before deſcribed, will appear to be no ſuch vaſt incongruity, if we give ourſelves leave but gradually to conſider, and imagine the earth as but one ſolitary part of the univerſe, compoſed of many ſuch congeſtions; and then by conſequence, we muſt be forced to grant, that the ball may be co-augmented of many ſmaller portions or maſſes heaped one upon another. In like manner as mountains ſometimes, from an aggregation of rocks; thoſe rocks from an accumulation of ſtones; thoſe ſtones, again, from a multitude of grains of ſand; that ſand from an aſſembly of duſt; and laſtly, the duſt from a more minute, but innumerable collection of imperceptible atoms or principles. But, indeed, few of the ancients favoured the opinion of the fortuitous production of the univerſe from "fruſtis quibuſdam temere concurrentibus," and, therefore, Lactantius, in his treatiſe de Ira Dei, is in the right to break out: "Quanto melius fuerat tacere, quam in uſus tam miſerabiles, tam inanes habere linguam!" Yet what ſome of thoſe very ancients have written and confeſſed of the firſt Mover is indeed very extraordinary, con-

ſidering, that they had only natural reaſon for their guide. Thales, Mileſius, Pythagoras, Plato, and others, whom the learned Grotius, in his aſſertion of the verity of the Chriſtian religion, has mentioned altogether, aſcribed the creation of the univerſe to God alone; nay, they held that the Almighty was even himſelf in all things.

——Deum namque ire per omnes [dum:
Terraſque, tractuſque maris, cœlumque profun-
Hinc pecudes, armenta, viros, genus omne ferarum
Quemque ſibi tenues naſcentum arceſſere vitas.
Virg. Georg. iv. *ver.* 221.

To the ſame purpoſe too the great apoſtle himſelf truly and divinely philoſophiſes to the ſuperſtitious Athenians, Acts xvii. 28. Nay, even Ariſtotle, as much an Atheiſt as many take him to have been, held the ſame belief in his more mature and ſerious thoughts, as may be deduced from divers expreſſions in his book de Mundo. And, as for any other fortuitous production, ſuch as our Epicurus, Heraclitus, Empedocles, Parmenides, Leucippus, and Ariſtotle too ſeemed at firſt to favour, by which all things were conſtrained to act by certain fatal neceſſities; this ſingle objection, how thoſe curious animals, perfect, and admirable plants, &c. could, by a beginning ſo extraordinary, be built, compoſed, and excogitated in ſo exquiſite a manner, that the mere conſideration, even of a gnat, or the eye of a paltry fly, the leaſt particle of the microcoſm, man's body, has been able to open the eyes of one of the world's moſt learned Atheiſts without the Divine Providence and ſome omnipotent cauſe, is undoubtedly not to be imagined, much leſs demonſtrated. Well, therefore, might he thus exclaim: "Componо hic profecto canticum in creatoris noſtri laudem," Galen. de uſu partium, lib. iii. and who that ſeriouſly conſiders this can abſtain from joining in the canticle with him? For then we might with as much reaſon believe, that a great volume of excellent ſentences, the hiſtorical relation of ſome intricate and true affair, or an epic poem in juſt and true numbers, ſhould reſult from the fortuitous and accidental miſchance of a printer's alphabet, the letters falling out of their boxes confuſedly, and without the diſpoſition either of author or artiſt.

Ver. 1035. The Stoics were of opinion, that the worlds had been frequently deſtroyed, or rather that they decayed, and were diſſolved by time, but that ſtill, phœnix-like, they were continually reſtored, as it were, from the aſhes of the expiring world. Now, Epicurus makes this reſtoration to proceed from the changes and fortunate encounters of his atoms, which not having, ſince the moment of their accidental coition, which begot the univerſe, deviated from their originally deſigned, ſtated, and equal motions, nor ſunk any lower to hinder and diſcompoſe the reſt, are the cauſe of the preſervation of the whole frame; for without this infinite ſupply of matter, rivers themſelves would have become channals of duſt; the ſun and ſtars have waxed cold, dim, and without influence: and the very bodies of animals have ſunk to an utter deſtruction both of the ſpecies and individuals.

Ver. 1037. In theſe two verſes, he illuſtrates the argument he laſt propoſed, and teaches, that all things would ſoon be diſſolved, unleſs matter were continually ſupplied from the infinite plenty of atoms, to make good the damage that bodies daily ſuffer, in like manner, as all animals would ſoon die, if they were not daily ſupported with food,

Ver. 1039. In theſe eleven verſes, he goes on and ſays: But, leſt any ſhould perhaps object, that the atoms, officiouſly moving up and down, which even Lucretius owns they do, meet, and rudely ſhock one another, and that from that conflict it proceeds, that being thus ſtopped and hindered in their courſe, they join together, and are compacted into bodies; and, therefore, though they be finite, yet, ſince they mutually ſtrike one another, the things that are already conjoined, are ſo far from loſing any of their parts, that, on the contrary, they are more and more increaſed by the new atoms, that are always coming to them. He aſſerts, that finite atoms cannot always, and at every moment of time, mutually ſtrike one another; nay, that when they do, they muſt ſometimes rebound, and thus give time and room to the principles of the compounds, which affect to be in continual motion, to break the chain of their contexture, and to fly away from one another; nay more, that there could be no ſtrokes whatever, except the atoms were infinite, as he obſerved before, ver. 1019.

Ver. 1050. Laſtly, Leſt his Memmius ſhould have embraced a different opinion, and believe that the univerſe has a centre, to which all things tend by their natural heavineſs, and therefore that there is no need of an infinite multitude of atoms, that, continually meeting together, may, by external blows, keep this compacted frame of the world in good repair; he confutes, and, at the ſame time, derides all belief of a centre; for he ſuppoſes, with the Stoics, who were very zealous aſſerters of a centre, that there was heretofore a confuſed multitude of particles ſcattered up and down through the whole immenſe ſpace, and that all thoſe particles made their way to one point, that is to ſay, to the middle of the univerſe. That this is the reaſon that the earth is round, and ſuſpended in the midſt of the world, and that all, even the oppoſite parts of this globe, are inhabited by animals, which fall not down into thoſe parts of the heavens that are beneath them, becauſe their heavineſs makes them tend to the middle; that, for the ſame reaſon too, the ſky is vaulted and rolled round; and the ſun, who with never-ceaſing motion runs through the arch of the heavens, alternately gives day to the oppoſite parts of the earth; and that it is not to be feared that the higheſt and loweſt parts of the frame will ever be diſjoined from one another, ſince they all ſtrive to one and the ſame centre. He has compriſed this in ſixteen verſes, and will now endeavour to prove this opinion to be weak and fooliſh, and that there is no middle place whatever in the

univerſe. Beſides, he ſuppoſes it an abſurdity to believe that any ponderous thing can ſtop and ſupport itſelf, or make its way upwards into the adverſe parts of the earth; for the Epicureans adhered to that vulgar notion; and, indeed, many of the ancients, and even of the firſt Chriſtians, did not believe the Antipodes, particularly Lactantius and St. Auguſtin were very difficult of belief upon that matter. Virgilius, a German biſhop, as it is related by Aventinus, in Hiſt. Boiorum, was like to have ſuffered a very ſevere puniſhment for favouring a little of this miſtaken hereſy. Plutarch, de Placitis Philoſoph. lib. i. tells us, that Oecetes affirmed there were two earths, between which, Philolaus, a diſciple of his, interſerted another continent of fire, which opinion Sandivogius, and other hermetic philoſophers, have alſo illuſtrated; but a ſounder philoſophy, and certain experience and knowledge, have long ſince evinced the error of all thoſe opinions.

Ver. 1060. For if we look on the ſhadows of animals in the water, their feet ſeem directly upwards towards our ſky.

Ver. 1062. For one of the trifling objections which ſome of the ancients made againſt the Antipodes was, that if there were any ſuch place, all weights and heavy bodies muſt there tend upwards towards the centre, to which they tend downwards with us; nor could they comprehend how the creatures there did no more fall downwards to their ſkies, than our bodies here mount upwards, and knock their heads againſt the oppoſite hemiſphere. And this fooliſh conceit, perhaps, was what made Lucius, as Plutarch, de Mac. in Orbe Lun. reports, deride thoſe in his time who fancied that men crawl there with their backs downwards, as cats, mice, and ſpiders do upon the walls and ceilings of our houſes. We read likewiſe of the ſcoff which Demonaſtes put upon a man who was diſcourſing with him concerning the inhabitants of the regions ἀντιχθόνων, when leading him to the mouth of a well. "Numquid," ſays he, "tales eſſe Antipodas aſſeris?"

Ver. 1064. *Phœbus.*] Of whom, ſee ver. 816.

Ver. 1066. Having laid down and explained the opinion of thoſe who held a centre in the univerſe, he attacks it in theſe ſixteen verſes, and teaches, in the firſt place, that there can be no middle, becauſe the void is infinite. Plutarch too, in like manner: The univerſe is infinite; but what is infinite has neither beginning nor end, and therefore it cannot have a middle, for the middle itſelf is a ſort of extreme, and infiniteneſs is a privation of extremes; and he argues Chryſippus to be guilty of a manifeſt contradiction, in giving a middle place to infinity. De Stoic. Repugn. And Plato himſelf, in his Timæus, ſeems to queſtion any ſurſum or deorſum at all in nature; for, ſays he, the whole heaven is round, and therefore it would be abſurd to call any place higher or lower, as in relation to the middle. Beſides, ſays Lucretius, grant there be a centre, yet no reaſon can be given why heavy things ſhould ſtop and reſt in that middle part of the void, rather than in any other part of it; becauſe it is the nature of the whole void to give way to ponderous things; nor can any part of the void ſupport any thing that has but the leaſt weight, becauſe the void is of all things the leaſt firm and ſolid.

Ver. 1080. In moſt of the former editions of this tranſlation, theſe two, and moſt of the following verſes of this book are tranſpoſed, and the ſenſe of Lucretius wretchedly embroiled and confuſed, if not totally miſtaken. No doubt our tranſlator followed ſome of the old editions of Lucretius, and finding them incorrect in this paſſage, endeavoured to mend them in his interpretation, but has ſucceeded ſo ill, that we may well apply to his verſion, what Lambinus ſaid of the original text, before he had corrected and brought it into ſome tolerable order: "Totus hic locus, qui deinceps ſequitur, miſerabilem in modum perturbatus et confuſus erat: ex qua ordinis perturbatione ita obſcurus erat, ut nulla ex ea probabilis ſententia elici poſſet." I have attempted to ſet it to rights in this edition; and in the few alterations and additions I have made, where the true meaning of Lucretius was evidently miſtaken, or imperfectly rendered, as well as in the diſpoſition and placing of the verſes, I have followed the interpretation and order which Creech himſelf has given and obſerved in his Latin edition of Lucretius, and hope I have done juſtice both to our tranſlator and his author.

Ver. 1082. His ſecond argument againſt thoſe that hold a centre, is contained in theſe twenty-two verſes, which are chiefly taken up in reciting their opinion; and he that recites an abſurdity, confutes it. Now they teach, ſays he, that the particles of earth and water only tend to the centre, but that thoſe of fire and of air ſtrive upwards. That of the fires which ariſe from the centre the planets and ſtars are made, and their flames preſerved and kept alive. But Lucretius anſwers, If ſome earthy particles did not riſe upwards likewiſe, how could animals be nouriſhed? how could trees, and all manner of plants grow, become green, and flouriſh, but by help of the needful food with which the earth ſupplies them? In the next place, ſays he, they pretend, that certain ſolid heavens, which ſtop and encloſe theſe light particles that ariſe from the centre, are rolled around all things: for if theſe particles were not ſtopped and reſtrained in their motion, they would immediately fly away through the immenſe void; the heavens would fall to pieces, the earth ſlip away from our feet, and the contexture of the whole frame would be diſſolved; for whenever any part of the world begins to fail, the diſſolution of the whole will follow.

Ver. 1086. Of this opinion, ſee the note on ver. 277.

Ver. 1094. The whole circuit or circumference of the heaven, with which the world is encloſed and ſurrounded, as with walls, Lucretius calls it Mœnia Mundi; and Ennius, Virgil, Manilius, and others, uſe the ſame expreſſion.

Ver. 1106. Through this whole book he has

been making grievous complaints of the obſcurity and intricateneſs of his ſubject, and of the difficulty of his undertaking; and, leſt this ſhould have deterred his Memmius from giving ear to his argumentations, he now, in theſe eight verſes, encourages him to take heart, promiſing that his future diſputation will be plain and eaſy.

ANIMADVERSION

BY WAY OF RECAPITULATION, ON THE FIRST BOOK OF LUCRETIUS.

Thus I have finiſhed my notes on the firſt book: may the reader enjoy the benefit of my labours, and pardon my miſtakes. But how can I beſpeak the candour and favour of my judges, who am going to paſs a ſharp, and perhaps too ſevere a cenſure on Lucretius himſelf. For, I will examine what he has advanced amiſs, and what with good reaſon. And as I will not reject all he has ſaid, ſo neither will I approve all his aſſertions. He who denied the praiſe of wit to Lucretius, granted him art; and who will refuſe him that honour which the moſt ſpiteful envy allowed him. I affirm, therefore, that his work is diſpoſed in an excellent method. Order ſhines throughout the whole; and the arguments ſupport and ſtrengthen one another in ſuch a manner, that if, in the opinion of Epicurus, there had not been a certain deformity, which no beautifying art could varniſh over and conceal, a certain weakneſs and deficiency which no ſtrength of wit, nor force of reaſoning could ſuſtain and make good, the poet would have repreſented to us a moſt beautiful, and at the ſame time, a moſt ſtrong and ſound philoſopher.

Epicurus was of opinion, that not the leaſt part of happineſs conſiſts in living exempt from fear; and that this happineſs can be attained only by the knowledge of nature:

——Terrores Animi, tenebraſque neceſſe 'ſt,
Non Radii Solis, non lucida tela diei
Diſcutiant; ſed Naturæ Species, Ratioque.
Lucret. lib. i. v. 147.

Theſe bugbears of the mind, this inward hell,
No rays of outward ſunſhine can diſpel;
But nature and right reaſon muſt diſplay
Their beams abroad, and bring the darkſome ſoul to day. *Dryden.*

Epicurus writes thus to Pythocles: Μὴ ἄλλο τι τέλος ἐκ τῆς περὶ μετεώρων γνώσεως εἴτε καθ' συναφὴν λεγομένων, εἴτε αὐτοτελῶς, νομίζειν δεῖ εἶναι, ἢπερ ἀταραξίαν, καὶ πίστιν βέβαιον, καθάπερ τὶ ἐπὶ τῶν λοιπῶν. And Cicero ſays, that by the knowledge of the nature of all things, we are eaſed of ſuperſtition, we are delivered from the fear of death, we are not diſquieted by the ignorance of things, which alone is often the cauſe of our moſt horrid and amazing terrors. "Omnium natura cognita levamur ſuperſtitione, liberamur mortis metu, non conturbamur ignoratione rerum, è qua ipſa exiſtunt horribiles ſæpe formidines," lib. i. de Fin.

Epicurus aſſerts, that all the fears that diſturb the minds of men, proceed from the belief of Providence, and of puniſhments after death, which laſt is a neceſſary conſequence of the former. For who is the man, that believing that God takes care of him, does not day and night dread the Divine Majeſty? See Cicero in Lucullus. This was the opinion of that miſtaken man, who was wiſe and knowing in a mad and fooliſh philoſophy: againſt whom, whoever undertakes to diſpute, will engage himſelf in a moſt ridiculous attempt: for whoſoever favours ſo abſurd an opinion, plainly wants common ſenſe, and is fit company only for lunatics. The care and protection of a gracious prince, or of a kind parent, deliver us from fear and ſorrow, nor do we dread the good will of courteous and charitable men. Whence then this horror, to think that we are taken care of by a moſt beneficent and Almighty Deity?

Lucretius propoſes this abſurd opinion in this firſt book; and after having prepared his reader by an artful introduction, he illuſtrates and adorns the ſubject, of which he had unhappily made choice. Ver. 181. He endeavours to prove by ten arguments, that nothing is made of nothing, and that nothing returns into nothing. I confeſs he is ingenious in the invention, and copious in the explication of them, but he does by no means come up to the matter: For, let us grant, I. That every thing cannot proceed from every thing. II. That things are produced at fixed and certain ſeaſons. III. That they require time to grow: And, IV. Matter to make them grow. V. That bounds are ſet to ſtrength and life. VI. That the earth becomes more fertile by culture and by the induſtry of men. VII. That nothing dies unleſs it be diſſolved by ſome force. VIII. That animals cannot be born daily, unleſs they be renewed by certain ſeeds. IX. That one and the ſame ſtrength is not able to diſſolve all things: And, X. laſtly, That nature does not produce any thing, unleſs ſhe be aſſiſted by the death of another. Let us, I ſay, grant all this, and what will it avail Lucretius? Will he conclude that the ſeeds themſelves were not made of nothing? Or, that nothing is ordered by the will and providence of the Deity? He can rationally conclude neither; and thus his ten arguments come to nothing: not indeed for any want of wit or artfulneſs on his part, but through the weakneſs of the cauſe itſelf, which he undertook to ſupport.

Ver. 316. He admirably well defends his ſubtle and minute ſeeds againſt ſuch as believe their ſenſes only: and ver. 381, he evinces that there is a void, by four arguments, than which no man yet ever brought more convincing. I have never ſeen any thing that could be replied to the firſt and fourth of them; but indeed, the ſecond and third are not of the ſame validity.

Ver. 472. He confirms by two arguments, that nothing is beſides body and void: and whatever elſe others allow to be things, he confines to the claſs of accidents which ſubſiſt, and are diſtinguiſhed from body and void by the imagination

only. But here he cunningly ſuppoſes what he ought to prove: that body only can act and ſuffer, touch, and be touched: for the ſouls of men, and all immaterial ſubſtances, contradict this definition.

Ver. 527. He, in many arguments, aſcribes perfect ſolidity to his atoms; nor do I deny it. But there is no reaſon to believe that therefore they cannot be diſſolved: for the ſolidity of the ſeeds proceeds from the immediate contact of their parts. But in all concrete bodies the contact of the parts is allowed to be at leaſt equal to that which is between the parts of the ſeeds. And therefore concrete bodies ſhould be equally, and no more liable to diſſolution than the ſeeds themſelves. The other argument by which he aſſerts the eternity of his atoms, are built on a falſe ſuppoſition: he aſſumes what he ought to prove; and when he at length flies to what they call a mathematical leaſt, ver. 630. he indeed preſſes hard on his adverſaries, and reduces them to great difficulties, but is reduced to no leſs ſtraits himſelf.

Ver. 668. He triumphs over Heraclitus, Empedocles, Anaxagoras, and others. At length, ver. 960. he employs a long diſputation, to prove the univerſe, which conſiſts of body and void, to be infinite: and here he is very copious in his arguments againſt the Stoics, who held a centre in the infinite univerſe, and deſcribes the opinions of Epicurus with a great deal of eloquence; but they being all built on falſe ſuppoſitions, fall together to the ground. Then he baniſhes the Antipodes, which a truer philoſophy and experience have long ſince recalled, and ſettled in their ancient abodes. However, he ſoothes with his arguments the imagination of man, which delights to be led away into an infinite, and never yet fixed any bounds to ſpace, nor ever will dare to do ſo.

BOOK II.

THE ARGUMENT.

I. From ver. 1. to 63, Lucretius exhorts his Memmius to the ſtudy of philoſophy, which alone can alleviate our cares and anxieties, and deliver the mind from fears. II. He diſputes concerning the properties or qualities of the ſeeds or atoms; the firſt of which is motion. That ſeeds move is demonſtrated from the generation of things; but their motion is downwards; for all ſeeds are heavy. But when ſolid ſeeds meet, they muſt of neceſſity rebound every way from one another. Thus ſome ſeeds happen to unite and join together, and thoſe whoſe union is moſt cloſe, compoſe the things that are hard and denſe; but the ſeeds whoſe connection is more looſe, make thoſe that are ſoft and rare. But ſome ſeeds never combine into one, but like the motes which we ſee in the beams of the ſun, are in perpetual motion, flying to and fro in the void, and inceſſantly ſtrike and drive up and down other atoms and themſelves. Theſe arguments end at ver. 133. III. He explains the ſwiftneſs of the ſeeds that tend downwards, to ver. 160. IV. Then to ver. 177, he ſeverely, according to his uſual method, falls upon thoſe who acknowledge a Divine and ruling Providence. V. He reſumes his argument, and to ver. 209, aſſerts that all bodies tend downwards. VI. To ver. 28c, he ſhows, that the ſeeds, as they tend downwards, decline a little from the ſtraight line; for unleſs they did ſo, nothing at all, at leaſt no free agent could ever be produced. VII. Then to ver. 318, he teaches that the ſeeds ſtill move in the ſame motion in which they have moved from all eternity: and that no man ought to diſtruſt this opinion becauſe he does not ſee the motion, ſince even the ſeeds themſelves cannot be perceived. Figure is the ſecond property or quality of the ſeeds: and he proves, VIII. to ver. 454, That all ſeeds are not of the ſame figure; but that ſome are round, ſome ſquare, ſome ſmooth, ſome rough, ſome hooked, &c. And he ſhows at large what figures compoſe bitter bodies, what ſweet, what hard, what ſoft. IX. To ver. 546, that this variety of figures is not infinite, but that the ſeeds of the ſame figure are infinite; that is to ſay, that the round are infinite, the ſquare infinite, &c. X. In the next place, to ver. 678, he proceeds to ſhow, that things are not compoſed of atoms of the ſame figure; and proves by ſeveral arguments, that compound bodies contain ſeeds of different figures. XI. Then he teaches that ſeeds have none of thoſe qualities which we call ſenſible; as colour, taſte, cold, heat, &c. XII. And that they are not endowed with ſenſe, though coloured, ſavoury, hot, cold and ſenſible things are compoſed of them, to ver. 988. XIII. Laſtly, That theſe infinite ſeeds, flying up and down through the infinite void, compoſe infinite worlds, and that theſe worlds are ſometimes increaſed in bulk by the ſeeds that drop down out of the infinite ſpace: and ſometimes diminiſhed and diſſolved, becauſe the ſeeds get looſe, and fly away from them into the infinite ſpace likewiſe; in like manner as plants and animals are born, increaſe in growth, wax old, and at length die.

'Tis pleaſant when the ſeas are rough, to ſtand
And view another's danger, ſafe at land:
Not 'cauſe he's troubled, but 'tis ſweet to ſee
Thoſe cares and fears from which ourſelves are free.

'Tis alſo pleaſant to behold from far
How troops engage, ſecure ourſelves from war.
But above all, 'tis pleaſanteſt to get
The top of high philoſophy, and ſit
On the calm, peaceful flouriſhing head of it.

Whence we may view deep, wond'rous deep below,
How poor miſtaken mortals wand'ring go,
Seeking the path to happineſs: ſome aim
At learning, wit, nobility, or fame:
Others with cares and dangers vex each hour
To reach the top of wealth and ſov'reign pow'r:
Blind wretched man! in what dark paths of ſtrife
We walk this little journey of our life!
While frugal nature ſeeks for only eaſe;
A body free from pains, free from diſeaſe;
A mind from cares and jealouſies at peace.
And little too is needful to maintain
The body found in health, and free from pain.
Not delicates but ſuch as may ſupply
Contented nature's thrifty luxury.
She aſks no more. What though no boys of gold
Adorn the walls, and ſprightly tapers hold,
Whoſe beauteous rays, ſcatt'ring the gaudy light,
Might grace the feaſts and revels of the night:
What though no gold adorns; no muſic's ſound
With doubled ſweetneſs from the roofs rebound;
Yet underneath a loving myrtle's ſhade,
Hard by a purling ſtream ſupinely laid, [ſpread,
When ſpring with fragrant flow'rs the earth has
And ſweeteſt roſes grow around our head;
Envy'd by wealth and pow'r, with ſmall expence
We may enjoy the ſweet delights of ſenſe.
Who ever heard a fever tamer grown
In clothes embroider'd o'er, and beds of down,
Than in courſe rags?
Since then ſuch toys as theſe
Contribute nothing to the bodies eaſe,
As honour, wealth, and nobleneſs of blood,
'Tis plain they likewiſe do the mind no good.
If when thy fierce embattled troops at land
Mock-fights maintain; or when the navies ſtand
In graceful ranks, or ſweep the yielding ſeas,
If then before ſuch martial ſights as theſe,
Diſperſe not all black jealouſies and cares,
Vain dread of death, and ſuperſtitious fears
Not leave thy mind; but if all this be vain,
If the ſame cares and dread and fears remain,
If traitor-like they ſeize thee on the throne,
And dance within the circle of a crown;
If noiſe of arms, nor darts can make them fly,
Nor the gay ſparklings of the purple dye.
If they on emperors will rudely ſeize,
What makes us value all ſuch things as theſe,
But folly and dark ignorance of happineſs?
For we, as boys at night, by day do fear
Shadows as vain and ſenſeleſs as thoſe are. [fouls,
Wherefore that darkneſs which o'erſpreads our
Day can't diſperſe; but thoſe eternal rules,
Which from firm premiſes true reaſon draws,
And a deep inſight into nature's laws.
But now I'll ſing, do you attend, how ſeed
Proceeds to make, and to diſſolve things made:
What drives them forward to their tedious race,
What makes them run through all the mighty ſpace.
'Tis certain now no ſeed to ſeed adheres
Unmov'd and fix'd: for every thing appears
Worn out, and waſted by devouring years;
Still waſting, ſtill it vaniſhes away,
And yet the maſs of things feels no decay:
For when thoſe bodies part, the things grow leſs
And old: but they do flouriſh and increaſe,
To which they join; thence too they fly away;
So things by turns increaſe, by turns decay:
Like racers bear the lamp of life and live,
And their race done, their lamp to others give.
And ſo the maſs renews: few years deface
One kind, and ſtraight another takes the place.
But if you think the ſeeds can reſt, and make
A change by reſt, how great is the miſtake?
For ſince they through the boundleſs vacuum rove,
By their own weight, or other's ſtroke they move,
For when they meet and ſtrike, that furious play
Makes each of them reflect a diff'rent way:
For both are perfect ſolids, and nought lies
Behind, to ſtop their motion as they riſe. [move,
But that you may conceive how thus they
Conſider that my former reaſons prove,
That ſeeds ſeek not the midſt, and that the ſpace
Is infinite, and knows no loweſt place;
And, therefore, ſeeds can never end their race,
But always move, and in a various round. [bound
Some when they meet, and rudely ſtrike, re-
To a great diſtance; others when they jar
Will part too, and rebound, but not ſo far.
Now theſe ſmall ſeeds that are more cloſely join'd,
And tremble, in a little ſpace confin'd,
Stopp'd by their mutual twinings, ſtones compoſe
Iron or ſteel, or bodies like to thoſe;
But thoſe that ſwim in a wide void alone,
And make their quick and large rebounds, or run
Through a large ſpace, compoſe the air and ſun.
Beſides theſe two, there is another kind;
Bodies from union free, and unconfin'd;
With others ne'er in friendly motion join'd.
Of theſe there's a familiar inſtance——
For look where'er the glitt'ring ſun-beams come
Through narrow chinks into a darken'd room;
A thouſand little bodies ſtraight appear
In the ſmall ſtreams of light, and wander there:
For ever fight, reject all ſhows of peace;
Now meet, now part again, and never ceaſe.
Hence we may judge how th' atoms always ſtrove
Through the vaſt empty ſpace, and how they move.
Such knowledge from mean inſtances we get,
And eaſily from ſmall things riſe to great.
But mark this inſtance well, and learn from thence
What motions vex the ſeeds, though hid from ſenſe:
For here you may behold, by ſecret blows
How bodies turn'd, their line of motion loſe:
How beaten backward, and with wanton play,
Now this, now that, and ev'ry other way.
All have their motions from their ſeeds; for thoſe
Move of themſelves, and then with ſecret blows
Strike on the ſmall moleculæ; they receive
The ſwift impreſſion, and to greater give:
Thus they begin from the firſt ſeeds; and thence
Go on by juſt degrees, and move our ſenſe.
For look, within the little beams of light
You ſee them ſtrike; but what blow makes them fight
Is undiſcern'd, and hidden from our ſight.

And yet how ſwift the atoms motions are,
This foll'wing inſtance will in ſhort declare:
For when the morning climbs the eaſtern ſkies,
And tuneful birds ſalute her early riſe;
In ev'ry grove and wood with joy appear,
And fill with rav'ſhing ſounds the yielding air.
How ſwift the beams of the bright riſing ſun
Shoot forth! Their race is finiſh'd when begun:
From heav'n to earth they take their haſty flight,
And gild the diſtant globe with gaudy light.
But this thin vapour, and this glitt'ring ray,
Through a mere void, make not their eaſy way;
But with much trouble force a paſſage through
Reſiſting air; and therefore move more ſlow:
Nor are they ſeeds, but little bodies join'd;
And adverſe motions in ſmall ſpace confin'd:
And therefore from without reſiſting force,
And inbred jars muſt ſtop their eager courſe;
But ſolid ſeeds, that move through empty ſpace,
And all whoſe parts do ſeek one common place;
Whom nothing from without reſiſts; than light
And beams more ſwift, muſt make their haſty flight;
And in that time a larger diſtance fly,
While the ſun's lazy beams creep through our ſky:
For they by counſel cannot move more ſlow;
Or ſtop to make inquiry, or to know
How they muſt work, on what deſign they go.
But ſome, dull ſouls! think matter cannot move
Into fit ſhapes, without the pow'rs above:
Nor make the various ſeaſons of the year
So fit for men; nor fruit, nor buſhes bear,
Nor other things, which pleaſure prompts, could do:
Pleaſure, that guide of life, and miſtreſs too!
That we ſhould ſeek love's generous embrace,
And thence renew frail man's decaying race:
And therefore fancy that the gods did make
And rule this all. How great is that miſtake!
For were I ignorant whence things ariſe,
Yet many reaſons from the earth and ſkies,
From ev'ry thing deduc'd, will plainly prove,
That this imperfect world———
Was never made by the wiſe pow'rs above.
This I'll explain hereafter; now go on
To finiſh what already I've begun.
And this I think a proper place to prove,
That nothing of itſelf can upward move:
Leſt when you ſee th' ambitious flame aſpire,
You think 'tis nat'ral force bears up the fire.
For ev'ry tree does rear its lofty head,
Each tender ear and ſhrub does upward ſpread,
And all draw up their nour'ſhment from below,
But yet all weights by nature downward go.
So when the ſubtle flame, and ſhining ſtreams
Of fire ariſe, and waſte the upper beams;
'Tis ſome force drives them up. So from a wound
Our blood ſhoots forth, and ſprinkles all around.
Again, who ſees not that a quiet flood
Throws back with mighty force th' immerſed wood?
For when we ſtrive, in deeper ſtreams, to drown,
And ſcarce with all our force can preſs it down,
The waves, with double vigour, throw it up,
And make it ſtrongly leap above the top:
And yet who doubts all theſe would downward tend,
When plac'd in void, and nat'rally deſcend?
So riſing flames by th' air are upwards borne,
Although their nat'ral weights preſs a return:
Beſides, we all behold, how ev'ry night
The falling meteors draw long trains of light.
Wherever nature yields a paſſage through,
We ſee ſtars fall, and ſeek them here below:
The ſun too from above his vigour yields
To us below, and cheriſhes our fields.
Therefore its fire deſcends; ſwift light'ning flies;
Now here, now there, betwixt the parted ſkies:
And fighting through the clouds, its place of birth,
The broken ſulph'rous flame deſcends to earth.
Now ſeeds in downward motion muſt decline,
Though very little, from th' exacteſt line:
For did they ſtill move ſtraight, they needs muſt fall,
Like drops of rain, diſſolv'd and ſcatter'd all;
Forever tumbling through the mighty ſpace,
And never join to make one ſingle maſs.
If any one believes, the heavier ſeed,
In downright motions, and from hind'rance freed,
May ſtrike the lighter; and fit motions make,
Whence things may riſe, how great is the miſtake!
'Tis true, when weights deſcend through yielding air,
Or ſtreams; the ſwiftneſs of the fall muſt bear
Proportion to the weights; and reaſon good;
Becauſe the fleeting air, and yielding flood
With equal ſtrength reſiſt not ev'ry courſe,
But ſooner yield unto the greater force:
But now no void can ſtop, no ſpace can ſtay
The ſeeds; for 'tis its nature to give way;
Therefore through void unequal weights muſt be
Like ſwift in motion, all of like degree.
Nor can the heavier bodies overtake
The lighter falling ſeeds; and, ſtriking, make
The motions various, fit for nature's uſe,
By which all pow'rful ſhe may things produce.
'Tis certain then and plain, that ſeeds decline,
Though very little from th' exacteſt line,
But not obliquely move: that fond pretence
Would fight all reaſon, nay, ev'n common ſenſe:
For ev'ry body ſees, a falling weight
Makes its deſcent by lines direct and ſtraight.
Beſides, did all things move in a ſtraight line,
Did ſtill one motion to another join
In certain order, and no ſeeds decline,
And make a motion fit to diſſipate [fate:
The well wrought chain of cauſes, and ſtrong
Whence comes this perfect freedom of the mind?
Whence comes the will ſo free, and unconfin'd,
Above the pow'r of fate, by which we go
Whene'er we pleaſe, and what we will we do?
In animals the will moves firſt; and thence
The motions ſpread to the circumference,
And vig'rous action through the limbs diſpenſe:
For look, and ſee, when firſt the barrier's down,
The horſe, though eager, cannot ſtart ſo ſoon
As his own mind requires; becauſe the force,
And ſubtle matter that maintains the courſe,

Muſt be ſtirr'd through the limbs, then fitly join'd,
Obey the eager motions of his mind:
Which proves theſe motions riſe within the heart,
Beginning by the will, then run through ev'ry part.
But now 'tis otherwiſe, when 'tis begun
From force; for then our limbs are hurry'd on
By violent ſtrokes, no pow'r of our own,
Until the will, by her own nat'ral ſway,
Shall check, or turn the force another way.
Wherefore 'tis plain; though force may drive us on,
And make us move our limbs, and make us run;
Yet ſomething lies within, that can oppoſe
The vi'lent ſtroke, and ſtill reſiſt the blows;
At whoſe command a ſubtle matter flies,
And bends through all our limbs, our arms, our thighs;
And check'd again, and all the vigour dies.
Therefore, we muſt confeſs, as theſe things prove,
There is another cauſe, by which ſeeds move,
Beſides dull weight and ſtroke, from whence is wrought
This pow'r: for nothing can ariſe from nought,
For weight forbids that things be only join'd
By ſtroke, and outward force; and leſt the mind
Should be by ſtrong neceſſity confin'd,
And, overcome, endure fate's rigid laws,
This little declination is the cauſe.
Nor was this maſs of matter, the whole frame,
Ever more looſe or cloſe, but ſtill the ſame:
For it can never fail, or greater grow;
Wherefore the ſeeds ſtill mov'd, ev'n juſt as now:
And the like motions ever will maintain;
What things were made, will be produc'd again
In the ſame way; look fair, grow ſtrong, and great,
And live as long as nature's laws permit.
Nor is there any force can change this all:
For there's no place from which ſtrange ſeeds may fall,
And make diſturbance: no ſpace does here lie
Beyond the whole, to which the ſeeds may fly,
And leave the mighty all to waſte and die.
Beſides, 'tis nothing ſtrange that ev'ry maſs
Seems quiet, and at reſt, and keeps its place;
Though ev'ry little part moves here and there:
For ſince the principles too ſubtle are
For ſight, their motion too muſt diſappear:
Nay, objects fit for ſenſe, which diſtant lie,
Conceal their motions too, and cheat our eye.
For often on a hill the wanton ſheep,
At diſtance plac'd, o'er flow'ry paſtures creep,
Where'er herbs, crown'd with pearly dew, invite,
And kindly call their eager appetite.
The lambs, their bellies full, with various turns,
Play o'er the field, and try their tender horns:
Yet all theſe ſeem confus'd at diſtance ſeen,
And like a ſteady white, ſpread o'er the green.
And thus, when two embattled armies rage,
And in a ſpacious plain at laſt engage,
When all run here and there; the furious horſe
Beat o'er the trembling fields with nimble force:
Straight dreadful ſparklings from their arms appear,
And fill with a ſtrange light the wond'ring air:
Earth groans beneath their feet; the hills around,
Flatt'ring the noiſe, reſtore the dreadful ſound:
Yet this would ſeem, if from a mountain ſhown,
A ſteady light, and a continu'd one.
Now learn what manner of things firſt bodies are,
What diff'rent figures, ſhapes, and forms they bear.
For though the ſhape to many is the ſame,
Yet all agree not in one common frame:
Nor is this ſtrange, or to be wonder'd at:
For ſince the numbers are ſo vaſtly great,
And know no bound, nor end, it cannot be,
That all in the ſame figures ſhould agree.
Beſides, conſider men, or beaſts, or trees,
Or ſilent fiſh, that cut the yielding ſeas;
Or birds, that either wanton o'er the floods,
Or fill with tuneful ſounds the liſt'ning woods;
Conſider each particular, you'll find
How diff'rent ſhapes appear in ev'ry kind.
Elſe how could dams their tender young, or how know;
The new-born young their diſtant mothers
Which all perform as well as men can do.
For often when an inn'cent heifer dies,
To angry gods a ſpotleſs ſacrifice;
When all around ſhe ſheds atoning blood,
And ſtains the altars with a purple flood:
Her dam beats o'er the fields in wild deſpair,
And wounds with loud complaints the tender air;
Now here, now there will run, and ſtill complain;
Now leaves her ſtall, and then returns again:
Mad for her young, ſhe ev'ry field does trace;
With paſſionate eyes ſhe viſits ev'ry place:
No ſtreams, no flow'rs, her former great delight,
Can raiſe or quicken her dead appetite,
Allay her grief, divert her pining care,
And though a thouſand heifers ſhould appear,
More fat, more fair than hers, ſhe paſſes by,
And looks on none, or with a ſlighting eye:
So plain it is, ſhe looks for ſomething known,
And view'd before; ſhe only ſeeks her own.
Beſides, the tender kids, and wanton lambs
All know the voice, and bleatings of their dams:
And all, as nat'ral inſtinct prompts them on,
When hunger calls, to their own mothers run.
Beſides, what various ſhapes in corn appear?
A diff'rent ſize to ev'ry grain, and ear.
And ſo in ſhells, where waters, waſhing o'er,
With wanton kiſſes bathe th' amorous ſhore.
And therefore ſeeds, ſince they from nature came,
Not made by art, after one common frame,
Muſt not be all alike, their ſhapes the ſame.
And hence a reaſon's ſeen why light'ning flies
With keener force, through ſtones, through parted ſkies,
Than thoſe blunt flames, which from our fires ariſe:
Becauſe its little parts, more looſely join'd,
More ſubtle far, an eaſy paſſage find
Through ſuch ſmall pores, as ſtop the blunter flame,
Which parts of heavy oil, or timber frame.

Through horn the ſun-beams paſs, and ſtrike our eye;
But water on the ſurface ſtays: and why?
Becauſe the parts of light are leſs than thoſe
That make up water, and dull ſtreams compoſe.
So through the ſtrainer wines with eaſe will flow;
But heavy oil, or ſtops, or runs more ſlow:
The reaſon's this; 'cauſe 'tis of parts combin'd,
Far greater, and more hook'd, and cloſely twin'd,
Which therefore cannot be disjoin'd as ſoon,
And through each little paſſage ſingly run.
From taſted honey pleaſing thoughts ariſe,
And in delightful airs look through our eyes:
When rue, or wormwood's touch'd, flies ev'ry grace,
And violent diſtortions ſcrew the face.
Whence you may eas'ly gueſs thoſe round, and ſmooth,
That with delightful touch affect the mouth:
But thoſe which we more rough or bitter find,
Are made of parts more hook'd, and cloſely twin'd;
Which wound the organ, as they enter in,
And force a paſſage through the injur'd ſkin.
In ſhort, what things are good for ſenſe, what bad,
Of ſeeds of diff'rent ſhape, and ſize are made:
Nor muſt you fancy bodies that compoſe
The harſher ſounds of ſaws, as ſmooth as thoſe
That form the ſweeteſt airs that viols make,
When gentle ſtrokes the ſleeping ſtrings awake.
Thoſe ſeeds have diff'rent figures, form, and ſize,
That from all rotting carcaſes ariſe,
From thoſe that new-preſs'd ſaffron yields, or rear
From incens'd altars, ſweet'ning all the air.
And ſo in colours too, that gaudy dye,
That pleaſes, and delights the curious eye,
A diff'rent form, and ſhape, and figure bears
From that which wounds the ſenſe, and forces tears;
Or mean and ugly to the ſight appears.
For ſeeds of all that pleaſe the ſenſe are ſmooth;
Of all that hurt, are rough, or hook'd, or both.
But beſides theſe, there other bodies are,
Not perfect ſmooth, nor hook'd, but angular:
With little corners butting ev'ry where,
Which tickle more than hurt the ſenſe; ſuch join
To make the acid taſte of palling wine.
Laſtly, that heat and cold, form'd diff'rent ways,
Affect the organs, ev'n our touch betrays.
For touch, that beſt, that chiefeſt ſenſe is made,
When ſtrokes, from things without, the nerves invade,
Or ſomething from within does outward flow,
And hurts, or tickles as it paſſes through:
As 'tis in venery, or when the ſeed
Remain within, and ſtrange confuſions breed,
Stirr'd up by vi'lent ſtroke: for ſtrike a blow
On any limb, and you will find 'tis ſo.
Wherefore theſe ſeeds muſt be of diff'rent ſize,
Of diff'rent ſhapes and figures; when ariſe
In ſenſe, ſo great, ſo ſtrange varieties.
Farther, what things ſeem hard and thick, are join'd twin'd;
Of parts more hook'd and firm, and cloſely

As iron, flints, braſs, ſteel, and diamonds,
Gems free from pow'r of ſtroke, ſecure from wounds.
But fluids are compoſed of ſmooth and round;
For their ſmall parts, by no ſtrong union bound,
Are very eaſily disjoin'd, and move
Or here, or there, at every little ſhove.
Laſtly, Whatever's ſoon diſſolv'd, or broke,
As morning miſts, or yielding flames, or ſmoke;
If all its little bodies be not ſmooth
And round in figure, form, or ſhape, or both,
Yet they are not all twin'd, all have not hooks,
And ſo may paſs through ſtones and hardeſt rocks.
Nor muſt you think it ſtrange the ſame ſhould be,
Fluid and bitter too, as is the ſea;
For fluids are of ſmooth and round combin'd;
To theſe are little pungent bodies join'd;
Yet there's no need they ſhould be hook'd or twin'd;
For they may globous be, though rough, and thence
Are fitted both to move, and hurt the ſenſe.
But to convince you with a clearer proof,
That acid fluids have ſmooth join'd with rough,
They may be ſep'rated with eaſe enough,
For when ſalt ſtreams through winding caverns paſs,
They riſe up ſweet, and bubble o'er the graſs:
Becauſe thoſe pungent parts they roll'd before,
Now ſtay behind, and lodge in every pore.
This being prov'd, I'll now go on to ſhow
Theſe various ſhapes are finite, and but few;
For grant them infinite, it follows thence
That ſome among the ſeeds muſt be immenſe:
And how can numerous ſorts of ſhapes appear
In ſuch ſmall bodies as the atoms are?
For think that ſome minuteſt parts compoſe
The ſeed; add two, or three, or more to thoſe;
Now, when the topmoſt parts are plac'd below,
And the right turn'd to left, you'll plainly know,
By changing ev'ry way their former place,
What figure each poſition gives the maſs.
But if you'd make it capable of more,
You muſt ſubjoin new parts to thoſe before,
And ſo go on, if you would vary thoſe;
Thus with the ſhapes the body greater grows:
Wherefore 'tis doworight folly to admit
That this variety is infinite,
Unleſs you grant ſome ſeeds immenſely great.
Beſides; embroider'd ſtuff, and purple dye,
Or gaudy peacocks plumes, that court our eye,
Excell'd by finer colours would ſeem leſs bright,
And loſe their wonted power to delight.
So things more ſweet than honey would appear,
And ſounds more ſoft than ſwans ſalute the ear;
Nay, muſic's ſweeteſt airs would ceaſe to pleaſe,
Becauſe there might be better than all theſe:
So on the contrary, we ſtill might fall
From bad to worſe, but ne'er to worſt of all;
For ſtill in nature ſomething worſe may riſe,
Still more offenſive to our ears, our eyes,
Our ſmell, our taſte But now, ſince 'tis confeſs'd
That ſome things are in nature worſt, ſome beſt,
And we can fear no high'r, 'tis likewiſe true,
Theſe various ſhapes are finite, and but few.

Laſtly, In fire and ſnow the heat and cold's intenſe,
The utmoſt qualities that ſtrike our ſenſe;
Theſe two, as bounds, the middle warmths controul,
Which riſe by juſt degrees, and make a whole:
'Tis certain then that theſe varieties
Are finite, and that two extremes compriſe,
On this ſide melting flames, on that ſide ice.
This prov'd, it follows, that thoſe ſeeds whoſe frame
Is perfectly alike, their ſhapes the ſame,
Are infinite; for, ſince theſe reaſons teach,
That thoſe varieties of ſhape ne'er reach
To infinite, there muſt be infinite of each;
Or elſe, what I before ſucceſsfully oppos'd,
The all is finite, and in bounds enclos'd.
This taught, my lab'ring muſe next ſweetly ſings,
That proper ſeeds for ev'ry kind of things
Are infinite; that theſe preſerve the maſs,
And kinds of things, by conſtant ſtrokes in ev'ry place:
For though ſome kinds of beaſts we rarely view,
As if unfruitful nature bore but few;
Yet other countries may ſupply our wants:
Thus India breeds ſuch troops of elephants,
As fight their wars, and uſually o'ercome;
So num'rous are they there, ſo few at Rome.
But grant in nature ſuch a ſingle one,
The like to which nor is, nor e'er was known:
Yet were its proper ſeeds but finite, how
Could that be made, or when 'twas made, how grow?
For think the ſeeds of any ſingle maſs
Being finite, ſcatter'd through the mighty ſpace,
Where, how, or when, what force, or what deſign,
Amid ſuch diff'rent ſeeds, could make them join?
For 'tis not reaſon prompts them to combine.
But as in wrecks, the ſeats, the maſts, the oars,
Confus'dly ſcatter'd, fill the neighb'ring ſhores:
That men might learn by ſuch ſad ſights as theſe
The force, and cruel treach'ries of the ſeas;
And ſtill diſtruſt, though with perfidious ſmile
Becalm'd, it tempts them on to farther toil.
So finite ſeeds would in the ſpace be toſt,
And in the whirls of diff'rent matter loſt;
So that they ne'er could join, or be at peace,
Nor yet preſerve their union, nor increaſe:
But now 'tis plain, and ev'n our ſenſes ſhow
That things are made; and, made, increaſe and grow.
'Tis certain then that ſeeds of ev'ry kind
Are infinite.——
Nor can deſtructive motions ſtill prevail,
And bring a univerſal death on all:
Nor motions, which compoſe or elſe increaſe,
Always preſerve things made, but ſometimes ceaſe:
So theſe two contraries do always jar
With equal force, and ſtill maintain the war.
Now theſe, now thoſe prevail; and infant's moans
Are ever mix'd with others' dying groans:
And ev'ry day and night the tender cry
Of new-born babes joins with their ſighs that die.
Now you muſt farther mark that nought's combin'd,
Compos'd, or made of ſeeds all of one kind;
But things of diff'rent pow'rs and faculties
Do equal diff'rent ſorts of ſeeds compriſe.
The earth does in itſelf ſuch parts contain,
As make up ſprings which feed the greedy main;
And ſuch ſeed too as fierceſt fire can frame;
For many parts, like Ætna, vomit flame:
And ſuch whence trees and tender ſhrubs do ſhoot; [fruit.
And graſs for beaſts, for man ſweet corn and
Hence term'd the mother of the gods: confeſs'd
The common parent too of man and beaſt.
The poets ſing, that through the heav'ns above,
She chariots, drawn by fierce yok'd lions, drove;
And riding to and fro, ſhe wanders there:
They teach by this, that in the ſpacious air
Hangs the vaſt maſs of earth, and needs no prop
Of any lower earth to keep it up.
They yoke ſuch beaſts, to ſhow that ev'ry child,
Though form'd by nature fierce, untam'd, and wild, [mild.
Soften'd by care and love, grows tame, and
Her lofty head a mural garland wears,
Becauſe ſhe towns and ſtately caſtles bears:
And thus adorn'd with gaudy pomp and ſhow,
Goes through our towns, and as ſhe paſſes through,
The vulgar fear, and all with rev'rence bow.
Concerning her fond ſuperſtition frames
A thouſand odd conceits, a thouſand names;
And gives her a large train of Phrygian dames:
Becauſe in Phrygia corn at firſt took birth,
And thence was ſcatter'd o'er the other earth.
They eunuch all her prieſts, from whence 'tis ſhown,
That they deſerve no children of their own,
Who or abuſe their ſires, or diſreſpect,
Or treat their mothers with a cold neglect;
Their mothers, whom they ſhould adore.——
Amidſt her pomp fierce drums and cymbals beat,
And the hoarſe horns with rattling notes do threat.
The pipe with Phrygian airs diſturbs their ſouls,
Till, reaſon overthrown, mad paſſion rules.
They carry arms, thoſe dreadful ſigns of war,
To raiſe in impious routs religious fear. [goes,
When carry'd thus in pomp. through towns ſhe
And health on all moſt ſilently beſtows;
With offer'd money they beſtrew the plain,
And roſes cover her, and all her train.
Here ſome in arms dance round among the crowd,
Look dreadful gay in their own ſparkling blood,
Their creſts ſtill ſhaking with a dreadful nod.
Theſe repreſent thoſe armed prieſts, who ſtrove
To drown the tender cries of infant Jove;
By dancing quick they made a greater ſound,
And beat their armour as they danc'd around;
Leſt Saturn ſhould have found and eat the boy,
And Ops for ever mourn'd her prattling joy.
For this her train is arm'd; or elſe to ſhow
They'll ſerve their country, and enlarge it too.

Whenever danger, or when honour calls.
All which, though well contriv'd, is fond, and false;
For ev'ry deity must live in peace,
In undisturb'd, and everlasting ease:
Not care for us, from fears and dangers free;
Sufficient to his own felicity.
Nought here below, nought in our pow'r he needs;
Ne'er smiles at good, ne'er frowns at wicked deeds.
The earth wants sense, and yet contains the seeds;
And therefore trees and living creatures breeds.
Now those that would their wanton fancies please,
And use the name of Neptune for the seas;
Ceres for corn, or Bacchus for the vine,
Rather than speak the plainer terms of wine,
Such men may call, and strength of fancy show,
The earth the mother of the gods below,
And those above, although she is not so.
The sheep, the warlike horse, and bull, in food
Agree; and all drink of the same cold flood:
And yet they diff'rent are; and each delights
In proper motions, manners, appetites;
Such diff'rent seeds in ev'ry herb do grow;
Such diff'rent seeds in ev'ry water flow.
Now though blood, humour, nerves, and vein, and bone,
Are parts of animal, and make up one;
Yet what varieties their forms divide?
How all unlike? Their diff'rence vastly wide!
So all combustibles, though not the same
In other things, have parts of such a frame
As make gay sparkles, ashes, light, and flame.
And so consider ev'ry thing, you'll find
Each made of diff'rent seeds in shape and kind.
Lastly, We all confess some object please
The smell and taste at once.——
Now seeds of diff'rent shapes must make up these,
For taste and smell do diff'rent organs strike,
Therefore their figures cannot be alike:
So that each mass does diff'rent shapes enclose,
And ev'ry body diff'rent seeds compose.
A pregnant proof of this my song affords,
For there are letters common to all words;
Yet some of diff'rent shapes and figures join,
To make each diff'rent word, each diff'rent line.
Not but that many are in shape the same,
But all agree not in one common frame.
And so of other things; though things are made
Of many common seeds in order laid,
Yet may the compounds widely disagree,
And we may justly guess that stone, and tree,
Or an'mal kind, as bird, and beast, and man,
From seeds of diff'rent shapes and kinds began.
Yet all join not with all, for thence would rise
Vast monsters, nature's great absurdities;
Some things half-beast, half-man, and some would grow
Tall trees above, and animals below;
Some join'd of fish and beasts, and ev'ry where,
Frightful chimeras, breathing flames, appear.
But since we see no such, and things arise
From certain seeds, of certain shape and size,
And keep their kind, as they increase and grow;
There's some fix'd reason why it should be so.

For see, our limbs receive from all their food
Agreeable parts, which, turn'd to flesh and blood,
Accept the vital motions: but for those
That disagree with her, some nature throws
Through open passages away; but more
By secret impulse fly through ev'ry pore;
For they could never join, but still at strife,
Obstruct all motions that are fit for life.
Now these are cath'lic laws; these rules do bind
Not animals alone, but ev'ry kind;
For since they all of diff'rent natures are,
The figures of their seeds can never square;
Not but that many are in shape the same,
But all agree not in one common frame.
Now since the seeds are diff'rent, thence will grow
A diff'rence in their weight and motion too,
Their stroke, connection, concuss. Now by these,
Not animals alone, but heav'n, earth, seas,
Are plac'd in their own proper species.
Now farther learn, what I with toil and pain,
With many a careful thought, and lab'ring brain,
Have sought to teach thee; lest thou shouldst mistake,
And think the seeds of black compositures, black;
Of white things, white; or other bodies wear
Those diff'rent colours that their seeds did bear.
For seeds are colourless; without a dye,
Or like, or unlike those that seem to lie
On bodies surfaces, and strike our eye.
Now if you think such seeds are things unfit
To be conceiv'd, how fond is the conceit!
For since that men born blind, whose nat'ral night
Was never scatter'd by one beam of light,
Know things by touch, he's foolish that denies,
That any notices of things can rise,
Unless from colours ent'ring at our eyes.
For in the dark we feel, and form from thence
Some images; yet then no colours strike our sense.
But this position stronger reasons show;
For seeds of things ne'er change, though colours do:
For somewhat must survive each change, and be
Essentially immutable, and free;
Lest all should sink to nought, and thence arise,
For what is chang'd from what it was, that dies.
Therefore seeds colourless, unfit for view,
Or grant: or grant annihilation true.
Though seeds are colourless, and free from dyes,
They're form'd of diff'rent figures; whence arise
The num'rous colours, gay varieties.
And since, as we discours'd before, we find
It matters much with what first seeds are join'd,
What figure, what position they maintain,
What motions give, and what receive again;
'Tis strait resolv'd why things as black as night
Can change so soon, and put on virgin white;
And scatter all around their vig'rous light.
As in the sea, when the mad ocean raves,
And white curls rise upon the foaming waves;
For thus it is: That which seem'd black before,
By losing little parts, or taking more,
Their number, motion, order, station, site,
Position chang'd, from black are turn'd to white.

But if the sea were ting'd with nat'ral sky,
What force, what art could make it change the dye?
For change its frame, and change, and change
Yet still the native tincture would remain, [again,
And never put on white; but if the seed,
Painted with diff'rent colours, all agreed
To make one white; as little parts, that bear
Quite diff'rent figures can compose one square;
Then it would follow, as in squares there lie
Such diff'rent figures, naked to our eye,
Just so, in one pure whiteness, we should view
A thousand colours mix'd, and diff'rent too.
Besides; look o'er those diff'rent shapes; for there
No hindrance in their natures does appear,
Why all may not agree to make one square.
But neither sense, nor nature's laws permit,
That diff'rent colours should compose one white.
Nay more; the only cause that all propose
For colour'd seeds, this fancy overthrows;
For here from white, white bodies do not rise,
Nor black from black, but seeds of various dyes,
Now colourless seeds will sooner make a white,
Than black, or any other opposite.
Besides; since colours are alone by day,
And owe their beings to the glitt'ring ray,
But seeds of things do not exist alone
By day: 'tis plain that they are ting'd with none;
For how can colours be in darkest night,
Since they all change, and vary with the light,
According as the ray's oblique or right.
So plumes, that go around the pigeon's head,
Sometimes look brisker, with a deeper red;
And then in different position seen
Show a gay sky, all intermix'd with green:
And so in peacock's tails, all fill'd with light,
The colour varies with the change of site.
Now since these colours rise from beams o'th' sun
Reflex, they cannot be when those are gone.
And since the eyes a diff'rent stroke receive
From white, from that which black, or others give:
And since it matters not what colour's worn
By things we touch, but what fit shapes are born,
We easily infer seeds want no dyes;
Those the variety of shapes supplies,
And thence those diff'rent sorts of touch may rise.
Besides; since certain colours not agree
To certain shapes; and any dye may be
In any shape, then tell me why we find
Such colours still belong to such a kind?
Why cannot crows their usual dye forsake,
And put on white? Why swans not mourn in black?
Again: break any thing, we find at last
The less the parts, the more the colours waste:
For instance; shave but gold, the gaudy red,
Which through the whole composure once was spread,
Is lost and gone, the parts unheeded lie,
Nor with their tempting purple court our eye.
Which shows that bodies are from colours freed,
Before they come to be as small as seed.

Farther; since some ne'er touch the ear or nose,
With sound, or smell; we nat'rally suppose
That neither sound, nor smell belong to those.
So likewise, since 'tis nonsense to deny
Some seeds too small, and subtle for our eye,
These free from colour we must all conceive,
As well as those from sound and taste believe,
Whose sound, nor taste, our ears, nor tongue perceive.
And yet the mind can comprehend as well
These void of dye, as those of sound and smell.
Besides: not only colour is not found
In seeds; but neither smell, nor taste, nor sound:
They no brisk odours in effluviums send,
Or to delight the nose, or to offend;
But void of odours all. So artists choose
An odorous liquor to compose
Their rich perfumes; lest they infect and spoil
Their odours, with the native smell of oil.
And thus as all their former reasons show,
The seeds on compound bodies ne'er bestow
Their sound, their taste or smell; for they have none,
No proper sound, or odour of their own;
Nor heat, nor cold, nor any quality;
For those are subject all to change, and die:
Ev'n such as viscous, brittle, hollow are;
All which arise from putrid, soft, and rare.
For either these can not to seeds agree,
Or seeds are not immortal all, and free
From change; and therefore things may fall to nought:
All which how fond my former reasons taught.
Now farther; those compositures that perceive,
Ennobled all with various sense, derive
Their beings from insensibles, and live.
This every common generation shows,
And rather proves this truth, than overthrows.
For look what num'rous swarms of worms and flies
From putrid and fermenting clods arise,
When sem'nal rain descends in soft'ning dew,
And makes the weary'd earth bring forth anew.
Besides, leaves, water, grass, do make up beast,
And man too seeds on blasts, and is increas'd:
Their flesh is turn'd to ours; and so again
The birds and blasts increase by eating men.
All these things prove, that any sort of food
Nature can easily turn to flesh and blood:
Whence animals, those things of sense, she frames,
As out of wood she raises fire and flames.
And hence, as we discours'd before, we find
It matters much with what first seeds are join'd;
What site, and what position they maintain,
What motions give, and what receive again.
But what confirms, what prompts thee to believe, [rive
That things, endow'd with sense, can ne'er de-
Their beings from insensibles, and live?
Perchance, as common observation shows,
Because earth, stone, wood, various things compose;
And yet there's neither life, nor sense in those.

But here you must consider, neither I,
Nor any master of philosophy
Affirm, that ev'ry being may commence
A sensible, and show the acts of sense:
But that those seeds, whence sensibles arise,
Must all have a convenient shape and size,
Position, motion, order: now not one
Of these appears in earth, or wood, or stone:
Yet these fermented by a timely rain,
Grow fruitful, and produce a num'rous train
Of worms; because the little bodies leave
Their former site and union; and receive
New motion, into new position fall,
And order, fit to make an animal.
Besides, they who contend that things commence
Sensibles, from seeds endow'd with sense,
Must grant those seeds are soft; for sense does
To tender gut alone, or nerve, or vein: [join
All which are soft and easily dissolv'd.
But grant they could eternally endure,
Suppose them all from fatal change secure:
Yet other doubts occur. For further see,
If all those seeds have sense, that sense must be
Or of one single member, or of all;
And so be like a perfect animal.
But now the parts in a divided state
Enjoy no sense: The hand, if separate
Can feel no more, nor any member live
Divided from the body, nor perceive:
Therefore each must be like an animal,
Each single seed contain the sense of all.
But if like animals; then tell me why,
As well as animals, they cannot die?
And why immortal all?
But grant them so;
Yet what could all their combinations do,
But make some animals? And what could be increas'd
But sensibles?
As man gets only man, and beast gets beast.
But if the seeds in mixture lose their own,
And take another sense, when theirs is gone,
What need of any? Why should we suppose,
They ever had that sense, which they must lose?
And since, as I have urg'd before, 'tis true,
That birds are made of eggs; since soft'ning dew
Ferments the clods to worms, we know from thence
That sensibles arise from seeds devoid of sense.
If any grants the thing, that sense can rise
From senseless seeds, if he consent to this,
But says, that it is form'd and fashion'd all
By change, that's made in th' atoms, e'er the animal,
Or any other things are born, and grow;
For his conviction I shall only show,
That nature's fix'd, and steady laws decreed,
That nothing should be chang'd, that nought should breed
Without a combination of the seed.
And thus without the limbs no sense can rise.
It cannot be, before the body is:
Because the seeds lie scatter'd ev'ry where,
In heav'n, and earth, in water, flame and air;
Not yet combin'd to make an animal,
Nor sense, that guide, and governor of all.
Besides, when strokes too strong for nature fall,
And mighty pressure crush an animal,
Its seeds and vital pow'rs are scatter'd all.
For then the little seeds do separate,
And all the vital pow'rs are stopt by fate.
At length the motion, scatter'd through the whole,
Breaking the vital ties of limbs and soul,
Expels, and drives it out at every pore;
For what can force, for what can stroke do more
Than disunite those seeds that join'd before?
But when the force is weak, more light the blows,
The small remains of life with ease compose
The violent motions of approaching fate,
And call back all things to their former state;
Expel usurping death, that seem'd t'obtain
An empire there; and settle sense again.
Else why should living creatures, that arrive
So near the gates of death, return and live,
Rather than enter in, when come so nigh,
And end their almost finish'd race and die?
Besides, since we feel pain, when outward force
Diverts th' atoms from their natural course,
And shakes them o'er the limbs, but when th' obtain
Their nat'ral motion, and their place again,
A quiet pleasure straight succeeds the pain,
It follows, that the seeds are things unfit,
Or to be touch'd with pain, or with delight;
Because they are not made of other seed,
Whose change of motion, or of site may breed
Or pain, or pleasure, or delight; and hence
It follows too, that they are void of sense.
But farther still; if we must needs believe,
That seeds have sense, because the things perceive;
What sort of seeds must form the human race?
Can violent laughter screw their little face?
Or can they drop their briny tears apace?
Can they or laugh, or weep? Can they descry
The greatest secrets of philosophy?
Discourse how things are mix'd? Or comprehend
On what firm principles themselves depend?
For all things, which enjoy the faculties,
And pow'rs of perfect animals must rise
From other seeds, and these must be begun
From others: thus we endlessly go on:
For thus I'll urge: whatever can perceive,
Discourse, laugh, reason, flatter, weep, and grieve,
Must be compounded, and must owe its frame
To proper seeds, which can perform the same,
But if this seems absurd, and dull, morose,
And heavy seeds can laughing things compose;
If wise and if discursive things can rise
From seeds, that neither reason, nor are wise:
What hinders then but that a sensible
May spring from seeds all void of sense as well?
Lastly, We all from seeds celestial rise,
Which Heav'n our common parent still supplies.
From him the earth receives enliv'ning rain,
And straight she bears bird, tree, and beast, and man,

And proper food for all by which they thrive,
Grow ſtrong, and propagate their race, and live:
Thence juſtly all the name of mother give.
And ſo each part returns, when bodies die,
What came from earth to earth, what from the ſky
Dropt down, aſcends again, and mounts on high.
For death does not deſtroy, but diſunite
The ſeeds, and change their order and their ſite:
Then makes new combinations, whence ariſe
In bodies all thoſe great varieties:
Their change in colour, ſhape, and frame; and thence
Some for a while enjoy, then loſe their ſenſe.
From whence, as we obſerv'd before, we find
It matters much with what firſt ſeeds are join'd:
What ſite, and what poſition they maintain,
What motion give, and what receive again;
And that the ſeeds of bodies ne'er contain
Such frail and tranſient things as ſeem to lie
On bodies' ſurfaces, and change and die.
It matters much, ev'n in theſe ruder lines,
How, or with what each ſingle letter joins:
For the ſame letters, or almoſt the ſame,
Make words to ſignify earth, ſun, and flame,
The moon, the heav'n, corn, animals, and trees,
And ſea: but their poſition diſagrees;
Their order's not alike; in bodies ſo;
As their ſeeds order, figure, motion do,
The things themſelves muſt change and vary
But now attend, I'll teach thee ſomething new;
'Tis ſtrange, but yet 'tis reaſon, and 'tis true:
Ev'n what we now with greateſt eaſe receive,
Seem'd ſtrange at firſt, and we could ſcarce believe;
And what we wonder at, as years increaſe,
Will ſeem more plain, and all our wonder ceaſe,
For look, the heav'n, the ſtars, the ſun, the moon,
If on a ſudden to us mortals ſhown,
Diſcover'd now, and never ſeen before,
What could have rais'd the people's wonder more?
What could be more admir'd at here below?
Ev'n you had been ſurpris'd at ſuch a ſhow.
But now, all cloy'd with theſe, ſcarce caſt an eye,
Or think it worth the pains to view the ſky.
Wherefore fly no opinion, 'cauſe 'tis new;
But ſtrictly ſearch, and after careful view,
Reject, if falſe; embrace it, if 'tis true.
Now I have prov'd before, this mighty ſpace
Is infinite, and knows no loweſt place,
Nor uppermoſt: no bounds this all controul;
For that's againſt the nature of the whole.
Through this vaſt ſpace ſince ſeeds then always move
With various turns, and from eternal ſtrove;
Who can imagine there ſhould only riſe
Our ſingle earth, our air, and but our ſkies,
Whilſt all the other matter ſcatter'd lies?
Eſpecially, ſince theſe from change aroſe,
When the unthinking ſeeds, by various blows,
Now this, now that way mov'd, at laſt were
Into the decent order of this world,
And made fit combinations; whence began
The earth, the heav'n, the ſea, and beaſt, and man.
Thus then 'tis prov'd, and certain, that elſewhere,
The buſy atoms join, as well as here:
Such earths, ſuch ſeas, ſuch men, ſuch beaſts ariſe,
All like to thoſe ſurrounded by our ſkies.
Again: when there can be no hindering cauſe,
But place and ſeed enough; by nature's laws
Things muſt be made: Now if the ſeed ſurmount
The utmoſt ſtretch of number's vaſt account;
And the ſame nature can compoſe a maſs,
As once in this, in any other place;
It plainly follows, that there muſt ariſe
Diſtinct and num'rous worlds, earths, men, and ſkies,
In places diſtant, and remote from this.
Now farther add: No ſpecies has but one,
Which is begun, increas'd, and grows alone:
But ev'ry kind does certainly contain,
Of individuals, a num'rous train;
As bird, and ſilent fiſh, as beaſt and man:
Therefore the ſpecies of the ſun and moon,
Of heav'n and earth, muſt needs have more than one.
For ev'ry one of theſe is made, and grows
By the ſame nature's cath'lic laws, with thoſe
Whoſe ſpacious kinds do num'rous trains encloſe.
If this you underſtand, you'll plainly ſee
How the vaſt maſs of matter, nature, free
From the proud care of any meddling deity,
Does work by her own private ſtrength, and move
Without the trouble of the pow'rs above.
For how, good gods! can theſe that live in peace,
In undiſturb'd and everlaſting eaſe,
Rule this vaſt all? Their lab'ring thoughts divide
'Twixt heav'n and earth, and all their motions guide?
Send heat to us, the various orbs controul,
Or be immenſe, and ſpread o'er all the whole?
Or hide the heav'n in clouds, whence thunder thrown,
Beats ev'n their own aſpiring temples down?
Or through vaſt deſerts break th' innocent wood,
Nor hurts the bad, but ſtrikes the juſt and good?
Learn next, th' infinite maſs ſends new ſupplies
Into the world already form'd, whence ſkies,
And this vaſt ball of earth, and boiſt'rous ſeas,
And ſpacious air grow bigger, and increaſe;
For all to their own proper kinds retire,
To earth the earthy, fiery parts to fire,
To water, wat'ry; till they grow as great
As nature's fix'd and ſteady laws permit.
For as in animals, when ev'ry vein
Receives no more than what flies off again,
They can increaſe no more: ſuch means ſecure
Thoſe things from farther growth, when once mature.
For that which looks ſo fair, ſo gay, and young,
Climbs to maturity, grows great and ſtrong,
That many parts receives, and ſtill retains,
And ſpends but few; becauſe through all the veins
The little nour'ſhing parts, with eaſe diffus'd,
Are there in little ſpace confin'd, and us'd
For growth; but few fly off, and break the chain,
And get their former liberty again.

For though things loſe their parts, when they are gone,
Some new ſupplies of other ſeeds come on,
And more than they have loſt: Thus things endure,
Look gay and young, until they grow mature.
Thence by degrees our ſtrength melts all away,
And treach'rous age creeps on, and things decay:
For bodies, now grown big and large, which ceaſe
From their continu'd growth, nor more increaſe,
Still waſte the more, their parts diſperſe with eaſe.
The nour'ſhing parts come ſlowly on, and few,
Too ſmall decaying nature to renew;
The ſtock is largely ſpent; no new ſupply,
Sufficient to make good thoſe parts that die:
Therefore they needs muſt fall, their nature broke
By inward waſting, or external ſtroke;
Becauſe the ſtock of nouriſhment decays,
As age creeps on; and ſtill a thouſand ways
The little enemies without oppoſe,
And ſtrive to kill them by continual blows.
And thus the world muſt fall, though new ſupply
The maſs affords to raiſe thoſe things that die:
Yet all in vain; for nature cannot give
Supplies ſufficient, nor the world receive.
Even now the world's grown old: th' earth that bore
Such mighty bulky animals before,
Now bears a puny inſect, and no more.
For who can think theſe creatures, fram'd above,
The little bus'neſs of ſome meddling Jove?
And thence, to people this inferior ball,
By Homer's golden chain let gently fall?
Nor did they riſe from the rough ſeas, but earth,
To what ſhe now ſupports, at firſt gave birth.
At firſt ſhe corn, and wine, and oil, did bear,
And tender fruit, without the tiller's care;
She brought forth herbs, which now the feeble ſoil
Can ſcarce afford to all our pain and toil:
We labour, ſweat, and yet by all this ſtrife
Can ſcarce get corn and wine enough for life:
Our men, our oxen groan, and never ceaſe,
So faſt our labours grow, our fruits decreaſe?
Nay, oft the farmers with a ſigh complain,
That they have labour'd all the year in vain,
And, looking back on former ages, bleſs,
With anxious thoughts, their parents happineſs;
Talk, loudly talk, how pious they were ſill'd,
Content with what the willing ſoil did yield,
Though each man then enjoy'd a narr'wer field.
But never think, fond fools! that age will waſte
This mighty world, and break the frame at laſt.

NOTES ON BOOK II.

Ver. 1. LUCRETIUS had made choice of a ſubject naturally crabbed, and therefore he adorned it with poetical deſcriptions and precepts of morality, in the beginning and ending of his books: And thus intending in this book to treat of the motions and figures of his atoms, and of their other properties, which we call qualities, he introduces his ſubject by the praiſe of that philoſophy which Epicurus taught, as well to give ſome reſpite and relaxation to the wearied mind of his Memmius, as by laying before his eyes, and forewarning him of the dangers and calamities of others, to allure him to the ſtudy of that philoſophy which he calls the doctrine of the wiſe. Thus, the firſt twenty verſes contain two compariſons and a metaphor, in which he aſſerts, that the life of a wiſe man conſiſts in a perfect tranquillity of mind, and indolence of body; and, at the ſame time, he derides and bemoans the anxieties and reſtleſs deſires of other men. But there are ſome who accuſe Lucretius of ill nature and cruelty of temper, on account of the firſt verſes of this book, where he ſays,

'Tis pleaſant ſafely to behold from ſhore
The rolling ſhip, and hear the tempeſt roar:
Not that another's pain is our delight;
But pains unfelt produce the pleaſing ſight.
'Tis pleaſant alſo to behold from far
The moving legions mingled in the war;
But much more ſweet thy lab'ring ſteps to guide
To virtues heights, with wiſdom well ſupply'd,
And all the magazines of learning fortify'd:
From thence to look below on human kind,
Bewilder'd in the maze of life, and blind.

Dryd.

But their cenſure ſeems too ſevere and unjuſt. The poet aſſerts only the ſentiment of all mankind; for who beholds another in any great affliction, or groaning under the violence of torments, and does not preſently think within himſelf, how happy am I not to be in that condition! Iſidorus Peluſ. lib. ii. Epiſt. 240. ſays, that nothing is more pleaſant than ἐν λιμένι καθῆσθαι, καὶ τὰ τῶν ἄλλων σκοπεῖν ναυάγια, to ſit in the harbour, and behold the ſhipwreck of others. Cicero too is of the ſame mind, in the ſecond epiſtle to Atticus. And our excellent Dryden, deſcribing the life of a happy man, ſays to the ſame purpoſe with Lucretius:

No happineſs can be where is no reſt;
Th' unknown, untalk'd of man, is only bleſs'd:
He, as in ſome ſafe cliff, his cell does keep;
From thence he views the labours of the deep:
The gold-fraught veſſel which mad tempeſts beat,
He ſees now vainly make to his retreat;
And, when from far the tenth wave does appear,
Shrinks up in ſilent joy that he's not there.

Tyran. Love.

'Ver. 7. In this excellent metaphor, the poet teaches, that the life of a wise man is placed in tranquillity of mind and indolence of body. And this was the doctrine of Epicurus, who, in Cicero, Tuscul. 3. says: 'Ergo is, quisquis est, qui moderatione et constantia quietus est animo, sibique ipse placatus, ut neque tabescat moleſtiis, neque fragrantur timore, neque sitientur quid appetens ardeat desiderio, nec alacritate futili gestiens deliquescat, is est sapiens quem quærimus.' He, therefore, whoever he be, who by moderation and constancy is sedate in his mind, who is at peace within himself, so as not to pine and languish with sorrow, so as not to be disquieted with fear, nor to burn with a thirsty desire for any thing, nor to be foolishly transported with unseemly mirth, he, I say, is the wise man whom we are seeking. And what Lucretius here proposes to his Memmius, Epicurus had written long before to Menœceus: Μήτε νέος τὶς ὢν μελλέτω φιλοσοφεῖν μήτε γέρων ὑπάρχων κατίατω φιλοσοφῶν· ὅτε γὰρ ἄωρος ὐδεὶς ἐστὶν, ὅτε πάρωρος πρὸς τὸ καλὰ ψυχὴν ὑγιαίνειν· ὁ δὲ λέγων, ἢ μήτω τῶ φιλοσοφεῖν ὑπάρχειν ὥραν, ὁμοίος ἔστι τῶ λεγοντι, πρὸς ἐυδαιμονίαν ὐ μὴ παρεῖναι τὴν ὥραν, ἢ μηκέτι εἶναι.

Ver. 15. To be the chief in a government; than which state of life nothing can be more unhappy to an Epicurean, and to a man who delights to live by the rules of nature: For to what end dost thou burden thyself with the care of an untractable multitude? Live for thyself: Do good to thyself: τὰ πολλὰ ὐδὶν πρὸς τὸ εῦ· No man is the happier for being at the helm: If thou governest well, thy body will suffer for it; because a thousand cares and businesses will be always disturbing thy brain and quiet: if ill, thou wilt live in continual dread; in a word, thou wilt be a wretched slave; If thou convert any thing to thy private use, thou wilt one day perhaps be forced to restore it with interest; therefore fly from greatness, καὶ λάθε βιώσα. Thus says Faber, who himself led a retired life. To which we may add what Epicurus says in Laertius, lib. x. "Ἐνδοξοι καὶ περιβλεπτοὶ τίνες εὐνλήθησαν γενέσθαι, τὴν ἐξ ἀνθρώπων ἀσφαλείαν ὥστω νομίζοντες περιποιήσεσθαι ὥσε εἰ μὲν ἀσφαλὴς ὁ τῶν τοιούτων βίος, ἀπέλαβον τὸ τῆς φύσεως ἀγαθὸν· εἰ δὲ μὴ ἀσφαλὴς, ὐκ ἴσχυσαν ὃ ἕνεκα ἐξ ἀρχῆς παρὰ τὸ τῆς φύσεως ἀκεῖον ὡρέχθησαν.

Ver. 18. For the Epicureans did not chiefly follow those pleasures that affect the senses with delight; but held the greatest of all pleasures to consist in an exemption from grief and pain. They did not, says Cicero, lib. i. de Fin. think the chief happiness to consist in that pleasure, "quæ suavitate aliqua naturam ipsam movet, et cum jucunditate quadam percipitur sensibus, sed quæ percipitur omni dolore detracto." And when Epicurus writes to Menœceus, that πᾶν ἀγαθὸν καὶ κακὸν ἐν αἴσθησει, the word αἴσθησις must be taken in a larger sense, and as opposed to death, which is στέρησις τῆς αἰσθήσεως. For that philosopher differed in opinion from the Cyrenaics, who held pleasure to be the "summum bonum;" οἱ μὲν γὰρ τὴν καταστηματικὴν ἐκ ἐγκρίνουσιν, μόνην δὲ τὴν ἐν κἰνησει, ὁ δὲ ἀμφοτέρων, ψυχῆς καὶ σώματος, says Laertius in the life of Epicurus: who says himself in the book περὶ αἱρέσιος· Ἡ μὲν γὰρ ἀπραξία τὲ ἀπονία καταστηματικαὶ εἶσιν ἡδοναὶ, ἡ δὲ χαρὰ τὲ ἐυφροσύνη κατὰ κίνησιν ἐνεργεῖσαι βλέποντα.

Ver. 21. In these nineteen verses he asserts, that but few things are requisite for the ease and delight of the body, and that neither great riches, nor delicious eating and drinking, nor costly apparel, or furniture, are of any considerable advantage, since without any of them, our natural wants may be supplied, and that too with pleasure enough: and even though we enjoyed all those delights, our bodies would nevertheless be liable to diseases and pain. How vain is it then to contend ambitiously for wit, for wealth, and for power; to bend our lost endeavours to outshine each other; and to waste our time and our health in search of honour and in pursuit of riches! Lucretius was aware of this, and therefore had reason to exclaim:

O wretched man! in what a mist of life,
Enclos'd with dangers, and with noisy strife,
He spends his little span; and overfeeds
His cramm'd desires with more than nature needs:
For nature wisely stints our appetites,
And craves no more than undisturb'd delights;
Which minds unmix'd with cares and fears obtain:
A soul serene, a body void of pain;
So little this corporeal frame requires,
So bounded are our natural desires,
That wanting all, and setting pain aside,
With bare privation sense is satisfy'd.

Dryd.

Ver. 25. He means the golden statues, which were formerly used in the houses of the rich, instead of sconces and candlesticks, in their entertainments by night; and he seems to blame the expensiveness and prodigality of the suppers of the Romans in his age. This passage, which Virgil has imitated in Culice, ver. 60. and in Georg. ii. ver. 461. Lucretius himself took from Homer, Odyss. vii. ver 100.

Ver. 37. Thus Horace, in Epist. ii. B. 1.

Non domus et fundus, non æris acervus et aur
Ægroto domini deduxit corpore febres,
Non animo curas.

Which Dryden's translation of this passage of Lucretius shall serve to interpret:

Nor will the raging fevers fire abate,
With golden canopies and beds of state:
But the poor patient will as soon be found
On the hard mattress, or the mother-ground.

Ver. 39. In these twenty-five verses, the poet declares, that since even kings and princes, the most potent and wealthy of men, are disquieted with fears and cares, and lead not happier lives than others, the greedy thirst of honour, power, riches, &c. must proceed from the ignorance of true happiness; and no wonder that this ignorance is so gross, since we walk as it were in the dark, and lead a life not yet enlightened with the rays of Epicurean philosophy. And he insists from the vain and groundless fears and terrors of

men, that we all live in darkneſs. For as children in the dark dread every thing, and imagine ridiculous dangers, ſo all men are terrified with the belief of Providence, and puniſhments after death, which, according to Epicurus, are but the day-dreams of a crazy mind. Now Lucretius, to diſpel this darkneſs, and deliver his Memmius from all fears and diſquiet of mind, purſues his ſubject, and fully and elegantly explains the nature of things.

Ver. 46. Faber, in his note upon this paſſage of Lucretius, ſays, that Horace had it in his mind when he writ,

Non enim gazæ, neque conſularis
Summovet lictor miſeros tumultus
Mentis, et curas laqueata circum
Tecta volantes.
Scandit æratas vitioſa naves
Cura; nec turmas equitum relinquit,
Ocyor cervis, et agente nimbos
Ocyor euro.

Which Otway thus interprets:

Neither can wealth, nor power, nor ſtate,
Of courtiers, nor of guards the rout,
Nor gilded roof, nor brazen gate,
The troubles of the mind keep out.
For baneful care will ſtill prevail,
And overtake us under ſail.
'Twill dodge the great man's train behind,
Outrun the doe, outfly the wind.

To which I will add theſe excellent verſes of Varro the Epicurean:

Non ſit theſauris, non auro pectu ſolutum:
Non demunt animis curas, nec religiones
Perſarum montes, non divitis æria crœſi.

Ver. 57. Seneca, in Epiſt. cx. ſays: Such is the nature of the mind, as it ſeemed to be to Lucretius, when he ſaid:

Nam veluti pueri trepidant, atque omnia cæcis
In tenebris metuunt; ſic nos in luce timemus,
Interdum nihilo quæ ſunt metuenda magis, quam
Quæ pueri in tenebris pavitant, finguntque futura.

——As children are ſurpris'd with dread,
And tremble in the dark, ſo riper years
Even in broad day-light are ſurpris'd with fears;
And ſhake at ſhadows, fanciful and vain,
As thoſe that in the breaſts of children reign.
Dryd.

And are we then, who tremble in the light, more fooliſh than children? 'Tis falſe, Lucretius! We are not afraid in the light, but have made all things darkneſs to ourſelves: We ſee nothing neither what is hurtful, nor what expedient: We blunder on all our life long, and ſtumble at every ſtep; yet we ſtill continue to ſtagger forwards in the ſame method, and take no care to place our ſteps with greater circumſpection: we ſee how dangerous it is to make haſte in the dark, and nevertheleſs we perſevere in driving full ſpeed to our journey's end: but if we would, we might have light upon the road; though there be but one way to get it, which is, by acquiring a thorough, not a ſuperficial knowledge of human and divine things; if we would continually contemplate and ſtudy the ſame things over and over again, even though we know them; and if we would apply them often to ourſelves; if we would inquire diligently into what is good, and what evil; if we would examine with care and ſubmiſſion into the wonderful works of Providence; and laſtly, if we would learn truly to diſtinguiſh between what is honourable, and what baſe.

Ver. 64. The argument of this ſecond book is briefly contained in theſe four verſes. He promiſes firſt to explain the motions of the ſeeds, by which motions things are generated and diſſolved. Secondly, the cauſe of thoſe motions; and, thirdly, the ſwiftneſs of them. When he has performed this, every thing will be prepared and ready for him to enter upon the explication of the generation and diſſolution of things.

Ver. 68. Being about to diſpute of the different motions of the atoms, and of the cauſes of thoſe motions, he fortifies his way beforehand, and in oppoſition to ſome weak and fooliſh philoſophers, demonſtrates in theſe thirteen verſes, from the growth and decreaſe of things, that there is motion: for the reaſon why things grow is, becauſe ſome particles of matter fly and adhere to them; and the reaſon why they diminiſh, is, becauſe ſome minute particles having loſt their hold, retire and fly away from them. And it would be abſurd to ſay that thoſe particles either come or go without motion.

Ver. 77. He alludes to the λαμπαδηδρόμια, the race of torches, which were certain games celebrated at Athens in honour of Vulcan, and in which the racers carried torches in their hands, and ſtrove who ſhould get firſt to the goal with his torch not extinguiſhed: Thus the Scholiaſt on Ariſtophanes in Ranis. Theſe Athenian games were called λαμπάδεσσαι, and the victor, λαμπαδήφορος, a bearer of torches; becauſe all the torches of thoſe that run were delivered to him as the prize of his victory: from whence the word λαμπαδεύεσθαι is uſed to ſignify, to deliver ſucceſsfully and in order. Caſaubon. in Perſ. Sat. 6. Thus Plato, in 6. de Legibus: Γιγνῶντες καὶ ἐκτρέφοντες παῖδας, καθάπερ λάμπαδα τὴν βίου παραδίδοντες ἄλλοις ἐξ ἄλλων, begetting and breeding children, as it were delivering the lamp of life. But Pauſanias makes this more plain. In the academy of Prometheus, ſays he, there was an area, where men were wont to run in a circle, carrying lighted torches in their hands, and the main of the ſtriſe conſiſted in keeping their torches alight during the ſwiftneſs of their running: For he whoſe torch was extinguiſhed, yielded the victory to him who came next after him, and he in like manner to the third. Thus Pauſanias. Now this cuſtom Lucretius thus applies: As the runner whoſe torch went out yielded the victory to the follower; ſo a living thing when its light of life is extinguiſhed, yields and gives up to another living thing, as it were, the lamp of life. Thus the remains of the vegetable life in graſs, yields itſelf

up to the ſenſible life of an ox: thus the remains of the animal life in an ox, yields itſelf up into the life of man: thus the life of man yields itſelf up to worms. And thus the viciſſitude is continued, and a new ſtructure ever ariſes from the ruins of the other; the forms only periſh, the matter is eternal, and ſuffers no decay.

Ver. 79. Ovid. Metam. xv. ver. 252.

——Rerumque novatrix
Ex aliis alias reparat natura figuras:
Nec perit in tanto quicquam mihi credite, mundo:
Sed variat, faciemque novat.—

——For nature knows
No ſtedfaſt ſtation, but or ebbs or flows:
Ever in motion, ſhe deſtroys her old,
And caſts new figures in another mold.
Dryd.

Ver. 81. He eſteems all who believe the new motions of things, that is to ſay, that their increaſe or decreaſe can proceed from atoms lying ſtill and at reſt, to be ſo void of ſenſe, as not to deſerve to be confuted. Then he teaches, in theſe eight verſes, that the ſeeds, which he has proved are always wandering up and down in the void, owe their motion either to their own weight, or to the blows of others. For whatever is ſolid (and ſolidity is the chief property of the ſeeds) is heavy: but heavy things tend downwards, therefore, the ſeeds muſt have a downward motion. But when theſe ſolid ſeeds, in their deſcending motion, light upon bodies that are lying ſtill, and without motion, or that move more ſlowly than themſelves, they muſt of neceſſity rebound; for a ſolid body that ſtrikes againſt another ſolid body, does not impart all its motion to that other, and therefore will be borne another way by the degrees of motion which it ſtill retains; and this proves the upward or aſcending motion. One of theſe motions is natural, the other violent; and both of them are neceſſary to the generation and diſſolution of things. Epicurus taught, κινεῖσθαι τὰ ἄτομα κάτω, τότε μὲν κατὰ στάθμην. τὰ δὲ ἄνω κινούμενα κατὰ πλαγὴν καὶ παλμὸν. *Laert.*

Ver. 89. That Memmius may the more fully comprehend this agitation and motion of the ſeeds, he reminds him, in theſe ſix verſes, of what he taught him, in the firſt book, viz. that in the infinite ſpace there is no middle or centre, nor any loweſt place to which the ſeeds are tending, and where, when they have once reached it, they may reſt from motion. Since, therefore, they are borne downwards by their own weight, and ſometimes daſhing againſt one another rebound, who can deny that they are toſt and agitated to and fro in a perpetual motion.

Ver. 95. Since, therefore, the ſeeds are continually in motion, and ſince they ſtrike and rebound, he teaches, in theſe ten verſes, that the reſilition of thoſe rebounding ſeeds is made to unequal diſtances, and that the difference of the blows produces the difference of the reſilitions. Now, of thoſe ſeeds that rebound to the leſs diſtances, and that are toſſed to and fro in a narrower ſpace than others, iron, ſtone, and the other hard and ſolid bodies are compoſed: but thoſe that rebound to a greater diſtance, and wander in a wider ſpace, produce the air, fire, and the other ſoft and rare bodies of the like nature.

Ver. 105. Beſides the ſeeds whoſe motion is confined to a narrow ſpace, and that are compacted into hard and ſolid bodies, and beſides thoſe that reſult to a greater diſtance, and wandering in a wider ſpace, compoſe the bodies that are ſoft and rare, there are other ſeeds that are always in motion, and being exempt from all contexture and coalition, are continually daſhing againſt the others, and diſturbing them. Now to repreſent, as it were by a ſimilitude, that careleſs and random agitation, with which the atoms that never unite with others, are, as I may ſay, exerciſed in the void, he, in theſe fourteen verſes, borrows a compariſon from Democritus and Alcippus; who, as Ariſtotle ſays, compared the atoms to thoſe minute corpuſcles that are called motes, which fly in the air, and ἀφαίνεσθαι ἐν ταῖς διὰ τῶν θυρίδων ἄκτισιν, are very viſible in the beams of the ſun, when they ſtrike through the chinks of windows or doors into a darkened room.

Ver. 119 In theſe fifteen verſes, he turns into an argument the ſimilitude with which he has illuſtrated the motions of his atoms. We ſee that thoſe motes that are dancing up and down in the beams of the ſun, are driven about in various and different manners. Now they ſeem to be ſtriving to get into a line; now they are moved to the right, now to the left, in ſhort, every way. But ſince all bodies ever keep the ſame line, unleſs they are turned out of their courſe by ſome exterior violence, or by the preſſure of their own interior weight; it muſt be granted, that ſome motions of the ſeeds, though inviſible to the eye, agitate thoſe motes or little bodies, and drive them to and fro in that manner; for the primary cauſe of all motion and agitation whatſoever, that is obſerved in things, is in the ſeeds themſelves. Thus we ſee that the Epicureans held, that the atoms were not only the firſt principles of things, but alſo the firſt cauſe of all motion. An impious belief, and condemned by the Chriſtian faith, which teaches us that God alone is the Creator and firſt mover of all things.

Ver. 125 When Democritus, as Plutarch tells us, lib i. de Placit. Philoſoph. had given only two properties to atoms, built and figure; Epicurus beſtowed a third, weight: ἀνάγκη γὰρ (φησὶ) τὰ σώματα κινεῖσθαι τῇ τῆς βάρεος πληγῇ ἴσῃ ἀ κινηθησεσθαι. It is neceſſary that bodies ſhould be moved by their weight, otherwiſe they would not be moved at all; and beſides this, he endowed his atoms with other motions, κατὰ παρέγκλισιν, καὶ κατὰ πλησμόν· of inclination and of ſtroke, which two laſt, though preſt with a thouſand peculiar difficulties, yet becauſe they depend on the other motion κατὰ στάθμην, downwards, which proceeds from the weight, are likewiſe liable to all thoſe exceptions that may be made againſt that. Firſt, then, that weight is not a property of atoms is evidently proved from the difference of weight in bodies: for take a cube of gold, and hallow it half through, and weigh it

againſt a ſolid cube of wood of the ſame dimenſion; that gold, though it has loſt half its matter, and conſequently half its weight by the hollow, is twenty times heavier than the wood; from whence the conſequence is natural and eaſy. For if weight were a property of matter, it would be impoſſible that a hollow piece of gold ſhould outweigh the wood, becauſe the wood cannot contain a ten times greater vacuity than that hollow. And this argument, if applied to the air, more ſtrongly concludes, becauſe that is lighter, eſpecially if we conſider that the air is a continuum, and not a congeries of particles, whirled about without any union and connection; for innumerable experiments almoſt in all fluids evince the contrary. I ſhall paſs by thoſe Dr. Gliſſon hath propoſed, and content myſelf with one concerning the air, which may be deduced from the faithful trials of the honourable Boyle. The 38th of his continuation of his Phyſico-Mechanical Experiments ſufficiently evinces, that the exhauſted receiver is quite void of all particles of air, which evidently proves (as little attention to the experiment will diſcover) that there is motus nexus, as Bacon calls it, in the air, which cannot be but in a continuum. The ſame may be proved in water from refraction; for why are not the rays diſturbed, if the parts are in motion? When experience tells us, that a little ſtirring with the finger troubles them. Not to mention, that this notion of fluidity, though embraced by the Pleniſts, is inconſiſtent with their hypotheſis, an ambient attending circle being not to be found in nature for each moving particle; and to paſs by the difficulties that preſs their opinion, who fancy reſt to be the cauſe of continuity, ſince two ſmooth bodies, whoſe ſurface touch, and eternally reſt, will never make one continuum; my next argument againſt the Epicureans is drawn from their own principles. For ſuppoſe weight a property of atoms, it is impoſſible the world ſhould be framed according to their hypotheſis; for how could the higher atom deſcend, and touch the lower, when the motions of both were equal? Nor can that little declination, that κλίνησις μι[κ]ὰ παραγκλισιν (which the Epicureans are ſo bold to aſſume, contrary to all ſenſe and reaſon, and which Plutarch, "de Animæ Procratione, ex Timeo," declares as the great charge againſt Epicurus ὡς ἀναίτων ἐπεισάγοντι κίνησιν ἐκ τοῦ μὴ ὄντος, as aſſerting a new motion without a cauſe) leſſen the difficulty; for, as Tully argues, if all atoms decline, then none of them will ever ſtick together; if only ſome, "hoc effet quaſi provincias atomis dare, quæ rectè, quæ obliquè ferantur," that would be to preſcribe to atoms their particular offices, which of them ſhould not decline, and which move obliquely. But grant there could be a combination, and grant that combination (which is impoſſible) ſhould ſtop in ſome parts of the ſpace, yet from the very nature of weight, and motion, it follows that the world, according to their hypotheſis, could not be made in that order we now perceive it. For ſuppoſe this quiet frame; the atoms that fall on it, as the laws of motion in ſolid bodies require, muſt leap backward; but meeting with other deſcending atoms, their reſilition is ſoon ſtopt, and ſo they muſt deſcend again, and then ſtriking, return, but not to ſo great a diſtance as before, becauſe the velocity of the deſcent was leſs; and ſo the diſtance ſtill decreaſing, the atoms in a little time muſt reſt, and only a vaſt heap of matter, cloſe, and moveleſs, muſt lie on that ſuppoſed quiet frame as its baſis.

Ver. 127. *Moleculæ.*] This Latin word is a diminutive of *moles*, and ſignifies ſmall heaps or lumps of any matter whatever. Our tranſlator uſes it to expreſs no leſs than two verſes of his author; who ſays that the atoms firſt move of themſelves; and

Inde ea, quæ parvo ſunt corpora conciliatu,
Et quaſi proxima ſunt ad vireis principiorum,

then the concrete bodies, that are of the leaſt bulk or ſize, and that approach neareſt as it were to the exility of the principles (all which our interpreter has expreſſed no otherwiſe than by the word *Moleculæ*).

Ictibus illorum cæcis impulſu cientur.

are moved by the inviſible blows they receive from them.

Ver. 128. The ſmalleſt bodies are moved firſt, and they move the greater; for the nearer any compound bodies approach to the unmixed ſimplicity of their principles, the more eaſy they are to be put in motion.

Ver. 134. To expreſs the celerity of his atoms, he brings an inſtance of the ſwiftneſs of the beams of the ſun, and employs it in theſe twenty-ſeven verſes, as an argument *à minore*. The Epicureans believed that light conſiſts of ſmall particles that flow out of the ſun, who is the fountain of all light. Moreover, that theſe minute particles conſiſt of ſeeds agitated by various motions, whence the motion of thoſe minute particles muſt be retarded, and become more ſlow: and, laſtly, that they do not find an open paſſage through the air, but make one, and are hindered in their flight by meeting with particles of the air. But that atoms are ſimple bodies, not obſtructed by the motions of their own parts; and are moved through the free and unmoleſted void. And hence they conclude, that the rays of the ſun being compoſed of a moſt ſubtle contexture of atoms, which do not at all agree in the ſame motion, nor paſs through a ſpace entirely free and empty, ought to yield in ſwiftneſs to the atoms, which are wholly diſentangled from one another, and move through a ſpace altogether empty and unobſtructed by any matter whatever: καὶ μὲν καὶ ἡ διὰ τοῦ κενοῦ φορὰ κα[τ]ὰ μηδημίαν ἀπάντησιν τῶν ἀντικοψάντων γενομένη, πᾶν μῆκος περι[λη]πτὸν ἐν ἀπειρινήτῳ χρόνῳ, συντελεῖ, &c. Epicurus to Herodotus.

Ver. 141. The very words of Cowley, in his hymn to the Light, Stanza 6.

Swift as light thoughts their empty career run,
Thy race is finiſh'd, when begun.

Nor was he obliged to Lucretius for the thought, which our tranſlator has taken wholly from him, not from his author.

Ver. 145. That is to say, they pass not through a void that is altogether free and empty of all bodies: for the heat of the sun passes through the air, which is full of atoms and other bodies: as winds, exhalations, &c. which resist and retard the course of his rays; and this is what he means by the resisting force from without, ver. 150.

Ver. 151. He means that the corpuscles of the light and heat of the sun pass not through the whole air in an instant of time: nor singly one by one, but conglobed and entangled in one another, which must, of necessity, hinder the swiftness of their course.

Ver. 158. No man will be so foolish as to pretend, that the atoms stop in the air to consult and deliberate among themselves which shall go first, which second, &c. This and the two following verses, some of the editors of Lucretius have rejected: others retain them, and interpret them as above. Whoever think fit to reject them, may give them what explication they please.

Ver. 161. In these seventeen verses, Lucretius, who is always arguing, though but very weakly against Providence, takes occasion to deride the Stoics, who held matter of itself to be unactive, and incapable to produce any thing: but that it is moved and disposed to act, not by its own strength and power, but by the Divine Mind. Then he audaciously and impiously affirms, that matter, rude as it was, did make this world without any art or counsel, or design, and accomplish all those works which the ignorant and superstitious vulgar ascribe to wisdom and providence. That pleasure is the guide of the life of man; that all things are ruled and governed by her direction, and that God neither made this world, nor any thing else for the sake of man. And, lastly, he promises to show in another place, that the frame of the world is so artless, confused, and ill put together, as to evince itself to be a work altogether unworthy of the Divine Wisdom. In the fifth book we shall see how he will keep his word with us:

Quid dignum tanto feret hic promissor hiatu.

Meanwhile, how much wiser he, who said, "Cœli enarrant gloriam Dei, et opera manuum ejus enunciat firmamentum," Psal. xix. 1. When we see any thing move, says Cicero, in fixed and regular motions, as the spheres, the seasons, and many other things, do we doubt those works are made without counsel and reason? When we consider with how wonderful a celerity the heavens are whirled around in so constant and never-failing a manner, making and maintaining the universal vicissitudes, to the preservation and utmost benefit of all things, can we doubt that they are made and done without reason, nay, and without an excellent and Divine reason and wisdom too? "de Natura Deor." lib. 2.

Ver. 178. He has already affirmed, that all the seeds tend downwards, and that all upward motion is violent. He, now, in thirty-two verses, urges the same again, and teaches, that no body, not even fire excepted, naturally aspires, but is driven upwards by the force of other bodies, in like manner as the sap rises in trees, as blood gushes out of a wound, and as a piece of timber mounts when it is plunged into water. For, who doubts but that the same sap, the same blood, and the same piece of timber would tend downwards in the void, though the sap rises up in the trees, the blood spouts out of the veins, and the timber emerges and leaps, at least half of its thickness, out of the water. Lastly, he observes, that the rays of the sun tend downwards, that stars, fiery meteors, and lightning, fall to the grounnd; and concludes, that fire is carried upwards, not by its own force, but by the impulse of protruding bodies. And, upon this he lays the foundation of the double, that is to say, natural and violent motion of his atoms. Plutarch, 1. Plac. Phil. cap. 12. καὶ τὰ πρῶτα μὲν ἄτομα τὰ ἐξ ἐκείνων συγκρίματα βάρος ἴσχει. And Simplicius teaches that Epicurus was of opinion, ἅπαν σῶμα βάρος ἔχειν, τῶν δὲ τὰ βαρύτερα ὑπερίζάνειν, τὰ βάρεα ὑπ' ἐκείνου ἐκθλίβεσθαι ἐπὶ τὸ ἄνω.

Ver. 180. Here we may observe a silent anthypophora: for the poet answers beforehand the objections that his adversaries might urge against him. But it will be said that fire moves upwards: to which he answers: And plants and trees rise upward likewise, by reason of the driving force from beneath, which breaking out of the earth, compels them to grow by ascent: and yet all ponderous things naturally, and as much as in them lies, sink downwards.

Ver. 199. Though the weight of the flame naturally strives to depress and bring down the flame; yet the force and strength of the ambient air compels and drives it upwards. Thus it yields to an element heavier and more dense than itself, but is not borne upwards of its own accord.

Ver. 203. Here some may be apt to think, that Epicurus, and Lucretius, who follows his opinion, are mistaken; for the stars never fall. But by the word stars in this place, we are to understand a fatty, oleaginous and sulphureous exhalation, which kindles in the air, and falls to the ground in a purple-coloured jelly. Virgil has imitated this passage of Lucretius, and describes the fall of these exhalations, Georg. i. v. 365.

Sæpe etiam Stellas, vento impendente videbis
Præcipites cœlo labi; noctisque per umbram
Flammarum longos a tergo albescere tractus.

The seeming stars fall headlong from the skies:
And shooting through the darkness, gild the night
With sweeping glories, and long trails of light.

Aristotle says, they are exhalations of the earth, that are apt to take fire; and that being carried up into the middle regions of the air, they kindle, by means of their being compressed by the cold of the circumfused air: and he calls this kind of exhalation Ἐπιδρομὴ, and Ἀστρὸς φύσις, "discursus et fluxus Stellæ." Anaxagoras held these meteors to be sparkles that fall from the fiery region. Eunapius in Ædes, calls them, ἀποῤῥοαὶ τίνες ἄστρων, "Ef-

fluentiæ quædam Stellarum." And the Arabs Sbibab, which the Commentator upon Ulugh Beigh's Fables, explains, " Stella quæ nocte incedit ſicut ignis;" and Stella " Demones pellens;" for the ancient Arabs and eaſtern people fancied falling ſtars to be fiery darts lanced from heaven, againſt the devils, or evil ſpirits of the air; as the learned Golias has likewiſe obſerved in his notes upon Altergau, p. 65. But Fromondus Meteor. lib. 2. cap. 3. deſcribes them, according to the doctrine of Ariſtotle, to be a fiery exhalation forced out of a cloud, and having the reſemblance of a true falling ſtar. They are thought to come from the ſame cauſe and origin as lightning, though they are not attended by thunder, at leaſt not perceivable by us: but they bear the ſame proportion to lightning, as the fire of a muſquet does to that of a cannon; for, as at a great diſtance we may ſee the fire of a muſquet, but ſcarce here its noiſe, though the fire of a cannon at the ſame diſtance is ſeen, and its noiſe plainly heard: ſo by the reaſon of the exility of the exhalation, we hear not the noiſe when theſe fallen ſtars break from a cloud, as we do that of thunder that follows lightning. Fromondus compares theſe meteors to our kind of fireworks called rockets (though their motions be different, that of the one being forced upwards, the other downwards); which run in a train and fall in the manner of the ſtars. And, therefore, Pliny calls them " Scintillas & Diſcurſus Stellarem," and Ptolemy, " Trajectiones:" both which are expreſſed by Manilius in theſe verſes:

Præcipites ſtellæ paſſimque volare videntur,
Quum vaga per nitidum ſcintillant lumina mundum;
Et tenuis longis jaculantur crinibus ignes,
Exurguntque procul volucres imitata ſagittas,
Arida quum gracili tenuatur ſemita ſitu.
Lib. i. *v.* 845

Which Creech renders thus:

And ſtill, when wand'ring ſtars adorn the night,
The falling meteors draw long trains of light:
Like arrows ſhot from the celeſtial bow,
They cut the air, and ſtrike our eyes below.

Ver. 210. To do juſtice in this place to Lucretius, I muſt give the original text of this paſſage, which our interpreter has not faithfully rendered:

Illud in his quoque te rebus cognoſcere avemus:
Corpora cum deorſum rectum per inane feruntur
Ponderibus propriis, incerto tempore ferme,
Incertiſque locis ſpacio decedere paulum,
Tantum quod Momen mutatum dicere poſſis.

To explain theſe five verſes, Creech beſtows but two:

Now ſeeds in downward motion muſt decline,
Though very little from th' exacteſt line.

He has totally omitted, " incerto tempore ferme, Incertiſque locis;" which words, nevertheleſs, have a ſignification, and that too of great importance in this place: for what Lucretius ſays is this, that the atoms, when by their own weight, they are borne downwards through the void in a direct line, do at ſome time or other, but " incerto tempore," at no one fixed and determinate time, and in ſome parts of the void likewiſe, but " incertis locis," not in any one certain and determinate place of it, decline a little from the direct line by their own ſtrength and power; but ſo, nevertheleſs, that the direct motion can be ſaid to be changed the leaſt that can be imagined. Inſomuch that he inſinuates, that his atoms are moved as animals; which appears more evidently, ver. 259. where ſpeaking of the voluntary motion of men, he uſes almoſt the very ſame words.

Declinamus item motus, nec tempore certo,
Nec regione loci certa, ſed ubi ipſa tulit Mens.

Thus this inveterate enemy of Providence, beſtows only not a mind, only not a will on his ſtupid and ſenſeleſs atoms. But, to proceed to the explication of this declining motion.

The poet has diſputed at large of the ſeeds natural motion downwards, and violent upwards. Now, from whence can that violent motion proceed but from ſtroke? but the ſeeds being heavy, and therefore deſcending through the void in a direct line, and with equal ſwiftneſs, could never meet, never overtake one another, ſo that nothing could be generated whatever; and nothing would exiſt but empty ſpace, and inviſible principles.

Deſertum præter Spatium, et Primordia cæca.
Lucretius.

The opinion of Democritus laboured under this defect: for, as Plutarch ſays, " de Placit. Philoſoph." lib. i. c. 23. he acknowledged only one ſort of motion; κατὰ πλαγήν, for ſo it ought to be read, not κατὰ πλαγίον, as is manifeſt from Cicero, who, in his Book of Fate, ſays, " Quandam vim motus habebant, impulſionis, quam Plagam ille appellat, à te Epicure, gravitatus et ponderis." Formerly, they [the atoms] had a motion of impulſe, which he (Democritus) calls ſtroke: but you, Epicurus, gave them a motion of heavineſs and weight. Epicurus, therefore, held two ſorts of natural motion: one perpendicular, the other declining: δύο εἶδη τῆς κινήσεως, τὸ κατὰ στάθμην, τε τὸ κατὰ παρέγκλισιν. " Plutarch. de Placit. Philoſ. lib. 1. cap. 23. Now, this motion of declination was thought neceſſary, becauſe, otherwiſe the atoms could never have met together; and, conſequently, there could have been no generation of any thing whatever. Cicero, in 1. lib. de Fin. Cenſet [Epicurus] " illa ſolida ac individua Corpora Materiæ ferri ſuo deorſum pondere ad lineam: hunc naturalem eſſe omnium Corporum Motum. Deinde ibidem homo acutus cum illud occurreret, ſi omnium deorſum è regione ferrentur, et ut dixi, ad lineam, nunquam fore ut Atomus altera alteram poſſet attingere: itaque attulit rem commentitiam: declinare dixit Atomum perpaulum, quo nihil poſſet fieri minus. Ita effici Copulationis, et Complexiones et Adhæſiones Atomorum inter ſe, ex quo efficeretur mundus, omneſque partes mundi, quæque in eo ſunt." Epicurus was of opinion, that thoſe indiviſible and ſolid bodies are carried

downwards in a direct line by their own weight; that this is the natural motion of all bodies: but at the same time, he sagaciously reflected, that if all the atoms descended by their own weight in a straight line, they would never reach or touch one another. He, therefore, being put to his shifts for another invention, asserted that they decline some small matter in their descent; but so very little, that nothing can be less: and that from this declination proceed the conjunctions, unions and adhesions of the atoms to one another, and among themselves: by which means was made the world and all its several parts, and whatever things are contained in it. This opinion Lucretius explains, in 30 verses; and first, in these six verses, teaches, that this declining motion must be granted, otherwise the seeds would be moved like drops of rain, always apart and disjoined from one another. There would be no blows, and the atoms would never combine and join together: the consequence of which would be, that there could be no compound bodies.

Ver. 216. Lucretius adheres so obstinately to this κίνησιν καὶὰ παρέγκλισιν, motion by declination, that he will by no means suffer it to be extorted from him; and, therefore, he sharply inveighs against those who believe that the heavier seeds, as they descend through the void, can overtake and strike the lighter; insomuch that there is no need of his pretended declination in their descent; he asserts, that all seeds are alike swift, and that they are hurried through the void with an equal velocity: and, therefore, those that follow, can never overtake those that are before them. But he grants that the medium through which they pass, may contribute to the hastening or retarding of their motion; and that bodies of the same matter, but different in weight, when they fall from above downwards through water, or through the air, are not alike swift, which is false; but he will have the motion to be the swifter, the more free and empty the place is, through which the bodies move; so that where the space is most void and empty, there the motion must consequently be most swift; and be there ever so many motions, or things moving in that space, they are all of a like swiftness.

Ver. 234. Having confuted the opinion he last proposed, he concludes in these six verses, that the atoms decline in their motion; but so little, that nothing can be less: nay, not so much as that they can be said to be moved obliquely: for the senses themselves teach us, that heavy things when they tend downwards, make not their descent in an oblique motion; but the same senses cannot persuade, that heavy things do not decline in the least; since the declination is so small that it cannot be perceived. And, therefore, since the senses are not repugnant to it, and that the generating of things, which could never be done at all without that motion, indispensibly requires it, we must, of necessity, admit a declination of the seeds in their descent. Here, too, our translator has omitted these two verses of his author,

Sed nihil omnio recta regione viai
Declinare, quis est, qui possit cernere, sese?

And yet they contain a part of the argument, as the reader may observe by the explication I have given of them.

Ver. 236 It is modest in the poet to ask of us to believe only this; and yet he might with equal reason have insisted on the most oblique motion that can be imagined. If he apprehends the judgment of the senses, away with these importunate judges, and for once let them suffer themselves to be imposed upon. This request would be no less reasonable than the other. Besides, even this declination is invented at pleasure: for as Cicero tells us in the first book de Finib. "Ait declinare Atomos sine causa, quo nihil turpius est Physico: Et illum motum naturalem omnium ponderum é regione inferiorem locum petentium sine causa eripuit Atomis. Nec tamen id cujus causa hæc fecerat assecutus est: Nam, sive omnes Atomi declinabunt, sive aliæ declinabunt, aliæ suo motu recte ferentur: primum erit hoc quasi provincias Atomis dare, quæ recte, quæ oblique ferantur: deinde eadem illa Atomorum, in qua etiam Democritus hæret, turbulenta Concursio hunc Mundi ornatum efficere non poterit." Epicurus says, the atoms decline without cause, than which nothing is more unbecoming, more unworthy of a natural philosopher; and has, without any reason likewise, taken from them that motion which is natural to all heavy bodies, that descend in a straight line from a higher to a lower place: but neither has he gained the point for the sake of which he invented all this. For either all the atoms will decline, and none will ever cleave and stick together, or some only will decline, while the others descend perpendicularly, as they naturally ought to do. And this is, in the first place, to prescribe to atoms their several duties and offices; which of them shall descend in a straight line, which obliquely: and in the next place, such a turbulent and confused concourse of atoms, the shelf on which Democritus likewise run aground, could never make this beautiful and regular frame of the world.

Ver. 240. In the following 41 verses, Lucretius contends yet farther for the declining motion of his atoms. All men feel within themselves, that some of their motions are voluntary. Every one perceives a liberty in himself, and does not, without good reason, conjecture the like freedom to be in other animals; for he sees that they do not perform their motions at a certain time, nor in a certain order; but vary them as they list, and live as they please themselves. Nay, when the barriers of the lists are thrown open on a sudden, we only not see the will of the courser starting to the race, and running even before his limbs are in motion. Upon hearing the first shout he pricks up his ears, and the inward motion of his mind is hurried forward, while the spirits that are to be conveyed through the nerves into the several joints and members of his body assemble more slowly; and with greater difficulty obey the eager mo-

tions of his mind. Beſides, when we are compelled to act by any exterior or foreign force, ſomething, I know not what, lies hid within us, that reſiſts and oppoſes that compulſion. And we plainly perceive a difference within ourſelves, and ſeem to do another thing when we act of our own accord, than when we are compelled and moved to action by any exterior and foreign force. But from whence proceeds this liberty? Search the ſeeds themſelves; nothing like it is concealed in them. The chain of neceſſity and fate is faſt linked together by the ſtraight and direct motion of the principles, from their ſtriking one another, if they can ſtrike, unleſs they decline, the ſame neceſſity follows. The declination therefore of the atoms only remains to which our liberty can be due.

Plutarch, in the Treatiſe de At. Solert. teaches us, that this doctrine of the declining motion of atoms was firſt broached by Epicurus, ὅπως εἰς τὴν ζωὴν ἡ τύχη παρεισέλθῃ, καὶ τὸ ἐφ' ἡμῖν μὴ ἀπορῆται. And that the reaſon why he ſet up this opinion, was, becauſe he feared that if no other motion were allowed to atoms but that which they naturally, and of neceſſity have, by their own weight, we ſhould not be free agents in any thing, ſince our mind would be moved in ſuch a manner as it would be compelled to move in by the motion of the atoms. But Cicero in his Treatiſe of Fate, blames Epicurus for this fooliſh opinion, in theſe words: "Epicurus ab Atomis petit præſidium, eaſque de via deducit, et uno tempore ſuſcipit duas res inenodabiles: unum, ut ſine cauſa fiat aliquid, ex quo exiſtet ut de nihilo quippiam fiat; quod nec ipſi, nec cuiquam Phyſico placet: alterum, ut cum duo individua per inanitatem ferantur, alterum, è regione moveatur, alterum declinet." Epicurus fled for refuge to the atoms, and leads them out of their way: and by ſo doing, ſubjects himſelf to two difficulties that can never be ſolved. One, that any thing can be done without a cauſe: from whence it follows, that every thing may proceed from nothing: which neither himſelf, nor any natural philoſopher will allow: the other, that when two indiviſible bodies are moved through the void, one of them ſhould move in a direct line; the other by declination. And the ſame author farther evinces the vainneſs of his opinion, by ſhowing it to be wholly needleſs; and that the freedom of will in animals proceeds from another cauſe. "Ad Animorum motus voluntarios non eſt requirenda cauſa externa; Motus enim voluntarius eam naturam in ſe continet, ut ſit in noſtra poteſtate, nobiſque pareat: nec id ſine cauſa: ejus enim cauſa ipſa eſt Natura." We need not ſeek an external cauſe for the voluntary motions of the mind: for voluntary motion contains within itſelf ſuch a nature, that it is in our power, and is obedient to us; and this too not without a cauſe, for nature herſelf is the cauſe of it. Lib. de Fato. Thus, even in Cicero's opinion, any antecedent external cauſe takes away liberty. But freedom of will does not require an antecedent external cauſe to make it move; ſince that has the cauſe of its motion within itſelf. Therefore, Lucretius has no reaſon to aſcribe the voluntary motions of men, or of irrational animals, to the exterior motion of atoms, ſince they proceed from the very nature of the free mind. It is well, however, that Lucretius owns that all our actions are not the effects of neceſſity or fate; but he was in the wrong to impute this freedom to the declining motion of his atoms.

But ſince the Epicureans acknowledge the liberty of the will, we may take it as a ſuppoſition already granted, and without any farther proof, make uſe of it in our diſputes againſt them: but, becauſe it is of great conſequence, and is the foundation of Seneca's and Plutarch's diſcourſes, "Cur Bonis malè, et Malis benè," why good men are afflicted and why villains proſper, it deſerves ſome confirmation. The liberty of the will is a power to chooſe, or refuſe any thing after that the underſtanding hath conſidered it, and propoſed it as good or bad. This is that τὸ ἐφ' ἡμῖν of Epictetus; and, as he calls it, ἐλεύθερον, ἐκώλυτον, ἀπερίσπαστον· free, not ſubject to hindrance or impediment. And Adrian delivers it as his doctrine, τὴν παρουσίαν οὐδ' ὁ Ζεὺς νικῆσαι δύναται· Our will not Jupiter himſelf can fetter. Epicurus calls it τὸ παρ' ἡμᾶς· and that ſuch a power belongs to every man, is evident from the general conſent of mankind; for every man finds ſuch a power in himſelf, and thence proceeds this agreement; it is the foundation of all laws, of all rewards and puniſhments. For it would be very ridiculous for a prince to command a ſtone not to fall, or break it for doing ſo. Origen declares, ἀρετῆς ἐὰν μὲν ἀνέλῃς τὸ ἑκούσιον, ἀνέλῃς αὐτῆς καὶ τὴν οὐσίαν· and Lucian ingeniouſly makes Soſtratus baſile Minos, after he had granted that all men act according to the determination of fate, ἢ ἑκάστῳ ἐπέταξε γενέσθαι τὰ πραττόμενα, which ordains every man's actions as ſoon as he is born; and the compaſſionate philoſopher, who would have all offences forgiven, produceth this argument: οὐ γὰρ ἑκόντας ἁμαρτάνειν ἀλλά τινι πάθει καταναγκασθέντας, for none ſin willingly, but are forced. But more, this may receive a particular confirmation from every man's experience; for let him deſcend into himſelf, he will find as great evidence for the liberty of his will, as for his being, as Cartes delivers; though he is extremely miſtaken, when he tells us in a metaphyſical ecſtaſy, "A quocunque ſimus, et quamtumvis ille ſit potens, quantumvis fallax, hanc nihilominus in nobis libertatem eſſe experimur, ut ſemper ab iis credendis quæ non planè certa ſunt et explorata, peſſimus abſtinere, atque ita cavere, ne unquam erremus:" From whomſoever we have our being, and how potent or deceitful ſoever he be, yet we find within ourſelves this liberty, that we can abſtain from believing thoſe things that are not evidently certain, and experimentally tried and proved to be ſo: and be ſo aware of ourſelves as never to be miſtaken: for what does he in this but determine the extent of that power, of whoſe bounds he is altogether ignorant? and place this cogitation beyond his reach, whoſe power to deceive is infinite, and his will equal to his ability. But let us all conſider our uſual actions, and we ſhall find every one

a demonſtration. For let a thouſand men think on any thing, and propoſe it to my choice, I will embrace or reject it according to their deſire, which neceſſarily proves my liberty; unleſs theſe thouſand, or perhaps the whole world, were determined to think on the ſame thing I was to act. For my part, if any one would take the bit and bridle of fate, I ſhall not envy him the honour, nor be very willing to blind myſelf, to have the convenience of a guide. Let Velleius think it a commendation for Cato to be good, "quia aliter eſſe non potuit," becauſe he could not be otherwiſe; and Lucan agree with him in his ſentence: I ſhould rather be freely ſo.

This is oppoſed by thoſe who imagine the ſoul material, and therefore all her actions neceſſary; becauſe matter once moved will ſtill keep the ſame motion, and the ſame determination which it received, which muſt needs deſtroy all liberty, and evidently proves the Epicurean hypotheſis to be inconſiſtent with it. Others urge preſcience, and think themſelves ſecure of victory, whilſt the Deity is on their ſide. The weakneſs of the former opinion will, hereafter, be diſcovered; and Cartes has ſaid enough to ſilence the latter objection. "His difficultatibus nos expediemus, ſi recordemur mentem noſtram eſſe finitam, Dei autem potentiam, per quam non tantum omnia, quæ ſunt, aut eſſe poſſunt, ab æterno præſcivit, ſed etiam, voluit, ac præordinavit, eſſe infinitam, ideoque hanc quidem à nobis ſatis attingi, ut clarè et diſtinctè percipiamus ipſam in Deo eſſe, non autem ſatis comprehendi, ut videamus quo pacto liberas hominum actiones indeterminatas relinquat. Libertatis autem, & indifferentiæ quæ in nobis eſt, nos ita conſcios eſſe ut nihil ſit quod evidentiùs & perfectiùs comprehendamus. Abſurdum enim eſſet, propterea quòd non comprehendimus unam rem, quam ſcimus ex natura ſua nobis debere eſſe incomprehenſibilem, de alia dubitare quam intimè comprehendimus, atque apud noſmet ipſos experimur." We may extricate ourſelves from theſe difficulties, if we reflect that our mind is finite; but that the power of God, by which he not only foreknew from all eternity all things that are, or that can be, but likewiſe willed and preordained them, is infinite; and therefore, that it is enough for us plainly and diſtinctly to perceive and know that ſuch a power is in God: and though we cannot ſo fully comprehend the extent of it, as to ſee how and by what means he leaves the free actions of men undetermined, yet we are ſo conſcious of the liberty and indifference that is within us, that we comprehend nothing more perfectly, nor with greater evidence. For it would be abſurd, becauſe we do not comprehend one thing, which we know ought in its nature to be incomprehenſible to us, to doubt concerning another, which we entirely comprehend, and experience within ourſelves.

Ver. 244. For as Cicero, de Fato, ſays, fate is only εἱμαρμένη, or συμπλόκη αἰτίων τεταγμένη, and they who introduce a fixed and eternal ſucceſſion of cauſes, deprive the mind of man of all its freedom and liberty, and ſubject it to the inevitable neceſſity of fate.

Ver. 249. Here the poet takes occaſion to explain the voluntary motion of animals. Firſt, the mind is willing, then it collects the ſpirits which are always obedient to its will, and conveys them through the nerves into the members, cheriſhes the languid and weak ſpirits, and ſupplies new and vigorous. Thus the animal is moved, and its motion continued.

Ver. 260. In theſe twelve verſes the poet illuſtrates the voluntary motion of animals, which he has explained, and makes a compariſon between that and a violent or conſtrained motion. For when we are moved by a violent motion, we feel an exterior force: but when we move of our own accord, we perceive no ſuch thing. Beſides, our will reſiſts and oppoſes an outward force, and ſometimes even overcomes it: whence it appears, that there is ſome inward principle of motion entirely free, and not bound or compelled by any neceſſity.

Ver. 262. So far are we from giving conſent to this violent exterior force, that on the contrary, the mind reſiſts it, and yields with reluctancy. Ariſtotle in the third of his Ethics gives this definition of a violent and compulſive motion: "Eſt Motus violentus, cujus Principium extrinſecus eſt, nihil ad juvante eo, quod agit." That is a violent motion, whoſe principle and cauſe proceed from without, the movent, or thing moved contributing nothing to it.

Ver. 267. *Something.*] He means the will that is ſeated in the heart.

Ver. 270. At the command of the will a ſubtle matter, that is to ſay, the ſpirits fly, &c.

Ver. 272. In theſe nine verſes he at length concludes for the motion by declination from the freedom of will, which cannot proceed from ſtroke; for motion by ſtroke is an outward force, which is wholly contrary to all liberty, and even deſtructive of it. Weight, though it be an inward principle of motion, yet ſince it always tends downward, and in the ſame manner, is no leſs an enemy to liberty, than ſtroke itſelf. Therefore declination only remains, which being made neither at any certain time, nor any certain place, avoids that neceſſity of which both weight and ſtroke are the cauſe, and unlinks the chain of deſtiny.

Ver. 274. Whence proceeds the freedom of will; i. e. the declining motion of the atoms is the cauſe of it. Cicero, in the firſt book of the Nature of the Gods: "Epicurus cum videret, ſi "atomi in inferiorem locum ferrentur ſuopte pon-"dere, nihil fore in noſtro poteſtate, quod illarum "motus eſſet certus et neceſſarius, invenit declina-"tionem, ut hanc neceſſitatem effugerit." When Epicurus ſaw, that if the atoms were moved downward by their own weight only, and had no other motion whatever, nothing would be in our power; becauſe their motion would then be certain and neceſſary, he invented declination to avoid this neceſſity.

Ver. 277. I take this paſſage, of which by the way, the interpreters ſay nothing to be very difficult, and this to be the meaning; nothing is made of nothing; therefore freedom of will proceeds

from ſomething; but what that ſomething is, we muſt now inquire. There is a twofold motion of the ſeeds: one natural, which is downwards, and proceeds from weight; the other violent, which is upwards, and occaſioned by ſtroke. Now it is manifeſt that all things are not made by ſtroke, becauſe ſome motion proceeds from weight. But ſince the motion that proceeds from weight is natural, and keeps due on always in the ſame tenor, it is no more favourable or conducive to liberty, than the motion cauſed by ſtroke. Nothing, therefore, can prevent the mind, which conſiſts of ſeeds, from being determined by a certain inward neceſſity, that is to ſay, by the motion that proceeds from weight, but the declination of the ſeeds, which motion of theirs being made in no certain nor determinate place, nor at any certain or determinate time, can alone be the cauſe of liberty, or freedom of will.

Ver. 280. Lucretius ſays,

Id facit exiguum clinamen principiorum
Nec regione loci certa, nec tempore certo.

In this diſputation for the declination of his atoms, this is the third time that our poet has repeated theſe words, "nec regione loci certa, nec tem-"pore certo," and as often too has our tranſlator omitted them; even though they are an eſſential part of the argument, and the main ſupport of it. For if the declination were made at a certain time, and in a certain place, the neceſſity would be equally inevitable. And of this he himſelf was afterwards aware, as may be ſeen in his explication of theſe paſſages in his Latin edition of this author; where he has given them the ſame interpretation that I have done in theſe annotations.

Ver. 281. Lucretius has already taught that ſeeds are not liable to change; and now in theſe thirteen verſes he aſſerts, that the univerſal maſs of matter can never increaſe or diminiſh; for not one ſeed dies, whereby a gap might be made in it, and no new ſeed is introduced, whereby it may become more cloſe; but it remains always the ſame. Then he affirms that the motions of the ſeeds are immutable; that they have always moved in the ſame manner they now do, and will always continue in the ſame motion to all futurity. And therefore, that whatever things have been produced heretofore, the like things may alſo be produced now. For where the ſame ſeeds, and the ſame weight, always remain, and where no external force can be introduced, there too the ſame motion that proceeds from that weight, muſt of neceſſity be alſo.

Ver. 294. Leſt any one ſhould object againſt Lucretius, that the ſenſes themſelves overthrow this opinion of the perpetual motion of the atoms; for if the univerſal matter be agitated, how comes it to paſs that the all, the τὸ πᾶν, ſeems buried in ſo profound a tranquillity. The poet anſwers in theſe twenty-five verſes, that this objection is very weak; for the motion of the ſeeds muſt of neceſſity be imperceptible, ſince the ſeeds themſelves are inviſible to the ſharpeſt ſight. Then he adds, that the motions even of ſenſible things often cannot be perceived by the eyes of ſuch as behold them from afar; which he illuſtrates by the example of ſheep friſking up and down on the ſide of a hill, and of an army moving to and fro in a plain. He means the whole maſs of all things; the univerſe.

Ver. 296. The atoms of which all things are compoſed.

Ver. 313. We have an excellent deſcription of this in Sir R. Blackmore's K. Arthur:

The various glories of their arms combine,
And in one fearful dazzling medley join.
The air above, and all the fields beneath
Shine with a bright variety of death.
The ſun ſtarts back to ſee the plains diſplay
Their rival luſtre, and terreſtrial day.

Ver. 319. He has diſputed at large of the ſolidity of the atoms, and of their properties, weight and motion, that proceed from it. He is now going to treat of another of their properties, which is figure, and this relates to their ſize or magnitude; for figure is the bound and manner of magnitude. And firſt, he aſſerts in eight verſes, that atoms are of different figures; not that their ſhape is diſcernible to the eye any more than their magnitude, which is imperceptible, as has been ſaid already: but becauſe their different figuration may be made evident by ſeveral arguments. Epicurus in Plutarch teaches that atoms, ἴδια ἔχειν σχήματα λόγῳ θεάρητα, have proper figures that are diſcernible to the eye of reaſon. And in the epiſtle to Herodotus: τὰ ἄτομα τῶν σωμάτων καὶ μετὰ, ἐξ ὧν τὰ αἰ συγκρίσεις γίνονται τὲ εἰς ὰ διαλύονται. ἀπεριλήπτα ἔσι τὴν διαφόρεις τῶν σχημάτων· ἢ γὰρ δύναται γένεσθαι τὰς τοσαύτας διαφόρας ἐκ τῶν αὐτῶν (perhaps ἀτόμων) σχημάτων περιειλημμένων.

Ver. 323. In the firſt place, he teaches that ſeeds are of different figures; becauſe it is not likely that thoſe corpuſcles, being infinite as they are, ſhould be all of the ſame figure. Conſider any things whatever, the greater their number is, the greater too, for the moſt part, is the variety of their figures; and therefore, what we ought to believe likewiſe of the atoms.

Ver. 327. Secondly, in theſe ſix verſes he argues for the different figures of his atoms, from the various ſhapes and figures of all natural things that are compoſed of them; as men, beaſts, birds, fiſh, &c.

Ver. 328. This is certainly a very proper epithet for fiſh; though Ariſtotle, and ſome others, will not allow all fiſh to be mute.

Ver. 333. Thirdly, he ſhows in twenty-five verſes, that this different figuration is very manifeſt and viſible, not only in all kinds of things taken collectively, but even in the individuals of the ſame kind; for among brute beaſts the dams know their young, and the young their dams, only by their different figuration. Then he illuſtrates this argument with an elegant and lively deſcription of a cow paſſionately bemoaning the loſs of her ſacrificed calf; to which he laſtly adds a hint of the agnition that lambs have of their mothers.

Ver. 340. Of the maternal affection of beaſts to their young, ſee Oppian Ἁλιευτ. α. ver. 724. and Ovid, Faſt. 4.

Ver. 358. In the four firſt of theſe ſeven verſes he teaches, that the ſame ſpecial, or, as they call it, individual difference may be diſcerned by any who attentively conſider them, not only in the ſtalks and ears, but in the very grains of corn, in ſhells and the like; and in the three laſt verſes he concludes, that the ſeeds themſelves, ſince they are not made by any artiſt, after one and the ſame ſhape and form, ought no leſs than the reſt of things to be adorned with various and different figures.

Ver. 365. He proves that this contention for the variety of figures is not vain and uſeleſs, but ever neceſſary for the explication of ſeveral phenomenons of nature; and from thoſe very phenomenons he fully proves the variety of the figures of his atoms. And firſt, in ſeven verſes he teaches why the fire of lightning penetrates things more eaſily, and with greater force than the fire that proceeds from oil, pitch, wood, &c. which is becauſe the fire of lightning conſiſts of ſmall and ſubtle ſeeds; but thoſe of the fire that comes from oil, &c. are thicker and more blunt. Thus ſome ſeeds are leſs than others, according to the doctrine of Lucretius.

Ver. 366. He means that penetrates more eaſily, for lightning lets out the wine, and leaves the veſſel unhurt; ſpares the ſcabbard, and melts the ſword within it; and does ſeveral other wonderful things of like nature, which our fires will not do.

Ver. 372. In theſe four verſes he teaches that this diverſity of figures is the cauſe that light pierces through horn, and that water ſtops on its ſurface.

Ver. 374. Here Lucretius acknowledges, that ſome ſeeds are leſs than others, though he aſſerted before that all ſeeds are leaſts: yet he contradicts not himſelf, for by leaſts, the Epicureans mean only bodies that are ſimple and ſolid, and therefore indiviſible.

Ver. 376. In theſe ſix verſes he demonſtrates, that ſome ſeeds are not only bigger than others, but that ſome are hooked and branchy, while others are ſmooth and round. For the reaſon why wine paſſes through a ſtrainer ſooner than oil, is, becauſe the ſeeds of oil are full of hooks, and therefore the texture of the principles being more intricate and perplexed, they are not ſo eaſily looſened and disjoined, to paſs through the holes of the ſtrainer.

Ver. 382. In theſe ten verſes he urges the ſame thing in an argument taken from the different taſte of things. For milk and honey are ſweet, becauſe they conſiſt of little bodies formed in ſuch a manner, that when they are poured upon the organ of the taſte, and are entering into the little pores of it, they are exactly fit for thoſe ſmall paſſages, and thus they gently and ſmoothly touch the organ, and pleaſingly affect the taſte. But wormwood and centaury are bitter and ſharp, becauſe the little bodies of which they are made, are formed in ſuch a manner, that when they come to enter into the little pores of the organ, they bear no proportion with them, and thus prick and hurt the particles of it, and tear and wound the organ itſelf. And hence it is reaſonable to conjecture, that ſweet things are compoſed of ſmooth and round principles; and bitter things of ſeeds that are rough and full of hooks.

Ver. 384. *Rue.*] Lucretius mentions not rue, but centaury, which is indeed a very bitter herb: the French call it *fiel de terre*, gall of the earth; it had its name from Chiron the Centaur, who firſt diſcovered the virtues and uſe of it: for as he was handling the arms of Hercules, he chanced to wound himſelf in the foot with an arrow, and cured the wound by the application of this herb; of which ſee more in Pliny, lib. xxv. c. 6

Ver. 385. In like manner, whoever eats of the herb ſardon is ſaid to die of a diſtorted mouth; for that herb contracts the nerves of the mouth, and cauſes a violent grinning and laughing, followed by death. Hence the proverb, "Riſus Sardonius," is ſaid of thoſe who laugh without cauſe, and when they have more reaſon for ſorrow than for joy.

Ver. 392. He has hitherto been ſpeaking of ſweet and bitter taſtes, and now he teaches, in ſeventeen verſes, that things are pleaſant or unpleaſant to the other ſenſes likewiſe, for the ſame reaſon, that is, becauſe the ſeeds of which they are compoſed are ſmooth and round, or rough and hooky. Thus in grateful and pleaſing ſounds, ſmells, and colours, we muſt acknowledge the ſeeds to be ſmooth and round, but in ungrateful and offenſive, hooky and rough.

Ver. 400. He alludes to the cuſtom of the ancients in ſtrewing the ſtage with ſaffron and other flowers, when plays were to be acted. Horace in the epiſtle to Auguſtus:

Recte necne crocum floreſque perambulet attæ
Fabulam ſi dubitem, &c.

And this they did to delight the audience with the fragrancy of odours.

Ver. 409. Becauſe there are ſome objects that are not altogether ſo offenſive as to wound the organs of the ſenſe, as bitter things do; nor ſo grateful as to delight and pleaſe them, as do the things that are ſweet, but rather tickle and affect them, with a ſort of inoffenſive pain, if I may ſo call it, we are to believe that the ſeeds of ſuch things are not entirely ſmooth and round, nor hooky and rough, but that they are ſhaped with angles jutting out, ſo that they may ſometimes gently prick and tickle; but cannot wound and tear. This opinion the poet has included in five verſes.

Ver. 413. Here our tranſlator has not fully expreſſed his author, whoſe words are,

Fœcula jam quo de genere 'ſt, inulæque Sapores.

The fœcula and the inula were two ſauces of the Romans: The firſt of them, the fœcula, was an acid ſauce, whoſe chief ingredient was indeed the lees of wine, (and the word properly ſignifies the

lees or dregs of any liquid), as Turnebus says on this passage of Horace:

——acria circum
Rapula, lactucæ, radices: qualia lassum
Pervellunt stomachum, ciser, halec fœcula coa.
Lib. ii. *Sat.* 8.

The other, the inula, was a sweet sauce, made of the sweetish bitter root of the herb inula, elecampane; of which see Columella, lib. xii. cap. 46. Horace too makes mention of it in the place above-cited:

Erucas virides inulis ego primus amaris
Monstravi incoquere.——

Now Lucretius says, that the reason why the fœcula has an acid taste, and the inula as it were a sweetish bitter, is, because they do not consist of atoms that are wholly rough, or wholly smooth, but of such as are of a nature between both, and have minute angles whose points are blunted, and therefore rather tickle the organ of the taste, than hurt or wound it.

Ver. 414. In the last place he comes to the sense of touch; and in thirteen verses teaches, that the objects of that sense are differently figured; because heat and cold affect the organs in different manners. For Epicurus held, that since the seeds of fire are pungent, and prick the sense, they must of necessity have some prominent angles; and that the seeds of cold have a trigonical or pyramidal figure; that is to say, their figure consists of four triangular faces. This we find in the epistle to Pythocles, where giving the reason of ice, he says it is made κατ' ἐκθλίψιν μὲν τῶ περιεχόντος σχημάτισμα ἐκ τοῦ ὕδατος, σύνεσιν δὲ τῶν σκαληνῶν, τὸ ἐξυγονίων τῶν ἐν τῷ ὕδατι ὑπαρχόντων, ἢ καὶ δὲ τὴν πῆξιν τῶν τοιούτων προσκρισιν, when the orbicular corpuscles (that are the efficient causes of heat) are driven out of the water, and when those of a trigonical and acutangular figure, that are in the same water are compressed together, or when such corpuscles come from without, and join themselves to the water. Plutarch too is of the same opinion in the treatise, "De primo Frigido." Then he describes the touch; the darling sense of the Epicureans, and the several kinds of it, not without some transport and exultation of mind.

Ver. 421. The seeds being tumultuously mixed together, confound the sense, because they are in a sort of commotion and uproar.

Ver. 427. He has hitherto been proving the diversity of the figures of his atoms from the different motions which the objects excite and cause in the organs of the senses: he now brings other arguments to the same purpose, taken from the firmness, as well as from the fluidity of things. For some seeds have little hooks and clasps, by which they catch and hold fast one another; and the little empty spaces being filled up as much as possible, they have not the liberty of mutually disentangling themselves, and getting free from one another; and thus they compose the firm and hard bodies of brass, iron, stones, and the like. Other particles are smooth, and approaching to an orbicular figure, and of these are composed all fluid bodies; for the smooth and round particles will not join to others, yield to the least thrust, are always in motion, and rolling up and down from place to place.

Ver. 430. A diamond is esteemed the hardest of all stones, and scarce any blows can break it. Pliny, lib. xxxvii. c. 4. says of it, "Incudibus deprehenditur ita respuens ictum, ut ferrum utrimque dissiliat." It is so proof to blows, that beat it on an anvil, and the iron on both sides will give way to its hardness.

Ver. 435. In these six verses, he says, there are some bodies we may reckon in the number of fluids, as smoke, mist, flame, &c. which may be dissipated and dissolved with the slightest stroke, and therefore do not consist of hooky seeds entangled with one another. Yet these very bodies hurt and prick the senses; for mist and smoke offend the eyes; and flame penetrates hard things, and passes even through stones and rocks, therefore they are not composed of principles entirely smooth and round. He, for this reason asserts, that they are made partly of acute principles.

Our translator has omitted the three last verses of this argument, which are as follows:

Non tamen hærere inter se, quod quisque videmus
Sentibus esse datum: facile ut cognoscere possis
Non è perplexis, sed acutis esse elementis.

Lambinus rejects them likewise, and asserts them to be needless, for which Faber commends him, and adds, that they cannot be of Lucretius. The other editors, Nardius, Fayus, &c. retain them; and so too does even Creech himself in his Latin edition, but only wishes for another word in lieu of *fontibus*, in which he seems too critical and hard to please. I take the verses to be not only not useless, but even necessary; and am of opinion, that Lucretius was in the right, and ought to affirm, as he does, that since those fluid bodies affect and penetrate into hard, they are composed of pungent, and penetrating, and acute principles, no less than of smooth and round: for the atoms that are either smooth or round cannot prick, offend, nor easily penetrate into bodies; "nec tamen hærere inter se," &c. nor do their particles nevertheless adhere and mutually stick to one another, as the particles of thorns do; insomuch, that from thence you may rightly conjecture, that all those things that are so soon and easily dissipated, are not composed of principles that are hooked, entangled, and perplexed among themselves: but of acute,

Non è perplexis, sed acutis esse elementis:

And this is the meaning of this passage, which has so much employed the interpreters.

Ver. 441. There are other fluids that are both bitter and sharp: for instance, the water of the sea. And the poet asserts, in these fourteen verses, that all such things are composed partly of smooth and round principles, from whence they have their fluidity; partly of sharp and rough, from which they derive their tartness and bitterness.

Laſtly, he demonſtrates, that bodies of that nature are made of particles different in figure, becauſe they may be ſeparated. For, ſtrain ſea-water through ſand, it loſes its ſharp particles, and becomes ſweet, ſo that it retains only its ſmooth and round principles.

Ver. 455. What he here undertakes to prove, is this: The atoms vary in their figure, and in their bigneſs too, as is proved already. But yet that variety is not infinite, though it be indefinite or incomprehenſible. This he proves, firſt in nineteen verſes, from the minuteneſs of the ſeeds, which he has before demonſtrated: for to make an infinite variety of figures, the maſs of ſome of the ſeeds muſt of neceſſity be immenſely great, ſince an immenſe magnitude only is capable of an immenſe variety of figures. If you would change the figure of a body, tranſpoſe its parts, and as many different poſitions as it can receive, ſo many different figures there will be. Attempt to do the like with an atom, turn and tranſpoſe every way the parts that can be conceived in it, and you will find only a finite variety of figures in ſo ſmall a body. Epicurus taught, that the figures of the atoms are incomprehenſible, but not infinite, εἶναι τὰ σχήμαθ᾽α τῶν ἀϊδίων ἀπεριλήπθ᾽α, οὐκ ἄπειρα, ſays Plutarch, de Placitis Philoſoph. lib. i. c. 3. And Epicurus himſelf writes thus to Herodotus: Ἀτόμοι ταῖς διαφοραῖς οὐκ ἀπλῶς ἄπειροί ἔϛιν, ἀλλὰ μόνον ἀπεριλήπ᾽τοι, ἐὰ μὴ μέλλει τις τὸ τοῖς μεγέθεσιν ἀπλῶς ἐϛ ἄπειρον αὐ᾽ξὰς ἐκβάλλειν, ἅτε ἓν τῷ ὠϱισμένῳ μεγέθει ἀπείρους ἐνηεῖν διαφορὰς ἀδύνα᾽τον.

Ver. 462. He does not mean that you ſhould add two, three, or more parts; but ſuppoſe it to conſiſt of three or more, that is to ſay, of a definite number of parts, each figuration requires a peculiar poſition of the parts. Now the parts of any finite magnitude may be tranſpoſed ſo many ways, that no new way ſhall remain to change the poſition from what it had been in before, for otherwiſe there would be ſtill new and new parts even to an infinity; from whence the magnitude might at length be conceived to be infinite; but nothing of this can be in an atom, which is too little even to be ſeen.

Ver. 474. He brings another reaſon, in theſe ſixteen verſes. If we grant ſtill other and other figures, even to an infinity, no external qualities of natural things would be certain and determined, ſince they might be ſo diverſified by a new figuration, that at length there might ariſe a better than every beſt, and a worſe than every worſt. Garments of the moſt precious colours, the ſweeteſt odours, ſounds, and taſtes, might be ſurpaſſed by others, and would be no longer in eſteem, while the things that ſeem now moſt offenſive and diſpleaſing, and to which we are moſt averſe, would be valued above worſe than might ariſe daily.

Ver. 479. For ſwans, when they are near their death, are ſaid to ſing very ſweetly. Thus Martial, lib. xiii. Epig. 77.

Dulcia defecta modulatur carmina lingua
Cantator Cycnus funeris ipſe ſui.

The mournful ſwan, thus when his death is nigh,
In tuneful ſtrains ſings his own elegy.

But Pliny denies it, "Olerum morte narratur flebilis cantus falſo, ut arbitrer, aliquot experimentis," lib. x. cap. 20. See the note on Book iii. ver. 5.

Ver. 486. Though our interpreter here mentions the ſenſe of ſmelling, yet he, at the beginning of his argument, ſays, "Has et contemptus odor myrrhæ," the odour of myrrh would be contemned, which Lucretius there alleges as an inſtance of an object of that ſenſe.

Ver. 488. *No higher.*] That is, from either extreme, either of worſt or beſt. Nor can there be an infinite number of things between either extreme, becauſe every thing is incloſed within certain bounds, and can neither enlarge itſelf into an infinite magnitude, nor contract itſelf into an infinite littleneſs; ſo neither can the goodneſs of things be improved to an infinite, nor the badneſs of things be impaired to an infinite.

Ver. 490. In theſe ſeven verſes, he confirms his foregoing arguments, becauſe, ſays he, things are generally determined and bounded by their contrary qualities, which are ſo extreme that though they may indeed have middle degrees, yet they can have no degree whatever without or beyond themſelves. Lambine interprets this of the zones; but I rather think our tranſlator in the right, and that Lucretius meant to ſpeak of the moſt intenſe power and force of fire and froſt, which are the extremes that bound the middle degrees of heat and cold. For fire is the moſt hot, and froſt or ice the moſt cold of all things.

Ver. 497. Having proved the different figures to be finite, he now adds, in ſeven verſes, another of Epicurus's opinions, which is, that the ſeeds of a like figure are infinite in number; that the globous are infinite, the oval infinite, the pyramidal infinite, and in like manner of all the other figures. Then he adds a reaſon for this opinion, from the infiniteneſs of the atoms which he has proved before. For, ſince the different ſorts of the figures are finite, it is evident, that if the atoms contained under each ſort were finite in number, there could be no infinity of atoms in the univerſe. Epicurus writes to the ſame purpoſe in the epiſtle to Herodotus: Καθ᾽ ἑκάϛην δὲ σχημάτισιν ἁπλῶς ἄπειροί ἔϛιν ἄϊδιμοι, ὑ γὰϱ τὸ πᾶν ἐϛὶ τῷ πλήθει τῶν ἀϊδίμων ἄπειϱον, ἐὰ μὴ ἁπλῶς ἂν ἦϛιν αἱ καθ᾽ ἑκάϛην τὰ σχημάτισιν ὁμοῖαι.

Ver. 504. Gaſſendus has omitted the four firſt of theſe verſes, as being improper to the explication of the argument: and indeed we may diſpenſe with the want of them, if we take Lucretius to be diſputing ſtill concerning the figures of his atoms; but if we conſider the particular argument that follows, they ſeem even neceſſary. For he has juſt proved the infinity of the atoms under each figure: but foreſeeing an objection hanging over his head, and that it might be the better underſtood together with the anſwer, he, in theſe four verſes, gives notice to the reader what he is to expect: and certainly our tranſla-

tor was in the right to retain them. But to return to the explication of Lucretius, who, in theſe thirty-three verſes, firſt objects againſt what he has been already arguing, that the atoms under certain figures may ſeem to be finite, becauſe we ſee that ſome animals are more ſcarce and fewer in number than others: to which he anſwers, that the animals that are ſcarce in one country abound in another. For inſtance, that there are many elephants in India, though he ſcarce ever ſaw one at Rome. In the next place, that granting there were but one only thing of one certain kind in the world, yet unleſs the atoms of the ſame figure were infinite, that only thing could not be born, nor grow. And, laſtly, he brings a compariſon to illuſtrate this aſſertion; and as it is difficult to find a ſimile more elegantly expreſſed, ſo we can never meet with one more properly applied. For what can better repreſent the perpetual motion of his atoms, than the diſturbed and reſtleſs agitation of the ſea.

Ver. 511. A region of Aſia, where there is great plenty of elephants, as there is likewiſe in Africa, though none are bred in Europe. Pliny, Nat Hiſt. lib. viii. cap. 10 and Polybius, lib. v. ſays, that in India the houſes, and even the ſtalls of their beaſts were encloſed with the trunks of elephants. And who knows not that the chief ſtrength of the Indians conſiſted in their elephants, by the help of which they defended both themſelves and their country.

Ver. 525. Cowley in his Davideis ſeems to have imitated this paſſage of Lucretius:

The ſea itſelf ſmooths her rough looks awhile,
Flatt'ring the greedy merchant with a ſmile:
But he whoſe ſhip-wreck'd bark ſhe drank before,
Sees the deceit, and knows ſhe would have more.

Ver. 536. Lucretius ſtruggles hard for the infiniteneſs of his atoms, the figures of which he will have to be very various, and thoſe of each ſhape to be infinite, which laſt aſſertion is the greateſt abſurdity imaginable. For infinite atoms muſt fill all the ſpace that is, becauſe if there be any place that can receive another, there may be conceived an addition to the former number; and therefore to ſay it was infinite is abſurd. And this proves that the infinite atoms of Epicurus can be nothing elſe but a vaſt heap of dull moveleſs matter, coextended, with the infinite ſpace. And how then could the world be made, how theſe various alterations of bodies, all which proceed from motion, is difficult to be conceived. And this likewiſe preſſes the hypotheſis of Cartes and his indefinite matter, as a little application will diſcover.

Ver. 537. Theſe ten verſes contain an argument that is a neceſſary conſequent of the former. If we grant the ſeeds of one ſort of figure to be finite, then the things that are compoſed of thoſe finite ſeeds, when they once come to be diſſolved ſhould never be reſtored. If the ſeeds were finite, we ſhould in vain expect the growth and generation of things And what is more certain then that ſome things are born, and grow; and that others decreaſe and die? from whence it muſt be concluded that the ſeeds of a like figure are infinite in number.

Ver. 549. He has hitherto been proving the infinity of atoms, under all the ſeveral ſorts of figures; and now, in four verſes, he teaches, that things cannot be compoſed of ſeeds of one and the ſame figure; and that the various qualities of things proceed from the variety of the ſeeds, which muſt neceſſarily produce a variety likewiſe of contexture. And this, indeed, he ſufficiently proves in ſeveral places.

Ver. 551. In theſe ſix verſes, he brings his firſt argument from the earth, which none will deny, conſiſts of ſeveral ſorts of ſeeds, if they conſider the ſprings that bubble, and the flames that burſt out of its bowels, together with what variety of trees and plants it produces, and that it ſupplies nouriſhment to man and beaſt. For all thoſe things cannot proceed from ſeeds of the ſame magnitude, weight, and figure. Then in ſixty four verſes he ſubjoins many things concerning the earth: how the ancient poets feigned her to be the mother of the gods, and called her Cybele; he deſcribes the ornaments of the goddeſs, explains the myſteries of the whole fable, derides the ſuperſtition of it, and at length falls foul upon Providence itſelf.

Ver. 554. As Hecla, Veſuvius, and other mountains, which, as well as Ætna, eject flames, a convincing proof that there are ſubterranean fires, and thoſe too great and many, as appears likewiſe by the Vulcanian iſlands, and by the hot baths and fountains that break out of the earth in many places; and which, as Vitruvius, lib. ii. rightly obſerves, could not be, "ſi non in imo haberent aut de ſulphure, aut de alumine, aut bitumine ardentes maximos ignes:" in which words he briefly declares the cauſes of them. To which, as a farther proof, not to mention divers others, may be added earthquakes, ſome of which moſt certainly derive their original from theſe ſubterranean fires. Whoever deſires to be farther ſatisfied touching this matter, may conſult Pliny, l. ii. c. 106. The Epicurean animadverſions of Gaſſendus, and particularly Kircher in his Mund. Subterran. lib. iv. See likewiſe Ittigius expreſsly upon this ſubject, in his treatiſe de Montium Incend. and the accurate diſquiſition of Alphonſus Borellus, in Hiſtoria et Meteorologia Incendi. Ætnæi. Anno 1669. Of Ætna, ſee Book I. ver. 744. and Book VI. ver. 646.

Ver. 557. The earth, which produces all things, is ſaid to be the mother of the gods, of men, and of beaſts. Holy rites are inſtituted to her, which Lucretius applies partly to natural, partly to moral philoſophy. Thoſe which relate to Jupiter he propoſes as a ſubject worthy of deriſion; but ſhe is deſervedly owned as a goddeſs, for the reaſons he enumerates in theſe forty-nine verſes, in which he tells us why men gave the earth the name of Magna Parens, great mother, and why ſhe was worſhipped as a goddeſs: and he takes occaſion to explain the ceremonies that were obſerved in the myſteries of that great mother, and

gives the reaſons of thoſe rites. The ſame ceremonies are likewiſe mentioned by St. Auſtin, de Civit. Dei, lib. vii. c. 24. and Arnobius, lib. iii. adv. Gent ſays, "Quidam è vobis terram, quod cunctis ſufficiat animantibus victum, magnum matrem eſſe dixerunt." Some among you called the earth the great Mother, becauſe it ſupplies all animals with food and nouriſhment.

So Virgil, Æn. vi. ver. 784.

——Qualis Berecynthia mater,
Invehitur curru Phrygias turrita per urbes,
Læta deûm partu, centum complexa nepotes,
Omnes cœlicolas, omnes ſupera alta tenentes.

——In pomp ſhe makes the Phrygian round,
With golden turrents on her temples crown'd:
A hundred gods her ſweeping train ſupply;
Her offspring all, and all command the ſky.
Dryd.

In a palace at Rome, belonging to the family of Colonna, there is to be ſeen to this day the following inſcription:

DOMUS ÆTERNA FLAVIÆ CHRYSYDIS LABERIA FELICIA SACERDOS MAXIMA MATRIS DEUM, M. L.

Ver. 560. Virgil ſpeaking of this great mother, ſays,

——Hinc fida ſilentia ſacris,
Et juncti currum dominæ ſubiere leones.
Æn. iii. *v.* 112.

She ſecret rites and ceremonies taught,
And to the yoke the ſavage lions brought.
Dryden.

Ver. 562. Macrobius Saturnal, lib. i. cap. 21. "Hæc Dea leonibus vehitur, validis impetu atque fervore animalibus; quæ natura cœli eſt, cujus ambitu aer continetur, qui vehit terram." This goddeſs is carried by lions, impetuous and fiery animals; of which nature is the heaven, within whoſe circumference is contained the air that carries the earth.

Thus too Claudian:

Et qui perpetuo terras ambitque vehitque,
Nec premat incumbens oneri, nec ceſſerit aer.

And Lucan:

——Dum terra fretum, terramque levabit
Aer.——

To which Ariſtophanes, in Nubib. likewiſe alludes:

Ὦ δέσποθ' ἀναξ ἀμέτερθ' ἀὴρ, ὃς ἔχεις τὴν γην μετέωρον.

And, indeed, if this opinion were to be examined into, according to the decrees of nature, rather than to the doctrines of the poets, it would appear ridiculous to philoſophers. Yet Pliny, who was admitted into the ſecrets of nature, as far as any of the Latins, viſibly favours this belief: "Hujus aeris vi ſuſpenſam cum quarto aquarum Elemento librari medio ſpatio tellurem," ſays he, lib. i. Nat. Hiſt. cap. 5. And Achilles Tatius, in Arat. Phænomen. illuſtrates the liberation or ſuſpenſion of the earth in the following manner: "Put," ſays he, "one ſingle ſheet of miller, or any other ſmall grain whatſoever into a bladder, and by blowing the bladder full of air, the ſeed or grain will be carried up and remain in the middle of it. After the ſame manner, the earth being on all ſides forced by the air, ſuſpends poiſed in the midſt of it." See Turbenus, I. Adverſar. 4, c. 17. where he explains theſe verſes of Ovid.

Et circumfuſo pendebat in aere Tellus
Ponderibus librata ſuis.——— *Metam. l.* 1.

Ver. 565. Thus too Ovid, 4 Faſt.

——Cur huic genus acre leonum
Præbeat inſolitas ad juga curva comas?
Deſieram: cœpit: feritas molita per illam
Creditur: id curru teſtificata ſuo eſt.

Ver. 578. The Romans had ſeveral ſorts of crowns or garlands, which it was the cuſtom to give as tokens or badges of honour, to ſuch as had diſtinguiſhed themſelves in any action, or done any ſignal ſervice to the republic. Among the reſt there was the "Corona Muralis," the Mural Crown, which was given by the emperor, or general of an army, to him who firſt ſcaled the walls of a town that was beſieged. It was made of gold, and had ſpikes that imitated the battlements or pinnacles of walls and towers. Ovid, in the place above cited, gives the ſame reaſon why the ancients crowned the image of the earth with a Mural Crown:

——Turrifera caput eſt onerata figura:
An primis turres urbibus illa dedit?

Ver. 574. Cybele, the mother of the gods, was daughter of Minos king of Crete, and wife of Saturn. The ancients called her by ſeveral names. I. Cybele, either from Cybelus, a hill in Phrygia, where, in her infancy, ſhe was expoſed to wild beaſts; or from κυβήβειν, which ſignifies to throw and ſet upon the head, becauſe of the frequent turning and fantaſtic motions of their heads which her prieſts were obliged to obſerve and practiſe in her rites and ceremonies; and it is probable ſhe had this name from both; for the Greeks called her Κυβέλη, and Κυβήβη. II. "Ops: quod ipſius auxilio vita conſtet." ſays Macrobius, becauſe the life of all things is preſerved by the aſſiſtance of the earth. III. Rhea, from ῥέω, to flow, becauſe the earth abounds with all good things. IV. Berecynthia, from Berecynthus, a caſtle of Phrygia, on the banks of the river Sagaris, or a hill of Phrygia, of the ſame name, near the river Marſyas. V. "Veſta, à vehendo," becauſe the poets feigned her to be carried in a chariot. VI. Peſſinuntia, from Peſſinus, a city of Phrygia where ſhe was honoured. VII. "Fauna à fevendo," becauſe the earth is beneficial to all animals. VIII. "Fatua à fando," becauſe, as the ſame Macrobius ſays, infants never ſpeak till they can ſet their feet to the earth. XI. Pales, becauſe ſhe was the goddeſs Paſtorum and Pabulorum, of ſhepherds and paſturage. X. Dindymè

& Dindymene," from Dindymus, a mountain of Phrygia. *Virgil.*

Alma Parens Idæa Deum, cui Dindyma cordi,
Turrigeræque urbes, bijugique ad fræna leones.
Æn. 10. *v.* 252.

XI. "Idæa Mater, from Ida, a hill and town of the same name in Phrygia, where her rites were first instituted. XII. "Phrygia Mater;" because she was generally worshipped throughout that country. But Faber on this passage of Lucretius, gives another etymology to these two last names of the Great Mother, and dissents from all others, and even from Lucretius himself. These are his words: Ἴδαι signifies mountainous and woody places, as we find in Hesychius, Eustathius, and Herodotus in Melpomene, Sect. 259. whence Ἴδη, is used to signify wood or timber for building. Now, men first fed upon acorns; the oak was their storehouse, and supplied them with provisions: from hence, therefore, the mother of the gods was called Idæa. But after the use of wheat was invented, she was called Φρύγια, Phrygia; for they were wont, φρύγειν, to parch their wheat. We may observe that Lucretius says, these appellations were given her from the ancient ceremonies of her mysteries: to which I add out of Virgil and others, that those ceremonies were first brought from Crete to the shores of the Hellespont: but the Cretans had all these customs and rites from the Syrians. Thus Faber, to whose opinion many things might be objected, if it were worth the while; but what should we be the worse, if we were ignorant of all the etymologies of the heathen gods? I will only add, that the image of this Idæan mother was brought out of Phrygia to Rome, at the time when Hannibal infested Italy. For the Romans had found in the books of the Sibyls, that they should be able to drive away their foreign enemy, if the Idæan mother were brought to Rome: upon which M. Valerius Levinus, Cæcilius Galba, Cn. Tremellus Flaccus, and M. Valerius Falco, were sent into Phrygia, and to them king Attalus gave the image of the Idæan mother, which they brought into the city: and this was only a rough unpolished stone which the Phrygians worshipped for the Idæan mother. *T. Liv. Lib.* 2. *Ovid. Fast.* 4.

Consulitar Pæan: Divumque accersite Matrem,
Inquit; in Idæa est inovenienda jugo:
Mittuntur Proceres: Phrygiæ tunc Sceptra tenebat
Attalus, &c.

Ver. 575. "Phrygiasque catervas—Dant Comites," says Lucretius; and with our translator's leave, he should not have made them all women; for, no doubt but both sexes assisted at the procession. Fayus is as much mistaken the other way; for he calls them legions, as if they were regular and armed troops.

Ver. 576. *Phrygia.*] i. e. Dry or burning; from φρύγειν, torrere, or from Phrygius, a river that divides it from Caria; or from Phrygia, the daughter of Cycrops. A country in Asia, bounded with Caria, Mysia, Lydia, and Bithynia: it is divided into the Greater and the Lesser, which last called Troas, was of old the kingdom of the Trojans.

Ver. 578. The priests of Cybele were called Galli, from Gallus, a river of Phrygia; of whose waters they had no sooner tasted, than they were seized with madness, and made eunuchs of themselves. This story, how strange and ridiculous soever it may seem, is related by St Jerome. And Tertullian in Apologetico, Sect. 25. calls the venerable and reverend high-priest of this goddess, Archigallus, Archeunuch. See more of them in Ovid, Fast. 4. where he calls them Semi-mares, half men.

Ver. 582. He bestows divinity on the mothers, of whom we puny creatures are born; and asserts, that the children who are guilty of undutifulness or impiety towards their parents, are unworthy to be parents themselves.

Ver. 582. The Phrygian muse was a sort of enthusiastic harmony, and very proper to excite the passions of the mind, and to swell the soul to rage and fury. Macrobius in his second book on the dream of Scipio, chap. 3. speaking of the power and force of music, says, "Ita ominis habitus animæ cantibus gubernatur, ut & ad bellum progressi & item receptui canatur; cantu & excitante & rursus sedante virtutem: dans somnis adimitque; nec non curas & immittit & retrahit: iram suggerit, clementiam suadet, corporum quoque morbis medetur." And all who are conversant among authors, meet with so many instances of the amazing effects of harmony, that there is no room to doubt of the truth of them. Timotheus, by music, inflamed Alexander to what degree he pleased, and cooled him again as easily; which Dryden describing, says, admirably;

Pleas'd with the sound, the king grew vain,
Fought all his battles o'er again,
And thrice he routed all his foes, and thrice he slew the slain.
The master saw the madness rise,
His glowing cheeks, his ardent eyes;
And while he heav'n and earth defy'd,
Chang'd his hand, and check'd his pride.

A musician in Denmark, by the same art, enraged king Ericius even to the striking of all his friends about him. Pythagoras taught a woman to stop by the same means the fury of a young man, who came to set her house on fire; and his scholar Empedocles hindered another from murdering his father, when the sword was drawn for that purpose. The fierceness even of the nature of Achilles was allayed by playing on the harp; for which reason Homer gives him nothing else out of the spoils of Eëtion. Damon, by music, reclaimed wild and drunken youths to sobriety and temperance; and Asclepiades reduced even seditious multitudes to temper and reason. And thus, too, these effeminate priests of Cybele were animated by their Phrygian arts to cut and hack their own flesh, as our poet observes of them, v. 594. Many more examples of this nature may be seen in Gronovius, Lib. II. Observation. cap. 1. Nor is it wonderful, that sudden passions should be raised and suppres-

fed by muſic; (for which reaſon, Pindar ſays to his harp, τὸν αἴχματον κεραυνὸν σβέννυεις, thou quencheſt the raging thunder); but that it ſhould cure ſettled diſeaſes in the body, is what we ſhould hardly believe, if we had not both human and divine teſtimony for it. Plin. lib. 28 cap. 1. "Dixit Homerus profluvium ſanguinis vulnerato femore Ulyſſem inhibuiſſe Carmine: Theophraſtus Iſchiadicos ſanari: Cato prodidit luxatis membris carmen auxiliari, Mar. Varro podagris." Where the word *carmen* muſt be underſtood as joined with muſical notes. For the cure of the ſciatica, Theophraſtus commends the Phrygian muſic upon the pipe; and A. Gellius for giving eaſe to it, "ut memoriæ proditum eſt," ſays he, as it is reported. Apollonius in his book de Miris, ſpeaks to this purpoſe: it deſerves admiration, what Theophraſtus writes in his treatiſe of Enthuſiaſm, that muſic cures many paſſions and diſeaſes both of the mind and body. Καθάπερ λειποθυμίας, φόβους, καὶ τὰς ἐπὶ μακρὸν γίγνομένας τῆς διανοίας ἐκστάσεις, ἰάσασι γάρ φησίν ἡ καλαύλησις καὶ ἰσχιάδα καὶ ἐπιλήψιαν. And the ſame author witneſſes that many in his time, eſpecially the Thebans, uſed the pipe for the cure of ſeveral diſeaſes: and this Galen calls καλαυλεῖν τῷ τόπῳ, "ſuper loco affecto tibia canere." or "loca dolentia decantare." So Zenocrates is ſaid to have cured madmen, Terpander and Arion divers other maladies. But were it not for the example of David, (which we find in 1 Sam. xvi).

———Whoſe lyre did Saul's wild rage controul,
And tun'd the harſh diſorders of his ſoul.

we ſhould hardly be convinced of this phyſic, unleſs in the particular cure of the tarantiſm; the experiments of which are too notorious to be denied or eluded; and therefore afford a probable argument, that other diſeaſes might naturally be expelled ſo too; but that we have either loſt, or not yet found out the art. For the explication of the reaſon of theſe ſurpriſing effects of muſic, the magicians fly to their Calcodea; the Platoniſts to their Anima Mundi; the rabbies to fables and prodigies too trivial to deſerve repeating. Baptiſta Porta, in his Natural Magic, ſeems to aſcribe it to the magical power of the inſtrument, rather than of the muſic: for he ſays, that madneſs is to be cured by the harmony of a pipe made of hellebore; becauſe the juice of that plant is held good for the ſame purpoſe: and the ſciatica, by a muſical inſtrument made of poplar, becauſe of the virtue of the oil that is extracted from that tree, in mitigating thoſe kinds of pains. But theſe, and many ſympathetical experiments are ſo falſe, that we have reaſon to wonder at the negligence, or rather impudence of thoſe that report them. Picus Mirand. ſays, that muſic moves the ſpirits to act upon the ſoul, as medicines do to operate upon the body; and that it cures the body by the ſoul, as phyſic does the ſoul by the body. But the true natural reaſon may be, that in the ſame manner as muſical ſounds move the outward air, ſo that does the inward, and that moves the ſpirits, and they the humours, which are the ſeats of diſeaſes, by condenſation, rarefaction, diſſipation, or expulſion of vapours, and by virtue of the ſympathy of proportion, which allies them to man.

Thus they our ſouls, thus they our bodies win,
Not by their force, but party that's within:
Thus the ſtrange cure on our ſpilt blood apply'd,
Sympathy to the diſtant wound does guide:
Thus when two brethren ſtrings are ſet alike,
To move them both, but one of them we ſtrike.
Cowley.

But for the producing of the deſired effect, Kircherus requires four conditions. I. Harmony. II. Number and proportion. III Efficacious and pathetical words joined with the harmony, which, by the way, were fully and diſtinctly underſtood in the muſic of the ancients. And, IV An adapting of all theſe to the conſtitution, diſpoſition, and inclination of the patient. Of which, and all things on this ſubject, his book "De Arte magna Conſoni & Diſſoni," is well worth the diligent reading. I will conclude this remark with theſe excellent verſes of an anonymous poet, touching the power of muſic on the mind of man.

For man may juſtly tuneful ſtrains admire;
His ſoul is muſic, and his breaſt a lyre:
A lyre, which whilſt its various notes agree,
Enjoys the ſweets of its own harmony.
In us rough hatred with ſoft love is join'd,
And ſprightly hope with grov'ling fear combin'd,
To form the parts of our harmonious mind.
What raviſhes the ſoul, what charms the ear,
Is muſic, though a various dreſs it wear.
Ev'n beauty muſic is, though in diſguiſe,
Too fine to touch the ear, it ſtrikes the eyes,
And through them to the ſoul the ſilent ſtroke conveys.
'Tis muſic heav'nly, ſuch as in a ſphere
We only can admire, but cannot hear.
Nor is the power of numbers leſs below;
By them all humours yield, all paſſions bow,
And ſtubborn clouds are chang'd, yet know not how.
Let other arts in ſenſeleſs matter reign,
Mimic in braſs, or with mix'd juices ſtain:
Muſic the mighty artiſt man can rule,
As long as that has numbers, he a ſoul,
As much as man can thoſe mean arts controul.

Ver. 587. With theſe arms they did not only terrify and ſtrike a dread into the common people, but ſometimes ſlightly wounded themſelves: hence the poet ſays, v. 594. that they

Look dreadful gay in their own ſparkling blood.

Ver. 590. This verſe contains a moſt ſharp invective and deriſion. This great mother; a rough ſtone, unpoliſhed by art, and not much given to tattle, did, no doubt, a world of good; but even ſhe herſelf kept ſilent the benefits ſhe beſtowed. Lucretius ſays:

Munificat tacita mortales mutua ſalute.

Meanwhile theſe, abuſed wretches ſtrewed the way with flowers, and gave money to her beg-

ging train; unmindful of Antisthenes, who answered one that asked him money for the goddess: ἵ' τρέφω τὴν μητέρα τῶν θεῶν, ἵνα οἱ θεοὶ τρέφωσιν.

Ver. 596. Saturn, the husband of this great mother Cybele, used to devour his male children, either by agreement with his brother Titan, as some say, or as others, because he knew that the fates had decreed that he should be dethroned and expelled his kingdom by his son. But Cybele hid Jupiter, of whom she was delivered in Crete, in a cave in the mountain Dicte, and gave command to her priests, who were called, Curetes Corybantes, and Dactyli, to take care of him: and if Saturn should come to look for him, to make a noise near the place where he was hid with their cymbals and brazen bucklers, that the crying of the infant might not betray him to his father. And this is what Lucretius hints at in this passage.

Ver. 597. *Jove*] Jupiter, so called, "quasi juvans pater." The chief of the fabulous gods of the heathens. He was son of Saturn and Ops, and born at the same time with Juno, whom he married. See the preceding note.

Ver. 600. *Saturn*] The son of Cœlus and Terra. He was cast into prison by his brother Titan: there arising a difference between them which of them should govern; but was set at liberty by his own son Jupiter: by whom, nevertheless, he was afterwards dethroned, having attempted to take away his life. Being expelled the kingdom, he fled into Italy to king Janus, whence the country in which he lay concealed was called Latium. Vossius, l. de Philosoph. cap. 6. not improbably supposes, that by him is meant Adam; for who besides him was the son of Heaven and Earth? Besides, the name Saturn seems to be derived from the Hebrew word Sotar, which signifies to lie hid; and may well be applied to Adam for his flight, and absconding himself after his fall. But Cicero is of another opinion concerning his name, and says, "Saturnus appellatus est, quod saturetur annis: Ex se enim natos commesse fingitur solitus, quia consumit ætas temporum spatia, annisque præteritis insaturabiliter expletur." De natura Deorum, lib. 2.

Ver. 601. *Ops*] The daughter of Cœlus and Vesta, or Tellus, and wife of Saturn. Why she was called Ops, see in the note on v. 574.

Ver. 602. Here the poet gives the reasons why the priests and attendants of this great goddess are armed. I. Says he, in remembrance of the Curetes, those armed priests, by whose means Jupiter was preserved from being devoured by his father. II. To signify that all men ought to be ready at all times to defend their country, with their lives and fortunes. And, III. To assist and protect their parents, "decorique parentibus esse;" of which last reason our translator takes no notice.

Ver. 605. In these sixteen verses he praises the witty invention of the poets, but rejects the thing itself: for why should the gods, who are blessed with eternal ease, take care of the earth or those who cultivate it; of the fields, or the corn that grows in them. The gods lie supinely indulging themselves in indolence, and lulled in undisturbed repose. They take no care of the affairs of the earth, and are wholly unconcerned at the good or ill actions of men. The word Ceres, Neptune, Bacchus, may be used for corn, for the sea, and for wine; but do not therefore fondly fancy them to be gods.

Ver. 606. Behold the true image of the Epicurean god! How thoughtless and supine he lies, indulging himself in ease and idleness! Epicurus writing to Menæceus, describes him exactly in the same manner: τὸ μακάριον, τὶ ἀφθάρτον ἅμα καὶ αὐτὸ πράγμα ἔχει, οὔτε ἄλλῳ παρέχει, ὥστε οὔτε ὀργαῖς, οὔτε χάρισι, συνέχεται· ἐν ἀσθενεῖ γὰρ πᾶν τὸ τοιοῦτον. Who despises not so lazy a prince, or but such a private man. These six verses are repeated in this place from book i. ver. 78. See there the note upon them.

Ver. 615. *Neptune*] He was the son of Saturn and Ops, brother of Jupiter and Pluto. In the division of the world, the godship of the sea fell to his lot; and therefore, the poets used the word Neptune for the sea. He married Amphitrite, the daughter of Nereus, or Oceanus, by whom he had many nymphs. His name, according to Cicero, comes from nando, swimming; according to Varro, "à nubendo, quia terras aquis obnubit & cooperit;" because he hides the earth, and covers it over with waters. He bore a trident as the token of his power, because of the three parts of the ancient world, that are surrounded by the sea. Let us hear Virgil describe him in all his pomp; and allaying the boisterous fury of the winds and waves.

Jungit equos curru Genitor, spumantiaque addit
Fræna feris, manibusque omnes effundit habenas:
Cæruleo per summa levis volat æquora curru:
Subsidunt undæ, tumidumque sub axe tonanti
Sternitur æquor aquis: fugiunt vasto æthere nimbi:
Tum variæ comitum facies; immania cete,
Et senior Glauci chorus, Inousq. Palæmon,
Tritonesque citi, Phorcique exercitus omnis,
Læva tenent Thetis, & Melite, &c.

Æn. 5. v. 817.

And Æneid. I. 158.

Sic cunctus pelagi cecidit fragor; æquora postquam
Prospiciens Genitor, cœloque invectus aperto
Flectit equos, curruque volans dat lora secundo.

His finny train Saturnian Neptune joins:
Then adds the foaming bridles to their jaws,
And to the loosen'd reins permits the laws.
High on the waves his azure car he guides,
Its axles thunder, and the sea subsides,
And the smooth ocean rolls her silent tides.
The tempests fly before their father's face,
Trains of inferior gods his triumphs grace;
And monster whales before their master play,
And quires of tritons crowd the wat'ry way.
The marshall'd powers in equal troops divide
To right and left, the gods his better side
Enclose, and on the worse the nymphs and nereids ride. *Dryden.*

When thus the father of the flood appears,
And o'er the ſeas his ſov'reign trident rears,
Their fury falls: he ſkims the liquid plains,
High on his chariot: and with looſen'd reins
Majeſtic moves along, and awful peace maintains. *Dryden.*

Ver. 616. *Ceres.*] So called, "quaſi Geres, à gerendis frugibus;" as Cicero ſays, or rather as Voſſius conceives, from the Hebrew word Geros, which ſignifies a green ſpike of corn. She was daughter of Saturn and Ops and mother of Proſerpina. She invented tillage and the uſe of corn; which ſhe taught to many people, as ſhe went ſearching up and down the earth for her daughter, whom Pluto had raviſhed. Whence the ancient poets made her the goddeſs of corn, and uſed her name to expreſs it, in which the modern too have followed their example.

——————As when a field
Of Ceres, ripe for harveſt, waving bends
Her bearded grove of ears, which way the wind
Sways them, &c. *Milton.*

Bacchus, the ſon of Jupiter and Semele; called by the Greek Διμητης, having two mothers: becauſe he was taken out of his mother's womb, who was killed with lightning, and put into Jupiter's thigh; from whence, when he was grown ripe for birth, he again came into the world.

Imperfectus adhuc infans genetricis ab alvo
Eripitur, patrioque tener, ſi credere dignum,
Inſuitur femori; maternaque tempora complet.

ſays Ovid, Metamorph. iii. 310. where the whole fable may be ſeen at large. He travelled over all the earth, conquered the Indies, and was the firſt who triumphed, which he did riding on an elephant, and ſurrounded by a throng of wild and bawling women, who from him were called Bacchæ; and he himſelf had his name Bacchus, ἀπὸ τῆ βαχὰν, "à vociferando vel ululando." He is likewiſe called by ſeveral other names, as Liber, Dionyſius, Lenæus, Bromius, &c. He is ſaid by the poets to have invented wine; for which reaſon they made him the god of wine, and expreſſed it by his name.

Ver. 621. Having deſcribed the pompous ceremonies of the great mother of all things, he returns to his ſubject, and in theſe ſix verſes brings his ſecond argument, to prove that ſeveral ſorts of ſeeds are employed in the compoſition of every thing: for example; in the ſame herbs, and in the ſame water; for ſince they ſerve for food to ſo many ſorts of animals, as horſes, ſheep, oxen, &c. they muſt, of neceſſity, contain ſeveral ſorts of principles that may make them proper nouriſhment for each ſort.

Ver. 627. In theſe four verſes he adds another argument, and urges, that even the atoms that compoſe but one animal, muſt, of neceſſity, be of many very different figures; that by their variety they may be proper and fit to make the ſeveral parts of the animal; the veins, the bowels, the bones, &c.

Ver. 631. In theſe five verſes he brings his fourth argument, and inſtances in wood and all combuſtible matter: for they are reſolved into fire, light, ſmoke, and aſhes; and we ought to believe that the diſſolution is not made into any thing but what was actually contained in the thing diſſolved: and that nothing periſhes out of the wood but the connection and poſition of its parts, or the peculiar manner of exiſting, the form, the quality, the ſpecies, the accident, the event, by whoſe means it was, and was called wood. It muſt therefore be granted, that in wood and other combuſtible things, there lies hid thoſe different kinds of ſeeds, of which fire, light, ſmoke, and aſhes conſiſt.

Ver. 636. His fifth argument is contained in theſe ſeven verſes. We find ſeveral qualities to be in the ſame body; that is to ſay, ſmell and taſte. But it is evident, that ſmell and taſte conſiſt of ſeeds of different figures; for they affect different ſenſes: and while one of them enters through the noſtrils, the other affects the tongue and the palate.

Ver. 643. In theſe twelve verſes he illuſtrates his opinion with the ſimile he often uſes, then he propoſes an objection, and ſolves it. And, firſt, if any one ſhould aſk, ſince the ſame ſeeds are common to many things, how come the things themſelves to be different? Like ſeeds ought to make like things. Lucretius bids this caviller look upon his verſes, and he will find the ſame letters common to many words; yet it cannot be denied but that thoſe words are different from one another, nor that different verſes are compoſed of them. For the like reaſon, though the ſame ſeeds are common to many things, yet the things themſelves that are compoſed of thoſe like ſeeds, may be wholly different from one another. See the note on ver. 833. book i. To which I add that if any one be deſirous to know how many different words can be contained in any one language, that acknowledges but four and twenty letters, he may take the trouble of computing the total of theſe nine and thirty figures, 2002327900396041408476186096435200000000; for the number cannot be expreſſed otherwiſe.

Ver. 647. This muſt be referred to what he ſaid above, ver. 501, of the infinity of the ſeeds of a like figure; and likewiſe to what he ſaid on the contrary, ver. 456, of the finite number of the unlike figures. Theſe two verſes the poet repeats again, a few verſes forwarder, viz. at ver. 677.

Ver. 655. Though many ſeeds are common to many things, yet each thing requires a certain order and diſpoſition of the atoms that compoſe it; and to have them join, and, as it were, aſſociate themſelves with ſuch as are congruous, and will agree with them, and paſs by and avoid to unite themſelves with others: from whence it farther comes to paſs, that when the thing is diſſolved, the congruous atoms mutually withdraw themſelves, and get away from the incongruous. This Lucretius propoſes in theſe ten verſes, and gives this reaſon why it muſt be ſo; becauſe o-

therwise monſters would be born every day; and we ſhould ſee chimæras, centaurs, and all the fabulous animals of the poets. But that none of theſe portentous monſters are ſeen, becauſe all things procced from certain, not from omnigenous ſeeds; and are nouriſhed by certain ſeeds likewiſe.

Ver 658. It would indeed be a miracle that boughs ſhould grow out of the body of a living man; and perhaps what Gaſſendus, in the fifth book of the life of Pireiſkius, relates of a plum-tree that ſprouted out at the ſternum (the part of the body where the ribs join upon the breaſt) of a ſhepherd who lived near Tarragona in the kingdom of Arragon, will meet with little credit. This ſhepherd, ſays he, happened to fall down upon a dwarf plum-tree, and a ſplinter chanced to run into that part of his body; where it took root for the ſpace of two years, to ſuch a degree, that after ſeveral ſhoots had been cut off, ſome at length ſprung out upon which bloſſoms and fruit were ſeen. Pireiſkius inſiſted on the truth of this ſo long, that at length Cardinal Barberini ſent to inquire concerning it of the Archbiſhop of Tarragona, who certified to him that the thing was true; and Puteanus not only received letters atteſting the truth of it likewiſe, but even ſome of the ſhoots were ſent him; and he held a correſpondence with the man upon whoſe body they grew. Nor was the Cardinal ſo hard of belief afterwards, having heard that ſomething like this had happened in Tuſcany, about the neck of a hen; and at Frontignan in Languedoc, about the finger of a fiſherman, into which there had run a bone of a ſea-fiſh, called a ſcorpion; which wound came to that paſs, that a chirurgeon took out of it three ſmall fiſh of the ſcorpion kind. Yet after all, none but they who have been eye witneſſes of theſe things, will readily give credit to them.

Ver. 660. A ſort of monſter that vomits flame, And that has a head and breaſt like a lion, the belly of a goat, and the tail of a ſerpent. Ovid. Met. ix. ver. 646.

Quoque chimæra jugo mediis in partibus Hircum,
Pectus et ora leæ, caudam ſerpentis habebat.

For this fable of the poets took riſe from the mountain in Lycia called Chimera, that ſometimes belches out flames; lions haunt upon the top of it; about the middle, which produces a great quantity of graſs, are abundance of goats; and a world of ſerpents are lurking at the foot of it. Thus Plin. lib. xii. c. 106.

Ver. 665. Theſe eight verſes do not ſo much advance any new argument, as they explain the latter part of the former. For things that proceed from certain and fixed ſeeds, therefore preſerve their kind, as they grow and increaſe, and do not degenerate into another; becauſe nature chooſes out of the nouriſhment only thoſe particles that are proper and fit for her; for which reaſon boughs never grow out of a living body; becauſe a human body throws out all the particles of the matter that is fit to nouriſh trees, and never converts it into aliment.

Ver. 666. Specific parts; for example, a man by concoction extracts from bread what is proper for human kind; a dog, on the contrary, what is agreeable to the ſpecies of dogs.

Ver. 669. Many things that we do not ſee, are evacuated out of the bodies of animals by a certain imperceptible force, διὰ τὸ μὴ δύνασθαι σαυῆφθαι τοῖς ὐκ ὁμοιογένεσι, which ſtatic experiments fully confirm.

Ver. 673. In theſe eleven verſes he teaches, that what he has been ſaying of animals, holds good in all other things, which conſiſt likewiſe of certain kinds of atoms, diſpoſed in a proper manner; and though in all things are contained ſome ſeeds that are common to all things, yet certain other ſeeds are mixed with them that are proper to each thing in particular, and theſe are the cauſe of the different intervals, motions, ſites, connections, &c. from whence proceeds the difference and variety of things. He concludes excellently well; that notwithſtanding the difference of the ſeeds, yet if the intervals, motions, &c. were not different likewiſe, the heavens, the ſeas, the earth, in a word, all things would be confuſedly mingled with one another.

Ver. 684. Cicero is miſtaken to ſay, that the Epicureans aſcribed no quality whatever to their atoms. "Iſti autem," ſays he, "ex corpuſculis "non colore, non qualitate aliqua, quam ποιότητα "Græci vocant, non cenſu præditis, ſed concur-"rentibus temere atque caſu mundum eſſe per-"fectum," &c. lib. ii. de Natura Deorum. Epicurus himſelf writes the contrary in the epiſtle to Herodotus: Καὶ μὴν καὶ τὰς ἀτόμους νομιτέω μηδεμίαν ποιότητα τῶν φαινομένων προσφέρισθαι, πλὴν χήματός καὶ βάρους τὰ μέγεθος, καὶ ὅσα ἐξ ἀνάγκης χήματός συμφωὴ ἐστι. Ποιότητες γὰρ ἄλλαι οἷον χρῶμα τὰ, τὰ θερμότης, παρὰ τον θέσιν τῶν ἀτόμων μεταβάλλουσιν, διὰ καὶ ταῖς ἀτόμοις ὐκ ἐνυπάρχουσι. Lucretius aſſerts the ſame opinion, and firſt in theſe nine verſes teaches that they have no colours; and that there is no need of white ſeeds to make a white compound body, nor of black to make a black, &c.

Ver. 691. He means that the atoms have no colours whatever, either any like, or any unlike thoſe that we diſcover on the ſurfaces of all concrete bodies.

Ver. 693. Lucretius was aware that he ſhould find it very difficult to perſuade many to believe, that there are no colours in the ſeeds, and conſequently not in the compounds. For moſt men are ſo carried away by prejudice, that they will not believe that they can perceive any corporeal thing, that is not coloured; and therefore they cannot ſuffer that the ſeeds, which cannot be conceived by the mind as colourleſs, ſhould be obtruded upon them as ſuch. He therefore briefly, in theſe nine verſes, obviates theſe prepoſſeſſions; and ſays, even men who are born blind perceive and know things by touching them, though they never ſaw their colours. Nor does all the perception of things ſet and go away with the ſun. Even in the thickeſt darkneſs we perceive no leſs the things we touch, than thoſe we handle at noon-day, and in the cleareſt light.

Ver. 702. In these eight verses Lucretius proves, in the first place, that the seeds of things are not coloured, because all colour is liable to change; but the seeds of things are immutable; otherwise all things would fall into nothing. Epicurus in the epistle to Herodotus. Ποιότης πᾶσιν ἀΐδιοις ὑπυπάρχουσα καὶ ἴδια μὴ μεταβάλλει, ὡς αἱ ἄλλοι μηδὲν μεταβάλλουσι· ἐπεὶδηλαι δεῖ τὸ ὑπομένειν ἐν τῶν διαλύσεσι τῶν συγκρίσεων στερεόν τε ἀδιάλυτον, ὅ τας μεταβολὰς ἐκ εἰς τὸ μὴ ὂν ποιήσαν[το]· αἱ δὲ ποιότητες ἔκ ὑπυπάρχουσαι τὲ μὴ ἴδιαι, οἷον χρῶμαλὰ, τε θερμότης, ἐν τῷ μεταβάλλοντι ἐκ ὥσπερ ἐκεῖναι καταλέιπονται, ἀλλ' ἐξ ὅλε τῷ σώματος ἀπόλλονται· From whence Lucretius asserts, that if colour were intrinsically in the seeds, the seeds would be mutable: for all colour is mutable.

Ver. 710. Secondly, He teaches in these sixteen verses, that the atoms are not imbued with any colours, and that it would be to no purpose for any man to pretend they are, since there is no necessity they should be so; for allow them a variety of figures, and from the different order, site and disposition of them, colours will proceed; for example, the sea is of a cerulean colour, but grows white by the agitation of the waves. Thus too the seeds, which disposed in one manner, look blue when they are placed in another order, may put on and exhibit a white. But if a blue colour were innate, and naturally in the seeds, no position or agitation whatever could make those principles white.

Ver. 720. Ovid. Metam. xi. ver. 499. speaking of a tempestuous sea:

——————cum fulvas ex imo vertit arenas,
Concolor est illis; Stygia modo nigrior unda:
Sternitur interdum, spumisque sonantibus albet.

When yellow sands are sifted from below,
The glitt'ring billows give a golden show:
And when the fouler bottom spews the black,
The Stygian dye the tainted waters take:
Then frothy white appear the flatted seas,
And change their colour, changing their disease.
Dryd.

Ver. 726. But some perhaps will allege that the water of the sea is composed of various coloured atoms, from whence proceeds that change of colours in the waves, now cerulean, now white, in like manner as a square is composed of two or four triangles included in it; which triangles within themselves have other figures. But the poet, in these twelve verses, tells us this is not the case; for in the square you may see the dissimilar figures, without or exterior to which it is a square, that is to say, you may see the figures, which the square has and contains within it; but you can see nothing like this in the water of the sea, that is, you can see no mixed and different colours. And, therefore, the objection that some perhaps might make, that white things do not proceed from white seeds, nor black from black; but white from black, and on the contrary, black from white, &c. is of no weight whatever. This is the interpretation which Faber gives to this passage.

Ver. 738. In these five verses, he proves the former objection to be of no weight whatever. For bodies of a different figure may conspire into another different figure, as triangles into a square: but there is no reason therefore to conclude the like of colours; for different colours can never compose one simple colour.

Ver. 743. He urges this yet farther, in these six verses, and asserts, that they who pretend that one simple colour may be made of seeds of several colours, forsake the former opinion, and overthrow the only reason of their own. For they insist upon coloured seeds, that white bodies may proceed from white seeds, and black from black: but if either a black or a white colour should proceed from various coloured principles, the whole reason of the argument they before insisted on is lost. Then he adds, that a white colour (and the same may be said of any other colour) will sooner proceed from seeds that have no colour at all, than from seeds imbued with a black or any other colour. Thus I explain this passage, which none of the interpreters hitherto have rightly understood: and it may be observed, that the whole series of the disputation confirms this interpretation.

Ver. 749. In these fifteen verses, Lucretius concludes, that the atoms are colourless, because colour is nothing but light refracted in a body, or reflected from the surface of an opacous body. The poet says nothing of refracted light; but if you put to your eyes a prism, or common three-cornered piece of glass, you will find that the rays of light, that suffer a double refraction, present several colours to the sight. But he observes, that the feathers about a pigeon's neck, or in peacocks tails, as the rays of light strike directly or obliquely upon them, put on and diffuse now a yellow, now a green, now a flame, and several other colours. And hence he argues, that in dark places, where no rays of light enter, and out of which none are reflected, there is no such thing as colours; and therefore that colours, which appear in things when the light returns, are produced from the light itself, according to the dispositions the things have to receive, reflect, refract, and convey it to the eyes. Therefore since seeds never come into the light, or reflect any rays, they are altogether colourless, as much as, if they were concealed and buried in utter darkness. Epicurus, in the second book against Theophrastus says: ἐκ εἶναι τὰ χρώματα συμφῶ τοῖς σώμασιν, ἀλλὰ γίνεσθαι κατὰ τοιάς τίνας τάξεις, καὶ θέσεις πρὸς τὴν ὄψιν. And again: ἐκ οἶδ ὅπως δεῖ τὰ ἐν σκοτεῖ ὄντα φῆσαι χρώματα ἔχειν. *Plutarchus adverf. Colorem.*

The dispute about colours is altogether difficult: and various are the opinions concerning the cause and reason of colour. Epicurus and Democritus, as Diogen. Laert. lib. x. says, were of opinion, that colour is not actually in any thing; but the other philosophers asserted it to be really in things, yet with this difference, the

the Pythagoreans did not distinguish colour from the surface of bodies, nor the Stoics from the first figurations of matter, nor the Peripatetics from the perspicuous bound of matter. Empedocles alone held colour to be a certain effluence from bodies, and Plato would have it to be a certain flame. This will help us to explain more clearly the opinion of Epicurus, who, as Plutarch says, taught that colours are not inherent in bodies, and a part of them, but are produced according to certain orders and positions of the sight. Moreover, that by the word bodies, he did not mean the atoms, but the things and bodies of the things composed of them, as the same Plutarch witnesses. Therefore I interpret his colours not inhering to be colours not engendered with, or innate in things. For Epicurus held, that in the outmost parts of things, or the surfaces of bodies, there is such a disposition and order of the atoms, of which the things are composed, as makes them exhibit and show forth certain colours, when the light comes to them; and that they emit out of themselves certain atoms, which constituting the image of the thing seen, strike the ball of the eye in such a manner, order, and disposition, that by certain strokes of the light, they are the cause that the things are seen in the eye itself. Nor would he allow any colour to be in his atoms, but taught that colours proceed from the various orders and positions of the atoms, when the light comes to them. Thus too Lucretius says, ver. 753. that there can be no colour in the dark; and, according to this doctrine, Virgil sings, Æneid vi. ver. 271.

———ubi cœlum condidit umbra
Jupiter, et rebus nox abstulit atra colorem.

This was the opinion of that philosopher. But the most probable opinion is, that colour is a certain power in bodies of affecting our organs after such or such a manner, whereby such or such a perception is excited and produced in the mind. This power is put into action by the intermediation of the rays of light, and consequently colour is but light reflected and modified; for when the rays of light are withdrawn, no colours are perceptible. Colour so far depends on the object seen, that, according to the different disposition, connection, and situation of the parts of bodies, the different reflections of the rays of light are produced; therefore, if the disposition of the object be altered, the colour likewise will vary, because the rays will not then be reflected in the same manner as they were before. Thus crystal, when broken into small pieces, loses its perspicuous transparency, and becomes bright; and wood, though before white, grows black with burning. Besides, what reasons could be given for the various colours in clouds, which are sometimes red, sometimes white; and to what can we attribute the gaudy diversity of colours in the rainbow, but to the different modifications of the rays of light, according to the variations of the figures and motions of the particles of such bodies? Neither can any one justly deny these to be colours, since colour is only such a power as is described above; nor ought it to be alleged, that because some colours are transitory and not permanent, they ought not really to be called colours, or at least, not without the addition of spurious. for it might with equal reason be asserted, that the short duration of the cause destroys the effect. Thus, a child that dies as soon as born, would not deserve the name; and the greenness of leaves might be said to be no colour, because they so soon fade and wither. If this were allowed, there would be no colours in the world; for there are not any that are everlasting. The opinion of Aristotle and his followers concerning colour is unsatisfactory, for they define it thus: A second quality, sensible to the sight, and produced from the tempering of the first qualities: But this definition leaves us still in the dark; for the question still remains, What this quality is? How it is produced? From what? When? Others define colour thus: "Perspicui extremitas in corpore determinatio, seu extremitas perspicui determinati." And the opinion of Plato, which I mentioned above, deserves to be transcribed at large. The passage is in his Timæus, p. 342. Edit Lamartianæ, and contained in these words: Τέταρτον δὴ λοιπὸν ἔτι γένος ἡμῖν αἰσθητικὸν, ὃ διεγείσθαι χρὴ, συχνὰ ἐν ἑαύτῳ ποικίλματα κεχῃμένον ἃ ξυμπάντα μὲν χρωὰς ἐκαλέσαμεν φλόγα τῶν σωμάτων ἑκάστων ἀπορρέουσαν, ὄψει σύμμετρα μόρια ἔχουσα πρὸς αἴσθησιν· where, in express words, he calls colours flames, that is, light continually flowing from bodies. Moreover, if it be inquired how one object comes to be yellow, another green, a third red, &c. the answer is, That colours being only the mixture of light with darkness in the surface of opacous bodies, yellow, for example, is the mixture of light with a little darkness, blue with a little more, red with more yet; so that, as we said before, colours are nothing but light variously reflected and shadowed. Pindar, Ode vi. elegantly attributes to flowers, παμποικίλους ἀκτῖνας, purple beams: And Cowley had something like this in his mind, when he said:

It casts a dusky gloom o'er all the flowers,
And with full beams their mingled light devours.
David. 2.

And in his Hymn to the Light he is entirely of this opinion:

All the world's bravery that delights our eyes,
Is but thy several liveries:
Thou the rich die on them bestow'st;
Thy pencil paints this landskip as thou go'st.
A crimson garment in the rose thou wear'st;
A crown of studded gold thou bear'st:
The virgin lilies in their white,
Are clad but with the lawn of almost naked light.
The violet, spring's little infant, stands
Girt in thy purple swaddling bands:
On the fair tulip thou dost doat;
Thou cloth'st it with a gay and particolour'd coat.

Having given this short account of the several opinions concerning the cause of colour, I will

only add, that colours are generally divided into two ſorts, ſimple and compound. The ſimple are only the extremes, white and black, to which ſome add yellow, blue, and red, which they call middle colours, as being of a middle conſtitution between white and black. The compound colours are thoſe that are formed by the mixture of ſome of the ſimples; for example, the cinericean or aſh-colour is a compoſure of white and black; the gold colour, of yellow and red; the purple, of red and blue; the green, of yellow and blue; the livid, of red, yellow, and blue, &c. All which colours vary, according to the different mixture of ſalts with ſulphurs, earth, &c. and where, the "caput mortum" more or leſs abounds, there the mixture turns to a colour more or leſs dark, &c.

But to return to our author: Epicurus farther taught, that all things are not diſpoſed and ordered in a like manner, ſo as to exhibit the like colours, when the light comes to them; but that one thing has a different diſpoſition from another, which is the reaſon that it exhibits a different colour; as pipes utter ſeveral and different ſounds, when they receive the breath of him that plays upon them; or as different plants that have no flowers, yet put forth different flowers, according as they have different heat or moiſture; moreover, ſince it is manifeſt that the ſame thing changes and varies its colours according to the different degrees of light or ſhade, as it happens in the feathers of pigeons. Epicurus, therefore, for this reaſon, believed, that none of thoſe different colours can be aſſumed or put on, ſo as to be ſaid to be in the things themſelves; and therefore that no colour is inherent in bodies.

Ver. 764. Another argument is contained in theſe ſeven verſes. In the perception of every colour, the pupil or light of the eye is ſtruck. But it receives one ſort of ſtroke when a white, another when a black, or any other colour offers itſelf to it. But what need have ſeeds of colours, that they may in various manners affect and ſtrike the eye? Allow only that theſe principles are of different figures, and diſpoſed beſides in different manners, and from thence will ariſe various images, by which they will variouſly ſtrike the eyes, and ſtir up different motions in the organs. For ſight, according to Epicurus, is made διὰ τῆς τῶν εἰδώλων εἰς τὴν ὄψιν ἐμπτώσεως. And from this doctrine of his, we may gather, that he held each of the ſenſes to be a certain touch, and that all ſenſation is made by the incurſion of the image out of the object into the organ of the ſenſe, which is ſtruck by it; but this image is nothing elſe but the atoms themſelves, which come upon the ſenſe in a different manner, according to their different poſition, order, figure, &c. Thus ſight is made, when the atoms come from the object ſeen into the pupil of the eye, and move, and affect it according to their different poſition, order, figure, &c. But ſince the perception of that image is different, according to the different motions or qualities of the atoms; hence it is that the ſtrokes which the apple of the eye receives, come to be different; and this is the reaſon it perceives different colours. But Ariſtotle taught, that the cauſe of ſight proceeds from the quality of the things ſeen, which quality diſcovers and makes manifeſt its power, and lays it open to the ſenſe of ſight. Plato and the Stoics are of another opinion, nor do they agree among themſelves. See A. Gell. lib. v. c. 15.

Ver. 771. In theſe ſix verſes, he adds another argument, taken partly from the confeſſion of thoſe againſt whom he diſputes, and partly from the conſtancy of the colours that appear in the different kinds of things. They, ſays he, who imagine that ſeeds have colours, do not aſcribe any certain colours to any certain figures, nor affirm that ſeeds of ſuch a figure are of ſuch a colour: for inſtance, they do not pretend that all quadrangular ſeeds are black, nor that the round are white, the triangular blue, &c. Whence then proceeds this conſtancy of colour in ſome kinds of things? Why are all crows black? Why all ſwans white? We ſhould certainly ſee both ſwans and crows of various colours, if the ſeeds of which they are compoſed were ſtained with various dyes.

Ver. 777. In theſe eight verſes, he argues yet farther, and ſays: Divide any coloured body, and the ſmaller the particles are made, the weaker grow the colours; nay, they will at length be quite loſt, and vaniſh away even while the particles ſtill remain viſible to the eye. We are therefore much in the wrong to expect colour in the principles of things, which we cannot find in the minuteſt parts of bodies.

Ver. 785. In theſe ten verſes, he preſſes hard on his adverſaries. All men grant, ſays he, that the bodies which the noſtrils cannot ſmell, are inodorous, and that they which the ear cannot hear have no ſound. Then why muſt it not be granted, in like manner, that the bodies which the eyes cannot perceive, are void of colours? For the ſenſes are the ſole judges of the qualities of things, nor ought we to believe that any quality can belong to a body which the ſenſes do not aſcribe to it. And ſince there are bodies that want ſome certain qualities, why may not the atoms in like manner want colour, ſenſibility, cold, dryneſs, &c.

Ver. 795. Enough of colours. He now demonſtrates, in theſe twenty verſes, that the atoms are deſtitute of all other qualities likewiſe, as ſmell, cold, heat, ſound, humidity, taſte, ſoftneſs, flexibility, rareneſs, &c. To prove which he brings three arguments: Firſt, If you allow ſmell to the atoms, you will confound all things: the moſt delightful fragrancy of the ſeeds muſt be loſt by the intervening of the unſavoury ſtenches of other ſeeds; and as when artiſts compoſe eſſences of rich perfumes, unleſs they make uſe of inodorous oil, that has no ſcent at all, the oil will corrupt their ſweeteſt odours; we may conclude the ſame likewiſe of taſte, ſound, heat, cold, &c. The ſeeds cannot be divided, and therefore cannot exhale either odours, or ſound, or heat, or taſte, or cold, which conſiſt of particles that are

emitted and flow from bodies. Third, If you aſcribe to atoms, ſoftneſs, flexibility, rareneſs, brittleneſs, &c. you will at the ſame time make them mutable, therefore obnoxious to diſſolution, and conſequently all things muſt fall into nothing.

Thus we allow that Lucretius has convincingly performed his deſign of freeing his atoms from all ſenſible qualities: and indeed he is of late ſeconded by ſo many experiments of the late philoſopher Boyle, that it is now paſt all doubt. And if we can believe our ſenſes, we muſt forſake forms and qualities, and allow what we formerly called ſuch to be only phantaſms ariſing from the ſtroke of external bodies on our organs.

Ver. 815. Having proved that the ſeeds of things are void of heat, cold, ſmell, taſte, colour, and all other ſenſible qualities, and having aſſerted, that hot, cold, ſavoury, odorous, &c. things are nevertheleſs made of them, he now undertakes a greater taſk, and teaches, that things of ſenſe can ſpring from ſenſeleſs ſeeds, and that there is no need of any ſuperior principle to matter, but a fit combination of atoms can think, will, and remember. To prove this, he appeals firſt to experience: Worms, ſays he, are bred from a rotten dunghill, in which it would be in vain to ſearch for any life or ſenſe. This argument is contained in nine verſes.

Ver. 820. Thus bees too are produced from the bowels of a ſuffocated and putrified heifer, as Virgil ſays, Georg. iv. and Ovid. xv. Metam. & Faſt. i.

——— fervent examina putri
De bove; mille animas una necata dedit.

And Diodorus Siculus, in the beginning of his firſt books, ſays, That in the country about Thebes, at certain ſeaſons of the year, large mice, that devoured every thing, were bred out of the clods of the earth. Athenæus, in his eighth book, chap. 2. reports, that in Pœonia and Dardanium (now called Bulgaria), there rained down ſo many frogs from heaven (that is, perhaps they were ſuddenly produced after great ſhowers), that they filled all the public ways, and ſwarmed even in the private houſes, inſomuch that their domeſtic furniture was covered with them; that they found them even in the very pots where they boiled their meat, and that, what with the trouble of the living, and ſtench of the dead ones, the inhabitants were forced at length to forſake their country. And Pliny, in his eighth book, ch 29 reports, that a whole city in Gallia, and another in Africa, were driven away, the firſt by frogs, the other by locuſts, which had been bred in like manner. And many examples of this kind might be collected in profane hiſtories, not to mention thoſe we find in the ſacred writers. Ovid deſcribes this production of animals from the putrid and fermenting ſlime of the river Nile

Sic ubi deſeruit madidos ſeptemfluus agros
Nilus, et antiquo ſua flumina reddidit alveo,
Æthereoque recens exarſit ſydere limus;
Plurima cultores verſis animalia glebis [ipſum
Inveniunt; et in his quædam modo cæpta ſub
Naſcendi ſpatium: quædam imperfecta, fuiſque
Trunca vident numeris: et eodem in corpore
ſæpe
Altera pars vivit, rudis eſt pars altera tellus.
Metam. lib. i. *v.* 422.

Which Dryden thus interprets:

Thus when the Nile from Pharian fields is fled,
And ſeeks with ebbing tides his ancient bed:
The fat manure with heav'nly fire is warm'd,
And cruſted creatures as in wombs are form'd:
Theſe, when they turn the glebe the peaſants find,
Some rude and yet unfiniſh'd in their kind:
Short of their limbs, a lame imperfect birth,
One half alive, and one of lifeleſs earth.

Ver. 824. Neither does he, to confirm this aſſertion, propoſe an example only in the generation of worms and animals, but in thoſe already generated. Thus, in theſe twelve verſes he tells us, that the food that is taken into the body of animals, from inanimate, as it was before, becomes animated. Beaſts and birds, which are things of ſenſe, are nouriſhed with inſenſible food, as graſs, leaves, &c. Mankind feeds upon birds and beaſts; and thus men are at length compoſed of the inſenſible particles of graſs, leaves, &c. He then illuſtrates this opinion with a very proper ſimilitude. Dry wood is reſolved into fire and flame; but inſenſible nouriſhment is not more different from living and ſenſible fleſh, than dull wood from clear and ſhining fire and flame. And as from the wood muſt be extricated ſome particles, which by ſtirring up, and diſentangling themſelves from their former poſition, and then diſpoſing themſelves in a new order, may be endowed with that new power of ſhining and warming: ſo from the meat muſt be ſeparated the ſpirituous particles, which, by being extracted in a certain manner, and diſpoſed in a new, may obtain this energy of ſenſibility. For the procreation of ſenſe, or of a ſenſible thing from inſenſible principles, is owing to the certain and peculiar magnitude, figure, poſition, order and motion of thoſe principles.
